Any way we can check on shrimpers in MS sound, esp skimmers (check tow times). We have had 15 stranded turtles in MS Sound (quite a few around Pascagoula) with no oil and looking like they were healthy prior to death in the last 24 hours.

Bob,
Special Agent Steve Campbell and myself conducted a patrol on Tuesday June 8. 2010. We patrolled the area
off Biloxi MS and down to Gulfport MS. I will follow this reply with a more detailed report of what we observed as
I need to go get my notes off the GMT boat. One thing to note, the waters off of Pascagoula have been closed
due too oil so no trawlers have been in this area. I guess the currents could have carried the turtles to the area
from some other location, however during the last two patrols (June 3 and June 8) the winds and the currents have
been strong from the East to West. All trawling to the East has been closed down due to the oil so I don't know
where they would have come from down that way. I will follow up in a few with a more detailed report on what
observed on Tuesday.

Hi Bob,

This is something we've been looking at since Wendy alerted us to the pulse in MS strandings on Monday. There've been a number of e-mails going around. Sorry you haven't been on those, I'll forward some for your info.

Shrimping opened in MS Sound on June 3. NMFS OLE with Pascagoula assistance and MSDMR marine patrol did a pretty large amount of TED compliance boardings and, as I understand, didn't find any significant violations. However, OLE noted that the trawlers were very concentrated in a few areas, and Dale Stevens estimated that the boats were 75% skimmer trawls. Pascagoula and OLE therefore immediately made plans to go out on June 8 to look into the skimmer trawls more closely. So Dale, we'll await your detailed report eagerly.

On the locations of the strandings vs. the shrimping effort: Wendy do you have all the stranding locations yet? I know those data were incomplete as of a few days ago. It would be nice to look at that vs. the shrimping effort. BUT, I don't think we should draw any major conclusions from that. I think it's a reasonable assumption (though far from always true) that a stranding occurs pretty close to where the mortality occurred. But Miss. Sound is a pretty small area itself: longshore movements of carcasses from tide and wind and the movement of the concentration of the shrimp fleet could make any analysis not too conclusive...

O.K. ---- I will recap the events from the last two patrols in the Mississippi Sound. On Tuesday June 3, 2010
the state of Mississippi opened inshore waters from the Biloxi/Ocean Springs channel, West, to the LA/MS
state line for shrimp trawling. NOAA Special Agents Steve Campbell and James Kajoennen accompanied me
onboard the GMT SafeBoat for a TEDs patrol to assure that trawlers were complying with TED
requirements. Forty vessels were observed trawling in a 2 to 3 square mile area off of Biloxi MS.
We estimated the number of vessels operating with skimmer trawls as opposed to conventional otter trawls
at approximately 3 to 1. The conventional trawlers required to have TEDs installed in their nets were all in
compliance with no violations found. After observing this many trawlers in such a confined area and giving the
number of large skimmer trawl vessels in the fleet it was a concern to us that this would result in stranded turtles.
After the report of dead turtles over the weekend another patrol was conducted on Tuesday June 8, 2010.
NOAA Special Agent Steve Campbell and I patrolled the same area and found four otter trawl vessels
actively trawling with one skimmer trawl vessel at anchor. The main purpose of this patrol was to
get a more accurate count of the skimmers vessels in the area and try to observe the tow times of some
of these vessels. One thing that was of a concern to me was the size of the skimmers being observed during
the previous patrol. With no skimmers found on the shrimping grounds we proceeded to the Biloxi Small Craft
Harbor in Biloxi MS. There we observed 20 vessels in the harbor, only four of these vessels were otter trawl vessels.
The remaining sixteen vessels were the larger skimmer trawl vessels and the same ones observed on the shrimping
grounds during the previous patrol. These are large vessels pushing very large skimmers. I took some video of
these vessels at the dock to show how large these skimmers are and to show the amount of webbing in these nets.
I have this video and will try to somehow get it transfered to a DVD if any of you are interested in it.

MS DMR regulations state:

"It shall be unlawful to use skimmer trawls or wing nets with a maximum size greater than 25 feet on the headrope and 32 feet on the footrope."

For regular trawlers: "..not more than 2 nets, each no larger than 25 feet on headrope and 32 feet on footrope."

So, given that a regular door trawler will only get 60-70% opening spread with his doors, but a skimmer can get 100% opening--at least on the headrope-- the state regs actually allow skimmers to carry a lot more net than door trawlers. Door trawlers also have a maximum standard door height of 34", which will limit the height of the net to something in the several feet range. How tall were the legs of the skimmers, Dale? 10-12'?

Do you think the skimmers were exceeding those regulatory limits, or were you just surprised at how much webbing the state regs allow?

Do you have any plans to try to monitor skimmer trawler effort again?

David,
I just talked to some fishermen out of Bayou La Batre AL. They informed me that a skimmer
trawl is typically a trawl used primarily at night. They do at times push in the daylight hours when the sea
conditions are rough and the bottom is stirred up. This was the case during the June 3, patrol. I will get with
Enforcement and arrange a night patrol in the near future to try and document tow times.

Dale, do you plan on measuring the nets and headrope? If so, I will send a couple of agents/officers along. This is a good training opportunity for my agents who are not familiar with skimmer vessels.

David,
I just talked to some fishermen out of Bayou La Batre AL. They informed me that a skimmer trawl is typically a trawl used primarily at night. They do at times push in the daylight hours when the sea conditions are rough and the bottom is stirred up. This was the case during the June 3, patrol. I will get with Enforcement and arrange a night patrol in the near future to try and document tow times.

spread with his doors, but a skimmer can get 100% opening--at least on the headrope-- the state regs actually allow skimmers to carry a lot more net than door trawlers. Door trawlers also have a maximum standard door height of 34", which will limit the height of the net to something in the several feet range. How tall were the legs of the skimmers, Dale? 10-12'?

Do you think the skimmers were exceeding those regulatory limits, or were you just surprised at how much webbing the state regs allow?

Do you have any plans to try to monitor skimmer trawler effort again?

significant violations. However, OLE noted that the trawlers were very concentrated in a few areas, and Dale Stevens estimated that the boats were 75% skimmer trawls. Pascagoula and OLE therefore immediately made plans to go out on June 8 to look into the skimmer trawls more closely. So Dale, we'll await your detailed report eagerly.

On the locations of the strandings vs. the shrimping effort: Wendy do you have all the stranding locations yet? I know those data were incomplete as of a few days ago. It would be nice to look at that vs. the shrimping effort. BUT, I don't think we should draw any major conclusions from that. I think it's a reasonable assumption (though far from always true) that a stranding occurs pretty close to where the mortality occurred. But Miss. Sound is a pretty small area itself: longshore movements of carcasses from tide and wind and the movement of the concentration of the shrimp fleet could make any analysis not too conclusive...

I will follow this reply with a more detailed report of what we observed as I need to go get my notes off the GMT boat. One thing to note, the waters off of Pascagoula have been closed due too oil so no trawlers have been in this area. I guess the currents could have carried the turtles to the area from some other location, however during the last two patrols (June 3 and June 8) the winds and the currents have been strong from the East to West. All trawling to the East has been closed down due to the oil so I don't know where they would have come from down that way. I will follow up in a few with a more detailed report on what observed on Tuesday.

Robert Hoffman wrote:

Attached is some additional information on the state waters status for shrimping. When the season opened on June 3, MS Sound waters were only open to the West of the Biloxi Ship Channel. (see attachment 10-69)
On June 4, MS DMR issued a revised closure notice, with a smaller closed area off of Pascagoula. The revision notice is a bit unclear on shrimp, but, if I were a shrimper, I would read it to mean that everything other than the closed box was open to shrimping. (see attachment 10-73).

June 4, 2010

FOR IMMEDIATE RELEASE

Revised Precautionary Closure: Portions of Mississippi Marine Waters Reopen to Commercial and Recreational Fishing

BILOXI, Miss. – The executive directors of the Mississippi Department of Marine Resources and the Mississippi Department of Environmental Quality are immediately revising the closure of certain portions of Mississippi's territorial marine waters to all commercial and recreational fishing, including all species of finfish, crabs, shrimp and oysters. The revised closure area in the eastern Mississippi Sound has been reduced to include those territorial marine waters of the State of Mississippi lying south of 30 degrees 18 minutes north longitude to federal waters and east of 88 degrees 39 minutes west longitude to the Mississippi-Alabama state boundary. Additional waters that were previously closed to fishing will be reopened.

This closure is a result of the detection of oil in this general area earlier this week, and the potential impacts of the oil on Mississippi's coastal marine resources. All other regulations will remain in full force and effect. The current shrimp closure line is not affected by this revision.

Any individuals retaining any marine species from this closed area will be required to immediately return them to the waters.

This precautionary closure revision supersedes the precautionary order of June 1, 2010, and will take effect and be in force immediately. The purpose of this revision is to be more consistent with the protocol used in the closure of federal waters. Monitoring of this situation continues to ensure the public safety and protection of Mississippi's coastal resources.

The Mississippi Department of Marine Resources is dedicated to enhancing, protecting and conserving marine interests of the state by managing all marine life, public trust wetlands, adjacent uplands and waterfront areas to provide for the optimal commercial, recreational, educational and economic uses of these resources consistent with environmental concerns and social changes. Visit the DMR online at www.dmr.ms.gov.

FOR IMMEDIATE RELEASE

Mississippi 2010-2011 Shrimp Season Opens June 3 in Waters West of the East Biloxi Ship Channel

BILOXI, Miss.—The Mississippi Department of Marine Resources (DMR) has set the opening date of the 2010-2011 shrimp season in **Mississippi territorial waters west of the East Biloxi ship channel for 6 a.m. Thursday, June 3, 2010.**

The area opening will include all Mississippi waters west of a line beginning at Beacon "18" in the East Biloxi Bay Channel including the channel, then following the eastern side of the channel in a southerly direction until it intersects with the Mississippi/EEZ 3 mile nautical line. The northern boundary will begin at Beacon "18" in the East Biloxi Bay Channel and then southwesterly along the most direct line to the southernmost point on Deer Island; then westerly following the north shore of Deer Island to the westernmost tip; then westerly in the most direct line to Biloxi Beacon "8"; then westerly following the meandering of the shoreline at a distance of one-half mile from there to a point on the centerline of the CSX Railroad Bridge over St. Louis Bay; then westerly along the centerline of the bridge to a point one-half mile south of the western abutment of the CSX Railroad Bridge; then southwesterly following the meandering of the shoreline at a distance of one-half mile there from to a point one-half mile east of the mouth of Bayou Caddy; then westerly to the mouth of Bayou Caddy; then southwesterly following the meandering of the shoreline to the Mississippi-Louisiana state line.

These waters may close on short notice if it is detected that oil is moving into the open area.

All regulations set by the DMR are to be in full force and effect, and all boats engaged in catching or transporting shrimp in or from the waters of Mississippi must be legally licensed.

For the latest updates on the Mississippi shrimp fishery, call the toll-free Shrimp Information Hotline 1-866-We Trawl (866-938-7295).

The Mississippi Department of Marine Resources is dedicated to enhancing, protecting and conserving marine interests of the state by managing all marine life, public trust wetlands, adjacent uplands and waterfront areas to provide for the optimal commercial, recreational, educational and economic uses of these resources consistent with environmental concerns and social changes. >> Special Agent Steve Campbell and myself conducted a patrol on Tuesday June 8. 2010. We patrolled the area off Biloxi MS and dow to Gulfport MS. I will follow this reply with a more detailed report of what we observed as I need to go get my notes off the G boat. One thing to note, the waters off of Pascagoula have been closed due too oil so no trawlers have been in this area. I guess the currents could have carried the turtles to the area from some other location, however during the last two patrols (June 3 and June 8) the winds and the currents have been strong from the East to West. All trawling to the East has been closed down due to the oil so I don't know where they would have come from down that way I will follow up in a few with a more detailed report on what observed on Tuesday.

Attached is a map (thanks to Jeff Adams, GIS contractor to HQ) showing Mississippi turtle stranding locations from 6/5/2010 - 6/9/2010. He also
included a semi-transparent layer of all strandings from 4/30/2010 - 6/9/2010.

The report for MS today (6/10/10) was very bad - there were 15 Kemp's ridleys recovered between Biloxi and Gulfport (the same area of concentration as recent days) and I received a very late report of 6 additional turtles still on the beach that will be retrieved tomorrow morning. So, total for today = 21.

Dale,

As per our earlier telephone conversation, we'll get together early
next
week and schedule a night enforcement patrol.

David,
I just talked to some fishermen out of Bayou La Batre AL. They
informed me
that a skimmer trawl is typically a trawl used primarily at night.
They do
at times push in the daylight hours when the sea conditions are
rough and
the bottom is stirred up. This was the case during the June 3,
patrol. I
will get with Enforcement and arrange a night patrol in the near
future to
try and document tow times.

David Bernhart wrote:

MS DMR regulations state:

"It shall be unlawful to use skimmer trawls or wing nets with a

maximum size greater than 25 feet on the headrope and 32 feet on
the

footrope."

For regular trawlers: "..not more than 2 nets, each no larger than 25 feet on headrope and 32 feet on footrope."

So, given that a regular door trawler will only get 60-70% opening spread with his doors, but a skimmer can get 100% opening--at least on the headrope-- the state regs actually allow skimmers to carry a lot more net than door trawlers. Door trawlers also have a maximum standard door height of 34", which will limit the height of the net to something in the several feet range. How tall were the legs of the skimmers, Dale? 10-12'?

Do you think the skimmers were exceeding those regulatory limits, or were you just surprised at how much webbing the state regs allow?

Do you have any plans to try to monitor skimmer trawler effort again?

Not with any certainty. They have all been moderately to severely decomposed so an educated guess would be dead 1-3 days - with the very high temperatures lately they decompose very quickly.

I also just heard that there were at least 4 additional turtles on the beach in the Biloxi - Gulfport area. There was also a call reporting 3 dead turtles floating several miles offshore of the Pass Christian / Bay St. Louis area - these were not recovered.

O.K. ---- I will recap the events from the last two patrols in the

Mississippi Sound. On Tuesday June 3, 2010 the state of Mississippi

opened inshore waters from the Biloxi/Ocean Springs channel, West, to

the LA/MS state line for shrimp trawling. NOAA Special Agents Steve

Campbell and James Kajoennen accompanied me onboard the GMT SafeBoat

for a TEDs patrol to assure that trawlers were complying with TED

requirements. Forty vessels were observed trawling in a

2 to
3 square
mile area off of Biloxi MS.
We estimated the number of vessels operating with
skimmer
trawls as
opposed to conventional otter trawls at approximately 3
to
1. The
conventional trawlers required to have TEDs installed in
their nets
were all in compliance with no violations found. After
observing this
many trawlers in such a confined area and giving the
number
of large
skimmer trawl vessels in the fleet it was a concern to
us
that this
would result in stranded turtles.
After the report of dead turtles over the weekend
another
patrol was
conducted on Tuesday June 8, 2010.
NOAA Special Agent Steve Campbell and I patrolled the
same
area and
found four otter trawl vessels actively trawling with
one
skimmer
trawl vessel at anchor. The main purpose of this patrol
was
to get a
more accurate count of the skimmers vessels in the area
and
try to
observe the tow times of some of these vessels. One
thing
that was of
a concern to me was the size of the skimmers being
observed
during
the previous patrol. With no skimmers found on the

shrimping
grounds

we proceeded to the Biloxi Small Craft Harbor in Biloxi
MS.
There we

observed 20 vessels in the harbor, only four of these
vessels were

otter trawl vessels.

The remaining sixteen vessels were the larger skimmer
trawl
vessels

and the same ones observed on the shrimping grounds
during
the

previous patrol. These are large vessels pushing very
large
skimmers.

I took some video of these vessels at the dock to show
how
large

these skimmers are and to show the amount of webbing in
these nets.

I have this video and will try to somehow get it
transfered
to a DVD

if any of you are interested in it.

Hi Bob,

This is something we've been looking at since Wendy
alerted us to

the pulse in MS strandings on Monday. There've been
a
number of

e-mails going around. Sorry you haven't been on those,
I'll forward
some for your info.

Shrimping opened in MS Sound on June 3. NMFS OLE with
Pascagoula
assistance and MSDMR marine patrol did a pretty large
amount of TED
compliance boardings and, as I understand, didn't find
any
significant violations. However, OLE noted that the trawlers were
very concentrated in a few areas, and Dale Stevens estimated that
the boats were 75% skimmer trawls. Pascagoula and OLE
therefore
immediately made plans to go out on June 8 to look into
the skimmer
trawls more closely. So Dale, we'll await your detailed
report
eagerly.

On the locations of the strandings vs. the shrimping effort: Wendy
do you have all the stranding locations yet? I know
those data were
incomplete as of a few days ago. It would be nice to
look at that
vs. the shrimping effort. BUT, I don't think we should
draw any
major conclusions from that. I think it's a reasonable
assumption

(though far from always true) that a stranding occurs pretty close

to where the mortality occurred. But Miss. Sound is a pretty small

area itself: longshore movements of carcasses from tide and wind

and the movement of the concentration of the shrimp fleet could make

any analysis not too conclusive...

He also
included a semi-transparent layer of all strandings from 4/30/2010
-
6/9/2010.

The report for MS today (6/10/10) was very bad - there were 15 Kemp's ridleys recovered between Biloxi and Gulfport (the same area of concentration as recent days) and I received a very late report of 6 additional turtles still on the beach that will be retrieved tomorrow morning. So, total for today = 21.

Subject: Re: Stranded iurtles in MS

David,
I just talked to some fishermen out of Bayou La Batre AL. They

informed me

that a skimmer trawl is typically a trawl used primarily at

night.
They do

at times push in the daylight hours when the sea conditions are

rough and

the bottom is stirred up. This was the case during the June 3,

patrol. I

will get with Enforcement and arrange a night patrol in the near

future to

try and document tow times.

David Bernhart wrote:

MS DMR regulations state:

"It shall be unlawful to use skimmer trawls or wing nets

with a

maximum size greater than 25 feet on the headrope and 32

feet on
the

footrope."

For regular trawlers: "..not more than 2 nets, each no

larger
than 25

feet on headrope and 32 feet on footrope."

So, given that a regular door trawler will only get 60-70%

opening

spread with his doors, but a skimmer can get 100% opening--

at
least on

the headrope-- the state regs actually allow skimmers to

carry a

lot

more net than door trawlers. Door trawlers also have a

maximum

standard door height of 34", which will limit the height of

the
net to

something in the several feet range. How tall were the legs

of
the

skimmers, Dale? 10-12'?

Do you think the skimmers were exceeding those regulatory

limits, or

were you just surprised at how much webbing the state regs

allow?>

Do you have any plans to try to monitor skimmer trawler

effort
again?

Attached is a map (thanks to Jeff Adams, GIS contractor to HQ) showing Mississippi turtle stranding locations from 6/5/2010 - 6/9/2010. He also included a semi-transparent layer of all strandings from 4/30/2010 - 6/9/2010.

The report for MS today (6/10/10) was very bad - there were 15 Kemp's ridleys recovered between Biloxi and Gulfport (the same area of concentration as recent days) and I received a very late report of 6 additional turtles still on the beach that will be retrieved tomorrow morning. So, total for today = 21.

David,
I just talked to some fishermen out of Bayou La Batre AL. They
informed me
that a skimmer trawl is typically a trawl used primarily at night.
They do
at times push in the daylight hours when the sea conditions are
rough and
the bottom is stirred up. This was the case during the June 3,
patrol. I
will get with Enforcement and arrange a night patrol in the near
future to
try and document tow times.

David Bernhart wrote:

MS DMR regulations state:

"It shall be unlawful to use skimmer trawls or wing nets with a maximum size greater than 25 feet on the headrope and 32 feet on the footrope."

For regular trawlers: "..not more than 2 nets, each no larger than 25 feet on headrope and 32 feet on footrope."

So, given that a regular door trawler will only get 60-70% opening spread with his doors, but a skimmer can get 100% opening--at least on the headrope-- the state regs actually allow skimmers to carry a lot more net than door trawlers. Door trawlers also have a maximum standard door height of 34", which will limit the height of the net to something in the several feet range. How tall were the legs of the skimmers, Dale? 10-12'?

Do you think the skimmers were exceeding those regulatory limits, or were you just surprised at how much webbing the state regs allow?

Do you have any plans to try to monitor skimmer trawler effort again?

-DB

Robert D Stevens wrote:

O.K. ---- I will recap the events from the last two patrols

in the
Mississippi Sound. On Tuesday June 3, 2010 the state of Mississippi
opened inshore waters from the Biloxi/Ocean Springs channel, West, to
the LA/MS state line for shrimp trawling. NOAA Special Agents Steve
Campbell and James Kajoennen accompanied me onboard the GMT SafeBoat
for a TEDs patrol to assure that trawlers were complying with TED
requirements. Forty vessels were observed trawling in a 2 to 3 square
mile area off of Biloxi MS.

We estimated the number of vessels operating with skimmer trawls as
opposed to conventional otter trawls at approximately 3 to 1. The
conventional trawlers required to have TEDs installed in their nets
were all in compliance with no violations found. After observing this
many trawlers in such a confined area and giving the number of large
skimmer trawl vessels in the fleet it was a concern to us that this
would result in stranded turtles.

After the report of dead turtles over the weekend another patrol was
conducted on Tuesday June 8, 2010.

NOAA Special Agent Steve Campbell and I patrolled the same area and
found four otter trawl vessels actively trawling with one skimmer
trawl vessel at anchor. The main purpose of this patrol was to get a
more accurate count of the skimmers vessels in the area and try to

observe the tow times of some of these vessels. One thing that was of
a concern to me was the size of the skimmers being observed during
the previous patrol. With no skimmers found on the shrimping grounds
we proceeded to the Biloxi Small Craft Harbor in Biloxi MS. There we
observed 20 vessels in the harbor, only four of these vessels were
otter trawl vessels.
The remaining sixteen vessels were the larger skimmer trawl vessels
and the same ones observed on the shrimping grounds during the
previous patrol. These are large vessels pushing very large skimmers.
I took some video of these vessels at the dock to show how large
these skimmers are and to show the amount of webbing in these nets.
I have this video and will try to somehow get it transfered to a DVD
if any of you are interested in it.

David Bernhart wrote:

Hi Bob,

This is something we've been looking at since Wendy alerted us to
the pulse in MS strandings on Monday. There've been a number of

e-mails going around. Sorry you haven't been on those, I'll forward some for your info.

Shrimping opened in MS Sound on June 3. NMFS OLE with Pascagoula assistance and MSDMR marine patrol did a pretty large amount of TED compliance boardings and, as I understand, didn't find any significant violations. However, OLE noted that the trawlers were very concentrated in a few areas, and Dale Stevens estimated that the boats were 75% skimmer trawls. Pascagoula and OLE therefore immediately made plans to go out on June 8 to look into the skimmer trawls more closely. So Dale, we'll await your detailed report eagerly.

On the locations of the strandings vs. the shrimping effort: Wendy do you have all the stranding locations yet? I know those data were incomplete as of a few days ago. It would be nice to look at that vs. the shrimping effort. BUT, I don't think we should draw any major conclusions from that. I think it's a reasonable assumption (though far from always true) that a stranding occurs pretty close to where the mortality occurred. But Miss. Sound is a pretty small area itself: longshore movements of carcasses from tide and wind

and the movement of the concentration of the shrimp fleet could make
any analysis not too conclusive...

Robert D Stevens wrote:

Bob,

Special Agent Steve Campbell and myself conducted a patrol on
Tuesday June 8. 2010. We patrolled the area off Biloxi MS and down
to Gulfport MS. I will follow this reply with a more detailed
report of what we observed as I need to go get my notes off the GMT
boat. One thing to note, the waters off of Pascagoula have been
closed due too oil so no trawlers have been in this area. I guess
the currents could have carried the turtles to the area from some
other location, however during the last two patrols (June 3 and
June 8) the winds and the currents have been strong from the East
to West. All trawling to the East has been closed down due to the
oil so I don't know where they would have come from down that way.
I will follow up in a few with a more detailed report on what
observed on Tuesday.

Robert Hoffman wrote:

Any way we can check on shrimpers in MS sound, esp skimmers (check tow times). We have had 15 stranded turtles in MS Sound (quite a few around Pascagoula) with no oil and looking like they were healthy prior to death in the last 24 hours.

Robert D Stevens wrote:

O.K. ---- I will recap the events from the last two patrols in the Mississippi Sound. On Tuesday June 3, 2010 the state of Mississippi opened inshore waters from the Biloxi/Ocean Springs channel, West, to the LA/MS state line for shrimp trawling. NOAA Special

Agents Steve Campbell and James Kajoennen accompanied me onboard the GMT SafeBoat for a TEDs patrol to assure that trawlers were complying with TED requirements. Forty vessels were observed trawling in a 2 to 3 square mile area off of Biloxi MS.

We estimated the number of vessels operating with skimmer trawls as opposed to conventional otter trawls at approximately 3 to 1. The conventional trawlers required to have TEDs installed in their nets were all in compliance with no violations found. After observing this many trawlers in such a confined area and giving the number of large skimmer trawl vessels in the fleet it was a concern to us that this would result in stranded turtles.

After the report of dead turtles over the weekend another patrol was conducted on Tuesday June 8, 2010.

NOAA Special Agent Steve Campbell and I patrolled the same area and found four otter trawl vessels actively trawling with one skimmer trawl vessel at anchor. The main purpose of this patrol was to get a more accurate count of the skimmers vessels in the area and try to observe the tow times of some of these vessels. One thing that was of a concern to me was the size of the skimmers being observed during the previous patrol. With no skimmers found on the shrimping grounds we proceeded to the Biloxi Small Craft Harbor in Biloxi MS. There we observed 20 vessels in the harbor, only four of these vessels were otter trawl vessels.

The remaining sixteen vessels were the larger skimmer trawl vessels and the same ones observed on the shrimping grounds during the previous patrol. These are large vessels pushing very large skimmers.

I took some video of these vessels at the dock to show how large these skimmers are and to show the amount of webbing in these nets.

I have this video and will try to somehow get it transfered to a DVD if any of you are interested in it.

I'll forward
some for your info.

Shrimping opened in MS Sound on June 3. NMFS OLE
with
Pascagoula
assistance and MSDMR marine patrol did a pretty
large
amount of TED
compliance boardings and, as I understand, didn't
find
any
significant violations. However, OLE noted that
the
trawlers were
very concentrated in a few areas, and Dale Stevens
estimated that
the boats were 75% skimmer trawls. Pascagoula and
OLE
therefore
immediately made plans to go out on June 8 to look
into
the skimmer
trawls more closely. So Dale, we'll await your
detailed
report
eagerly.

On the locations of the strandings vs. the
shrimping

effort: Wendy

do you have all the stranding locations yet? I know those data were incomplete as of a few days ago. It would be nice to look at that vs. the shrimping effort. BUT, I don't think we should draw any major conclusions from that. I think it's a reasonable assumption (though far from always true) that a stranding occurs pretty close to where the mortality occurred. But Miss. Sound is a pretty small area itself: longshore movements of carcasses from tide and wind and the movement of the concentration of the shrimp fleet could make any analysis not too conclusive...

Robert D Stevens wrote:

Bob,

Special Agent Steve Campbell and myself conducted a patrol on Tuesday June 8. 2010. We patrolled the area off Biloxi MS and down to Gulfport MS. I will follow this reply with a more detailed report of what we observed as I need to go get my notes off the GMT boat. One thing to note, the waters off of Pascagoula have been closed due too oil so no trawlers have been in this area. I guess the currents could have carried the turtles to the area from some other location, however during the last two patrols (June 3 and June 8) the winds and the currents have been strong from the East to West. All trawling to the East has been closed down due to the oil so I don't know where they would have come from

down that way.

I will follow up in a few with a more detailed report on what observed on Tuesday.

Robert Hoffman wrote:

Any way we can check on shrimpers in MS sound, esp skimmers (check tow times). We have had 15 stranded turtles in MS Sound (quite a few around Pascagoula) with no oil and looking like they were healthy prior to death in the last 24 hours.

David,
I just talked to some fishermen out of Bayou La Batre AL. They

informed me

that a skimmer trawl is typically a trawl used primarily at

night.
They do

at times push in the daylight hours when the sea conditions

are

rough and

the bottom is stirred up. This was the case during the June 3,

patrol. I

will get with Enforcement and arrange a night patrol in the

near

future to

try and document tow times.

David Bernhart wrote:

MS DMR regulations state:

"It shall be unlawful to use skimmer trawls or wing nets

with a

maximum size greater than 25 feet on the headrope and 32

feet on
the

footrope."

For regular trawlers: "..not more than 2 nets, each no

larger
than 25

feet on headrope and 32 feet on footrope."

So, given that a regular door trawler will only get 60-70%

opening

spread with his doors, but a skimmer can get 100% opening--

at
least on

the headrope-- the state regs actually allow skimmers to

carry a
lot

more net than door trawlers. Door trawlers also have a

David Bernhart wrote:

Hi Bob,

This is something we've been looking at since

Wendy

alerted us to

the pulse in MS strandings on Monday. There've

been

a
number of

e-mails going around. Sorry you haven't been on

those,
I'll forward

some for your info.

Shrimping opened in MS Sound on June 3. NMFS OLE

with
Pascagoula

assistance and MSDMR marine patrol did a pretty

large
amount of TED

compliance boardings and, as I understand, didn't find any significant violations. However, OLE noted that the trawlers were very concentrated in a few areas, and Dale Stevens estimated that the boats were 75% skimmer trawls. Pascagoula and OLE therefore immediately made plans to go out on June 8 to look into

the skimmer

trawls more closely. So Dale, we'll await your

detailed
report

eagerly.

On the locations of the strandings vs. the

shrimping

effort: Wendy

do you have all the stranding locations yet? I

know

those data were

incomplete as of a few days ago. It would be nice

to
look at that

vs. the shrimping effort. BUT, I don't think we

should
draw any

major conclusions from that. I think it's a

reasonable
assumption

(though far from always true) that a stranding

occurs
pretty close

to where the mortality occurred. But Miss. Sound

is

a
pretty small

area itself: longshore movements of carcasses

from

tide
and wind

and the movement of the concentration of the

shrimp

fleet could make

any analysis not too conclusive...

Bob,

Special Agent Steve Campbell and myself

conducted a
patrol on

Tuesday June 8. 2010. We patrolled the area

off

Biloxi MS and down

to Gulfport MS. I will follow this reply with

a

more
detailed

report of what we observed as I need to go get

my
notes off the GMT

boat. One thing to note, the waters off of

Pascagoula have been

closed due too oil so no trawlers have been in

this
area. I guess

the currents could have carried the turtles to

the
area from some

other location; however during the last two

patrols
(June 3 and

June 8) the winds and the currents have been

strong
from the East

to West. All trawling to the East has been

closed

down due to the

oil so I don't know where they would have come

from
down that way.

I will follow up in a few with a more detailed

report on what

observed on Tuesday.

Robert Hoffman wrote:

Any way we can check on shrimpers in MS

If approved, we will likely board the skimmers, monitor their tow time, interview the crew and evaluate their catch. It will almost be impossible to do this discretely because of our operation will be overt. This should deter any illegal actions and possibly give us the information we need to help determine the causes of high stranding rate.

Bob,

Special Agent Steve Campbell and myself conducted a patrol on Tuesday June 8. 2010. We patrolled the area off Biloxi MS and down to Gulfport MS. I will follow this reply with a more detailed report of what we observed as I need to go get my notes off the GMT boat. One thing to note, the waters off of Pascagoula have been closed due too oil so no trawlers have been in this area. I guess the currents could have carried the turtles to the area from some

other location, however during the last two
patrols
(June 3 and
June 8) the winds and the currents have been
strong
from the East
to West. All trawling to the East has been
closed
down due to the
oil so I don't know where they would have come
from
down that way.
I will follow up in a few with a more detailed
report on what
observed on Tuesday.

Robert Hoffman wrote:

Any way we can check on shrimpers in MS
sound,
esp skimmers (check
tow times). We have had 15 stranded
turtles
in
MS Sound (quite a

few around Pascagoula) with no oil and

looking
like they were

healthy prior to death in the last 24 hours.

It is only 10AM here central time and we are working now to verify 20 NEW stranding reports for MS called in already. I reccomend the state take immediate action and close down the shrimp season until this can be resolved, if they can't we should take emergency action under ESA if at all possible. Has anyone spoken with the state folks that manages the shrimp fisheries? It seems like we are all in agreement that all information points to skimmers or regular trawlers volume.

Mark Kinsey wrote:
I will speak with my boss and request permission to saturate the area with OLE for an extended period. At a minimum, we should be able to reduce the stranding rate by repetitive boardings. Additionally, I will contact Mississippi Law Enforcement and request they saturate the area simultaneously. Any vessels within the saturated area will be boarded and monitored.

David,
I just talked to some fishermen out of Bayou La Batre AL. They

informed me

that a skimmer trawl is typically a trawl used primarily at

night.
They do

at times push in the daylight hours when the sea conditions

are

rough and

the bottom is stirred up. This was the case during the June 3,

patrol. I

will get with Enforcement and arrange a night patrol in the

near

future to

try and document tow times.

David Bernhart wrote:

MS DMR regulations state:

the

skimmers, Dale? 10-12'?

Do you think the skimmers were exceeding those regulatory

limits, or

were you just surprised at how much webbing the state regs

allow?>

Do you have any plans to try to monitor skimmer trawler

effort
again?

-DB

Robert D Stevens wrote:

O.K. ---- I will recap the events from the last two

patrols
in the

Mississippi Sound. On Tuesday June 3, 2010 the state

of

Mississippi

opened inshore waters from the Biloxi/Ocean Springs

channel,
West, to

the LA/MS state line for shrimp trawling. NOAA Special

Agents Steve

Campbell and James Kajoennen accompanied me onboard

the

GMT
SafeBoat

for a TEDs patrol to assure that trawlers were

complying

with TED

requirements. Forty vessels were observed trawling in

a

2 to
3 square

mile area off of Biloxi MS.

We estimated the number of vessels operating with

skimmer

trawls as

opposed to conventional otter trawls at approximately

3

to
1. The

conventional trawlers required to have TEDs installed

in

their nets

were all in compliance with no violations found. After

observing this

many trawlers in such a confined area and giving the

number
of large

skimmer trawl vessels in the fleet it was a concern to

us
that this

would result in stranded turtles.

After the report of dead turtles over the weekend

another
patrol was

conducted on Tuesday June 8, 2010.

NOAA Special Agent Steve Campbell and I patrolled the

same

area and

found four otter trawl vessels actively trawling with

one
skimmer

trawl vessel at anchor. The main purpose of this

patrol

was
to get a

more accurate count of the skimmers vessels in the

area

and
try to

observe the tow times of some of these vessels. One

thing
that was of

a concern to me was the size of the skimmers being

observed
during

the previous patrol. With no skimmers found on the

shrimping
grounds

we proceeded to the Biloxi Small Craft Harbor in

Biloxi

MS.
There we

observed 20 vessels in the harbor, only four of these

vessels were

otter trawl vessels.

The remaining sixteen vessels were the larger skimmer

trawl
vessels

and the same ones observed on the shrimping grounds

during
the

previous patrol. These are large vessels pushing very

large
skimmers.

I took some video of these vessels at the dock to show

how
large

these skimmers are and to show the amount of webbing

in

these nets.

I have this video and will try to somehow get it

transfered
to a DVD

if any of you are interested in it.

David Bernhart wrote:

Hi Bob,

This is something we've been looking at since

Wendy

alerted us to

the pulse in MS strandings on Monday. There've

been

a
number of

e-mails going around. Sorry you haven't been on

those,
I'll forward

some for your info.

Shrimping opened in MS Sound on June 3. NMFS OLE

with
Pascagoula

assistance and MSDMR marine patrol did a pretty

large
amount of TED

compliance boardings and, as I understand, didn't

find
any

significant violations. However, OLE noted that

the

trawlers were

very concentrated in a few areas, and Dale Stevens

estimated that

the boats were 75% skimmer trawls. Pascagoula and

OLE
therefore

immediately made plans to go out on June 8 to look

into
the skimmer

trawls more closely. So Dale, we'll await your

detailed
report

eagerly.

On the locations of the strandings vs. the

shrimping

effort: Wendy

do you have all the stranding locations yet? I

know

those data were

incomplete as of a few days ago. It would be nice

to
look at that

vs. the shrimping effort. BUT, I don't think we

should
draw any

major conclusions from that. I think it's a

reasonable
assumption

(though far from always true) that a stranding

occurs
pretty close

to where the mortality occurred. But Miss. Sound

is

a
pretty small

area itself: longshore movements of carcasses

from

tide
and wind

and the movement of the concentration of the

shrimp

fleet could make

any analysis not too conclusive...

David,
I just talked to some fishermen out of Bayou La Batre AL. They

informed me

that a skimmer trawl is typically a trawl used primarily at

night.
They do

at times push in the daylight hours when the sea conditions are rough and the bottom is stirred up. This was the case during the June 3, patrol. I will get with Enforcement and arrange a night patrol in the near future to try and document tow times.

David Bernhart wrote:

MS DMR regulations state:

"It shall be unlawful to use skimmer trawls or wing nets with a maximum size greater than 25 feet on the headrope and 32 feet on the footrope."

For regular trawlers: "..not more than 2 nets, each no larger than 25

feet on headrope and 32 feet on footrope."

So, given that a regular door trawler will only get 60-70% opening

spread with his doors, but a skimmer can get 100% opening-- at least on

the headrope-- the state regs actually allow skimmers to carry a lot

more net than door trawlers. Door trawlers also have a maximum

standard door height of 34", which will limit the height of the net to

something in the several feet range. How tall were the legs of the

skimmers, Dale? 10-12'?

Do you think the skimmers were exceeding those regulatory limits, or

were you just surprised at how much webbing the state regs allow?>

Do you have any plans to try to monitor skimmer trawler effort again?

Robert D Stevens wrote:

O.K. ---- I will recap the events from the last two patrols in the

Mississippi Sound. On Tuesday June 3, 2010 the state of Mississippi

opened inshore waters from the Biloxi/Ocean Springs channel, West, to

the LA/MS state line for shrimp trawling. NOAA Special Agents Steve

Campbell and James Kajoennen accompanied me onboard the

GMT
SafeBoat

for a TEDs patrol to assure that trawlers were

complying

with TED

requirements. Forty vessels were observed trawling in

a

2 to
3 square

mile area off of Biloxi MS.

We estimated the number of vessels operating with

skimmer
trawls as

opposed to conventional otter trawls at approximately

3

to
1. The

conventional trawlers required to have TEDs installed

in

their nets

were all in compliance with no violations found. After

observing this

many trawlers in such a confined area and giving the

number
of large

skimmer trawl vessels in the fleet it was a concern to

us
that this

would result in stranded turtles.

After the report of dead turtles over the weekend

another
patrol was

conducted on Tuesday June 8, 2010.

NOAA Special Agent Steve Campbell and I patrolled the

same
area and

found four otter trawl vessels actively trawling with

one
skimmer

trawl vessel at anchor. The main purpose of this

patrol

was
to get a

more accurate count of the skimmers vessels in the

area

and

try to

observe the tow times of some of these vessels. One

thing
that was of

a concern to me was the size of the skimmers being

observed
during

the previous patrol. With no skimmers found on the

shrimping
grounds

we proceeded to the Biloxi Small Craft Harbor in

Biloxi

MS.
There we

observed 20 vessels in the harbor, only four of these

vessels were

otter trawl vessels.

The remaining sixteen vessels were the larger skimmer

trawl
vessels

and the same ones observed on the shrimping grounds

during
the

previous patrol. These are large vessels pushing very

large

skimmers.

I took some video of these vessels at the dock to show

Shrimping opened in MS Sound on June 3. NMFS OLE

with
Pascagoula

assistance and MSDMR marine patrol did a pretty

large
amount of TED

compliance boardings and, as I understand, didn't

find
any

significant violations. However, OLE noted that

the

trawlers were

very concentrated in a few areas, and Dale Stevens

estimated that

the boats were 75% skimmer trawls. Pascagoula and

OLE
therefore

immediately made plans to go out on June 8 to look

into
the skimmer

trawls more closely. So Dale, we'll await your

detailed
report

eagerly.

On the locations of the strandings vs. the

shrimping

effort: Wendy

do you have all the stranding locations yet? I

know

those data were

incomplete as of a few days ago. It would be nice

to
look at that

vs. the shrimping effort. BUT, I don't think we

should
draw any

major conclusions from that. I think it's a

reasonable
assumption

(though far from always true) that a stranding

occurs
pretty close

to where the mortality occurred. But Miss. Sound

is

a
pretty small

area itself: longshore movements of carcasses

from

tide
and wind

and the movement of the concentration of the

shrimp

fleet could make

any analysis not too conclusive...

from
down that way.

I will follow up in a few with a more

detailed

report on what

observed on Tuesday.

Robert Hoffman wrote:

Any way we can check on shrimpers
in MS

sound,
esp skimmers (check

tow times). We have had 15 stranded

turtles

in
MS Sound (quite a

few around Pascagoula) with no
oil and

looking
like they were

healthy prior to death in the
last 24 hours.
