Subject: Global And National Supervision With Accountability

Dear BRC:

After all has been said and done, nuclear energy will still be needed by most nations around the world. The BRC must appreciate these needs and the possible solutions on our fragile planet. Yes we must protect the planet.

The BRC must review and account for all operations in nuclear energy. The events in Japan present the need for global and national cooperation on nuclear energy. Our planet needs safe nuclear energy.

Both the NRC and the IAEA must supervise and report on the status of nuclear energy on the planet Both must foster the safe disposal of the waste. Both must foster Research & Development for more efficient processes. Both must foster corrective responses in case of emergencies (e.g., Japan).

The BRC must ensure full cooperation between our NRC and the IAEA

Thank you..

Louis Zrebiec, Ph.D.
