## Flow of Funds Summary Statistics

### Fourth Quarter 1997

---

Debt of domestic nonfinancial sectors increased at a seasonally adjusted annual rate of 6-1/2 percent in the fourth quarter of 1997. Growth of federal government debt, at a 1-3/4 percent pace, remained subdued, while debt of nonfederal sectors increased at an 8 percent annual rate. Household debt picked up to a 7-3/4 percent rate, as an increase in home mortgage borrowing was only partially offset by a slight decline in consumer credit borrowing. Nonfinancial business debt accelerated to an 8-3/4 percent rate in the fourth quarter, the highest in nine years. All types of business credit remained strong, with particularly sizable increases in bank loans and loans from other sources. State and local government debt rose at a 7 percent annual rate in the fourth quarter.

Over 1997, domestic nonfinancial debt rose 5-1/4 percent, about the same as in the previous two

years. However, the composition of debt growth shifted toward businesses and state and local governments and away from the federal government and households.

The level of domestic nonfinancial debt outstanding was \$15.2 trillion at the end of 1997. Debt of the nonfederal sectors was \$11.4 trillion, and federal debt was \$3.8 trillion.

Figures on the growth and level of debt are found on tables D.1 through D.3. Tables with financial flows, amounts outstanding, and selected sector balance sheets and reconciliation tables are included in the remaining pages of this release.

## Flow of Funds Accounts, Fourth Quarter 1997

---

This publication presents the flow of funds accounts for 1997:Q4.

**Data revisions and other changes.** The statistics shown in these tables reflect use of new or revised source data. Most significant revisions appear in recent quarters; however, new source information resulted in changes to data for earlier periods. The revisions include the following:

1. Total financial assets of the state and local governments sector (tables F.105 and L.105) were revised upward for the period 1995:Q1 onward. The changes were based on a compilation of data by the Flow of Funds Section from a sample of financial reports of the state governments that account for a majority of sector activity and from information on the assets of local government investment pools from Standard & Poor's. Within instrument categories, the sector's holdings of corporate equities are now larger than previously estimated.

2. In the private pension funds sector (tables F.119 and L.119), data have been benchmarked to aggregates from the Internal Revenue Service/Department of Labor/Pension Benefit Guaranty Corporation Form 5500 filed for plan year 1994. Total assets of the sector are about unchanged from previous estimates. Among instrument categories, the revisions indicate that private pension funds accumulated a larger volume of U.S. government securities and a smaller volume of corporate and foreign bonds than reported earlier.

3. Data for the state and local government employee retirement funds sector (tables F.120 and L.120) were revised for 1992:Q3 onward to reflect new information from plans reporting details of asset composition to the Bureau of the Census. The changes resulted in a reduction of the value of unidentified miscellaneous assets and a reallocation of identified assets in the sector.

4. Figures for funding corporations' (tables F.131 and L.131) investment in foreign banking offices were revised from 1991:Q1 onward, owing to

new data compiled from information on commercial paper from The Depository Trust Company.

5. Loans extended by federal agencies and reported in the other loans and advances instrument category (tables F.216 and L.216) were revised up from 1994:Q1 onward based on information from the Treasury Department. The bulk of the revision is the result of a higher value for loans to students under the Federal Direct Loan Program.

6. Beginning with 1997:Q4, the figures for other loans and advances (tables F.216 and L.216) include estimates of bank business loans in collateralized loan obligations. The loans are assets of the issuers of asset-backed securities sector (tables F.126 and L.126) and liabilities of the nonfarm nonfinancial corporate business sector (tables F.102 and L.102).

7. The time series for home mortgages (tables F.218 and L.218) was revised, with the most significant change a downward revision for the period beginning 1992:Q1. That revision owed mainly to improved estimates of the value of loans financed by owner-sellers and was offset in part by an upward revision to home mortgages for the period 1991:Q4 onward based on more complete information for securitized home equity loans.

8. Balance sheet and reconciliation tables for the households and nonprofit organizations sector (tables B.100 and R.100) and the nonfarm nonfinancial corporate business sector (tables B.102 and R.102) have been extended through year-end 1997. Data for prior periods have been revised to reflect changes to assets and liabilities in tables L.100 and L.102.

9. A new supplemental table, provided at the end of this release, shows the flow of funds accounts matrix for the year 1997. The matrix format provides a snapshot of financial flows for a given period.

**Explanatory notes for tables D.1, D.2, and D.3.** Domestic debt includes credit market funds borrowed by U.S. entities from both domestic and foreign sources, while foreign debt represents amounts borrowed by foreign financial and nonfinancial entities in U.S. markets only. Financial sectors consist of government-sponsored enterprises, federally related mortgage pools, and private financial institutions. Credit market debt consists of debt securities, mortgages, bank loans, commercial paper, consumer credit, U.S. government loans, and other loans and advances; it excludes trade debt, loans for the purpose of carrying securities, and funds raised from equity sources.

Growth rates in table D.1 are calculated by dividing seasonally adjusted flows from table D.2 by seasonally adjusted levels at the end of the previous period from table D.3. Seasonally adjusted levels in flow of funds statistics are derived by carrying forward year-end levels by seasonally adjusted flows. Growth rates calculated from changes in unadjusted levels printed in table L.2 can differ from those in table D.1.

**Relation of Flows to Outstandings.** Estimates of financial assets and liabilities outstanding are linked to data on flows. However, figures on outstandings contain discontinuities or breaks in series that could affect analysis of particular relationships over time. Specifically, outstandings in the flow of funds accounts are related to the flows in the following way:

$$\text{Outstanding}_t = \text{Outstanding}_{t-1} + \text{Flow}_t + \text{Discontinuity}_t$$

where "t" is the time period.

Discontinuities result from changes in valuation, breaks in source data, and changes in definitions. For most series, the value of the discontinuity is zero for nearly all time periods. However, in a few instances, the discontinuity is nonzero for almost all time periods, or is quite large in a particular quarter, such as a period when there is a sharp increase or decrease in equity prices or a major break in source data.

The discontinuities in the series can distort estimated rates of growth in assets and liabilities between periods. In order to minimize these distortions, percentage changes in assets and liabilities in flow of funds releases should be calculated in the following manner:

$$\text{Percentage change}_t = (\text{Flow}_t / \text{Outstanding}_{t-1}) * 100$$

**Preliminary Estimates.** Figures shown for the most recent quarter in these tables are based on preliminary and incomplete information. A summary list of the principal sources of information available when the latest quarter's data were compiled is provided in a table following this introduction. The distinction between "available" data and "missing" data is not between final and preliminary versions of data, but rather between those source estimates that are fully ready when the latest quarterly publication is compiled and those that are not yet completed. However, the items that are shown as available are, in general, also preliminary in the sense that they are subject to revision by source agencies.

**Margins of Uncertainty.** Flow of funds statistics are subject to uncertainties resulting from measurement errors in source data, incompatibilities among data from different sources, potential revisions in both financial and nonfinancial series, and incomplete data in parts of the accounts. The size of these uncertainties cannot be quantified in precise statistical terms, but allowance for them is explicitly made throughout the accounts by the inclusion of "discrepancies" for various sectors and instrument types. A discrepancy for a sector is the difference between its measured sources of funds and its measured uses of funds. For an instrument category, a discrepancy is the difference between measured funds borrowed through the financial instrument and measured funds lent through that instrument. The size of such discrepancies relative to the main asset or liability components is one indication of the quality of source data, especially on an annual basis. For quarterly data, differences in seasonal adjustment procedures for financial and nonfinancial components of the accounts sometimes result in discrepancies that cancel in annual data.

**Availability of Data.** Flow of funds statistics are updated about nine weeks following the end of a quarter. This publication--the Z.1 release--is available from the Board's Publications Services. Flow of funds data are also available electronically through the Internet at the following location:

<http://www.bog.frb.fed.us/releases/>

and through the Economic Bulletin Board of the Department of Commerce.

Data from the flow of funds accounts are also available on 3-1/2 inch diskettes. The diskettes contain quarterly data beginning in 1952, organized in files that correspond to the tables published in this release. One diskette contains the seasonally adjusted

flows, a second diskette contains unadjusted flows, and a third diskette contains quarterly outstandings, which are not seasonally adjusted. In addition, the third diskette contains quarterly data for the debt tables (tables D.1, D.2, and D.3) and available balance sheet tables, as well as monthly data from January 1955 onward for the monthly debt aggregate published in the Board's H.6 statistical release, "Money Stock, Liquid Assets, and Debt Measures."

**Subscription Information.** The Federal Reserve Board charges for subscriptions to all statistical releases. Inquiries for releases or the diskettes should be directed to:
