

# **Treatment Episode Data Set (TEDS) 2002**

**Discharges from Substance Abuse Treatment Services**

DEPARTMENT OF HEALTH AND HUMAN SERVICES  
Substance Abuse and Mental Health Services Administration  
Office of Applied Studies

## **ACKNOWLEDGMENTS**

This publication was developed for the Substance Abuse and Mental Health Services Administration (SAMHSA), Office of Applied Studies (OAS), by Leigh Henderson (Project Director) of Synectics for Management Decisions, Inc., Arlington, Virginia, under Contract No. 283-02-9026. Elizabeth Walter at Synectics for Management Decisions, Inc., reviewed the manuscript. The report benefitted greatly from reviews by OAS staff Cathie Alderks, Anita Gadzuk, and Deborah Trunzo (Project Officer).

## **PUBLIC DOMAIN NOTICE**

All material appearing in this report is in the public domain and may be reproduced or copied without permission from the Substance Abuse and Mental Health Services Administration (SAMHSA). However, this publication may *not* be reproduced or distributed for a fee without the specific, written authorization of the Office of Communications, Substance Abuse and Mental Health Services Administration, U.S. Department of Health and Human Services. Citation of the source is appreciated. Suggested citation:

### **Discharge Data Description and Data Overview for All Types of Service: 2002**

2.1a	Year 2002 admissions and discharges, by type of service, primary substance, sex, age, and race/ethnicity: TEDS 2002. Number .....	22
2.1b	Year 2002 admissions and discharges, by type of service, primary substance, sex, age, and race/ethnicity: TEDS 2002. Percent distribution .....	23
2.2a	Year 2002 discharges, by State and year of admission: TEDS 2002. Number .....	24
2.2b	Year 2002 discharges, by State and year of admission: TEDS 2002. Percent distribution .....	25
2.3	Year 2002 discharges, by State and type of service: TEDS 2002. Number and percent distribution .....	26
2.4	Year 2002 discharges, by State and reason for discharge: TEDS 2002. Number and percent distribution .....	27
2.5	Year 2002 discharges, by type of service and reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	28
2.6	Year 2002 discharges from methadone treatment, by type of service, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	29
2.7a	Odds ratios for client characteristics associated with treatment completion or transfer to further treatment: TEDS 2002. Univariate logistic regression .....	30
2.7b	Odds ratios for client characteristics associated with treatment completion or transfer to further treatment: TEDS 2002. Multiple conditional logistic regression .....	31

### **Outpatient Treatment Discharges**

3.1	Year 2002 discharges from outpatient treatment by State, according to reason for discharge: TEDS 2002. Number and percent distribution .....	40
3.2	Year 2002 discharges from outpatient treatment by sex, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	41

## LIST OF TABLES (CONTINUED)

[Click on topic to go to page](#)

3.3	Year 2002 discharges from outpatient treatment by age at admission, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	42
3.4	Year 2002 discharges from outpatient treatment by race/ethnicity, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	43
3.5	Year 2002 discharges from outpatient treatment by primary substance at admission, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	44
3.6	Year 2002 discharges from outpatient treatment by frequency of use, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	45
3.7	Year 2002 discharges from outpatient treatment by age at first use, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	46
3.8	Year 2002 discharges from outpatient treatment by number of prior treatment episodes, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	47
3.9	Year 2002 discharges from outpatient treatment by treatment referral source, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	48
3.10	Year 2002 discharges from outpatient treatment by employment status (aged 16 and over), according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	49
3.11	Year 2002 discharges from outpatient treatment by education (aged 18 and over), according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	50

### **Intensive Outpatient Treatment Discharges**

4.1	Year 2002 discharges from intensive outpatient treatment by State, according to reason for discharge: TEDS 2002. Number and percent distribution .....	58
-----	---	----

## LIST OF TABLES (CONTINUED)

[Click on topic to go to page](#)

4.2	Year 2002 discharges from intensive outpatient treatment by sex, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	59
4.3	Year 2002 discharges from intensive outpatient treatment by age at admission, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	60
4.4	Year 2002 discharges from intensive outpatient treatment by race/ethnicity, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	61
4.5	Year 2002 discharges from intensive outpatient treatment by primary substance at admission, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	62
4.6	Year 2002 discharges from intensive outpatient treatment by frequency of use, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	63
4.7	Year 2002 discharges from intensive outpatient treatment by age at first use, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	64
4.8	Year 2002 discharges from intensive outpatient treatment by number of prior treatment episodes, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	65
4.9	Year 2002 discharges from intensive outpatient treatment by treatment referral source, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	66
4.10	Year 2002 discharges from intensive outpatient treatment by employment status (aged 16 and over), according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	67
4.11	Year 2002 discharges from intensive outpatient treatment by education (aged 18 and over), according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	68

### Short-Term Residential Treatment Discharges

5.1	Year 2002 discharges from short-term residential treatment by State, according to reason for discharge: TEDS 2002. Number and percent distribution .....	76
5.2	Year 2002 discharges from short-term residential treatment by sex, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	77
5.3	Year 2002 discharges from short-term residential treatment by age at admission, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	78
5.4	Year 2002 discharges from short-term residential treatment by race/ethnicity, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	79
5.5	Year 2002 discharges from short-term residential treatment by primary substance at admission, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	80
5.6	Year 2002 discharges from short-term residential treatment by frequency of use, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	81
5.7	Year 2002 discharges from short-term residential treatment by age at first use, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	82
5.8	Year 2002 discharges from short-term residential treatment by number of prior treatment episodes, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	83
5.9	Year 2002 discharges from short-term residential treatment by treatment referral source, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	84
5.10	Year 2002 discharges from short-term residential treatment by employment status (aged 16 and over), according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	85
5.11	Year 2002 discharges from short-term residential treatment by education (aged 18 and over), according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	86

### Long-Term Residential Treatment Discharges

6.1	Year 2002 discharges from long-term residential treatment by State, according to reason for discharge: TEDS 2002. Number and percent distribution .....	94
6.2	Year 2002 discharges from long-term residential treatment by sex, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	95
6.3	Year 2002 discharges from long-term residential treatment by age at admission, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	96
6.4	Year 2002 discharges from long-term residential treatment by race/ethnicity, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	97
6.5	Year 2002 discharges from long-term residential treatment by primary substance at admission, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	98
6.6	Year 2002 discharges from long-term residential treatment by frequency of use, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	99
6.7	Year 2002 discharges from long-term residential treatment by age at first use, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	100
6.8	Year 2002 discharges from long-term residential treatment by number of prior treatment episodes, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	101
6.9	Year 2002 discharges from long-term residential treatment by treatment referral source, according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	102
6.10	Year 2002 discharges from long-term residential treatment by employment status (aged 16 and over), according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	103
6.11	Year 2002 discharges from long-term residential treatment by education (aged 18 and over), according to reason for discharge: TEDS 2002. Number, percent distribution, and median and average lengths of stay .....	104

### Appendix C

C.1	All discharges: Average length of stay in treatment (mean), maximum length of stay, and standard deviation of the mean, by type of service: TEDS 2002 .....	188
C.2	OUTPATIENT treatment discharges: Average length of stay in treatment (mean), maximum length of stay, and standard deviation of the mean: TEDS 2002 .....	189
C.3	INTENSIVE OUTPATIENT treatment discharges: Average length of stay in treatment (mean), maximum length of stay, and standard deviation of the mean: TEDS 2002 .....	191
C.4	SHORT-TERM RESIDENTIAL treatment discharges: Average length of stay in treatment (mean), maximum length of stay, and standard deviation of the mean: TEDS 2002 .....	194
C.5	LONG-TERM RESIDENTIAL treatment discharges: Average length of stay in treatment (mean), maximum length of stay, and standard deviation of the mean: TEDS 2002 .....	197
C.6	HOSPITAL RESIDENTIAL treatment discharges: Average length of stay in treatment (mean), maximum length of stay, and standard deviation of the mean: TEDS 2002 .....	200
C.7	DETOXIFICATION discharges: Average length of stay in treatment (mean), maximum length of stay, and standard deviation of the mean: TEDS 2002 .....	203
C.8	METHADONE OUTPATIENT treatment discharges: Average length of stay in treatment (mean), maximum length of stay, and standard deviation of the mean, by type of service: TEDS 2002 .....	207
C.9	METHADONE DETOXIFICATION discharges: Average length of stay in treatment (mean), maximum length of stay, and standard deviation of the mean, by type of service: TEDS 2002 .....	211

# LIST OF FIGURES

[Click on topic to go to page](#)

## **Discharge Data Description and Data Overview for All Types of Service: 2002**

2.1	Median and average (mean) lengths of stay for intensive outpatient discharges .....	9
2.2	Type of service: TEDS Year 2002 Discharges .....	11
2.3	Reason for discharge, by type of service: TEDS 2002 .....	12
2.4	Median length of stay, by reason for discharge and type of service: TEDS 2002 .....	13
2.5	Average length of stay, by reason for discharge and type of service: TEDS 2002 .....	14
2.6	Odds ratios for client characteristics associated with treatment completion or transfer to further treatment, by type of service: TEDS 2002 Multiple conditional logistic regression .....	20

## **Outpatient Treatment Discharges**

3.1	Reason for discharge from outpatient treatment: TEDS 2002 .....	33
3.2	Median and average lengths of stay in outpatient treatment, by reason for discharge: TEDS 2002 .....	34
3.3	Outpatient treatment completion and transfer to further treatment, by sex: TEDS 2002 .....	35
3.4	Outpatient treatment completion and transfer to further treatment, by age at admission: TEDS 2002 .....	35
3.5	Outpatient treatment completion and transfer to further treatment, by race/ethnicity: TEDS 2002 .....	36
3.6	Outpatient treatment completion and transfer to further treatment, by primary substance: TEDS 2002 .....	36
3.7	Outpatient treatment completion and transfer to further treatment, by frequency of substance use: TEDS 2002 .....	37
3.8	Outpatient treatment completion and transfer to further treatment, by age at first use: TEDS 2002 .....	37
3.9	Outpatient treatment completion and transfer to further treatment, by number of prior treatment episodes: TEDS 2002 .....	38
3.10	Outpatient treatment completion and transfer to further treatment, by treatment referral source: TEDS 2002 .....	38

## LIST OF FIGURES (CONTINUED)

[Click on topic to go to page](#)

3.11	Outpatient treatment completion and transfer to further treatment, by employment status: TEDS 2002 .....	39
3.12	Outpatient treatment completion and transfer to further treatment, by years of education: TEDS 2002 .....	39

### **Intensive Outpatient Treatment Discharges**

4.1	Reason for discharge from intensive outpatient treatment: TEDS 2002 .....	51
4.2	Median and average lengths of stay in intensive outpatient treatment, by reason for discharge: TEDS 2002 .....	52
4.3	Intensive outpatient treatment completion and transfer to further treatment, by sex: TEDS 2002 .....	53
4.4	Intensive outpatient treatment completion and transfer to further treatment, by age at admission: TEDS 2002 .....	53
4.5	Intensive outpatient treatment completion and transfer to further treatment, by race/ethnicity: TEDS 2002 .....	54
4.6	Intensive outpatient treatment completion and transfer to further treatment, by primary substance: TEDS 2002 .....	54
4.7	Intensive outpatient treatment completion and transfer to further treatment, by frequency of substance use: TEDS 2002 .....	55
4.8	Intensive outpatient treatment completion and transfer to further treatment, by age at first use: TEDS 2002 .....	55
4.9	Intensive outpatient treatment completion and transfer to further treatment, by number of prior treatment episodes: TEDS 2002 .....	56
4.10	Intensive outpatient treatment completion and transfer to further treatment, by treatment referral source: TEDS 2002 .....	56

10.12 Methadone detoxification completion and transfer to further treatment, by years of education: TEDS 2002 .....	165

## HIGHLIGHTS

This report presents results from the Treatment Episode Data Set (TEDS) for clients discharged from substance abuse treatment in 2002. The report provides information on treatment completion, length of stay in treatment, and demographic and substance abuse characteristics of almost 800,000 discharges from alcohol or drug treatment in facilities that report to individual State administrative data systems.

The TEDS Discharge Data System was designed to enable TEDS to collect information on entire treatment episodes. States are asked to submit data for all discharges from substance abuse treatment. Discharge data, when linked to admissions data, represent treatment episodes that enable analyses of questions that cannot be answered with admissions data alone (e.g., the proportion of discharges that completed treatment and the average length of stay of treatment completers).

TEDS is an admission-based system, and TEDS admissions do not represent individuals. Thus, for example, an individual admitted to treatment twice within a calendar year would be counted as two admissions.

TEDS does not include all admissions to substance abuse treatment. It includes facilities that are licensed or certified by the State substance abuse agency to provide substance abuse treatment (or are administratively tracked for other reasons). In general, facilities reporting TEDS data are those that receive State alcohol and/or drug agency funds (including Federal Block Grant funds) for the provision of alcohol and/or drug treatment services.

- 
- A total of 792,513 records for clients discharged in Year 2002 were submitted by 23 States. Ninety-seven percent of these records (n = 765,705) could be linked to a TEDS admission record from 1999, 2000, 2001, or 2002 [Tables 2.2a and 2.2b].
  - The primary substance reported for 42 percent of all Year 2002 linked discharges was alcohol. Twenty percent reported opiates, 16 percent reported marijuana, 14 percent reported cocaine, and 6 percent reported stimulants [Tables 2.1a and 2.1b].
  - Forty percent of Year 2002 discharges were from outpatient treatment, 25 percent were from detoxification, 12 percent were from intensive outpatient treatment, 8 percent each were from short-term residential treatment and long-term residential treatment, 6 percent were from methadone treatment, and 1 percent were from hospital residential treatment [Table 2.3 and Figure 2.2].
  - Among the 45,173 methadone discharges that reported reason for discharge, 51 percent were from outpatient treatment, 46 percent were from detoxification, 2 percent from long-term residential treatment, and less than 1 percent each from short-term residential and hospital residential treatment [Table 2.6].

## Treatment Completion

- Treatment was completed by 41 percent of the Year 2002 discharges. Nine percent of discharges were transferred to further treatment, 27 percent dropped out of treatment, 16 percent had treatment terminated by the facility, 1 percent had treatment terminated because of incarceration, less than 1 percent died, 5 percent failed to complete treatment for other reasons, and the reason for discharge was unknown for 2 percent of discharges [Table 2.4].
- The treatment completion rate was highest among discharges from short-term residential and hospital residential treatment (65 percent and 62 percent, respectively), and from detoxification (56 percent). Completion rates were lower in longer-term and less structured settings, at 36 percent for intensive outpatient treatment, 35 percent for outpatient treatment, and 33 percent for long-term residential treatment. The completion rate was lowest (14 percent) among discharges from methadone treatment [Table 2.5 and Figure 2.3].
- The treatment completion rate for discharges from methadone treatment was 9 percent among discharges from methadone outpatient treatment and 18 percent among discharges from methadone detoxification. The completion rate for methadone clients was higher among discharges from more structured settings, at 47 percent for hospital residential treatment, 45 percent for short-term residential treatment, and 25 percent for long-term residential treatment [Table 2.6].

## Median Length of Stay (LOS)

- Among all non-methadone discharges, the median LOS was greatest for discharges from outpatient treatment (52 days), followed by intensive outpatient treatment (42 days), and long-term residential treatment (33 days). The median LOS for discharges from short-term residential treatment was 21 days; from hospital residential treatment, 10 days; and from detoxification, 3 days [Table 2.5].
- Among non-methadone treatment completers, the median LOS was greatest in outpatient treatment (91 days), followed by long-term residential treatment (71 days) and intensive outpatient treatment (52 days). The median LOS for treatment completers in short-term residential treatment was 24 days; for hospital residential treatment, 14 days; and for detoxification, 4 days [Table 2.5 and Figure 2.4].
- Among all methadone discharges, the median LOS was 20 days. It was longest (79 days) among methadone outpatient discharges. The median LOS was 15 days among methadone detoxification discharges, and was between 8 days and 34 days for methadone discharges from the other service types [Table 2.6].
- Among methadone discharges completing treatment, the median LOS was 20 days. It was longest (113 days) among methadone outpatient completers. The median LOS was 20 days among methadone detoxification completers, and was between 10 days and 75 days for methadone completers from the other service types [Table 2.6].

## Client Characteristics Associated with Treatment Completion or Transfer to Further Treatment

- Both treatment completion and transfer to further substance abuse treatment represent positive conclusions to a treatment episode.

To examine the client characteristics associated with treatment completion or transfer to further treatment, univariate logistic regression was conducted for each service type, and for all service types combined, to test whether the client characteristic was related to completion of treatment or transfer to further treatment for that service type. Next, a multivariate conditional logistic regression model was used to identify, for each service type and for all service types combined, client characteristics that remained associated with treatment completion or transfer to further treatment when controlled for the other client characteristics [footnote, pg 16].

For discharges from all service types combined, all client characteristics except frequency of use of the primary substance were associated in univariate analysis with treatment completion or transfer to further treatment. When the multivariate model was computed, all of the client characteristics remained significantly associated with a higher rate of treatment completion or transfer to further treatment, although the association was weaker than in the univariate regression for most variables [Tables 2.7a and 2.7b and Figure 2.6].

Results of the multivariate analysis are presented below:

- Discharges with alcohol (vs. drugs) as the primary substance were 66 percent more likely to complete treatment or transfer to further treatment.

- Male discharges (vs. female) were 20 percent more likely to complete treatment or transfer to further treatment.
- Discharges aged 30 years and older (vs. less than 30 years) were 7 percent more likely to complete treatment or transfer to further treatment.
- Discharges who were non-Hispanic White (vs. other racial/ethnic groups) were 28 percent more likely to complete treatment or transfer to further treatment.
- Discharges who were employed full time or part time (vs. those who were unemployed or not in the labor force) were 16 percent more likely to complete treatment or transfer to further treatment.
- Discharges with 12 years or more of education (vs. those with less) were 19 percent more likely to complete treatment or transfer to further treatment.
- Discharges referred to treatment through the criminal justice system (vs. those referred to treatment by other sources) were 7 percent more likely to complete treatment or transfer to further treatment.
- Discharges who were 17 years of age or older at first use of the primary substance (vs. those who were younger) were 23 percent more likely to complete treatment or transfer to further treatment.
- The use of alcohol rather than drugs as a primary substance was a significant predictor in the multivariate model for all service types.<sup>1</sup> Discharges reporting alcohol as their primary substance were more likely than discharges reporting drugs as their primary substance to

---

<sup>1</sup> Alcohol vs drugs was not included in the logistic regression analysis of methadone outpatient treatment or methadone detoxification services, as 91 percent and 98 percent, respectively, of discharges from these service types reported their primary substance as opiates.

complete treatment or transfer to further treatment by factors ranging from 19 percent (for long-term residential discharges) to 54 percent (for short-term residential discharges).

- Employment (full time or part time) vs not being employed was also a consistent predictor of treatment completion or transfer to further treatment for all service types except methadone outpatient treatment and methadone detoxification. Discharges who were employed were more likely to complete treatment or transfer to further treatment by factors ranging from 6 percent for detoxification to 55 percent for short-term residential and long-term residential treatment.
- Similarly, being non-Hispanic White, referred to treatment through the criminal justice system, first using the primary substance at an older age (17 years or more), and having 12 years or more of education were all predictors of treatment completion or transfer to further treatment in five of the eight service types [see Table 2.7b].
- Being male and being older (30 years and older), although significant in most of the univariate analyses, were significant as predictors of treatment completion or transfer to further treatment in the multivariate model for only two service types each (outpatient and intensive outpatient for males, and short-term residential treatment and detoxification for age 30 and older).
- Having been in treatment previously was significantly associated with treatment completion or transfer to further treatment for intensive outpatient, short-term residential, and long-term residential treatment. For outpatient and methadone outpatient treatment, and methadone detoxification, however, discharges who had not been in treatment before were more likely to complete treatment or transfer to further treatment than were those who had been in treatment previously.

# CHAPTER 1

## DESCRIPTION OF THE TREATMENT EPISODE DATA SET (TEDS)

### Introduction

This report presents results from the Treatment Episode Data Set (TEDS) for clients discharged from substance abuse treatment in 2002. The report provides information on treatment completion, length of stay in treatment, and demographic and substance abuse characteristics of approximately 800,000 discharges from alcohol or drug treatment in facilities that report to individual State administrative data systems. The Office of Applied Studies (OAS), Substance Abuse and Mental Health Services Administration (SAMHSA), coordinates and manages collection of TEDS data from the States. (Additional information on TEDS, its history, and its relationship to SAMHSA's other data collection activities can be found in Appendix A.)

The TEDS system is comprised of two major components, the Admissions Data Set and the Discharge Data Set. The TEDS Admissions Data Set is an established program that has been operational for over 10 years. It includes data on treatment admissions that are routinely collected by States to monitor their individual substance abuse treatment systems. The TEDS Discharge Data Set is relatively new, with the first data reported in Year 2000. For both data sets, selected data items from the individual State data files are converted to a standardized format consistent across States. These standardized data constitute TEDS.

The TEDS Admissions Data Set consists of a Minimum Data Set collected by all States, and a Supplemental Data Set collected by some States. The Minimum Data Set consists of 19 items that include:

- Demographic information
- Primary, secondary, and tertiary substances and their route of administration, frequency of use, and age at first use
- Source of referral to treatment
- Number of prior treatment episodes
- Service type, including planned use of methadone

The Supplemental Data Set includes 15 items that include psychiatric, social, and economic measures.

The TEDS Discharge Data Set was designed to enable TEDS to collect information on entire treatment episodes. States are asked to submit data for all discharges from substance abuse treatment. Discharge data, when linked to admissions data, represent treatment episodes that enable analyses of questions that cannot be answered with admissions data alone, for example, the proportion of discharges that completed treatment and the average length of stay of treatment completers.

A total of 23 States submitted complete discharge data for Year 2002; therefore, the data presented in this chapter do not represent all discharges in all States.

Items on the discharge record include:

- Type of service at discharge
- Date of discharge and/or date of last contact
- Reason for discharge or discontinuation of service

Definitions and classifications used in the Admissions Minimum and Discharge Data Sets are detailed in Appendix B.

### **Limitations of TEDS**

TEDS, while comprising a significant proportion of all admissions to substance abuse treatment, does not include all such admissions. TEDS is a compilation of facility data from State administrative systems. The scope of facilities included in TEDS is affected by differences in State licensure, certification, accreditation, and disbursement of public funds. For example, some State substance abuse agencies regulate private facilities and individual practitioners, while others do not. In some States, hospital-based substance abuse treatment facilities are not licensed through the State substance abuse agency. Some State substance abuse agencies track treatment in correctional facilities (State prisons and local jails), while others do not.

In general, facilities reporting TEDS data receive State alcohol and/or drug agency funds (including Federal Block Grant funds) for the provision of alcohol and/or drug treatment services. Most States are able to report all admissions to all eligible facilities, although some report only admissions financed by public funds. States may report data from facilities that do not receive public funds, but generally do not because of the difficulty in obtaining data from these facilities. TEDS generally does not include data on facilities operated by Federal agencies, including the Bureau of Prisons, the Department of Defense, and the Department of Veterans Affairs. However, some facilities operated by the Indian Health Service are included.

The primary goal of TEDS is to monitor the characteristics of treatment episodes for substance abusers. Implicit in the concept of treatment is a planned, continuing treatment regimen. Thus TEDS does not include early intervention programs that are considered to be prevention

programs. Crisis intervention facilities such as sobering-up stations and hospital emergency departments generally are not included in TEDS.

TEDS is an exceptionally large and powerful data set. Like all data sets, however, care must be taken that interpretation does not extend beyond the limitations of the data. Limitations fall into two broad categories: those related to the scope of the data collection system, and those related to the difficulties of aggregating data from highly diverse State data collection systems.

Limitations to be kept in mind while analyzing TEDS data include:

- TEDS is an admission-based system, and therefore TEDS admissions do not represent individuals. For example, an individual admitted to treatment twice within a calendar year would be counted as two admissions.
- TEDS attempts to enumerate treatment episodes by distinguishing the initial admission of a client from his/her subsequent transfer to a different service type (e.g., from residential treatment to outpatient) within a single continuous treatment episode. However, States differ greatly in their ability to identify transfers; some can distinguish transfers within providers but not across providers. Some admission records in fact may represent transfers, and therefore the number of admissions reported probably overestimates the number of treatment episodes.
- The primary, secondary, and tertiary substances of abuse reported to TEDS are those substances that led to the treatment episode, and not necessarily a complete enumeration of all drugs used at the time of admission.
- States continually review the quality of their data processing. When systematic errors are identified, States may revise or replace historical TEDS data files. While this process represents an improvement in the data sys-

tem, the historical statistics in this report will differ slightly from those in earlier reports.

## **Interpretation of the Data**

Considerations specific to this report include:

- This report includes records for discharges in calendar year 2002 that were received and processed by SAMHSA through August 4, 2004. Discharge records that could be linked to their original admission records (initial admission or transfer admission) in 1999, 2000, 2001, or 2002 are included in the analysis. Records for codependents are excluded.
- SAMHSA, in reporting national-level data, must balance timeliness of reporting and completeness of the data set. This can result in a time lag in the publication of annual data because preparation of the report is delayed until nearly all States have completed their data submission for that year.
- States rely on individual facilities to report in a timely manner so they can in turn report data to SAMHSA at regular intervals. Records from facilities that report late to the States may appear in a later data submission to SAMHSA. Thus the number of records reported for 2002 may increase as submissions of 2002 data continue. However, additional submissions are unlikely to have a significant effect on the percentage distributions that are the basis of this report.
- Discharge records linked to both new admissions and transfer admissions to further treatment in another facility, clinic, or program have been included.
- Records with partially complete data have been retained. Where records have missing or invalid data for a specific variable, those records are excluded from tabulations of that variable. The total number of discharges on

which a percentage distribution is based is reported in each table.

- Opiates include heroin (89 percent), non-prescription use of methadone (less than 1 percent), and other opiates and synthetics (e.g., codeine, hydrocodone, hydromorphone, meperidine, morphine, opium, oxycodone, pentazocine, propoxyphene, and any other drug with morphine-like effects; 11 percent).
- Stimulants include methamphetamine, amphetamine, and other stimulants, but are primarily methamphetamine. Combined methamphetamine/amphetamine admissions constitute 98 percent of all stimulant admissions.

## **Organization of the Report**

Chapter 2 comprises general information about the linked admission/discharge records in the report.

Chapters 3 to 10 comprise a set of tables detailing reason for discharge for each of eight discrete service types. Each table represents an item in the TEDS Minimum Data Set (e.g., sex, age, race/ethnicity), and includes number, percent distribution, percent completion, and median and average (mean) lengths of stay in days.

Six service types exclude records where use of methadone was planned as part of treatment:

- Outpatient
- Intensive outpatient
- Short-term residential
- Long-term residential
- Hospital residential
- Detoxification

Records reporting planned use of methadone occurred mainly in two service types, and these are reported separately:

- Outpatient methadone
- Methadone detoxification

Appendix A details the background of the Treatment Episode Data Set.

Appendix B contains the definitions of the response categories for items in the Minimum and Discharge data sets.

Appendix C contains the average (mean) length of stay, the maximum length of stay, and standard deviation of the mean for all mean values shown in the report tables.

## CHAPTER 2

# DISCHARGE DATA DESCRIPTION AND DATA OVERVIEW FOR ALL TYPES OF SERVICE: 2002

Chapter 2 describes the discharge data and provides an overview of the 765,705 linked admission/discharge records for clients discharged in 2002 in 23 reporting States. Discharge data linked to admissions data represent treatment episodes that enable analyses of treatment completion and length of stay (LOS) in treatment.

### Data Definitions

#### *Reason for Discharge*

The different reasons for discharge are listed below. Because both treatment completion and transfer to further treatment represent positive conclusions to a treatment episode, the rates for treatment completion and transfer are combined in some of the analyses.

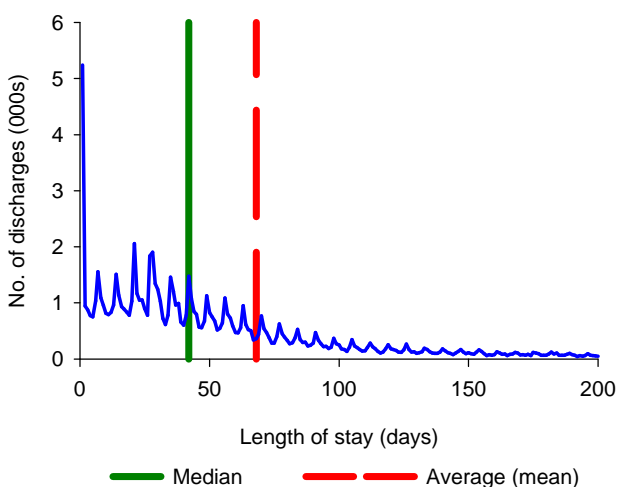

- *Completed treatment*—All parts of the treatment plan or program were completed.
- *Transferred to another substance abuse program or facility*—Client was transferred to another program, provider, or facility within an episode of treatment (the client may or may not have reported to that program).
- *Dropped out*—Client chose not to complete treatment program, with or without specific advice to continue treatment. Includes clients who drop out for unknown reason.
- *Terminated by facility*—Treatment terminated by action of facility.
- *Other*—Incarcerated (jail, prison, house confinement); death; other (e.g., moved, illness, hospitalization, or other reason out of client's control).

- *Unknown*—Client status at discharge not known (e.g., record incomplete or lost).

#### *Length of Stay (LOS) in Treatment*

The length of stay (LOS) in days was calculated for each record by subtracting the date of admission from the earlier of either the date of last contact (if available) or the date of discharge; stays of under one day were rounded to one day. Two measures of LOS are included: the median—the number of days at which half of all clients had been discharged—and the average (or mean). The average LOS was calculated by summing the number of days in treatment for all Year 2002

**Figure 2.1**  
**Median and average (mean) lengths of stay for intensive outpatient discharges**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

discharges and dividing the total by the number of discharges in 2002.

For each type of service, the average LOS was longer, often much longer, than the median LOS, indicating that the distribution of LOS was skewed [Figure 2.1]. In other words, while half of all clients had been discharged by the median LOS, some of the remainder had exceptionally long stays, ranging between 1,200 and 1,400 days for each type of service [Appendix C]. Many of these exceptionally long periods may be the result of administrative procedures in which records for clients who had dropped out of the system were periodically “purged.” In this case, if the date of last contact with these clients was unknown, the records were assigned a discharge date that represented the date of the administrative procedure.

### *Type of Service*

Data are presented for each of eight discrete types of service. Treatment completion rates and median and average LOS in treatment vary considerably among the service types [Tables 2.5 and 2.6]. For that reason, and because of the significant State-to-State variation in types of services available [Table 2.3], treatment completion rates and median and average LOS were not aggregated across service types.

Six service types exclude records where use of methadone was planned as part of treatment:

- *Outpatient*—Outpatient treatment services including individual, family and/or group services.
- *Intensive outpatient*—As a minimum, the client must receive treatment lasting two or more hours per day for three or more days per week.
- *Short-term residential*—Typically, 30 days or less of non-acute care in a setting with

treatment services for alcohol and other substance abuse and dependency.

- *Long-term residential*—Typically, more than 30 days of non-acute care in a setting with treatment services for alcohol and other substance abuse and dependency; this may include transitional living arrangements such as halfway houses.
- *Hospital residential*—24-hour per day medical care in a hospital facility in conjunction with treatment services for alcohol and other drug abuse and dependency. Does not include detoxification.
- *Detoxification*—
  - a) Free-standing residential—24-hour per day services in non-hospital setting providing for safe withdrawal and transition to ongoing treatment (91 percent of discharges from detoxification),
  - b) Ambulatory—Outpatient treatment services providing for safe withdrawal in an ambulatory setting (7 percent of discharges from detoxification),
  - c) Hospital—24-hour per day medical acute care services in hospital setting for detoxification for persons with severe medical complications associated with withdrawal (2 percent of discharges from detoxification).

Methadone treatment can occur in any service type [Table 2.6]. In 2002, 51 percent of discharges from methadone treatment were from an outpatient setting and 46 percent of discharges from methadone treatment were from detoxification. Data are presented separately for:

- *Outpatient methadone*
- *Methadone detoxification*

## Comparison of Discharge and Admission Data

Tables 2.1a and 2.1b present the distribution of key variables for all Year 2002 admissions, for Year 2002 admissions in the 23 States submitting usable discharge data, and for linked and non-linked Year 2002 discharge records in the 23 States reporting discharge data. These tables indicate that admission characteristics for the discharges submitted by the 23 States were similar to the admission characteristics in all States. As discharge records are added to the data set, the total numbers of admission and discharge records are expected to more closely approximate one another.

## State Data

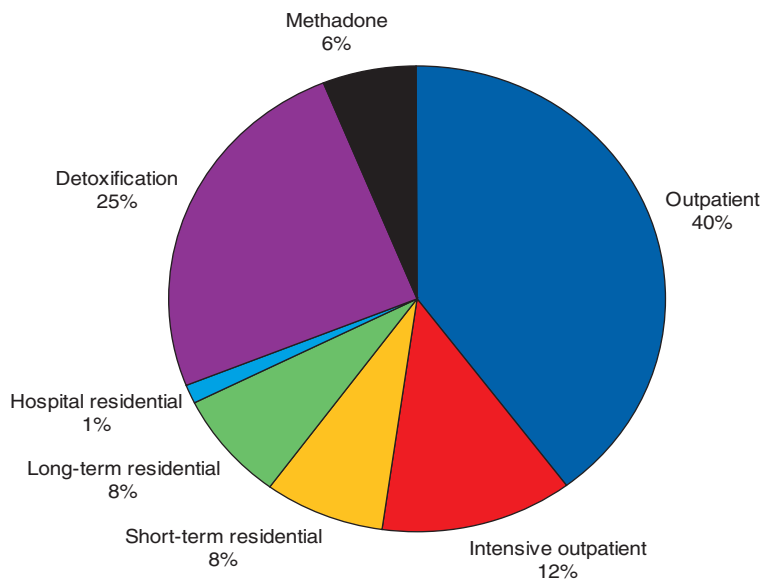

### Data Linkage

Tables 2.2a and 2.2b. A total of 792,513 records for clients discharged in Year 2002 were submitted by 23 States. Ninety-seven percent of these discharge records (n = 765,705) could be linked to a TEDS admission record from 1999, 2000, 2001, or 2002. No matching admission record was found in those years for 26,808 of the Year 2002 discharges.

### Type of Service

Table 2.3 presents type of service at discharge by State for the 23 States that submitted discharge data in 2002. There was considerable State-to-State variability in the combination of service types available and in the proportions of clients in each of these service types. Overall, 40 percent of discharges were from outpatient treat-

**Figure 2.2**  
**Type of service: TEDS Year 2002 Discharges**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

ment, 25 percent were from detoxification, 12 percent were from intensive outpatient treatment, 8 percent each were from long-term residential treatment and short-term residential treatment, 6 percent were from methadone treatment, and 1 percent were from hospital residential treatment [Figure 2.2].

### Reason for Discharge

Table 2.4 presents reason for discharge by State. Overall, 41 percent of the Year 2002 discharges completed treatment, 9 percent were transferred to further treatment, 27 percent dropped out of treatment, 16 percent had treatment terminated by the facility, 1 percent had treatment terminated because of incarceration, less than 1 percent died, 5 percent failed to complete treatment for other reasons, and the reason for discharge was unknown for 2 percent of discharges.

## Data Overview

### Primary Substance

Tables 2.1a and 2.1b. Almost half (42 percent) of all Year 2002 linked discharges reported primary alcohol abuse at admission. Twenty percent reported opiate abuse, 16 percent reported marijuana abuse, 14 percent reported cocaine abuse, and 6 percent reported stimulant abuse at admission.

### Reason for Discharge by Type of Service

Table 2.5 and Figure 2.3 present reason for discharge by type of service. Of the 748,075 Year 2002 discharges that reported a reason for discharge, 42 percent completed treatment and 9 percent transferred to another treatment program. More than one quarter (27 percent) dropped out of treatment, while the treatment of an additional

**Figure 2.3**  
Reason for discharge, by type of service: TEDS 2002

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

16 percent was terminated by the facility. Six percent left treatment for other reasons.

The treatment completion rate was greater than 50 percent among discharges from short-term and hospital residential/rehabilitation treatment (65 percent and 62 percent, respectively), and from detoxification (56 percent). Completion rates were lower in longer-term and less structured settings. For intensive outpatient treatment, the completion rate was 36 percent. For outpatient treatment, it was 35 percent, and for long-term residential/rehabilitation treatment, it was 33 percent.

The completion rate was lowest among discharges from methadone treatment (14 percent). Of those who were discharged from methadone treatment, 67 percent either dropped out or had their treatment terminated by the facility. Methadone treatment could be in any type of service; for more

detail on methadone discharges, see Table 2.6 and Chapters 9 and 10.

Admissions to hospital residential/rehabilitation facilities were the most likely to have been transferred to further substance abuse treatment (17 percent). In each of the other service types, 7 to 11 percent were transferred to further treatment.

*Median LOS by Reason for Discharge and Type of Service*

Table 2.5 and Figure 2.4. The median LOS among all non-methadone discharges was longest for discharges from outpatient treatment (52 days), followed by intensive outpatient treatment (42 days), and long-term residential treatment (33 days). The median LOS for all discharges from short-term residential treatment was 21 days; from hospital residential treatment, 10 days; and from detoxification, 3 days.

**Figure 2.4**  
**Median length of stay, by reason for discharge and type of service: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

The median LOS was longer for discharges who completed treatment than for those who transferred to further treatment, which was in turn longer than for those who did not complete treatment. Exceptions were detoxification and methadone treatment, where the median LOS for treatment completion, transfer to further treatment, and failure to complete treatment were similar.

The median LOS among non-methadone treatment completers was longest for outpatient treatment (91 days), followed by long-term residential treatment (71 days), and intensive outpatient treatment (52 days). The median LOS for treatment completers in short-term residential treatment was 24 days; for hospital residential treatment, 14 days; and for detoxification, 4 days.

For data on methadone discharges, see Table 2.6 and Chapters 9 and 10.

*Average LOS by Reason for Discharge and Type of Service*

Table 2.5 and Figure 2.5. The average LOS among all non-methadone discharges was longest for discharges from outpatient treatment (90 days), followed by intensive outpatient treatment (68 days), and long-term residential treatment (61 days). The average LOS for all discharges from hospital residential treatment was 35 days; from short-term residential treatment, 27 days; and from detoxification, 13 days.

The average LOS for treatment completers was generally longer than for clients who transferred to further treatment, similar to the pattern seen for median LOS. However, probably because of the administrative “purging” discussed above, the average LOS for clients who did not complete treatment was longer than for treatment completers for several types of service.

**Figure 2.5**  
Average length of stay, by reason for discharge and type of service: TEDS 2002

\* Methadone discharges may be any service type.

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

The average LOS among non-methadone treatment completers was longest for outpatient treatment (121 days), followed by long-term residential treatment (87 days), and intensive outpatient treatment (79 days). The average LOS for treatment completers in hospital residential treatment was 30 days; for short-term residential treatment, 28 days; and for detoxification, 11 days.

For data on methadone discharges, see Table 2.6 and Chapters 9 and 10.

### *Discharges from Methadone Treatment*

*Table 2.6.* There were 45,173 discharges where methadone use was planned at the time of admission and that could be linked to admission records from 1999 to 2002, and that reported reason for discharge. These records were limited to methadone treatment that began and ended within a maximum period of 4 years and, because methadone treatment can extend for a much longer period, may not be representative of all methadone discharges. Fifty-one percent of methadone discharges were from outpatient treatment (including both outpatient and intensive outpatient treatment), 46 percent from detoxification, 2 percent from long-term residential treatment, and less than 1 percent each from short-term residential and hospital residential treatment.

The treatment completion rate for discharges from methadone treatment was 14 percent overall, but varied by type of service. It was 9 percent among discharges from methadone outpatient treatment and 18 percent among discharges from methadone detoxification. The completion rate was higher among discharges from more structured settings, at 47 percent for hospital residential treatment, 45 percent for short-term residential treatment, and 25 percent for long-term residential treatment.

The median LOS for all clients discharged from methadone treatment was 20 days. It was longest

(79 days) among methadone outpatient discharges. The median LOS was 15 days among methadone detoxification discharges, and was between 8 days and 34 days for methadone discharges from the other service types. Overall, the median LOS for methadone discharges completing treatment was 20 days. It was longest (113 days) among methadone outpatient completers. The median LOS was 20 days among methadone detoxification completers, and was between 10 days and 75 days for methadone completers from the other service types.

The average LOS for all clients discharged from methadone treatment was 105 days. It was longest (175 days) among methadone outpatient discharges. The average LOS was 30 days among methadone detoxification discharges, and was between 24 days and 69 days for methadone discharges from the other service types. Overall, the average LOS for methadone discharges completing treatment was 91 days. It was longest (198 days) among methadone outpatient completers. The average LOS was 35 days among methadone detoxification completers, and was between 27 days and 83 days for methadone completers from the other service types.

### **Client Characteristics Associated with Treatment Completion or Transfer to Further Treatment**

The text in the following chapters presents data on treatment discharges according to reason for discharge. Two of the *Reason for discharge* categories, treatment completion and transfer to further treatment, represent positive conclusions to a treatment episode. The rates for treatment completion and transfer are often combined in the analyses in Chapters 3 to 10. A statistical analysis of the client characteristics associated with treatment completion or transfer to further treatment was conducted and is presented below.

Client characteristics associated with treatment completion or transfer to further treatment were

analyzed (for discharges from each service type and for discharges from all service types combined) using univariate and multivariate logistic regression.<sup>1</sup>

*Table 2.7a.* Univariate analysis demonstrated that, for discharges from outpatient, intensive outpatient, short-term residential, and long-term residential treatment, each client characteristic was significantly associated with treatment completion or transfer to further treatment. For the other service types, the majority of the client characteristics were significantly associated with

---

<sup>1</sup> To examine the client characteristics associated with substance abuse treatment completion or transfer to further treatment, the variables representing these characteristics were dichotomized (see Table 2.7a and 2.7b). Univariate logistic regression was conducted for each service type, and for all service types combined, to test whether the client characteristic was related to completion of treatment or transfer to further treatment for that service type. Logistic regression yields an odds ratio, i.e., the odds of one group completing treatment or transferring to further treatment over the odds of the other group completing treatment or transferring. For example, the odds ratio among all discharges combined for males completing treatment or transferring to further treatment versus females completing treatment or transferring is 1.265 (see Table 2.7a). This can be expressed as a percentage; i.e., males were 27 percent more likely than females to complete treatment or transfer to further treatment.

Many of the client characteristics are related to each other, and the univariate odds ratio can reflect that interrelatedness. For example, if both age and sex are related to treatment completion or transfer, and age is related to sex, then calculation of the univariate odds ratios for age and sex will effectively count some treatment completers twice (i.e., once in the age calculation and once in the sex calculation). To produce an odds ratio for age that is *independent* of (or *adjusted for*) that for sex, and vice versa, a multivariate conditional logistic regression model is used. In this analysis, for each service type and for all service types combined, client characteristics that were associated with treatment completion or transfer to further treatment at the significance level of  $p < 0.05$  were used in SAS software stepwise regression procedures (alpha=0.001 to enter or remove).

treatment completion or transfer to further treatment.

When all discharges combined were analyzed, all client characteristics except frequency of use of the primary substance were associated with treatment completion or transfer to further treatment. Among all discharges combined:

- Males were 27 percent more likely to complete treatment or transfer to further treatment than were females.
- Discharges who were age 30 and older (vs. those less than age 30) were 25 percent more likely to complete treatment or transfer to further treatment.
- Non-Hispanic Whites (vs. other racial/ethnic groups) were 40 percent more likely to complete treatment or transfer to further treatment.
- Discharges whose primary substance was alcohol (vs. drugs) were 86 percent more likely to complete treatment or transfer to further treatment.
- Those who began use of their primary substance at age 17 or older (vs. those whose use began at less than 17) were 9 percent more likely to complete treatment or transfer to further treatment.
- Those who had been in treatment before (vs. those who had never been in treatment before) were 5 percent more likely to complete treatment or transfer to further treatment.
- Clients referred to treatment through the criminal justice system (vs. those referred through other sources) were 7 percent more likely to complete treatment or transfer to further treatment.
- Clients who were employed full time or part time (vs. those who were unemployed or not in the labor force) were 36 percent more

likely to complete treatment or transfer to further treatment.

- Discharges with 12 or more years of education (vs. those with less than 12 years) were 38 percent more likely to complete treatment or transfer to further treatment.

*Table 2.7b and Figure 2.6.* For the multiple conditional logistic regression model, a different set of predictors of treatment completion or transfer to further treatment was evident for each of the different service types. A number of client characteristics that displayed significant univariate associations with treatment completion or transfer to further treatment were no longer significant when the other client characteristics in the model were taken into account. For example sex, which had been significantly associated with treatment completion or transfer to further treatment in short-term, long-term, and hospital residential treatment, was not significant when other client characteristics were included in the model. Age also lost significance as a predictor of treatment completion or transfer to further treatment in several service types.

Among all discharges combined, each of the client characteristics entered in the model remained significantly associated with treatment completion or transfer to further treatment. However, the association was weakened for most client characteristics when adjusted for the presence of the other client characteristics in the model.

- Alcohol (vs drugs) as the primary substance remained the client characteristic most strongly associated with treatment completion or transfer to further treatment, but its influence fell from 86 percent in the univariate model to 66 percent when controlled for the other client characteristics.
- The independent associations of sex, age, race/ethnicity, education, and employment status were also all weaker than their univariate associations.

- Males (vs. females) were 20 percent more likely to complete treatment or transfer, down from 27 percent
- Those who were age 30 and older (vs. those less than age 30) were 7 percent more likely to complete treatment or transfer, down from 25 percent
- Non-Hispanic Whites (vs. other racial/ethnic groups) were 28 percent more likely to complete treatment or transfer, down from 28 percent
- Discharges with 12 or more years of education (vs. those with less than 12 years) were 19 percent more likely to complete treatment or transfer, down from 38 percent
- Clients who were employed full time or part time (vs. those who were unemployed or not in the labor force) were 16 percent more likely to complete treatment or transfer, down from 16 percent
- Referral to treatment through the criminal justice system, which had a relatively weak univariate association with treatment completion or transfer, was little affected by adjustment, remaining at 7 percent.
- Older age at first use of the primary substance (age 17 or older vs. those whose use began at less than 17), on the other hand, increased from a univariate association of 9 percent to an adjusted association of 23 percent.

The use of alcohol rather than drugs as a primary substance was a significant predictor in the multivariate model for each service type.<sup>2</sup> Discharges reporting alcohol as their primary substance were

---

<sup>2</sup> Alcohol vs drugs was not included in the logistic regression analysis of methadone outpatient or methadone detoxification services, as 91 percent and 98 percent, respectively, of discharges from these service types reported their primary substance as opiates.

more likely to complete treatment or transfer to further treatment by factors ranging from 19 percent (for long-term residential discharges) to 54 percent (for short-term residential discharges).

Employment (full time or part time) was also a consistent predictor of treatment completion or transfer to further treatment for all service types except methadone outpatient and methadone detoxification. Discharges who were employed were more likely to complete treatment or transfer to further treatment by factors ranging from 6 percent for detoxification to 55 percent for short-term residential and long-term residential treatment.

Similarly, being non-Hispanic White, referred to treatment through the criminal justice system, first using the primary substance at an older age (17 years or more), and having 12 years or more of education were all predictors of treatment completion or transfer to further treatment in five of the eight service types [see Table 2.7b].

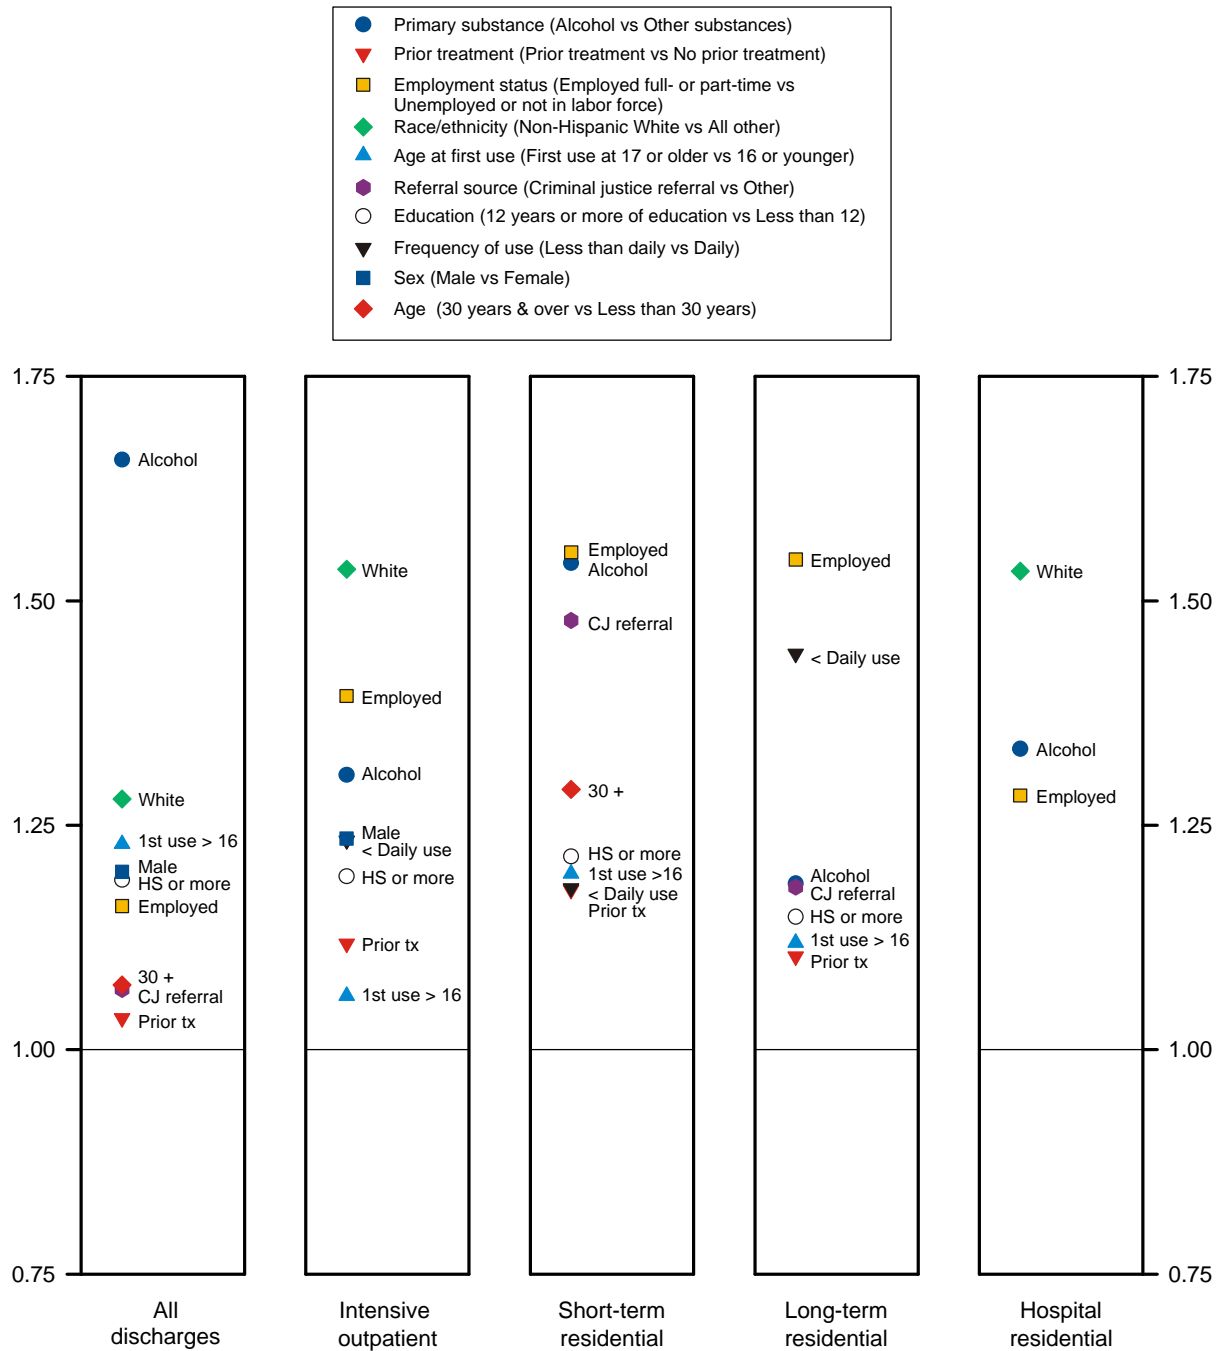

Being male and being older (30 years and over), although significant in most of the univariate analyses, were significant in the multivariate model for only two service types each (outpatient and intensive outpatient for males, and short-term residential treatment and detoxification for age 30 and older).

Having been in treatment previously was significantly associated with discharges from all service types combined, as well as those from intensive outpatient, short-term residential, and long-term residential treatment. For outpatient, methadone outpatient, and methadone detoxification, however, discharges who had not been in treatment before were more likely to complete treatment or transfer to further treatment.

## CHAPTER 3

### OUTPATIENT TREATMENT DISCHARGES: 2002

Chapter 3 presents data on the reasons for discharge and length of stay (LOS) in treatment for the 293,303 linked admission/discharge records of clients discharged from outpatient treatment in 2002. Outpatient treatment in this chapter includes outpatient care other than intensive outpatient treatment (Chapter 4), outpatient detoxification (Chapter 8), and outpatient methadone treatment (Chapter 9).

Table 3.1 presents reason for discharge by State. Overall, 101,845 (35 percent) of outpatient discharges completed treatment,

19,994 (7 percent) were transferred to further treatment, 78,003 (27 percent) dropped out of treatment, 67,284 (23 percent) had treatment terminated by the facility, and 26,177 (9 percent) failed to complete treatment for other reasons [Figure 3.1].

Figure 3.2, Table 2.5, and Appendix Table C.1. The median LOS for outpatient treatment was 52 days. The average (mean) LOS was longer, 90 days (standard deviation, 112). The average LOS was longer than the median LOS for all reasons for discharge, and in all sub-categories.

**Figure 3.1**  
**Reason for discharge from outpatient treatment: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

Clients who completed treatment remained in treatment longer than clients who did not complete treatment. Among treatment completers, median LOS was 91 days, and among clients transferred to further treatment, it was 37 days. Among clients who dropped out of treatment, the median LOS was 35 days; among those whose treatment was terminated by the facility, it was 19 days; and among those who failed to complete treatment for other reasons, the median LOS was 47 days.

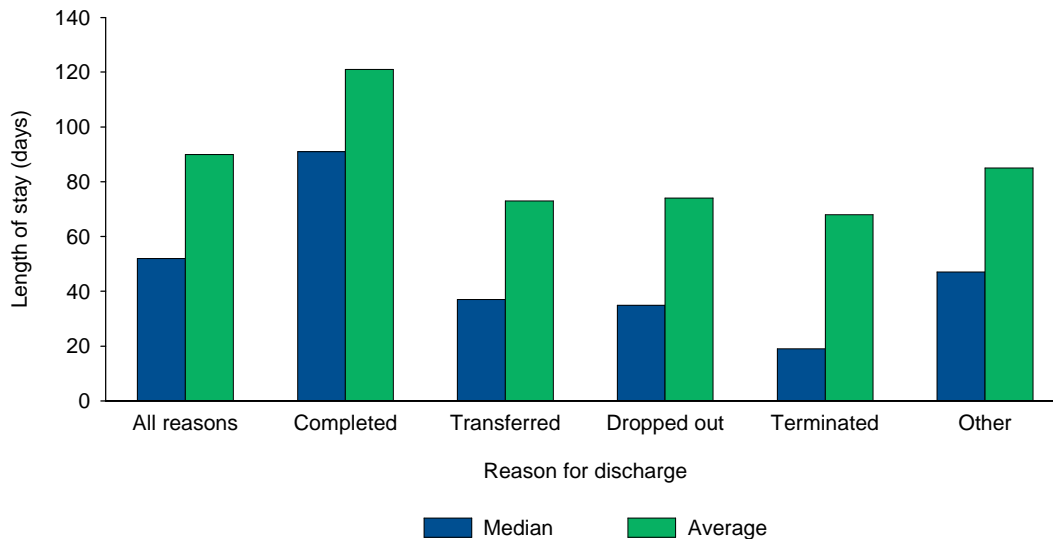

### Demographics

Tables 3.2-3.4. About three-quarters of clients discharged from outpatient treatment were male (74 percent). Most were 20 to 29 years of age and 30 to 39 years of age (28 percent each). Nineteen percent were 40 to 49 years

of age, and 17 percent were 15 to 19 years of age. Small proportions were less than 15 years of age or 50 years of age and over (3 percent and 6 percent, respectively).<sup>1</sup> Most clients discharged from outpatient treatment were non-Hispanic White (60 percent), while 28 percent were non-Hispanic Black, 8 percent were Hispanic, and 4 percent were of other racial/ethnic groups.

Table 3.2 and Figure 3.3. Men were more likely to complete outpatient treatment or to be transferred to further treatment (43 percent, combined) than were women (37 percent, combined). Among both men and women who completed outpatient treatment, the median LOS was 91 days.

**Figure 3.2**  
**Median and average lengths of stay in outpatient treatment, by reason for discharge:**

<sup>1</sup> Percentages sum to more than 100 percent because of rounding.

**Figure 3.3**  
**Outpatient treatment completion and transfer to further treatment, by sex: TEDS 2002**

**Figure 3.4**  
**Outpatient treatment completion and transfer to further treatment, by age at admission: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

*Table 3.3 and Figure 3.4.* Among clients discharged from outpatient treatment, the combined rate of completion or transfer to further treatment was greater for the oldest and youngest age groups than for the middle age groups. The rate was 46 percent among clients who were less than 15 years of age. It fell to 39 percent among those who were 30 to 39 years of age, then increased with age to 51 percent among the discharges who were 50 years of age and over.

The median LOS among outpatient treatment completers was longest (94 days) among those who were less than 15 years of age, but displayed no consistent pattern with age. The median LOS was between 86 days and 92 days for the other age groups.

*Table 3.4 and Figure 3.5.* Non-Hispanic Whites were more likely to either complete outpatient treatment or be transferred to further treatment (46 percent) than either

non-Hispanic Blacks or Hispanics (32 percent and 38 percent, respectively).

The median LOS among outpatient treatment completers was shortest (90 days) among non-Hispanic Whites and non-Hispanic Blacks and longest (97) days among Hispanics and racial/ethnic groups other than White, Black, or Hispanic.

### Primary Substance

*Table 3.5 and Figure 3.6.* Forty-four percent of clients discharged from outpatient treatment reported alcohol as their primary substance of abuse at admission. Marijuana was reported by 25 percent, cocaine by 13 percent, opiates by 8 percent, and stimulants by 6 percent.

Clients who reported alcohol as their primary substance had the highest combined rate of treatment completion or transfer to further treatment (50 percent). The combined rate was

**Figure 3.5**  
**Outpatient treatment completion and transfer to further treatment, by race/ethnicity: TEDS 2002**

**Figure 3.6**  
**Outpatient treatment completion and transfer to further treatment, by primary substance: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

lowest for clients who reported opiates as their primary substance (26 percent).

The median LOS among outpatient treatment completers was 91 days for those who reported alcohol, marijuana, or stimulants as their primary substance. Among those who reported opiates as their primary substances, the median LOS was 81 days. For those who reported cocaine, it was 84 days.

### Frequency of Use

*Table 3.6 and Figure 3.7.* Forty-one percent of outpatient discharges reported no use of their primary substance in the month before entering treatment, while 20 percent reported daily use in that period.

Among clients discharged from outpatient treatment, the combined completion or transfer rates declined as frequency of primary substance use in the month before entering

treatment increased. The rate was highest (50 percent) among those who reported no use, and declined to 26 percent among those who reported daily use.

The median LOS among outpatient treatment completers was shortest (79 days) among those who reported daily use of their primary substance. The median LOS was between 91 days and 97 days among those who reported less frequent use, but showed no consistent pattern.

### Age at First Use

*Table 3.7 and Figure 3.8.* More than half (60 percent) of outpatient discharges first used their primary substance by 16 years of age—16 percent at 12 years of age or less, 20 percent between 13 and 14 years of age, and 24 percent between 15 and 16 years of age. Eight percent did not begin use until they were over 25 years of age.

**Figure 3.7**  
**Outpatient treatment completion and transfer to further treatment, by frequency of substance use: TEDS 2002**

**Figure 3.8**  
**Outpatient treatment completion and transfer to further treatment, by age at first use: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

Among clients discharged from outpatient treatment, the combined rate of treatment completion or transfer to further treatment was lowest among the oldest and youngest age at first use groups. Among those whose substance use began at 25 years of age or over, the rate was 40 percent; among those whose use began at 12 years of age or less, the rate was lowest (35 percent). The rate was highest (48 percent) among those whose use began at 17 to 18 years of age.

The median LOS for outpatient treatment completers was longest among the youngest age at first use group, those whose use began at 12 years of age or less (96 days). The median LOS was shortest (86 days) among those who began substance use at 17 to 18 years of age and 19 to 20 years of age. The median LOS was between 89 days and 91 days among those in other age at first use categories.

**Prior Treatment**

*Table 3.8 and Figure 3.9.* Over half (51 percent) of outpatient treatment discharges had never been in treatment before, while 5 percent had been in treatment 5 or more times previously.

Among clients discharged from outpatient treatment, the combined rate of outpatient treatment completion or transfer to further treatment was highest (42 percent) among those with no prior treatment episodes. The rates displayed no consistent pattern with the number of prior treatment episodes, and ranged between 37 percent and 39 percent for the other categories. However, the proportion of those who completed treatment declined steadily from 36 percent among those who had never been in treatment before to 26 percent among those who had been in treatment 5 or more times. The rate of transfer to further treatment increased inversely, from 6

**Figure 3.9**  
**Outpatient treatment completion and transfer to further treatment, by number of prior treatment episodes: TEDS 2002**

**Figure 3.10**  
**Outpatient treatment completion and transfer to further treatment, by treatment referral source: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

percent among those who had never been in treatment before to 13 percent among those who had been in treatment 5 or more times.

The median LOS among outpatient treatment completers was shortest (90 days) among those with 5 or more prior treatment episodes, but displayed no consistent pattern with the number of prior treatment episodes. The median LOS was between 91 days and 101 days for the other categories.

**Treatment Referral Source**

*Table 3.9 and Figure 3.10.* More than half (55 percent) of clients discharged from outpatient treatment were referred to treatment through the criminal justice system, and 22 percent were self- or individual referrals.

Among clients discharged from outpatient treatment, the combined rates of completion or transfer to further treatment were 47 percent among those referred to treatment through the criminal justice system and 36 percent

among self- or individual referrals. The rate was highest (53 percent) among clients referred by an employer, but these clients represented only 1 percent of outpatient treatment discharges. Among other referral sources, the combined completion/transfer rates ranged between 28 percent and 45 percent.

The median LOS among outpatient treatment completers was longest (94 days) among clients referred through the criminal justice system. The median LOS for self-or individual referrals was 77 days. The median LOS for outpatient treatment completers referred by other sources was between 78 days and 93 days.

**Employment Status**

*Table 3.10 and Figure 3.11.* About 40 percent of clients aged 16 and over discharged from outpatient treatment were employed (30 percent full time and 10 percent part time).

**Figure 3.11**  
**Outpatient treatment completion and transfer to further treatment, by employment status: TEDS 2002**

**Figure 3.12**  
**Outpatient treatment completion and transfer to further treatment, by years of education: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

Thirty-one percent were unemployed, and 29 percent were not in the labor force.

Among outpatient treatment discharges, the combined rate of treatment completion or transfer to further treatment was highest among those employed full time (54 percent). At the other levels of employment, the rates displayed no consistent pattern with employment status, and ranged between 33 percent and 46 percent.

The median LOS among outpatient treatment completers was shortest (82 days) among those who were not in the labor force and longest (97 days) among those who were employed full time. At the other levels of employment, the median LOS displayed no consistent pattern with employment status.

### Education

Table 3.11 and Figure 3.12. Nineteen percent of clients aged 18 and over discharged from outpatient treatment had more than 12

years of education. Forty-five percent had 12 years of education or a GED, 30 percent had 9 to 11 years of education, and 6 percent had 8 years of education or less.

Clients with more than 12 years of education were the most likely to either complete outpatient treatment or to be transferred to further treatment (47 percent). Among clients with 12 years of education or less, the rates displayed no consistent pattern with level of education, and ranged between 35 percent and 43 percent.

The median LOS was longest (95 days) among clients with 8 years of education or less and shortest (87 days) among those with more than 12 years of education. Otherwise, the median LOS displayed no consistent pattern with level of education.

## CHAPTER 4

### INTENSIVE OUTPATIENT TREATMENT DISCHARGES: 2002

Chapter 4 presents data on the reasons for discharge and length of stay (LOS) in treatment for the 93,960 linked admission/discharge records of clients discharged from intensive outpatient treatment in 2002. Intensive outpatient treatment in this chapter includes outpatient care other than outpatient treatment (Chapter 3), outpatient detoxification (Chapter 8), and outpatient methadone treatment (Chapter 9).

Table 4.1 presents reason for discharge by State. Overall, 33,820 (36 percent) of intensive outpatient discharges completed

treatment, 10,684 (11 percent) were transferred to further treatment, 22,751 (24 percent) dropped out of treatment, 20,745 (22 percent) had treatment terminated by the facility, and 5,960 (6 percent) failed to complete treatment for other reasons [Figure 4.1].

Figure 4.2, Table 2.5, and Appendix Table C.1. The median LOS for intensive outpatient treatment was 42 days. The average (mean) LOS was longer, 68 days (standard deviation, 123). The average LOS was longer than the median LOS for all reasons for discharge, and for all subcategories.

**Figure 4.1**  
**Reason for discharge from intensive outpatient treatment: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

Intensive outpatient clients who completed treatment remained in treatment longer than clients who did not complete treatment. Among treatment completers, median LOS was 52 days, and among clients transferred to further treatment, it was 38 days. Among clients who dropped out of treatment, the median LOS was 27 days; among those whose treatment was terminated by the facility, it was 37 days; and among those who failed to complete treatment for other reasons, the median LOS was 39 days.

### Demographics

*Tables 4.2-4.4.* Sixty percent of clients discharged from intensive outpatient treatment were male. Almost one-third (30 percent) were 30 to 39 years of age. Twenty-five per-

cent were 20 to 29 years of age, and 21 percent were 40 to 49 years of age. Fifteen percent were 15 to 19 years of age. Small proportions were less than 15 years of age or 50 years of age and over (2 percent and 6 percent, respectively).<sup>1</sup> Most clients discharged from intensive outpatient treatment were non-Hispanic White (60 percent), while 28 percent were non-Hispanic Black, 7 percent were Hispanic, and 5 percent were of other racial/ethnic groups.

*Table 4.2 and Figure 4.3.* Men were more likely to either complete intensive outpatient treatment or to be transferred to further treatment (51 percent, combined) than were women (43 percent, combined). However, women who completed intensive outpatient treatment remained in treatment several days

**Figure 4.2**

longer than men. The median LOS was 55 days for women and 51 days for men.

*Table 4.3 and Figure 4.4.* Among intensive outpatient treatment discharges, the combined rate of completion or transfer to further treatment was greater for the oldest and youngest age groups than for the middle age groups. The rate was 49 percent among clients who were less than 15 years of age. It fell to 45 percent among those who were 20 to 29 years of age and 30 to 39 years of age, then increased to 57 percent among the discharges who were 50 years of age and over.

The median LOS among intensive outpatient treatment completers was longest (72 days) among those less than 15 years of age, and declined with increased age to 49 days among those who were 50 years of age and over.

*Table 4.4 and Figure 4.5.* Non-Hispanic Whites were more likely to either complete intensive outpatient treatment or be transferred to further treatment (53 percent) than were either non-Hispanic Blacks or Hispanics (36 percent and 40 percent, respectively).

The median LOS among intensive outpatient treatment completers was shortest (50 days) among non-Hispanic Whites and longest (57 days) among non-Hispanic Blacks and Hispanics.

### Primary Substance

*Table 4.5 and Figure 4.6.* Forty-one percent of clients discharged from intensive outpatient treatment reported alcohol as their primary substance of abuse at admission. Marijuana was reported by 23 percent, cocaine by 17 percent, opiates by 9 percent, and stimulants by 8 percent.

**Figure 4.5**  
**Intensive outpatient treatment completion and transfer to further treatment, by race/ethnicity: TEDS 2002**

**Figure 4.6**  
**Intensive outpatient treatment completion and transfer to further treatment, by primary substance: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

Clients who reported alcohol as their primary substance had the highest combined rate of treatment completion or transfer to further treatment (55 percent). The combined rate was lowest for clients who reported cocaine as their primary substance (37 percent).

The median LOS among intensive outpatient treatment completers was 50 days for those who reported alcohol as their primary substance. Among those who reported other primary substances, the median LOS was shortest (49 days) among those who reported cocaine and longest (58 days) among those who reported marijuana.

**Frequency of Use**

Table 4.6 and Figure 4.7. Twenty-nine percent of intensive outpatient discharges reported no use of their primary substance in the month before entering treatment, and 29 percent reported daily use in that period.

Among clients discharged from intensive outpatient treatment, the combined completion or transfer rate was highest (54 percent) among those who reported no use of their primary substance in the month before entering treatment, and was lowest (43 percent) among those who reported daily use of their primary substance. Otherwise, the rate displayed no consistent pattern with frequency of use.

The median LOS among intensive outpatient treatment completers decreased as frequency of primary substance use in the month before entering treatment increased. The median LOS was longest (61 days) among those who reported no use. It declined steadily to 42 days among those who reported daily use.

**Age at First Use**

Table 4.7 and Figure 4.8. More than half (57 percent) of intensive outpatient discharges had first used their primary substance by 16 years

**Figure 4.7**  
**Intensive outpatient treatment completion and transfer to further treatment, by frequency of substance use: TEDS 2002**

**Figure 4.8**  
**Intensive outpatient treatment completion and transfer to further treatment, by age at first use: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

of age—16 percent at 12 years of age or less, 19 percent between 13 and 14 years of age, and 22 percent between 15 and 16 years of age. Twelve percent did not begin use until they were over 25 years of age.

Among clients discharged from intensive outpatient treatment, the combined rate of treatment completion or transfer to further treatment displayed no consistent pattern with age at first use of the primary substance, ranging between 44 percent and 50 percent.

The median LOS for intensive outpatient treatment completers was longest (55 days) among those whose use began at 12 years of age or less, but displayed no consistent pattern with age at first use. The median LOS was between 50 days and 53 days among the other age at first use groups.

**Prior Treatment**

*Table 4.8 and Figure 4.9.* Forty-two percent of intensive outpatient treatment discharges had never been in treatment before, while 8 percent had been in treatment 5 or more times previously.

Among clients discharged from intensive outpatient treatment, the combined rate of intensive outpatient treatment completion or transfer to further treatment was highest (50 percent) among those who had been in treatment 5 or more times before, and lowest (46 percent) among those with no prior treatment episodes, but otherwise displayed no consistent pattern with the number of prior treatment episodes. The rate of transfer to further treatment was higher (20 percent) among those who had been in treatment 5 or more times before than for those with fewer prior treatment episodes, where the rates ranged between 10 percent and 14 percent.

**Figure 4.9**  
**Intensive outpatient treatment completion and transfer to further treatment, by number of prior treatment episodes: TEDS 2002**

**Figure 4.10**  
**Intensive outpatient treatment completion and transfer to further treatment, by treatment referral source: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

The median LOS among intensive outpatient treatment completers was shortest (44 days) among those with 5 or more prior treatment episodes, and longest (53 days) among those who had never been in treatment before, but displayed no consistent pattern with the number of prior treatment episodes.

### Treatment Referral Source

*Table 4.9 and Figure 4.10.* Thirty-nine percent of clients discharged from intensive outpatient treatment were referred to treatment through the criminal justice system, and 28 percent were self- or individual referrals.

Among clients discharged from intensive outpatient treatment, the combined rates of completion or transfer to further treatment were 49 percent among those referred to treatment through the criminal justice system and 47 percent among self- or individual referrals. The rate was highest (65 percent)

among clients referred by an employer, but these clients represented only 2 percent of intensive outpatient treatment discharges. Among other referral sources, the rates ranged between 41 percent and 48 percent.

The median LOS among intensive outpatient treatment completers was longest (60 days) among clients referred through the criminal justice system. Among other outpatient treatment completers, the median LOS for self- or individual referrals was 44 days. The median LOS for treatment completers among other referral sources was between 42 days and 55 days.

### Employment Status

*Table 4.10 and Figure 4.11.* One-third (34 percent) of clients aged 16 and over discharged from intensive outpatient treatment were employed (26 percent full time and 8 percent part time). Thirty-one percent were unemployed, and 35 percent were not in the labor force.

**Figure 4.11**  
**Intensive outpatient treatment completion and transfer to further treatment, by employment status: TEDS 2002**

**Figure 4.12**  
**Intensive outpatient treatment completion and transfer to further treatment, by years of education: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

Among intensive outpatient treatment discharges, the combined rate of treatment completion or transfer to further treatment was highest among those who were employed full time (59 percent). At the other levels of employment, the rates displayed no consistent pattern with employment status, and ranged between 41 percent and 47 percent.

The median LOS among intensive outpatient treatment completers was shortest among those who were not in the labor force (48 days). At the other levels of employment, the median LOS displayed no consistent pattern with employment status, and was between 51 days and 57 days.

### Education

Table 4.11 and Figure 4.12. Twenty-three percent of clients aged 18 and over discharged from intensive outpatient treatment had more than 12 years of education. Forty-three per-

cent had 12 years of education or a GED, 29 percent had 9 to 11 years of education, and 5 percent had 8 years of education or less.

Among clients discharged from intensive outpatient treatment, the rate of treatment completion or transfer to further treatment increased with higher levels of education. Among clients with 8 years of education or less, the rate was 39 percent. It increased to 55 percent among those with more than 12 years of education.

Among clients who completed intensive outpatient treatment, the median LOS decreased with higher levels of education. Among clients with 8 years of education or less, the median LOS was 56 days. It decreased to 49 days among those with more than 12 years of education.

## CHAPTER 5

### SHORT-TERM RESIDENTIAL TREATMENT DISCHARGES: 2002

Chapter 5 presents data on the reasons for discharge and length of stay (LOS) in treatment for the 59,175 linked admission/discharge records of clients discharged from short-term residential treatment in 2002.

Table 5.1 presents reason for discharge by State. Overall, 38,520 (65 percent) of short-term residential treatment discharges completed treatment, 4,784 (8 percent) were transferred to further treatment, 9,750 (16 percent) dropped out of treatment, 4,796 (8 percent) had treatment terminated by the fa-

cility, and 1,325 (2 percent) failed to complete treatment for other reasons [Figure 5.1].

Figure 5.2, Table 2.5, and Appendix Table C.1. The median LOS for short-term residential treatment was 21 days. The average (mean) LOS was longer, 27 days (standard deviation, 92). The average LOS was longer than the median LOS for most reasons for discharge in most subcategories.

Clients who completed treatment generally remained in treatment longer than clients who did not complete treatment. Among treatment completers, median LOS was 24 days, and

**Figure 5.1**  
**Reason for discharge from short-term residential treatment: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

among clients transferred to further treatment, it was 20 days. Among clients who dropped out of treatment, the median LOS was 7 days; among those whose treatment was terminated by the facility, it was 16 days; and among those who failed to complete treatment for other reasons, the median LOS was 11 days.

### Demographics

*Tables 5.2-5.4.* About two-thirds of clients discharged from short-term residential treatment were male (69 percent). Almost one-third (31 percent) were 30 to 39 years of age. Twenty-six percent were 20 to 29 years of age, and 24 percent were 40 to 49 years of age. Ten percent were 15 to 19 years of age. Small proportions were less than 15 years of age or 50 years of age and over (1 percent

and 7 percent, respectively).<sup>1</sup> Most clients discharged from short-term residential treatment were non-Hispanic White (67 percent), while 22 percent were non-Hispanic Black, 5 percent were Hispanic, and 6 percent were of other racial/ethnic groups.

*Table 5.2 and Figure 5.3.* Men were more likely to complete short-term residential treatment or to be transferred to further treatment (74 percent, combined) than were women (71 percent, combined). Among both men and women who completed short-term residential treatment, the median LOS was 24 days.

*Table 5.3 and Figure 5.4.* Among short-term residential treatment discharges, the combined rate of completion or transfer to further treatment increased with age. Sixty-three percent

**Figure 5.2**

of clients who were less than 15 years of age either completed treatment or were transferred to further treatment. The rate increased steadily to 81 percent of clients who were 50 years of age and over.

The median LOS among short-term residential treatment completers generally decreased with age, from 28 days among those who were 15 to 19 years of age to 21 days among those who were 40 to 49 years of age and 50 years of age and over. The median LOS was 26 days among the 1 percent of clients who were less than 15 years of age.

*Table 5.4 and Figure 5.5.* Non-Hispanic Whites were slightly more likely to either complete short-term residential treatment or to be transferred to further treatment (74 percent) than were Hispanics (73 percent) or non-Hispanic Blacks (72 percent).

The median LOS was longest (28 days) among Hispanics, and ranged between 21 days and 25 days for the other racial/ethnic groups.

### Primary Substance

*Table 5.5 and Figure 5.6.* Forty-one percent of clients discharged from short-term residential treatment reported alcohol as their primary substance of abuse at admission. Cocaine was reported by 19 percent, marijuana by 13 percent, opiates by 12 percent, and stimulants by 11 percent.

Clients who reported alcohol as their primary substance had the highest combined rate of treatment completion or transfer to further treatment (79 percent). The combined rate was lowest for clients who reported opiates as their primary substance (66 percent).

**Figure 5.5**  
**Short-term residential treatment completion and transfer to further treatment, by race/ethnicity: TEDS 2002**

**Figure 5.6**  
**Short-term residential treatment completion and transfer to further treatment, by primary substance: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

The median LOS among short-term residential treatment completers was shortest (21 days) among those who reported alcohol or opiates as their primary substance and longest (28 days) among those who reported marijuana as their primary substance.

**Frequency of Use**

*Table 5.6 and Figure 5.7.* Fifty-two percent of short-term residential treatment discharges reported daily use of their primary substance in the month before entering treatment, while 13 percent reported no use in that period.

Among clients discharged from short-term residential treatment, the combined completion or transfer rate displayed no consistent pattern with frequency of primary substance use. The rates ranged between 71 percent and 77 percent.

The median LOS among short-term residential treatment completers was longest (28 days) among those who reported no primary substance use in the month before entering treatment. Otherwise, the median LOS displayed no consistent pattern with frequency of use. The median LOS ranged between 21 days and 25 days for the other frequency of use categories.

**Age at First Use**

*Table 5.7 and Figure 5.8.* More than half (52 percent) of short-term residential discharges first used their primary substance by 16 years of age—15 percent began use at 12 years of age or less, 17 percent between 13 and 14 years of age, and 20 percent between 15 and 16 years of age. Fifteen percent did not begin use until they were over 25 years of age.

Among clients discharged from short-term residential treatment, the combined rate of

**Figure 5.7**  
**Short-term residential treatment completion and transfer to further treatment, by frequency of substance use: TEDS 2002**

**Figure 5.8**  
**Short-term residential treatment completion and transfer to further treatment, by age at first use: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

treatment completion or transfer to further treatment displayed no consistent pattern with age at first use of the primary substance, ranging between 70 percent and 75 percent.

The median LOS for short-term residential treatment completers was longest (25 days) among the oldest and youngest age at first use groups, but displayed no consistent pattern with age at first use of the primary substance. The median LOS was between 22 days and 24 days among the other age at first use groups.

### Prior Treatment

*Table 5.8 and Figure 5.9.* Over one-third (35 percent) of short-term residential treatment discharges had never been in treatment before, while 9 percent had been in treatment 5 or more times previously.

Among clients discharged from short-term residential treatment, the combined rate of completion or transfer to further treatment was lowest (70 percent) among those with no prior treatment episodes. The rates displayed no consistent pattern with the number of prior treatment episodes, and ranged between 73 percent and 76 percent for the other categories.

The median LOS among short-term residential treatment completers was longest (26 days) among those who had never been in treatment before, but displayed no consistent pattern with the number of prior treatment episodes. The median LOS was between 21 days and 24 days for the other prior treatment categories.

### Treatment Referral Source

*Table 5.9 and Figure 5.10.* More than one-third (36 percent) of clients discharged from

**Figure 5.9**  
**Short-term residential treatment completion and transfer to further treatment, by number of prior treatment episodes: TEDS 2002**

**Figure 5.10**  
**Short-term residential treatment completion and transfer to further treatment, by treatment referral source: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

short-term residential treatment were self- or individual referrals to treatment. About one-quarter (26 percent) were referred to treatment through the criminal justice system, and 15 percent were referred from other substance abuse treatment providers.

Among clients discharged from short-term residential treatment, the combined rates of completion or transfer to further treatment were 70 percent for self- or individual referrals, 78 percent among those referred to treatment through the criminal justice system, and 74 percent among those referred by a substance abuse treatment provider. The rate was highest (88 percent) among clients referred by an employer, but these clients represented only 1 percent of short-term residential treatment discharges. Among other referral sources, the combined completion/transfer rates ranged between 65 percent and 73 percent.

The median LOS among short-term residential discharges who completed treatment was 27 days among clients referred through the criminal justice system, 23 days among self- or individual referrals, and 21 days among clients referred by a substance abuse treatment provider. The median LOS for treatment completers among other referral sources was between 15 days and 28 days.

### Employment Status

*Table 5.10 and Figure 5.11.* Twenty-two percent of clients aged 16 and over discharged from short-term residential treatment were employed (18 percent full time and 4 percent part time). Thirty-seven percent were unemployed, and 40 percent were not in the labor force.

Among short-term residential treatment discharges, the combined rate of treatment completion or transfer to further treatment was

**Figure 5.11**  
**Short-term residential treatment completion and transfer to further treatment, by employment status: TEDS 2002**

**Figure 5.12**  
**Short-term residential treatment completion and transfer to further treatment, by years of education: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

highest among those who were employed full time (83 percent). It declined to 76 percent among those who were employed part time, 73 percent among those who were unemployed, and was lowest (70 percent) among those who were not in the labor force.

The median LOS among short-term residential treatment completers was longest (27 days) among those who were not in the labor force. At the other levels of employment, the median LOS displayed no consistent pattern with employment status, and was between 21 days and 24 days.

### Education

*Table 5.11 and Figure 5.12.* Twenty-four percent of clients aged 18 and over discharged from short-term residential treatment had more

than 12 years of education. Forty-six percent had 12 years of education or a GED, 26 percent had 9 to 11 years of education, and 5 percent had 8 years of education or less.<sup>1</sup>

Among clients discharged from short-term residential treatment, the rate of treatment completion or transfer to further treatment increased with higher levels of education. Among clients with 8 years of education or less, the rate was 67 percent. It increased to 79 percent among those with more than 12 years of education.

The median LOS among discharges completing short-term residential treatment displayed no consistent pattern with level of education, ranging between 21 days and 25 days.

<sup>1</sup> Percentages sum to more than 100 percent because of rounding.

## CHAPTER 6

### LONG-TERM RESIDENTIAL TREATMENT DISCHARGES: 2002

Chapter 6 presents data on the reasons for discharge and length of stay (LOS) in treatment for the 57,288 linked admission/discharge records of clients discharged from long-term residential treatment in 2002.

Table 6.1 presents reason for discharge by State. Overall, 18,888 (33 percent) of long-term residential treatment discharges completed treatment, 5,603 (10 percent) were transferred to further treatment, 18,740 (33 percent) dropped out of treatment, 11,295 (20 percent) had treatment terminated by the fa-

cility, and 2,762 (5 percent) failed to complete treatment for other reasons [Figure 6.1].

Figure 6.2, Table 2.5, and Appendix Table C.1. The median LOS for long-term residential treatment was 33 days. The average (mean) LOS was longer, 61 days (standard deviation, 47). The average LOS was longer than the median LOS for all reasons for discharge, and in all subcategories.

Clients who completed treatment remained in treatment longer than clients who did not complete treatment. Among treatment completers,

**Figure 6.1**  
**Reason for discharge from long-term residential treatment: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

median LOS was 71 days, and among clients transferred to further treatment, it was 30 days. Among clients who dropped out of treatment, the median LOS was 16 days; among those whose treatment was terminated by the facility, it was 32 days; and among those who failed to complete treatment for other reasons, the median LOS was 22 days.

### Demographics

Tables 6.2-6.4. Sixty-three percent of clients discharged from long-term residential treatment were male. One-third (33 percent) were 30 to 39 years of age. Twenty-five percent were 20 to 29 years of age, and 22 percent were 40 to 49 years of age. Thirteen percent were 15 to 19 years of age. Small proportions were less than 15 years of age or 50

years of age and over (2 percent and 6 percent, respectively).<sup>1</sup> Most clients discharged from long-term residential treatment were non-Hispanic White (54 percent), while 29 percent were non-Hispanic Black, 11 percent were Hispanic, and 6 percent were of other racial/ethnic groups.

Table 6.2 and Figure 6.3. Men were more likely to complete long-term residential treatment or to be transferred to further treatment (44 percent, combined) than were women (41 percent, combined). Men who completed long-term residential treatment remained in treatment longer than women who completed treatment (median LOS 74 days and 65 days, respectively)

**Figure 6.2**  
**Median and average lengths of stay in long-term residential treatment, by reason for discharge: TEDS 2002**

<sup>1</sup> Percentages sum to more than 100 percent because of rounding.

**Figure 6.3**  
**Long-term residential treatment completion and transfer to further treatment, by sex: TEDS 2002**

**Figure 6.4**  
**Long-term residential treatment completion and transfer to further treatment, by age at admission: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

*Table 6.3 and Figure 6.4.* Among long-term residential treatment discharges, the combined rate of completion or transfer to further treatment was greater for the oldest and youngest age groups than for the middle age groups. The rate was 45 percent among clients who were 15 to 19 years of age; it fell to 39 percent among those who were 20 to 29 years of age, then increased with age to 52 percent among the discharges who were 50 years of age and over. Among the 2 percent of clients who were less than 15 years of age, the rate was 42 percent.

The median LOS among long-term residential treatment completers generally decreased with age, from 88 days among those who were 15 to 19 years of age to 59 days among those who were 50 years of age and over. The median LOS was 64 days among the 2 percent of clients who were less than 15 years of age.

*Table 6.4 and Figure 6.5.* Non-Hispanic Blacks were somewhat less likely (39 percent) to either complete long-term residential treatment or to be transferred to further treatment than other racial/ethnic groups. Among non-Hispanic Whites and Hispanics, the rates were 44 percent and 43 percent, respectively.

The median LOS among treatment completers was shortest for Hispanics at 62 days. The median LOS was 69 days for non-Hispanic Blacks and 73 days for non-Hispanic Whites.

### Primary Substance

*Table 6.5 and Figure 6.6.* Thirty-one percent of clients discharged from long-term residential treatment reported alcohol as their primary substance of abuse at admission. Cocaine was reported by 24 percent, marijuana and opiates by 15 percent each, and stimulants by 12 percent.

**Figure 6.5**  
**Long-term residential treatment completion and transfer to further treatment, by race/ethnicity: TEDS 2002**

**Figure 6.6**  
**Long-term residential treatment completion and transfer to further treatment, by primary substance: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

The combined rate of completion or transfer to further treatment was highest among clients who reported alcohol as their primary substance (48 percent). The combined rate was lowest for clients who reported opiates as their primary substance (33 percent).

The median LOS among long-term residential treatment completers was 70 days for those who reported alcohol as their primary substance, and 60 days for those who reported cocaine. Among those who reported other primary substances, the median LOS was between 61 days and 87 days.

### Frequency of Use

*Table 6.6 and Figure 6.7.* Forty-seven percent of long-term residential treatment discharges reported daily use of their primary substance in the month before entering treatment, while 23 percent reported no use in that period.

Among clients discharged from long-term residential treatment, the combined completion or transfer rate was highest (50 percent) among those who reported no use of their primary substance in the month before entering treatment, and lowest (38 percent) among those who reported daily use of their primary substance. Otherwise, the rates displayed no consistent pattern with frequency of use.

The median LOS among long-term residential treatment completers was longest (85 days) among those who reported no use of their primary substance in the month before entering treatment. The median LOS was between 59 days and 69 days among those with more frequent substance use, but showed no consistent pattern.

### Age at First Use

*Table 6.7 and Figure 6.8.* More than half (58 percent) of all long-term residential treatment

**Figure 6.7**  
**Long-term residential treatment completion and transfer to further treatment, by frequency of substance use: TEDS 2002**

**Figure 6.8**  
**Long-term residential treatment completion and transfer to further treatment, by age at first use: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

discharges first used their primary substance by 16 years of age—19 percent began use at 12 years of age or less, 20 percent between 13 and 14 years of age, and 19 percent between 15 and 16 years of age. Twelve percent did not begin use until they were over 25 years of age.

Among clients discharged from long-term residential treatment, the combined rate of treatment completion or transfer to further treatment was highest (48 percent) among those who began substance use at over 25 years of age. The rates displayed no consistent pattern with age at first use, and ranged between 43 percent and 45 percent among the other age at first use groups.

The median LOS for long-term residential treatment completers displayed no consistent pattern with age at first use. It was longest (81 days) among those whose substance use began at 12 years of age or less, and shortest

(69 days) among those whose use began at over 25 years of age.

### Prior Treatment

*Table 6.8 and Figure 6.9.* One-third (33 percent) of long-term residential treatment discharges had never been in treatment before, while 15 percent had been in treatment 5 or more times.

Among clients discharged from long-term residential treatment, the combined rate of completion or transfer to further treatment was lowest (40 percent) among those who had been in treatment 5 or more times before. The rates displayed no consistent pattern with the number of prior treatment episodes, ranging between 41 percent and 46 percent for the other categories.

The median LOS among long-term residential treatment completers was shortest (57 days) among those who had never been in treatment before, and longest (87 days) among those who had been in

**Figure 6.9**  
**Long-term residential treatment completion and transfer to further treatment, by number of prior treatment episodes: TEDS 2002**

**Figure 6.10**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

treatment 5 or more times previously. Otherwise, the median LOS displayed no consistent pattern with the number of prior treatment episodes.

### Treatment Referral Source

*Table 6.9 and Figure 6.10.* About one-third (31 percent) of clients discharged from long-term residential treatment were referred to treatment through the criminal justice system, 29 percent were self- or individual referrals, and 20 percent were referred by a substance abuse treatment provider.

Among clients discharged from long-term residential treatment, the combined rates of completion or transfer to further treatment were 45 percent among those referred to treatment through the criminal justice system and 41 percent among both self- or individual referrals and clients referred through a substance abuse treatment provider. The rate was highest (61 percent) among clients referred by

an employer, but these clients represented less than 1 percent of long-term residential treatment discharges. Among other referral sources, the combined completion/transfer rates ranged between 35 percent and 45 percent.

The median LOS among long-term residential treatment completers was 79 days for those referred through the criminal justice system, 45 days for self- or individual referrals, and 89 days for referrals by a substance abuse treatment provider. The median LOS for treatment completers referred from other sources ranged between 33 days and 71 days.

### Employment Status

*Table 6.10 and Figure 6.11.* About 12 percent of clients aged 16 and over discharged from long-term residential treatment were employed (9 percent full time and 3 percent part time). Thirty-three percent were unem-

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

employed, and 55 percent were not in the labor force.

Among long-term residential treatment discharges, the combined rate of treatment completion or transfer to further treatment was highest among those who were employed full time (54 percent). It declined to 52 percent among those who were employed part time, 42 percent among those who were unemployed, and was lowest (41 percent) among those who were not in the labor force.

The median LOS among long-term residential treatment completers displayed no consistent pattern with employment status, ranging between 54 days and 73 days.

### Education

*Table 6.11 and Figure 6.12.* Twenty-two percent of clients aged 18 and over discharged from long-term residential treatment had more

than 12 years of education. Forty-two percent had 12 years of education or a GED, 31 percent had 9 to 11 years of education, and 5 percent had 8 years of education or less.

Clients with more than 12 years of education were the most likely to either complete long-term residential treatment or to be transferred to further treatment (48 percent). Among clients with 12 years of education or less, the rates displayed no consistent pattern with level of education, and ranged between 38 percent and 43 percent.

The median LOS was longest (71 days) among clients with 8 years of education or less, but displayed no consistent pattern with level of education. The median LOS was between 66 days and 68 days for the other levels of education.

## CHAPTER 7

### HOSPITAL RESIDENTIAL TREATMENT DISCHARGES: 2002

Chapter 7 presents data on the reasons for discharge and length of stay (LOS) in treatment for the 8,869 linked admission/discharge records of clients discharged from hospital residential treatment in 2002.

Table 7.1 presents reason for discharge by State. Overall, 5,542 (62 percent) of hospital residential discharges completed treatment, 1,490 (17 percent) were transferred to further treatment, 1,028 (12 percent) dropped out of treatment, 542 (6 percent) had treatment terminated by the facility, and 267 (3

percent) failed to complete treatment for other reasons [Figure 7.1].

Figure 7.2, Table 2.5, and Appendix Table C.1. The median LOS for hospital residential treatment was 10 days. The average (mean) LOS was longer, 35 days (standard deviation, 87). The average LOS was longer than the median LOS for all reasons for discharge, and in all subcategories.

Clients who completed treatment generally remained in treatment longer than clients who did not complete treatment. Among treatment completers, median LOS was 14 days, and

among clients transferred to further treatment, it was 8 days. Among clients who dropped out of treatment, the median LOS was 5 days; among those whose treatment was terminated by the facility, it was 17 days; and among those who failed to complete treatment for other reasons, the median LOS was 12 days.

### Demographics

*Tables 7.2-7.4.* Sixty-three percent of clients discharged from hospital residential treatment were male. Twenty-eight percent were 30 to 39 years of age, and 26 percent were 40 to 49 years of age. Nineteen percent were 20 to 29 years of age, 14 percent were 15 to 19 years of age, and 12 percent were 50 years of age and over. A small proportion (2 percent) were less than 15 years of age.<sup>1</sup> Most

clients discharged from hospital residential treatment were non-Hispanic White (80 percent), while 14 percent were non-Hispanic Black, 3 percent were Hispanic, and 4 percent were of other racial/ethnic groups.<sup>1</sup>

*Table 7.2 and Figure 7.3.* Men were only slightly more likely to complete hospital residential treatment or to be transferred to further treatment (80 percent, combined) than were women (78 percent, combined). Men who completed hospital residential treatment remained in treatment slightly longer than women (median LOS 14 days and 13 days, respectively).

*Table 7.3 and Figure 7.4.* Among hospital residential treatment discharges, the combined rate of completion or transfer to further treatment was greatest among the oldest and

youngest age groups. The rate was 87 percent among clients who were 50 years of age and over, 83 percent among clients who were 15 to 19 years of age, and 84 percent among clients who were less than 15 years of age. The rate was lowest (73 percent) among clients who were 20 to 29 years of age.

The median LOS among hospital residential treatment completers generally decreased with age. Among clients who were 20 to 29 years of age, the median LOS for treatment completers was 18 days, falling to 14 days among those who were 40 to 49 years of age and 50 years of age and over. Clients in the two youngest age groups were exceptions; the median LOS was 6 days among clients who were less than 15 years of age and 15 to 19 years of age.

*Table 7.4 and Figure 7.5.* Non-Hispanic Whites, with a combined completion/transfer rate of 81 percent, were the most likely to ei-

ther complete hospital residential treatment or to be transferred to further treatment. Among Hispanics and non-Hispanic Blacks, the rates were 75 percent and 72 percent, respectively.

The median LOS among treatment completers differed little by race/ethnicity, ranging between 13 days and 16 days.

### Primary Substance

*Table 7.5 and Figure 7.6.* Fifty-two percent of clients discharged from hospital residential treatment reported alcohol as their primary substance of abuse at admission. Marijuana was reported by 14 percent, cocaine by 11 percent, opiates by 9 percent, and stimulants by 8 percent.

The combined rate of treatment completion or transfer to further treatment was highest (82 percent) among clients who reported alcohol or who reported marijuana as their primary

**Figure 7.5**

substance. Among clients who reported opiates, the combined rate was 68 percent. Among those who reported other substances, the combined rate of treatment completion or transfer to further treatment ranged between 67 percent and 80 percent.

The median LOS among hospital residential treatment completers was 15 days for those who reported alcohol as their primary substance. Among those who reported other primary substances, the median LOS was between 9 days among those who reported marijuana and 18 days among those who reported cocaine or opiates.

**Frequency of Use**

*Table 7.6 and Figure 7.7.* Fifty-nine percent of hospital residential treatment discharges reported daily use of their primary substance in the month before entering treatment, while 11 percent reported no use in that period.

Among clients discharged from hospital residential treatment, the combined completion or transfer was lowest (75 percent) among those who reported no use of their primary substance in the month before entering treatment, but displayed no consistent pattern with frequency of use. The rates ranged between 80 percent and 82 percent among those reporting more frequent use.

The median LOS among hospital residential treatment completers displayed no consistent pattern with frequency of substance use in the month before entering treatment, ranging between 9 days and 17 days.

**Age at First Use**

*Table 7.7 and Figure 7.8.* More than half (58 percent) of the hospital residential treatment discharges first used their primary substance by 16 years of age—15 percent at 12 years of age or less, 19 percent between 13 and 14

**Figure 7.7**  
**Hospital residential treatment completion and transfer to further treatment, by frequency of substance use: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

years of age, and 23 percent between 15 and 16 years of age.<sup>1</sup> Eleven percent did not begin use until they were over 25 years of age.

Among clients discharged from hospital residential treatment, the combined rate of treatment completion or transfer to further treatment displayed no consistent pattern with age at first use of the primary substance, ranging between 78 percent and 82 percent.

The median LOS for hospital residential treatment completers displayed no consistent pattern with age at first use of the primary substance, ranging between 13 days and 18 days.

### Prior Treatment

*Table 7.8 and Figure 7.9.* About one-third (34 percent) of hospital residential treatment discharges had never been in treatment be-

fore, while 11 percent had been in treatment 5 or more times before.

Among clients discharged from hospital residential treatment, the combined rate of completion or transfer to further treatment was lowest (79 percent) among those with no prior treatment episodes. The rates displayed no consistent pattern with the number of prior treatment episodes, ranging between 81 percent and 83 percent.

The median LOS among hospital residential treatment completers was shortest (10 days) among those who had never been in treatment before and who had been in treatment 5 or more times before, but displayed no consistent pattern with the number of prior treatment episodes. The median LOS was between 14 days and 16 days for the other categories.

<sup>1</sup> Percentages sum to less than total because of rounding.

**Figure 7.9**  
**Hospital residential treatment completion and transfer to further treatment, by number of prior treatment episodes: TEDS 2002**

**Figure 7.10**  
**Hospital residential treatment completion and transfer to further treatment, by treatment referral source: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

### Treatment Referral Source

*Table 7.9 and Figure 7.10.* Almost half (45 percent) of clients discharged from hospital residential treatment were self- or individual referrals to treatment, 20 percent were referred by another health care provider, and 17 percent were referred to treatment through the criminal justice systems.

Among clients discharged from hospital residential treatment, the combined rates of completion or transfer to further treatment were 80 percent for self- or individual referrals, 81 percent for discharges referred by a health care provider, and 82 percent for those referred through the criminal justice system. The rate was highest (94 percent) among clients referred by an employer, but these clients represented only 1 percent of hospital residential treatment discharges. Among other treatment referral sources, the combined

completion/transfer rates ranged between 72 percent and 78 percent.

The median LOS among hospital residential treatment completers was 11 days for self- or individual referrals, 9 days among those referred to treatment through the criminal justice system, and 18 days among those referred by a health care provider. The median LOS for treatment completers among other referral sources ranged between 14 days and 29 days.

### Employment Status

*Table 7.10 and Figure 7.11.* Thirty-one percent of clients aged 16 and over discharged from hospital residential treatment were employed (26 percent full time and 5 percent part time). Twenty-five percent were unemployed, and 43 percent were not in the labor force.<sup>1</sup>

<sup>1</sup> Percentages sum to less than 100 percent because of rounding.

**Figure 7.11**  
**Hospital residential treatment completion and transfer to further treatment, by employment status: TEDS 2002**

**Figure 7.12**  
**Hospital residential treatment completion and transfer to further treatment, by years of education: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

Among hospital residential treatment discharges, the combined rate of treatment completion or transfer to further treatment was highest among those who were employed full time (84 percent). At the other levels of employment, the rates displayed no consistent pattern with employment status, and ranged between 71 percent and 81 percent.

The median LOS among hospital residential treatment completers displayed no consistent pattern with employment status, ranging between 10 days and 20 days.

**Education**

*Table 7.11 and Figure 7.12.* Thirty percent of clients aged 18 and over discharged from hospital residential treatment had more than 12 years of education. Forty-six percent had 12 years of education or a GED, 21 percent

had 9 to 11 years of education, and 3 percent had 8 years of education or less.

Clients with more than 12 years of education were the most likely to either complete hospital residential treatment or to be transferred to further treatment (82 percent). Among clients with 12 years of education or less, the rates displayed no consistent pattern with level of education, and ranged between 75 percent and 77 percent.

Among clients who completed hospital residential treatment, the median LOS was longest (17 days) among clients with more than 12 years of education and shortest (8 days) among those with 8 years of education or less. Otherwise, the median LOS displayed no consistent pattern with level of education.

## CHAPTER 8

### DETOXIFICATION DISCHARGES: 2002

Chapter 8 presents data on the reasons for discharge and length of stay (LOS) in treatment for the 190,307 linked admission/discharge records of clients discharged from detoxification in 2002.

Table 8.1 presents reason for discharge by State. Overall, 105,734 (56 percent) of detoxification discharges completed detoxification, 18,720 (10 percent) were transferred to further treatment, 50,366 (26 percent) dropped out of treatment, 10,015 (5 percent) had treatment terminated by the facility, and

5,472 (3 percent) failed to complete treatment for other reasons [Figure 8.1].

Figure 8.2, Table 2.5, and Appendix Table C.1. The median LOS for detoxification was 3 days. The average (mean) LOS was longer, 13 days (standard deviation, 109). The average LOS was longer than the median LOS for most reasons for discharge in most subcategories.

Among clients who completed detoxification, there was little difference in the median LOS by reason for discharge. Among treatment completers and clients transferred to further

**Figure 8.1**  
**Reason for discharge from detoxification: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

treatment, median LOS was 4 days. Among clients who dropped out of treatment, the median LOS was 2 days; among those whose treatment was terminated by the facility, it was 3 days; and among those who failed to complete treatment for other reasons, the median LOS was 2 days.

### Demographics

*Tables 8.2-8.4.* Three-quarters (75 percent) of clients discharged from detoxification were male. One-third (33 percent) were 30 to 39 years of age, and 32 percent were 40 to 49 years of age. Twenty-one percent were 20 to 29 years of age, and 11 percent were 50 years of age and over. Small proportions were less than 15 years of age and 15 to 19 years of age (less than 1 percent and 3 percent, respectively). Most clients discharged from

detoxification were non-Hispanic White (59 percent), while 22 percent were non-Hispanic Black, 15 percent were Hispanic, and 5 percent were of other racial/ethnic groups.<sup>1</sup>

*Table 8.2 and Figure 8.3.* Men and women were equally likely to complete detoxification or to be transferred to further treatment (65 percent each). For both men and women, the median LOS among treatment completers was 4 days.

*Table 8.3 and Figure 8.4.* Among detoxification discharges, the combined rate of completion or transfer to further treatment for the majority of clients—those who were 15 years of age and older—was lowest (60 percent) among those who were 20 to 29 years of age and highest (69 percent) among those

who were 50 years of age and over. Among the less than 1 percent of clients who were less than 15 years of age, the rate was 79 percent.

The median LOS among detoxification completers was 4 days for the 97 percent of discharges who were 20 years of age and over; it was 3 days for discharges who were 15 to 19 years of age, and 5 days for discharges who were less than 15 years of age.

*Table 8.4 and Figure 8.5.* Non-Hispanic Blacks and non-Hispanic Whites were more likely to either complete detoxification or to be transferred to further treatment (67 percent and 66 percent, respectively) than were Hispanics (62 percent).

The median LOS among detoxification completers was 2 days to 4 days for all racial/ethnic groups.

**Primary Substance**

*Table 8.5 and Figure 8.6.* Fifty-two percent of clients discharged from detoxification reported alcohol as their primary substance of abuse at admission. Opiates were reported by 30 percent, cocaine by 11 percent, stimulants by 4 percent, and marijuana by 2 percent.

The combined rate of treatment completion or transfer to further treatment was highest (68 percent to 70 percent) among clients who reported alcohol, cocaine, or stimulants as their primary substance. Among those who reported opiates as their primary substance, 57 percent either completed detoxification or transferred to further treatment. Among those who reported marijuana as their primary substance, 64 percent either completed detoxification or transferred to further treatment.

The median LOS among detoxification completers was shortest (3 days) among those who reported alcohol as their primary substance and

**Figure 8.5**  
**Detoxification completion and transfer to further treatment, by race/ethnicity: TEDS 2002**

**Figure 8.6**  
**Detoxification completion and transfer to further treatment, by primary substance: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

longest (5 days) among those who reported opiates.

### Frequency of Use

*Table 8.6 and Figure 8.7.* More than three-quarters (77 percent) of detoxification discharges reported daily use of their primary substance in the month before entering treatment. Nine percent reported primary substance use 3 to 6 times per week in the month before entering treatment, 6 percent reported primary substance use 1 to 2 times per week in the month before entering treatment, and 8 percent reported primary substance use 1 to 3 times or less in the month before entering treatment.

Among clients discharged from detoxification, the combined rate of completion or transfer

to further treatment was lowest (62 percent) among clients who reported primary substance use 1 to 3 times or less in the month before entering treatment, but displayed no consistent pattern with frequency of use. The rates ranged between 65 percent and 68 percent for more frequent use.

The median LOS among detoxification completers displayed no consistent pattern with frequency of use. The median LOS was 4 days among the 78 percent of detoxification completers who reported daily use of their primary substance use in the month before entering treatment, and ranged between 1 day and 4 days for the other frequency of use categories.

<sup>1</sup> Percentages sum to more than total because of rounding.

**Figure 8.7**  
**Detoxification completion and transfer to further treatment, by frequency of substance use: TEDS 2002**

**Figure 8.8**  
**Detoxification completion and transfer to further treatment, by age at first use: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

### Age at First Use

Table 8.7 and Figure 8.8. Somewhat less than half (46 percent) of the detoxification discharges first used their primary substance by 16 years of age—14 percent at 12 years of age or less, 14 percent at 13 and 14 years of age, and 19 percent at 15 and 16 years of age.<sup>1</sup> Sixteen percent did not begin use until they were over 25 years of age.

Among clients discharged from detoxification, the combined rate of treatment completion or transfer to further treatment was highest among the oldest and youngest age groups. Among those whose substance use began at 25 years of age or over, the rate was 67 percent; among those whose use began at 12 years of age or less, the rate was 68 percent. The rate was lowest (63 percent) among those whose use began at 19 to 20 years of age.

The median LOS for detoxification completers was 3 days to 4 days regardless of the age at first use.

### Prior Treatment

Table 8.8 and Figure 8.9. One-third (33 percent) of detoxification discharges had never been in treatment before, while 25 percent had been in treatment 5 or more times before.

Among clients discharged from detoxification, the combined rate of completion or transfer to further treatment was lowest (63 percent) among those who had been in treatment 5 or more times before. The rates displayed no consistent pattern with the number of prior treatment episodes, ranging between 66 percent and 67 percent for the other categories. The rate of transfer to further treatment was lower (6 percent) among those who had been in treatment 5 or more times before than for

**Figure 8.9**  
**Detoxification completion and transfer to further treatment, by number of prior treatment episodes: TEDS 2002**

**Figure 8.10**  
**Detoxification completion and transfer to further treatment, by treatment referral source: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

those with fewer prior treatment episodes, where it ranged between 11 percent and 13 percent.

The median LOS among detoxification completers was shortest (3 days) among those who had never been in treatment before and longest (5 days) among those who had been in treatment 5 or more times before.

### Treatment Referral Source

*Table 8.9 and Figure 8.10.* Sixty-one percent of clients discharged from detoxification were self- or individual referrals to treatment, and 11 percent were referred to treatment through the criminal justice system.

Among clients discharged from detoxification, the combined rates of completion or transfer to further treatment were 64 percent among self- or individual referrals and 75 percent among those referred to treatment through the

criminal justice system. The rate was highest (76 percent) among clients referred by an employer, but these clients represented less than 1 percent of detoxification discharges. Among other treatment referral sources, the combined completion/transfer rates ranged between 49 percent and 73 percent.

The median LOS among detoxification completers was 4 days among self- or individual referrals and 1 day among those who had been referred to treatment through the criminal justice system. The median LOS for other treatment referral sources was between 3 days and 8 days.

### Employment Status

*Table 8.10 and Figure 8.11.* About 19 percent of clients aged 16 and over discharged from detoxification were employed (14 percent full time and 5 percent part time).

**Figure 8.11**  
**Detoxification completion and transfer to further treatment, by employment status: TEDS 2002**

**Figure 8.12**  
**Detoxification completion and transfer to further treatment, by years of education: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

Thirty-five percent were unemployed, and 46 percent were not in the labor force.

Among detoxification discharges, the combined rate of treatment completion or transfer to further treatment was highest among those who were employed full time (70 percent). At the other levels of employment, the rates displayed no consistent pattern with employment status, and ranged between 61 percent and 67 percent.

The median LOS among detoxification completers displayed no consistent pattern with employment status, ranging between 2 days and 5 days.

### Education

Table 8.11 and Figure 8.12. Twenty-two percent of clients aged 18 and over discharged

from detoxification had more than 12 years of education. Forty-seven percent had 12 years of education or a GED, 24 percent had 9 to 11 years of education, and 6 percent had 8 years of education or less.<sup>1</sup>

Clients with more than 12 years of education were the most likely to either complete detoxification or to be transferred to further treatment (69 percent). Among clients with 12 years of education or less, the rates displayed no consistent pattern with level of education, and ranged between 63 percent and 66 percent.

The median LOS among clients completing detoxification was the same, 4 days, at all levels of education.

<sup>1</sup> Percentages sum to less than 100 percent because of rounding.

## CHAPTER 9

### METHADONE OUTPATIENT TREATMENT DISCHARGES: 2002

Chapter 9 presents data on the reasons for discharge and length of stay (LOS) in treatment for the 23,220 linked admission/discharge records of clients discharged from methadone outpatient treatment in 2002. Methadone outpatient treatment in this chapter includes methadone outpatient treatment other than methadone detoxification (Chapter 10).

Table 9.1 presents reason for discharge by State. The treatment completion rate for methadone outpatient treatment was the lowest completion rate among all types of service.

Overall, 2,090 (9 percent) of methadone outpatient discharges completed treatment, 2,205 (9 percent) were transferred to further treatment, 10,239 (44 percent) dropped out of treatment, 6,186 (27 percent) had treatment terminated by the facility, and 2,500 (11 percent) failed to complete treatment for other reasons [Figure 9.1].

Figure 9.2, Table 2.6, and Appendix Table C.1. The median LOS for methadone outpatient treatment was 79 days. The average (mean) was longer, 175 days (standard deviation, 246). The average LOS was longer

**Figure 9.1**  
**Reason for discharge from methadone outpatient treatment: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

than the median LOS for most reasons for discharge in most subcategories.

Clients who transferred to further treatment remained in treatment longer than clients who completed treatment or who did not complete treatment. Among treatment completers, median LOS was 113 days, and among clients transferred to further treatment it was 147 days. Among clients who dropped out of treatment, the median LOS was 62 days; among those whose treatment was terminated by the facility, it was 78 days; and among those who failed to complete treatment for other reasons, the median LOS was 106 days.

### Demographics

*Tables 9.2-9.4.* Just over half (56 percent) of clients discharged from methadone outpatient treatment were male. About one-third (34 percent) were 30 to 39 years of age, and 31

percent were 40 to 49 years of age. Twenty-two percent were 20 to 29 years of age, and 10 percent were 50 years of age and over. Small proportions were less than 15 years of age and 15 to 19 years of age (less than 1 percent and 3 percent, respectively). Just over half of clients discharged from methadone outpatient treatment were non-Hispanic White (52 percent), while 34 percent were non-Hispanic Black, 11 percent were Hispanic, and 3 percent were of other racial/ethnic groups.

*Table 9.2 and Figure 9.3.* Men and women were approximately equally likely to complete methadone outpatient treatment or to be transferred to further treatment (19 percent and 18 percent, respectively). Women who completed methadone outpatient treatment remained in treatment longer than men (median LOS 124 days and 101 days, respectively).

**Figure 9.2**  
**Median and average lengths of stay in methadone outpatient treatment, by reason for discharge: TEDS 2002**

**Methadone outpatient treatment completion and transfer to further treatment, by age at admission: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

*Table 9.3 and Figure 9.4.* Among methadone outpatient treatment discharges, the combined rate of completion or transfer to further treatment for the majority of clients—the 97 percent who were 20 years of age and older—was lowest (16 percent) among those who were 30 to 39 years of age and highest (21 percent) among those who were 50 years of age and over. Among the 3 percent of methadone outpatient treatment discharges who were 19 years of age or less (under 15 years of age and 15 to 19 years of age), the rates were higher (41 percent and 33 percent, respectively).

The median LOS among methadone outpatient treatment completers displayed no consistent pattern with age, and ranged between 79 days and 120 days.

*Table 9.4 and Figure 9.5.* Non-Hispanic Whites were the most likely (22 percent) to either complete methadone outpatient treat-

ment or to be transferred to further treatment. Among Hispanics and non-Hispanic Blacks, the rates were 17 percent and 14 percent, respectively.

The median LOS among methadone outpatient treatment completers was shortest (89 days) among Hispanics and longest (116 days) among non-Hispanic Blacks.

### Primary Substance

*Table 9.5 and Figure 9.6.* Ninety-one percent of clients discharged from methadone outpatient treatment reported opiates as their primary substance of abuse at admission. Alcohol and cocaine were each reported by 3 percent, marijuana by 2 percent, and stimulants by less than 1 percent.

Among clients who reported opiates as their primary substance at admission, the combined rate of treatment completion or transfer to further treatment was 18 percent. Among the 9

**Methadone outpatient treatment completion and transfer to further treatment, by race/ethnicity: TEDS 2002**

**Figure 9.6**  
**Methadone outpatient treatment completion and transfer to further treatment, by primary substance: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

percent of clients who reported substances other than opiates, the rates ranged between 16 percent and 37 percent.

The median LOS among methadone outpatient treatment completers was 122 days for those who reported opiates as their primary substance. Among the 9 percent of clients who reported substances other than opiates, the median LOS ranged between 42 days and 86 days.

### Frequency of Use

*Table 9.6 and Figure 9.7.* Eighty-four percent of clients discharged from methadone outpatient treatment reported daily substance use of their primary substance in the month before entering treatment, while only 7 percent reported no use in that period.

Methadone outpatient treatment completion or transfer rates declined as frequency of primary substance use in the month before entering treatment increased. The rate was highest (34 percent) among those who reported no use of their primary substance, and declined fairly steadily to 17 percent among clients who reported daily use of their primary substance.

The median LOS among methadone outpatient treatment completers was 116 days for those who reported daily use of their primary substance in the month before entering treatment. Among the remaining 16 percent of methadone outpatient treatment completers, the median LOS displayed no consistent pattern with frequency of use, ranging between 97 days and 144 days.

**Figure 9.7**  
**Methadone outpatient treatment completion and transfer to further treatment, by frequency of substance use: TEDS 2002**

**Figure 9.8**  
**Methadone outpatient treatment completion and transfer to further treatment, by age at first use: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

### Age at First Use

Table 9.7 and Figure 9.8. More than half (59 percent) of methadone outpatient discharges first used their primary substance at age 19 or older—12 percent between 19 and 20 years of age, 19 percent between 21 and 25 years of age, and 27 percent at age 25 or over.<sup>1</sup> Small proportions reported first use at 12 years of age or less and between 13 and 14 years of age (5 percent and 7 percent, respectively).

Among clients discharged from methadone outpatient treatment, the combined rate of completion or transfer to further treatment displayed no consistent pattern with age at first use of the primary substance. The rates were between 16 percent and 20 percent; the highest rate was among the 5 percent of clients whose use began at 12 years of age or less.

The median LOS for methadone outpatient treatment completers was shortest (83 days) among those whose substance use began at 12 years of age or less, but displayed no consistent pattern with age at first use. The median LOS for the other age groups was between 95 days and 144 days.

### Prior Treatment

Table 9.8 and Figure 9.9. Twenty-six percent of methadone outpatient treatment discharges had never been in treatment before, while 20 percent had been in treatment 5 or more times before.

Among clients discharged from methadone outpatient treatment, the combined rate of treatment completion or transfer to further treatment was highest (20 percent) among

<sup>1</sup> Percentages sum to less than total because of rounding.

**Figure 9.9**  
**Methadone outpatient treatment completion and transfer to further treatment, by number of prior treatment episodes: TEDS 2002**

**Figure 9.10**  
**Methadone outpatient treatment completion and transfer to further treatment, by treatment referral source: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

those with no prior treatment episodes, and lowest (17 percent) among those with 5 or more prior treatment episodes. Otherwise, the rates displayed no consistent pattern with the number of prior treatment episodes.

The median LOS among methadone outpatient treatment completers displayed no consistent pattern with the number of prior treatment episodes, ranging between 106 days and 148 days.

### Treatment Referral Source

*Table 9.9 and Figure 9.10.* Three-quarters (76 percent) of clients discharged from methadone outpatient treatment were self- or individual referrals to treatment.

Among clients discharged from methadone outpatient treatment, the combined rate of completion or transfer to further treatment was

18 percent for self- or individual referrals. The rate was highest (35 percent) among clients referred by an employer, but these clients represented less than 1 percent of methadone outpatient discharges. Among other treatment referral sources, the combined completion/transfer rates ranged between 16 percent and 23 percent.

The median LOS among methadone outpatient treatment completers was 120 days for self- or individual referrals, ranging between 52 days and 208 days for the other treatment referral sources.

### Employment Status

*Table 9.10 and Figure 9.11.* Twenty-nine percent of clients aged 16 and over discharged from methadone outpatient treatment were employed (22 percent full time and 7 percent part time). Thirty-five percent were unem-

**Figure 9.11**  
**Methadone outpatient treatment completion and transfer to further treatment, by employment status: TEDS 2002**

**Figure 9.12**  
**Methadone outpatient treatment completion and transfer to further treatment, by years of education: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

ployed, and 36 percent were not in the labor force.

Among methadone outpatient treatment discharges, the combined rate of treatment completion or transfer to further treatment was highest among those who were employed full time (21 percent), and lowest among those who were not in the labor force (15 percent). Otherwise, the rates displayed no consistent pattern with employment status.

The median LOS among methadone outpatient treatment completers was shortest (97 days) among those who were not in the labor force. At the other levels of employment, the median LOS displayed no consistent pattern, ranging between 109 days and 170 days.

### Education

*Table 9.11 and Figure 9.12.* Eighteen percent of clients aged 18 and over discharged from methadone outpatient treatment had more than 12 years of education. Forty-four percent had 12 years of education or a GED, 31 percent had 9 to 11 years of education, and 7 percent had 8 years of education or less.

Clients with more than 12 years of education were the most likely to either complete methadone outpatient treatment or to be transferred to further treatment (20 percent). Among clients with 12 years of education or less, the rates displayed no consistent pattern with level of education, ranging between 16 percent and 19 percent.

The median LOS was shortest (87 days) among clients with 8 years of education or less, but displayed no consistent pattern with level of education. It was between 111 days and 121 days for the other levels of education.

<sup>1</sup> Includes methadone outpatient clients (n=22,020; 95 percent) and methadone intensive outpatient clients (n=1,200; 5 percent).

<sup>2</sup> Methadone outpatient treatment was not offered, or was not reportable to TEDS.

<sup>3</sup> Methadone outpatient treatment admissions were reported, but there were no linkable discharge records.

-- Quantity is zero.

## CHAPTER 10

### METHADONE DETOXIFICATION DISCHARGES: 2002

Chapter 10 presents data on the reasons for discharge and length of stay (LOS) in treatment for the 20,586 linked admission/discharge records of clients discharged from methadone detoxification in 2002.

Table 10.1 presents reason for discharge by State. Overall, 3,717 (18 percent) of methadone detoxification discharges completed methadone detoxification, 1,954 (9 percent) were transferred to further treatment, 12,347 (60 percent) dropped out of treatment, 629 (3 percent) had treatment terminated by the

facility, and 1,939 (9 percent) failed to complete treatment for other reasons [Figure 10.1].

Figure 10.2, Table 2.6, and Appendix Table C.1. The median LOS for methadone detoxification was 15 days overall, and the average (mean) LOS was longer, 30 days (standard deviation, 75). The average LOS was longer than the median LOS for most reasons for discharge in most subcategories.

Methadone detoxification clients who completed treatment generally remained in treatment longer than those who did not complete treatment. Among treatment completers,

**Figure 10.1**  
**Reason for discharge from methadone detoxification: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

median LOS was 20 days, and among clients transferred to further treatment it was 13 days. Among clients who dropped out of treatment, the median LOS was 13 days; among those whose treatment was terminated by the facility, it was 21 days; and among those who failed to complete treatment for other reasons, the median LOS was 18 days.

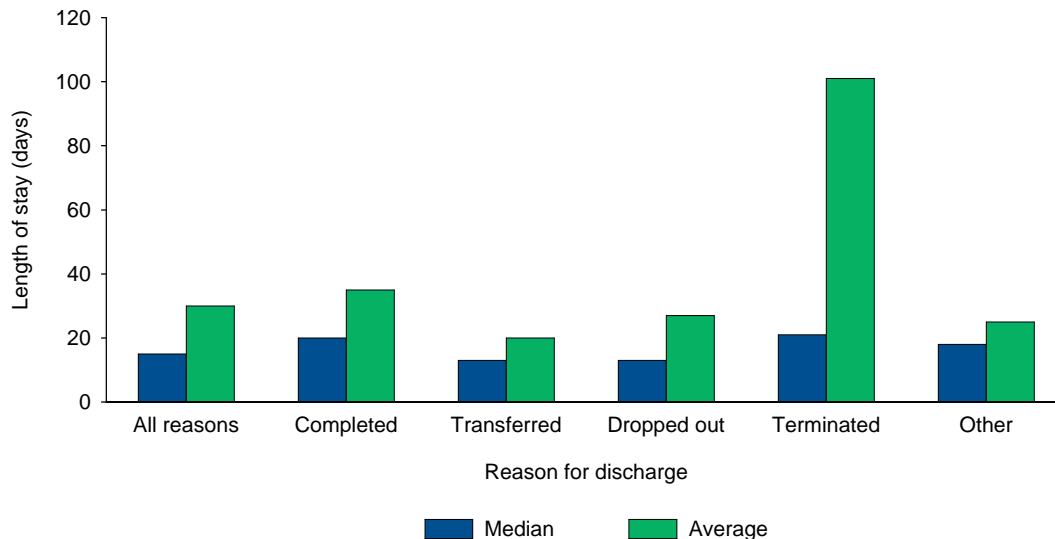

### Demographics

*Tables 10.2-10.4.* Seventy-one percent of clients discharged from methadone detoxification were male. About one-third (35 percent) were 40 to 49 years of age, and 30 percent were 30 to 39 years of age. Nineteen percent were 20 to 29 years of age, and 15 percent were 50 years of age and over. Small proportions were less than 15 years of age and 15 to 19

years of age (less than one-half of 1 percent and 1 percent, respectively). Forty-three percent of clients discharged from methadone detoxification were non-Hispanic White, while 31 percent were Hispanic, 20 percent were non-Hispanic Black, and 5 percent were of other racial/ethnic groups.<sup>1</sup>

*Table 10.2 and Figure 10.3.* Men and women were about equally likely to complete methadone detoxification or to be transferred to further treatment (27 percent and 28 percent, respectively). Men and women who completed methadone detoxification remained in treatment equal lengths of time. The median LOS among methadone detoxification completers for both men and women was 20 days.

**Figure 10.2**  
**Median and average lengths of stay in methadone detoxification, by reason for discharge: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

<sup>1</sup> Percentages sum to less than 100 percent because of rounding.

**Figure 10.3**  
**Methadone detoxification completion and transfer to further treatment, by sex: TEDS 2002**

**Figure 10.4**  
**Methadone detoxification completion and transfer to further treatment, by age at admission: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

*Table 10.3 and Figure 10.4.* Among methadone detoxification discharges, the combined rate of completion or transfer to further treatment was greatest among the oldest and youngest age groups. The rate was 33 percent among clients who were 50 years of age and over, and 31 percent among the 1 percent of clients who were 15 to 19 years of age. The rate was lowest (25 percent) among clients who were 30 to 39 years of age.

The median LOS among methadone detoxification completers was 20 days for all age groups.

*Table 10.4 and Figure 10.5.* Non-Hispanic Blacks and non-Hispanic Whites were approximately equally likely to either complete methadone detoxification or to be transferred to further treatment (30 percent and 29 percent, respectively). The rate was lower for Hispanics (24 percent).

The median LOS among methadone detoxification completers was 20 days for all racial/ethnic groups.

### Primary Substance

*Table 10.5 and Figure 10.6.* Ninety-eight percent of clients discharged from methadone detoxification reported opiates as their primary substance of abuse at admission. Alcohol and cocaine were each reported by 1 percent. Marijuana and stimulants were reported by less than one-half of 1 percent each.

Among clients who reported opiates as their primary substance at admission, the combined rate of treatment completion or transfer to further treatment was 27 percent. Among the 2 percent of clients who reported substances other than opiates, the rates ranged between 38 percent and 71 percent.

**Figure 10.5**  
**Methadone detoxification completion and transfer to further treatment, by race/ethnicity: TEDS 2002**

**Figure 10.6**  
**Methadone detoxification completion and transfer to further treatment, by primary substance: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

The median LOS among methadone detoxification completers was 20 days for those who reported opiates as their primary substance. Among the 2 percent of clients who reported substances other than opiates, the median LOS was between 3 days and 10 days.

### Frequency of Use

*Table 10.6 and Figure 10.7.* Ninety-three percent of clients discharged from methadone detoxification reported daily use of their primary substance in the month before entering treatment, while less than 1 percent reported no use in that period.

Among methadone detoxification clients who reported daily use of their primary substance in the month before entering treatment, the combined rate of completion or transfer to further treatment was 27 percent. Among the remaining 7 percent of clients, the rates ranged between 29 percent and 42 percent.

The median LOS among methadone detoxification completers was 20 days for those who reported daily use of their primary substance in the month before entering treatment. Among the remaining 7 percent of methadone detoxification completers, the median LOS displayed no consistent pattern with frequency of use, and ranged between 8 days and 20 days.

### Age at First Use

*Table 10.7 and Figure 10.8.* Age at first use was reported for only 28 percent of methadone detoxification discharges. Among those reporting age at first use, more than half (51 percent) first used their primary substance at age 21 or older—20 percent between 21 and 25 years of age and 32 percent at over 25 years of age.<sup>1</sup> Eleven percent reported first use

<sup>1</sup> Percentages sum to more than total because of rounding.

at 14 years of age or less. Another 38 percent reported first using their primary substance at between 15 and 20 years of age.

Among clients discharged from methadone detoxification, the combined rate of completion or transfer to further treatment was slightly lower among those whose substance use began at 17 years of age or older than it was among those whose use began at less than 17 years of age. Among the four older age groups (17 years of age or older), the rates ranged between 26 percent and 28 percent. Among the three younger age groups (less than 17 years of age), the rates ranged between 30 percent and 42 percent.

The median LOS for methadone detoxification completers generally increased with age at first use. Among the three youngest age groups (those whose use began at 16 years of

age or younger), the median LOS was 7 days or 8 days. It increased to 13 days for those whose use began at 17 to 18 years, and to 21 days for those whose use began at over 25 years of age.

**Prior Treatment**

*Table 10.8 and Figure 10.9.* Twenty-one percent of methadone detoxification discharges had never been in treatment before, while 27 percent had been in treatment 5 or more times before.

Among clients discharged from methadone detoxification, the combined rate of completion or transfer to further treatment was highest (31 percent) among those with no prior treatment episodes, and lowest (23 percent) among those who had been in treatment 5 or more times. Otherwise, the rates dis-

**Figure 10.9**  
**Methadone detoxification completion and transfer to further treatment, by number of prior treatment episodes: TEDS 2002**

**Methadone detoxification completion and transfer to further treatment, by treatment referral source: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

played no consistent pattern with the number of prior treatment episodes.

The median LOS among methadone detoxification completers was the same, 20 days, regardless of the number of prior treatment episodes.

### Treatment Referral Source

*Table 10.9 and Figure 10.10.* Ninety percent of clients discharged from methadone detoxification were self- or individual referrals to treatment.

Among clients discharged from methadone detoxification, the combined rate of completion or transfer to further treatment was 26 percent for self- or individual referrals. The rate was highest (67 percent) among clients referred by an employer, but these clients rep-

resented less than one-half of 1 percent of methadone detoxification discharges. Among other treatment referral sources, the combined completion/transfer rates ranged between 25 percent and 44 percent.

The median LOS among methadone detoxification completers was 20 days for self- or individual referrals, and ranged between 4 days and 20 days for the other treatment referral sources.

### Employment Status

*Table 10.10 and Figure 10.11.* Thirty-four percent of clients aged 16 and over discharged from methadone detoxification were employed (25 percent full time and 8 percent part time).<sup>1</sup> Thirty-four percent were unemployed, and 32 percent were not in the labor force.

<sup>1</sup> Percentages sum to less than total because of rounding.

**Figure 10.11**  
**Methadone detoxification completion and transfer to further treatment, by employment status: TEDS 2002**

**Figure 10.12**  
**Methadone detoxification completion and transfer to further treatment, by years of education: TEDS 2002**

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

Among methadone detoxification discharges, the combined rate of treatment completion or transfer to further treatment was lowest among those who were employed full time (24 percent). At the other levels of employment, the rates displayed no consistent pattern with employment status, and ranged between 25 percent and 39 percent.

The median LOS among clients completing methadone detoxification was the same, 20 days, at all levels of employment.

### Education

*Table 10.11 and Figure 10.12.* Sixteen percent of clients aged 18 and over discharged from methadone detoxification had more than 12 years of education. Forty-seven percent had 12 years of education or a GED, 30 percent had 9 to 11 years of education, and 6 percent had 8 years of education or less.<sup>1</sup>

Clients with more than 12 years of education were the most likely to either complete methadone detoxification or to be transferred to further treatment (30 percent). Among clients with 12 years of education or less, the rates displayed no consistent pattern with level of education, and ranged between 26 percent and 28 percent.

The median LOS among clients completing methadone detoxification was the same, 20 days, at all levels of education.

<sup>1</sup> Percentages sum to less than 100 percent because of rounding.

<sup>1</sup> Includes ambulatory detoxification (n = 18,691; 91 percent), free-standing residential detoxification (n = 1,574; 8 percent), and hospital detoxification (n = 321; 2 percent).

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through August 4, 2004.

## APPENDIX A

### BACKGROUND OF THE TREATMENT EPISODE DATA SET (TEDS)

#### History

National-level data collection on admissions to substance abuse treatment was first mandated in 1972 under the Drug Abuse Office and Treatment Act, P.L. 92-255. This act initiated Federal funding for drug treatment and rehabilitation, and required reporting on clients entering drug (but not alcohol) abuse treatment. The Client-Oriented Data Acquisition Process (CODAP) was developed to collect admission and discharge data directly from Federally-funded drug treatment programs. (Programs for treatment of alcohol abuse were not included.) Reporting was mandatory for all such programs, and data were collected using a standard form. CODAP included all clients in Federally-funded programs regardless of individual funding source. Reports were issued from 1973 to 1981 based on data from 1,800 to 2,000 programs, including some 200,000 annual admissions.

In 1981, collection of national-level data on admissions to substance abuse treatment was discontinued because of the introduction of the Alcohol, Drug Abuse, and Mental Health Services (ADMS) Block Grant. The Block Grant transferred Federal funding from individual programs to the States for distribution, and included no data reporting requirement. Participation in CODAP became voluntary; although several States submitted data through 1984, the data were in no way nationally representative.

In 1988, the Comprehensive Alcohol Abuse, Drug Abuse, and Mental Health Amendments

(P.L. 100-690) established a revised Substance Abuse Prevention and Treatment (SAPT) Block Grant and mandated Federal data collection on clients receiving treatment for either alcohol or drug abuse. The Treatment Episode Data Set (TEDS) data collection effort represents the Federal response to this mandate. TEDS began in 1989 with the issue of 3-year development grants to States.

#### TEDS in the Context of DASIS

TEDS is one of the three components of SAMHSA's Drug and Alcohol Services Information System (DASIS). DASIS is the primary source of national data on substance abuse treatment.

The core component of DASIS is the Inventory of Substance Abuse Treatment Services (I-SATS), a continuously-updated comprehensive listing of all known public and private substance abuse treatment facilities.

TEDS includes facilities that are licensed or certified by the State substance abuse agency to provide substance abuse treatment (or are administratively tracked for other reasons), and that are required by the States to provide TEDS client-level data.

The third component of DASIS is the National Survey of Substance Abuse Treatment Services (N-SSATS), an annual survey of the location, characteristics, services offered, and utilization of alcohol and drug abuse treatment facilities in I-SATS.

## APPENDIX B

### TEDS DATA ELEMENTS

#### TEDS MINIMUM DATA SET

##### PROVIDER IDENTIFIER

##### CLIENT IDENTIFIER

##### CLIENT OR CODEPENDENT/COLLATERAL

- **Client:**
  - Has an alcohol or drug related problem
  - Has completed the screening and intake process
  - Has been formally admitted for treatment or recovery service in an alcohol or drug treatment unit
  - Has his or her own client record

A person is not a client if he or she has completed only a screening or intake process or has been placed on a waiting list.

- **Codependent/collateral:**
  - Has no alcohol or drug related problem
  - Is seeking services because of problems arising from his or her relationship with an alcohol or drug user
  - Has been formally admitted for service to a treatment unit
  - Has his or her own client record or has a record within a primary client record

GUIDELINES: Reporting of *Codependent/collateral* is optional. If a record does not include a value for this field, it is assumed to be a substance abuse client record. If a substance abuse client with an existing record in TEDS becomes a codependent, a new client record should be submitted indicating that the client has been admitted as a codependent, and vice versa.

##### TRANSACTION TYPE

Identifies whether a record is for an admission or a transfer/change in service.

- **A.** Admission
- **T.** Transfer/change in service

GUIDELINES: For TEDS, a treatment episode is defined as that period of service between the beginning of treatment for a drug or alcohol problem and the termination of services for the pre-

scribed treatment plan. The episode includes one admission (when services begin), and one discharge (when services end). Within a treatment episode, a client may transfer to a different service, facility, program, or location. In some data systems, such transfers may generate admissions records. When it is feasible for the State to identify transfers, they should be reported as transfers, not as admissions. When admissions and transfers cannot be differentiated in a State data system, such changes in service should be reported to TEDS as admissions.

## **DATE OF ADMISSION**

The day when the client receives his or her first direct treatment or recovery service.

## **TYPE OF SERVICE AT ADMISSION**

Describes the type of service the client receives.

- **Detoxification, 24-hour service, hospital inpatient.** 24-hour per day medical acute care services in a hospital setting for detoxification for persons with severe medical complications associated with withdrawal
- **Detoxification, 24-hour service, free-standing residential.** 24-hour per day services in a non-hospital setting providing for safe withdrawal and transition to ongoing treatment
- **Rehabilitation/residential, hospital (other than detoxification).** 24-hour per day medical care in a hospital facility in conjunction with treatment services for alcohol and other drug abuse and dependency
- **Rehabilitation/residential, short-term (30 days or fewer).** Typically, 30 days or less of non-acute care in a setting with treatment services for alcohol and other drug abuse and dependency
- **Rehabilitation/residential, long-term (more than 30 days).** Typically, more than 30 days of non-acute care in a setting with treatment services for alcohol and other drug abuse and dependency; this may include transitional living arrangements such as halfway houses
- **Ambulatory, intensive outpatient.** As a minimum, the client must receive treatment lasting two or more hours per day for three or more days per week
- **Ambulatory, non-intensive outpatient.** Ambulatory treatment services including individual, family, and/or group services; these may include pharmacological therapies
- **Ambulatory, detoxification.** Outpatient treatment services providing for safe withdrawal in an ambulatory setting (pharmacological or non-pharmacological)

## **AGE**

Identifies client's age at admission. Derived from client's date of birth and date of admission.

- **0.** Indicates a newborn with a substance dependency problem
- **1-96.** Indicates the age at admission

## **SEX**

Identifies client's sex.

- **Male**
- **Female**

## RACE

Specifies the client's race.

- **Alaska Native (Aleut, Eskimo, Indian).** Origins in any of the original people of Alaska
- **American Indian (other than Alaska Native).** Origins in any of the original people of North America and South America (including Central America) and who maintain cultural identification through tribal affiliation or community attachment
- **Asian or Pacific Islander.** Origins in any of the original people of the Far East, the Indian subcontinent, Southeast Asia, or the Pacific Islands
  - **Asian.** Origins in any of the original people of the Far East, the Indian subcontinent, or Southeast Asia, including, for example, Cambodia, China, India, Japan, Korea, Malaysia, Philippine Islands, Thailand, and Vietnam
  - **Native Hawaiian or other Pacific Islander.** Origins in any of the original people of Hawaii, Guam, Samoa, or other Pacific Islands
- **Black or African American.** Origins in any of the black racial groups of Africa
- **White.** Origins in any of the original people of Europe, North Africa, or the Middle East
- **Other single race.** Client is not classified in any category above or whose origin group, because of area custom, is regarded as a racial class distinct from the above categories
- **Two or more races.** For use when the State data system allows multiple race selection and more than one race is indicated

GUIDELINES: If a State does not distinguish between *American Indian* and *Alaska Native*, both should be coded as *American Indian*. If a State does not distinguish between *Asian* and *Native Hawaiian or other Pacific Islander*, both should be coded as *Asian or Pacific Islander*. For States that collect multiple races: a) when a single race is designated, the specific race code should be used; b) if the State collects a primary or preferred race along with additional races, the code for the primary/preferred race should be used; c) if the State uses a system such as an algorithm to select a single race when multiple races have been designated, the same system may be used to determine the race code for TEDS. When two or more races have been designated and neither (b) nor (c) above apply, the TEDS code for *Two or more races* should be used.

## ETHNICITY

Identifies client's specific Hispanic origin

- **Puerto Rican.** Of Puerto Rican origin, regardless of race
- **Mexican.** Of Mexican origin, regardless of race
- **Cuban.** Of Cuban origin, regardless of race
- **Other specific Hispanic.** Of known Central or South American or any other Spanish cultural origin (including Spain), other than Puerto Rican, Mexican, or Cuban, regardless of race
- **Hispanic (specific origin not specified).** Of Hispanic origin, but specific origin not known or not specified
- **Not of Hispanic origin**

GUIDELINES: If a State does not collect specific Hispanic detail, code *Ethnicity* for Hispanics as *Hispanic (specific origin not specified)*.

## NUMBER OF PRIOR TREATMENT EPISODES

Indicates the number of previous treatment episodes the client has received in any drug or alcohol program. Changes in service for the same episode (transfers) should *not* be counted as separate prior episodes.

- **0 previous episodes**
- **1 previous episode**
- **2 previous episodes**
- **3 previous episodes**
- **4 previous episodes**
- **5 or more previous episodes**

GUIDELINES: It is preferred that the number of prior treatments be a self-reporting field collected at the time of client intake. However, this data item may be derived from the State data system if the system has that capability, and episodes can be counted for at least several years.

## EDUCATION

Specifies the highest school grade the client has completed.

- **0.** Less than one grade completed
- **1-25.** Years of school (highest grade) completed

GUIDELINES: States that use specific categories for some code numbers should map their codes to a logical number of years of school completed. For General Equivalency Degree, use *12*. For Bachelor's Degree, use *16*.

## EMPLOYMENT STATUS

Identifies the client's employment status at the time of admission or transfer.

- **Full time.** Working 35 hours or more each week; includes members of the uniformed services
- **Part time.** Working fewer than 35 hours each week
- **Unemployed.** Looking for work during the past 30 days, or on layoff from a job
- **Not in labor force.** Not looking for work during the past 30 days, or a student, homemaker, disabled, retired, or an inmate of an institution.

GUIDELINES: Seasonal workers are coded in this category based on their employment status at time of admission.

## PRINCIPAL SOURCE OF REFERRAL

Describes the person or agency referring the client to the alcohol or drug abuse treatment program.

- **Individual (includes self-referral).** Includes the client, a family member, friend, or any other individual who would not be included in any of the following categories; includes self-referral due to pending DWI/DUI
- **Alcohol/drug abuse care provider.** Any program, clinic, or other health care provider whose principal objective is treating clients with substance abuse problems, or a program whose activities are related to alcohol or other drug abuse prevention, education, or treatment
- **Other health care provider.** A physician, psychiatrist, or other licensed health care professional; or general hospital, psychiatric hospital, mental health program, or nursing home
- **School (educational).** A school principal, counselor, or teacher; or a student assistance program (SAP), the school system, or an educational agency
- **Employer/EAP.** A supervisor or an employee counselor
- **Other community referral.** Community or religious organization or any Federal, State, or local agency that provides aid in the areas of poverty relief, unemployment, shelter, or social welfare. Self-help groups such as Alcoholics Anonymous (AA), Al-Anon, and Narcotics Anonymous (NA) are also included in this category. Defense attorneys are included in this category.
- **Court/criminal justice referral/DUI/DWI.** Any police official, judge, prosecutor, probation officer, or other person affiliated with a Federal, State, or county judicial system. Includes referral by a court for DWI/DUI, clients referred in lieu of or for deferred prosecution, or during pretrial release, or before or after official adjudication. Includes clients on pre-parole, pre-release, work or home furlough, or TASC. Client need not be officially designated as “on parole.” Includes clients referred through civil commitment.

## SUBSTANCE PROBLEM (PRIMARY, SECONDARY, OR TERTIARY )

These fields identify the client’s primary, secondary, and tertiary substance problems.

- **None**
- **Alcohol**
- **Cocaine/crack**
- **Marijuana/hashish.** This includes THC and any other *cannabis sativa* preparations
- **Heroin**
- **Nonprescription methadone**
- **Other opiates and synthetics.** Includes codeine, hydrocodone, hydromorphone, meperidine, morphine, opium, oxycodone, pentazocine, propoxyphene, tramadol, and any other drug with morphine-like effects
- **PCP.** Phencyclidine
- **Other hallucinogens.** Includes LSD, DMT, STP, hallucinogens, mescaline, peyote, psilocybin, etc.
- **Methamphetamine**
- **Other amphetamines.** Includes amphetamines, MDMA, phenmetrazine, and other unspecified amines and related drugs
- **Other stimulants.** Includes methylphenidate and any other stimulants

- **Benzodiazepines.** Includes alprazolam, chlordiazepoxide, clonazepam, clorazepate, diazepam, flunitrazepam, flurazepam, halazepam, lorazepam, oxazepam, prazepam, temazepam, triazolam, and other unspecified benzodiazepines
- **Other non-benzodiazepine tranquilizers.** Includes meprobamate and other non-benzodiazepine tranquilizers
- **Barbiturates.** Amobarbital, pentobarbital, phenobarbital, secobarbital, etc.
- **Other non-barbiturate sedatives or hypnotics.** Includes chloral hydrate, ethchlorvynol, glutethimide, methaqualone, and other non-barbiturate sedatives or hypnotics
- **Inhalants.** Includes chloroform, ether, gasoline, glue, nitrous oxide, paint thinner, etc.
- **Over-the-counter medications.** Includes aspirin, cough syrup, diphenhydramine and other antihistamines, sleep aids, any other legally obtained nonprescription medication
- **Other.** Includes diphenylhydantoin/phenytoin, GHB/GBL, ketamine, etc.

### **USUAL ROUTE OF ADMINISTRATION (OF PRIMARY, SECONDARY, AND TERTIARY SUBSTANCES)**

These fields identify the usual route of administration of the respective substances.

- **Oral**
- **Smoking**
- **Inhalation**
- **Injection (IV or intramuscular)**
- **Other**

### **FREQUENCY OF USE (OF PRIMARY, SECONDARY, AND TERTIARY SUBSTANCES)**

These fields identify the frequency of use of the respective substances.

- **No use in the past month**
- **1-3 times in the past month**
- **1-2 times in the past week**
- **3-6 times in the past week**
- **Daily**

### **AGE OF FIRST USE (OF PRIMARY, SECONDARY, AND TERTIARY SUBSTANCE)**

For drugs other than alcohol, these fields identify the age at which the client first used the respective substance. For alcohol, these fields record the age of first intoxication.

- **0.** Indicates a newborn with a substance dependency problem
- **1-96.** Indicates the age at first use

### **MEDICATION-ASSISTED THERAPY**

Identifies whether the use of methadone or LAAM treatment is part of the client's treatment plan.

- **Yes**
- **No**

## TEDS DISCHARGE DATA SET

### TYPE OF SERVICE AT DISCHARGE

See TEDS Minimum Data Set item *Type of service at admission* for definitions.

### DATE OF LAST CONTACT

Specifies the month, day, and year when the client was last seen for a treatment. The date may be the same as the date of discharge. In the event of a change of service or provider within an episode of treatment, it is the date the client transferred to another service or provider.

### DATE OF DISCHARGE

Specifies the month, day, and year when the client was formally discharged from the treatment facility or service. The date may be the same as the date of last contact. In the event of a change of service or provider within a treatment episode, it is the date the service terminated or the date the treatment ended at a particular provider.

### REASON FOR DISCHARGE, TRANSFER, OR DISCONTINUANCE OF TREATMENT

Indicates the outcome of treatment or the reason for transfer or discontinuance of treatment.

- **Treatment completed.** All parts of the treatment plan or program were completed.
- **Left against professional advice (dropped out).** Client chose not to complete treatment program, with or without specific advice to continue treatment. Includes clients who drop out for unknown reason.
- **Terminated by facility.** Treatment terminated by action of facility (not because client dropped out of treatment, or client incarcerated or other client reason).
- **Transferred to another substance abuse program or facility.** Client was transferred to another program, provider or facility, and reported or it is not known whether client reported. This code is to be used for all clients who have a change of service or provider within an episode of treatment, except when it is known that the client did not report to the next program.
- **Transferred to another substance abuse treatment program or facility but did not report.** Client was transferred to another program, provider, or facility, and it is known that client did not report. This code is to be used for all clients who have a change of service or provider within an episode of treatment, but are known not to have reported to the next program.
- **Incarcerated.** Jail, prison, house confinement. This code is to be used for all clients whose course of treatment is terminated because the client has been incarcerated
- **Death**
- **Other.** e.g., moved, illness, hospitalization, or other reason somewhat out of client's control.
- **Unknown.** Client status at discharge not known, e.g., record incomplete or lost.

## **APPENDIX C**

### **MEAN, MAXIMUM, AND STANDARD DEVIATION**

Appendix C tabulates the average (mean) length of stay (LOS), the maximum length of stay, and the standard deviation of the mean for all mean values shown in the report tables. The tables are organized by service type, variable value, and reason for discharge.

**Table C.1**  
**Average length of stay in treatment (mean), maximum length of stay, and standard deviation of the mean: TEDS 2002**
