

CMS 2010 Basic Stand Alone (BSA) Outpatient Procedures Public Use File (PUF)

General Documentation

1. Overview of the PUF

This release contains the Basic Stand Alone (BSA) Outpatient Procedures Public Use File (PUF) named “*CMS 2010 BSA Outpatient Procedures PUF*” with information from 2010 Medicare outpatient claims.¹ The *CMS 2010 BSA Outpatient Procedures PUF* is a procedure-level file in which each record is a procedure in an outpatient claim incurred by a 5% sample of Medicare beneficiaries. There are some demographic and claim-related variables provided in this PUF as detailed below. However, as claim or beneficiary identities are not provided, it is not possible to link procedures that belong to the same claim or beneficiary in the *CMS 2010 BSA Outpatient Procedures PUF*.

When the variables were selected for inclusion in this PUF, priority was given to the measures most commonly reported/studied in health services research. However, most variables could not be included in the *CMS 2010 BSA Outpatient Procedures PUF* because the inclusion of more information would increase the risk of identification of beneficiaries.

2. Source Data for the PUF

The *CMS 2010 BSA Outpatient Procedures PUF* originates from a 5% simple random sample of beneficiaries drawn (without replacement) from the 100% Beneficiary Summary File for reference year 2010. The sample that is used for the *CMS 2010 BSA Outpatient Procedures PUF* is *disjoint* from the existing 5% CMS research sample² in the sense that there is no overlap in terms of the beneficiaries in the *CMS 2010 BSA Outpatient Procedures PUF* and the 5% CMS research sample. It is also disjoint from the other *BSA PUFs* (i.e., CMS 2010 Inpatient Claims PUF, CMS 2010 PDE PUF, CMS 2010 DME Line Items PUF, and CMS 2010 Hospice Beneficiary PUF, CMS 2010 SNF Beneficiary PUF, CMS 2010 HHA Beneficiary PUF, and CMS 2010 Carrier Line Items PUF) that have been released so far. This property prevents users from linking data across multiple files for identification purposes.

The 100% Beneficiary Summary File is created annually and contains demographic, entitlement and enrollment data for beneficiaries

- a. who were documented as being alive for some part of the reference year of the Beneficiary Summary File, and

¹ Claims with outpatient services ending in 2010, defined by the “claim through date.”

² http://www.resdac.org/tools/TBs/TN-011_How5percentMedicarefilescreated_508.pdf

- b. who were entitled to Medicare benefits during the reference year, and
- c. who were enrolled in the Medicare Part A and/or Part B for at least one month in the reference year.

The 5% sample of outpatient procedures is created by collecting the outpatient procedures for the beneficiaries in the 5% random sample of beneficiaries. The 5% random sample contains approximately 2.5 million beneficiaries. To create the *CMS 2010 BSA Outpatient Procedures PUF*, all claims that belong to those 2.5 million beneficiaries are collected. These claims are then transformed so that each record of the PUF is not one claim, but one procedure of a claim.

As part of the PUF preparation steps, only a small number of procedures were removed (before suppression) from the file because of data anomalies or denied services. Out of the 2,503,543 beneficiaries, there are 1,181,723 beneficiaries with at least one outpatient claim, and the remaining 1,321,820 beneficiaries do not have any outpatient claims in 2010. To protect the privacy of Medicare beneficiaries, a total of 1,658,243 procedures incurred by 369,037 beneficiaries and comprising 737,298 claims are suppressed from the PUF, leaving 33,600,194 procedures and 6,697,804 claims incurred by 1,173,818 beneficiaries in the *CMS 2010 BSA Outpatient Procedures PUF*. Note that suppressing a procedure may or may not exclude a beneficiary from the PUF. The exclusion of a beneficiary depends on whether or not the beneficiary has one or more additional procedures remaining in the PUF. Consequently, not all 369,037 beneficiaries and 737,298 claims are excluded. Table 1 below provides the number of procedures and the total Medicare payments for the procedures.

Table 1: Suppression in *CMS 2010 BSA Outpatient Procedures PUF*

Category	Formula	Medicare Payments ⁽²⁾	Number of Procedures
Initial 5% Sample ⁽¹⁾	(a)	2,332,484,794	35,258,437
Suppressed	(b)	327,606,764	1,658,243
<i>CMS 2010 BSA Outpatient Procedures (HCPCS) PUF</i>	(c) =(a)-(b)	2,004,878,030	33,600,194

(1) 4,422,778 procedures are suppressed initially because of invalid HCPCS codes or denied procedures.

(2) The Medicare Payments for the procedures provided in this table are computed using actual payment amounts for the procedures from the outpatient claim file.

3. Content of the PUF

The most important aspects of the *CMS 2010 BSA Outpatient Procedures PUF* are as follows:

- i. It contains claims for a simple random sample of 5% of the 2010 beneficiary population. Out of approximately 2.5 million beneficiaries in the 5% sample, about 1.2 million had claims, resulting in a PUF of 33,600,194 procedures, after protecting the privacy of Medicare beneficiaries.
- ii. It contains six (6) analytic variables (in addition to a unique procedure key): Age, gender, ICD-9 primary diagnosis code, HCPCS procedure code, count of number of services, and Medicare payment for procedures. Some of these variables have been aggregated or coarsened in order to protect individuals from identification while retaining the analytic value of the data.
- iii. A procedure is only included in the PUF if the combination of all six (6) variables is shared by at least eleven (11) beneficiaries in the population. For some combinations of values of the six (6) variables, there are fewer than eleven (11) procedures in the PUF (e.g., only one or two procedures).
- iv. Procedures cannot be linked by claim or beneficiary and cannot be linked to any external data source by means of the procedure ID. The procedure ID is a cryptographic key specific to this Outpatient Procedures PUF and not available elsewhere. The *CMS 2010 BSA Outpatient Procedures PUF* is sorted by this procedure ID to ensure that the relative positions of each procedure in the PUF and in the original source data are totally uncorrelated.

4. Analytic Variables of the PUF

CMS 2010 BSA Outpatient Procedures PUF contains seven (7) variables: A procedure count and six (6) analytic variables, listed below.

- i. Gender (BENE_SEX_IDENT_CD): The beneficiary's gender, (1) male or (2) female.
- ii. Age (BENE_AGE_CAT_CD): The beneficiary's age, reported in six categories: (1) under 65, (2) 65 - 69, (3) 70 - 74, (4) 75-79, (5) 80-84, (6) 85 and older.
- iii. ICD-9 primary diagnosis code (OP_CLM_ICD9_DIAG_CD): "International Classification of Diseases" version 9.³ This is a three-digit code. In the PUF, 869 such codes are observed. The variable is blank (or missing) when there does not exist a primary diagnosis on the procedure. There are only 2 such records in the PUF.
- iv. HCPCS procedure codes (OP_HCPCS_CD): These are HCPCS codes (HCPCS Level I and Level II) and take on 3,867 possible values in the PUF.

³ See <http://www.cdc.gov/nchs/data/icd9/icdguide10.pdf>

- v. Count of services (OP_HCPCS_UNIT_CNT): This is the count of the total number of services associated with the procedure. This variable is not rounded. There are some records in the PUF for which count of services is equal to zero (0).
- vi. Medicare payment on procedures (OP_HCPCS_PMT_AMT): The amount paid by Medicare for the associated procedure. Payment amount is rounded according to the rule in Table 2.
- vii. Procedure count (PROC_CNT): Total number of procedures associated with the record (i.e., combination of the analytic variables).

The detailed definitions and frequency distributions of these variables are provided in the Data Dictionary & Codebook together with this document.

5. Analytic Utility of the PUF

Table 3 presents the number of procedures, claims and beneficiaries in the initial 5% sample and *CMS 2010 BSA OP Procedures PUF*.

Table 4 through Table 7 present the distribution of procedures and beneficiaries in the PUF by gender, age and number of months in 2010 for which the beneficiary was enrolled in Part B of Medicare. Note that *CMS 2010 BSA OP Procedures PUF* includes procedures for beneficiaries who were enrolled in Medicare Part B for less than a full year.

Table 8 and Table 9 provide the distribution of the number of procedures and claims per beneficiary in the *CMS 2010 BSA OP Procedures PUF*.

Table 10 shows the distribution of the number of procedures per claim. A claim can have many procedures, but as shown in Table 10, more than half of the claims have only one or two procedures.

Table 11 and Table 12 compare the distribution of procedures by gender and age of beneficiaries in the *CMS 2010 BSA OP Procedures PUF*, the initial 5% sample and the entire population. The figures presented in those tables indicate that the PUF, despite the suppression of 5% of the procedures in the original sample, provides good estimates of population parameters. Table 13 through Table 15 provide the same comparison for the ICD-9-CM diagnosis codes, HCPCS codes, and count of services, respectively.

Table 16 shows the suppression percentages of individual ICD-9-CM diagnosis codes in the *CMS 2010 BSA OP Procedures PUF* from the initial 5% sample. 143 ICD-9 diagnosis codes have

suppression rates from the initial 5% sample of 10% or less. Care should be exercised in using statistics for ICD-9 diagnosis codes with high suppression.

Table 17 shows number of procedures, count of services and Medicare payments by HCPCS code in the *CMS 2010 BSA OP Procedures PUF*. The weighted mean (Medicare payments divided by service counts for each HCPCS code) is compared with the mean from the initial 5% sample. Medicare payments in the *CMS 2010 BSA OP Procedures PUF* are rounded according to the rules in Table 2. The means in the initial 5% sample and in the *CMS 2010 BSA OP Procedures PUF* may differ for several reasons. First, the payments in the PUF are rounded while the mean payments shown in Table 17 for the initial 5% sample are based on actual payments. Second, approximately 4.7 % (or 1,658,243 procedures) of the initial 5% sample is suppressed in the de-identification process so the number of procedures for each HCPCS code differ between the initial 5% sample and the *CMS 2010 BSA OP Procedures PUF*. Some HCPCS codes are already sparsely represented in the initial 5% sample and suppression may decrease the sample size for these HCPCS codes further, exacerbating differences in mean payment per service count between the two files. Though there are 7,243 HCPCS codes in the initial 5% sample, over 70 percent of those procedures is comprised of the top 58 most frequent HCPCS codes. Thus, many of the HCPCS codes in the *CMS 2010 BSA OP Procedures PUF* are infrequent and care should be exercised in using statistics for the higher risk HCPCS codes. Table 17 also provides the suppression rates for each HCPCS code in the *CMS 2010 BSA OP Procedures PUF*.

It is important to note that the 5% sample is 5% of *beneficiaries*, not procedures, so multiplying payments in the initial 5% sample by 20 may not yield a good approximation of total payments in 2010 associated with each HCPCS code.

Table 2: Rounding Rule for Total Medicare Payments

Value of Medicare Payment Amount (\$)	Rounding Rule
0 - 100	Round to the nearest multiple of 10
100 - 1,000	Round to the nearest multiple of 50
1,000 - 10,000	Round to the nearest multiple of 100
Greater than 10,000	Round to the nearest multiple of 1,000

Table 3: Size of initial 5% sample and OP PUF in 2010

File	Number of Procedures	Number of Claims	Number of Beneficiaries
Initial 5% sample ⁽¹⁾	35,258,437	7,435,102	1,181,723
OP PUF	33,600,194	6,697,804	1,173,818

(1) The following data cleaning steps were taken: (i) remove invalid HCPCS codes; (ii) remove denied services.

Table 4: Distribution of Procedures for Male Beneficiaries by Number of Months of Part B Enrollment in 2010 and Age of Beneficiary

Months of Part B Enrollment ⁽¹⁾	Under 65	65 - 69	70 - 74	75 - 79	80 - 84	85 and above	Total
1	6,406	2,971	1,334	1,437	1,830	2,632	16,610
2	10,914	7,899	3,389	4,158	5,101	6,591	38,052
3	20,577	11,784	7,396	6,811	7,565	12,573	66,706

- (1) HCPCS codes that are fully suppressed (i.e., HCPCS codes that do not appear in the *CMS 2010 BSA OP Procedures PUF*) are not included in this table. Hence, the actual suppression rate for any HCPCS code in this table is less than 100%.
- (2) Mean Medicare Payment in PUF and Mean Medicare Payment in Initial 5% Sample are both weighted means. Mean Medicare Payment in PUF is calculated by dividing total (rounded) Medicare payment by the count of services in the PUF. Mean Medicare Payment in Initial 5% Sample is calculated by dividing total actual (not rounded) Medicare payment in the initial 5% sample (not shown) by the count of services in the initial 5% sample (not shown) for each HCPCS code. A number of procedures are excluded from the initial 5% sample because of missing or invalid HCPCS codes or denied services.
- (3) “abs[]” stands for absolute value of the term inside the brackets.
