This is the second time that promoters of the casino have attempted to gain access to the Gettysburg battlefield area. It was a bad idea the first time and it remains a bad idea. The notion that this location will provide jobs is a red herring. A casino at this location is NOT the right answer.

Yes, not only should wilderness quality land be managed as such, the amount of wilderness should be dramatically expanded. In addition to ANWR, there are approximately 9 million acres of wilderness quality lands in southern and central Utah that desperately deserve--need--protection. If Congress won't pass the America Redrock Wilderness Act, then pieces of it should be designated wilderness, as occurred with Grand Staircase-Escalante and Washington Co. II that passed last year.

A Great Plains National Park? OK... lets put it in Central Park in New York City or maybe the Mall in Washington DC. I'm sure you wouldn't mind having a few Wolves or Grizzly Bears in your back yard, since you want to put them in ours! You have got to be kidding!! There are people living out here in the Great Plains, descendants of the Settlers who first Homesteaded this Great Land. We have historically fed America and much of the World. When these Homesteaders saw a Wolf, they stopped what they were doing and all the neighbors hunted that Wolf until it was dead. Not because they hated Wolves, but because Wolves and Livestock are incompatible. This is obviously the Brain Child of someone who doesn't understand Where their Food comes from, nor Appreciates the Hard Work and Sacrifices made by the Farmers and Ranchers of the Great Plains to ensure Top Quality Food is available in your Local Grocery Store. By the way... there already is a National Park that has Bison, Wolves and Grizzly Bears. Its called Yellowstone National Park. A Great Place to see all of these creatures, not to mention Old Faithful and many other Wondrous Sites! Thanks!

For our own health and vibrancy, for our communities and culture, for our offspring, we need wild areas. This needs is surely as important as any other natural resource, but the areas with potential to provide wildness are diminishing. The Wilderness Act, and it's potential in designating new Wilderness areas are the best way to assure these benefits continue and should be fully realized and implemented across the remaining landscape suitable for Wilderness. This administration has the opportunity to do that.

Think locally, act nationally - locally, designate the Scotchman Peaks as Wilderness.

## Discussion Question 2

***(cont.)***

I haven't heard a single statement on this thread (or site for that matter) from an OHV enthusiast or supporter asking to take non-OHV designated land away from hikers/campers. I can, however, think of dozens of places to hike/camp near my home but I have to drive over 2 hours to the nearest OHV designated area which is currently at risk of closure.

It's always so frustrating to read through these comments spouting that OHV enthusiasts are reckless, polluting, land-hungry caveman mentalities trying to take over the world's public land. I get it, you've had a bad experience with some a-holes somewhere down the line and put the other 99% in the same category. Please wake up. Your campaign is more likely to hurt your cause in the long run. You are trying to shut out one of the largest groups of folks that has respect and offers care to the lands you are trying to close access to. All we want is access to the same public lands we and our past generations have had access to and the same for our/your future generations to come. We are not the partying, drag-racing, gang-banging inner-city thugs with toys tearing it up having some drunken' booze-fest in the middle of nowhere. We are the "tread-lightly-so-we-can keep-enjoying-the-peace-and-beauty-of-what-we-have-been-treading-on-for-generations" folks. Now. Go lobby against illegal dumpers and factories destroying our ozone for a change! Fight a REAL threat for once!

The so called 5% of inconsiderable bikers aren't damaging the natural planet. Get your facts straight. We as a whole human population are the real threat. As a matter of fact, considering the vast majority of our public land as a whole, the irresponsible few could only leave a microscopic scar which quickly fades away with natural erosion and plant growth. I can personally testify seeing with my own eyes, what used to be OHV trails (now abandoned), completely wiped of any traces from the hills near my home. If you are an advocate in preserving the land, you need to realize restricting the access will only promote illegal and more irresponsible abuse. Additionally, it is typically the designated areas that are maintained and enforced, without these areas, the restricted land is an open invitation for the mindset you and I are so strongly against.

Yeah, I must admit, I get angry and fired up and sometimes lash out. That's not saying I don't choose my words wisely. I don't think anything or anyone can change your mind. Your anger for OHVers is now blinding. Additionally, I think this has turned into a hobby for you. It's simple, if you're not going to give us our trails back (previously OHV allowed), at least stop taking away what we already have. If you got issues with the noise, go elsewhere...how about the MILLIONS upon MILLIONS of designated non-OHV trail systems where the only motorized noise that can be heard is from the parking lots and roads you need to access them. There are far greater ecological threats to our public lands than OHVs, go wage war on them please. B.Meyer - Sounds like you are open minded and a reasonable thinker, thank you for sharing your thoughts and opinions that I do believe have had and will impact OHVers reading this thread. I think many will walk away with a level of responsibility for nature and an understanding of common courtesy on the trails. I see the point on the noise, but then again...you have many, many more choices of where go than we do.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Thank you so much Sally, for providing all this valuable information and thoughts. This might be our last chance (across all the nation) to protect wilderness areas. This a huge step in American History and we can be an example to other communities facing the same type of issues.

I am glad to hear of one family of ORV riders that is responsible. All off road enthusiasts I have ever met drive anywhere they want. Getting a "high" experience is all they are after. Sure, the wilderness quality land is beautiful. But, they are there to have fun and since that means tearing up the landscape, destroying precious petroglyphs, pouring hazardous waste into water, oh well, they had fun. I have not yet seen an ORV rider be responsible for the destruction his/her vehicle does to the air, water and land. Wilderness quality lands/water and air need protections. Lands that are sensitive need more restricted recreational activities. There are many places that provide a person who likes to ride ORV's opportunities to see the landscape. ORV riders, is it the thrill of the ride or appreciation of the land/water/birds and others. They also put noxious fumes into the air which adds air pollution and makes the views much more difficult to see. I expect it is the thrill of the ride the ORV riders want.

Preserve soft trails. Too many trails are being converted to OHV or paved trails. There are aesthetics of natural soft trails that are destroyed when trails are converted to OHV or paved trails. However, the dept. of transportation seems to push for OHV and paved trails in order to charge access fees. Hikers need to come together to protect soft trails before they disappear.

We do need some places of just wilderness lands. This type of thinking above, will only allow the corporations to overrun the wild places. It will also take humanity further away from the land, water and air. The human needs places to touch the land, breathe clean air and drink clean water. People need to experience a plant, a tree, a rock. Too much of this is taken away by our city and suburban lives. There are less and less places these days. Compromises in the past have just watered down an action leaving us with dirty water to drink. What does it mean to be a steward of the earth?

"Wild" horses are not wild, they are feral. They are not native to North America. I like horses and burros, but we should not close our eyes to the damage they can do to wildlands, and how fast they breed. They are not all adoptable, it is expensive to keep feeding them. Just because they are pretty doesn't mean they should given "sacred cow" status.

Agree with some of this statement- Solar development is very land intensive, will be hard on a delicate desert landscape- and uses too much water (even the "low water" versions) in areas that have very little water. Should our demand for "renewable" energy ignore use of nonrenewable water aquifers? should people who own land and homes already have to drill ever deeper wells to subsidize solar developments? That said, solar is not the answer in some places due to weather, etc limiting the output. Why not biomass energy? Cogen plants create electricity through burning ag waste and small trees. No new tech needed- just need to deal with air quality crazies that prefer to burn non renewable natural gas because "it's cleaner." How about producing methane from dairies, landfill, and sewage plants (one farmer tried doing that in CA, again bureaucracy did not allow him to burn methane to produce electricity- he's only allowed to pile the manure so the methane is wasted.)

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

although there is waste in our system, the United States feed many other nations- I guess we could tell them no more food...the reality is that we can't produce enough food for the world with our current footprint without using modern methods even if we all went vegetarian. Unless you insist on buying feedlot animals, beef is usually raised on land that can't be used to produce rice or potatoes- not all land is equivalent. I buy grass fed meat which is raised on open range. Vegetarianism is not a healthy option for anyone of Native American or northern extraction (diabetes etc). I would argue that rice and potatoes are NOT a substitute for meat, and wishful thinking is not a substitute for realistic planning. Why is logging bad? It's better to use wood products than strip mine for metal. If we don't want to use petroleum, we will have to use some form of biofuel- wood gasification is a method that already exists, as does chipping small trees to feed cogen plants. Solar only works during the day, wind is hit or miss (and think of the impact to birds) you sound like a laundry list of group think environmentalist religious belief (logging bad, farming bad, must suffer to be good) personally I believe that we need less people, but I'm not sure how we do it in an ethical way- pay people to not have kids?

why stop at vandalism? Let's shoot kids if they play video games- that way they won't be around to go psycho from all the damage video games are doing to their brains....will that make you happy? After all the Taliban banned kites, didn't it? while we're at it, let's force them to eat their broccoli at gunpoint too! Please, we have enough serious problems with meth labs, invasive weeds, and more, without forcing unwilling kids to participate in activities by banning games.

Although I do not agree with the initial statement, I DO think there should be limits on speed. Please can we at least have a speed limit? 10 mph perhaps? The problem is not with slow pedaling along, it is with folks bombing downhill, braking hard, who are more interested in going fast than in being polite. There are trails in my area that are officially multi-use, but because they are heavily used as "downhill" bike trails, they are no longer usable by adult hikers, much less small children, equines or dogs. I have found that some mountain bikers do not realize just how frightening and unpleasant it is to have someone come up fast and quiet behind them then come to a screeching stop just a couple of feet away when you fail to jump out of the way. Think how frightening it is to an animal who does not understand that you are not trying to attack them. I am hard of hearing, and I DO NOT like sharing a trail with someone who is going 30 mph or more downhill. I really don't like rude cusswords or eye rolling, heavy sighs, because I can't get my animals off the trail fast enough. I try to stay on trails where bikes are not allowed, yet even there, I often find bike riders who claim they "didn't know" after passing many signs....We need both trails for fast bike riders AND slow hikers, and they really don't mix.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Although your idea is sweet, there are some problems with sharing between some uses. Fast bike riders are NOT compatible with equines due to the problem of spooking animals. If bike riders were willing to go slow, we could share safely, but, as it is, I stay away from heavy bike use areas due to the excessive speeds of many mountain bikers. Even if I don't have my animals with me, I don't like having to jump off the trail as bikes zoom by (not very peaceful). It is actually safely to share the trail with motorized bikes as they don't "surprise" you, and usually are more "animal aware" so stay back and don't spook the pack animals. I don't want to tell anyone not to ride their bike, I just want some trails and the wilderness to remain off limits to them, so I can safely recreate the way I want to. Unless they would be willing to slow down?

Can we focus on making engines quieter? I don't mind hearing quiet ATV's, trail bikes, etc. when I am close by, but the whine of 2 cycle engines from long distances is annoying and not peaceful. I think many folks are like me- don't want to stop anyone from having responsible fun, just don't think they have to disturb the peace for miles around. Some OHV's are quieter than others- is it possible to enforce a decibel limit that is meaningful? Is there a current limit that is not being enforced?

I absolutely agree that single track mountain bike trails should be built (not wildcatted, please) BUT if they are, the existing trails should be off limits or have a 5 mph speed limit so hikers and equestrians don't have to dodge speeding bikes. I know it must be annoying to have to stop or slow down for us non-wheeled folks, but high speeds don't mix with little kids, horses, burros, llamas, dogs, etc. Multi-use is a great idea until uses are not compatible.

I agree- I'm paying them to stay home right now- why shouldn't they help out? Why limit them to state land- there's plenty of litter in National Parks that needs to be cleaned up.

I am not a "rider", i just like to get out and camp on dirt roads, some of them rougher than others. That said- I don't like camping in noisy spots. I'm not sure why trail bikes and ATVs have to be loud. I would like to see some folks slow down, as I believe speed is correlated with trail damage. This is true of mountain bikers too. I don't want to shut off more ground - I think we should focus more on getting everyone to be polite, and tread lightly. I think 1% of folks ruin things for the other 99% by not following rules and being rude. I use pack animals and hope that others will not try to shut off my use of natural areas, therefore I don't want to run around telling other people to go away either!

In general I agree you on with the need to avoid political buzz words, but take exception to your phrase "truly disabled" I have a severe immune system disease resulting in arthritis and other problems. Thank God, I am not in a wheelchair, and hope not to be. However, I can't walk as far as I used to, and need more gear to survive. I now have pack animals to go into the back country because I can't carry what I need to function (my medicine bag alone weighs a pound, and don't ask about the extra warm sleeping bag and super thick pad, and large utensils that I can use with my clumsy hands). I do not look "disabled", I still walk, but am I therefore supposed to not use my "service animals?" Similarly, I do not want to tell others that they are not "truly disabled" enough to need help to get out and about. Of course, responsible riding education, quieter machines, and slower speeds would also help.

## Discussion Question 2

### **Written & Online Comments**

**(cont.)**

Lotterys are voluntary taxation- and they usually work if people keep their eye on them and don't allow money to be diverted for "emergencies." on the the other hand, raising taxes during a depression is unlikely to produce the desired result. Yup, tax until they leave, then we'll have lots of money. It is futile to impose punitive taxes- whatever your thoughts about an industry, they will not pay more taxes than they want to. If you raise taxes too high, they will just leave or go out of business and put their money in some other country. Whether you think it's fair or not, it's just the way it is.

Many people here want to spend tax dollars on recreation projects. (I promoted a few of these ideas myself) Although I truly enjoy a good trail, I know how much many of these ideas could cost. Given the budget crisis in many towns, is it reasonable to increase recreation spending, instead of supporting hospitals, fire stations, police, schools, etc? I would like to hear other folks opinions!

OK 10 mph? what would be a reasonable speed limit? just because you can ride faster than everyone else doesn't mean you should- it would be grossly irresponsible horse riders to gallop down a trail at full speed but yet again today I had bike riders whiz past me- they clearly saw me riding my animal, yet did not slow down, and to add to the fun, their dog was running behind. The riders did not control their dog until I demanded they keep it from running toward us- they didn't even realize what was happening (probably due to speed) So how do we make people behave? I am getting tired of dangerous behavior on the part of one community. believe it or not ATV and motorized trail bike riders are generally politer than mountain bikers.

OK so we're "privileged" - let's see - 90% of the land in our county is held by federal gov which pays no taxes. Our average income is much lower than state average. Our unemployment is much higher than state or national average. The RAC money is a trickle compared to what the tax base would be if the land was private. YOU on the other hand, live where there is a tax base, you are allowed to build offices, restaurants, industrial parks, hospitals, whatever. WE can't step out of our houses without being told what not to do. Our schools are barely scraping by, we have NO hospital in our county, our roads our full of potholes, and people like you want us to have NO Control over the pittance allowed to us out of the tax dollars we give annually to the government. YOU are allowed to appeal on environmental documents for projects on federal ground, whether or not you have ever been here. YOU are not here, YOU do not know what happens here, so YOU must be the expert, right?

if we don't log or mine, how will you be able to send your thoughts out over the internet from your comfortable home? There are no easy answers. "logging" is not all the same, some is not good (1000 acre clearcuts) some is more appropriate (thinning, group cuts, etc.) Mining also has different types with different impacts. Planning careful projects to provide goods for people is not a bad thing. We all eat, we all like a roof over our heads, we all like modern conveniences like computers, and insulting the people who provide those things to us is not productive. ("destroying forests"? Really ?) Discouraging smart kids from entering land management careers is a bad way to reduce impacts from producing all the things you use.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Up until we developed modern methods of agriculture, including pesticides, famine was common in Europe and other "first world" nations. (Irish potato blight, anyone?) We are using LESS land to produce more food because of the modern methods. This has allowed us to reforest old farms on the East Coast and great lakes. We now have vastly more people than we did before WWII. If we go to all organic, we will need to clear land again to feed the number of people we now have. Although I am worried about the number of people we have, limiting our agricultural and technical tools, is likely to increase hunger- hunger leads to chaos, chaos leads to environmental damage (starving folks in Africa will do anything to feed their kids, including killing rare animals- wouldn't you?). "environmentally friendly" is in the eye of the beholder, and often found to have trade offs that some folks don't want to admit. BTW, I am very low footprint, but not by following the expensive hybrid car, solar panel, method advocated.

We are growing way more trees than we are cutting in CA. We are using way more wood than we are cutting in CA. Is this sustainable? Meanwhile, housing and lawns are spreading. Is it the limited logging that affects salmon, or runoff from increased population? How about every time we burn off another 100,000 acres? does that affect the fisheries? Demanding that we import our wood products from other states or countries is selfish and unnecessary. Buy locally grown - both food AND wood!

would like to see quieter OHV's. Responsible riding will cut down damage to a minimum.

We don't need wolves here. These coyotes are bad enough. Can't let a little dog out at night without staying with it.

\$128 million per day is what the Gulf of Mexico provides to the US economy. Without it our economy will collapse even sooner than Progressives plan. So far Obama has driven off a couple deep sea platforms with his prolonged drilling embargo, one to Egypt, another to West Africa. Each platform represents hundreds of union jobs. "Require 'voluntary' action"??? What part of voluntary do you derive from 'require'?

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The Problem: Federal agency officials continue to resist the idea that easements and other alternatives are effective cost-saving alternatives to fee acquisition of lands. They talk about using alternatives but rarely try to implement them. The Solution: Incentives need to be established for officials to use easements and other cost-saving alternatives. Penalties need to be created for buying more than the interest necessary to achieve project objectives. Federal officials have often, and inaccurately, misrepresented the cost of easements. A popular notion is that easements cost 80% or more of fee title. The key is to buy easements early when development is far away. Easements increase in cost as development gets closer. However, officials have made little or no attempt to use easements or other alternatives, and instead go to great lengths to avoid them. Inholders have actually been scared out of using easements because of very restrictive terms and negative statements from federal officials. For example, the State of Minnesota successfully used easements on a cost effective basis on the Kettle River. The Park Service was unable or unwilling to use easements on the nearby St. Croix to the degree suggested by Congress. The result was costs much higher than necessary on the St. Croix and poor landowner relations. The Fish and Wildlife Service has also successfully used easements to protect wildlife habitat at costs approximately 40% or less of what the fee title would have cost. The inability of the federal agencies to use alternatives to fee title has actually slowed the protection of some areas and wasted funds. The result is that there is now a huge backlog of unprotected lands. Some landowners want to sell but can't because of the shortage of money. In addition, relocation and human costs associated with fee acquisition are not considered by agency officials. Nor do they consider the project benefits when inholder communities are left intact. There may, in fact, be lower long term management and maintenance cost, especially when landowners remain in areas where significant cultural and historical values exist. An example is the Buffalo River. Local landowners were so mad at the Park Service that they would not even show the agency how to run a historic grist mill. How much better it would have been to have kept the grist mill in the hands of the original owners so visitors could have seen living history. There needs to be better training of land managers and acquisition officers and more information for landowners, so that all parties can understand the benefits of using reasonable alternatives and avoiding unnecessary conflict. The bottom line from the federal agency viewpoint must be to acquire only the interest in land necessary to meet the intent of Congress. This issue was developed in cooperation with the American Land Rights Association [www.landrights.org](http://www.landrights.org)

42% of all federal spending is with borrowed money. We're broke guys! The CCC requires money we DON'T HAVE. Putting people on the government payroll doesn't reduce debt, it increases it, and increases the future liabilities. We need to incentivize private companies to employ people so as to increase the tax revenue, not taxpayer funded government.

42% of all government spending now is with borrowed money. America has \$114 trillion in debt and unfunded liabilities and the debt is growing fast. This idea perpetrates the myth that government has money of its own - it doesn't. The money either is taken from taxpayers, or borrowed (repaid with interest). Government must spend less, and this proposal doesn't rise to the a level of criticality. America is fast approaching a downgrading of its debt. While honoring our fallen comrades, we must remember that the land is for the living.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Both the Forest Service and Park Service have ignored the intent of Congress while implementing new park and recreation areas. While Congress intended more public use in some areas, the Park Service manages all areas the same way. The results have been: far more land acquisition than anticipated by Congress; greater cost; and almost no use of alternative means of land protection. As a result, local land owners and communities have turned against federal recreation schemes. The Solution: A clear understanding of the intent of Congress by the federal agency before it begins to develop new parks and recreation areas. Require all land planning, acquisition and management personnel to read and be familiar with all legislative histories for their areas. Require land protection plans in each area before acquisition begins. The Government Accountability Office (GAO) (formerly the General Accounting Office), the investigative arm of Congress, has been extremely critical of federal land acquisition programs, particularly those of the Park Service. It suggested in a series of reports that the Park Service had gone so far beyond congressional intent, that it should sell much of the land it purchased back to the original owners because it was not needed to meet the requirements of Congress. The GAO suggested that the Park Service managed most of its areas the same way, regardless of congressional priorities. Examples:

- Lake Chelan National Recreation Area – GAO said that Park Service land acquisition had actually cut overnight lodging in half. Other Park Service actions cut available recreation activities. Far more land was acquired than was intended by Congress. This turning point report recommended that the agency sell the land back to private owners.
- Buffalo River – Land acquisition destroyed the unique farming culture that existed along the river. It was so special it was featured in National Geographic. Almost no easements were used, although they were recommended by Congress. The Park Service is now trying to re-establish the culture and rent the farms back to private owners, yet is continuing to make the same mistakes in other areas.
- St. Croix River – GAO found in 1978 that the Park Service had purchased over 21,000 acres when they were only supposed to buy 1,000. Again, in 1979, GAO found more people facing condemnation than the agency was legally able to condemn. The State of Minnesota was able to protect as much land as the Park Service, but for far less cost, using easements.
- Mt. Rogers NRA – In 1980 the Forest Service published a master plan indicating many more condemnations. A review of the legislative history showed that Congress specified 39,500 acres as the amount of land to purchase, 40% in scenic easements. At that time the agency had purchased 26,000 acres in fee with no easements. After intervention by the local congressman and American Land Rights, the Forest Service curtailed their plans.
- Many other examples exist. In one report, the GAO only found one area out of 21 examined where the agency was managing it consistent with the intent of Congress. Each agency should be required to have a complete copy of the legislative history, including congressional debates, House and Senate Committee Reports, Conference Reports and other important documents in the park or recreation area available for inspection. All personnel associated with management, planning, and land acquisition should be required to be familiar with this information. Other oversight procedures should be set up to make sure the agency is obeying the law... and the intent of Congress. Part of the problem is that the Park Service rotates its personnel often. As a result, Park Service personnel begin to manage all areas the same regardless of what Congress intended. This issue was developed in cooperation with the American Land Rights Association [www.landrights.org](http://www.landrights.org)

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Downed timber creates an opportunity and a cost to National Parks. Excessive fallen timber has considerable market value that could bolster the revenue of the park, and provide work opportunities for local loggers and sawmills. If not removed, the timber can create an extreme fire hazard, such as was created in Yellowstone before their devastating fire. A similar potential exists now in the Olympic National Park which has millions of board feet of timber that was blown down in the 2007 and 2008 storms. Referred to as the 'Asbestos Forest', it burns only once in about every 300 years, but when it does, the accumulated fuel will incinerate even the buried seeds. That condition exists right now. The locals, including the local Indian nation, BEGGED to allow logging to remove the excessive fallen timber but federal managers refused to budge. Of course now the timber is no longer good for prime lumber and much of the value is lost but perhaps someone in the government actually is imbued with common sense and can reverse this terrible policy.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Forest Service recreation residence program is under threat of gradual phase out. Poor appraisals and high fees could make cabin sites only available to the affluent. Agency termination policy has led to the loss of hundreds of cabins and loss of visitor morale. Several thousand cabins have been lost to fire and termination over time. The Solution: Recognize recreation residences as a valuable part of multiple use in the forests. They provide the highest income per acre of any recreation use in the forests and allow access and a valuable recreation experience for many people who otherwise might not be able to use the forests. This is especially true for the handicapped, elderly and children. Cabin owners are good stewards of the forest who provide many valuable services. Private investment by permittees often makes up for the lack of federal funding. Ever since the 1962 Outdoor Recreation Resources Review Commission there has been an unwritten Forest Service policy to gradually eliminate the now reduced to around 14,000 "recreation residences" and "isolated cabins." This has led to years of conflict between permittees and the US Forest Service that damaged a previously successful program and partnership. The agency terminated 1,300 "isolated cabins". The present policy is to remove all isolated cabin uses. This policy is costly, brings many appeals, and leads to the loss of valuable human resources that could help make up for agency funding shortfalls through private investment in roads, fire protection, and other services. Poor appraisals and uneven application of appraisal standards has led to large variations in permit fees. Some permittees have been paying fees in excess of \$20,000 in some areas for a single lot for one year, often only accessible two or three months out of the year. In other areas of the country, a similar lot is charged only \$600 a year. The recent faulty appraisal process has increased fees so much that many cabin owners are being forced to consider selling, if they can sell at all. Many cabin sites in existing tracts are unfilled due to present policies. These sites could provide recreation to thousands of families and others who use their facilities. The Forest Service has failed to recognize permittees as assets. Gradually, many permittees have been turned from friends into enemies. Agency policy must be changed to encourage the recreation residence program to continue. Fees must be fair and equitable to prevent cabins from being only available to the rich. Appraisals should recognize the existing private investment and previous investments in water, sewer, roads and power service. In addition, appraisals should recognize the reduced value of the permit because of extreme limitations included in the permit the permittee must sign. Agency personnel should be encouraged to look at the benefits of recreation cabins, both in tracts and in isolated areas, and take advantage of the private stewardship and cost benefits possible with a better relationship with permittees. This idea was submitted on behalf of the American Land Rights Association [www.landrights.org](http://www.landrights.org).

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Grazing rights are threatened. Grazing is a long-term, legally established economic use of the federal lands. Grazing rights and water rights are privately owned property rights established in a recent Hage Case in the US Court of Claims. Agencies and some special interest groups are attempting to take these rights or legislate grazing out of existence. The resulting threat is causing ranchers, normally friends of recreation, to close access to private land, as well as public land where access requires going through private land for recreational purposes. The Solution: Grazing must be recognized as an activity that subsidizes recreation. The investments by ranchers in grazing permits, roads, water development and range improvements on federal land help wildlife and subsidize recreation. These investments must be recognized and compensated, or traded for, when a conflict over recreation develops. Continuous attempts have been made to eliminate grazing from federal areas with the idea that it is an activity that conflicts with public purposes and diminishes recreational opportunities. In reality, ranchers invest large sums of money in roads, fences, and water improvements that enhance wildlife propagation. Wildlife often feed on private land at lower elevations in the Winter as well as Summer. This advances and subsidizes such recreation as fishing and hunting. Failure to acknowledge the existence of privately held water, grazing, and range rights, and the possessory interest in federal land they generate, has led to unending conflict. The solution is to recognize grazing and water rights as private property rights. In addition, we should acknowledge the economic benefits other segments of society receive from privately funded range improvements. Grazing on public lands lowers the overall cost of food for America, and increases the economic activity of local communities. Efforts have been made by the federal agencies, as well as special interest groups, to regulate out of existence, or legislate the removal, of grazing without recognition of or compensation for the huge investment by most stockmen in range improvements. These activities are gradually turning stockmen away from their traditional support for recreation activities. In large areas of grazing land managed by the Bureau of Land Management and Forest Service, there is so much private investment and so many private rights, that the area is actually not public land, but split estate land, with the stockmen owning a significant percentage of the bundle of rights to the land. In some cases, the percentage owned by the stockmen is so large, and the government's percentage so small, that the land title should be conveyed to cut management costs and get land on the tax rolls. Recreation conflict resolution and allocation of recreation resources would be easier if the investments by stockmen were recognized and they were compensated for their economic loss in the event of a conflict over a recreation use. Grazing should be recognized as a positive contribution to recreation. This issue was developed in cooperation with the American Land Rights Association [www.landrights.org](http://www.landrights.org).

It's scary enough that someone promoted forced re-education of our youth without advocating work camps, de-development of America, and increasing our energy dependence to dictators.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

National Parks don't allow volunteers to use chainsaws in clearing trails. This inhibits volunteers helping out the parks after storm damage closes the trails. Many volunteers are just as experienced in the use of chainsaws as park employees, and have their own health insurance, yet Park officials won't permit it. The consequences of a ban on chainsaw use is that park trails remain closed for extended periods, labor cost for park maintenance goes up, local volunteer spirit declines because they aren't allowed to help.

Not all designated wilderness decisions are to protect nature, some are political. Clinton put Staircase Escalante off-limits to protect his Chinese campaign contributors. There is as much as \$1 trillion in very clean coal buried there, but it competed with the Lippo Group's plans. When I worked there as a supervisor, the Port of Long Beach canceled part of its expansions when the possibility of exporting the coal to China evaporated. Along with those plans went thousands of union jobs, and the potential boost US exports. So now China burns dirtier coal, the effluence of which gets delivered to us a few days later.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Resource managers have been taught that inholders are a threat to recreation areas and should be removed. This perception has become policy in most federal agencies. It has turned supporters into adversaries. The result is constant bureaucratic pressure against inholders, more land acquisition than necessary, higher cost, loss of volunteer stewardship, and the loss of unique rural cultures which add to the visitor experience. The sale of easements by companies who own a large portion of a township can damage or destroy the future tax base of that township. The Solution: Co-Management. Make inholders an asset. Involve them in land planning and turn them into allies. The country cannot afford to buy out all the nice places that need conservation. Private stewardship, in cooperation with land planning agencies and elected officials, is the answer. It would reduce land conservation costs through the use of easements and alternatives and make landowners part of the solution instead of enemies. Inholders are people who own land or other equity interests such as grazing permits, recreation cabins, mining claims, and water rights within the boundaries of federally managed areas or adjacent to those areas, or who are impacted by the management, regulation of, or access to those areas. Over one million people are inholders. They own: land in National Parks; private land; recreation permits; special use permits; grazing permits and other rights in National Forests and areas managed by the Bureau of Land Management. They include a variety of privately owned uses in areas managed by the Fish and Wildlife Service, Corps of Engineers, and Bureau of Reclamation. Easements are a two edged sword. They can be useful in some circumstances. But often they are a threat to the landowner and the local community. For example, in Maine, land trusts are buying easements from forestry companies that often own a large portion of a township. The local community or elected officials are not involved in the negotiations. The town officials wake up one morning to find out that a huge portion of their tax base is gone. That means the town and the future of the town are largely destroyed or severely damaged. Any negotiation for easements must involve local elected officials to protect the future of the township. When Congress creates a federally designated area, there is sometimes considerable public support by residents and those living on adjacent lands. Often that is based on promises made by environmental groups and government officials. However, the record shows, as in the Cuyahoga Valley National Park, that the promises made to them to gain their support are often broken. The traditional federal method for dealing with conflicts, real or perceived, between private ownership, federal management and recreation objectives has been to remove the private interest. Gradually, private users that were promised the ability to continue are driven from the scene. Often, recreation opportunities are also driven out. Landowners and others begin to fight any federal involvement because of the agencies failure to honor their promises. This process often leads to more conflict and less recreation. A variety of methods are used by the federal agencies to gain control. The use of condemnation or eminent domain to acquire private land, homes and farms has had a devastating impact on the rural culture of America. Numerous films, television shows, magazine and newspaper articles document the abuses. Regulation of inholders is also an enormous problem. The federal agency gradually takes over an area designated for special management through an ever-increasing series of regulations. Private uses and access are reduced. It becomes uneconomic for private interests to continue. Co-management of these areas could change this. Secretary of the Interior Donald Hodel was quoted in the "Daily Oklahoman," Friday, December 6th, 1985, about the proposed Tallgrass Prairie Preserve: "Any obstacle to drilling or grazing would depend on the

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

legislation that creates the park. But there is a trap in that. If legislation says grazing and drilling is permitted, as soon as the park is created, there will be an enormous push to prevent it by banning it outright or raising so much red tape that it could become impossible. Like night follows day, it's an unwavering principle of park development. There's a constituency that would oppose any development. Within five years, anyone carrying on commercial activity in or near the park could find it difficult if not impossible to operate." There is a finite amount of resources available for recreation. Many chances exist for truly cooperative relationships that encourage multiple-use while creating recreation opportunities. The secret is encouraging cooperation between the owners of private rights and those wishing to develop an area for recreation – whether government or private. Traditionally the government doesn't have to cooperate. It can simply take (and sometimes pay) for what it wants which creates enemies and opposition. By treating inholders or private interests as allies in the effort to expand recreation, a wide vista of new opportunities would come into focus. Private investment, secure with long-term leases or permits and a friendly neighbor in the federal government, would increase. Inholders who are already there, and who own portions of the checker boarded lands intermixed with federal land, can provide the best and least expensive way to expand recreation if they are brought into the process and treated fairly. There are indications that vandalism and costs for management and maintenance of campgrounds and other facilities are reduced when adjacent to inholdings. Inholders often provide living examples of special cultures that should be protected, not destroyed. Communities on the Buffalo River in Northwest Arkansas are an example. These communities were lauded by National Geographic but later destroyed by the Park Service. This leads to the loss of future parks because of the fear that the Buffalo River example will be repeated. That means less recreation. The American's Great Outdoors Initiative should recommend that due to the scarcity of funds, private land, recreation residence permits, and other uses be integrated into the long term recreation plan. Also, that management of federal lands should encourage opportunities for co-management with private interests which would reduce costs, provide more recreation, and build a spirit of cooperation. -----The "Expansion, Modification and Intensification" idea led to States "acquiring" recreational lands by condemnation and seizure of private property in thousands of cases. -----The Bureau of Outdoor Recreation has become a costly political football bounced from one form to another. -----The "Grant-in-Aid" idea led to the Land and Water Conservation Fund Act of 1964, which has been the instrument of private land takings too vast to comprehend. And all that is from one little Commission, the Outdoor Recreation and Review Commission of 1962. We are likely to get much worse from the current American's Great Outdoors Initiative. We haven't learned a thing from history. What's most instructive – and dangerous – is how these seemingly innocuous recommendations by well-meaning commissioners in 1962 turned into such devastating laws. In many cases it was sheer accident. For example, the Land and Water Conservation Fund – an instrument of destruction to thousands of property owners – gained support in 1963 from development-friendly Rep. Wayne Aspinall (D-Wyoming), chairman of the House Interior and Insular Affairs Committee. Aspinall looked upon the Fund as a way to reduce pressure for more Wilderness by purchasing alternative sites for outdoor recreation. He let it through his committee in 1964, but never intended the Fund as the instrument of destruction it became. If a friend of private property in 1964 could help pass a seemingly innocent measure that went so

bad, what is today's Congress likely to do with the American's Great Outdoors Initiative recommendations? It's like George Santayana said: "Those who cannot remember the past are condemned to repeat it", and Edmund Burke who said: "Those who don't know history are destined to repeat it." This idea was submitted on behalf of the American Land Rights Association [www.landrights.org](http://www.landrights.org).

Some horses panic at the sight of a bicycle. If you allow mountain bikes on all horse trails, you threaten the safety of equestrians.

Something along these lines are needed. N.E. Ohio has no place to ride with more than 10 miles of trails. Sure Wayne National forest has what 28 miles of trails but for us we have to drive 8 hours away (to WV) to ride trails that have any worth while lengths to them. We have hundreds of miles of horse trails & vacant railway beds that are never use, why not convert some of those to OHV trails? Why not help us open trails here in N.E. Ohio too? We pay taxes just the same as everyone else.....

The GAO (Government Accountability Office), has been critical over the years of the National Park Service and other agencies with respect to land acquisition. The Federal Agencies, Congress and recreation advocates have largely ignored the GAO findings and recommendations. The Solution: Congress and the Agencies should review these GAO reports and begin implementing the recommendations. The result would be substantial cost savings, better landowner relations, and improved land conservation. Today's readers would benefit greatly from reading these reports. They are as contemporary as if they were written yesterday. In one report, the President's Commission on American's Outdoors was severely criticized for failing to follow the law and the Federal Advisory Committee Act. It is hoped that the America's Great Outdoors Initiative follow in the PCAO's footsteps and will not make these same or similar mistakes. It appears it already is by largely only notifying the environmental groups about Great Outdoors meetings while failing to notify a broad section of landowners, recreation and community groups. In six earlier reports, the GAO heavily criticized the Park Service and other agencies for: (1) not following the intent of Congress; (2) failing to consider cost effective alternatives; (3) buying more land than was intended by Congress or needed to manage the area; (4) failing to prioritize land purchases; and (5) failing to pay attention to the needs of local government, landowners, or local communities. Three of the GAO reports recommended that the Park Service sell back land they had needlessly purchased. The GAO is the investigative arm of the Congress. Their reports, together with the Interior Department Inspector General's reports, are critical of agency activities and clearly indicate that something is wrong with the system. These reports need to be reviewed and their recommendations implemented. A recent GAO report reviewing the Land Protection Planning Process of the National Park Service indicated that in most cases the plans themselves were not consistent with Park Service or Interior Department Policy. It is likely that when a review is made of the implementation of the Land Protection Policy plans, the Park Service will be found not to have followed their own plans, much less Department Policy. They will be found to have failed to update the plans or involve the public. The result is lip service to creative land protection alternatives. "Federal Protection of Wild and Scenic Rivers Has Been Slow and Costly" (CED-78-96) (May 22, 1978) "The Federal Drive To Acquire Private Lands Should be Reassessed" (CED-80-14) (December 14, 1979) "Federal Land Acquisitions By Condemnation – Opportunities to Reduce Delays and Costs" (CED-80-54) (May 14, 1980) "Lands In The Lake Chelan National Recreation Area Should Be Returned to Private Ownership" (CED-81-10) (January 22, 1981) "The National Park Service Should Improve Its Land Acquisition and Management at Fire Island" (CED-81-78) (May 8, 1981) "Federal Land Acquisition and Management Practices" (CED-81-135) (September 11, 1981) "New Rules For Protecting Land In The National Park System – Consistent Compliance Needed" (RCED-86-16) (October 31, 1985) The scanned 1988 GAO report on the Commission on Americans Outdoors, Interior Did Not Comply with Legal Requirements for the Outdoors Commission, GAO/RCED-88-65, March 1988, is at { <a href="http://moosecove.com/propertyrights/NPCA/docs/GAO-OutdoorsCommission\_1988-03.pdf" rel="nofollow" target="\_blank">Link</a> } (17.6 MB). This issue was developed in cooperation with the American Land Rights Association [www.landrights.org](http://www.landrights.org)

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The LWCF has become a tool for some special interests to destroy the fabric of rural communities and reduce recreational opportunities for large segments of society at unnecessary cost to the taxpayers. In 2000 there was a proposal, the Conservation and Reinvestment Act, to give the land buying agencies over \$3 billion per year, off budget and automatically. If that had passed it would have meant the end of rural America over time. The Solution: Any future fund of this type must have tight controls and effective and continuous oversight. Any new funds including the LWCF must go through the appropriations process each year and compete with other Federal funding needs. The new direction must be to purchase only sufficient interests in lands necessary to meet the intent of Congress for the area. According to the Government Accountability Office, formerly the General Accounting Office (GAO), to a large extent, no effective priority system has been used with this fund. Lands have been purchased in fee title without considering the need for such purchases, alternatives to fee acquisition or cost-effectiveness of such purchases. For too many years, the federal government has supported the philosophy that we need to buy in fee as much land as possible within dedicated boundaries regardless of: (1) cost; (2) whether the purchase is necessary; (3) whether alternatives exist; (4) the rights of the landowners; and (5) the socio-cultural effects of large-scale purchases of land on local communities and land use patterns. Robert Herbst, former Assistant Secretary for Fish, Wildlife and Parks described the result at the 1980 National Park Service Advisory Board meeting as a land acquisition backlog exceeding three billion dollars. Others have suggested that the figure may be much higher. Each federal project must have a limited amount of funding for fee title purchases for public use areas with adequate provisions for alternatives. Each federal area should have an approved Land Protection Plan along with a General Management Plan prior to beginning acquisition. Priorities should be established after full public participation. Only the interests necessary to manage the area and meet the intent of Congress should be purchased. Public involvement must take place at least every two years to update the Land Protection Plan. Without these safeguards, area managers won't know which land to buy or what interest will suit the need of the project. Any increases in the price of land caused by waiting until the plans are complete would be more than offset by the lower total expenditures since only the correct interests and amount of land required to fulfill congressional objectives would be purchased. In other words, will conservation easements satisfy the legislation or could a lesser interest be purchased. Or should the land be purchased in fee title. As of now, the agencies just assume they will buy it all in fee title so why bother with a priority system. If these guidelines were followed, substantial savings would result without the huge cost overruns and needless acquisitions of the past. The cost of management would be reduced. No new funding system should be created without a carefully crafted oversight system that makes sure the funds are spent properly and consistent with the intent of Congress. In addition, any future funds should be available for maintenance as well as acquisition. That way the agency can set its own management priorities. It may be reasonable to move away from dedicated funds of this type and allow competition for funds with other national priorities. This issue was developed in cooperation with the American Land Rights Association [www.landrights.org](http://www.landrights.org)

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

While I agree to having more localized processing facilities, I don't want government subsidizing it. I only have a few head of cattle, but when I take beef to the butcher, I expect to bear the full cost, and not pass it along to the taxpayer. Similarly, I don't want to be subsidizing other industries either. The free market is the most efficient allocator of resources.

Why exclude 'for profit' companies from participating in promoting scenic byways? Why does this administration so hate free enterprise? A privately run company generally provides superior service at lower cost than a government run or 'non-profit' organization that doesn't have cost efficiency in mind.

Preservation of the important Civil War battlefields where Americans fought in a war of ideals. Preservation and interpretation of these grounds is important to understanding our Nation's history.

Absolutely spot on with this one. We will probably lose upward to 75 % of our flora and fauna as that belt moves north. It is going to be a drastically different world. The stripping of biosystems to only grow one thing, whether it be a food crop or a single species forest, is just downright idiotic.

I agree with you entirely. I think part of the problem is that in today's world some humans expect a one size, fits all solution. That just isn't going to happen because we aren't all that. We need a multiple of approaches. But, because we think we're all that, we have put some very strange people in charge of things and then those strange people get to pick the next level of strange ones and on it goes until you have that theatrical, political, stupidized system. Knowledge and common sense have been left to wither. Just a federal mandating that no outside lights should run on fossil fuels during daylight hours would save tremendous amounts of wasted energy resources and since most of our electricity is generated via coal...that would help with our air pollution. A one page congressional bill could take care of that. Heck, let the citizens patrol those 'daylight burners' for cash bonuses and see how fast we could change habits. I think the political right has finally achieved its aims, though I can't quite get my head around their goal. We have dumbed down the population, made money the end all of living and raped the very planet, upon which we owe our survival, until it is self destructing and then have blamed it all on the very Creator and the same citizens that continue the fight to stop the madness. Anyway, exact and strategic plans most definitely should have already been in place to exercise on a moment's notice and that oil should have never seen landfall. We are really something, huh?

It isn't just sound, though the constant droning is annoying. It is the desire to cut new trails that runs in the blood of riders. It's just a human thing. I feel, they need to ride on private property. I'm sure there are plenty of biker parks, too. In fact, look at what a biker park looks like. I don't want natural forests to look like that. They wouldn't be forests anymore, would they?

OHV brings trampled earth. Opposite of natural beauty. OHV brings fuel stations, fumes and ground pollution. Opposite again. One for one isn't smart or fair.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

People do need to think, balance and respect but they don't. I say no to mechanized vehicles in wilderness areas unless a ranger is behind the wheel. There is no way to police ignorance in the wilderness; it's just too vast.

The 5 % of environmentally considerate people won't damage the natural planet. The 5% of inconsiderate bikers will.

Unfortunately many bike users get bored with designated trails or think their rights to freedom are being trampled. They decide where to cut new ones that will then be expanded by others. I say no to mechanized travel through wilderness areas unless a ranger is behind the wheel.

You are right on. We are following the plans with which the Global Elite (World Bank, etc) have already raped 3rd world countries(Haiti, great example). Theory is if people can't feed themselves - whoever controls the food controls them. And, they are absolutely correct. And, we are absolutely letting it happen. Shame on us. Great idea you put forth. I'd throw my tax dollars there, if I had a choice. Visiting a farm can be as much fun as hiking a trail.

I live in the Seattle metro area. For having so much Wilderness in the area, it is becoming harder and harder for me to find trails the take my Jeep on locally. As I have learned, with a new child there is little I can do to get out and enjoy the wilderness. This is one of the few recreational activities that can accommodate the whole family. Being outdoors is big part of our family's recreational activities. I really would like to see more Wilderness in the Seattle area (cascade foothills) opened up for ORV activities. In lieu of this "treading lightly" must be publicized/taught, and enforcement of that mantra should take place with more rigor. Potentially a Federal or State Fund could be created to help pay for the land purchases, maintenance and enforcement of regulations in the areas deems as ORV areas. As a tax paying citizen, and a law abiding citizen, I would be willing to pay a voluntary tax to utilize and pay for such areas. A great example are the "Sno Park" permits and "Wilderness" permits that are required when parking at wilderness trail heads. Don't get me wrong, I am an advocate for saving wilderness for hiking, climbing and backcountry skiing. I do all of those as well. In fact I have climbed every volcano in WA state. But, there has to be a good balance of ORV and Non-ORV wilderness.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Currently each National Forest is writing a Plan to reduce the use of National Forest Roads and Trails by OHV and 4WD vehicle use. Their plans have been four years in development. Their plans are being completed using the NEPA Process and most of them are nearly completed. They are all required to include Public Input during their Scoping Process. These plans have been being written for about 4 years and should be nearly completed. The outcome of most of the draft Plans (DEIS) is to reduce the number of miles of roads and trails that currently exist. This will reduce the public's use of national forests for fishing, dispersed camping, hunting, mining, firewood cutting. Many uses of the National Forests which you as the public have participated in for years will not be permitted, I am asking that each of you contact the National Forest Office that you visit and request a copy of their Forest Road Management Plan. Review this plan to see how it will affect your recreational activities. Then ask them how you can provide comments to change their plans. This may require an appeal (a written letter or map) be submitted to the Forest. The Forest's are required to follow the NEPA process. If they are in the final stage of writing their plan, your comment may be submitted as an Appeal. If there is a group of OHV users that is contesting the Forest Plan of working on and alternative to their Plan, contact them and consider joining them to protect your use of the National Forest road and trails. I live on the Plumas National Forest in the Northern portion of the Sierra Nevada Mts. I belong to a group called the Sierra Access Coalition (SAC). You can log on to our web page at [www.sierraaccess.com](http://www.sierraaccess.com). There is no charge to join the group and we welcome new members. We currently have +1,000 members from all over the US. We are attempting to keep roads and trails open in the Forest Plan and we are working with the USFS to maintain trails and roads and to clean up areas to make them environmentally sound.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Currently, Internal Revenue Code section 2031(c) provides an estate tax exclusion of 40% of the value of land protected by a conservation easement. Unfortunately, this exclusion is capped at \$500,000. In the context of rising farm values this exclusion is woefully inadequate. The American Family Farm and Ranchland Protection Act, H.R. 3050, would increase this existing exclusion to 50% and raise the cap to \$5 million – providing a powerful incentive for owners of high-value agricultural, forest, and natural habitat lands to protect these properties in perpetuity. More than 70 percent of wildlife gets food and shelter from our working farm, ranch and forest lands, and the greatest value for wildlife and other public benefits comes from the large, contiguous properties where estate taxes frequently force families to subdivide and sell their land for development. In fact, due to high land values, farmers and ranchers are disproportionately subject to an estate tax at a rate of approximately 4 times that of the general public. On private forest land, the U.S. Forest Service has invested heavily to promote sustainable forestry. As second home development pushes deeper into our forests, inflated tax values make it increasingly difficult for forest owners to hold on to the timberland they've stewarded for generations. In fact, a 2006 study indicates that approximately 2.4 million acres of forest land are harvested and 1.3 million acres are sold annually to pay the federal estate tax. These outcomes are no way to reward a good deed and good stewardship. We can avoid them by expanding the estate tax benefits for landowners who have permanently protected their land. The Joint Committee on Taxation has scored H.R. 3050 as costing just \$132 million over ten years, but its impact would be enormous, encouraging thousands of landowners to work with land trusts in their community to ensure that lands with important conservation values for the public are never lost to development. This provision works well with a deferral of estate taxes on family farmland (H.R. 3524) and we expect new House and Senate legislation in the coming weeks that will combine these provisions. This provision also works well with the enhanced income tax deduction for conservation easements (H.R. 1831) setting up the opportunity for America's Great Outdoors to promote a conservation tax package. For more information please visit: [www.lta.org/estatetax](http://www.lta.org/estatetax).

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I believe that the National Forests should be open to the public's use and not restricted to the use of specific groups. Their Motto is the Care for the Land and Serve the People. But over the last decade or more their activities and policies restricting the uses of their lands to the general public has changed their Motto to Ignore the Land and Control the People. Instead of allowing the Public to use their roads and trails outside of Wilderness Areas and Roadless Areas with OHV's (atv's, single tracks motorcycles, 4WD pickups, their are finalizing plans for each National Forest in the USA that will greatly restrict and reduce the miles of roads and trails that we all have used for years. Dispersed camping, fishing, hunting, firewood cutting, mining, sightseeing, driving for the enjoyment of viewing of the National Forests will be, in many cases, a memory and unavailable in the future. I would encourage everyone who has not heard of these plans, to contact their National Forest immediately for information on their plans. If you are affected, find out how to submit a comment, or an appeal of the portion of the plan that adversely affects you. I am a member of a local group of about a 1,000 members that is working to keep as many of the existing roads and trails open on the Plumas National Forest. The Plumas National Forest is located in the northern Sierra Nevada Range (Feather River watershed) east of Chico, California. If there is a group in your area that is attempting to keep the roads and trails open in your National Forest contact them for information and join them. If you are interested in our efforts here, log on to [www.sierraaccess.com](http://www.sierraaccess.com) and learn about the Sierra Access Coalition. The Forest Service is aware of our numbers and is listening to our comments and statements. Join our group if you are interested. There is no fee, and you can join by logging on to the web page and clicking on the "JOIN" block. We welcome your support and the more members we have the more power we will have in keeping the access into the National Forest open to the Public and to work cooperatively with the USFS to maintain and repair the roads and trails for future use...

Certainly people are part of the equation, but just as the federal lands in my region produced great wealth and many good jobs in the past, opening up our forests to the activities of the past will not bring back those jobs. Our mills are highly mechanized, and there is way too much competition for workers to be paid the high wages of the past. We have also, I hope, learned about the impacts of our old ways, and are improving our methods and management techniques. We long ago stopped allowing logs to be yarded through streams, and we now see fire and selective cutting as good management tools. Our past is a good base for the future, but we have to look forward, not backwards.

Despite years of effort, a very small fraction of the wild land that European settlers saw has been preserved for the future. Even if we protect all of what is left, the vast majority of the United States will be available to provide for our material needs. If we cannot live on that, our descendants will have ample cause to judge us greedy.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I believe that Off-Highway Vehicle (OHV) groups and riders can and should do much more to cultivate a responsible environmental ethic among all OHV riders through strong personal contact and peer pressure. I have lived in rural southern Utah for the past eight years, in a small community virtually surrounded by BLM and Forest Service lands. I've witnessed first-hand a number of OHV related adverse environmental impacts and user conflicts. Illegal route proliferation is the most serious and ongoing problem. I've hiked on many of the same trails over the years, and I am constantly finding new pioneered OHV routes or new or additional braiding of existing routes. I've watched as these illegal OHV routes greatly facilitated the colonization and spread of several invasive and noxious weed species, especially cheatgrass and Sahara mustard. In turn, these weeds have created unnatural or excessive fuel loads when they dry out in the summer. Now native habitats are increasingly at great risk from potentially catastrophic wildfires. This is especially scary in non-fire-adapted habitats like Mojave desert creosote, home for the threatened Mojave desert tortoise. From large fires in recent years, there are now several large areas around where I live where much of the native vegetation is gone, the Mojave desert tortoise population is declining, and further fires are likely to kill off what's left of the natural vegetation and soil seed source. This process is transforming beautiful, natural wildlife-rich habitats into a largely sterile, alien annual grasslands. It is a tragedy of immense and increasing size that few people seem to know or care about, including those whose irresponsible conduct contributes to the problem. I recognize that many OHV riders are generally responsible and want to follow the rules. However, I have seen incidents where irresponsible OHV use was occurring but other OHV riders, to the best of my knowledge, did not intervene to educate or admonish the offender. This is disappointing, because I think that the best hope for improvement is through strong peer pressure. All OHV groups and riders tend to talk about the importance of legal compliance and environmental responsibility. I am now asking them to have the courage and foresight to walk that talk out on the ground where and when it matters most.

I don't understand why we can't provide incentives for solar energy production throughout the country. Disincentives should be applied to coal burning plants, as coal allows too much carbon to enter the atmosphere. Places that people don't use as much, such as deserts and browfields could be excellent places to site these solar fields.

I recognize that not everybody is able-bodied, but for anyone who is, I don't understand how ohvs help people connect with the outdoors. I am regarded as a bit of a "gear-head" by those who know me, but people, and especially kids, need to be encouraged to walk through, hike in, smell, feel, and appreciate nature. Riding on a self-propelled vehicle just seems contrary to the concept, especially for kids.

The Clean Water Act was designed to make our water swimmable, fishable and drinkable, but it has not done so. We need to upgrade our sewer treatment plants, and reduced toxic runoff into our streams. Currently most storm drains go directly into streams untreated and we wonder why our fisheries are declining. Our water treatment plants are unable to treat personal care products, prescriptions, and other chemicals, and they go into streams and the ocean. We need clean water and the Clean Water Act was supposed to accomplish this by 1985. Has it worked? No, so why aren't we doing more?

## Discussion Question 2

*(cont.)*

The quality waters of the San Juan River over the past ten years has been an important place to spend time in the outdoors. The river meets many needs which includes quality fly fishing, water for local communities, the safeguard of endangered species, and future long range Native American needs. A study revealed that the Quality Waters brings in an annual revenue of \$40 million dollars, primarily to the hospitality industry as 64% of the fishers are from out of state. Regretably, today the river's health has deteriorated and now requires dynamic stewardship to return it to its "crown jewel status" days. River silting and inappropriate water releases create endless harm. Cooperation between BOR/BLM and New Mexico state agencies for a comprehensive study and long range plan is crucial for its health.

There are many, many examples of multiple-use groups cooperating/collaborating with government agencies (such as the BLM) to maintain and even restore public land with great success. Unfortunately, these stories are generally ignored by the mainstream media. It's a shame, because the public needs to see the positive results of government agencies working hand in hand with recreational vehicle enthusiasts, mountain bikers, hunting and fishing enthusiasts, and even loggers. Bringing together representatives from all stakeholder groups is a common sense approach that balances access and responsible land use with conservation and sustainable land management. These interests are not mutually exclusive. I'm very concerned with this administration's land management approach as detailed in the Great Outdoors initiative. There is something intrinsically wrong with a government arbitrarily restricting access to our public lands without listening to the voice of the users of that land. If President Obama truly wants a long-term solution, then each stakeholder group must be invited to the table with an equal share in the decision making process.

All these 'YES' votes; How many of you live in the area ? Do you try to make a living here? Have you ever been in the area and talked to the people it will really effect ? I don't think so. A MONUMENT WILL ONLY HURT THE AREA. TALK TO THE FOLKS IN UTAH BUSSINESS OWNERS "I HAVE" ABOUT LOSS OF BUSINESS; TALK TO THE SCHOOLS WHO HAVE LOSS KIDS DUE TO THE FACT PARENTS HAD TO MOVE TO SUPPORT THEIR FAMILIES BECAUCE JOBS DON'T EXIST ANY MORE. NO MONUMENT

Can someone tell me how OHV use "promotes physical fitness"?

I've been involved in battlefield preservation for many years. I also understand the myriad of issues confronting the government today and I understand that somethings must be pushed to the back to allow for more pressing matters to be dealt with. Having said that, I would add that our history is the single thing that defines us as a nation and to allow the second most important era (the period of the revolution being the most important) of our history to fade in obscurity would be a crime against our descendents. How can we ever hope to know where we are going as a nation if we do not know where we have been? As Americans we all owe so much to the men and women who gave so much during the era of the civil war. Everything we are today can be linked back to the people who survived the fires of the war. The civil war was both our greatest tragedy and our supreme triumph as a nation.

***(cont.)***

As many as a quarter of our Federal Class 1 Areas have lost the ability to see the Milky Way due to light pollution. The National Park Service has estimated that by 2025, we will no longer have an unpolluted night sky in the lower 48 states. { <a href="http://www.nature.nps.gov/air/lightscapes/" rel="nofollow" target="\_blank">Link</a> } Please put together best practices and recommendations for protecting our public lands from light pollution. Sincerely, Robert Wagner President Board of Directors International Dark-Sky Association

Civil War historical sites are endangered national assets. Once they have been paved over, built upon, or otherwise disturbed, they cannot be retrieved. Perhaps the most bitter chapter in our national history is enshrined at these sites, which should be preserved for future generations to visit, study, and contemplate. Concerned individuals, government officials and agencies, and foundations, working together, have already saved many sites, but much remains to be done. Every day more of these historic sites disappear forever, and the window for preserving them closes a bit more. Join CWPT and contribute to the ongoing process of battlefield preservation.

Invasive species threaten our public lands in many ways and the response to the threat is totally inadequate. We need significant new resources dedicated to controlling weeds and aquatic invaders. We especially need funding and programs that promote actions that reduce the risk of spreading invasives. Invasive species threaten all users of our public lands. They will damage the environment and can destroy recreation. They offer no benefits in any way. Lets keep them from spreading on our public lands.

Major wind and solar projects are being proposed on BLM lands in the Mohave Desert region. People need to realize that the BLM is a multiple use agency, meaning that wild farms, wildlife, recreation, water, etc are analyzed in tandem to come up with a way to satisfy the larger whole. Now whether this concept is possible or whether satisfaction of big-business precludes satisfaction for wildlife and water quality is the larger question.

Mr. Harris, I gladly host the very creatures you speak of on my acreage, do not whine nor complain about your agenda and do not want every acre of the beautiful land God created and graciously allows us to exist upon. I merely desire equity! Since the OHV community does not have the likes of Ted Turner or Warren Buffet providing financial backing for the hijacking of the lands I served OUR Country to preserve for ALL, nor the high dollar Lobbyists influencing OUR Public Servants every move with regard to this issue like you folks do, I spoke my piece here instead. If I felt like it, I would make this an Americans with Disabilities Act (ADA) issue and drag this through the courts like your crew does.

My son is a downhill mountain biker, they use many of the same trails that the snow skiers do, are we now banning snow skiing? Love the comments, can't we all just get along? Just because I am opposed to tree huggers does not mean I think we should cut down all of the trees. Like someone said, there are many forms of people enjoying the great outdoors, I do believe there is enough room for ALL of us. And by the way, we ALL pay taxes right?

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Non-point source pollution and stormwater runoff regulations requiring limited sediment deposition to waterways have the potential to conflict with recreation (OHV, camping, hiking, swimming) on public lands. Dirt roads on national forests have numerous water crossings that are not hardened or bridged; numerous campsites and trails are next to water with runoff and stream degradation; user created dams in rivers alter wildlife habitat and put pollution in rivers. Clean Water Act requirements could be used to limit access to recreation sites, require closure of recreation sites, or require altering the natural flowpaths to capture stormwater runoff and treatment. It is unlikely that the Forest Service will choose to limit recreation greatly without the forceful arm of EPA, but that puts two sectors of the government at odds, when the President recognized both agencies as being involved in the initiative. Partnerships and funding will be needed to specify the consequences of designating water quality as a priority. How much will people be willing to give up on the recreation side when they know that water treatment plants can protect their drinking water sources?

One thing I have always noticed when my family, friends and I are at an off-road riding area is the vast amount of land that lies between the trails. I believe that the OHV opponents have painted a picture of a flattened landscape associated with OHV's and that is simply not true. In fact, it's quite far from the truth. When I hike and mountainbike in areas shared with OHV's, I rarely hear them until they are within 100 feet of me and encounters are far and few between. A ban would be extremely unfair when the overall impact is so small. A shared use management plan is the right thing to do.

Our young people deserve opportunities to know, understand and appreciate the exceptional history of our country. First-hand experiences, enhanced by outstanding explanatory comments, at the actual places that are important in our history are essential tools for providing or enhancing this understanding and appreciation. Visiting a site is far superior to reading about it or even watching a video or television program, and the older generations have a moral and cultural obligation to insure the preservation and accessibility of such sites for all people, but especially for the young. Actions that degrade these sites and the experiences they offer should be permitted only if the benefits from such actions, viewed honestly and objectively, clearly, unequivocally and substantially outweigh the damages, often irreparable, that such actions will cause or promote.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The initial "Wilderness Act of 1964" envisioned about 20 million acres as suitable. Today we have over 120 million acres of Wilderness where Public Access is restricted to non-mechanized means, excepting the use of wheel chairs meeting "Hospital Specifications" which are of no use to Americans who are confined to them but still want to enjoy OUR Public Lands. This also severely limits the activities and hence effectiveness of various Government agencies who are responsible for maintaining these lands. The majority of recreating Americans have been forced onto smaller and smaller areas outside of Wilderness given studies which have concluded that only approximately five percent of recreating Americans use them. In order to encourage Americans to enjoy the Great Outdoors we do not need more "Wilderness", "Wilderness Study Areas" or "National Monuments". If the President were truly interested in local involvement in his plan, multiple use groups would have been included or invited to the various "Listening" sessions taking place around OUR Nation, often with little prior scheduling notification. The initial plan has clearly been created by a small segment of special interest groups who seek to limit access to OUR Public Lands. My family, friends and fellow OHV enthusiasts spend many enjoyable hours recreating in our National Forests, National Parks and on BLM lands taking in the wonders of nature. My family travels to our chosen destination via a four wheel drive vehicle as it allows us to get away from paved roads and into areas we could not otherwise reach by other means due to our age and an injury I incurred while serving OUR Country. I served OUR Country in part to protect access to these lands for all Americans, not just the five percent who are able to walk into "Wilderness", "Wilderness Study Area" or OUR "National Monuments". As an owner of many acres of private property for decades and an OHV enthusiast for forty years I can say that the cougar, bear, deer, raccoon, possum, rabbit, squirrel, birds and other animals who call my property their home are welcomed, thrive here and coexist just fine with my OHV use and that of my friends and neighbors. The land does not suffer from the OHV use, my woods are properly thinned, healthy and clear of standing and fallen dead trees unlike our National Forests and BLM managed lands. Locking OHV users out of OUR Public Lands (yes, they belong to everyone) via "Wilderness", "Wilderness Study Area" or the "National Monument" designations being implemented Nation Wide, many times in direct violation of the "1964 Wilderness Act" implemented by Congress is not the answer to protecting animals, nature or OUR Public Lands. Only Congress can designate "Wilderness"! The "National Monument" designation has been and is currently being used unlawfully against the letter of the law as spelled out by the "Antiquities Act" to bypass Congressional scrutiny and hence We The People to lock up Public Lands without public debate as are "Wilderness Study Areas". Much of the land being designated as "Wilderness", "National Monuments" and "Wilderness Study Areas" does not meet the criteria set forth in the "1964 Wilderness Act". Many of these Federal lands include roads, bridges, campgrounds, trails, etc. This contradicts the intent of the original "1964 Wilderness Act", which essentially defines "Wilderness Areas" as lands that show "little or no signs of human involvement". These areas are not National Parks, they are lands administered by the Bureau of Land Management and National Forest Service and should be managed as such. Most importantly, the President and Congress should honor the established protocol of respecting State and local rights by not imposing "Wilderness", "National Monument" or "Wilderness Study Area" designations on people whose elected Congressional delegation are not in full support of the designations. The OHV community supports conservation efforts including support of the

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

“travel limited to designated roads, trails and areas” paradigm as outlined in the Forest Service travel management regulations and BLM’s planning directives. The OHV community also supports conservation through environmental review and analysis in route designation processes, as well as ongoing monitoring and maintenance of the OHV infrastructure. The OHV community supports conservation efforts by contributing substantial funds to implement OHV management and volunteers tens of thousands of man hours in volunteer work projects. Much of this funding is made available to federal land managers via state OHV programs. These programs exist today because years ago motorized recreationists voluntarily “taxed ourselves” via state OHV registration programs. Some of these funds are used to supplement the agencies’ law enforcement efforts. Recently, Governors of many States have raided these funds in ill fated attempts to fix the budgets that OUR Public Servants failed to balance and in doing so have removed this important funding source from the agencies responsible for managing OUR Public Lands. The majority of we OHV users are motorized environmentalists and good stewards of our Public Lands. The failure of the BLM and National Forest Service to maintain public lands in the manner they are charged to is the problem not the OHV Community. This is in part due to a lack of will, the theft of the OHV funds previously mentioned and the absence of Congressional budgetary support for these land management agencies. Back in the 60s development of America’s wild lands and backcountry was a threat. Now the threats are the Wilderness Act, the National Environmental Policy Act (NEPA), and many other environmental protection laws passed by Congress due to the way they are being used by Wilderness lobbies to lock recreationalists out of our public lands via “Wilderness”, “National Monument” and “Wilderness Study Area” designations. Public lands are important recreational opportunities; there are other alternatives such as “National Conservation Areas” or “National Recreation Areas” which would provide the same level of protection from development that these various designations carry while still preserving a diverse array of opportunities for recreation. While I understand that non-controversial bills can be lumped together to make the legislative process easier, Omnibus initiatives like the “America’s Great Outdoors” are far from non-controversial. I am concerned that any Omnibus initiative such as this would include measures that are both controversial and will not received a hearing or proper vetting in one or both Houses of Congress. Public lands bills and initiatives have a significant impact on economic development, recreational opportunities and the day-to-day lives of people who live and work near the areas in question. As a result, it is imperative those most affected have sufficient opportunities to provide input on any Public Lands legislation. The “America’s Great Outdoors” initiative process should allow for Congressional review, State, local government and public input before any designations take place.

## Discussion Question 2

***(cont.)***

The initial Wilderness Act envisioned about 20 million acres as suitable. Today we have over 120 million acres of Wilderness where public access is restricted. The majority of the public have been forced onto smaller and smaller areas outside of Wilderness. In order to encourage Americans to enjoy the outdoors we do not need more Wilderness areas, we need less. If the President were truly interested in local involvement in his plan, multiple use groups would have been included or invited. The initial plan has clearly been created by a small segment of special interest groups who seek to limit access to our public lands. Private Property owners like me are normally better care takers of our land than the government is with OUR Public Lands due to fewer regulations and private interest involvement, so in my opinion it is counter productive to have the government involved in Landscape Wide Planning. This will degrade private property, reduce Landscape Health and infringe on my private property rights while encouraging others to do the same. As an OHV enthusiast I believe that the President needs to include this form of recreation as a priority in his plan to reconnect Americans with the Outdoors and allow folks like me who were injured while serving OUR County and cannot walk into or near by "Wilderness" to access and enjoy them too.

The United States would be quite different if the Civil War had never been fought. Slavery would undoubtedly have been phased out but would an American apartheid have taken its place? Would it still exist? It should go without saying that our Civil War is what has made us what we are today. Many people today, however, have an alarming lack of understanding of our nation's central cataclysmic event. What better way to reinvigorate interest in American history than the preservation of historic sites related to the Civil War. Such preservation not only serves to educate. It also serves to provide an economic basis for local communities in the form of tourism dollars. Education and a bonus of tourism dollars....what better argument is there for the push for historic preservation?

The vision shown by those who wrote and enacted the National Trails System Act should not go unfulfilled. Many of the resources necessary to complete the system are in danger, either from neglect or urban expansion. If these resources are not protected now, future generations will surely and rightfully ask "why didn't they do something about that?" This is the time, while money is flowing to "infrastructure" to acknowledge that the National Trails System is part of that infrastructure, a non-renewable part of it, too. Be it to purchase trail corridors, protect historic sites, or simply maintain what we have worked so hard to build and preserve, this will be money well spent now and far into the future. The opportunity is now. Let's not dillydally around until all the money is gone to other programs or projects. Agencies and their not-for-profit partners can and should fulfill the vision by the 50th Anniversary of the National Trails System Act in 2018. This is the decade for more action and fewer words.

There are similar ideas like mine, but anyone can sign up for this. I believe this would be worth while in the sense that "we would truly be part of what is already very important". We would then be completely responsible for our actions and "we" the riders would be doing what is right to do....but with initiative. Some may think that the trails do not need upkeep....because they are trails. But this could be the correct way to show responsibility and respect to our government and green friends. I say "Trail Tax Off Initiative" Rob

## Discussion Question 2

***(cont.)***

what chris said, big tent vs small tent ... if you start cutting out groups you don't like instead of working with them you will lose votes and elections....

Wow you sure cover a lot of territory Mr. Moffatt. Must be lonely sitting in that tree all by yourself. Civil wars and rioting are due to the Muslim Socialist President we currently have in the White House that has no clue how to run a country, stop spending and actually do what he says. Never held a "real" job so can't say I'm surprised. This world is big enough for everyone to have some place to enjoy what they do. I'm so tired of the greenies thinking just their way is right. Many of our environmental issues are caused by the green legislation. We wouldn't have the gulf issue if the oil companies were allowed to drill on land. Don't you think it would be easier to contain a spill on land instead of a mile down in the ocean - the environ"mental"ists can be thanked for that mess - they didn't want to see the rigs off shore. We enjoy riding dirt bikes with family and friends, and we always leave the area we stage in cleaner than we found it.

You guys need to slow it down a bit. Liberals aren't so good with numbers. To say only 3% of the public use OHVs and not give the percentage that use wilderness areas is unfair. The idea is that wilderness areas are growing and OHV areas are shrinking, and that is unfair. To convert current multiple use areas to wilderness and call it preservation when many of these areas were ravaged by logging and mining already is unfair. That's restoration not preservation. We need to share, and that means not taking from one group to give more to another.

"The problem with religion, is that it really is a conversation stopper. Faith is a <b>declaration of immunity to the powers of conversation.</b> It is a <i>reason</i>, why you do not <i>have</i> to give reasons, for what you believe." - Sam Harris Our ground rules here are: "Our Terms of Participation is intended to support open discussion while ensuring a respectful exchange of ideas." Is this posting supportive of this goal? Clearly not.

(To offer a concrete suggestion, the NPS administers but cannot maintain some of the most valuable real estate in the US. For example, Governor's Island and Floyd Bennett Field could both be transferred to the city or state of NY, or auctioned and proceeds invested in reducing the huge deferred maintenance backlog of our real national parks.)

claims "It is expected that about 40 percent of species will become endangered over the next 40 years." Please provide a citation relevant to the Pacific Crest ecosystem? Are most endangered species migratory, or stationary? For those that are migratory, how would merely drawing a line on a map change their migration patterns? As any PCT thru-hiker knows, there are major barriers to N-S migration... the Columbia River, Interstate highways... would the proposed "PCNP" remove these?

## Discussion Question 2

### *Written & Online Comments*

*(cont.)*

may I commend to your attention the "Sustainable Funding" section of the executive summary of the NPS Second Century Commission report? At this link { [Link](http://www.npsa.org/commission/pdf/Commission_Report.PDF) } (3 MB pdf) scroll down to PDF page 40 (text page 38) for an overview. To me, one sentence best summarizes it "Our financial commitment to the parks matches neither their importance to society nor the enormous franchise they have with the American people." I volunteer in a Park which loses, on average, one structure listed on the National Register of Historic Places every year. The current NPS annual operating deficit is ~\$750 million/year. This shows up directly as a growing deferred maintenance backlog and loss of staff. The distinction between expanding vs diluting the NPS mission is to first secure adequate funding for its current mission, before expanding its mission. That's why I feel you have put the cart before the horse.

As a nation, we spend more on **potato chips** than on our National Parks, more on **pet grooming** services than on our National Parks, more on **cosmetics**... Although the NPS is less than 1/1000th of the Federal budget, it is being cut { [Link](http://home.nps.gov/applications/digest/headline.cfm?type=Announcements&id=8814) } *"Our financial commitment to the parks matches neither their importance to society nor the enormous franchise they have with the American people."* National Parks Second Century Commission { [Link](http://www.npsa.org/commission/) }

Backcountry Horsemen are the most active (per person) volunteer group in the Northwest's national parks, helping to maintain hundreds of miles of wilderness trails. I don't know what is talking about (although I've seen "damage" to wet meadows, it's from bull elk in rut, who just love to dig wallows). Pursuant to 36 CFR 2.16, Park Superintendents set Park- and site- specific regulations on stock use, so that "wet meadows", or more to the point, sensitive alpine meadows and lakeshores, are not affected. Each Park has these regulations, and a significant portion of Park trails are not open to stock (even though they were originally built by and for stock!).

Campsites are largely funded through fees, which are already higher for larger RV sites and fund power and sewer hookups (actually, there are few except in our largest NPs such as Yellowstone; there are only 12 such sites within all of Yosemite; RVs mostly stay outside NPs). Further, many of the most scenic National Park roads are closed to RVs (Going to the Sun road in Glacier, Trail Ridge Road in RMNP, Denali Park Road, Mineral King in Sequoia, and hundreds of secondary Park roads). Who is subsidizing who? Please support the Park Service by not proposing to burden it with whatever pet political peeve might stike your fancy. NPS needs broad public support from everyone. Keep politics out of our National Parks.

Economics are dubious, potential is real but limited (&lt;1% of US electricity, 0.1% of total US energy use) even with incentives (substantial taxpayer or electric ratepayer subsidies). Subject is peripheral to the land management & preservation focus of this forum.

## Discussion Question 2

### **Written & Online Comments**

**(cont.)**

Even for us hikers, the loss of roads that provide access to trailheads is a major issue. When this loss of access to campgrounds, trailheads and ranger stations is not due to nature's storms but to deliberate advocacy and threats of lawsuits from activist groups, that is particularly sad. { [Link](http://www.peninsuladailynews.com/article/20090617/news/306179993) }

Habitat will be moving up in elevation (~300 m) or equivalently to higher latitude (~440 km) in the 21st century (for mean predicted warming 3 C, { [Link](http://cses.washington.edu/cig/pnwc/cc.shtml) } ). There are significant barriers to long-distance N-S migration, compared to short distance elevation gain. This is particularly true for plants and all species in their ecosystem, from mycorrhizal fungi to butterflies. To put a finer point on it: can redwoods establish seedlings 300 m higher in elevation, or miraculously leap 440 km north into Washington state, within only one century? The "crunch" comes in the isolated Great Basin mountain ranges of Nevada, which simply don't have higher elevations or latitudes into which species might, even theoretically, move. Extinction will challenge some unique endemic species, but your proposal does not address these areas. Further, it does not address unique ecosystems such as the Siskiyou, which are founded upon local serpentine soils, nor thousands of unique local species from salmon to salamanders. Drawing a line on a map does not move mountains nor rivers. The ecological merit in this proposal... well, it escapes me. I'm a pragmatist. How would drawing an "NPS Boundary" line on a map actually mitigate climate change? Could NPS even manage such a 2000 km long Park? Is this realistic? Does it actually work? Dreams are great. In the virtual reality of "Second Life", this is a wonderful Pacific Crest NP with rangers moving redwoods north 4 km each year. In reality, we need to get a lot more serious about mitigating and limiting climate change than drawing fanciful lines on a map. This is far bigger issue than NPS land management can solve.

\_\_\_ asks "Do you know how many acres it would take to support 1,000,000 buffalo, along with all the elk, and grizzlies you are proposing?!" Based on the largest Great Plains bison rancher { [Link](http://www.tedturner.com/enterprises/ranches_Template.asp?page=ranches_faq.html,) } roughly 40 million acres, or 18 times the area of Yellowstone, or equal to, say, the entire state of South Dakota. As the author says, "where even the biggest imagination can run wild"... as if it hasn't already ;-)

Having worked to organize National Park outings with a local school, I know that it is now much more difficult for schools to find time (let alone money) in their programs for field trips. The primary reason is the intense focus on test scores, initiated by states in response to "No Child Left Behind" mandates. However, extra-curricular programs can still be accomplished outside of school hours, on weekends or vacations for example. The logistics (transport, liability) are more complex than for school field trips, unless parents are directly involved.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Hunting is allowed in National Parks. And Wildlife Refuges. And Marine Sanctuaries. Even hunting and fishing of endangered and protected species, from elk to salmon to whales. Certain restrictions nominally apply: { <a href="http://www.animallaw.info/cases/causfd443us658.htm" rel="nofollow" target="\_blank">Link</a> }

I ask the author to research this question: When President Jefferson commissioned the Lewis and Clark expedition, he described its purpose with one word { <a href="http://en.wikipedia.org/wiki/Lewis\_and\_Clark\_Expedition" rel="nofollow" target="\_blank">Link</a> } What word did he choose? Please take time to ponder that, as if one is to have a world view consonant with reality, mustn't that be a significant part of it? Each year, I invest a hundred days digging dirt, cutting a couple hundred windfall logs, building a half dozen footbridges, maintaining a few dozen miles of wilderness trails... and yes, from the mountain tops, one can see the Pacific Ocean and Seattle, so it is by the author's lights it is but small and whimpy, but at least it is something concrete... not a mere pointless rant dismissing the significance of all National Parks.

I maintain 14 miles of popular multi-use trail as a USFS volunteer. Properly built trails are not damaged by bikes. There is damage from windfall rootball tipouts, floods at stream crossings, slides on unstable terrain, and cuts at heavily used game trail crossings. But not from bikes. Fewer than 10% of the trails in this national forest are open to bikes. Why you wish to bar them from the few remaining escapes me. Our trails need public interest and support from all. p.s. I'm not a mountain biker. But when a helping hand is needed on trail work, I find they are far more likely to pitch in than my fellow hikers are!

If you could cite specific examples, that would be appreciated. I'm not aware of any development on a wilderness inholding within the past 20 years. There were proposals (Mineral King ski area adjacent to wilderness, for example) that were killed on NEPA or access issues. Not aware of any that actually occurred. Cite one? National Park inholdings (all of them that I'm aware of) receive little or no investment from their owners, because they realize that eventually they will go to the NPS. I'd welcome citation of counter-examples. I agree it makes eminent good sense to acquire inholdings sooner, as land values generally rise faster than inflation over time. But it's a matter of priorities, and Congress sets these. So it only has to make political sense, not fiscal nor environmental sense... sigh

In Olympic NP, there is no logging, but Google Earth allows one to see blowdown from the intense windstorm of Nov 2007. It knocked down areas of old growth on the Quinault ridge and elsewhere. One can readily see areas hit by wildfire or blowdown in earlier years, too. Please post lat/long (or better, a Google Earth link of the view you're concerned about). The concern behind your posting, that logging could occur surreptitiously in NPs or wilderness, frankly seems virtually impossible. Timber thefts do occur, however, adjacent to roads in National Forest, BLM and State forest. Usually these are isolated, individual, high-value trees (e.g. old growth big leaf maple or cedar). The recession hasn't helped...

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

NPS actually does have a facilities program in which this is one element. And ARRA stimulus funds are moving some of these projects forward this year. But this is a far bigger topic than USFS, BLM and NPS. Shouldn't this goal apply to all government facilities? Is the technology really available? (show me how you're gonna heat Wrangell NP HQ & VC overwinter) Responsible stewardship of public lands isn't carried forward by merely dumping unfunded mandates upon already over-stretched land management agencies. If you're really serious about making a contribution, not merely bumping your posting count, think further before posting?

NPS already administers 392 sites, including 58 national parks. Its resources are spread too thin. The deferred maintenance backlog grows { <a href="http://www.gao.gov/highrisk/agency/doi/reducing-interiors-deferred-maintenance-backlog.php" rel="nofollow" target="\_blank">Link</a> } as Parks become delapidated and less able to serve visitors or protect their resources. Before we add more NPs, lets first cut some of the existing sites by transferring them to states, localities, or other Federal agencies. Hasn't Mackinac Island done fine as a former National, now State, Park? Do we really need a Lower East Side Tenement NHS or a William Jefferson Clinton Birthplace Home NHS? Before adding new NPs, either cut the number of NPS sites by 1/3 or up the NPS budget by 1/3. Both are do-able! It's a matter of understanding what the NPS mission is... and is not.

Please read about the Nature Conservancy's Ellsworth Creek Preserve { <a href="http://www.nature.org/wherewework/northamerica/states/washington/misc/art31226.html" rel="nofollow" target="\_blank">Link</a> } and Lomakatsi { <a href="http://www.lomakatsi.org/?p=502" rel="nofollow" target="\_blank">Link</a> } thinning projects. Please read the Environmental Assessments for USFS projects to accelerate the development of old-growth characteristics in formerly clearcut areas, now being managed as Late Successional Reserves under the Northwest Forest Plan. I mention this because your proposal reads "These forests will not be logged and will be allowed to develop old-growth characteristics." That's fine, if the stand has never been logged. But Congress set a much more ambitious goal under the 1994 NWFP: the goal returning millions of formerly clearcut acres to old growth conditions. That requires thinning, removing the smallest trees to release the growth of the largest, removing the monoculture of replanted fir and releasing more a more diverse forest of cedar, pine, maple, etc.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Staffing Park entrance stations, whether by NPS staff or volunteers, is already a challenging assignment... adding scales to all Park entrances so they are like the local landfill would surely enhance the Visitor Experience from the start (not!) and is a poor investment of Park resources. Successful Park initiatives are inclusive, not exclusive. National Park visitation has declined steadily since 1996 (the year the Recreation Fee Demo Program began { <a href="http://www.newwest.net/index.php/topic/article/the\_real\_reason\_national\_park\_visitation\_has\_declined/C41/L41/" rel="nofollow" target="\_blank">Link</a> } ). This proposal would accelerate this decline. Fee revenue accounts for only 6% of NPS budget; 94% comes from general tax revenues, and depends crucially on broad public support of the NPS mission, in competition with all other Federal programs. That support is undermined if the Parks are not open to all. If National Parks become viewed as playgrounds for the rich (who don't care about fees), then they lose broad public support. Whether this proposal is intended to be helpful or punitive (readers may judge for themselves from its tone ;- ) it will damage the National Parks it purports to support.

Stict "no chainsaws, no helicopters" means yet more trails will become impassible, fewer trail bridges will be replaced, more trails will become abandoned. Stict "no rescues" means accidents, injuries and medical emergencies will more often become deaths. Strict "no cycles" means wilderness additions will be opposed and delayed (e.g. in Montana now) or cut into ribbons to preserve existing biking trails (e.g. Mt. Hood last year). Strict "no cabins" means the loss of historic backcountry ranger stations and shelters which are appreciated as destinations for most hikers, and which allow USFS/NPS to protect wilderness resources and conduct S&R. I've become convinced that this absolutist vision of Wilderness, however romantic at first glance, is not shared by most who love the backcountry when it comes down to specific trails, sites and issues, so is counterproductive because it engenders intense local opposition to new wilderness areas. And it goes beyond the intent of the Wilderness Act itself, which is very much a compromise between values, not of one value to the exclusion of all others.

The primary cause of National Park road damage is storm damage, primarily floods. From the Blue Ridge Parkway to Mt. Rainier, from Point Pelee to Acadia, repair of storm damage has cost far more than routine road maintenance over the past decade. The second cause is aging infrastructure, primarily bridges. The third, I think, is "normal" windfall trees and landslides on unstable terrain. Actual damage from traffic is a minor, almost negligible, component of road maintenance costs.

The problem is well recognized, and affects every western state. This proposal is a novel solution, worthy of serious discussion. Although agencies have a number of small-scale initiatives underway in the southwest, the procedural burden of planning compliance outweighs the agencies' ability to negotiate at a rate sufficient to keep up with the growth of this problem. And I'm not aware of meaningful small scale efforts in the intermountain west and northwest. Under the current system, what's theoretically needed is a fuels reduction EIS which addresses at least hundreds of thousands, if not millions, of acres across all of an entire USFS region. The agencies just don't have the ability to accomplish a study of that magnitude, let alone act on it once done. So before any any brush or doghair could be cleared, there are a net of conflicting legal issues that would have to be cleared... by Congress, I guess?

There is a program to buy Park inholdings from willing sellers: the NPS Land Acquisition program. It is funded at ~\$100 million/year, or 3% of the NPS budget (see the NPS Greenbook { <a href="http://home.nps.gov/applications/budget2/fy11toc.htm." rel="nofollow" target="\_blank">Link</a> } Although this has gradually increased over the last few years, it remains below 1990s funding levels. The reason is deferred maintenance needs have grown. I agree that the NPS budget is too small, but think it should be funded through general revenues, not through a dedicated fee. (A Federal real estate transfer tax could not withstand legal challenge on constitutional grounds.)

This idea is unfocused, would benefit from being more specific. The 1994 Northwest Forest Plan essentially ended this on USFS administered lands in WA OR ID nCA, and NPS never has logged. NW state lands are similarly protected. That covers essentially all temperate rainforest in the contiguous 48 states. The interior Rocky Mountain forests inherently have little old growth (the mean fire return interval in pine forests is measured in decades, not centuries). So I assume your focus is on the Tongass NF? If so, focus on it. (70% of Tongass old growth is permanently protected in reserves { <a href="http://en.wikipedia.org/wiki/Tongass\_National\_Forest" rel="nofollow" target="\_blank">Link</a> } and old growth logging is almost ended there, anyway.)

Vehicles are licensed and taxed by states, not by the NPS. Fuel excise taxes go into the DOT FHWA highway trust fund and to states. Park roads are primarily funded by FHWA through PRP (Park Roads & Parkways), PLHD (Public Lands Highways - Discretionary), FH (Forest Highways), ERFO (Emergency Relief for Federally Owned Roads) and other programs { <a href="http://www.wfl.fhwa.dot.gov/programs/transportation.htm" rel="nofollow" target="\_blank">Link</a> } The primary funding for National Park roads is already through Federal fuel excise taxes, not through the NPS maintenance budget. Apparently you don't realize that your proposal is effectively the way things have actually worked for more than 50 years already? This issue of taxing vehicles directly by weight (rather than taxing fuel consumption) is of debatable merit, but whatever its merits, it is not a National Park issue. Fewer than 0.1% of the nation's roads are within National Parks. Funding highways, and in particular sustainably funding the Federal Highway Trust Fund which is the primary source of funding all highways including in Parks, is a national issue.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Which state(s) do you propose to force all residents out, bulldoze all sign of civilization, and return to wilderness? Wyoming, Montana, Idaho, Colorado...? These are among the fastest growing states in the US. And which states do you propose become a new American "Gaza Strip" for the millions or tens of millions of refugees your proposal creates? Imaginative? Yes, but more a nightmare than an idyll.

Yes, we wish to power southern California with renewable solar, wind and geothermal energy instead of burning coal and natural gas, but no we don't wish to build the transmission lines necessary to make that possible. Isn't blockading new transmission lines is the real issue here? Isn't it NIMBYism masquerading as preservation? Is a transmission line standing on rocky ridges spanning a ravine with Joshua trees in it an "irretrievable loss of resources", or is it the embodiment of true conservationism? Is this not better decided on a case-by-case, site-by-site basis, not with some broad national "one size fits all" law?

I was born and raised in the Flint Hills of Kansas but was 20 years old before I had even heard of tall grass and what the Great Plains used to be, one of the continent's great ecosystems. Pockets of prairie are being preserved but a vastly larger effort is needed.

Overuse of recreational facilities can degrade water quality, but our overall outdoor policy should encourage increased outdoor recreation more than limiting it. On the one hand we need to outlaw the most damaging uses, such as off-road vehicle mudding and camping too close of our waters, but at the same time enhance low impact recreation. We need to act to minimize erosion by limiting riparian development and harmful logging practices, improving and stabilizing river road crossings and boating access points, and developing low-impact campsites back from but with access to our waters. Increasing the number of outdoor recreators increases the overall health of the nation and creates more champions of good waer quality and conversation. But we do need to make certain that the recreation we encourage has low negtive impact

As I see it the main obstacle to achieving our conservation goals in America is our deep-rooted addiction to growth. We have this great fear as a nation that if we aren't growing then we must be stagnating, and we know we don't want to stagnate, so we accept whatever environment-damaging projects come down the pipeline in the name of promoting growth. If Congress and the President instead were to focus on stability, security, and happiness as our national goals, we would quickly see that it was in our own self-interest to stabilize the US population. Right now we are caught in a vicious cycle - we have population growth, so we think we need economic growth to keep up, even though the economic growth mostly benefits existing millionaires and billionaires. Then to keep the economy growing, we think we need population growth (e.g. more immigrants and more babies), which of course leads back to the need for more economic growth. It would be so much easier to protect, share, and enhance our natural resource base in America if we set a national policy on population stabilization. Stabilizing our population at some reasonable level is in fact the only way we can truly protect our outdoor quality of life for future generations.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Depends on your definition of open space, which is not my favorite term to begin with. If you count cornfields in Kansas and wheat farms in Washington, not to mention deserts in Nevada, then maybe the 80% figure is close to being accurate. But that doesn't mean much for wildlife conservation - especially when you consider how much non-mountain/non-desert habitat has been lost. The tallgrass prairie is the best example - something like 99% gone and replaced by corn and soybeans. The Nature Conservancy is a non-profit organization, and any modest gain they make on reselling land to the government goes right back into their revolving fund for protecting habitat around the world. TNC only makes money on land sales when they get the land in the first place at a discount - the government only pays its own definition of fair market value. Right now TNC has been left holding the bag on a number of daring conservation purchases, since state and federal budgets are so broken.

For the first 12 or so of my 19 years living in the Four Corners region, I fished the San Juan Quality Waters at least twice per month year round, and loved the quality of the fishing experience there. Great baetis hatches much of the year, prolific PMD hatches in the summer, occasional strong summer caddis hatches. Now I seldom go to this formerly great fishery because less than half of the former "quality" waters have any quality these days, and about the only dependable hatches are for midges and these are less certain than in the past. The fact is that the San Juan is buried under much more silt than ever before. I don't know for sure if the huge increase in oil and gas drilling is responsible for this greatly increased siltation. But I do not accept at face value the assertions of those agencies that say drilling is not a factor without having conducted any credible study of the issue. Impartial studies need to be done that are not tainted by political pressures. And springtime releases are now more necessary than ever to help remove the increased load of silt. Stocking more fish or building more structure here and there in the river is not the answer. The fish need insects to eat, and the insects are being smothered. The structure only serves to trap the silt and in no time the new boulders have deep silt behind them. In the meantime, I occasionally fish the San Juan and occasionally have a productive day, but I no longer proudly recommend this river to out-of-state friends as a quality trout fishery.

Great idea! Surely now with the oil spill ongoing Congress can see the need for a robust Land and Water Conservation fund.

I believe it would be helpful for the advocates of full permanent funding for the Historic Preservation Fund to briefly articulate what we are losing, and what the recipients of HPF funding--states, tribes, localities, non-profit organizations--are unable to do without those funds. It may be trite, but I think it's also important to recognize what a drop in the bucket this amount of funding is in the big scheme of things, and how it compares to the public money that is spent (and often wasted) every single day.

## Discussion Question 2

***(cont.)***

I enjoy visiting wilderness areas very much, and I wish we had more such places to get away from the noise and psychosis of the urban environment. There are plenty of opportunities to expand existing and connect wilderness areas by removing unneeded roads. As points out, there is little truth to the idea that wilderness areas are pushing people onto smaller and smaller peripheral zones - in fact if you look at the trend over the last 100 years quite the opposite is true. Wilderness is now very much the rare treasure in a sea of farms, degraded plantation forests, and cities.

I stand corrected - Leopold's influence on our thinking about the value of predators began much earlier than the 1950's, most notably with the publication of A Sand County Almanac in 1949.

I support historic preservation, though if push comes to shove in the federal budget I would rather see that money go towards buying and restoring forest land at the battlefields than restoring old buildings. If spent well a million dollars can still buy a thousand acres of land in some states, but the same money doesn't go far when it comes to buying, restoring, and maintaining historic structures.

I support this idea (I always like the idea of a new big park) and I think it could be combined with the concept of a Great Plains National Park to let the bison roam free on. North America had wild horses before the first arriving humans killed them off. Overpopulation is a serious problem (as with white-tailed deer in the eastern USA)- but perhaps less of a problem if the same park was well stocked with wolves, mountain lions, and grizzly bears. Of course, when we had horses we also had lions, sabretooth tigers, and dire wolves, not to mention megaherbivores like mastodons that weren't directly controlled by any predator.

If you are up in arms protesting against wildlife corridors and wilderness, please read this: Someone actually took the time to make and distribute a totally fake map of potential wildlife corridors across the United States. The title for the map reads something like "Simulated Wildlands Project, as Mandated by the UN Convention on Biological Diversity". The word "simulated" is telling - this map is completely and 100% false, and was created intentionally to stir up the lunatic fringe (which charitably I am sure you are not a part of!) into opposition against valid wildlife conservation and wilderness projects. The map was contained in an equally false and misleading rant called "Understanding Sustainable Development (Agenda 21)", which would be laughable except for the fact that some people apparently think its true. If all you know about wilderness comes from this sort of nonsense, then please do yourself a favor and actually visit the websites of a few notable conservation groups, like the Wildlands Network, The Nature Conservancy, the Wilderness Society, etc. Also, check out the UN Environment program, and you'll quickly learn how little power this agency has over anyone's land-use decision-making. The black helicopters are not on their way, and with a little patience we can resolve our recreational preference differences and focus on protecting the public lands that most of us hold so dear.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Just returned from SE Utah last month. I'll gladly drive 2000 miles every year to immerse myself in this place of spectacular beauty! The Monticello BLM oversees more than 1.8 MILLION acres of some of the most scenic, fragile and culturally rich land in America (Canyonlands, Cedar Mesa, Grand Gulch, Comb Ridge) - and much of this land is designated as wilderness quality by the Utah BLM. However, 'wilderness quality lands' in Utah are caught between State and Federal politics because of the 2003 'No More Wilderness' policy. Repeal the 'No More Wilderness' policy that keeps Utah wilderness-quality lands in limbo. Wilderness designation could provide the additional level of oversight and funding needed to protect these fragile areas for generations to come.

you are implying that the US needs to keep growing its population size and economic consumption forever - this is exactly the mindset that I am complaining about. If you like the great outdoors, and especially if you like the freedom to enjoy the great outdoors more or less as you see fit, then you have to be dismayed at the idea of a USA with 400 million people (expected by 2050). If you think we have onerous regulations now, just wait till every national forest is surrounded by suburbs. Even the military is complaining these days that urban growth is getting in the way of their outdoor training missions at large bases like Ft. Bragg in NC. Instead of a growth arms race with China, we should be helping them stabilize their own population size. The benefits to national security would far outweigh any investment we could make in smart bombs and cruise missiles. And no, stagnation is not the same thing as stability. A pond that is stagnating is an unhealthy place that is losing oxygen, whereas a pond that is stable can be full of fish year after year. I think most Americans would trade the current economic mess (caused directly by the urgent Wall Street quest for never-ending growth) for some stability in their financial status and quality of life.

OHV's, snowmobiles, and jetski's should all be banned from most public lands and waters - they are the usage that is least compatible with other uses, and they have the longest-lasting negative impacts. Just like America in general was sold by Madison Avenue into thinking we all needed giant SUV's for our single passenger daily commute, OHV-users have been sold into thinking that they can't enjoy the woods without a gasoline engine roaring between their legs. If OHV users want to band together to buy themselves a private wooded racetrack with a noise control barrier and onsite mountain dew dispensers, fine, but even then they should still have to clean up their act so they don't send water pollution downstream.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The best available scientific information clearly indicates that top carnivores play essential roles in maintaining the health of native ecosystems. We've known this since Aldo Leopold wrote about it back in the 1950's, and recent analysis of the impacts of returning wolves in Yellowstone (and cougars in Zion) confirms that you just cannot expect to have high-quality nature preserves without the big predators. In the southeast, except for a small pocket of red wolves in eastern NC, and a small band of panthers in southern FL, we don't have much in the way of top predators anymore. The official US FWS recovery plans for both species call for restoration of an additional two populations each so that the wolves and panthers can be delisted. Now would be a great time to carry those reintroduction projects out. Otherwise, all of our efforts at protecting natural habitat in the southeast will continue to be ruined by the deleterious impacts of overabundant deer, raccoons, possums, and wild pigs. President Obama could set the process in motion with a quick memo to the relevant federal agencies, and this would provide a much-needed conservation success story for his administration. Likely candidate locations for top predator restoration would include Okefenokee NWR-Osceola NF, Ft. Stewart, Francis Marion NF, Croatan NF, Apalachicola NF, Great Smoky Mountains NP, Pisgah NF, Nantahala NF, Ozark NF, and Ouachita NF. The goal of the projects should be to establish large, interlinked populations of the predator species so that they can be delisted from the Endangered Species Act and carefully managed (like other wildlife) by the states.

I don't think your assessment is very accurate. Communist countries did not have a good track record of protecting land for conservation and public recreation, they were much more concerned with micromanaging their economies and increasing their outputs. I am proposing the US government spend money buying land and development rights from willing sellers at fair market prices. When the government (or a land trust, etc) buys development rights, the property remains under the control of the landowner, and markets adjust the property values accordingly. China did have an aggressive and authoritarian population policy, but I'm not aware of any other communist nations that followed suit, so the only thing communist about it was their approach. I am proposing that we spend more federal tax money providing voluntary birth control techniques to women who want them but don't have them. No direct coercion is implied or required. I am confident that cost-benefit analysis would show that a dollar spent on reducing overpopulation is a better investment for the taxpayer than any other investment we could make in national security or natural resource protection.

The population growth due to US citizen has actually achieved the ideal of replacement of parent (ie two children per family) or even less. However, the population growth due to the governments lack of effective enforcement of immigration policies already on the books has cause our population to explode, causing many of the pressures that we see on resources and recreational lands. The Federal Government needs to step up and fill the role that it is chartered to do.

Not only do private land owners have a vested financial interest in taking care of their land, they also pay taxes. Every time we add acres to our public holdings, we decrease the local tax base. And, it is apparant in MT that the government does not have the resources to properly manage the huge amounts of land they currently own.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Public Statement for “America’s Great Outdoors Initiative” Good morning, my name is Rosalyn LaPier. I am an enrolled member of the Blackfeet tribe. I came here today to offer my voice to the discussion regarding public land use in the United States. I come with a unique perspective and background. I grew up in a family that gathered plants on a seasonal basis for medicinal and edible purposes. Until this past year when my grandmother passed away at the age of 95, she oversaw our family’s efforts to gather and process plants. My grandmother was taught by her grandmother, Mary Spotted Bear, about the use of native plants. For the Blackfeet, plant knowledge was taught through the generations from woman to woman, usually from grandmother to granddaughter. Not only was the knowledge of gathering plants taught, but also how to process, preserve and prepare plants for future use. Archaeological evidence suggests that humans have lived on the northern Great Plains for at least 10,000 years. And that throughout that time humans have used the numerous rich natural resources found on the landscape. The Blackfeet used at least 200 different plants from a variety of habitats. The Blackfeet collected these plants all over what is now the State of Montana and the Province of Alberta. The Blackfeet went to specific places each season to gather and collect specific plants. Despite the stereotype that the Blackfeet “followed” the bison, the Blackfeet strategically traveled to certain places at certain times of the year specifically to gather plants or other natural resources and to also hunt animals. My family has gathered plants on the northern Great Plains and on what is now Montana for generations. I have spent my entire life helping my grandmother gather plants. It is something I continue to do (even after her passing) and that my family continues to do. However, I have found that we are an invisible presence on the land. Even though we continue to go to certain places to collect plants during certain times of the year, just as our ancestors did before us, no one recognizes that we have been there. This is in part because we do not harm the land or over-harvest it. Because of this we are often overlooked as a stakeholder in the discussion of public land use. And we are rarely, if ever, asked our opinion of issues related to public land use. Today, I would like to make you aware of a few of the challenges we face and the obligations that we believe the federal government has toward traditional cultural resource use. Challenges to traditional gatherers: 1) Each year it seems that there is more public land that is being leased for natural resource development, logging or for livestock use. Because of this there seem to be more roads, more ATV’s and more erosion on public lands. 2) Each year it seems that there are more pesticides and herbicides being used on public lands and that I have to ask where and when they are being used. We try to avoid places that are being sprayed but sometimes it is difficult, especially for older or elderly gatherers who cannot walk far from roads or far away from the car to gather plants. 3) Each year it seems that there are more noxious weeds on public lands. These seem to be near roads or development and they greatly impact the growth of native plant species. Sometimes it seems that we have to travel farther and into more remote places to avoid noxious weeds. 4) Each year it seems that there are more commercial harvesters on public lands. I have seen areas where commercial harvesters have over-harvested and have literally stripped a site of all natural resources, leaving nothing for either animals or other humans to share. 5) Finally, it seems that whenever there is a discussion of conversing land in Montana that it is said that the land needs to be restored to the way it was when Lewis and Clark arrived. People forget that when Lewis and Clark arrived there were numerous tribal groups in the region who had lived here for thousands of years and who

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

utilized the land. There seems to be a perception that “no one was using the land”, when in fact, people did use the land and continue to use the land every season and rely on that land for their health. America’s Great Outdoors Initiative should work toward: 1) Increasing and protecting access to traditional cultural resources on public lands for traditional gatherers. 2) Limiting development, the creation of roads, leasing for livestock use, and controlling erosion on public lands. 3) Limiting the use of pesticides and herbicides on public lands. 4) Restoring natural areas impacted by noxious weeds or erosion. 5) Protecting traditional cultural resources from over-harvesting by commercial harvesters. 6) Ending using the language of “restoring the land to they way it was when Lewis and Clark arrived” as if no one was here and no one was utilizing its natural resources. 7) Asking if traditional gatherers use public lands before allowing projects or leasing to occur. 8) Promoting the perpetual use of traditional cultural resources on public lands by traditional gatherers. For years my grandmother helped people on the reservation by providing medicinal plants for their illnesses and for their health. On Memorial Day I was on the Blackfeet reservation decorating graves. While there an elder (who is a veteran) came up to me and asked that now that my grandmother was gone, if I could make some medicine for him. Gathering and using plants has been a vital part of my life and the life of my family for many generations. We collect plants in a wide range of habitats – both on the reservation and off the reservation and both on private and public lands. I hope that I can continue this practice and so can the rest of my family. However, unlike commercial harvesters, we do not gather plants to sell them, we use them for our own family use and also for members of the community. I hope that my public statement will provide some awareness of how these issues impact individuals, like that tribal elder. Although this man does not gather the plants himself, he relies on others so that he can continue to live a healthy life. Ultimately though, he relies on the federal government to provide protection of public lands so that he can continue to benefit from that land. Just as his ancestors did for thousands of years. Even though our presence on the landscape is invisible I hope that my voice is heard today. Thank you for your time.

MORE FREEDOM! LESS RULES! No one has more of a right to use this "public" land than any other American.

So if you do this are you planning on going back retroactive for all the OHV land that has already been closed to travel by motorized vehicle and make that land 1-1. If so you owe us about 5 million acres. 1-1 this year and then it will be 1- .5 then 1-.25 Typical liberal incrementalism, less freedom and more rules.

Ya, just what we need more government jobs right. I agree, this country is broke we can't spend more money on anything. It's time to CUT all budgets DEEP. If you want something like this make all the people on unemployment checks go up in the woods and earn that check instead of sitting on the sofa for 2 years. Great idea

*(cont.)*

Thanks for the explanation. I agree that the DOI, as with many Federal entities, is not capable of implementing another large program; however, I must have poorly communicated my idea if that is how you interpreted it. The Task Force would use existing DOI data to identify Conservation Priority Areas. Ideally, the Task Force would be composed of representatives from DOI, other Government entities, NGO's, and private industry, which would require minimal resources or administrative burden for DOI. Essentially, this program would use existing data and knowledge to address serious conservation issues on private lands. I'm sure an avid outdoorsman such as yourself, based on your numerous comments to other ideas, could support such an objective. If this is not the appropriate mechanism for achieving such an objective, you should submit your own idea and allow others to vote and comment on it as well. Thanks again for your explanation

The idea of a free ranging buffalo herd in Eastern Montana will have many negative & unintended consequences. Bison are very destructive animals that have few natural predators. Since wolves were reintroduced in Yellowstone Park they have decimated the elk, deer, & moose populations, leaving the buffalo herds to thrive. The bison have overgrazed the park and have caused less biodiversity in an already fragile ecosystem. Lewis & Clark's journals describe eastern Montana's landscape as a desert with few shrubs and trees along the rivers. This lack of vegetation was caused by the herds of bison trampling and foraging along the rivers' edge. With no hunting to thin the bison, their population will skyrocket, pushing out many other plant and animal species. Tourism would be very limited because of the harsh climate, lack of roads, large number of biting insects, and isolation. Most of the people who have commented favorably on this proposal have probably never been to eastern Montana. If this proposal is implemented, it will cause many of eastern Montana's hardy residents, both human & animal, to leave. It would decimate entire towns and destroy a decent way of life for thousands of people. There are already several free ranging bison herds in the United States. Bison are not an endangered species. I STRONGLY disagree with this proposal.

The national park system can't take care of the parks they already have. Why not take the money and resources and try to fix the problems in our existing parks instead. Maybe the interior dept. could fully fund their PILT payments to rural counties like they are supposed to. Does acquiring land adjacent to the federal land mean buying it from a willing seller or does it mean taking it by eminent domain. It's a good idea as long as you're not the one who has to give up their home and way of life.

CHERNOBYL. THREE MILE ISLAND. TERRORISTS. I'm sorry. Not a good plan. You forgot one "The sky is falling"

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

It is an obligation of the USFS and NPS to provide visitors with a quality outdoor experience, not just during the day, but all night long. Half our world is above us -- the night sky. To connect with the stars and planets we need darkness. Protect the night sky by requiring all govt. buildings, parking lots, restrooms, etc. to use full cutoff lights that prohibit upward and sideways shining light. Zero upward light. Use timed motion sensors at restrooms. HPS and yellow LED lights interfere least with circadian rhythms and ecosystems. 2/3 of the US population have never seen the Milky Way. If they can't see it in our national forests and parks, where will they ever experience the awe of such a magnificent sight?

Local and state parks may be the only resources some people have to relate to nature. If those facilities are closed then we are eliminating a whole community from experiencing the outdoors. Funding through LWCF is essential for keeping facilities open and for building new ones.

People are twice as likely to be killed by a stranger with a car than a stranger with a gun. In urban areas that boomed after the automobile became the primary transportation mode, low income areas also lack sidewalks and safe street crossings. Federal transportation dollars should be made more available for projects that facilitate short trips on foot.

I see pluses and minuses to this idea. You aptly describe the benefits of eliminating fees -- total access -- but a potential downside is overuse of the parks, potentially resulting in the degradation of natural resources/ecosystems/trails/etc. The Boundary Waters Canoe Area Wilderness of northern Minnesota has a system which, in my opinion, successfully bridges these two concerns: Access to the BWCA for a day trip (no overnight camping) is free and unlimited. Additionally, there are free Forest Service campsites on the border lakes just outside the area. However, if you wish to stay overnight within the Wilderness Area, you must purchase an entry permit. An entry permit is designated for a specific entry point on a specific day, and there are limited numbers of permits to control the amount of traffic in a given area. However, the permit is needed solely for entry into the BWCA and affords limitless days within the area so long as visitors do not leave and reenter. These permits are only \$16 per person, not a debilitating fee. I fully agree with and understand your concern. That being said, in the 1950s the federal government nearly closed many parks because they could not maintain facilities on pace with the wear and tear caused by heavy use. We must keep this piece of public resource history in mind as we create plans for access to these areas. We must guarantee access both for current and future generations.

Even though there is no doubt that forest and ecosystem health could benefit from well-thought out thinning efforts, there have certainly had some suspiciously self serving "thinning" proposals over the years. It seems important to incorporate state of the art science-based experimental forestry research into the equation, and use an adaptive management approach that evaluates the outcomes and adjusts if not performing as intended.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

We must commit to preserving these monuments to the sacrifices made by so many to mold this nation into one nation. If we cannot preserve our past what makes us think there will be a future. I certainly don't want future generations ignorant of the blood shed on behalf of our country. We cannot allow the final resting place for many of those who gave their very lives to preserve this country fall victim to a shopping center or mall. We owe our children and grandchildren the opportunity to see the battlefields where our bravest fought and died for a cause they believed in. It is hard to imagine what our future would be without a past to learn from. Let us never take for granted the sacrifices made and the blood shed for the future you and I are now enjoying. These battlefields MUST be preserved.

We must preserve our history for our children and grandchildren. If we cannot preserve our history who will? Battlefields and other historic sites should be a priority for preservation. We owe all those who shed their blood to preserve this nation the honor they deserve. They have earned a place of honor preserved and maintained for future generations.

As we are all in this together, I believe it creates negative feelings when you are allowed to demote a valid idea. We need to all work together to gather the best practices, be it dealing with private land conservation, public land conservation, recreation, education, or just connecting people with nature.

B Meyer: I'm not against moving available OHV trails. The problem is that while trails are closed down here, new trails are *\*never\** opened up there to keep the same net trail miles. I suspect that most in the OHV community would not have an issue with new trails opening up to counter trail shutdowns (mile for mile swap of similar types of trail). \_\_\_\_\_ stated the issue perfectly, there are more people using less space (due to closures), which leads to over use. There are two solutions I see. 1. *\*Expand\** the 4wd/OHV trail network so that the land does not get over used. 2. Education and advocacy of TREAD lightly! - while most users (both OHV and non-ohv) are responsible, there are a few that are not and spoil it for everyone else. I've also seen a number of instances where hikers have damaged and trashed our natural resources also. For those that want to hike in solitude, remember that for every 1 mile of 4wd trail there are thousands of miles of hiking trails, where you can hike in solitude.

you make the same mistake that many people seem to make. Wilderness and all public lands are not the same thing. There are millions of acres of Wilderness Areas that are not accessible to motorized use and \_\_\_\_\_ is not suggesting any motorized access to those areas. I just don't feel there is a need to increase the amount of Wilderness. Here in the Northwest we have an abundance of Wilderness Areas that are easily accessible and rarely used by the so called quiet users who continue to want more. When I say an abundance, I don't mean a large backyard, I mean an excess of a million acres and almost half of the 1.6 million acres of the Bitterroot National Forest which surrounds the community I live in.

Don't forget the 120 million acres of existing wilderness areas. There is more than enough designated wilderness areas and we need to stop expanding these wilderness areas. Enough is enough. These areas are easily accessible and rarely used by the quiet users who continue to push for more and more unused space.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I suggest you take your own advise. Have you ever been to the Northwest? Do you have any concept of what 1 million acres of timbered forest looks like.

I too enjoy fishing, but ... just to play devil's advocate: Sport fishing can adversely affect habitats and fish populations, and introducing non-native game fish just so people can catch them creates other unintended consequences, like habitat reduction for native species etc. Also, gas powered boats introduce pollution into environments that cannot be removed easily, like litter can. I say this because I've known plenty of anglers (and hunters) who like to get away and fish, but have no problem tossing beer cans, spilling oil and gas, or mutilating fish to remove hooks and tossing them aside too. Outdoor sportsman are an important link to conservation, and should be targeted in this campaign to take greater responsibility for natural areas they utilize; but should not be assumed to be great stewards of the land, or stereotyped to be some sort of "noble savages".

Mr. Moffat you should try a day hike, plane ride or stand on one side and enjoy the view in the Bob Marshall wilderness (1.5 million acres), Selway Bitterroot Wilderness(1.6 million acres), Great Bear Wilderness(286,000 acres). Need I say more about the relevance of your comments?

People, in general, contribute little to wilderness areas, so it is better that they stay out. I understand people like riding ATVs and such, but it only takes one motorized vehicle to ruin everyone else's experience in the wilderness. The noise can be heard for miles, so forget any relaxing or listening to birds or the breeze or just silence. Even if most ATV drivers are responsible, safe, and respectful of nature, the handful who are not spoil it for everyone. ATVs need to be kept in designated areas--as do hikers and horseback riders etc. Any "multi-use" space that includes motorized vehicles is no longer a wilderness place for anyone else; it is just another spot with varying degrees of human noise.

the federal government has closed access to too many areas where we can enjoy the outdoors.The local governments and local citizens should have the control on most areas.Recreation areas are dissappearing with out local citizens input.Wilderness areas are to many and completly shut out oppurtunities to enjoy OUR lands.

You are an idiot. So, anywhere/everywhere on this earth that you think is sacred is then off limits to everyone else on this world? That's a very selfish existence, congrats. Where do you live? Where do you work, because both the buildings are located on ground that I feel is sacred, so I'm going to have to ask you to tear them down and return them to the natural state they were in. I feel it's wrong that someone would create a home on somewhere that I consider my church.....see the reasoning here? When you learn to see that you are not the only being on this earth, then maybe good change can and will happen to this world. Until then, it's people like yourself that will drive in your car on a newly paved road to the place you call sacred, and condemn all those who may have a different view of what is sacred. Don't worry, I'll actually go to a Church and pray for you and all of us.

## Discussion Question 2

*(cont.)*

I take exception to being accused, as a full sized OHV enthusiast, of not being environmentally conscious. There are the typical "one percenters" in all forms of outdoor recreationists that do not care about thier impact to the environment. I have seen just as many on motorcycles as on ATVs. In fact, I tend to clean up the messes they leave behind. This kind of attitude, that one group is inherently better than another, is detrimental to our shared cause.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Long before there were environmentalists from the large cities and towns across the nation there were local ranchers and farmers who lived off the land. These ranchers were the original environmental stewards and activists. They labored day in and day out to provide not only food for their own tables but food for everyone else in our great nation. These Ranchers took care of the land, they built stock ponds for their cattle, they planted hay and irrigated fields. All of this resulted in an increased amount of food and water for the local wildlife. The animal populations have flourished since the ranchers made food and water more easily accessible. They were improving on the land and as a result they were improving the quality of life for the wildlife as well. The rancher's livelihood depends greatly on the quality of the land they graze their animals on. They take pride in keeping the noxious weeds controlled, in keeping trash off their land, and in doing so providing not only a beautiful place to raise a herd of cattle but a family as well. Modern day animal rights activists and environmentalists will tell you that ranchers are destroying eco-systems and wildlife in their pursuits of the American Dream. I can assure you that it is not so. Real American Ranchers do not make a lot of money. They get paid once a year when they sell their cattle or sheep and it is getting more and more difficult for ranches to survive. The cost of land and living in general has skyrocketed, the price of livestock remains the same. Now the federal government wants to impose "voluntary" regulations on private land conservation? At what cost? Ranchers are slowly getting priced out of their profession. There are very few people in the United States who can relate to the American Rancher. I was fortunate to be born into a family of Ranchers in Colorado, my wife was fortunate to be born into a family of ranchers from New Mexico, we know the troubles that lie ahead for the American Rancher. For four generations my family has slaved over our land to eek out a living. My Great-Grandfather, Grandfather and Father all spent countless hours on the ranch performing "Environmental Improvements" long before there was any such movement. Let the American Rancher be. I could go on and on about the heritage surrounding ranching and I could talk about how the American West was founded by the same people that are now facing extinction, but I won't. Do not impose ideas based on speculations on the American Rancher. They have been Environmentalists all along. I know that there are people out there who do not like the idea that people have ranches that no one else can access or enjoy. We catch them trespassing every year. They do not respect the fact that for four generations our ranch has been our home. The Division of Wildlife has already tried to persuade ranchers into giving up their rights by providing small incentives to ranchers who allow people access to their lands for recreation. Everyone in this country has a right to life, liberty, property and the pursuit of happiness. There are millions of acres that can be accessed by any American at any time, leave private property alone. Please don't undermine private property rights. Every American should have the right to say what happens on their private property. Do you want people to be able to have picnics in your backyard? Voluntary efforts soon become mandates, and we will be undermining the very principals that United States of America was founded on. My idea for private land conservation is to leave ranchers alone. They have already lost rights to their property either from forced infrastructure improvements (i.e. roads/bridges/housing developments) and their ability to control wildlife that lives on their property. Do not move the American Rancher to the Extinct Species list.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I believe natural gas can be our Sadi Arabia. BUT we must find a way to get the gas without the use of harmful chemicals. There has to be a way it can be done. The problem is most Gas company's and their share holders don't have the patience to find it. They want the quick buck. Screw the environment and the people. End of story....

All who want to impose a tax on logging companies should immediately move out of there residence built with wood. There are a myriad of every day things we use that are made from trees. Do your homework before making blanket comments. Private forest land owners who have been caretakers of their own forests all have to place 50 to 200 ft buffers on every stream, wetland, body of water. They have to address wildlife and cultural resource concerns. This is a taking of private property. On top of that, all timber harvested in WA State is subject to a 5% timber tax already. Also, when Europeans showed up on the landscape there was not a continuous 400 yr old forest of old growth. There were openings due to fire, some of which was burned on a regular basis by Native Americans to maintain berry fields and wildlife areas. You see some species need the young succsional forest for forage, as well as migratory birds also use these areas as the plants are quite diverse in a forest opening. There are plants that need fire to propagate. The issues are complex and one size does not fit all. We cannot legislate from the top down. But on a local basis by those that live and work next to the forest.

FS to promote an email list to give out current information on proposed projects in the idea stage, allow public to participate in the ID team meetings. By the time a project gets to the public comment stage it is way to late. FS should have round table discussions and work groups with conflicting user groups so we get to know each other. After all the local community usually has ownership in what is going on in their back yard. When the logging was shut down the forestry companies were to get restoration work. However, those in the rural community did not get those jobs because the county they lived in did not qualify for HUB zone jobs. Federal Gov. is too slow to correct this. It has been 15 yrs since the Forest Plan came out and no work in out own back yard. So where is the local rural community support?

On the Mt Baker/Snoqualmie Natl.Forest less than 10% of the land is open to multiple use and motorized recreation. The North Cascades Wilderness Leadership School based at Burlington, WA caters to the 16 to 32 yr old crowd. We have lost 95% of our day hikes 3 to 5 miles round trip to alpine meadows and lakes in our area due to road closures by the FS digging up the roads or the roads washed out by floods. Wilderness is off limits to the very young, the elders, and the handicap. My love is to be in the mtns. hiking. However, this summer I turn 60 yrs. and was injured at work a yr ago and now cannot pack a back pack or walk more than 3 miles round trip, or do more than a 300 ft elevation gain. Which pretty much eliminates all hikes into the alpine mtn meadows. My husband is 63 and broke his back 10 yrs ago and cannot walk a long distance or pack. We love going slow on the ATV to enjoy the scenery and the wildlife. Motorized access allows the elders to bring along the youth to teach them about the outdoors. Bring back Multiple Use, we can make it work. We need all the groups to come together to find solutions.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

To comment #6, most folks who see trees automatically think it is FS lands. The FS has not had any clear cuts and in our area only an occasional thinning since 1990 or 20 yrs ago. So if you are seeing clear cuts it might be State DNR Lands or private timber companies lands on which there is no recreation conversation. So when you look at a map go to the specific County Assessors page and find out who owns the land you might be referring to. In many places the land ownership is mixed.

We have lost over 95% of our day hikes in the Darrington, in the 3 to 5 mi. round trip, area due to road closures and flood damage. Increasing day hikes, walking all day along the valley floor and gaining 500' to 3500' elevation and spending 10 mins in the alpine meadow or lake is not my idea of a good time. Wilderness with the long mileages and elevation gains in the North Cascades is for the age group 16 to 32 according to the North Cascades Outdoor Leadership School based in Burlington, WA. Wilderness is not for the elders, families with young children or the handicap. Trails in the North Cascade Mtns are different than hiking the flatter areas of the East part of the USA. Men have a greater lung capacity than women so can hike longer and farther. We have very few places for the handicap. Those of us in our 60's enjoy taking the 4 wheeler to drive slow and stop along the way to photograph the flowers and the wildlife. When we were much younger we backpacked often.

We need to look at each area across the USA FS lands separately. Each area is different, has different needs, has different geology, landscape etc. This is where the local folks who live in the area should be active participants in the planning process for the forests. In our area, we want to be able to use ATV's on old FS roads that have been dug up and no longer used. We are not advocating using ATV's on existing trails used for hikers. All we want is to be able to access the day hikes we used to have in the 3 to 5 miles category. The roads to trails has increased day hikes from 3 to 5 miles to 8 to 13 plus miles which requires an overnight stay and a heavy back pack. The North Cascade Mtns are steep and rugged. And maybe OHV use may be increasing in other areas but in our area it is non-existent. So please do not legislate one size fits all. The local folks in each area should decide what is best. We local folks do not have a big budget to hire attorneys, nor do we get paid to comment on every project that comes up like the environmental side. We love the wildlife. My life's work has been documenting edible/medicinal plants in our area.

***(cont.)***

Goshen Farm Preservation Society is a group of dedicated people who have been trying to preserve 22 acres of land and a historic home in a heavily developed area near Annapolis MD. The property is owned by the Anne Arundel County Public Schools. It was purchased through eminent domain in the 1970's in order to build an elementary school and middle school. The elementary school was built and the middle school was deemed not needed. The house was built in the 1780's and there are 22 acres of forest and meadows left in the original homestead. Our group was formed when a few residents found out the the Board of Ed was about to demolish the house(which was on the MD Historic Register). These residents testified at the next BOE hearing and the demolition was stopped. Goshen Farm Preservation Society has spent the last 5 years trying to gain a lease from the BOE to renovate the House, create community gardens and a historic community preserve. Each time this organization feels close to achieving a lease, new roadblocks are created by the BOE. As a member of this group, my philosophy is that environmental protection is achieved in large (lobbying by the League of Conservation Voters) and small (saving 22 acres near the Chesapeake Bay) efforts. Both are critical. Our group is to speak at a hearing on August 18th of the Anne Arundel County Board of Education concerning the feasibility of our lease request. Our group has been busy over the last 5 years - getting non-profit status, a \$150,000 matching grant from the state of Maryland, fundraising, and much more. This lease hearing is our greatest hurdle. If you want more information, please go to our website [www.goshenfarm.org](http://www.goshenfarm.org).

It's been proven time and again that the existing built environment can provide ALL the clean solar power we need - so we need to IMMEDIATELY STOP KILLING OPEN SPACES FOR POWER INCLUDING BIG SOLAR AND BIG WIND. Democratically-owned, decentralized, affordable point of use solutions like efficiency upgrades, rooftop solar (water and power), passive solar, geothermal heat exchange, microwind - THESE are the tools of the future, while we continue to enjoy the enormous benefits of millions of acres of healthy desert and plains ecosystems. PLEASE don't believe Big Energy or the sellouts at the Big Enviros - we CAN generate all the clean power we need, right where we need it, and we DON'T have to rip open another landscape for Chevron Solar, BP Wind, Goldman Sachs Cogentrix, Bechtel/Bright Source, Sempra, GE or any other Robber Barons who will rob us blind and won't reduce GHGs at all. Feed in Tariffs and PACE loans will solve our clean energy needs quickly and affordably. Killing the deserts will only make it worse.

Support federal legislation to avoid permanently protected lands during the siting of utilities. If protected properties cannot be avoided, utilities should be required to mitigate the damage. LTA is sponsoring a National Utility Infrastructure Coalition and working with Congress to pass amendments to ensure that our permanently protected lands are safeguarded forever.

## Discussion Question 2

***(cont.)***

I repeat: Stop these monuments!! People who do not live in this latest proposal, the Siskiyou Crest Monument, should not vote for this until you have heard from us, the people who live here, work here, and have for over 150 years. We have not abused any part of this area: we take care of it. That is why it is as beautiful as it always has been. There are thousands of us, "we the people" who live in this particular proposed area and we are angry that those who do not live here can be so uninformed that they listen to special interest groups and their lies. We do not need another 600,000 acre monument!! Enough!! Shirley Fisher

Kansas does indeed need a national park within its borders and the most natural location would include the prairielands and involve preserving bison in a Buffalo Commons. Having camped with our children for many years, we were always disappointed that there was no National Park in Kansas. How sad! This is our heritage -- let's preserve it while we can!

Yes, to multiple use. We all pay taxes to support these resources. Seems like much of the decisions as to who can use what is not based on important factors such as how much damage a recreation type might do to trails, environment, or enjoyment for other users. Instead, decisions seem to often be made based on whether something is "traditional" (horses, which can damage trails and impact the enjoyment of other users) vs. mountain bikes which offer less damage to trails, no smelly droppings on the trail, or no noise like some motorized vehicles. Yet, either because horses are traditional or because they have more effective lobbying, they are allowed places where mountain bikes or not. What is the rationale? I'm not against horses. Or mechanized dirt bikes. All have their place. One wonders about the decision criteria sometimes, though.

Motorized users can experience the great motorized outdoors in the comfort of our many motorized urban areas accessible in minutes from even remote suburban areas. If their interest is in mudding and other destructive "great outdoor" activities, wallows should be established in our many abandoned industrial areas conveniently located near many urban areas.

Unfortunately balance is hard to achieve. It would take many hikers or quite a few bikers or horse riders to disrupt any ORV users. Bikers and horse riders disrupt hikers disproportionately. One responsible ORV user would disrupt the experience of many none motorized users, maybe unintentionally but it's still a disruption. A dirt biker, ATV user, or irresponsible ORV user disrupts just about everybody and everything except their cronies.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The Farm and Ranchland Protection Program (FRPP) and Grassland Reserve Program (GRP) provide conservation organizations with critical matching dollars toward the purchase of conservation easements. Without them, many land trusts can't afford to purchase the development rights on the most scenic and ecologically important landscapes in the country. These dollars enable land trusts to purchase easements on working ranchlands, providing landowners with capital without having to liquidate acreage or livestock. We believe that FRPP and GRP dollars will be an important component of our collective ability to protect remaining native grasslands by aiding the transfer of working ranches to the next generation in the face of development pressure. The America's Great Outdoors initiative should support robust, dedicated funding for the protection of private, working lands within and in partnership with the 2012 Farm Bill. For example, LWCF funds could be made eligible for meeting the non-federal match requirements for GRP and FRPP. In places like Kansas, private land conservation is an important alternative to increasing the federal land base. The purchase of conservation easements is a fiscally responsible, one time investment – keeping land in private hands and on the tax rolls, preventing fragmentation of wildlife habitat and migration corridors, and conveying oversight to a privately funded organization and not the government. These programs help ensure working farm and ranch lands will continue to be devoted to the production of food and fiber and the wide open spaces we all enjoy.

The natural infrastructure that must be protected to create a Great Outdoors does not recognize local, state, or national boundaries, political districts, or the existence of different land managers and owners. In some instances, for example in the Morongo Basin area of the Morongo Basin of California, the landscape is fragmented by "checkerboard" patterns of BLM and private lands, small parcels that are a legacy of homestead acts that create challenges in assembling adequate patches of habitat for plants and animals to live and roam. As well, resources for protection and enforcement in BLM lands are limited, more so as personnel and \$\$ are redirected to energy development on public lands. Even when the studies exist to show the locations of wildlife corridors on the ground, the cross jurisdictional nature of corridors necessitates regional scale collaboration by all jurisdictions and agencies concerned. Not all areas of the country have wildlife corridor studies -- these are essential foundations for planning for growth and development.

Preserving battlefields allows us to keep tangible links to our past. It's important to preserve sites from all conflicts, from the French and Indian War, the Revolutionary War, the War of 1812, and the Civil War. Once these sites are lost, it is almost impossible to get them back. These sites are valuable parts of our communities and require more attention and funding.

This part of the US history is not being taught correctly if at all. We need to keep ALL the battlefields as close to the way they were for all to learn from.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

For 10,000 years the Native American Peoples managed their lands. They used fire to burn off sour grasses in the fall to promote new growth in the spring. they burned the thick brush in the forest. they knew every plant and tree in their environment and what it was good for. Then the Europeans threw out that knowledge because they knew better. Now we have a mess on our public lands with countless agencies (BLM, Forest Service, Park Service, and others) with no coordinated management plan. Any attempt to plan for managing our public lands is met with litigation from the radical environmentalist. We need a simple management plan that all government agencies must follow. Wilderness designation destroys more land than it saves. No new roads, no condos, no development, just common sense management.

Grazing on federal lands is a great deal for the cattle ranchers but a disaster for our wilderness areas. It's misuse of public lands, it pollutes streams AT THEIR SOURCE, causes erosion, breeds flying insects and insect borne diseases and makes for a very unpleasant experience for those of us who like to explore the great wilderness areas in our country. Proper, responsible management of these lands should not include grazing in any form.

I agree with. OHV's belong in the wilderness as much as cows do.

I agree that this would be a cost effective method for conflict resolution, however we in the Rocky Mountain West have found that every time the community has tried to talk over an issue the Forest Service gets a phone call from one radical environmental group or another. "Do it our way and ignore the resolution process or we will sue" says the caller and the conversation collapses. Until common sense and rule of law can be accepted nothing will change.

If rancher Joe can ride his horse and graze his cattle in the wilderness, why can't I ride my mountain bike there? Horses and cattle urinate and defecate all over the wilderness, polluting streams. You never see cyclists defecating on the trail! One horse or cow causes more erosion and damage to the landscape than a mountain biker would cause in a life time. Let cyclists use the wilderness.

It is all about balance! I have solar power on my house to (more than) offset my pool power consumption. I have a Prius to balance out my SUV. I recycle at all times. I go camping for 2 weeks every year at one of the most beautifully preserved and quiet lake in CA. I also ride OHVs at Pismo, CA with my family, but only in a responsible manner. Public land should absolutely be conserved and cared for, but OHVs do not need to be banned to accomplish that. People just need to think, respect, and "maintain a balance". It is always a few disrespectful, non-thinking individuals that ruin it for everyone else! Finally, please don't talk about OHV and air pollution. Overwhelming, vast majority of air pollution comes from cars, factories, and electric power generation... not OHVs!

Our battlefields are precious national landmarks. Once destroyed, they are gone forever. Please preserve our cultural and historic heritage!

## Discussion Question 2

### **Written & Online Comments**

**(cont.)**

Public Law 88-577(16U.S.C. 1131-1136), "The Wilderness Act" clearly states on page-4, "Prohibition of Certain Uses" (c) "no other form of mechanical transport" shall be allowed. A bicycle is a form of mechanical transport. The Wilderness Act has been missused to the point that it should be repealed. Today your Senators are considering Jon Tester's S-1470 which will place portions of the Continental Divide Trail System into wilderness. This is a prime bicycle route, yet the mountain bike community says make it all wilderness to prevent all uses of the land, but give us a cherry stem route just for the bicycle. The bicycle community could gain a lot of support for their cause if they would support the other forest users and the activities others enjoy. The CDTS should be left open to bicycle use but not at the cost of keeping me out of the rest of the forest.

The Wilderness Act has already been perverted, and the original intent missused. The Bob Marshal Wilderness contains old homestead cabins and an airstrip that is still used to ferry the rich and famous to a "wilderness experience". S-1470 from Jon Tester is attempting to make new wilderness, lands that currently contains roads, old mine claims, dams, headgates, ditches and CCC constructed campgrounds. The radical environmentaist doesn't want to read the Wilderness Act to see what type of lands were originally intended to be so designated. Today all of the designated wilderness, 109 million acres, would cover California with room to spare. We don't need a single acre of additional wilderness as the wilderness we have is not used. Look up the FS Recreational Use charts. For 2009 Montana recorded just 3.09% of forest visits were to wilderness, while 96.98% were to multiple use areas.

Off roading is the best family sport & for years our areas keep getting smaller & smaller, but the sport keeps getting more popular. This will improve our riding areas & help keep the sport growing

Off roading is the best family sport & for years our areas keep getting smaller & smaller, but the sport keeps getting more popular. This will improve our riding areas & help keep the sport growing.

When professional outdoor educators and teachers want to lead field expeditions onto public lands, they face the labyrinth of the permitting process. Some national forests and blm offices require any paid professional, including teachers, to have a commercial permit to lead a trip on that public land. This lumps teachers in with guide services and mineral extraction companies. In some cases, there is no way to acquire a permit for an educational trip to a national forest. Some forest service and blm offices require an educational permit that takes more than six months to acquire while other offices only ask for the same wilderness permits that all users must get. This patchwork of permitting requirements makes it difficult to know where to go when choosing a destination. There should be a unified and simplified permitting process that would allow legitimate schools and universities to have access to the public lands in order to use the great outdoor classrooms of this country. Low impact backcountry travel, river-trips and day hikes should be allowed with far less permitting hassle to get our 'nature deficit' youth out in the great outdoors.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

3 million heritage tourists a year visit Gettysburg National Military Park. These tourists value our diverse, small town, rural and historic environment. But the casino industry is targeting a site just 1/2 mile from hallowed ground, just outside the boundary of the military park, right on the nationally designated Journey Through Hallowed Ground. We have no protection locally. The decision will be made by the PA Gaming control Board. The proposal (the 2nd one in 5 years) is ripping our community apart and if licensed will change our culture. There are hundreds of casinos...there is only one Gettysburg. Could there be a buffer? Federal zoning? Save Gettysburg. [www.nocasinoggettysburg.org](http://www.nocasinoggettysburg.org)

Gee, I think we have wilderness for those people who don't want to hear the "music of roaring engines". Every time we have a govt initiative to help in the forest, the motorized community lose trails. So if you don't like to share than help vote for more managed trails so there is no conflict between user groups. Everyone has a hobby and needs to get away and get their head cleared, we all do it in different ways. There's more land out there that there's no need to constantly shut down trails and what not, manage it for a change and we can ALL use the forest.

Gettysburg commemorates 51,000 casualties in 3 days fighting in 1863. Gettysburg is the reason we are a Union today. Now investors want the Pa Gaming Control Board to license a casino just 1/2 mile from the Gettysburg National Military Park. There is no federal buffer zone to protect the GNMP and nearby Eisenhower National Historic site from this inappropriate development. Please save our most hallowed ground with a federal buffer zone of at least 6 miles from adults-only businesses that would change the educational and meaningful context of the Park. See { <a href="http://nocasinoggettysburg.org" rel="nofollow" target="\_blank">Link</a> }

I live within sight of two major wind farms. The agricultural fields they sit on are crisscrossed with roads to service the towers. This is definitely NOT something you would want in a nature preserve!

It's hard to imagine why anyone would demote this idea. Invasive, exotic species of plants and animals are costing us a fortune to manage. Regional education about invasives would be a good place to start.

The Wildlands Project, which is now called Wildlands Network, has always been about reconnecting habitat, not excluding people. It was victimized in the past by the "wise use" crowd who used bogus websites and bogus maps to advance conspiracy theories. The conservation biology approaches that Reed Noss helped promote have become mainstream. Basic concepts like cores, buffers, and corridors appear in the green infrastructure plans that many cities are developing.

Land trusts have been cautioned to not accept conservation easements if they feel the owners' appraisals are excessive. The IRS is reacting to a flurry of abuses that occurred in the past. It's a tough situation for all parties.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Most counties have local planning boards with local citizens serving to view land planning issues. Perhaps this board could assist in promotion of multiple use of the forest through a 9 person subcommittee made up of local retired: wildlife manager, USFS manager, State forest manager, large landowner stakeholder, and 5 members at large from the county involved. This 9 person subcommittee could be the sounding board for various local recreational groups to submit their plan/trail request for developing "their" recreational interest. For example the local OHV group could submit a "plan" for a new OHV trail through the forest area which would be reviewed by the subcommittee for preliminary approval or modification. As the "plan" gains support and approval of the committee it could then be submitted through the local planning board for coordination with the government agency affected. Retired board members may be free of retribution by an employer and time to commit as volunteers. Trails could then be adopted by the users, which would require monitoring, maintainance and policing.

Mountaintop removal is perhaps the greatest threat to America's outdoors that exists. A radical form of coal mining adopted by profit-hungry coal companies, entire mountains are literally blown up, and the debris dumped into valleys. Mountaintop removal is devastating hundreds of square miles of Appalachia; polluting the headwaters of rivers that provide drinking water to millions of Americans; and forever destroying our natural and cultural heritage. Not only that, burning coal contributes to global warming, which is already having devastating consequences, and could make much of the planet uninhabitable. We must put future generations ahead of coal company profits, and stop this practice immediately.

Our kids' shortcomings at outdoor play and natural history awareness are becoming well recognized and are reflected by many AGO ideas about these subjects. It's a good bet that our goverment is listening.

Protecting working lands and ranches from development doesn't always provide strong public benefits. The protection should serve important conservation purposes, for instance to save high-quality natural characteristics or to buffer existing conservation lands. I don't think it matters whether some or all of the debts are federally held; and I don't think the agencies that hold the debts may always be qualified to say what lands are worth protecting or to actually monitor the conservation easements in perpetuity. For me, the bottom line is that while things like cash payments, tax deductions and debt reductions help to motivate landowners, we already have in this country an effective network of federal, state and non-profit organizations leveraging these and other methods while making good conservation decisions.

Rosalyn, the distinction you made between collecting for personal use and commercial collecting is an important one. It often appears in conjunction with activities in other parts of the country, like mushroom collecting and fishing. I have voted to promote your idea. The one thing where I might disagree just a little relates to your concern about Lewis and Clark. Most of us who have invoked their view of the West do so because their visit was the beginning of the end to the West's widespread biological diversity and its mostly-sustainable Native American life styles. By the way, being a small part Choctaw, I sympathize with you.

## Discussion Question 2

***(cont.)***

Savory's method leans a little too heavily on increasing cattle grazing for my tastes. It's arguably a source of our grasslands' problems more than a source of solutions.

The BLM should be run by people who are motivated to protect, restore and connect their land's diverse ecosystems.

Very well said, Kristen. I agree with you completely. It could be argued that our President's personal background leads him to think of the environment as a balance between economics and social justice, more so than as an issue of Nature for Nature's sake (ex. endangered species). Our Secretary of Interior has a ranching background that may make him sympathetic to protecting the outdoors from harsher forms of resource extraction (ex. mining). However, ranchers are not always sympathetic to wildlife and wilderness. Clearly, we are much better off, administratively, than we were two years ago; so I don't want to be critical. Still, as a country, we can and should do much better than we currently do at protecting our natural heritage.

You are so right. Our nation is decades past the time when it should be encouraging and subsidizing the development and destruction of its own outdoors.

You pose a good question. There are seven designated Forest Legacy areas in my state, and land trusts have encountered the same limitation. It doesn't make sense since land trusts are reliable long-term holders of conservation lands and interests.

Your idea provides a good summary of the kinds of actions that are needed to address this serious problem. This issue is part of the Federal Biodiversity Protection idea that I suggested a few days ago. Because exotics exist across state lines, federal coordination makes lots of sense. Thanks a lot!

While it's unfortunate that so many of our most significant and cherished battlefields are so close to current population centers, we need to prove that our heritage really is important to us as a people.

Overlanding and ATV's do have a large part in this argument. When following the tread lightly guidelines offroading can be enjoyed with minimal effect on the environment. The way that BLM has managed their areas in my opinion is probably the best for every one. Every one is entitled to have access to public lands as long as they do so responsibly. A hiker who is careless with a camp fire can do far more damage than an ATV who is riding responsibly. Instead of restricting the access we should do more to educate the users in how to use the land with out ruining it.

## Discussion Question 2

***(cont.)***

Backcountry areas constitute roughly one-third of all National Forest System lands, or approximately 60 million acres. Although backcountry areas comprise only two percent of the land base in the continental United States, they are found within 661 of the over 2,000 major watersheds in the nation and provide many enduring social and ecological benefits. As the nation's population grows, native forestlands, grasslands and shrublands and other open space continue to be converted to urban and agricultural uses. Between 1992 and 1997, almost 10 million acres of forests, wetlands and other open space were converted to more urban uses. This is an increase from the 7 million acres of forestland and other open space converted to other uses between 1987 and 1992, despite the fact that the population growth rate remained fairly constant from 1987 to 1997. In an increasingly developed landscape, large un-fragmented tracts of land become more important. Backcountry areas provide clean drinking water and large, relatively undisturbed landscapes that are important to fish and wildlife species and their habitat needs. Backcountry areas provide opportunities for dispersed outdoor recreation and biological strongholds for populations of threatened and endangered species. They also provide reference areas for study and research and serve as bulwarks against the spread of non-native invasive species that can displace native fish and wildlife. The following values or features often characterize backcountry areas:

- High quality or relatively undisturbed ecosystems, soil, water, and air. These three key resources are the foundation upon which other resource values and outputs depend. Undisturbed watersheds catch, store, and safely release water over time; protect downstream communities from flooding; provide clean water for domestic, agricultural and industrial uses; help maintain fish and wildlife populations; and are the basis for many forms of outdoor recreation, education and renewal.
- Sources of public water supplies. National Forest System lands contain watersheds that are important sources of clean water for industrial, agricultural and domestic uses. For example, backcountry areas within the National Forest System contain all or portions of 354 municipal watersheds contributing drinking water to millions of citizens. Maintaining these areas in a relatively undisturbed condition saves downstream communities millions of dollars in water filtration costs. Careful management of these watersheds is crucial in maintaining the flow and affordability of clean water to a growing population.
- Diversity of plant and animal communities. Backcountry areas serve as a bulwark against the spread of nonnative invasive species. Backcountry areas are more likely than roaded areas to support abundant populations of selected fish and wildlife. For example:
  - o In the Interior Columbia River Basin, 60 percent of the best remaining trout and salmon habitat are within backcountry areas or areas with low road densities.
  - o 85 percent of the healthiest populations of all western cutthroat trout species occur in wilderness and backcountry areas.
- Habitat for threatened, endangered, proposed, candidate, and sensitive species and for those species dependent on large, undisturbed areas of land. Backcountry areas function as biological strongholds and refuges for many species. In the northern Rocky Mountains, for example, backcountry areas provide core habitat areas, travel corridors and habitat connectivity for grizzly bear, mountain lion, and elk. Of the nation's species currently listed as threatened, endangered, or proposed for listing under the Endangered Species Act, approximately 25% of animal species and 13% of plant species are likely to have habitat within backcountry areas on National Forest System lands. Backcountry areas support a diversity of aquatic habitats and communities, providing or affecting habitat for more than 280 threatened, endangered, proposed, and

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

sensitive species. More than 65% of all Forest Service sensitive species are directly or indirectly affected by backcountry areas. This percentage is composed of birds (82%), amphibians (84%), mammals (81%), plants (72%), fish (56%), reptiles (49%), and invertebrates (36%).

- Semi-Primitive, non-motorized dispersed recreation. Backcountry areas often provide outstanding dispersed recreation opportunities such as hunting, fishing, hiking, camping, picnicking, wildlife viewing, cross-country skiing, horseback riding, mountain bike riding, and canoeing. While they may have many wilderness-like attributes, unlike wilderness the use of mountain bikes and other means of mechanized non-motorized travel often are allowed. These areas also can take pressure off heavily used wilderness areas by providing solitude and quiet, and dispersed recreation opportunities. Backcountry areas offer some isolation from the sights and sounds of human activity and an environment with challenge and risk, necessitating some level of outdoor skill.
- Reference landscapes. Reference landscapes of relatively undisturbed areas serve as a barometer to measure the effects of development on other parts of the land. The body of knowledge about the effects of management activities over long periods of time and on large landscapes is very limited.
- Natural appearing landscapes with high scenic quality. High quality scenery, especially scenery with natural-appearing landscapes, is a primary reason that people choose to recreate. In addition, quality scenery contributes directly to real estate values in nearby communities and residential areas. A National Approach to Backcountry Conservation A national approach is needed to protect against cumulative, incremental loss of values and characteristics of backcountry areas. Backcountry areas contain traditional cultural properties and sacred sites. Traditional cultural properties are places, sites, structures, art, or objects that have played an important role in the cultural history of a group. Sacred sites are places that have special religious significance to a group. Traditional cultural properties and sacred sites may be eligible for protection under the National Historic Preservation Act. However, many of them have not yet been assessed, especially those that occur in more remote backcountry areas. Backcountry areas may offer other locally identified unique characteristics and values. Examples include uncommon geological formations, which are valued for their scientific and scenic qualities, or unique wetland complexes. Unique social, cultural, or historical characteristics also may depend on the backcountry character of the landscape. Examples include ceremonial sites, places for local events, areas prized for collection of forest products, or exceptional hunting and fishing opportunities. The Forest Service is responsible for balancing national interest with local needs. The local forest planning process does not always recognize the national significance of backcountry areas and the important national values they possess in our increasingly developed landscape. Left to a case-by-case decision-making process without effective guidance and constraints, management decisions could lead to an incremental loss of backcountry areas through new road construction, commercial timber harvest and mineral extraction, and irresponsible or unauthorized off-road vehicle use. Taken together, the cumulative national loss of backcountry area values and characteristics could be significant. On many National Forests and National Grasslands, backcountry area management has been a major point of conflict in land management planning, adding to what the Forest Service describes as “process gridlock.” This controversy continues unabated in connection with proposals to harvest timber, build roads, develop energy resources, or otherwise develop backcountry areas. The large number of appeals and lawsuits, and the extensive amount of congressional debate over the last 25 years,

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

demonstrate the need for national direction to protect backcountry areas and their values and characteristics. Backcountry areas are national resources that merit a national conservation management policy. Within that policy, it is equally important to provide for the consideration of local priorities and local input to decision making, as well as to recognize variability among backcountry areas and between regions of the country. Values of Backcountry Areas Important to American Citizens Secure Habitat for Native Big Game Species-- National forest backcountry areas provide large blocks of exceptional habitat for big-game animals such as mule deer, elk, moose, bear, bighorn sheep and mountain goats. While some roads are important for enabling access to these federal public lands, too many roads and associated motorized traffic are associated with increased big-game vulnerability and fewer mature bucks and bulls, often resulting in shorter hunting seasons and fewer available tags. Productive Waters for Trout, Steelhead and Salmon-- Backcountry areas offer intact waterways where trout, steelhead, and salmon – dependent on clean water, stable streamflows and consistent lake levels – can thrive. Backcountry areas also are strongholds for some of the last remaining native fish populations, providing unique opportunities for anglers to fish for native trout such as Westslope cutthroat, Rio Grande cutthroat, Bonneville cutthroat and redband rainbow. Motorized traffic on roads can increase sediment loads into waterways and decrease the quality of spawning habitat. Opportunities for Solitude in Primitive and Semi-Primitive Settings Backcountry areas offer non-motorized “primitive” and “semi-primitive” recreation opportunities where sportsmen can escape the noise and commotion of urbanized society. These areas are important not only to sportsmen who hunt and fish deep in the backcountry: high-quality hunting and fishing can be found by sportsmen who stay close to their vehicles, as many backcountry areas provide easy access via adjacent roads and trailheads. Contributors to Strong and Diverse Economies-- Fishing and hunting annually contribute more than \$190 billion to our nation’s economy. Conscientious backcountry management can maintain strong economic engines in rural communities and continue to supply stable jobs associated with hunting, fishing and other outdoor recreation. Businesses that provide services and products to sportsmen – everything from guide and outfitter services to sporting goods stores, motels, grocery stores and gas stations – are the lifeblood of many rural communities. These businesses depend on responsible backcountry management. Barriers Against the Spread of Noxious Weeds-- Invasive weeds such as spotted knapweed, yellow starthistle and cheatgrass choke out native forbs and bunchgrasses, altering water runoff and the historic frequency of wildfires – and can increase erosion and sediment loading into waterways while reducing the amount of food and available cover for wildlife. Backcountry areas are bastions for native flora, and these lands exhibit significantly fewer problems with invasive weeds compared to areas with roads. Conserving backcountry areas helps maintain native plant structures and high-quality fish and wildlife habitat and, indirectly, benefit sportsmen and hunting and fishing opportunities on federal public lands. Reference Landscapes-- Landscapes of relatively undisturbed areas, such as backcountry, serve as a barometer for scientists when measuring the effects of development on other areas. Many backcountry areas look much as they did when Lewis and Clark first crossed the Great Divide more than 200 years ago. The backcountry’s largely natural state provides baseline data to help land managers maintain and restore our federal public lands to maximize their benefit to fish and wildlife and the public. The Proposed Backcountry Area Conservation Program • Propose to the

U.S. Congress that they establish a national 'Backcountry Area Conservation Program' (Program) under which the Chief of the Forest Service would designate, protect and maintain up to 60-million acres of land within the National Forest System as Backcountry Conservation Areas. • When designating backcountry areas under the Program, the Chief of the Forest Service should consider giving priority to areas that—

- o are identified on an official 'backcountry area map' of the Forest Service;
- o contain at least 5,000 (five-thousand) contiguous acres of National Forest System land;
- o have no existing classified, temporary or unclassified roads;
- o protect healthy watersheds;
- o reduce damaging greenhouse gases;
- o protect fish and wildlife populations that are sensitive to human disturbances;
- o protect biological strongholds and refugia for imperiled fish, wildlife and plants; and
- o conserve native biodiversity; and protect crucial wildlife corridors.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Limited access to federal public land often has frustrated and disappointed hunters, anglers, and other naturalists and undermined the relationship between land owners and the general public. Some landowners are reluctant to provide access across their land to isolated parcels of federal public land through agreements with the federal government because those agreements invariably require perpetual access. State and tribal governments frequently secure access on or across private land through short-term agreements, contracts, leases or easements, and are not required in all cases to secure only perpetual access arrangements with private landowners. The Recreational Trails Program provides funds to the states to develop and maintain recreational trails and trail-related facilities for both non-motorized and motorized recreational trail uses. The authorized funding level for the program for FY 2009 under SAFETEA-LU is \$85 million. Establish a voluntary federal public-land-access (Open Trails) program under which States and tribal governments may apply for federal grants to encourage owners and operators of privately-held land to voluntarily make a portion of that land available for access by the public to federal public lands for non-commercial wildlife-dependent recreation that shall include but is not limited to non-commercial hunting and or fishing, under programs administered by the States and tribal governments. Current law provides funding for the development and maintenance of trails that are used by anglers, hunters, wildlife viewers, and hikers annually. However, millions of acres of Federal public land remain either inaccessible or severely limited in public access opportunities. I believe the Recreational Trails Program should be strengthened by opening trails to sportsmen to address these needs in the following ways: Open Trails • Establish a voluntary Federal “Open Trails Access Program” under which states, tribal governments, and conservation organizations may apply for grants to encourage owners and operators of privately-held land to voluntarily open trails for access by the public to Federal public lands that is either inaccessible or severely limited in public access opportunities for non-commercial wildlife-dependent recreation that includes hunting and or fishing under programs administered by a Federal agency, state, tribal government, or conservation organization. • The Recreation Trails Program (within the Federal Surface Transportation Bill, SAFETEA-LU) in general, and the “Open Trails Access Program” more specifically, should allow states, tribal governments, and conservation organizations to enter into property leases to open trails to enhance non-commercial public access to isolated parcels of Federal public lands. • I propose that the Federal agency responsible for administering the “Open Trails Access Program”, should give priority to those applications that propose to: o maximize participation by offering a program the terms of which are likely to meet with widespread acceptance among private landowners; o ensure that private land enrolled under the Federal, state, tribal government, or conservation organization program provides open trails access to Federal public land that supports fish and/or wildlife populations and that provides or can be made to provide regulated, non-commercial hunting and fishing opportunities to the public; o ensure that any access secured across private land (road, trail, etc.) through the program is maintained at a standard necessary to protect adjacent private and public property and public safety; o strengthen wildlife and fish habitat improvement efforts on Federal public land accessed by the program; and o use additional Federal, state, tribal government, or private resources in carrying out the program. • The Transportation Bill should establish that the use of funding through the existing Recreation Trails Program generally, and the “Open Trails Access Program” more specifically, will allow Federal agencies, states, tribal governments, and

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

conservation organizations to enter into property leases to enhance non-commercial public access through open trails to isolated parcels of Federal public lands as a permissible use of funding. • I believe \$110 million should be dedicated annually to the Recreational Trails Program of which a minimum of \$20 million will be allocated to the "Open Trails Access Program" in order to begin implementing the program with Federal, state, tribal, conservation organizations, and landowner partners.

Seeing the Milky Way should be part of the experience in all of the Federal Class 1 Areas in our National Parks. There is no benefit to anyone to throw artificial light into the sky in National Parks. It not only pollutes, but also represents wasted electrical energy. Compared to the many difficult environmental problems involving air, water and habitat, this one is simple and easy to solve: (1) Light only where and when light is essential (2) Follow good lighting practices involving shielding and operating hours (3) Use efficient light sources of appropriate output. A light switch is a powerful tool in this effort. As an IDA member and lighting designer, I am happy to support Robert Wagner's Best Practices Proposal.

The proposed Open Trails Access Program would provide access to federal public land that has no public access. Most of the time these public lands are surrounded by private land on all sides and the public can get to them only if the private landowner allows access. This situation gives the private landowner exclusive access to our federal lands, and if that landowner is willing to provide some sort of access that is negotiated with the states or some other entity so that the citizens have some access to their land, then that is good for all of us.

everyone in the country has a given right to share the government occupied land. there should be designated areas for all. for those who do not do any type of off roading with a motorized vehicle should try it. each has a personal fun purpose. I have done all. i believe there are less OHV areas than any other group. Here in V.A. we have farmers willing to lease areas of land for riding so kids do not ride through there crops. unfortunately locals do not want it. the same people who never set foot on a off road vehicle let alone even cut there grass. The off road vehicle population brings in millions of dollars and builds up the working population. Hatfield Mccoy trail system is a great example. brings in tax money and keeps local communities working by creating new jobs. not for nothing but hikers and bicyclists do not bring in the revinue that the motorized ones do. im all for helping out the mom and pop shops ready to go out, and build up the acconomy in struggling towns that could offer great off roading.

Get the kids out of doors! Feel the earth & see the sky!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I like your idea. The problem is that the National Forest Service has shown it's propensity to close the areas in which you refer. Just last year (or was it two years ago now?) the Eldorado National Forest closed over 1,000 miles of roads and trails that were built to service the loggers and were still used by OHV'ers and others. Why? Many of the other National Forests are closing whole tracts of roads and trails that are still in use under their new "travel management plan." The real name should be the "travel prevention plan", since as far as I can tell, that is what they're planning and implementing. I went to a couple of the "travel management plan" town hall meetings. 99% of the people present were from the OHV crowd. That either means the other "interest groups" weren't interested or they didn't care as far as I'm concerned. Many good ideas were proposed, including volunteer trail maintenance programs run by the OHV clubs, FREE grading services by persons who owned and operated graders in the area and a whole slew of other useful suggestions. Pretty much it was a room full of people who were willing to do what it takes to keep the existing roads and trails open. Everything said in those rooms was completely ignored by the Forest Service Administration when the final plan came out. 1 for 1 will work. It will force those who want to close recreational sites forever to choose wisely as they will also be forced to give up like tracts of land elsewhere forever.

Hi Rebecca, Back with the same argument you've posted in many of these threads now? You have yet to provide any interesting or meaningful comments besides the same few "my way or the hi-way" spatterings of hatred toward OHV users. 1 for 1 would balance the extreme restriction of motorized vehicles from wilderness areas (many which are designated in places that OHVs are already present) by giving them someplace to go when they are shut out of the areas they are already using. This benefits you, Rebecca, in a few ways: 1. You get to continue to designate wilderness in areas that are deemed worthwhile to protect. 2. By giving the OHV user a place to go, you relieve the pressure placed on other unapproved areas to ride, as well as in the wilderness recently closed to said OHV user. 3. You can go to the wilderness, and the OHV rider can go to the OHV area. Everybody is happy.

I organized and was the first president of the Cradel of Texas Chapter (Brazoria County). We began our first class of 20 students on September 12, 2001 the day after the attack on the World Trade Center. We decided to not let the terrorists stop our class. The COT Chapter has grown and is one of the most active providing education to children and the public about the value of the Texas Wetlands. I recently moved to the Hill Country where I joined the local chapter here. Again I saw how people want to learn through excellent trainers about nature so they can go out into the public to share their knowledge. I recently received my 5000 hour TMN volunteer pin and a Presidentail Citation for volunteering. I currently serve as a member of the State Committee and have had the pleasure to see so many new chapters join and watch the older one still growing.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Rebecca, I have ridden my dual-sport motorcycle from Oregon to Alaska without straying from the road or trail. I have also ridden it from California to Utah, again staying on roads and trail. I have ridden many more thousands of miles in the National Forests in the west, all shared by bicyclists, hikers, equestrian, and cattle ranchers. I assure you, the desire to cut new trails is not there. There are plenty of roads and trails already existing, to satisfy the riding population. The problem arises when each individual Forest Supervisor reads the new rules differently, and close a thousand miles of roads in their jurisdiction- roads that were used regularly until the day of the closure- in the name of, well, they never really tell you exactly why. They just close them. Now all those people who used that part of the forest are forced into an ever smaller area, creating congestion, noise pollution, and a lack of diversified trails. The OHV crowd isn't looking to make the forest an OHV Park (what you refer to as biker parks), they just want to be able to access the roads already in place, built by or with the permission of the Forest Service and BLM, and in some cases the NPS. And yes, just like there is wilderness where all things motorized are off limits, there should be designated areas where OHV's can do their thing as well.

This really is a no-brainer. Preserved historic sites and battlefields not only provide a history lesson for everyone (something sadly lacking, especially in our schools these days) but also open spaces which provide healthful recreation, wildlife habitat, help the environment and may continue to be beneficial in terms of agricultural use and resources (food crops, livestock pasturage, etc.). There are plenty of places to build our malls, homes and so forth but once a historic site is plowed under, it's gone forever. Support the CWPT and its efforts to preserve our mutual American heritage. It is absolutely one of the best and most effective non-profit organizations in the country. Been a member since the days of the APCWS.

" .....everyone knows motorized vehicles are incredibly destructive on the land...." Patently untrue. Yes there are irresponsible people in the OHV ranks. However the majority of us love the outdoors, the scenic beauty, and have great respect for these places. OHV's allow us to cover much more ground, and see places that are very difficult to get to by any other means. "damage" caused by OHV's is highly exaggerated. Try to find an OHV trail that was closed 3 or more years ago. You can't, they are overtaken by nature, like it never existed. Where is the damage? How do you define it? What was harmed? Are there not much more serious environmental issues to fight?

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

"I think the biggest problem with OHV's is their ability to quickly destroy things when the people at the controls are not aware of problems they are creating." "Damage" caused by OHV is highly exaggerated. One only need to look at old OHV trails that have been closed. After a year or two has passed, those trails are overtaken by nature and essentially disappear. So how do you define damage? Roads cut by bulldozer create far more "damage", yet there are no complaints about them. I enjoy hiking as well as OHV'ing, and like other have said there are millions of acres, and thousands of miles of trail where Mt. bikes and OHV's are off limits. In fact I'd guess that 98% of all public lands allow hiking, and ban OHV's. Please hike in those areas, that's what I do. Leave the 2% to us, if you feel generous give us say 5%, and keep 95% to yourselves. What we need are areas that are designated as Mt. bike ONLY, and OHV only. There is plenty of room for everyone. OHV'ers are willing to allow trails that we have built to be used by everyone. People on the other side of the issue are much less generous.

Fracking with salt water is purported as "common". However, others are using "proprietary" chemicals they will not disclose because they are "trade secrets". Seems a bit too convenient to me. Place unconditional priorities on gas supplies over fresh water supplies is STUPID and very poor long term thinking. Regulating the producers and full disclosure is a necessary FIRST step. Using WATER instead of chemicals for the extraction process would be far less toxic BUT still cause lateral movements of gas and affect peoples well water. The US fixed acid rain in the '70's, we can fix this too.

Stop FRACKING for Natural Gas.

Instead of picking on OHV's and their high maintenance trails, why don't we work together to try and get more multi use parks. Any trail that removes vegetation from the ground will cause erosion. I was a high adventure director at a summer camp on the East Spanish Peak in Colorado. The trails there are foot traffic only and we were constantly fighting a battle to maintain them because of running water. The problem with OHV trails is they generally get over used, under maintained, and the users are uneducated about how they ride or drive on public lands. If more trails were opened there could be a system of revolving trails, one closed one opened, to ease the strain per trail. If we required so many hours of volunteer work for your use of a public trail, all trails not just OHV's, people would see how much work goes into keeping any trail open plus under maintained trails would finally be worked on. We also need to inform people on how to use public trails. If it's super muddy, don't use it! There are places that you can go play in the mud, public trails should not be one of them. Also there is a time and a place for racing, it's on a race track, smooth riding (including mountain bikes) or driving without wheel spin or locking the brakes will cause much less trail wear and tear.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Wildlife Corridors are essential to populations of wildlife that have been inbreeding for the last half century. As a OHV user I don't like the idea of more land closing off, but I do see the need for multi national wildlife corridors from South America all the way to Canada to help bring in new genes to previously closed off wildlife populations. I would propose instead of wilderness areas in between them that we open more multi use parks with some area inside them to be designated as a wildlife area so they can freely move between the corridors.

Why not learn how to walk or bike? Considering how fat US citizens are, solve two problems at once. Loose weight and preserve our natural resources.

How can you not support this. This is a major part of the story of our nation, yet we have people and companies that would like to build casinos and other disgusting development ideas on some of our most hallowed ground. As congested as much of Europe is they do hold some things sacred and you will find large tracts of the D-Day beaches untouched, Battle of Somme still filled with untouched trenches and nearly 95 % of the Waterloo battlefield left as it was on the last day of that world changing battle. We as a nation have far more land that isn't hallowed ground that can be developed, yet we still look at this "prime real estate" and our politicians buckle to those that finance their campaigns and allow things such as the proposed casino in Gettysburg to happen.

Public land means all Americans should have access and share the trails no matter the mode of transportation you choose.

The proposed casino will be built on the battleground ! The site of the casino is on privately held battlefield land that is known as the Cavalry Fields. This is the location of one of the largest cavalry engagements of the war. General George Custer and General Jeb Stuart clashed here on July 3rd, 1863. General Custer's actions that day helped seal the victory for the Union forces at Gettysburg. This is Hallowed ground where far to many of our Northern and Southern sons paid the last full measure for their cause. Sure this casino will bring in jobs...low paying jobs. It will also bring in crime and everything else that comes with the seedy side of the gaming business. This battlefield and the area surrounding it is the site of one of the most important events in the history of this country and casino has no business scaring that memory. The people proposing this endeavor are trying to profit off the history of this site, yet they could give 2 cents for the history of the site. DISGUSTING, SAD and HEARTBREAKING.

Why is it the only groups Ive ever seen doing trail mntc is the OHV community, oh ya and by the way we are also the only group that PAYS to use the trails. So we pay for the privilage of using the public land and it is slowly being taken away from us, how about the greenies and tree huggers pay for the use of the wilderness area and see if it gets taken away, then you can wine about needing more wilderness area. No more wilderness area.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Now you need to come down from 15,000 ft and take a close look on the ground, and see how well it is taken care of, producing for both man and beast. The term public lands is used loosely. These ranchers have private grazing allotments on these lands. I believe you can go back to the Taylor grazing act, where these private allotments were allotted. These allotments are attached to the ranchers private deeded property. The ranchers need to and do take care of the land to sustain a living for now and for future generations. Before you come down, take look of LA, Chicago, NY, DC and other cities, where you will see nothing but buildings and pavement, totally absent of wild habitat.

Be careful restricting outdoor activities that American families enjoy. When it's too far away, then kids will prefer sticking their faces into a phone-screen. For the future of the USA, we need kids to be active, know about outdoors, and enjoy the outdoors. The forest can survive hunting and fishing, biking and hiking, OHVs , campers and horses. Closing lands to the public will cause much larger problems for the next generation, because when the parents are shut out, a whole generation of kids won't know anything about the outdoors.

Can't see any real advantage to anything with wild buffalo. Where have buffalo improved anything? There is no natural predator of buffalo. What is going to stop the spread of disease or of the animals themselves. When they wander in unwanted areas such as urban development, how will they be removed?

Connecting kids to the outdoors and wildlife is critical to get them interested in the outdoors, especially those in metropolitan areas where suburban development makes "traditional" outdoor experiences more distant. Schools are part of the solution, but funding will never be sufficient. In many cities zoos, aquariums, botanic gardens, nature centers and others specialize in making such connections and also conduct informal and experiential education programs. Many of these programs are in partnership with local school systems and are focused on students and teachers in underserved communities. Funding for existing programs supporting such activities should be increased and federal agencies should seek to partner with zoos, aquariums and other informal education providers.

I am all for education, but it depends on the source and it needs to be all encompassing. So many of these educational programs are politically driven, it is agenda driven. It sounds good on the surface, the devil is in the details. I think a good environmental program should start and look at what these kids are doing now and how they are affecting their environment. Every time they turn on their computer, video game, tv, and buying all these things, they are supporting the destruction of land. These companies use tremendous amounts of energy and these factories and stores are built on land that was once occupied by wildlife. These education agendas fail to mention all of this. They just talk about saving land far far away from where they live. The wilderness was once right under their feet. Each new house, each new shopping mall, each new car dealership destroys the land. Not only that but it reduces the nations capabilities to provide the food and fibre they need to live on.

I have never seen a foot trail converted to OHV use. I have seen thousands of miles of OHV trails closed to OHV use and limited to foot traffic only.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I think this is a much better idea than wasting funds trying to save lands that don't need saved hundreds of miles from the populations and development. People need to have land preserved close to where they live so they can enjoy them on a daily basis if they wish. This would also help control urban sprawl. Good idea

In the last 25 years over 23 millions acres of agriculture land have been lost to development. Over 13 million acres were of prime agriculture land. As more acres are lost to development, agriculture producers are asked to produce more and more for an ever growing population. At the same time budgets are continually being cut at land grant universities across the nation. The agriculture departments face budget cuts much deeper than other non-agriculture departments. Serious education and research is needed for agriculture and the general public on this issue. Where will the food and fibre for the nation come from if this trend continues? By far, today's education on agriculture is formed by anti-agricultural environmental groups, in return, agriculture research budgets are cut. Whether the removal of agriculture by development or by "Land preservation" efforts, food production is taking a turn in a direction nobody wants. Food may someday be more valuable than oil. Agriculture and nature does and can co-exist.

Incentives are not needed to grow organic foods, if the market is there for organic foods the farmers will grow it. If there is not much demand, farmers will not grow it. Don't put up false markets. The comment that farmers are bullied by large corporations is just not true especially in the case of Monsanto. I can't say I have ever used a Monsanto product. I have never felt pressure from them. I do know that they have some tough regulations in the use of the products. If you misuse the products, they will come after you. The farmers that didn't not follow the regulations are the ones calling foul on Monsanto. I believe they are the ones trying to make Monsanto look bad because they did not follow regulations. Which they agreed to when they bought. It was by choice not forced upon them. The comment that meat consumption is bad is a total scarce tactic. There is a lot of research into the benefits of meat. It is NOT a leading cause of diabetes, heart disease and cancer. Unfounded ideas and comments like this one, leads to more regulation and more problems. Nobody cares more for the environment then those in agriculture, a minority of the population. That's what the vast majority fails to recognize.

It is very nice there. All thanks to the agriculture producers who have cared for the land. It doesn't need any special preservation. Just wait until hundreds of thousands of buffalo make their way down to the river. That's when it will need preserving. I was just south of there in Billings, MT recently and I was amazed how people have destroyed the Yellowstone valley there. The new Cabella store and Sam's club and continued expansion of residential areas have destroyed hundreds of acres. Not to mention the airport that you probably flew in on. Not long ago I was in Charolette, NC it was quite disturbing there also. The list can go on and on. Why are you concerned about preserving it to the way it was just 200 years ago. Why not preserve it back to the way it was 10,000 yrs ago or even further back?

## Discussion Question 2

### *Written & Online Comments*

*(cont.)*

it seems to me that the vast majority of opposition to ohv by environmentalist groups is generated by irresponsible ohv recreation. while there are 'good' and 'bad' operators of all ohv types, the most entry-level freindly types of ohv attract the inexperienced, immature, irresponsible people. atvs, (quads, 4 wheelers) are not well suited to a challenging, low-impact, narrow trail system, and therefore their use becomes doing donuts in the mud, or making wide bypass trails around obstacles. 4x4 trucks are the same, only accessible to a far greater number of people who do not have any interest in preserving what little ohv access is still available. in the ohv world, many dirt bike riders are seen as being 'elitist' and this is why. we dirtbikers are environmental enthusiasts and dispise being grouped with those who do the damage that offends everyone but the offenders. single track motorcycle trials cause very little disturbance to the environment, and can co-exist with animal, hiking, bicycle, equestrian and other trails without the negative effects of other ohv types. please consider setting aside sepeate areas for different types of ohv use and allow the results to speak for themselves.

I think \_\_\_'s statement is accurate and well thought out. If the Spotted Owl Scam had not been perpetrated upon the private industry and residents of the west we would not have the need for this conversation. How is \_\_\_'s statement going to "...destroy what little (nature) is left"? I believe your environmental fascism is showing!

Much of the public, their jobs and their investments are the one destroying the land with constant development. Yet they fail to do anything about it. They are only focused on saving public land. Much of which is already saved and since its public it can't be destroyed. Look at what you have and what you continue to support with your purchases and investments. You are your own worst enemy. You state 6,000 acres are lost per day. Do something about it. If you are serious about this loss, you would ask for an wilderness area perimeter around every city in the United States. But don't stop there, check you investments and see what you are destroying overseas by investing in those companies.

One cannot forget these hypocrites like the Wal-Marts, the Board of Directors of Wildlife Funds, and even donors whose own businesses and investments destroy land with development, but then they think it is OK as long as they "save" land that is already preserved. If they are really want to preserve land they would change how they develop themselves. If they develop commercial property, then they should save another like kind commerical property.

Please clarify your idea, with the title "Funding Public conservation." What would you actually fund with the collection of these fees? If it is used to buy privately owned undeveloped land, then I would oppose. But I may support this if it was used to revert "like kind" property back to undeveloped land. Example: if new development is planned commerical property, then funding should be used to take some other commerical property and put it back to its natural state. It would also need to be nearby, not in some other state.

Poor idea. Why would wildlife need to be regrown? Why would plants need to be replanted? The wildlife is flourishing right now. The plants are in very good condition and well taken care of now.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Some of the "monsanato" thing has been blown out of porportion. A person need to go back and do more research to find out what put us in this situation. Much leads us right back to much pressure by envirnomental groups forcing new government regulations on agriculture, such as tillage as bad and led to more erosion. This forced the use of more chemicals. At the same time govermental spending cuts for agriculture research such as that of Montana State University, a land grant university. When the funding is cut to these land grant universities, who does agriculture turn to? Private companies such as Monsanto. Funding to Montana State Agriculture is always subjected to large budget cuts while other departments see an increase. Agriculture people care about the land and are much better at it then the governement will every be.

Sounds good on the surface, but I believe you would mostly encourage hyprocrites to donate. In some situations you would just create playgrounds for the rich. It is amazing how many people invest in companies, including their 401K, that are constanly expanding and developing on undeveloped land. If only these land trusts and the nature conservancy types would protected the land from commerical development and all that pavement and concrete. Instead they try to save land nowhere near where they make their money. They invest and work in development, but then forgive themselves by saving land that they can't make money on.

The University of California has long had an extensive Natural Reserve System, thousands of acres in areas of critical habitat. These reserves are used for college education, research, and recreation. The Federal Government should encourage all colleges and universities to do the same, perhaps by making the existence of such reserves a positive factor in allocation environmental and educational grants from the NSF, EPA, etc..

This "idea" should have been a comment under another heading instead of an outright new idea suggestion

This will severely impact my property owner rights and my family's way of life. I strongly suggest that Secretary Salazar, himself, answer the numerous requests for a meeting with the local government entities of Siskiyou County. They need to meet Government to Government... NO Eco/Enviro/special intrest group spin... just the raw facts and findings!

Those who are disrupted by the actions of other users fall into these two categories: 1) this person must not really be enjoying the outdoors if their enjoyment is so close to the edge that sharing pushes it over the edge 2) this person values solitude but chose an area that was too crowded on that day. With millions and millions of acres of public lands already set aside for solitude, it seems like a poor choice of location was made (self-blame would be more appropriate).

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Urban development is one of the largest causes for the loss of wildlife habitat. Whether it is residential or commercial, the land is lost forever to wildlife. It is not only a loss to wildlife, but to agriculture. Agriculture and wildlife can co-exist, but neither can co-exist with development. Lets use Wal-mart as an example, even though there are many similiar large corporations, they have destroyed hundreds of thousands of acres of nature. Not only do they have sprawling stores, but huge parking lots and extended streets and highways to get there. Walmart has a program called "Acres for America" where they preserve an acre for each acre that they destroy. What a cover up! If they are serious about wanting to preserve an acre, then they would quit building on undeveloped land. They are not adding one single acre to the world by preserving another acre. They destroy land, period! Development needs to find ways to either build upward, remodel existing buildings, or use abandoned areas of inner city as an example. The public has forgotten as they are shopping, that where they stand, deer once roamed, wolves and coyotes hunted and birds nested. Several hundred stores were built over productive fields of grain and a lettuce field. But now, Mary Howard, Edwin Smith, William "Bill" Conely, and so many others over seas have gone hungry because of the loss of this agriculture production. Now travel outside the city for several miles you will see fields where grain is growing deer are grazing, birds are flying and nesting. The pastures are healthy, deer, fox and coyotes are out in the same pasture as the cattle. But several years from now it will probably be a Wal-mart store and all paved over.

What a hyprocrisy. What are you balancing when you have a Prius and a SUV? If you are serious about pollution, make sure you are disconnected from the electrical grid completely. Then take a good look at everything you have, your job and your investments (check them all now) and make sure you not supporting pollution and development on undeveloped land. Now tell me more about your plan, how are you conserving land?

What is your plan? Please be more specific

Wilderness areas are closed to all but foot traffic. 99.99% of designated wilderness is never used by anyone. Massive amounts of public land have already been designated as wilderness and essentially closed to the majority of the public.

Yes, ranchers have a right to use their "private" grazing allotments on public land. It is just a win win situation. They take care of the land, and provide for wildlife on their own deeded land in which their allotments are attached. If you start removing agriculture from the land you will be paying more for that steak.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I love and enjoy the outdoors but the extreme environmentist have shown their true colors over the last 15 years. I've seen land in CA that many many OHV users have used for almost 40 years go away at the blink of an eye due to bias studies such as the bighorn sheep endangered species designation. In no way does a OHV effect the habitat or migration of the big horn sheep yet vast swaths of land have been denied to the casual OHV user for reasons that are unscientific and political. The sheep live in areas that are no where near the trails at the bottom of the mtn ranges yet this is the excuse that is used to deny the public access and enjoyment. This eco-facist policy has got to end and the silent majority of the OHV communities are fed up by this disregard to public OHV recreational access. Stop with all the wilderness designations already it's out of control and unscientific. What is truly endangered is the OHV family! We will fight for our public access just as hard as our grandfathers fought your freedom 65 yrs ago.

OHV trails are anywhere from 6 inches for motorcycles and 6ft for jeeps ect. Comparing this vs oil and gas drilling just shows your lack of education on the subject. OHV trails are not high intensity like mining or logging so stop with your anti-access propaganda. I've seen most OHV trails look the same after 10 yrs worth of use. In fact some of the small single-track motorcycle and mtn bike trails I've been on are in far better shape then your average hiking or horse trail. The impact is no different even after heavy rains. It's usually the OHV clubs that go out there and volunteer to clean up the trails after large storms too. We all need to respect each other's way of enjoying the outdoors especially the wildlife/hiker only crowd.

The vast majority of visitations on CA BLM & FS land are people using multi-use trails. Wilderness designations do nothing but shove more people in smaller spaces (which adds to overuse) so that a small minority can claim victory for wildlife and hikers. What is truly endangered is the american family being able to enjoy the outdoors as they see fit. Too much wilderness has already been appropriated and the focus now need to be on public access and multi-use route EDUCATION.

There has been way too much designation of wilderness and ACEC areas w/o any sort of scientific studies to back up these claims. People who use OHV for outdoor recreation should be granted the same respect and understanding as someone who uses other designated areas for hiking and horseback riding. Stop with the banning of OHV use in designated wilderness areas, just set aside areas that can be accessed for multi-use trails such as mtn biking and dirt biking. As long as the trails are maintained (plenty of volunteers for this) then everyone can enjoy the wilderness as they see fit but turning these areas into non-motorized areas shuts out a large population that contributes to the local economy and enjoyment of the outdoors. Keep public lands open to multi-use.

We should have a new designation of "national protection areas" instead of the the anti-access activists "wilderness designation? Clearly they are more interested in denying recreational opportunities to people than they are in protection. Since Wilderness allows them to permanently close existing designated multiple-use trails, that's the only tool in their toolbox. Kudos to multiple-use advocates like Blue Ribbon Coalition that are willing to be a more flexible and inclusive to many forms of outdoor recreation and public lands access.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

We need to save the Battlefields before they are gone. A Pizza Hut where Gen. Cleburne was killed at Franklin was horrid when I saw it (and I'm from Illinois). There are so many sites that are disappearing before our eyes to the Wal-Mart's and the useless trashy strip malls with places like "Nail Envy". These men died for their ideals. To desecrate the land that they sacrificed their lives for makes me want to scream! How can we allow this to happen. In Europe they preserve their past, what about us? We need a priority now, not 25 years from now. President Teddy Roosevelt had the guts vision to save the west for future generations! Which President will have the guts and vision to save our Civil War history? As we approach the 150 events put people back to work in America saving and preserving the battlefields, not create more road projects under ARRA.

Western Kansas would be a perfect location for a Great Plains National Park. It has been stated that less than 4% of the prairies, tallgrass, mixed grasses and short grasses is left. Due to the federal government owning less than 1.2% of Kansas, we receive very little help for land development compared to states such as Nevada where the government owns 84% of the state. Kansas is known for its prairie and historic image and it would be a shame not to protect and preserve it for future generations. Presently the endangered ecosystem of the prairie could be sustained with bison, plant and wildlife. This could be a wonderful way to pay respect and remember how the pioneers, early settlers, farmers and ranchers lived and paved a way for us.

The Pebble Gold Mine is proposed for Bristol Bay, Alaska. It would be the world's largest gold and copper mine in the world. It would destroy the world's largest and most productive salmon fishing grounds in the world and forever pollute all the surrounding fresh lakes. The massive open-pit, hard-rock mine known as the Pebble Project calls for the creation of 10 square miles of "lakes" to contain an estimated 2 billion to 3 billion tons of contaminated mine waste at the head of salmon spawning streams. Opponents warn that a single earthquake in this seismically active region could release a poisonous stew that would take generations to clean up. "It's a region with huge, off-the-charts biological value," says Tim Bristol, Trout Unlimited's Alaska program director, noting that nearby Katmai National Park has the world's highest concentration of brown bears. Audubon Alaska has identified four large Important Bird Areas at the head of the bay that are major migratory waterfowl flyways for the Steller's eider and other federally threatened species. Plus, the watershed accounts for a third of all salmon caught in Alaska; its sport and commercial fisheries together earn about \$350 million a year.

There are vast amounts of country in the western US that are difficult to get to, even by motorcycles with long range off road capability. Turning these types of areas into wilderness will virtually assure that they are never visited, by anyone. To consider unmotorized travel 100 miles deep into the desert is tantamount to suicide for all but a very small percentage of highly skilled adventurers. So, except for those few, these areas will become lost. I've been to these areas (on motorcycle), and the few on foot or on bicycle are often traveling with support vehicles (motorized). So, this declaration as wilderness becomes some sort of "non-use" policy. Yes, the land will be preserved, but, what is the value if it isn't used. If the land needs to be protected from development, mining, whatever, is wilderness, basically shutting down an area really the best solution?

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Go Lisa! The same overgrazing that destroyed the grasslands and ecosystems of the Arizona Strip and probably dried up its climate continues unabated. The BLM does not attempt to prevent it. The ranchers who profess to "love the land" take no responsibility for what they and their ancestors have done and continue to do. Multiple Use: There are some places, mostly existing unpaved roads, where motorized off highway vehicles can be driven without destroying an ecosystem and ruining the outdoor experience for everyone who does not fully appreciate the music of roaring engines. Unfortunately, the "daredevil, go anywhere, churn up everything, never follow an established route" attitude seems to be prevalent. Turning this set of dimwits loose to tear up any public land they please is simply wrong. Multiple use makes absolutely no sense if it means mixing motorized with non-motorized traffic. The noise levels and velocities involved are completely incompatible. Waid

This is one of those trick questions touching on strongly felt political differences. We need to stay out of the political quagmire. What I think people agree on is more open space everywhere. Who owns, manages and maintains depends on more than your political perspective and the parks visitors. Many parks are truly international gems typically visited by more outsiders than locals, e.g. Grand Canyon or Yellowstone. All levels of government have problems supporting the purchase and management. We need to work on stable funding at all levels.

"In southwest Montana, one of the greatest wilderness areas in the world near Yellowstone Park has seen a dramatic increase in ATV and motorized access." Surely you have some FACTS to back up this assertion? The FACT that you believe your income depends on keeping responsible OHV users from enjoying their right to enjoy the outdoors as you do would not have anything to do with your rant, would it? If it is designated wilderness, there are no OHVs being used. If the area is being managed as wilderness, I would highly doubt OHVs are a huge problem. Your definition of wilderness obviously includes legal roads and trails on public land. "Fact is, as more motorized pollutants like ATV's enter our wilderness areas wildlife is displaced, gone, perhaps forever." Again, your logic is not supported by the facts. Wildlife such as elk and deer will avoid certain roads and trails with traffic at certain times of day. If you care to hike off said roads, I think you will find your game. As a Montana hunter who does not care to use an OHV during hunting season, I find your stereotypes of OHV use silly and elitist.

"Why would I want to go for a hike and hear nothing but revving engines?" Good question, as there are MILLIONS upon MILLIONS of acres of public land where ohvs are prohibited. I would suggest finding these areas for quiet time.

Even if we did not add another acre of wilderness, Americans that enjoy motorized travel on public lands will see a decrease in their recreational opportunities. There is a concerted effort by public lands managers to deny access. This trend needs to be reversed. Many people who live in large urban areas in the East do not even have a clue as to the vast amount of land ALREADY in wilderness designation in the West. If you seek relief from urban pressures, I suggest you contact your local officials to try to get your own wilderness near you.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I believe the good people of Utah should have a voice in what you are proposing, as in a state vote. If decided locally and not by the stroke of a pen by some Washington politician, then so be it. Chances of this area becoming a national monument or park are remote given this scenario.

Local governments are even more corrupt than and self-interested than the Federal govt. It's federal land, it belongs to all of us. Ride your dirtbike in your own driveway.

Motorized users should not have to travel hundreds of miles to experience our great outdoors. the current trend of closing access to motorized users concentrates many more people on constantly fewer acres causing greater conflict. Widespread dispersed use is more desirable. There are multitudes of quiet spots for hikers, etc already-don't get greedy.

OHV USE IS NOISY, DISTURBING TO WILDLIFE AND OTHER USERS, DAMAGING TO TRAILS INCLUDING EROSION, CAUSES AIR POLLUTION AND IS A WASTE OF GASOLINE !! OHV USERS NEED TO GROW UP FROM THEIR NOISY OBNOXIOUS TOYS. IT'S NOT ALL ABOUT YOU AND YOUR TOYS, ITS ABOUT STOPPING TO ENJOY, LOOK AND LISTEN TO THE WILDLANDS AROUND YOU. AFTER ALL...ISNT THAT WHAT'S UNIQUE AND BEAUTIFUL ABOUT OUR WILDLANDS. WHAT WOULD YOU RATHER LOOK AT, A BEAUTIFUL UNDISTURBED DESERT ESCARPMENT OR A PIRATED DIRTBIKE TRAIL THAT LOOKS LIKE A SCAR, CAUSED BY AN IGNORANT IRRESPONSIBLE SELFISH DIRTBAG. THIS IS MY SINCERE INFORMED ACCURATE OPINION. THANKS. WALT

To include Arches NP? Can ohv's erode rock?

I feel that trails should be single use only, thereby doing away with the accidents and such caused by having horses spooked on bike trails, hikers getting scared on ATV trails, etc.. That way, were a trail to be destroyed or an ecosystem damaged, one would know which group of users to blame for the damages and the extents to go to to prevent an occurrence in the future. Also, trail building should be done by groups of that recreation usage. For example, mountain biking trails should be built by active cycling groups such as SORBA or avid bikers only, and for different levels of experience, or at least not by someone that has no desire to bike or knows what kinds of things bikers like. The governing agency, be it NPS or just a state park would then only have to fund these groups and provide the technical and environmental impact support when planning out where these trails would go.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

More and more, children's learning comes from more of what school and media teaches them than from what they are taught by their parents. Many parents work multiple jobs trying to provide for families and plan for their kids' education and their own retirement. Therefore, our concentration needs to be on providing enough education about the environment and what makes our outdoors so "great" all around the country. A lot of kids nowadays have been conditioned to be afraid of the outdoors because parents and educators have never really taken the time to connect them to it, effectively barricading them from it by means of video games, TV, etc. If organizations, colleges of agriculture, forestry, the media, etc., would take the time to reach out to kids, and in return the school systems would work closely together with these groups, kids could take what they learn back to their households and encourage their parents to do things to help out such as donating to outdoor organizations their time and money in helping maintain the world around us.

The Pacific Northwest Region of the Forest Service faces a trail maintenance backlog that reaches into the tens of millions of dollars. Trail crews have been winnowed down to the bare bones and even further in many cases. Volunteers have stepped up to meet that need, but there are limitations to the scope of work that volunteers can do. Washington Trails Association generates nearly 100,000 hours of volunteer trail maintenance in Washington state each year, but we can't do that work when we lose experienced, talented and dedicated Forest Service staff to retirement regularly. As an agency, the Forest Service is aging, and due to anemic federal appropriations, many retirees aren't being replaced, or are being replaced by people with significantly less experience. If there's no one in the office with whom to coordinate, we have a much harder time leveraging those scant public funds. Federal appropriators must commit to making money available to hire Trails Specialists, Trails and Wilderness Coordinators and other District and Region staff, and USFS must groom people to take over those positions. We, and everyone else who loves our public lands, depends on the expertise, commitment and institutional memory of these people.

1 for 1 sounds good. we have lost so much opportunity, land. public lands are just that.

I am opposed to the government being in the land buying business. With that being said, it is still the lesser of two evils as man will never side with conservation when it comes to the almighty dollar. If public money is going to be used for purchasing properties, they should be managed for public uses. Buying up land and locking the public out of it is what has given environmentalism a bad name. Thankfully, we can still have conservation without fanatical environmentalism.  
Wayne Jenkins, FL.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I am someone who has spent his career in business--mostly accounting and finance. During the last 15 years I developed an interest in American history. I am increasingly concerned that many Americans do not know much about this history of this country. This ignorance covers all class, race, and income levels. How can we appreciate America, and its freedoms, without an appreciation of how this country evolved. Outside of independence, the Civil War was the most defining event in our country's history. A basic understanding of that event is would be a start in the right direction. With the recent election of President Obama, and the 150th anniversary of the beginning of the Civil War America has an opportunity at hand. Preservation of Civil War era battlefields are key elements in this process. Preserved Civil War battlefields are tangible links to a defining moment in our nation's history. Other benefits related to the opreservation of Civil War battlefields...

- The 150th anniversary commemoration is expected to stimulate renewed interest in the conflict and generate unprecedented tourism to Civil War sites.
- Preserved battlefields revitalize local economies and create jobs by encouraging heritage tourism. In addition, preserved battlefield lands also save localities money by not requiring the use of sewer and other city/county services.
- Cultural and historic resources, such as battlefields, foster a sense of community and improve quality of life. They are a source of pride for communities.
- Time is of the essence for preservation of Civil War battlefields and other historic parks in the eastern part of the United States. Many of these parks are in urban and suburban areas, where development pressures are considerable.
- Preserved battlefields provide environmental benefits including protection of watersheds and wildlife habitats

i raised my 2 girls off roading. now there adults and still love it and the desert.we have a strong family and good old friends made in the wild.at 52 ive seen alot of my land taken from us.we also hike,fish,shoot,mountain bike.public lands are for all of us.not just a few purests. theres room for all americans.the future of u.s.a.are in the kids,we know what the inner city does to them.keep the waters, land open for my grandson and all. please thanks for your time.

National Forest and National Parks have lost control of many camping areas to concessionaires. These controlling parties have not served us campers well. Fees have gone wild with no upkeep. Those of us with Access Passes are not getting the discounts we are counting on as we did in the past. Gates are locked, fees are up, and something needs to be done.

ORV's are very destructive of the environment they are used in but should be allowed in some set aside areas. However, I think that most of the propose areas for wilderness should be designated as that. Let's see if we can find some common ground here. As far as the above comment about the earth healing itself for 5 billions years, the earth hasn't had 6 billion humans on it at one time.

With proper design and layout multi-use trails can work, but they need good sight-lines and sustainable slopes

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

As a landscape architect who has worked in cultural and historical preservation, i feel that the practice of preserving our cultural heritage makes us more aware of the importance of nature in our society. We just need to make sure that we recognize the land and natural systems with the same value and importance as architecture and human use. It is our interaction with the land that makes places important - not just what we put on them!

Bob - I see where you're coming from, but in my family, all 4 generations go hiking together. It keep us healthy and fit. And trust me, we are not a bunch of uber-athletes or fitness maniacs. Try going for a walk - where the sound of your footfalls and laughter are the only thing to distract you from the quiet of nature. That being said - of course you have rights, too. The negative environmental impacts of your machines just need to be added into the equation for there to be real fairness (along with the negative impacts of ANY type of use).

There is no such thing as "new" wilderness, there are only new rules to protect one of the few things that man can not make or imitate. Wilderness is not something we can create or re-create. We can only hope to preserve some small portions of it that remain from our already destructive, consumptive history. We CAN create areas for OHVers to play, where they will be able to enjoy their activities, but their negative impacts will (hopefully) not have long-reaching consequences . Over-simplified rules such as 1 for 1 do not respond to the complexities of the environment, of our society and of the dynamic nature of land. OHVers deserve a place at the table right along side environmentalists, hikers, campers, anglers, hunters, ranchers, farmers and developers. No one group deserves special consideration in this case.

What Mrs. Paddock fails to state in her opposition to a legal business on private property that is zoned correctly is that 62 percent of the local populace believes this to be a step in the right direction to economic growth. Not to mention badly needed jobs for this area. The proposed casino is going into an already existing structure.

I am an avid OHVer myself. Though I would LOVE to see more open land, a 1:1 ratio isnt going to work. Stop closing what we have is a good start.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

- Climate change is the largest threat our fish and wildlife have ever faced. Temperature increases, altered precipitation patterns, and declining water supplies in the Western U.S. are already adversely impacting many fish and game species sportsmen cherish. Bird migrations are becoming more unpredictable, numbers of caribou, moose, and bighorn sheep are dwindling in some regions and fish kills resulting from rising water temperatures are becoming more common. The Fish and Wildlife Service said, “the warming of the earth could potentially have more far reaching impacts on wildlife and habitat than any challenge that has come before us.”
- The only way to stave off this crisis is to dramatically alter the way we think of land and wildlife conservation; we must focus on building resilience into ecosystems to help them adapt to a warming world. The Treasured Landscape initiative should be structured specifically to address the challenges of climate change, and should include as a major strategy protection of crucial areas of habitat and connective migration corridors.
- Public lands in Montana are going to be critical in maintaining viable populations of game and non-game species and in providing high-quality public hunting and fishing opportunities for the public. Their management can be directed towards climate change amelioration by federal authority. All relevant land management operating units within Department of Interior must have explicit mandates to manage their lands for both present and future climate impacts, and all decisions should be based on sound science.
- The Department of Interior is responsible for the majority of our country’s federal lands. The National Park Service, Bureau of Land Management, and the Fish and Wildlife Service collectively manage about one fifth of the land area - some 507 million acres - in the United States. The Great Outdoors Initiative should begin by ensuring that all 507 million of these acres are managed for climate change.
- The Forest Service and the Bureau of Land Management, in addition to the Montana Department of Fish, Wildlife & Parks, should receive dedicated funding to implement natural resource measures and strategies adaptive to climate change.

The levels of access for tourism, the protection of the land, the preservation of private property rights and the protection of the environment are all greater without monument status. Stop the insanity of the extreme environmental groups who are proposing the Siskiyou Crest monument.

These sessions are not only essential, they should be ongoing, engaging and including all stakeholders (interest groups). They are essential to the success of the outdoors. As an example, the Cibola National Forest, IMVHO, could not function without people from Albuquerque Open Space, Rio Grande Nature Center, Friends of the Sandias, Volunteers for the Outdoors, and the New Mexico Mountain Club. The 10-year plans for National Forests, now underway, must be open, inclusive and pro-active. Cibola National Forest goals should include improved on-going assets maintenance and resolution of disputes involving the Manzano and Manzanita mountains, especially the restoration of the Manzanos 30-mile Crest Trail and various trails and resources on the West Side, especially Trigo Canyon, Kennedy Campground, Salas Trail, Ojito Canyon, and the Kirtland AFB Boundary.

***(cont.)***

To reconnect with the great outdoors and only the great outdoors risks overlooking at least half of what the environment and environmental stewardship is all about. While this initiative alludes to "the cultural and historic sites that tell America's story," nothing in the rhetoric or actions suggests that doing so is worthwhile. It couldn't be more so. People generally don't trash or abuse things they understand and appreciate. The human history and stories that define our values and aspirations as Americans are indivisible from the impulse to be good stewards, neighbors, and custodians of the land. As Maya Angelou puts it, our lives have already been paid for by the toil and effort of those who came before. Gratitude is a fundamental value without which environmental stewardship can seem abstract or merely recreational. Stories, works of cultural expression, historic sites, and historic preservation both large and small are the building blocks of our identity and values. The environment isn't only about that which is "great" and some of it is emphatically not "outdoors." To be responsible stewards we must see and appreciate the whole of our inheritance, holistically and with equal reverence for the physical and cultural elements that are its basis. This campaign needs to find its basis in something wider, deeper and more inclusive.

As most schools across the country are faced with financial challenges, providing education in basic subjects will become the primary focus of all administrators. Students in many financially strapped districts will lose various opportunities to be exposed to the "Great Outdoors", from camp experiences to field trips. To maintain a sense of urgency in encouraging conservation and participation in outdoor recreation, it is imperative that federal funding be made available to local agencies through multi-year grant opportunities.

As much as I disagree with increasing taxes at a time when many are struggling financially, the bottom line is we as a society need to be willing to support the most critical issues. Many outdoor manufacturers are small companies who have a passion for the great outdoors thus the reason they got into the business. A small tax rate of 1-2% might be appropriate or we could take it one step further and only tax those companies who manufacture their product outside the US. Let's make a push for Made in America and help keep the U.S. employed. Just a side note. ditto on the OHV issue as we see its path of destruction in many ecosystems.

Thank you both for your comments. Although I am not hunter, I respect the tradition as family activity given the hunting is done in a legal manner. The intent of my comment was based primarily on the example represented. As a representative of a city agency in southern California, I have seen the impact that an excursion to a small park where animals are observed can have on a group of children. Children can be the impetus for future change as they learn conservation through hand-on experiences and memories. The preservation of nature is critical to not only America but to the entire global community.

## Discussion Question 2

***(cont.)***

The Mexican gray wolf reintroduction program is in trouble. Another lobo, the third in the last month, was found shot to death in eastern Arizona just two days ago. A population of only 42 wolves at the end of 2009 cannot sustain losses of this magnitude. As a citizen-advocate who has camped in Mexican wolf home ranges at least 250 nights in the past twelve years, tracked and observed lobos in the wild since 1999, and photographed members of the very pack whose two-year-old male was shot on Thursday, I find the response of the U. S. Fish and Wildlife Service to recent events to be shockingly tepid. After each new killing, Regional Director Tuggle expresses his sorrow and promises to have law enforcement agents investigate. Yet the killings continue. Clearly, the regional law enforcement agents are doing their best to catch the perpetrators and bring them to justice, but they are undoubtedly stretched too thin.

Release the captive Mexican wolf family of eight into Arizona as soon as possible. New releases of Mexican wolves will increase wolf numbers and strengthen the wild population's genetic viability. A healthy, captive Mexican wolf family is ready to be released into the wild. This release has been held up by foot-dragging among higher-ups in the Arizona Game and Fish Department. It's time that the Fish and Wildlife Service re-asserts its authority and stops allowing itself to be held hostage to the whims of Arizona officials.

"Finding new funding sources to increase the financial viability for owning and maintaining private forest land", sounds like the timber industry to me, especially that "maintaining" part., I can not support that.

If this has been addressed already, forgive me! A National "highway" of preserved habitat. This was mentioned in the Nature Conservancy magazine "Nature" last year. Incorporate rare/endangered habitat and species, wildlife migratory paths. Use overpasses, consider this "highway" a priority before building the ever increasing network of High Voltage Transmission Lines and wind farms, community planning and urban sprawl, commercial/residential development, etc, etc, etc....

Definitely agree that there are certain areas where this is much needed, but eventually (sooner, rather than later) all planning should be done with this in mind. The main opposition I can see to this would be the increased costs incurred by the municipalities doing the constructing, so something would need to be done to ensure these costs are offset.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I BELIEVE THIS IS WAY OVER DUE. The generations coming up who are making our rules are not caring what so ever about the wildlife. Their parents for the most part were too busy to stop and smell the roses of the wilderness and teach them what is really precious in life. Where I live they poison the Raccoons merely because they bother the kids at night in the church camp in the middle of the forest. One boy had a candy bar and the Raccoon wanted it. The boy got scratched so the next thing we knew 13 of them were dead. All had been poisoned. The Bears get shot because they come too close to the houses that have invaded the forests. People up there are picking the natural berry's for themselves and leaving the bears without their natural food so they wander into the area where the homes are looking for hand outs. What is the wildlife supposed to do? Now we are killing more and more with our trucks and cars on the roads because we are invading their land and they are trying to find somewhere else to go. At least give them a safe passage to move along. They really don't want to be around us. Don't the people get the BIG picture?

Another idea complete with a self supporting voting block. How very clever and oh so subtle. Are you all in the same room with 60 laptops or just working from home. Y'all might want to remember to include locals and not try to sneak the idea through in your planning efforts for animal crossings. Be sure not to attempt to block hunting access or any other kind of public access or tribal access to cultural sites. Consideration of impacts upon other than umbrella species should also be taken into account along with FHWA 4f property. Others forgot these important items in So Fla regarding 2 underpasses for the oh so endangered Panther and lost the project when locals found out and demanded the designs be scrapped. Years of work went down the tube. Be careful folks are watching.

There are an estimated 80-100 Florida panthers left, I suppose you think that is not endangered?

I do not even they qualify as an endangered species since these cats are the same mountain lions, pumas, cougars etc. that are out West and in many other parts of North, Central and South America. What lead me to that conclusion was a book titled "Swamp Screamer" authored by Charles Fergus. Between the covers of the book at page 119 there is an admission by a veterenarian named Melody Roellke that her and a gentleman named Stephen O'Brien hired to study Fla panthers that genetic analysis confirmed that Coryi was actually a "hybrid" thus not qualifying for ESA funds. So much for honesty in that program. There are well over 100 in So Fla when all are actually counted but the count only includes mature cats. There already is a deficiency in land available for these cats and they are over the carrying capacity now. Wait until one of them kills a human instead of goats, dogs,feral cats etc. as they have been doing for some time in populated areas of SW Fla. At that time the sentence for them will be the same as it was for Alligators when they began killing humans. Florida will declare a hunting season for them and make tons of money. The permits will be in the thousands of dollars to bag one. These poor animals are being mis-managed by well intentioned misguided humans and will have to suffer the consequences we cause to fall upon them.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The problem there... convincing the masses that these goods truly are valuable. Waste, extraction, is rampant.

The Bureau of Land Management is mis-managing our public lands to death and costing hundreds of millions of taxpayer dollars in the process. They aren't supposed to be the Bureau of Livestock and Mining but that is what they are doing. Organic grass fed beef produced by family ranchers is a good thing but that is not what is going on. Less than 3% of US beef is produced on the range. Large corporations like Hilton and millionaires like Ted Turner own most of the grazing rights. The grazing program loses hundreds of millions of dollars annually. The price charged to graze on public land is decades old as is price charged for mining and drilling. Our public lands are being eaten and drilled/mined to death and we aren't even making any money on it. The Bureau of Land Management spends millions of dollars needlessly rounding up wild horses and holding them in pens in the Midwest and killing animals across the West. They pay to have coyotes, wolves, cougars, bobcats, foxes, badgers, prairie dogs, raccoons and other wildlife trapped and poisoned because it might cause harm to a cow or sheep. The BLM just killed a bunch of wild horses in Nevada removing them from the land that British Petroleum (BP) wants to put the Ruby Pipeline through. They ran them in the heat for over twenty miles with a helicopter and over a dozen dropped dead of exhaustion and dehydration. They killed over 200 last winter in the Calico round up. They are in violation of the Free Roaming Wild Horse and Burro Act and they are also acting with extreme cruelty. Water holes are being fenced off so they can say the horses are dehydrated and must be removed for their health. Horses do not have the same negative impact on the ecosystem that cattle do. There are also less than 30,000 in the entire West compared to close to 10 million cows and sheep. The numbers speak for themselves and there is no documentation that horses are causing any damage and they are very healthy animals. Horses actually evolved in North America and spread to Asia and Europe via the same land bridge people came here over. Unfortunately, their temperaments that made them so easy to domesticate in Asia led to them being easily killed and eaten in North America. Eaten to extinction. Hundreds of horse bones have been found here with spear and club marks on them and cliffs have been found with thousands of horse bones below where they were stampeded off and then cut up. The Conquistadors were actually returning the horse to North America, not introducing an invasive species. Many mustang herds in the West have been DNA typed to prove they are of Spanish descent. They are gorgeous, healthy horses and when adopted become extremely hardy, healthy, trainable riding horses yet the BLM would have everyone believe they are jug headed, skinny and worthless. That they are pests and have no value. We should be promoting our mustangs to the world rather than rounding them up. Land areas set aside by Congress in 1971 specifically for horses have now been reduced by more than half. There are less than 200 wild horses left in all of Montana yet the Pryor Mountain Wild Horse Refuge continues to be emptied. Even Cloud, the wild stallion made famous by three PBS Nature series documentaries is rounded up every year and members of his family taken away. If such a beloved mustang isn't safe, no mustang is safe.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I agree that BLM is not adhering to either the rules or public opinion. They are way out of line in many areas and need an overhaul and perhaps investigation into exactly who is supporting all the grazing of public lands that is practically 'free', and why! Not only are wild horses suffering but also the endangered desert tortoise. The cows are eating all the wildflowers these tortoise need to survive when they emerge from hibernation in the spring. Something is wrong with BLM and they need to be investigated!!

I also agree that BLM needs to be investigated & completely overhauled. We definitely should not be subsidizing mega-corporate ranching & farming & allowing them to abuse our wildlands. I am not sure about how the treatment of wild horses should be handled, but it needs to be one of the things addressed in the investigation & overhaul so very needed! So I am voting YES on your idea.

The BLM is in the pocket of corporate ranching and farming. They are a disgrace and need to be overhauled. You have my vote.

Agreed. Eohippus was native to North America. If you compare the numbers cited by Ms. Goen, 30,000 wild horses compared to 10 million cattle and sheep is a minority indeed. The BLM definitely need an overhaul, and most Americans agree that wild horses need to be protected. (How many movies are there about Moo, the Wild Bull of the West? I haven't seen any.) You have my vote too. Well said, Ms. Goen.

In 1971 Congress set aside approx 50 million acres as wild horse sanctuaries. Today, there are horses on about half. Wild horses are not starving anywhere, there are not too many of them anywhere. 200 in the entire state of Montana? Look on a map, Montana is huge and just happened to have an anti-wild horse senator, Conrad Burns for years. The Pryor Mountain Wild Horse Refuge contains one of the most documented wild horse herds in the country and there are books, videos, photos and three documentaries available for anyone to see that the refuge is almost empty of horses and in excellent health. The BLM's says there can be 2600 horses in the herd management areas in Oregon alone but there are 2300 horses again, according to the BLM and yet they rounded up 120 two weeks ago with some deaths. This was reported in the Oregonian newspaper recently sourced directly from the BLM. Why did they round up those horses at all let alone in the July heat? No wild horse groups or observers agree with the BLM's tally of wild horses, they all insist there are far less. Actually, ten million cattle and sheep is very conservative, I read yesterday there are 15 million cattle alone but I of course, have not counted the cows. Not just Eohippus was native here, Equus was here until ten thousand years ago and all the evolutionary steps in between the two were here in the preceding years as well. Equus spread from here to Asia and Europe. At the very least the BLM needs to stop rounding up horses and shipping them off to corrals in the Mid West. 35,000 horses in pens, it is ridiculous, costly (millions annually) and cruel. With no valid plan to solve the problem and American's have demonstrated very clearly that slaughtering them all isn't valid, round ups need to stop. Now.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I realize I didn't finish a comment: The Pryor Mountain Wild Horse Refuge is almost empty of horses and in excellent health and could support many more as it used to. Cattle are not grazed there BTW, it is too rugged. The horses were removed for political gain and nothing more. I urge you to watch the Nature specials available on PBS.org on Cloud and his herd. There are three and they are spectacular.

In the near future people in general will lose touch with the earth, the world of nature, the understanding of its importance if we fail to entrust this to the children. This type of program would be a great help in doing this. On another level this type of program would help the health and stature of our children.

It should be obvious to everyone by now that republicans no longer care about the environment or our wildlife. While republicans of the past have done marvelous things with an eye to conservation that is no longer true and it seems most, if not all, republicans would just as soon see our forests and wildlife disappear altogether. If it were up to republicans we would sell our national parks off to logging, mining and oil companies and would sell hunting licenses for endangered species. If they are not voting down bills for climate change or holding up legislation for oil drilling safety they are trying to promote mountain top removal mining, logging in pristine, old growth forests and getting rid of the ESA. Bush underfunded our parks for years, opened some up to mining, logging and drilling and closed dozens if not hundreds of wildlife refuges. He and his cronies tried their best to get rid of the ESA, the roadless act and many more environmental laws, now the holdovers in congress and the senate have taken up right behind him. If you are someone who loves and respects nature, has a fondness for wildlife and would like to see both around for your children and grandchildren to enjoy get out this November and vote for the representative that will do his best to preserve and protect what little is left of our forests and wildlife.

I think this is just the forum to bring this to light. The policies under Bush, Cheney and the republican lead senate and congress did more damage to our forests, lakes, rivers, wildlife and overall environment than all other factors combined. It is imperative that we get representatives that will protect what wild lands are left or there will be no places left to connect to.

I'm promoting your idea because it's obvious that the republican party is the one biggest obstacle to achieving goals for conservation, recreation, or reconnecting people to the outdoors; what this list is all about! Get rid of em! I'm disgusted at how this so called democracy is being run by the vast minority of stone-wallas and fat cats. Brittish petro seems to have more to say about the US government than we the people do. Stand up for your rights people. The present republican party is owned by the oil spillers.

How about getting rid of republicans and democrats period!! These two parties are destroying America. They care of only their party and not about the American people.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I think that any group that does not support maintaining our environment should be questioned about their motives. The environment is all we have in a quickly changing world. If we destroy it, we are eventually destroying ourselves. This has been played out through the history of mankind. Much of this history is not being taught in schools today, so people are not aware of it. We need to set aside places to preserve what we had and have regardless of the people who are elected to office. Unfortunately, too many of these elected officials seem to be "bought off" by big business or corporations for that corporation's agendas. They get into office and change the laws we have had for their own political purposes.

I don't know how this turned into a political agenda but I agree that things need to change back to taking care of the Environment. Since the Republicans are the ones that screwed it up then I think the Democrats need to be given a chance to fix it. The President cannot fix all the problems we have in 18 months, it took longer than that to cause them. I think President Obama is doing the best he can under the mess he took on, and I truly believe he cares about this Country. We need to get past Racism and Bigotry that has taken over this Country, we are just showing the World our BAD side. Let's stop all the HATE and give President Obama a chance, if it doesn't work than there is always the next election, that's the way America works best.

The idea was to establish wild areas to save or preserve the natural vegetation and animal life. If you allow these areas to be altered, the vegetation and wildlife will be altered. Perhaps setting aside marginal areas for recreational uses would be an option and keep wild areas as wild. We should put aside more lands for wild and recreational use. With our increase in population, we are putting more stress on our lands. Who knows, but if the population keeps growing these areas may be the only wild places left on the earth.

Who supervises what to cut vs. what to simply move over or leave alone. Who decides that a fallen tree is dead? We have a private tourist forest in California where many of the interesting trees that attract the tourists are actually trees that fell over and then continued to live. NPS still needs to have their hand in decisions that they will be held responsible for.

I kept the acacia felled by wind in my yard and now it houses a family of endangered oak titmice (a bird, for those of you who are not familiar with them). If this happens in a backyard (albeit very close to the fire-decimated Angeles National Forest), imagine what happens in fallen trees in a forest. In the Lowland Forest areas of the Park, the abundant downed trees are a necessary part of that old-growth ecosystem. Is this where you want to remove trees? Or is it the Montane Forests in their damp, misty heights? -- or on their drier, sunny south-facing slopes, where fire plays an active role and necessary role? Certainly not in the Subalpine Forests, where tree clumps are often separated by open meadows or rocky slopes, rendering fires small, just a few clusters of trees on dry, sunny slopes (and leaving behind silvery snags that last for decades)? In the boggy Coastal Forests, with their spongy wet floor? Or in the Temperate Rainforests, with their 140 to 167 inches of rain every year? Considering that 95% of the Olympic is Wilderness, with little human disturbance, the emphasis should be on what is natural, and those of us blissfully unaware of what is natural should have no voice in determining its future.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

fallen timber provides nutrients and habitat for the forest, logging is invasive and it destroys habitat through erosion and depletion of nutrients as the dead and down rots on the forest floor.

Down timber is part of the ecology of the forest. Leave it be.

I kept the fallen tree in my yard and now it houses a family of endangered oak titmice (a bird, for those of you who are familiar with them). If this happens in a backyard (albeit very close to the fire-decimated Angeles National Forest), imagine what happens in fallen trees in a forest. In the Lowland Forest areas of the Park, the abundant downed trees are a necessary part of that old-growth ecosystem. Is this where you want to remove trees? Considering that 95% of the Olympic is Wilderness, with little human disturbance, the emphasis should be on what is natural, and those of us blissfully unaware of what is natural should have no voice in determining its future.

Wonderful idea but tell me, who is going to help me out the first time some drunken moron in a 4wd nearly runs me over or I have mud splashed all over me when he goes by? If my ankles survive walking over all the ruts and assuming I can navigate the parts of the trail that are impassable on foot from the wear and tear of heavy machinery who will return all the wildlife I like to see that has been scared off by the noisy ohvs? How am I going to enjoy the peace and quiet I seek as a hiker now that ohvs use the trails I enjoy? You ohv people like to blame everyone else and call everyone else greedy but it is you that wants more and more and more! You have your trails so why do YOU want it all? OHV use is up because americans are lazy pure and simple and walking is just too much exercise for them to handle and that should not be rewarded by destroying what hikers and equestrians like to do and why we like to get out into nature. Multi use trails are a great idea for ohv users because it will quickly rid them of the nuisance hikers and equestrians they despise and then they will have the trails all to themselves. Lets call it like it is and quit lying about your true motives.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Joseph I want to agree with you but it just does not allow equal access for everyone to the same areas that are not a restricted type area (such as non-wildness). If I had my way “total enjoyment of our favorite leisure activities”- as you put it - I would hopefully be out there all by myself going to a destination and none of you are allowed in! No mountain bikes silently slipping down the trail, no horses near my camp dropping their usual business, no hikers stumbling into camp late at night wanting firewood from me, no ATV’ers sharing the same trail with me, no motorcycles blasting by me, cross country skiers are usually too focused to stop and talk, snowmobilers - do I have to see them at the warming hut! And why should I have to be slowed down by that 4X4 club doing trail maintenance on the trail I use! That would be my total enjoyment – just me and no one else. But then there would be the need to put in eight different trails for eight “different use” trails, one for each user group. Eight “different construction” types for eight different types of trails. Eight “different upkeep” for eight different types of trails. And all of these user groups just trying to enjoy going to the same destination. I am NOT serious about not sharing the trails like above. And I agree with you wholeheartedly that a single user type trail does make “for total enjoyment of our favorite leisure activities” And I feel the vast majority (if not all) of single user type trails should stay the way they are intended to enhance the outdoor experience. But where possible to adapt an existing trail for multi-use or when possible create an environmentally sound new trail for multi-use. There is one easier section of the PCT that I am still able to back pack into for secluded camping. In one week camping on the PCT not one other backpacker came by! NOT ONE! As I drove out the twelve miles of the area, on a multi-use trail, to the trailhead there were maybe a hundred families (several hundred people) enjoying the back country along the trail because they had the multi-use access to it. Hikers, equestrian, ATV’s, motorcycles, didn’t see any mountain bikers that day but I have many other times. Change the PCT to a multi-use trail– NO WAY! But maybe in a different area of this forest add a new or adapt an existing trail to multi-use so these families can experience their “total enjoyment of our favorite leisure activities” somewhere different than this one restricted area. Eight single use trails or one Multi-use trail?

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Okay, now I understand. It is okay for you to criticize me and question my motives on my ideas but I cannot question your motives or criticize your ideas. Ahh, the typical double standard. Not a surprise. Here I will use the same words as you did on one of my ideas "this idea is a wolf in sheep's clothing"! Like that better? Yes here in CT where I live I have seen 2 trails I enjoyed ruined after being opened up to ohv use and a couple more not opened up to ohv use but used by atvs and motorcycles just the same and although not ruined beyond repair certainly damaged by that use. On the ruined trails wildlife all but dissapeared, giant ruts and huge puddles that formed after rains and lasted days if not weeks depending on the season making many areas impassable on foot without straying far off the trail. I saw meadows ruined, streams torn up, saplings and berry bushes run down, trash strewn everywhere, broken glass. In fact one area of a trail I used to frequent before it was turned into a multi use trail had so much broken glass I had to pick up my dog and carry him because there was literally no where for him to walk without stepping on the glass. Over the months I saw less and less hikers and eventually I stopped going to all of those trails so rejoice \_\_\_\_\_, your community drove away the hikers and the wildlife so now it is all yours. Congratulations. In fact with so much area now opened to ohv use and so much other areas developed on I have less than a half dozen trails to enjoy but who cares about hikers and wildlife as long as the ohv community gets all the access they want right? It is like some surreal, alternate world you ohv enthusiasts live in where your motorbikes, atvs and 4wd do not harm the environment or wildlife but actually help it. Is it possible that ohvs in your world are lighter than here so they cause less damage? Are they less noisy in your universe? Are the drivers more callous and less responsible in CT than anywhere else in the world? Or is it that your community is oblivious to the damage you cause and uncaring when you do find out? I never really gave the ohv community much thought to be truthful and I always thought it was like hikers and backpackers where most were generally good but there are always the few bad apples. That was until I saw with my own eyes the destruction they cause and the disrespect they show others. This forum has also been quite an eye opener in exposing just what you people are all about. I now know without any benefit of the doubt that it is indeed the very small minority that is in fact responsible and respectful of nature and others while the overwhelming majority care nothing about preserving nature and wildlife and care only about their own self centered pleasures. I still believe that ohv enthusiasts deserve areas to enjoy but I am quickly becoming more and more convinced that it should be banned altogether considering some of the comments and ideas I have read. Actually I have had motorbike riders drive me off a trail or to be more exact my dog. He was so frightened in fact that he was shaking and it took me quite awhile to calm him down and that was after I had moved out of the jerks way. Of course I should just wave and try to make small talk though because it was me and my dog that were in the wrong for being on the trail in the first place right? How inconsiderate of me to be hiking in the woods with my dog on a multi use trail and causing some speeding jerk to actually change his course by an inch or so. Trust me if god had shined on me that day and I had been able to catch up with that butthole I would have been doing something other than waving to him. He showed me and my dog ZERO respect and I would have shown him the same. As far as you being courteous to those people why would you not be nice? What had they done to you? They were just trying to enjoy the outdoors like you so unless you are like that jerk that nearly ran me and my dog down and think that hikers have no place in the forest they gave you no reason not to be

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

nice.

I have said time and time again that ohv users deserve areas to enjoy and yes if other areas were put aside and animal and plant populations in decline were actually stabilized and growing then I see no reason why more access to areas now off limits should not be granted assuming those areas were taken care of and the animal and plant populations did not go back into decline. The same goes for hikers, I am not biased to either side and I believe the most important thing is to preserve nature for future generations not destroy it by our own self centered pleasures. I too have seen areas harmed by hikers and backpackers and I have said that if we as hikers and backpackers cannot be better stewards then we deserve to have our privileges taken away as well. Still though the damage I have seen from hikers is nothing compared to the damage I have seen from ohvs and that is just fact. I cannot agree with you though that the people creating the damage is the small minority. Why can you not see that your machines, no matter how careful or responsible you are, are damaging to trails, wildlife and people that want to enjoy the peace and quiet nature provides? I have seen with my own 2 eyes animals run from food sources when a bike rumbles by, your machines are very loud and you cannot say they are not and be truthful, their weight damages trails and the tires tear huge holes in the earth when it is wet. Those are facts you cannot deny and if you are you are just blatantly lying. I cannot say the problem is only in CT like you want me to believe because I have seen many pictures that very closely resemble the destroyed trails in my area from all around the country and I have read horror stories much like my own many times from many, many different states so I know I am not alone. If you want me to believe that many want to preserve nature you will have a whole lot of convincing to do there. Tell me why so many ohv enthusiasts on this forum demote all ideas on preservation yet promote all ideas that include oil drilling or mining, even in national parks in some cases. You cannot even get them to admit endangered species need protecting. Sorry but that does not sound like people that are very concerned at all. You have the same ability to check peoples votes as I do so do some research and you will see that I am correct. It is a very sad day if in fact what you say is true about less and less people hiking because if the future is solely at the hands of the ohv crowd then I fear the future is very, very bleak indeed and I will have nowhere for me to enjoy my choice of activity. Not that I would want to with no wildlife around. I am sure that will please the ohv community to know that one less hiker will be around.

Thankyou for your comments. I too believe that we should be free to disagree. I think that is one of the best attributes of our form of government. We are able to openly discuss our opinions free from government oppression. In fact I think this website, provided by the government, is one of the best thing I have ever seen. Already I have been enlightened by the different range of ideas and concepts proposed here. I am however perplexed by your comment "I think I am most offended by the way this list has been taken over by an OHV group and every other so called idea is about driving ATVs through the wilderness." Please do not be offended that OHV users want to express their opinion. And I have yet to see anyone post that they want to drive ATVs through the wilderness. They are just tired of places they currently ride always under threat of closure due to potential wilderness designation.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Great concept, however, when I ride my OHV (yes, I own one) I make noise and dust and disturb all creatures and the environment around me for half a mile or more. When I hike or back pack only my footsteps and soft conversation disturb the peace and tranquility and beauty; that is, after all, what I came here for. OHV's are a lot of fun but I don't want the disruption when I'm hiking, fishing, etc. Quiet sports on one trail, noise and thrills on another.

The EPA should cease promoting 'Environmental Justice' over 'Equal Justice' as policy. America was created with the goal of 'Equal Justice For All', even if it took many years of attempt. All Americans should be treated equally. No group should be considered above another and receive special treatment or benefits, as is stated in the EPA's Interim Guidance on Considering Environmental Justice During the Development of an Action. Such unequal treatment leads to class warfare. The EPA proposal states its goal "to protect the health and safety of the historically underrepresented...". Shouldn't the goal be to protect the health and safety of ALL Americans regardless of race, creed, religion, gender, ...?

Yes it should which is why something should be done about climate change, pollution and our overuse of fossil fuels. More regulations and fines if need be for the abusers!!!

As a victim of politically connected Enviro terrorists who can do what they want on their property but are deputy dogs on anyone else's I can tell you that Government Enviro agencies are corrupted beyond anyone's imagination. I used to be such a tree hugger that I wanted to join Earth First. However after watching what is REALLY being done which is terrorize anyone who is NOT connected, lie to authorities, and steal you property because they are Connected - then enough is enough. The government is a failure to police its own. The citizens who pay the freight are now the enemy.

One of the most critical things the Administration can do to protect and enhance wildlife in national parks across the country is to restore the landscapes and watersheds surrounding the parks. Restoration efforts underway in the Great Lakes, Chesapeake Bay, Everglades, Columbia River Basin, and other major watersheds should be supported and sustained. Restoration of these systems brings the added near-term benefit of thousands of American jobs on American lands, and the long-term benefits of clean water, recreation, tourism, and other values that are the economic backbone of countless communities across the country. Development, pollution, invasive species, and the changing climate are taking a toll on our national parks and their wildlife, from the coral reefs of Biscayne National Park in Florida to the salmon that migrate through Olympic National Park in Washington.

Proposed wilderness areas are vulnerable to human encroachment and need to be protected as soon as possible or will be lost as wilderness lands forever. Some of those opposed to a wilderness designation for sensitive federal lands are intentionally denigrating the land so that it will lose its wilderness characteristics. This is a challenge to federal lands that needs to be addressed before it is too late.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I voted to demote due to the flip side of this idea. That is that Federal agencies can acquire large areas and close them to all activities for 10 - 20 years claiming the place can't be opened to the public because there is no Gen. Mg't. Plan. In that long time the grass grows to cover the noticeable previous effects of modern man that would disqualify it for Wilderness. Then after 20 years NPS begins the planning process including a Wilderness proposal for 95% of it as has happened in the 147,000 acre Addition lands in So. Fla. under the rule of NPS. That should be illegal except that the Wilderness law has been amended to the point that my back yard in the city could qualify as Wilderness according to this unethical law devised by misguided elected officials in Washington.

Don't rangers have enough to do already? They are supposed to be experts on their park, be traffic cops, police, and rescue experts. What else, have them balance the budget too? Let them do what they're good at already.

My husband is a park ranger. He already does law enforcement, fire suppression, cleaning, building maintenance, interpretive programs on environment, history, wildlife, and flora, rescue work, trail maintenance, manages a water system, and the occasional domestic dispute. He also has to do budgeting, lobbying, deal with customer comments, and essentially run a hotel of cabins. Now you want him to become a public health nurse? When the history of the place warrants lessons on typhoid they already talk about it because they genuinely love their work -- nobody would work that hard for this low of pay otherwise!

I agree, but make sure OHV users and others have areas set aside for them as well.

I believe funding and preserving our State and National parks is very important both for our environment and our connecting with nature. They are the only source of nature connection for some and the best form of vacation for others. I can't imagine the United States without them. They are a most important legacy to leave our children and theirs.

OHVs degrade and erode the land they are driven on. It's really hard to preserve something while changing it beyond recognition. If we don't preserve natural places now, they won't be there to preserve later -- ergo, we need to preserve them now if we want our children and grandchildren to be able to enjoy them. We can find and designate some places that are already used by OHVs and let them continue to ruin those places, not areas that are currently off limits to OHVs.

Your OHV does not belong in our State and National Parks. Certainly there should be areas for you to enjoy too but not in parkland.

Great idea. Our forests are not simply an agricultural resource and should be managed for their inherent value, not just as commodities.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

In many western National Forests, timber is sold at bargain basement prices, which don't come close to recouping the federal tax dollars expended to build logging roads. In one recent year, alone, logging in the Tongass National Forest added \$40 million to the federal budget deficit. If it's not economically feasible for corporations to pay for their own logging roads, then so be it, don't log, don't build the roads, and the forest and salmon streams, and the federal debt will all benefit.

I agree, but why should there be any timber sales from the federal lands, even if they did make the profit?

I'm not opposed to some harvesting of trees, done in a reasonable manner. But spending my money to subsidize it is just wrong. If the loggers and their kin want to be partly on welfare, fine, but be a little more honest about whether or not this is what you are doing.

We need to preserve the lands & forests for the health of all wildlife & to allow the atmosphere to continue providing us with oxygen. It is these very places which provide cooling to a planet heading toward global warming in leaps & bounds. As a taxpayer, I do not want the money I pay into the government going to unsustainable harvesting of trees. Going toward replanting our forests would make infinitely more sense, while conserving our very future.

I agree that managed forestry needs to be practiced - unless we're willing to forgo putting out fires and let nature run its natural course across the country, something needs to be done to clean and clear overburdened land. Going in and *losing* money by selling a resource for this purpose, however, is unacceptable. If these resources can't be extracted efficiently, then other lower-cost methods of forestry management should be tried before money is diverted away which could be used for more noble causes.

I agree. I am not opposed to sane, responsible harvesting of timber, but large scale clearcutting is neither sane nor responsible!

Although wheeled access with internal combustion powered vehicles causes some controversy, access for the handicapped is needed. Greater provision should be made for the use of wheelchairs and slow, electrically powered wheelchair substitutes.

Bob Like your idea, yes wheelchair access and access for all of the handicapped is needed, but not sure how you would accomplish this. I would think a great deal of construction would be needed even if it was for a wheelchair, there are a lot of safety concerns that would have to be satisfied. If you are making this a proposal for within Wilderness Areas I doubt that after safety aspects were addressed that it would be a true Wilderness Area. I know that you are for preservation and wilderness so I am hesitant to bring this up and open a can of worms. But there are many groups that get the handicapped their access to the backcountry, no way near enough of them do this or are available, but it does happen. Four wheel drive clubs and other OHV groups transport them often. I have taken quadriplegic's on ATV's that they can operate on their own. While it is not in the National Parks it is in the backcountry and only up to wilderness boundaries. Feedback often is it was something they never thought they would experience again.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I understand your cause and am, in general, sympathetic with it. I have volunteered much time toward getting more people to experience the natural world. However, I think your statement needs qualification. Should there be wheelchair ramps (or other facilities) to get people to places such as the top of Mount Denali who couldn't otherwise get there on their own? I agree there needs to be opportunities for people who could not climb Denali on their own to still experience natural quiet, solitude, and beauty. I would even agree that some areas should exist that present them with challenges different from what they'd experience in civilization. But I don't agree that every wilderness and deep backcountry location should be made accessible.

It would be hard to tell someone with no legs that they couldn't access the wild in some kind of quiet mechanical device, but, people who are fat and lazy might claim to have a disability in order to get access on an atv to places deep in wilderness. I just don't think it's a good idea to give some people loop-holes. This idea would be ripe for abuse.

I too would be horrified if all areas of our natural parks and wilderness was suddenly accessible to me, just because I have mobility issues. People need to understand their limits and accept that there will always be areas that only those who are in peak physical condition can access such as the peak of Denali, walk down to the bottom of the Grand Canyon, or all the way up the Yosemite Falls trail. Our park system has try to carefully balance access of our national wonders with the needs of those who are mobility impaired. Only thing I can ask for is better access for information on those trails and areas that are easily access to those of us that are unable to walk far, with signs that give not just distance, but also elevation to view points. Also free access to maps that are well mark with handicap accessible trails and camp sites.and information online or pamphlets by mail to help plan our visits.

I think \_\_\_\_'s idea of increased access to information is helpful and would be of great benefit to mobility impaired individuals who visit our parks.

It would nice to be able to easily be able to plan visits before going to visit state and national parks knowing which trails can be easily accessed by those who have mobility issues. This means more then just putting the length of a trail on the sign at the trail head, but also the change in elevation and if it's graded for use of an mobility device such as an wheelchair, scooter or other device as defined by ADA rules. Also it would help if maps are clearly marked and available on the Internet for free. While at Cunningham Falls State park with borders Catoctin Mountain Park, It was impossible to figure from the signs and map posted if I could handle a 0.5 mile hike to the falls from the parking lot and I just had to take my chances that I could make it all the way to the falls and back on my own.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I can't agree with you more. I'm someone with relatively limited ability and if I couldn't read a terrain map, I'd be in a world of hurt when it came time to pick walking trails (I'm too decrepit these days to call it hiking). I don't know how much use they would be for someone using a scooter or wheelchair, but I use the USGS store site to look up and download .pdf files of various maps. They don't have access designations, but if you can read a terrain map, they can help you gauge whether or not a trail will be too steep. The link is { <a href="http://store.usgs.gov" rel="nofollow" target="\_blank">Link</a> } Just click on the Map Locator link to choose the area, then download a .pdf file of the maps you want. This is the best it gets until they start putting all of the necessary access information on the various parks' websites.

This sounds fine, as far as it goes. Just to be devil's advocate, what's to prevent a corporation from sending in 300 workers to pick 5 pounds each and wiping out the mushrooms in that area (also driving up the price). Also, I can see some lawyer salivating already: Somebody's going to pick a poison one and sue when they become ill, saying the government should not have allowed them to do it. Just a couple of thoughts.

I would agree with you with the caveat that the mushrooms be harvested properly by cutting the stem rather than pulling them out completely as I've seen some individuals do. As always, there are individuals who ruin things for everyone.

OHV's, even if they are electric, would still be destructive to the fragile environment and would crowd hikers, walkers, and cross country skiers off trails. Besides, they don't make any noise, so the typical OHV user wouldn't be interested. I see no reason that OHV users and their toys should have access to the parks and monuments. They have plenty of access to trails outside federal lands. Paying taxes does not give anyone, including OHV users, the right to trash the parks and destroy the enjoyment of nature by non-OHV users. OHV's are destructive and noisy, and many of the people who use them are not interested in nature at all. They just want to make noise and raise hell.

This addresses noise and fuel consumption, but does not address erosion and the destruction of trails.

"The people who participate in this activity pay their taxes and deserve to have some access to Federal lands." Hey, there's a marijuana grower on public land a few miles from here who's avoided detection because he pays his taxes. Gold miners who have eliminated fish habitat pay their taxes (well, maybe not). People who enjoy peace and quiet in the woods also pay their taxes. The E-range is NOT the only fully electric 4X4. There's an outfit in Ashland, OR (Barefoot Motors) that produces all-electric ATVs, but they target vineyards and orchards, not recreation. If you look at the Russian word for energy you see that it is synonymous with "work." So, how about you consider what you're contributing to society with your play machine, gas or electric.

Where are we going to get the money to support this? We don't have the funds to support all the programs we have now.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

What I have gathered after reading through this site for the last couple hours is that we need much more science based environmental education in this country. Whether people are for things like more, less, or no motorized vehicle use on our public lands is irrelevant if the majority of people commenting have inadequate knowledge (often it appears none) of what's really going on in nature and their impact, even if they are tiptoeing through the wilderness. I worked as an elementary teacher for several years and the amount of time given to science education in the lower grades was pitiful. Partly because there was very little time left after trying to get the kids ready for all the standardized testing forced on us! Whether you want to roar down a trail at 80mph on your snowmobile (Don't tell me no one does. I'm a snowmobiler and I don't, but I have heard the boasts and seen people do it.) or actually be able to hear the squirrels and birds as you hike quietly through a forest, it's very hard to make a rational decision without a adequate understanding of ecology and the natural environment. A good education doesn't mean you have to be pulled to the extreme on either side of the argument, but it'll make your arguments carry more weight.

Tody we have so many folks addicted to motorized entertainment that it is going to be very hard to stop .Our parks are not the only problem we are facing today , we also have more and more peolpe seeking a way to boost their low self esteem by removing their mufflers. My guess is that 90% of all Harleys today have the mufflers removed . Also a large percentage of Pickups and Ninga motorcyces also .

Good comments. I've always liked this quote by Frank Church. "As the floor manager of the 1964 Wilderness Act, I recall quite clearly what we were trying to accomplish by setting up the National Wilderness Preservation System. It was never the intent of Congress that wilderness be managed in so "pure" a fashion as to needlessly restrict customary public use and enjoyment. Quite the contrary, Congress fully intended that wilderness should be managed to allow its use by a wide spectrum of Americans."

4 retired experts and 5 local members at large from the county, so the experts could easily be overruled. OHV trail there it is. Only one OHV trail abuser among any number of responsible users could foul up a natural area beyond recognition. The level of monitoring that prevention would require to is logistically unworkable. Our police have enough to do already and don't need additional areas and activities to police.

Man has been an important part of the natural order for a couple hundred thousand years NOT a visitor. We have been harvesting game, timber and planting crops for most of that time. Humans are part of nature not just an outside observer of it. Perhaps you are not a part of the process of nature but you probably are. If you eat meat and bread, use toiletpaper and live in a house you are detracting from nature. BUT thats OK, its supposed to be that way.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Consultants for scenic highways are private and for profit, and do well whether things work out or not. Consultants on Tamiami Trail over an 8 year period walked away with \$400,000 dollars. Private companies can promote scenic hiways but won't get paid as far as I know. The program is prohibited from letting any private company be advertised by a scenic hiway in any way no matter what the company does for the program. Grant funds authorized for scenic hiways cannot be used for road repairs unless road defects can be proven to have been caused by increased traffic due to the designation.

What are we saving these lands for, what good is it to have something you cant use, if you look at the over all time man will be here on earth its just a fraction of the history of this earth, history has proven no matter how much you damage the earth it ALWAYS repairs itself and ends up being BETTER each time its repaired. Man is not going to be here much longer might as well enjoy everything to its fullest extent.

The initial "Wilderness Act of 1964" envisioned about 20 million acres as suitable. Today we have over 120 million acres of Wilderness where Public Access is restricted to non-mechanized means - Thanks to Robert Clark the point is made very well. Give the green team an inch and they want a mile. Maybe we should figure out just how much is adequate. Or is the arguement just grab all you can anytime you can. Harry Reid just introduced a drastic measure that must not pass HR3534 will cost us Billions of our tax dollars, for many years for the purpose of buying more lands, most of it by eminent domain. Look up the bill and call your congressmen and Senators. This is important to shoot down! When is it okay to run a farmer off his land? When is it okay to tell the fourth generation rancher they have to vacate because Harry wants their land to become "Wilderness"? Will the stealing never end?

If you want an education on what we tax payers are up against you should to Google "Wild Lands Project" Which used to be known as the Wilderness Project. Go to the link that says citizens review dot org and read what these radicals have in mind so you will be armed when a green team says they "need" more Wilderness. You'll be shocked! People who are part of the green team, if you are not aware of the adjenda you need to be. By crying more Wild Lands you are playing into a larger role of domination of the planet and it is real... look it up. If you care anything about humanity you may want to rethink what you want to be a part of.

## Discussion Question 2

### **Written & Online Comments**

**(cont.)**

Mr. Lamica, Thank you for the nod and adding valuable information to the pot! I have been aware of TWP ([Link](http://www.twp.org/)) for over a decade! Although their name has changed their breath still smells the same! I have advocated all this time and warned of the pending storm at every opportunity but have seen them and others like them grow into a group who now dictate the very content and context of this AGO initiative with Ken Salazar and OUR President as their puppets!! Enough!!! Those of you who are familiar with all of the Public Land closures in the West over the last decade need look no further than the TWP map on their home page at the ULR included above to see that they have achieved many of their goals already through various methods, most of which are dependant on massive amounts of money stuffed in the right pockets! Please DO NOT let the AGO go forward without your input, get out to cast your vote this November and beyond for FRESH Public Servants who are like minded and in tune with your way of thinking!!!

"Building wildlife over-or-underpasses mitigates pinch-points where major roads interrupt wildlife pathways. " How do they expect to get the animals to use these? Animals cross roads where ever they please.

Cattle ranching on public lands provides only about 3 percent of the beef to the US supply. This practice is, therefore, of only marginal importance to the total beef supply. However, to the ranchers who have grown dependent on this cheap source of feed, it is their way of life. A balance must be struck to protect and preserve the land for all today and for future cowboys, miners, hikers, bikers and gauchoes.

Cattle ranching is cheap for the ranchers at our taxpayer expense. Ranchers keep away wildlife & take away the rights of wildlife like buffalo & wolves & elk. Ranchers should pay a fair share to use Federal lands. All wildlife must have preference over rancher's cattle!

"Service grazing programs represent over a hundred million dollar a year loss in terms of low permit fees versus the much higher cost of administering these programs. " That is exactly the point, government can't even do simple paperwork without creating a negative impact on their budgets. Just how many employees does it take to issue a permit? I don't believe those willing to give up a grazing permit want to do so permanent. They being on the ground and really knowledgeable about the lands know, you need to give it a season off grazing now and then.

Only an idiot sells the rights to visit his backyard at the start of winter and expects to still have that right come spring. The seller isn't the one messing up the permanence of this sale. It's the current regulations that say the buyer has to 'use it or lose it' and it will be sold again. The problem is once a purchaser of grazing rights takes land out of grazing use, said purchaser is then forced to graze the land in order to keep control of whether or not and when it is grazed. That's counterproductive and in fact prevents land from ever truly being removed from grazing. The savings come when the allotment no longer needs monitoring every year as it is not being used for grazing.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The BLM loses hundreds of millions of dollars annually on grazing rights permits that are far below fair market value. The permit fees haven't been raised in decades. The Taylor Grazing Act is was put into law over 75 years ago and the fees were not raised then. The BLM also loses hundreds of millions of dollars on "controlling" predators and wild horses to benefit grazers. Yet less than 3% of US beef is produced on the range, millionaires and large corporations own most of the leases and the benefit to the local economies is very small. Even foreign corporations own grazing leases on US Public Land. It is a myth that cowboys and family ranchers are who owns the majority of the leases. Access to permits and allotments absolutely needs to be made available to all and at fair market value. If conservation groups or individuals want to pay the fees but NOT graze livestock on their allotments that only benefits the BLM. It is ridiculous that it isn't allowed.

Grazing brings profit to a few at huge costs to the many. Less than 3% of US beef is produced on the range yet most of our public lands are managed for grazing. Grazing leases cost hundreds of millions of dollars annually. Huge corporations and millionaires own most of the rights not family ranchers. The leases are not at fair market value, they haven't been raised in decades. The taxpayers subsidize grazing at a cost of money and destruction of habitat. and millions of cows are destroying the ecosystem not benefiting it. Cows trample riparian areas and destroy salmon spawning habitat as well. Millions are spent to try to save salmon runs but the BLM promotes grazing. Thousands of animals such as prairie dogs, coyotes, cougars, wolves and badgers are trapped, poisoned and shot "to protect cows" at the taxpayer's expense. Wild horses have been reduced to half of the refuges set aside by Congress for them. There were 2 million a hundred years ago and now there are 30,000 left. There are more in pens in the Midwest than running free. The BLM spends millions annually to "control" them yet they have never been proven to do any damage and are a re-introduced native species not an invasive one like cattle and sheep. Yes, horses evolved here and humans ate them to extinction here will in Asia they domesticated them after they crossed the same land bridge that brought humans to North America. Grazing leases should be made available to those who would want to pay for them but to NOT graze cattle on their allotments. There are plenty of groups and individuals who would do this but it isn't allowed. Grazing rights are sewn up for generations and sold at huge profits to the holders not the government. Grazing leases should be at fair market value. Millionaires like Ted Turner should not be subsidized as he plays at being a rancher. Huge corporations should also not be subsidized.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

To protect wildlife migration routes and give national park wildlife the freedom to roam, the Administration should require measures to enhance current and projected wildlife migration routes in all federally funded transportation and energy transmission projects, and in leases for resource extraction on federal land. Throughout history, Americans have worked to save national treasures in their own backyards to retain what they find special for our children and grandchildren. At Yellowstone and Grand Teton National parks, pronghorn have seasonal migrations, but fencing and road development outside of the parks have threatened migration routes, limiting access to winter habitat, and leaving the park's pronghorn at risk. To further protect wildlife, the Administration should create a multi-agency wildlife habitat and migration corridors information sharing network; push for new revenue sources and prioritize existing resources for the acquisition or protection of vital wildlife migration corridors. National parks are not islands and their humanmade boundaries are not recognized by wildlife. As the climate changes it is widely expected that wildlife will migrate further from their park homes in search of suitable habitat.

Recreational overuse of our water ways become a major threat to these most important wildlife corridors. Establishing recreation-free riparian environments could significantly improve riparian habitat.

We should certainly preserve the wild areas and Parks, but to assume that we can change the local impact of a global issue is simply foolhardy. Climate change is an issue for energy policy. We should absolutely protect local wildlife species from local threats. The two are separate issues, one primarily national, one primarily local.

Allowing the public to carry firearms in National Parks is a very recent development. I utterly disagree with it. Individuals can be too out of control to be allowed the ability to easily maim and kill wildlife and other people. There may have been some who were always armed before it was legal, but this law will dramatically increase the number of firearms in parks and therefore the potential for violence.

There weren't any mass murders BEFORE the firearms became allowed either. The law just went into effect this spring. How do we know the difference between patriots and wack jobs? Is the idea that we all just walk around armed to the teeth so arguments and offenses go to the level of deadly violence more frequently?

We can talk about parcelling out percentages of land for OHV, camping, mtn biking, etc but none of it will make a difference if our wild areas and wild animals are destroyed by our own love of being in the outdoors. Yes, there are lots of ways to get out and enjoy nature but we must take the "seven generation" approach and make sure that our wilderness is intact for those who do not yet walk on this earth. Since most of us can't think beyond next Tuesday, we need legislation that puts into action long range plans that put the health of the environment first.

There is not enough funding to maintain existing national parks. Our Federal government is already deep in debt and painful spending cuts must take place.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

All motorized use on public lands (county, state, federal) should be banned, period. Parks and forests are for citizens to relax, breathe fresh air, enjoy a natural environment. People who can afford \$5,000 or more for an ATV or snowmobile can afford to club together and buy or lease private land on which to enjoy their machines.

This doesn't really seem like much of an idea. There are only about 60 national parks in the U.S. and I certainly can't imagine creating 100 more of those before 2016.

This would be a great idea if the Boy Scouts weren't so exclusionary and discriminatory.

I also agree wholeheartedly that the BLM needs to be completely transparent.

Whereas I agree this would work in some cases, I had to demote this because of the number of tribes out there who are just as rapacious and exploitative as the greediest of corporations. One can't assume that all Native Americans are conservationists.

Actually, I should have said that there were tribal governments out there who are as rapacious and exploitative. Not all members within a tribe have the same notions.

Unfortunately, a very large number of those who own private forest lands are much more interested in harvesting every stand of timber large enough to make the process worthwhile. Most of those people then sell the land for development afterward, considering the length of time it takes to grow more timber. If you look at forested properties for sale in Washington state, as an example, you'll see that most of those properties have either been cleared of timber in the last 5 to 10 years or that it is being advertised as having a lot of marketable timber. That is neither conservation nor stewardship and I don't want tax dollars going to help those who are only interested in clearcutting everything down to the last sapling. If this program would fund only those who intend to nurture the forest lands and use only selective harvest to achieve any necessary thinning of trees to encourage larger growth and habitat for wildlife, I would be all for it!

How many people have been attacked in National Parks in the past 20 years where a visitor's gun would have saved life or limb? Darn few, if any. I feel much less safe camping near someone packing a gun than not. The only people who are sane enough to be allowed to have firearms are those who don't want one. At least until now, the real crazies stayed out of the parks because they couldn't bring their guns with them.

Todd, Since when is a study done more than 5 years ago invalid? And BTW, where is all your data showing that there is little to no impact? If you want to open up the public lands even more, then the burden is on you to make the case. Scientifically, please (even studies over 5years old are acceptable).

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

So do you think there is no place that should be off limits to your vehicles?

No money for the BSA. Girl Scouts of America are not biased the same way as BSA are. But they're not listed in the proposal, and promoting one gender over the other is still wrong for government money. Propose this again without the BSA involvement and I could support it.

We ARE living in a warm period of an Ice Age. Reality is that this planet has two climates which are very much more stable than the one we owe our whole existence to. The hot one supported the Dinosaurs for hundreds of millions of years, toward the end of that climactic period, there was the beginning of a true winter at the poles. That means snow only fell on Earth in the Arctic circles for a brief part of the year, and that it ALL melted each spring. The geological history of the Earth seems to favor that climate. The stable cold climate, (what we usually think of as an ice age) is most climatically stable when glacial ice has spread well into what we consider the temperate regions today, that is as low as the parts of the southern states. Remember glacial ice doesn't melt away in summer. We've been living all of human history including our hominid evolution in an uncommon, barely stable warm period of a long Ice Age. Human history records the major effects of only a few degrees change in temperatures one way or the other. Neither of the stable climates are anywhere close to the one we and the rest of the current life on this planet require. Every other change in climate has been far slower and smaller than what conservative climatologist project will happen if we don't make major changes. Yet those gradual changes have contributed to mass extinctions every time. Change is natural and normal when it is caused by natural or normal events. Digging naturally sequestered carbon compounds out of the Earth and burning them off into the atmosphere at even 10% of the rate we have so done at any time in the last century is not natural. We are nothing more than arrogant fools if we don't start making changes. And we deserve to not be part of the next planetary ecosystem we usher in by causing the current system to fail. Any steps that will help us halt, reverse or slow this trend are well worth the effort. Our future generations deserve no less.

You have a point that some (or many) Americans may have obese trends. But this is not a good solution. I have a hard time believing anyone would promote the idea that the Federal Government make it a requirement for physical exercise to be performed in order to be allowed to use the land that belongs to ALL of the people. This just seems to me to be such a BIG BROTHER IS WATCHING situation. More government telling you what to do and when to do it, it's scary! post above is so right on, she has the right to live her life in the fashion she desires as long as it's within the law and common courtesy of others! Now may think she is a racist, a teabagger and need a little bit more tinfoil and I guess he has his right to express his views – if they are right or not. But I think there is there is a possibility he really is offering up the extra tinfoil just so the government will be able to track better to see if she is doing her jumping jacks while in camp!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

My apology for my miss interpretation of your idea. I agree we need to encourage everyone to get away from "the obese trend" and I am with you right there. That is a personal life choice everyone needs to make for them self. But with your statement of "Recreation on government land should require physical exercise..." the word "require" leads people (at least me) of some type of enforcement to satisfy the "require(ment)" or mandated exercise. And I think your idea is making more of a reference to the government setting up a passive attempt in making people "get more exercise" as they visit National Forests and Parks without them realizing it. Personally I am a "dirt" tent camper and stay away from the parks and where the crowds go that usually want the amenities that you are suggesting be done away with. But that is my desire and there are others that desire or often require (physical needs) the amenities of electric hookups, convenient parking lots, and others so they are able to visit the forest and parks. Shouldn't this type of concern be directed towards United States Department of Health and Human Services rather than the DOI? A creative idea however, but I guess the words government and require just keeps me feeling we have too much governmental requirements in our daily lives all ready! Again, My apology for my miss interpretation of your idea.

I have lots of Free(dom) of Speech as stated in the 1st and 14th Amendments to the Constitution of the United States. I also have lots Wilderness Areas and I don't feel either are going anywhere.

Now why should we do that they are no longer endangered so why should they be protected? That entire act should be changed we were lied to when it was passed we were told it would protect the eagle but it is being used to protect pest like rats and yes wolves. Wolves are pest who kill farm animals and US pets. The act should be modifying to protect only major animals and all species added should have to be approved by congress every few years in televised hearings to keep pest like rats insects and blind fish off the list. In addition it should be modified to comply with the Constitution in that if any land owner is harmed he must be compensated as a taking. If you are told you can not mow your land because of a kangaroo rat then the gov must pay for your loss. Or pay to move the rat. the current law violates the takings clause.

We do not need a Climate Science Centers because the only people who support global warming theory are those who receive grant money to do research on it. Such an agency would only rubber stamp the disproven theory.

The Socialists and Communists always know what is best for the masses. As the President of the Audobon said (I paraphrase) - the people living on 20 acre "ranchetts" are the biggest threat to the environment. We will not cease until they are all relocated to the intercity using mass transportation. And the Water people say the biggest threat to the pollution of our lakes and rivers is not septic tanks but storm water runoff. My "ranchette" has natural perc - Only the "CITIES" have storm water runoff - Does ANYONE see the INSANITY from these property rights stealing Non Profits?

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I find the Question is - how can a National Organization of Bikers with only 33,000 members nationwide have the clout to get Billion\$\$ to create more concrete to create more stormwater runoff, global warming, etc.? Their DEMAND for paths have torn up decades old beautiful landscaping, cut down trees, and created a road hazard on country roads where the pathway ends. They are NUTS. The rudeness of those on bicycles is only topped by those arrogant and drunk.

It seems people that are lucky enough to live near wilderness sometimes don't appreciate it. It seems they are in a rush to develop what they have, until it's too late and we can all look back and say "we should have" or "we could have".

Wolves are an important part of the eco system that were here before this country was established. What really needs to happen is enough land needs to be set aside so they can thrive again, without being forced onto farmland or into suburbs. Any animal that becomes extinct is a shame. Extinct means gone forever. Once animals start disappearing (which they are), it's only a matter of time before we are next. This may not happen in our lifetime, but I don't want to leave that legacy for my children or grandchildren.

"Security lights" left on by neighbors are annoying. Motion detectors would be an improvement over spotlights left on all night. We don't have streetlights in my small, unincorporated area but the commercial strip two blocks away is very bright; in winter I can see the golden arches of McDonald's from my house. Some towns have begun using solar operated streetlights, which save a lot of coal-produced energy. I see the commercial areas as the biggest offenders for lighting up the sky all night long. There are two large office buildings nearby built out of glass and lit up all night!!

Mr. Moffatt, You regurgitated all over my idea with your "fat and lazy" agenda and denigrated my Military Service to OUR Country, my fellow Veterans and the valiant Veterans who have gone before us in defense of OUR Country in addition to those brave and selfless young women and men currently serving OUR Great Nation! The disability I suffered while serving OUR Country is real, this coupled with my age disallows me from walking great distances with a heavy back pack into places like I once did but I should still be allowed to visit many of them via other means. While serving I defended your freedom of speech and access for ALL to OUR Public Lands. I am neither obese nor do I spend time with my butt parked in front of a T.V. or playing computer video games as you assert everyone in the world other than you is guilty of. I am out working my acreage 7/14/365 and when I can get a break to camp I do it in a tent on the ground in unimproved areas with no music, T.V., portable DVD player or anything else electronic except a cell phone which is off at all times excepting a personal emergency or to assist others with one. You are in my opinion an elitist pompous arse . . . period!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

While I agree about the value of extensive outdoor education and of after-school care, I definitely oppose further support for the BSA. Not only are they biased, they are poorly run and poorly policed. Here in Utah they are an arm of the Mormon church, and reports of deaths in poorly prepared troops hiking in the hot desert summers, of drownings in slot canyons in flood stage, and sexual victimization by leaders are not nearly as rare as they ought to be. If only we had a "Junior Sierra Club", something of that sort. I hope I'm not taking my life in my hands by saying that---as I said, I live in Utah.

I own three patented mining claims. At the time this law was created the government wanted people to go out and make a living off the land, how things have changed. I suppose that the land that people homesteaded should have to be returned to the federal government too?

Carrying loaded firearms for personal protection just got allowed recently. Prior to that you could carry them sometimes (hunting season) but they had to be cased and empty. Doubtful this will change soon.

One BIG problem - the standards to meet the Wilderness criteria have been amended down into the dirt and practically any piece land can be qualified. No Original High Standard - No Wilderness in my book.

This problem is obvious if you read Scoping Comments and then the DRAFT EIS on just about any BLM project. I have spoken with BLM employees who just shrug and say, "The bosses didn't want it in there." They actively discourage objectivity among their employees. Even worse, they had a great disdain for the average citizen. I have spent hours researching EAs and EIS documents, submitted lengthy, detailed comments with appropriate citations, and seen a follow-up document that dismisses these comments as "not substantive." "Not substantive" in BLM-speak means, to me, "We don't agree." Fine, don't agree, but tell my WHY. Nor does the average citizen get representation in any BLM activity. If I were a corporation, a special interest group (OHVs), a local government or even a tribe, I could get a seat at the table. But John Q. Average has no voice in the public process with BLM. Salazar needs to clean house!

Why do people think they can live wherever they want and the rest of have to put up with the decline of what's left of our wilderness and wild species? Biodiversity and healthy ecosystems are not only key to humanity's survival (as if that weren't enough) but they are also every American's right. Wolves are a natural and important part of the wild landscape - an ecosystem that does not have its top predators is not functioning properly. Furthermore, I and my children deserve to see and experience animals that for many centuries have lived in and are a symbol of the American wilderness. Why is someone's right to own property and do what they will with that property more important than my right to know and enjoy unadulterated nature? They don't have the right to destroy a species just because they want to have lawns and ticky tacky boxes or herd cattle or sheep right next to a National Forest or Park. That's not part of the bargain of private property in this country. And if they do choose to live and make their living on the edge of a park or forest, then they should have to abide the consequences (which is that some of their sheep will get picked off or they will have to dispose of garbage in special containers, or not be able to have a lawn, etc).

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The fact that there has been no revision of this law and that the public lands of our country can be had so cheaply is a national travesty.

Wow! Thanks for the information! Very in depth and illustrates why further measures need to be taken to restrict ATV use.

Currently, Internal Revenue Code section 2031(c) provides an estate tax exclusion of 40% of the value of land protected by a conservation easement. Unfortunately, this exclusion is capped at \$500,000. In the context of rising farm values this exclusion is woefully inadequate. The American Family Farm and Ranchland Protection Act, H.R. 3050, would increase this existing exclusion to 50% and raise the cap to \$5 million – providing a powerful incentive for owners of high-value agricultural, forest, and natural habitat lands to protect these properties in perpetuity. More than 70 percent of wildlife gets food and shelter from our working farm, ranch and forest lands, and the greatest value for wildlife and other public benefits comes from the large, contiguous properties where estate taxes frequently force families to subdivide and sell their land for development. In fact, due to high land values, farmers and ranchers are disproportionately subject to an estate tax at a rate of approximately 4 times that of the general public. On private forest land, the U.S. Forest Service has invested heavily to promote sustainable forestry. As second home development pushes deeper into our forests, inflated tax values make it increasingly difficult for forest owners to hold on to the timberland they've stewarded for generations. In fact, a 2006 study indicates that approximately 2.4 million acres of forest land are harvested and 1.3 million acres are sold annually to pay the federal estate tax. These outcomes are no way to reward a good deed and good stewardship. We can avoid them by expanding the estate tax benefits for landowners who have permanently protected their land. The Joint Committee on Taxation has scored H.R. 3050 as costing just \$132 million over ten years, but its impact would be enormous, encouraging thousands of landowners to work with land trusts in their community to ensure that lands with important conservation values for the public are never lost to development. This provision works well with a deferral of estate taxes on family farmland (H.R. 3524) and we expect new House and Senate legislation in the coming weeks that will combine these provisions. This provision also works well with the enhanced income tax deduction for conservation easements (H.R. 1831) setting up the opportunity for America's Great Outdoors to promote a conservation tax package. For more information please visit: [www.lta.org/estatetax](http://www.lta.org/estatetax).

I agree whole heartedly! BLM is not acting in the interests of all. Just who are they acting in the interest of????? Pay-offs? Greed? Investigate!

I wish to absolutely agree here. There is no way money should be put into an organization with such discriminatory and indoctrinating practices.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Wolves killed 6 cows in Oregon last year. Eagles killed over 200 lambs. Shall we shoot every eagle on sight? Loose dogs killed countless cows as they do every year. They aren't kept track of because feral packs of dogs are a dirty little secret of rural life and everyone loves dogs. The group Defenders of Wildlife does compensate ranchers across the West for valid wolf kills. Coyotes are eating people's pets in suburban and even urban areas across the USA not wolves. Coyotes have spread far beyond their native habitat in the last hundred years. Why? partially because wolves were hunted to extinction. Wolves prey on coyotes and kept their populations down and kept them confined to a much smaller section of the country. Unfortunately, human killing of coyotes does not work to reduce the population. Unlike the wolves, humans can't be in their territories day in and day out and when humans kill coyotes they just breed bigger litters. Wolves belong in our wilderness areas and in our national parks and deserve protection.

Not only do they need to stop illegal grazing but they need to completely overhaul the grazing program. The BLM loses hundreds of millions of dollars annually on grazing leases. The fees paid are decades old and far below fair market value. Big corporations and millionaires own most of the leases not small family ranchers. Less than 3% of US beef is produced on the range yet the BLM loses hundreds of millions of dollars not only on the grazing program but to "control" wild horses and kill predators at the taxpayer's expense all to benefit cattle and sheep.

They are losing hundreds of millions of taxpayer dollars annually on grazing permits, wild horse round ups and predator control and they don't want the American public to realize what is going on. The BLM acts like they are the Bureau of Livestock and Mining not Land Mangement. There is no benefit to the land or to the government or to their finances in the way they operate. Grazing, mining and drilling fees are at rates that are decades old. Far below fair market value. They are actually killing wild horses and wildlife. They pay to have wolves, cougars, bears, coyotes, badgers, prairie dogs, raccoons and other wildlife killed to protect cows and sheep. Eagles actually take hundreds of lambs, can you imagine the out cry that would result if they were killing eagles too? The public doesn't know about all the other animals. They are rounding up wild horses in the heat and snow with helicopters. Paying the company over \$500 for each horse. They "lost" 200 last winter in the Calico round up and over a dozen in July in Nevada. They are emptying lands set aside by Congress for wild horses of wild horses. They are not allowing the media or concerned citizens/groups to observe. This agency desperately needs an over-haul.

Unfortunately, the Boy Scouts are a religious organization, and shouldn't receive Federal support.

When the use of a resource such as a park or national forest degrades the quality and the value of national resources -- in effect "using up" instead of simply "using" -- it is fair and appropriate to place limits on those activities. For that reason, we should limit the access of off-road vehicles to national parks, national monuments, etc. Let those vehicles be used on terrains where they are not causing deterioration of lands that belong as much to me as to any biker.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Well-balanced programs that can teach our children the value of preserving our remaining wild lands and the skills to do so could be extremely beneficial. Note my use of the term “well-balanced” which the Boy Scouts most decidedly is not. Any such proposal for the creation of publicly funded programs must ensure that access and membership are open to all children regardless of sex, sexual orientation, ethnicity, religion or other factors before receiving any consideration whatsoever. The Boy Scouts is an arrogantly discriminatory agency that intentionally refuses membership to children who do not fit its bigoted criteria. The Boy Scouts is in no way and at no time entitled to the imprimatur of any government agency or the use of any public monies.

We have more than enough laws and regulations in place already. We will not have our land turned into a monument. Why cant the enviros just enjoy life instead of always looking for something to save?

Put the Northern Rockies population of wolves back on the Endangered Species list so they won't be hunted. Allow wolves back into Utah now. The Ecosystem is dependant on even wolves. They were here before us and all that was here should remain.

While I agree ohvs should only be allowed on restricted areas they should never, under any circumstances, be allowed into national parks so I have to demote the idea.

I think you misspoke. I think you meant to say the only ones who DON'T believe in global warming are the ones who have been paid off to think so.

Like many federal agencies given the responsibility of looking out for our wildlife, forests, prairies, streams, rivers and lakes they have been corrupted for years. I would like to see many of them disbanded and reinvented with environmentally friendly voices like those from non profits given a voice in decisions. Ending the secrecy would help also but as long as the right controls the media it would not help as much as is needed.

No. The LWCF already funds essential programs. Conservationists should not be competing for such a small pot of money (\$900,000.000 max!). We need Additional funds to preserve private lands plus an EXPANSION OF LWCF's budget. WE ARE RUNNING OUT OF TIME.

thanks for your input. Well documented and the note to monitoring civility on these posts is well-placed. I have to demote this idea also because I believe ALL OHV should be banned in public parks/wilderness area. OHV's should pay a fee and go play on private land. It makes me ill to see them destroy any land whatsoever, but private is private. I can only promote any ideas that entail the total banning of these unnecessarily destructive, noisy, fuel-burning, air-polluting monsters on public lands. I have periodically thought about taking a .45 with me on my hikes and blowing out a few engines, but my hiking partners have assured me that jail food isn't as good as it used to be. So, I'll have to settle for more civilized methods of expressing my dismay and working for change!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Boy Scouts? How about Girl Scouts? In Utah, the BSA is a Mormon-run organization and the Mormons are not leaders in environmental preservation. Quite the opposite. Private money only to gender-based groups.

This idea confuses the use of taxation to raise money for governmental functions and the use of public policy to set parameters for, among other things, land use. It also confuses the role of state and federal governments as set by our Constitution. Allowing ATV/UTV access to wilderness areas is nonsensical. Have you ever seen what ATV users and snowmobilers do to an area? It certainly isn't wilderness when they're finished.

The National Park Service can't maintain the parks they have now and you want to add 100 more? sounds like a recipe for disaster to me.

To assume that the present climate should remain in perpetuity is both arrogant and ignorant. It is totally contrary to the cycles and every changing patterns of mother nature. If it weren't for climate change all of the animals of the world including ourselves would be living in an iceage. Maybe instead we should study how the earth regularly changes and see for its inhabitants adapt and evolve. Some might refer to it as evolution.

Arguments like this amaze me at times. We aren't broke because we have too much government spending, we're broke because we don't the lower classes jobs with dignity and instead shuffle them off to work at McDonalds or Walmart and what little they get goes right back into corporate hands, not small businesses, not the community. If we don't create jobs that, while possibly being less glamorous, are good solid work and useful than we have to accept that we might have to support people to live because there are no jobs for them. You can't automate someone out of a job then call them lazy.

Any motorized vehicle that burns fossile fuel, is heavier than an average man, and makes more noise than a conversation imacts the environment and degrades the public land more than most other users. Why should one user be able to degrade the public land more than another? It may be "legal" but is not ethical.

I agree, I have sent emails and letters to the Southern Nevada office and get nothing, the Guys in Calente NV are will to discuss issues and possible soultions and the staff admitted the Las Vegas office had a totally diffrent outlook and attitude, I'm a government employee and would never treat a tax payer the way I have been treated.

Just this summer we hosted students from the Tahoe Baikal Institute, which is a program that brings environmental scientists from Russia/Lake Baikal to the US/Lake Tahoe. Students spend six weeks here and six weeks in Russia. One of the major environmental threats in the Tahoe Basin that they identified was cheatgrass- it is everywhere here. Besides edging out native grasses, cheatgrass is a serious fire hazard. We have removed it from our own property the old fashioned way, by pulling weeds, but what to do about the millions of acres it has infected?

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

We need our some of our forests for hiking, mountain biking and other outdoor activities. In New Mexico, we do have some areas where people can use atvs, but we also have some designated wilderness areas where atvs are not permitted, or can use the forest service roads, but can't go off into the forest with them. They also have to have a permit. Off-road vehicles can damage the forest areas and disrupt wildlife. My mother's family has a cabin in Colorado located in the National Forest near where a couple of generations of ranchers have had forest land where their cattle graze. The ranchers in the area would not want people with off-road vehicles to be allowed in the area because it would tear up the grazing lands and scare the cattle. The homestead and the land has been in our family for 3, going on 4, generations now. We would like to see that our land and the surrounding National Forest stays the way it is, so future generations can enjoy hiking, mountain biking and other outdoor activities without the noise of off-road vehicles.

S.Colins, I don't think patented claims are part of any proposed reform. And this has nothing to do with homesteads. Those are private property. Miners pay almost nothing to mine on public land and can displace all other uses. That means government money is going out and all it is is a loss for taxpayers. The rest of us deserve compensation. I don't want to pay your way.

Recreation means different things to different people. One dictionary definition described it as "diversion". If America is going to break the obese trend we're in where it is normal for everyone to be overweight, the government is going to have to participate by quitting rewarding fat behavior. Recreation on government land should require physical exercise that gets the heart rate up. It should reward people who drive to campsites in small vehicles. It should reward vitality and shun TV, video games, beer parties, target shooting, car hunting, OHVs, motor home camps and sit-a-thons.

this is not a "Big Brother is watching" suggestion. There are very simple ways the transportation system in national forests and parks could be changed to encourage people to get more exercise. And there are simple things the government can do in designing campsites that would encourage people to sleep in tents or on the ground. Why does the government need to provide electric hookups in campgrounds? They don't! Or, what about making parking lots well away from scenic areas and trails leading away from them. You don't walk, you don't get the reward. I know of beaches where you can drive right on the gravel and camp with your trailer spitting distance from the river. That is lazy to the max fat behavior that encourages beer parties and garbage dumping. Who the heck needs a drive through redwood tree or a parking lot on a mountain top? My idea is about common sense, not big brother. It's about getting to know the land, not insulating yourself from it. Government land is big enough to get some exercise on. If the government wants you to get some exercise, they don't need to watch you or know where you are.

I know of many places that would make very fine additions to the wilderness system, and they have not yet been included because they have some marginal forestland on them. No other reason. No roads, no ohv trails, no mining scars, just pure wilderness. Big areas too.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The right wingers just don't get it. They say the envirofreaks are taking away their rights to transport cattle and feed (that carry invasive species seed). And then they complain cause their field is worthless because of something like star thistle. Then they want the government and taxpayers to come fix it. I just shake my head. The enviros aren't the problem. It's the cows. It's the feed. This is a message of hope. My hope that, if you have hate for someone you call an envirofreak, may your field become a star thistle patch.

The Siskiyou Crest is unique in its geology and geographically. It really is biodiverse and it needs to be preserved now and for the future. I have hiked a number of trails of the Siskiyou and realize that many areas are not well protected - even though many remain designated as wilderness. Many areas have been harmed by logging, roads, off use vehicles and livestock grazing. I live in this area and I know we need full protection for the crest and pristine places and restoration for the rest. The Siskiyou Crest is a valuable and important ecosystem. Jean Mount

Sadly, especially in the sense of recycling plastic, it is only delaying the inevitable. Recycling was for the most part put in place to satiate guilt over consumption and convenience. We need to focus on educating for less consumption. Read "Garbage Land" and you will understand the cycle.

I am tired of selfish, elitest, environmental snobs trying to tell me what I can and can't do on PUBLIC LAND and trying to close it down to everyone who does not fit their definition of acceptable recreation. I agree, I too am physically handicapped and would be unable to access our beautiful forests, mountains, etc. if it weren't for motorized recreation. Sure there are a few beer swilling jerks out there and I am all for getting rid of them. But for every one of them there are a hundred people like me that stay on established roads and trails, don't trample the earth, and clean up after ourselves - leaving the area as clean or cleaner than when we arrive. I carry a trash bag with me and clean up litter when I can. If you can't stand the sight of people like me, there are millions of acres of Wilderness that I am unable to access - so go there!

Why are hikers so negative? Well, I guess I shouldn't say all, I've never had a bad experience on the trail, mostly people complaining on the internet....makes me wonder if the people that complain ever actually use the trails.

It's not just Idaho. This is the perfect opportunity for all user groups to cooperate and actually do some good for the land, and I've said this before. Instead of everyone spending money on lawsuits over access issues, we need to be spending it on this.

Excellent idea. Where I live, there is a trail that will soon be closed if the Wilderness expands. It's been ridden by mountain bikers for years. As a matter of fact it even mentions in a hiking guide that it makes a good bike ride as well. The pro-Wilderness folks won't even compromise by shifting the boundary. It's such a remote trail, that conflict is not likely at all. There's absolutely no reason to close it to bikes other than selfishness.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

BSA is a private organization, which is why it's allowed to exclude gay Scouts, which is, in turn, why it is ineligible for public subsidies. The Supreme Court just recently ruled on this. See *CLS v. Martinez, et al.* { <a href="http://caselaw.lp.findlaw.com/scripts/getcase.pl?court=us&vol=000&invol=08-1371" rel="nofollow" target="\_blank">Link</a> }

Me either, I would support this as long as the private farm owners are not large corporations. I can't help wondering if there is some hidden loophole here for them.

What we need is a BIG Tax on OHVs ATVs and UTVs in order to build a few small trails to keep the riders out of our National Parks and Public Lands.

I think this is a great idea but, how will it be funded? Almost nightly I hear on the news some report about how over-taxed we are. Perhaps it could be tied in with welfare benefits?

Support federal legislation to avoid permanently protected lands during the siting of utilities. If protected properties cannot be avoided, utilities should be required to mitigate the damage. LTA is sponsoring a National Utility Infrastructure Coalition and working with Congress to pass legislation to ensure that our permanently protected lands are safeguarded forever.

Recreation in the Salmon Challis National Forest is not going to be an issue soon, as the Forest is dying. I would call the attack of the Western Pine Beetle a National Emergency! Hundreds of thousands of trees are dying daily. Every summer that goes by we see more and more forest dead, and new trees dying, and yet we see nothing being done. Mother Nature isn't going to take care of this one. I was recently in Canada and stopped to read about how the beetle had come to their forests near Revelstoke, BC. The Canadian government realized they had to take action and they did, with aggressively cutting down, spraying and whatever it took to eradicate this destructive pest. I can't understand why nothing is being done in this country. I'm frightened that we won't have any forest left in Idaho, not to mention the fire threat these dead trees pose.

People can enjoy wilderness if they have the willingness to actually get out and work at it. I can't go everywhere others can go because of my physical limitations, strength, etc., but I don't expect others to accommodate my deficiencies out in the wide open spaces. People who are afraid of wilderness designations and public lands in general should go to places where all land is owned and see how far they get with trying to "trespass" on someone's property with their ORVs, etc.

I don't really think this is realistic for the reasons other stated, but I like the reasoning, especially the idea of connecting areas into complete ecosystems. Fragmentation of ecosystems is a huge issue that needs to be addressed in a comprehensive way.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Recreation on government land should require physical exercise that gets the heart rate up. It should reward people who drive to campsites in small vehicles. It should exude vitality and shun TV, video games, beer parties, target shooting, car hunting, OHVs, motor home camps and sit-a-thons. I'm disabled with chronic back problems. I guess I'm supposed to stay out of natural areas so these fitness freaks don't have to look at someone with gray hair limping around. I can't ride a bike or hike very far. I don't have an RV but I do have a Jeep and a tent with an inflatable mattress. Heaven forbid any one target practice, that would mean they have a GUN!!! Not only does "O" want to tell me what to watch on TV, he wants to tell me where I can watch it. If I want to take a portable TV or video game camping it is none of his business, though for the live of me I can't imagine why anyone would. If a group of us want to sit around and enjoy the great outdoors together what in the world is wrong with that? I do with there was some way to exclude the jerks who litter and leave graffiti on cliffs and rocks. Someone need to tell this administration that the government is the people not Obama.

One humorous aspect to \_\_\_'s idea is the fact that any taxes paid by "The Feds" would be, in fact, paid by the US taxpayer. Where does \_\_\_ think "The Feds" get the money they have to operate? From the US taxpayer....just sayin'.

If native Americans are willing to limit their use of these lands to pre-industrial tools and techniques, then I'm all for this proposal. If this law just grants the tribes special rights to access the lands to freely use their ATVs, motor boats, and firearms there, then this is not a solution to the problems.

How many people have been involved in a firearms incident or mishaps in National Parks I am having problems researching this. Thanks

Everybody needs to spend all their free time with a shovel out trying to control all the erosion I seen when driving around CA ,AZ, NV, NM, UT, ID, WY anybody that has not been to these areas should take a look its almost all washed and blown away we need to take action soon I have seen canyons more than a mile deep and a mile wide you should see this mess its horrible.

No thanks we have so many failed do good for all ideas we cant afford any more.

In economics, free goods are one justification for government. Because the good is "free" most people have no incentive not to waste or destroy the resource. National Parks, wilderness areas, national monuments, national forests, etc fall into this category. The government MUST regulate users of these resources in order to maintain its natural state. Roads and especially off road travel severely damage the resource. If off roaders want to damage a resource, they should damage their own property not the publics.

See "Tragedy of the Commons"...

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Cheatgrass and other invasive species are gradually destroying the natural habitats in the West. These invasive species are expanding and reportedly collectively now cover an area larger than the state of California. Cheatgrass crowds out native vegetation, and creates excessive fuel loads when it dries out in the summer. When fires occur, these excessive fuel loads can change what was once a natural and beneficial disturbance process (fire) into an unnatural agent of destruction. Cheatgrass thrives on repeated fires, but the frequency and severity of the fires may gradually remove the natural vegetation and even the natural seed bank in the soil. Eventually, the permanent outcome can be an alien, annual grassland that is largely sterile for native wildlife and ugly to look at. This is a relatively quiet ecological crisis. Can you imagine the public outcry if many millions of acres were strip mined in the West? In my view, the response thus far by federal agencies and other stakeholders has been proportionally small compared to the enormous magnitude of the threat posed by invasives. Indeed, in most places, the invasives are still expanding. The challenge will be to aggressively apply the best science and tools to stop and reverse this expansion, and to better educate the public about how they may be inadvertently aiding in this expansion.

As someone who has followed federal lands issues in the West for many years, I believe that federal agencies need to be much more consistent and effective in how they respond to illegal or trespass livestock grazing situations. I have heard or read about BLM or Forest Service livestock grazing trespass situations that have lasted many years. For example, there is one publicized chronic situation near Mesquite Nevada where the trespass has reportedly occurred over the past fifteen years, and in critical habitat for the threatened Mojave desert tortoise. I believe that federal agencies can charge the offending rancher for the administrative costs of enforcement against the trespass, for the resulting resource damage, and, as a last resort, for the agency to round up, impound, and auction the trespass livestock. These cumulative costs should add up to a large bill hanging over that rancher and his family/heirs, and so I wonder why these chronic trespasses continue. Are the agencies not adding up these costs or submitting these bills? Are the federal managers afraid of the ranchers or their possible political connections? Are there no ways to track these chronic trespass situations so that the managers and ranchers can be held accountable? I recommend that the Obama administration establish a consistent program for tracking and monitoring the status of all federal lands trespass grazing situations. This would bring accountability from outside the local areas, and perhaps motivate more managers to do everything legally possible to stop the trespasses and recover the costs. The general data showing the status of trespass cases around the nation should also be available to the public, as part of the Obama administration's commitment to greater government transparency. Where there is a substantial delay in stopping a trespass or recovering costs, this program could flag those delays so that the manager could either provide a reasonable explanation for the delay or be disciplined for dereliction of duty. The BLM and Forest Service are supposed to manage livestock grazing as a multiple use, consistent with a variety of laws, regulations, plans, and policies. Allowing trespass grazing to continue violates all of those, and should be a huge embarrassment for these agencies. As such, the agencies themselves should support greater transparency and accountability to help shield them from the local pressures that may otherwise undermine prompt compliance.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

As someone who has followed BLM issues in the West for many years, I believe there is a pervasive, unwritten "culture of secrecy" in some BLM offices. This occurs where managers unofficially let employees know that they should not put anything in writing on sensitive issues unless they obtain prior approval from the managers. This can have a chilling effect on any employees who may want to document a concern in writing on a sensitive issue. This can also include when an employee wants to document something that they reasonably believe may be improper or illegal. BLM resource professionals are hired because of their substantial academic training and practical scientific experience, but that expertise may be diluted or lost if they are too intimidated to put their actual findings and recommendations in writing. This secrecy would also seem to frustrate the Obama administration and Interior Secretary Salazar's professed commitment to greater government transparency and accountability. If managers are successful in preventing anything in writing that they may disagree with, what is the point of Freedom of Information Act (FOIA) requests or discovery requests in litigation when everything in the official files has already been "sanitized" (like a motel room toilet seat) for the managers' protection? If President Obama and Secretary Salazar want to walk their good government talk, they need to root out this de facto BLM "culture of secrecy" wherever it exists, and discipline any managers who seek to maintain it.

What are the details of this idea? For instance: Would the private owners be given money from the gov't to "conserve" these privately owned easements? What does "conserve" mean in this instance? You state that these easements would remain "agriculturally productive" What does that mean? Would taxpayer money be subsidizing the private owners to grow crops? What would be the constraints on the landowners re the use/treatment of the easements?

You are absolutely right, and I will go even further. Several million acres of public lands are sverely damaged by 'legal' grazing that should be ended in the interest of soil errosion problems, stream degradation and extensive loss of plant species. These grazing rights have been passed down from generation to generation and are regarded by the privileged ranchers who benefit from them, as practically their God-given-rights. They are grazing their cattle on land you and I own.....to the detriment of that land!

Um, aren't WE the "feds"? Where does federal money come from? Oops, just read Tim's comment. Great minds...

When I am hiking, snowshoeing or cross country skiing I don't want to hear, see or smell the polution caused by OHVs.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

People should be aware that conservation easements always exclude public access. So public tax dollars that are provided to non-profits for the purpose of purchasing conservation easements do not improve recreational opportunities. They primarily benefit the landowner, who gets to sell his land twice. In our western states, conservation easements lock up more scarce private land, drive property values up, and restrict growth of communities. As property values increase, affordable housing becomes difficult to find, and, eventually, our small western communities become affordable only to the wealthy. I do not support the use of public funds to support land trusts. There is simply no guarantee that these funds will be used in the best interests of the public.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Dude, There isn't room for all the studies - hey and try to be a little civil with your tongue. Here's a start on your query. Currently, hundreds of thousands of miles of routes give off-road vehicles abundant access to our parks, forests, and other public lands and waters creating an imbalance between the amount of land available to off-road vehicles and the amount of land available to non-motorized users. For example, off-road vehicles are allowed on 93% of the 264 million acres managed by the Bureau of Land Management. Although ORV users represent only a small percentage of the total number of people recreating on public lands they are having a disproportionately large and harmful impact. Since the roar of motors can be heard by people and wildlife miles away, these vehicles can ruin the experience for those who choose to experience the outdoors without motorized vehicles. 3. Federal agencies have failed to enforce laws designed to protect our wildlands and drag their feet on implementing important new regulations. Exacerbated by inadequate or no route planning as well as severe lack of monitoring by these agencies, illegal and inappropriate off-road vehicle use has continued largely unchallenged. Americans want to experience natural quiet to camp, hunt, hike and fish with their families on their national public lands free from the roar of engines and the pounding of pistons. The Federal government has an abysmal record of enforcement of even established regulations barring ORV use. My personal experience comes from Arizona and the Coconino National Forest where ORV users transit signed/prohibited areas regularly. Repeated calls to Forest Service Law Enforcement brought zero results. The excuse given was insufficient resources. There is NO reason to believe that the situation for FOREST SERVICE is any different. Now in Williams, I hike an area where it is clearly signed "No Motorized Access", but ORV use takes place there regularly. 4. ORVs also emit large amounts of pollution, including carbon monoxide, hydrocarbons, and carcinogens such as benzene. The small, inefficient two-stroke engines of some of these machines spew out as much as 30 percent of their fuel unburned polluting the soils, air, and water of our National Forests, National Parks, and other public lands including Oregon FOREST SERVICE holdings. With 36 million registered all-terrain vehicles and 12 million registered snowmobiles in the U.S. alone, these machines are a significant source of pollutants. They run on inefficient two and four-stroke engines that emit several dangerous gasses and chemicals including carbon monoxide (CO), hydrocarbons (HC), nitrogen oxide (NOx), and particulate matter (PM) (US DOT 2001). These emissions have all been shown to affect human health. Despite this fact, the U.S. Environmental Protection Agency (EPA) has yet to establish emission standards for off-road vehicles. Carbon monoxide binds to the hemoglobin molecule in blood and inhibits the transportation of oxygen in the body. High levels of carbon monoxide exposure have been shown to lead to visual impairment, reduced work capacity and mental dexterity, poor learning ability, nausea, headaches, dizziness, and even death (USEPA 1991). Carbon monoxide is especially dangerous to the elderly, people with cardiovascular disease or other circulation disorders, anemic individuals, young infants, and pregnant women (USEPA 1991). Hydrocarbons are volatile organic compounds that include benzene, toluene, ethylbenzene, and xylenes. While these compounds can cause dizziness, headaches, and loss of consciousness, the EPA has also identified benzene as a carcinogen and those exposed to benzene have an increased incidence of leukemia. Nitrogen oxides can cause shortness of breath and chest pains and increase a person's susceptibility to respiratory infections and asthma. Long-term exposure can cause chronic lung disease. Particulate matter, also found in off-road vehicle

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

emissions, is detrimental in fine and coarse forms as it accumulates in the respiratory system, and can lead to decreased lung function, respiratory disease and even death (Janssen and Schettler 2003). Of the pollutants emitted by ORVs, particulates are of special concern because their small size makes them easily respirable and thus deliverable directly into the lungs, causing any number of the aforementioned maladies (NPS 2000). The EPA found that ATVs emit more than 381,000 tons of hydrocarbons, 1,860,000 tons of carbon monoxide, and 11,000 tons of nitrogen oxide each year across the country (USEPA 2001). While emissions from on-road vehicles decreased 56 percent over the last 20 years as a result of emission control programs, there was a 42 percent increase in ATV emissions during the same time period (Grambsch 2002). The list of greenhouse gases continues to show the impact of these vehicles. For example, on-road vehicle emissions of nitrogen oxide were virtually unchanged during the same twenty-year span, while emissions from off-road vehicles increased 56 percent (Grambsch 2002).

Anthropogenic emissions of nitrogen oxide account for a large majority of all nitrogen inputs in the environment and off-road emissions are a large contributor (Grambsch 2002). The EPA went even further to research individual ATVs: they showed that a two-stroke ATV or motorcycle could emit as much pollution as more than thirty automobiles operating in the same time frame. Even more shocking is that the ATV took a distant second from two-stroke snowmobiles, which can emit as much as nearly one hundred automobiles in the same time frame (USEPA 1996). It is well-established that off-road vehicles contribute a large amount of pollution to the air.

According to the EPA, if left uncontrolled, off-road vehicles will contribute 33 percent of hydrocarbon emissions, nine percent of carbon monoxide, nine percent of nitrogen oxide, and two percent of particulate emissions nationally by 2020 (USEPA 1996). The Environmental Protection Agency has yet to establish emission standards for off-road vehicles and the engines on which they run. The off-road vehicle industry has been slow to adopt technological changes that could lessen the impact of its machines on air quality at the local and, even the global, level. And while the industry has been sluggish, government regulatory and enforcement agencies have been all-too complacent in allowing continued degradation. References Cain, C.J. and J.

The idea that most ORV riders obey the laws and regulation is patently FALSE, and additional designation of ORV areas will NOT solve the problem. It will only exacerbate it. I incorporate, for the record, the following research article. Just a Few Bad Apples: Research Shows Many Off-Roaders Break the Law. Introduction The ecological impacts of off-road vehicles on water, air and land have been well documented. In the past five to ten years, however, these issues have taken on social dimensions, and social scientists have begun exploring the attitudes and behaviors of off-road vehicle drivers. Countless newspaper articles are peppered with myths perpetuated by off-roaders, such as: "elite environmentalists are locking the public out of public lands;" "the old and infirm need vehicles to explore the forest;" "if you give folks a place to ride their ATVs, they won't break the rules;" and "it's just a few bad apples riding where they're not supposed to and causing damage." This article examines important social science research that debunks the "few bad apples" myth. Analysis includes a review of three state-level surveys revealing that a majority of off-roaders break the law. These studies point to the failure of this myth and show a pronounced preference and practice among off-road vehicle recreationists to travel cross-country and ride off of legal routes. Montana In 2006, Montana Fish, Wildlife and Parks received survey responses from 446 owners of registered off-road vehicles. Among the full sample of respondents, 23% "always or sometimes" ride cross-country even though off-route

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

riding is against the rules in Montana and has been since 2001. Over 28% “sometimes or never” avoid riparian areas and wetlands, in violation of rules for federal and state public lands in Montana. Sixty-four percent of those surveyed have used an off-road vehicle while hunting. The majority of this hunting subset admits to riding cross-country — over 58% have traveled off of legal routes to retrieve downed game. Colorado A 2001 Colorado study cited the state of Montana’s off-road vehicle public education program as a model to emulate. According to the Colorado study, Montana’s “On the Right Trail” program “provided a list of key behavioral traits that define an ‘ethical hunter’ — with several of these related to proper OHV use.” However, as discussed above, the more recent Montana study revealed a significant disregard for the rules among many off-road vehicle riders, pointing to the ineffectiveness of the state’s education program. This supports the key conclusion of the Colorado study: “information and education per se – will not result in substantial behavioral change” (emphases in original). Monaghan and Associates, a marketing research firm, conducted the 2001 study at the behest of the Colorado Coalition for Responsible OHV Riding, a coalition of off-road vehicle representatives, environmentalists and public officials. Researchers surveyed Colorado off-road vehicle riders through a series of three focus groups. Monaghan and Associates found that the majority of off-roaders understand that staying on designated routes is “fundamental trail etiquette” and that going off trail is not “correct” off-road vehicle behavior. The survey revealed, however, that regardless of this knowledge “as many as two-thirds of adult users go off the trail occasionally.” A significant percentage of riders, 15-20%, admitted to frequently breaking the rules and riding off of legal routes often. Survey participants also stated that “others” ride off-route and cause most of the damage. Utah In a separate study, the Utah Division of Parks & Recreation commissioned Utah State University to survey riders to determine their “OHV uses and owner preferences.” The university conducted a telephone survey of 335 riders from a random sample of the 50,676 people who registered off-road vehicles with the state in 2000. The Utah report reveals that a high percentage of riders prefer to ride “off established trails” and did so on their last outing. Of the ATV riders surveyed, 49.4% prefer to ride off established trails, while 39% did so on their most recent excursion. Of the dirt bike riders surveyed, 38.1% prefer to ride off established trails, while 50% rode off established trails on their most recent excursion. When surveyed on issues affecting off-road vehicle use in Utah, survey respondents recognized the need for enforcement but not the need for protecting the natural resources where they ride. This questions the assumption that off-road vehicle riders will stay on-route if educated that cross-country travel is illegal or damaging. One-third of the respondents said there should be more law enforcement presence in OHV areas. Only 6% cited “resource management conservation” as the most important issue affecting off-road vehicle use in Utah. Nevada The U.S. Fish and Wildlife Service found a near universal disregard for motorized guidelines when the BLM experimented with a “voluntary off-road vehicle route system” in Nevada. The area in question serves as a refuge for the disappearing Sand Mountain Blue butterfly, a species proposed for listing under the Endangered Species Act. A 2006 monitoring report compiled over a three-year period found that “98 percent of all existing routes continued to be used and new routes were created, indicating an ongoing expansion of habitat degradation.” The study also found that half of the places where riders violated guidelines were near signs that discouraged them from proceeding into sensitive butterfly habitat. The cumulative impacts of such “noncompliance points” were

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

four-fold as each discouraged route experienced multiple incursions. Conclusion One can assume that many folks will not tell the truth when asked if they participated in a behavior known to be illegal or generally perceived to be in conflict with social norms. This tendency is known as the “social desirability bias” and defined as under-reporting undesirable attributes and/or over-reporting desirable attributes due to the tendency to present oneself in a favorable light (Groves et. al. 2004). Therefore, the percentage of off-roaders who violate the rules is likely even higher than revealed in the survey results discussed above. Many public land managers assume that designating additional off-road vehicle routes will lead directly to greater compliance, less cross-country travel and, as a result, less resource damage and fewer conflicts among incompatible uses. Some believe that off-road vehicle riders will quit creating renegade routes once more routes are designated “open” and riders are educated as to where they are and are not allowed to ride. In contrast, the research above shatters the myth that damage and conflicts are being caused by an insignificant percentage of off-road vehicle riders. The findings of these studies suggest that even if the “demand” for more off-road vehicle riding opportunities is met, riders will continue to fulfill their preferences by riding off legal routes. They also conclude or at least strongly suggest that education and information alone are not effective strategies for changing off-road behavior. Instead, Monaghan and Associates offers the following recommendation: “In order to be successful and actually influence behavior, OHV users must be motivated to behave properly.” While more social science research is needed to determine what will motivate users to behave properly, anecdotal research (Wildlands CPR 2007) argues most strongly for increasing enforcement, and especially increasing the consequences for breaking the law, through mechanisms like vehicle confiscations, increased fines, and closing areas to all motorized users when motorized trespass occurs. ## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I'd love to enjoy life, but a number a folks are killing everything that gives me joy. you bet I will continue to "save" as much as I can! Bear in mind also folks these these lands are federal lands, belonging to all the people of the USA who also have a voice.

Noise pollution drives away much animal life and stunts plant growth, sometimes preventing germination. There is no such thing as a motor vehicle in the wild that is not destructive.

I used to live in Salt Lake City. I have woken up under the night sky while in southern canyons (dirtbiking). A telescope would have been a hindrance to me in that situation. It's the most beautiful picture I carry through life to this point. I now live in rural VT on a street where no one leaves lights on except the, usually, unoccupied vacation home at the bottom of my driveway who's motion detector lights turn on each time a car passes or the leaves move in the wind. It is annoying, but, I guess, it's the price we pay for "civilization". I'm no greenie or tree hugger, but I'll give you the nod on this due to a similar appreciation of night time as it should be. Thanks.

After 50 years of hiking, camping, fishing and photographing the American west, I can testify from experience that off-road vehicle operators are not "users" of public lands, they are "abusers" of it. Our public lands are among the most important legacies we will leave for our children, and their children and their children's children. Ten years ago, I could walk from my home to a lovely piece of desert -- wild, though not protected wilderness. Then came the off-roaders. Now the area is a trashed wasteland.

Boy Scouts was one of the worst experiences of my life. Too often they are run by churches who are promoting their own ideals.

Please elaborate on these "impacts" and be sure to site scientific evidence of these impacts with the results of these scientific studies being dated within the last 5 years. Otherwise your comment is worthless and ignorant.

Carrying a gun does not increase your security or the security of your family or companions.

Not being allowed to rip up and pollute larger swaths of the outdoors can hardly be considered causing harm to humans. There is no such thing as a RIGHT to adversely affect public lands. We KNOW OHV use adversely affects the wild-ness of a place. Why are OHVs so desperate to hit places that aren't already designated for OHV use? Could it be because current OHV areas have lost that quality of wild-ness?

Give federal land managers new authority to enforce offroad vehicle restrictions in wilderness and other federal lands, such as: (1) Confiscate the vehicle as evidence, then destroy it when the suspect has been found guilty. (2) Expand the closed area by 1 mile after the first violation, 1 mile more after every subsequent violation.

The National Park Service has made a good start on this, using good science and engineering to establish baseline data in some of the national parks. It's worth doing, because the sounds of nature are one of the values we enjoy in national parks and wilderness areas.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

People who believe that there is plenty of room for wildlife and that there no need for wildlife corridors have no idea what they are talking about. I have studied science, biology and chemistry, and we need more protected lands for wildlife in order to sustain the present population levels.

In your statement, you said "no more wilderness, we do not need more the land does not need to be taken away from the majority of people it needs to be used in a responsible manner, not burried in a hole for a select few." I grew up on the east coast and honestly I'm not sure if there is any "Wilderness" that one could go to on the weekend, and especially one that only serves a few. From what I hear the recreation spots outside of DC are packed on the weekends. But these "select few" that may recreate on the lands are not the ones benefitting the most. Myself and my family are benefitting when we see wildlife in the areas between the city and the wildlands, because they have habitat in the wildlands. We are benefitting on days when the air smells fresh and clean, because there is less dusts stirred up by construction because there is less construction happening in wild places. So just because only some people are physically visiting wildlands, doesn't mean the rest of us don't benefit, be it from the view at the overlook nearby, or the quality of life that we have.

Getting away from the hiking and OHV debates here, I do think that wildlife corridors are important for many varieties of wildlife. Intact and relatively contiguous wetlands and streams are of particular importance to healthy ecosystems throughout the continent. The arguments around OHV use have some limited impact here, but in the larger scheme is not important. In my (unscientific) opinion, urban development, major highways, and dams are the big potential threats to existing wildlife corridors. OHVs and even farmland are of minimal impact here.

Jack said it right. Machines mean noise and polluted air - exactly what hikers are trying to escape. They also mean wide trails (way too wide for a pleasant walk in the woods) and torn-up ground. I'm a hiking trail maintainer: one illegal ORV rider can in ten minutes ruin what a group of volunteers spent all day improving. It's heart-breaking.

how are you enjoying being in the wilderness, hearing the birds, watching the squirrels...seeking the peace and tranquility of nature when you can't hear anything but engines revving up and seeing dirt flying everywhere?

## Discussion Question 2

*(cont.)*

It is so ironic that the Historic Route 66 Bridge in Eureka, MO was added to the National Historic Register last year only to be added to the demolition list by MODOT shortly thereafter. The Historic Route 66 bridge was built in 1931 and is one of the few remaining reverse trestle bridges left in America. This bridge is now the link between the Route 66 State Park Historic roadhouse Visitor Center and the Route 66 State Park. Since the bridge closure the visitor center and park staff have been cut off from the remainder of the park making visitation difficult for both local and foreign travelers alike. Travelers come from all over the world on a daily basis to visit our historic roadhouse and bridge. How is it then that we can deem a site valuable enough to add to the National Historic Register but not valuable enough to maintain and preserve. MODOT is trying to give the bridge away due to the public outcry to save the bridge but no one has the money to fix MODOT's failure to properly maintain the bridge. MODOT wants to demolish the bridge unless someone steps forward to take ownership and responsibility to repair the bridge. This bridge is also an important link to other trails in this area. There is a National Route 66 Corridor Preservation Program but there are no funds available to preserve and maintain this historic bridge. What is the purpose of these historic preservation programs and National Registers if our government is not going to see fit to maintain and preserve sites on the National Historic Register????? We need our President to champion the cause to save the National Historic Route 66 Bridge. Perhaps the National Parks and Sites should assume ownership of the bridge and see to its preservation. SAVE THIS AMERICAN ICON!!

Trees all across the west are dying due to climate change. Warmer winters and longer summers allow insects of all kinds to live through winter and produce more offspring. Rainfall is down, temperatures are up. Dead trees and increased fires are not caused by poor forest management. They are caused by climate change and will continue to increase if we don't work to mitigate our impact on the environment. There is not enough money in the world to manage all the forests that will be affected or fight all the fires that will occur if we don't deal with the fundamental problem: climate change. Read Bill McKibben's book *Eaarth* (2 a's because it's not the same planet anymore). He provides some staggering statistics on forest lands in the west.

Agencies do not need MORE land to manage. They need to manage the land under their jurisdiction more productively. In place of "acquisition", agencies should promote private land conservation.

As an education coordinator for a watershed district in MN, I provide many education activities for K12 students. However, it has been increasingly difficult to get teachers to participate in these programs. These programs are often completely free and do not require anything of the teacher but to show up. However, I've noticed teachers do not have the flexibility in their curriculum or the time to participate in valuable outdoors education programs. It's a shame because so many important experiences cannot be shared in a classroom setting. I would love to see the federal gov. back a program that at least encourages, if not requires, teachers to take classes on env. field trips, to nature centers, water festivals, conservation days, and many of the other programs that are available to them. Make it easy for teachers to participate, not more difficult. I don't know much about the educational policies regarding testing kids so I won't bother going into that, but I think that is part of the problem.

## Discussion Question 2

***(cont.)***

Huh? A "power grab" by the government to control its own lands -held for all Americans, no matter where they live, in the public interest? No, your idea is a thinly veiled power grab by the interests of the local developers, ranchers, miners, loggers and hunting and fishing interests who typically want the federal lands turned over to the the same local governments they personally dominate. Why do we need more deer? I love to watch them, but they're so numerous they're like locusts already. They thrive in transition forests, and most of the federal forests are already a patchwork of stands in transition between just-cut and nearly mature. Don't "watch out for the feds" --watch out for the ever-hungry money interests that would exploit the federal lands for their private profit.

Letting locals decide how to use federal lands would be an abrogation of federal responsibilities and obligations to the citizenry as a whole. Locals always want to have dibs on federal resources because they think they own them, personally, and should be able to develop and exploit them because the local monied interests almost always control the local politicians. I've seen it all before. Forget it. My tax dollars, and those of my parents and grandparents paid for their acquisition and management just as much as anyone's and all Americans have an equal say. The feds employ scientists and professional managers to follow the federal law. That doesn't mean enriching local power brokers.

Pollution credits and exchanges are just a "free market" ruse for one party to make money while another continues to pollute or even pollutes more. If nutrient loading can be reduced by Party A why should Party B bet to eat up that reduction by not reducing loading? better to make it much more expensive to continue polluting than to abate and put the fines into the Treasury or into corrective actions and research.

I think we're missing an important point here. There is more to be considered than how I can do my preferred activity and whether I get my fair share of land where my preferred activity is allowed or optimally provided for. The whole point of wilderness is not to give backpackers a peak experience; it's for preservation of habitat. Humans have taken over 95% of what was wilderness. At what point do we become concerned that the whole web of life is degraded if not threatened by the overwhelming precedence and influence of one species?

I agree with Mr Carpenter on this one. There is no such thing as smart "development" near pristine lands.

you are right on, here. I'd go further: You have a kid and you end up on welfare, you get sterilized. We need more tax incentives to not have children, and to adopt instead. Even if you buy into the mythology that God somehow told us to go forth and populate the earth, the corollary is that "He" gave us a brain big enough to figure out when we were done.

There needs to be a balance. Too often local interests are dominated by those who stand to profit by the exploitation of our resources.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I find it interesting that people are arguing that OHV use needs to be eliminated because of a few bad apples, but these people seem to have no interest in working on laws and enforcement that would stop this abuse. The comments by this group of dishonest. You hate people who are not like you and enjoy only the things you enjoy. You could at least be honest about this and admit it. I have hiked, biked, motorcycled, and driven on many of the public lands in the west. I have NEVER come across any OHV enthusiasts that express any hatred, distrust, or angst against hikers, or horse enthusiasts. However I have come across an overwhelming hatred and bias from the hiking community against the OHV and mountain bike community. Makes it quite clear which group is "not compatible". I guess these people never learned how to share and work/play well with others. If we all work together we can come up with a plan that ensures everyone gets to enjoy public lands and those that wish to damage(whether they be from the OHV, Horse or Hiking community) are controlled.

I'd be happy to let you "open season" as long as it works both ways - and I'd guarantee you that most of us "enviro-nuts" can sneak up on you and your friends a lot quieter than you can sneak up on us - and, yes, many of us are hunters. The difference is, we're the type that respect nature rather than rape it. As for the rest of your opinion, I'd rather be a Marxist than a Fascist pig. Talk about the pot calling the kettle black! Now, on to saner conversations...

Indeed, multi-use trails that include mountain biking work very well. This posted idea does not include anything about restricting the trails to only mountain bikes. What we do want to avoid is trails that are accessible by motorized vehicles. Single-track trails are not usable by ATVs, and thus help to protect natural areas from the misuse and noise of motorized vehicles. Trails must of course be properly constructed to avoid erosion. Studies show that mountain biking has similar or less erosion impact compared to hiking, and far less impact than horseback riding. The IMBA (Int'l Mountain Biking Assoc.) publishes a detailed document describing good trail building technique (the same principles apply to all types of trails). Trail grade and trail grade reversals are the most important factors in allowing water to flow off the trails instead of along the trails, thus preventing erosion.

Comment #38 is the best post I've read on this subject, and I wish more of the ORV crowd would read it carefully and think about the impact of road building on our wild places. Thanks, for the informed, responsible, and tactful post.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I'm going to quote from #38: "There are over 300,000 miles of designated Forest Roads (8 times bigger than the interstate highway system!) and probably a like amount on BLM land. How on earth is this not enough for ORV users? I drive a 4 wheel drive truck and use it to access trailheads and dispersed camping sites but I stick to the roads on the forest service map. Even if the USFS closes some of those roads for natural resource protection there are still more miles to drive on than one person could hope to drive in a lifetime. I don't begrudge ORV users from enjoying the forest but when "roads" are closed by the federal agencies or wilderness areas created by Congress it has NOTHING to do with creating playgrounds for the tree huggers and everything to do with erosion control, habitat protection, endangered species protection, watershed preservation (kind of important in the arid west), archeological and historic preservation, and myriad other natural resource reasons. It's our playground but it's the wildlife's home." What parts of this are "wrong,"? Do you care about erosion control and habitat preservation? Maybe you don't, but I know that many OHV users \*do\* care about these things, and sure, many hikers don't care enough about them. I wish we didn't have to be so alienated, to say one side is totally WRONG when engaging in a debate. How do you address the issue of erosion control in the use of OHVs in wilderness areas? Is there a way to mitigate this? I have read some intelligent and detailed posts in other threads that talk about different KINDS of OHVs...claiming that the 2-wheeled variety are less destructive than the 4, and addressing the matter of decibels in noise output. As a non-OHV person, I learned a lot from these posts, and wish I saw more of them here.

Why don't you hike on your own property then. You know, we like to explore as well, not just go round and round on a track. I am a responsible rider and always have been. Saying that we all tear up the land is nonsense. If we go by your thinking, No one should be allowed in the wilderness-no one. I have seen many a hiker running off the trail kicking up rocks, etc. I guess by your thinking, every hiker does that. I have been in the mountains all my life and OHV has changed nothing. I enjoy my OHV and will fight for the right to use roads and trails. You will never convince me of your narrow thinking.

Each OHV and ATV carries a large, clearly legible license number visible from front and back. The perpetrators among the OHV and ATV community rely on their speed, "all terrain" capability, and anonymity to evade detection by property owners and law enforcement. Although the property I monitor is surrounded by other properties that prohibit ATVs, nevertheless, as a monitor of protected land, I see many ATVs. Occasionally, the ATV is stopped or slow enough and the license plate is properly mounted and clean. More often, if there is a plate, it is invisible. Another land monitor stood at the edge of a field with a county sheriff as an ATV circled through the field. There was no way for the sheriff to apprehend or identify the perpetrator. Simplify the landowners' and sheriffs' task by requiring large, clear plate numbers visible from hundreds of yards.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

In Hawaii, homeowners install solar cells on their roofs and sell electricity to the power company. In the US, Big Oil managers are the biggest spender on influencing the legislature and the administration. Three out of four of the energy lobbyists are former government employees. The Big Oil managers are among the 1/100th of one percent of Americans who take more than five percent of the national income. That is, the people who are paid an average \$25,000,000 per year. They are not the founders of the companies. They are not inventors. They are the survivors of office politics -- bureaucrats, if you will. They have effectively sold doubt about global warming for 35 years.

The energy industry spends the most money on influencing the Federal government. Three out of four energy lobbyists are former government employees. For example, look at the sad story of the watchdog Minerals Management Service that makes it easy for the big oil companies to gamble with our resources. If you think your air is bad, check out Houston. Big oil rules!

So, we should trust volunteers to manage our land? Follow the drilling industry model?

Estuaries are suffering from global warming. The expansion of the warming sea is pushing salt water back through the estuaries, replacing fresh water and changing the ecology.

We are putting increasing amounts of CO<sub>2</sub> into the air. The CO<sub>2</sub> does not stay in the air forever. Some of the CO<sub>2</sub> is absorbed by the ocean. The ocean is becoming more acidic. The increasing acidity of the water harms life forms that build shells. Whatever the cause, the atmosphere is warming. The heat does not stay in the air forever. The biggest heat sink is the ocean. The ocean is becoming warmer, more slowly than the atmosphere. As the ocean warms, the volume of the water expands, raising the sea level. The rising sea level covers land that people used. The warmer surface water prevents the upwelling of cold nutrient-laden water that supports phytoplankton. The loss of nutrients has caused the phytoplankton to decline by 40% since 1950. Phytoplankton is the base of the food chain. The smell of the sea is the respiration of phytoplankton. Phytoplankton breath includes sulfur. Sulfur particles are a nucleus of raindrops. Phytoplankton produced 50% of the oxygen in the atmosphere. The warming atmosphere melts the tundra, releasing methane, a more powerful greenhouse gas. The warming ocean melts the methane hydrates locked in the continental shelves, releasing more methane. Methane caused the extinction of the large animals once before, leaving the world open to the dinosaurs.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Just because cars cause most of our air pollution problems does not mean that OHVs on wilderness land is a great idea. I favor designated OHV areas with the vast majority of our wilderness lands confined to walkers or disabled travelers using some quiet, non-invasive form of motorized transportation to visit more accessible areas. I agree that balance is good, but these forums seem to be dominated by an organized OHV community that opposes limits on where drivers can take their vehicles. It seems to me that part of the attraction of OHV use is that drivers can blaze new trails, instead of confining travel to those boring byways that people on foot use. The temptation to cowboy around with wild abandon appears to be pretty strong and that's how many of these vehicles are marketed. It's good to know that there are OHV fans who are quiet, considerate and responsible like the writer above. My experience sharing the outback with wheeled vehicles (including mountain bikes) is that I usually have to be on the alert to stay out of the way. Noisy is the norm, which is antithetical to the whole notion of getting away from it all.

Does this mean the parks in my city will have to take out a soccer field, duck pond, trees or picnic areas? Or will the meadow at Yosemite have to include a parcel of public farm. Or will the public schools in my community have to designate some percentage of the lot to public gardens. General idea sounds great but not at the expense of existing publicly held land. Sounds better to be a requirement of future development.

All of our rights have limits. Just because I have a voice and a right to use it that right is limited to not yelling fire in a theater. Just because you own property doesn't mean you have the right to prevent the water that crosses it from getting to the neighbors down stream, or to pollute it. The sooner we apply that logic to the source of the very oxygen we breath the better. There need to be limits to what we can do to the land, water, and air of our world because personal short term decisions are not always what's best for the long haul. Wildlife is an intrinsic part of land, water and air. It's the part that recycles all of it for the future and therefore it must be protected whenever possible. Wise use gives us short term benefits that help the less informed justify the bother of protection.

e vv How much did you pay for the air and rain? Both are directly and inextricably connected to the health of natural land areas. Many of which are even publicly owned buy various levels of government. Meaning each of us own part of them. In any case we all own the air and rain, and therefore have a "stake" in protecting the parts of the world that affect them. Lucky for your descendants no matter how hard you try to sell or squander their share there are "stake holders" more enlightened than you that will protect their share while they protect the future for their own descendants.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

You have me “falling down Laughing”! The vast a majority of all Wilderness Areas within the USA are west of the Mississippi. How could there be “Little quality habitat remains” west of the Mississippi? I think the Wilderness Areas and forest out west have great habitat or they would not have been designated Wilderness Areas and forest! You are right on the money with “...what does this have to do with the debate between motorized and hiking traffic?” I don’t see the author anywhere refer to motorized traffic (as you put it) within the idea. So why are you, and many others, bringing up a topic that has nothing to do with the author’s idea?

Man himself walking through degrades the environment. Period. Are you including hikers/backpackers as well in your statement of “Multiple use does not mean multiple abuse”. This idea is not about Wilderness areas where motorized vehicle are suppose to be prohibited, it is about Multiple Use Lands.

On your comment for “...Forest Service management...”. Can this be done under the status of being National Park? My limited experience with the classification difference between a National Monument and a National Park, with regards to your concerns for “recreational access”, is that the National park has restricted some of the access when changed from a National Monument. The only access staying the same or improvements, where I travel, were in the form of better roads and parking facilities, but an actual reduction in the areas you have access to.

Help me out here as I am not familiar with the areas that you are referring to. I get the grasp of what your idea is about and think protection for this type of areas are needed. But not sure why The National Park Service is the right agency to manage these areas. First, are these areas not currently protected at all? Such as State Park or regional park status? If they are protected what’s not currently work? Would the protection as a “National Monument” status work as well rather than National Park? I live within two miles in either direction of two state run parks that are well managed, that is at least as long as the funding holds out in these difficult times! When Death Valley was a National Monument in many ways I feel it was better run then under the National Park status it is now. Thanks

Help me out here. What is “RTP” stand for and what area does it represent? I am sure it is something like what we have in California State Parks, Off-Highway Motor Vehicle Recreation Division. Gas taxes go towards many uses, grants and programs, that is unless the governor gets to funds first for other purposes. But I am not sure if they are also used for “most trails” - meaning hiking, equestrian and other non OHV trails. Thanks

Less government, less Dennis German's, more quieter off-road machines, more education. There are such things as responsible OHV users however the minority are ruining it for the majority.

Even as an OHV'r, this isn't a bad idea. I and many others takes great care in staying on the trail and nothing is worse than seeing tracks (be they bicycle, foot, hooves, OHV, or full size rigs) on areas that are not meant to be tread on. Even if law enforcement can't or doesn't have the resources to impound all the vehicles, there should be stiff penalties for off-route use.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

More than enough recreation, beauty, history, trail potential and international understanding through linking with the always-enthusiastic Canadian hikers, etc., the Great Lakes Basin is powerful, under-rated and very accessible. Let's link trails, especially cycling trails, throughout the region. Give it a thorough review for possible national/international designation -- perhaps creating a new category for mutual agreement, interest and a world-model for cooperation. Already a UNESCO World Heritage Site - Bruce/Niagara Escarpment, look at the whole picture and help educate on the formation of the basin, its resources and its future.

As the permafrost melts below the tundra in the arctic regions, the land is rebounding, rising, causing the upper Great Lakes to tilt. In effect, the water levels are lowering in Superior, Huron and rising in Erie and Ontario [of course some of Ontario water level is regulated by the St. Lawrence Seaway/Joint Commission]. In any event, the global effects of warming are affecting the Great Lakes. This is just one reason the area is significant. In addition, the fresh water resource is inestimable. The long complex history of industrialization's pollution needs to be revisited. The cities of the area are bouncing back in creative ways and the long-established ethnic enclaves have generated food, customs and spirituality that is significant in many different ways. For a few pics of L. Ontario: [www.westspit.blogspot.com](http://www.westspit.blogspot.com)

>OHV brings trampled earth. Opposite of natural beauty. >OHV brings fuel stations, fumes and ground pollution. Opposite again. >One for one isn't smart or fair. You clearly have never seen the forest we are talking about. Official ATV trails are built using gravel and are leveled off every so often they create no trampled earth. I do not understand the fuel stations argument most all of these forest have state roads through them with existing fuel stations in the area. I am against one for one because I am against all wilderness areas. They should all be abandoned because they are not needed. It was just a trick to shut down oil gas and coal production. But it also prevents motorized fire fighting equipment. If we are going to have wilderness areas the FIRE POLICE and RESCUE officials should be exempt from the non motorized rules. I am also against having any forest without access roads used to fight fires.

Yes its also true that wilderness areas violate the Americans with Disability act. Why should the gov exempt itself from this act and require businesses to follow it?

You clearly do not understand the constitution. The federal gov has no rights to regulate or control private state or Indian lands. Also I am against this creation of blocks of land. That's right out of the old rejected UN Bio Diversity treaty. To move people out of the country in to the cities and make lands into blocks with corridors connecting them together that no one was allowed to enter. As far as changing who runs this land I am in favor of turning it all over to the states. I see nothing in the Constitution that allows the feds to own or control land in blocks greater than 10 miles from a port, fort or official building. Under the Constitution such land should be controlled by the states.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Oh yes, Let us have the Federal Government take charge of just everything. Or better yet, why not have all the IMPORTANT people just tell the rest of us where we can live, how we are to live, how much money we must contribute to the whims and wishes of the IMPORTANT people. Then we can all wait in anticipation while the yellow school bus brings everyone lunch - this in light of the fact that Mom gets food stamps but is too stoned to make the kids a P&J. Then because we are all becoming fat off the yellow school bus we will have to pay more so the IMPORTANT people can steal people's land and homes to make parks so we can go and work off our fat. Children will grow up to believe that everything is brought to them by the Government - Oh wait - it already is.

I agree about the forests of the Alaska panhandle. A good start would be to institute the roadless rule in the Tongass National Forest. The only problem with leaving land with private landowners is future owners, when the land changes hands, may decide to develop it.

Logging should only take place in second growth forests that already have roads built. No new roads on federal land. There are already too many.

I think the people who want to preserve land for future generations and habitat for animals are concerned about the environment. I don't own a cabin or house in the woods and I would still like to see a lot more land preserved. There has already been plenty of land used and developed by people. Do some people want to keep going until it is all used up? That would be a shame, to say the least.

I agree. There is plenty of land that is more than accessible to everyone. Maybe not every single acre of every corner of the country should have a mini mall and souvenir shop. There is generational inequality when future generations won't have the same access to wilderness that we were afforded.

I think the remaining wild areas should be preserved as wilderness. I'm talking about areas in Alaska, Idaho, Montana, and a few others. If it's still wild in today's environment, with all the development that has taken place, and all the pressure from all sides for more development, then it should be preserved, before it is gone. The only thing standing in the way of preserving our last true wildernesses is big industry's quest for the almighty dollar. Don't forget that when these areas are developed, there are only a select few that make the big money, and the land is degraded forever.

What little wild land that is left should be saved. We have developed and used more than our share. Future generations should have the same opportunity to enjoy wilderness and what it has to offer in the form of solitude and rejuvenation.

I'm not for development at all near wilderness. That's the opposite of the idea of wilderness.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The natural resources are to use but I don't think anyone would say they should be used up for the rich man's quick buck. A good portion should be preserved for the good of all, including the people who don't profit from the development of our natural resources, and the plants and animals.

There are too many roads already. I suggest you walk in and enjoy the solitude. That is what forests are for. If you want to go where there are crowds, I'm sure you can find a road somewhere.

I agree with most of your comment. You are lucky to have wild areas so close to where you live. Remember, there are people who have to travel hours to get away from the crowds.

I say the problem is there are too many roads.

Quite a politician. I'm sure there are some campaign contributions from lumber and mining industries involved. Some land should be used for development, but with all the development in this country, more land needs to be preserved that is not used for development.

I don't really understand how this works. It seems confusing. It seems the land is just sold to whoever wants it for whatever purpose they want it for. Is the land preserved at all?

I agree that alot more needs to be done in America to take better care of the environment. No other country is capable of turning around a situation and that makes me hopeful. For example, remember when there was leaded gasoline? Lead levels were extremely high. We were able to totally turn that situation around and now lead levels are no longer a threat.

I think most of our national parks should be managed in their natural state. How much money does that cost? I say if we had fewer roads, there would be less maintenance.

Horses first evolved on the American continent but died off with the arrival of humans along with our native camels, mastodons, mammoths, saber toothed cats and other large animals. We should allow wild horses to remain on our range lands, cattle are not native to our continent and never were . Cattle are the intruders, not wild horses and return the wolf to the range lands to help control their numbers. Our national monuments, parks, and forests must remain free of those NOISY, DESTRUCTIVE, POLLUTING OFF ROAD VEHICLES! We go to what's left of our wild lands to ESCAPE the noise and pollution of other humans. When I take a walk in the wild lands, the last thing I want to see, hear, smell or dodge are those STINKING, NOISY ATV'S/ ORV !

The Listening Sessions should be held in the evenings so working people can attend - as it is all you have making comments are government bureaucrats and paid conservation advocates.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

So many young people have no opportunity to connect to the natural world. Many of our national parks are located only a short distance from urban communities, but children have never visited. As a former National Park Service ranger, I know from my own experience how transformative it can be for children to explore a forest, observe bugs in a creek, or experience the natural quiet away from the city. I also know that with constraints on the federal budget and limited staffing for interpretive park rangers, strategic government and nonprofit partners can greatly further the National Park Service mission. These key partnerships can make all the difference in reaching many more urban youth who would not otherwise be able to visit our national parks, and nurture our next generation of environmental leaders.

A Framework for Conserving and Enhancing the Benefits from Private Working Forests in the Western US - This Western Forestry Leadership Coalition report represents months of stakeholder workshops investigating the suite of issues hindering private forest landowners' ability to keep and sustainably manage their land and presents the following recommendations: • Reward landowners for their stewardship of ecosystem services • Promote diverse forest products markets and the utilization of woody biomass • Facilitate action through cross-ownership management and partnerships While only a fraction of the western forested landscape, private working forests provide critical ecosystem services to their owners and to the public. They also create important linkages that facilitate the production of ecosystem services on public lands. However, we are in danger of losing the benefits provided by private working forests owing to such forces as changing climate, economic conditions, demographics, and competing social values. To explore these issues, the Western Forestry Leadership Coalition brought together family and large-scale forest landowners, county commissioners, local and regional planning agencies, state forestry and wildlife agencies, federal land managers, tribes, universities, conservation districts, and nonprofit organizations. From this, a drafting committee synthesized workshop input and developed the report. The goal is to facilitate the creation of a new policy framework and new business model that, together, address the needs of private forest landowners; local, state and federal agencies; conservation organizations; and other stakeholders in the western U.S. The report's recommendations are meant to foster solutions at a meaningful scale. Policy, program, and on-the-ground actions by a multitude of partners can contribute to a future where sustainable forest management is an economic reality, a recognized social benefit, and a significant contributor to forest health and long-term climate change mitigation and adaptation goals. { <a href="http://wflccenter.org/forestthreats/" rel="nofollow" target="\_blank">Link</a> }

"we are the worlds worst polluters" Really, what about China and India? "european nations have cars that get 60mpg" True, and did you know most of those cars run on small efficient diesel engines? The reason we dont have the same cars here is because they are diesel and the EPA will not allow them. Plus the oil companies wouldnt want us to start getting good mileage. "we are responsible for the loss of 110,000,000 trees every year" In the state I live in (Idaho) more trees die and rot every year than are harvested. If you cut trees they can and will grow back most of the time. How many trees are planted every year by the Forrest Service and by timber companies?

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The intention is good, yet the results I'm afraid won't be. For example; the Peirson's Milk-Vetch plant has been listed as a Threatened Species, this was done back in 1998. To this day, there is NO recovery plan in place. This plant was used as a "tool" to close an OHV area in CA. If the Fish & Wildlife Service didn't have radicals within, we would have a workable plan to use by now...

"Leaders of non profit environmental groups are brilliant people. They are not radicals or extremists and do not oppose all development like some believe. Instead they are people who have dedicated their lives to a cause, saving wilderness and wildlife." You don't know Karen Schambach in CA of the PEER org. I would consider her a prime example of someone who leads a radical group. She moved to California's Sierra foothills in 1984. On a spring day six months into construction of her new cabin in El Dorado County, she was startled by the buzzing of dirt-bike riders just yards away. THAT HAD BEEN THERE BEFORE SHE PURCHASED THE LAND. It's like buying a house next to an airport and then demanding it close down due to noise. { <a href="http://www.hcn.org/issues/188/10012" rel="nofollow" target="\_blank">Link</a> }

"When I see many animal species down to their last 1 or 2% of their range and hundreds listed as either threatened or endangered while many have already gone extinct it pretty much tells me that not a whole lot of thought or action has gone to preservation." I believe that you see man has created all the reasons for these species peril. Having been in the knowledge of a Threatened species myself, (Peirson's Milk Vetch plant) learning everything there is to know and talking with those that have the both the credentials and credibility on the subject matter, it's really about politics more than science I'm afraid... To a True conversationalist in my eyes, just like the majority of those that experience the great outdoors on an OHV.

wild horses

Thanks. I'm afraid that most people will not get this until their drinking water turns sour, or the Kudzu smothers their shrubs and overgrows their house.

I have long thought that the Forest Service gives away too much to private interests. Why should I have to pay to use cross-country trails in a national forest that my taxes support? And, how do people get permission to build a private, no-trespassing home within a national forest?

Wild horses do create problems when their populations boom, so predators are needed to control their numbers. We need a coupled policy -- horses + predators.

The BWCA has been a big part of my spiritual life for the past fifty years and I want it protected for my grandson. PLEASE and Thanks!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

As someone who grew up in a rural area in Vermont, I took my ability to get lost in the woods by myself and explore the environment for granted. The lessons I learned camping and hiking with my friends gave me confidence in myself and anchored me to something tangible and real. Now that I live in a city, I realize that the sense of wilderness I experienced as a kid is unreachable for so many. I agree that close partnerships between non profits and government should make it possible for everyone to experience the environment and feel connected with our planet.

What a bunch of one purpose crap,from wacko environmentalist ass/hole's who want too close off all our public land's too everyone but them,to protect it,bull/shit,it's about power & control,nothing else,always has ,always will be,and our Liberal Leftist,socialist,Government Leader's allow these nut cases to sue them,so they can go along with them, Not going to Happen,after November 2nd.2010, We are Taking Back our Country.

Amen, they are environmental ecofreaks, i like that better than wacko's,and your right on, we are not destroying the earth,and we already have way too much wilderness now,don't want or need anymore, they can all go hug a tree along with there idol Al Gore,and leave the fun to us.

One thing we all need too remember,is it's about,our Freedom's & Liberty's too,and witch seem to be getting less and less,as the Government grows more and more,and gets more into every aspect of out lives. smaller=is better,and=more Freedom & Liberty's, we are not Destroying our Outdoors,or Country,by being able to use them.

Too many wacko's on both side's to count,but i do know i can't go or use our great land's,like when i was 18, i would love to see it all before i die,or before it's all closed off, both of which are getting closer every day.

Drill baby Drill,when ever ,where ever,we need the oil,and have more than anybody else in the world, on our own land,but environmental wacko's stop us from using our own,get over it,get a life,enjoy it,and quit telling every one else how to live.

It's high time too put a stop to all these Environmentalists Wacko group's Law Suit's against the Government,and then our Government Caving into Them,because they agree with them,and allowed the Suit's in the first place,we the American People are not Stupid, We are Dam Pissed off,and getting even more pissed off,at our Elected officials,who work for US,taking more and more of our land's,away from our use,under the false claim of saving them,lying bull/shit,all way's has been,all way's will be only stealing our Freedom's & Liberty's,and Destroying our Constitution,which most don't read or understand, it say's what it means & mean's what it say's,if it is Not in there, You have No right to do it, keep up what you are doing, We will take it Back,starting November 2 nd. 2010, God Bless America,and Keep Her Free.

Amen Brother,they want it all,and tell you, what,when,where,why,they are taking it away from you, nothing but environmental bull/shit.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I had to stop from throwing up at this bull/shit, talk about destroying the view, nothing look's worse than looking at a bunch of stupid windmill's spread across the landscape, and you only worry about what color they should be, too save a bird from flying into them, I say take them all down, save the bird's and the Helicopters, and the paint too.

This may be one of the good scenic byways. One question - Did elected officials in the effected communities retain 100% of their authority over the highway involved or is that authority currently a shared authority including un-elected persons???

One thing about drivers is that they actually pay for at least some or most of the infrastructure they use (e.g. license tags, gas taxes etc.). Some of it may be subsidized but I don't know how much. Bicyclists are very well organized and politically savvy it seems from web sites I have viewed. From what I can ascertain they have been brilliant at maintaining their free ride off the backs of motorized vehicle drivers up to this point. Possibly if they started to support paying for at least a portion of the amenities we non-bike riders are being forced to pay for they would get more and not feel so underserved.

Don't want to pop anyone's bubble but mineral extraction is allowed in designated or proposed Wilderness as per the Wilderness Act. Roads are also allowed to be constructed to the mineral extraction sites. Congress had the wisdom to see to it that these necessary actions could take place for the Nation's security I would imagine. We do need certain resources to be available to continue our existence and they - Congress knew this in 1964 and still do. I have to demote since idea is not feasible.

I don't want to be accused of being picky but I thought this site was about helping folks connect with America's Great Outdoors not a wish list site for green marketing incentives. Our government knows well how to force citizens to do things. WHERE is the SITE ADMINISTRATOR when needed.

How are gov't. vehicles (ORV) leaving designated trails dealt with or kept track of? Records would need to be kept so civilians aren't blamed for gov't. duties being carried out. What about perceived trail violations actually caused by native Americans who are not usually under these restrictions - would visitors trails be closed for their un-documented unrestricted movements aboard ORV's?

Our governmental systems in AMERICA were intentionally designed to be very inefficient so that laws and rules could not be made easily. It should be brutally time consuming and difficult. Political boundaries mark out exactly where elected officials have say so. They should have a lot more say so but their authority has been incrementally transferred to bureaucratic agencies or flipped by the US Supreme Court. Now that is something in need of a big fix. So called insider "stakeholders" should have nothing (zero) whatsoever to say about lawfully operated private property.

## Discussion Question 2

### **Written & Online Comments**

**(cont.)**

Mr. Hines - Does the Constitution actually support the Federal government controlling the lands \_\_\_ mentioned it should not? Please help to educate us by expanding your comment 4. I do know that in Florida the Feds control a lot of lands inside the State. The reason for that here is that our State government has allowed them to do so through many nefarious agreements ( section 6, Lips and SWG etc.) in order to get their hands on Federal dollars which probably never should have gone to the Feds in the first place.

To all the regular working folks of which I am also one I will share what I have learned after 12 years of fighting for access of all sorts. The government works like everyone else Mon thru Friday for the most part. If we really value what might be lost WE better be ready to take days off and plan vacation days to attend meetings and produce informed comments (not whining how it was in grandpa's days) or suffer the consequences. It is that simple. Those who attend the meetings and do informed written comments stand a chance of getting what they want. Those who don't - DO NOT stand a chance.

While you're entitled to your own "beliefs", you are not entitled to your own FACTS. Please educate yourself about the realities of the issue. We need more science based solutions and less fox-"news"-based fear.

Public lands should be open to the public. Come one, come all. But leave your noisy, polluting, trail-damaging vehicles at the gate.

This sounds like a great idea, on the surface. I do not trust the federal government and the Obama administration especially has shown that their interest lies in more government control. We have a very large national park in Northern Minnesota, and there are areas of wilderness, that if logged and hunted would show an improvement in the overall health of wild life. Deer, grouse, rabbits and other wild life do well on a new growth forest, and right now, the only new growth in the park is the result of wild fire or controlled fire. There is no logging or hunting in the park. I also believe that local control of waters and land is always better for the environment and the tax payers. Any government project always cost many times that of a local project, and the results of the local program may take the local population in to consideration. Federal restrictions usually mean stricter restrictions and more rules for the sportsmen and women to follow. Any use of public lands and waters is becoming so complicated, that I believe many people are getting discouraged. So when I say "watch out for the feds", make sure this is not just another power grab.

Having confronted trespassers numerous times, the lack of identification is the biggest obstacle to prosecution. It is not a local problem, but one I've heard repeated in all parts of our country. Requiring identification is opposed by OHV enthusiasts because it would put the lie to their argument that problems are caused by only a few.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

In Southern Oregon nearly three times as much State money goes into expanding OHV opportunities than enforcing the law. It is virtually impossible to catch a trespasser without a violent confrontation. Violators on both public and private land have repeatedly maintained to me that they "don't carry identification" when they ride. Often law enforcement is miles away. We need a way to identify these miscreants. We also need local law enforcement to quit looking the other way, to pursue these violators vigorously and no longer dismiss their actions as "minor."

Not close-minded, just fact. Once you put machines on the landscape, you eliminate the desirability and usefulness of that area for "passive" recreation, such as hiking, skiing, birdwatching, or any other form of recreation that is rewarded with peace and quiet.

For the past 50 years most timber sales on public lands have been based on large volumes and large acreage. This has benefited large timber companies and loggers. Over the past ten years fuel reduction projects have likewise been based on having enough commercial timber to make it worthwhile for the contractor. The result has been continuous litigation and a stalemate in the woods that costs the government money and takes away from healthy forest management. Prior to the growth of the large timber and logging companies, there were "gyppo" operators in the woods. These were small, two- to four-man operations. Their cut-and-run approach, however, soon made "gyppo" synonymous with bad. The better small operators, however, continue to exist as contractors to small woodland owners, the largest segment of forestry owners in the country. I suggest we take a smaller look at our public lands, particularly in the West. The emerging growth of small diameter utilization presents an opportunity for public forestry agencies (primarily BLM and USFS) to present more focused, smaller operations. (@ 200 acres) Contracting with an independent, two- to four-man crew that utilizes smaller equipment (e.g., UTVs) would produce less controversy, more jobs, and better management practices across the landscape. One of the big problems with public land management is the proliferation of roads. Smaller equipment and smaller operating areas would require fewer roads and have less impact on the operation area. Large sales will continue to be controversial, particularly in the West, for the next few decades at least. By implementing a program of smaller scale, local workers would gain employment, overstocked lands could be thinned with less impact, and a more progressive and sustainable management of public forest lands could occur.

In 2009 a study done by Colorado State University and the NPS found that human-caused noise has a significant impact on wildlife. We are losing our quiet spaces. Most studies I've seen say that less than 5% of our planet has only natural sounds for fifteen minutes or longer.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Most off-road vehicle routes were not created with resource sensitivity or public land/national forest management in mind. Route designation is necessary on all public lands and national forests where multiple use management is an objective to determine what existing routes can sustain continued vehicle use along with the management of non-motorized uses and appropriate biological resource management. This is called or per the Federal Land Policy and Management Act and various statutes relative to our public lands and national forest lands. Route networks need to be closely monitored and managed, with open routes signed as such and designated closed routes put to bed with vertical mulching and other revegetation methods so they do not look like vehicle routes open for use. These efforts need to be fully funded by the government, using young adult labor where possible, to be completed in a timely fashion and promote awareness of our shared resources. There must be penalties for use non-compliance and the creation of unauthorized routes. Non-Compliance with a designated network needs to be fostered in the offroad vehicle use community to ensure these networks are available for use into the future.

Maybe we should ask 80% of the wildlife east of the Mississippi to pack up and move out west. But I am not sure if the animals are really ready to move. Besides they might not like the hotter dryer conditions out west. Don't get me wrong I am all about keeping land open for public use. But, you sound like a developer just itching to get your hand on some prime real estate!!

It is crucial to both wildlife & humans to have places in which no sound of industry, vehicles, planes or other noise intrudes upon them. It is only where the peacefulness of nature exists that the world cannot intrude upon us. We must have places of serenity to find it within ourselves, and to be at one with that which is greater than ourselves.

Sorry, as much as I like motorcycles and other motorized vehicles— speed and even the sound and feel of a powerful engine—it has no place or rather limited place in the natural surroundings of a National Park. This kind of recreation is not about beauty, it's about power, speed and excitement. So, I say make parks designated for that kind of action. Who in the world wants to hear the roar of engines racing thru the natural wilderness? Scaring every living creature in the vicinity, Tire tracks tearing up the trails. It's not nature. It machine. The Parks were set aside to preserve and appreciate the natural beauty of this country. It's not dissimilar to smoking cigarettes in an enclosed space, forcing another to breath it.

I agree. In Oregon, they have Outdoor School for 6th graders to foster an appreciation for nature, showing them the interconnectedness of all life. This in turn fosters a sense of personal responsibility for their interaction with their natural environment. Why not an adult version? The "bad apples" are just scared ignorant 6th graders that never got that education. These feuding land stewards are letting their egos misdirect them from the bigger picture of preserving this land for the next generations.

With all of the wonderful uses of petroleum, does anyone think about mankind 500 years from now? Do you think they could use some? Or should we just use it all up and pray that technology will find a solution?

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Finally, someone have spoken for the wilderness. I cannot imagine trying to camp while ATV's are roaring around me. All these comments, and little has been said about the true inhabitants of the wilderness. Off road vehicles do not belong in the wilderness. Respect the wilderness--animals, trees, plants, birds, fish. They all manage to live quietly compatible, until we invade their homes. This is not just our land--to do as we please. This is their land too. Getting out into the woods should be quiet--as it was before we arrived. Family bonding? Camping? Roaring engines. Please! Wrong. Go have your own designated areas. Watching eagles as you roar through the woods? Sitting quietly for hours until they learn to trust us. These people like they write the same story, but do not write of their experiences disturbing the forests and their inhabitants.

If in an above post would get off his ATV, get down on his knees and take a close look at the desert sands he'd see an intricate system of nature designed to capture what limited water there is. That system not only feeds the sparce vegetation, but also prevents sand from being swept up by winds into sandstorms. Uncontrolled wandering on foot and the swaths cut by ATVs destroy that delicate system. Since ATVs/OHVs damage the landscape much more than other methods of recreational enjoyment, charge them appropriate fees. Given the revenue needs of the park and forest system, a seasonal fee of \$1,000. per OHV used in each land unit is a good start.

Not all lands need to be accessible for human recreation or economic exploitation. A reasoned balance should be struck, although I'd prefer to err on overprotection for the benefit of future generations.

Since OHV's damage the landscape much more than other methods of recreational enjoyment, charge them appropriate fees. Given the revenue needs of the park and forest system, a seasonal fee of \$1,000. per OHV used in each land unit is a good start.

you people who think wilderness serves no purpose but to drive your filthy, noisy orv's through it make me sick. i'd rather be a tree hugger than a narrow minded red necked jerk spewing gas fumes and noise through the woods on your little toy trucks. you people have absolutely no appreciation for nature, per se. you think adding your polluting, noisy, destructive form of 'recreation' to a wilderness is normal bec you think the world's creations exist for your selfish pleasures. go drive on road and stay the hell out of the woods. woods are for quiet, for restoring the soul, for getting away from all the hellish parts of "civilization" that want to encroach on every piece of quiet earth left. wilderness exists for it's own sake, not for the sake of people. if we want to enjoy it then we do it by appreciating it for what it is, not turning it into something it was never meant to be.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I've lived in the West, I haven't just driven over it and flown over it. I've lived here all of my life. First of all, The Nature Conservancy is a NON profit organization. They do not hate people nor do they want everyone to live in cities. The only ones making obscene profits with regards to public lands in Western states are oil and gas companies and big agribusiness. The Bureau of Land Management loses hundreds of millions of dollars annually on grazing rights leases on public land and what they take in for mining and gas leases doesn't even out the loss. Both grazers and miners are paying fees that are decades old and not fair market value. The BLM is also losing hundreds of millions on wild horse and predator control when both are not needed. In Montana there are only 200 wild horses left in the entire state and that is on a refuge but they are emptying the refuge too. Small family ranchers are being blamed but it is big corporations like Hilton and millionaires like Ted Turner who own most of the grazing rights and who are taking gross advantage of the system. Less than 3% of US Beef is produced on the range yet most of the public lands in the West are managed for cattle grazing. The West does have a lot of open space but not pristine open space. Desert soil is very fragile and off road vehicle use does cause permanent damage in some areas. When you fly in or out of Phoenix AZ for example you can clearly see all the damage. Of course, ATV users should have access to ride and enjoy but so should everyone else. You also should consider that some of the biggest cities in the US are West of the Mississippi. Population counts only the cities themselves, not their surrounding suburbs. All of these cities take up huge portions of land. Miles and miles in many cases and they run together in some states with little to no wild open land in between for wildlife movement/migration. Los Angeles (2), Houston (4), Phoenix (5), San Antonio (7), San Diego (8), Dallas (9), San Jose (10), San Francisco (12), Ft. Worth (17), El Paso (22), Seattle (23), Denver (28), Portland (30). From Seattle to Portland there is city or suburbs almost the entire three hour drive. From San Francisco to San Diego same thing. From Los Angeles to Phoenix, same thing. The Northwest is clear cut and farmed in a checkerboard pattern that does leave wildlife nowhere to go in many cases. You don't see most of the clear cuts from the roads because they are required to leave trees along them in most areas but from the air it is horrifying. Yellowstone National Park is surrounded by ranchers who are afraid that bison will transmit a disease, Brucellosis which causes cows to abort their calves so the government pays to have hundreds of bison shot every year when they migrate out of the park during winter. Bison don't understand park boundaries. They go where they have water and forage. There has been not one case of a cow catching this disease from a bison yet hundreds of bison are shot at the taxpayer's expense every year. If more wilderness areas and wildlife corridors are not designated our National Parks are going to end up like Disneyland, surrounded by commercial interests as little islands of nature consumed by city.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Wilderness exists because it is an irreplaceable resource. It's where the world works naturally, without our stamp. A lot of us Americans are proud that you can have that experience here in our country. Some of us work out and prepare ourselves to go out into our wilderness and experience it, without roads, vehicles, buildings, etc. The idea is to experience the natural world on its terms, not ours. You don't need a motorized vehicle to get on top of a mountain or to a pristine lake deep in the woods. All you need is some skill, some determination and some time to walk and live in the moment. If you need a road or a vehicle to enjoy a place, then there are plenty of places to go. Visit your state parks. Heck, visit your county parks. But wilderness is there because people should have the right to dream, and dream big. It should still be possible to simply 'be,' deep in a wild, untamed place, worlds away from subways, malls and parking lots. It seems there are a lot of people who won't feel fulfilled until every last critter is shot, every last tree has a road within a half-mile of it, and every last swimming hole has a parking lot. I'm sorry, that sounds like a desolate and depressing idea of our world, devoid of something profoundly beautiful, missing the truly sublime.

Without wildlife corridors viability of the species declines. I suppose you would rather visit your "wildlife" at the city zoo? That's the only place you will find them if they are confined due to human encroachment. There used to be a balance in nature until we thought we could manage it better. Go figure.

Are you kidding me? The only reason ORV'ers want new space is because they have already torn up and destroyed what they have, otherwise they would be happy. There is plenty of room for these vehicles already in use. Even when private property is posted "No Trespassing" many of these riders will continue on their merry way and plow right through with no regard to the noise, the smell and the physical harm they leave for the property owner. By no means give them a license to destroy more of OUR wilderness!

Yes we need to consider TRUE economic costs when people propose things like factories, golf courses, and other such employers which look good for immediate gain, but in the long run may cost us. My other concern here though, is I have read studies on no matter where you live outside air is actually always "cleaner" than inside.

I don't know if editing and publishing a book is really where federal funding should be going. How/where would the book be distributed? Is it free or do people buy it? I think there are more effective ways to spend federal funds cultivating youth experiences in the outdoors, like funding programs that actually take kids to the wilderness.

Definitely need more federal partnership re: organic gardening and farming - and a return to pre-WWII food quality, before industrialized farming and intensive inputs.

Survival of the fittest is a misunderstanding - it was always survival of the most adaptable; human beings are maladaptive in the extreme when we deny that nature (biology, physics, chemistry) rules.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Brandy Station is America's largest and most important Civil War battlefield, and the effort to preserve this pristine historic landscape now spans more than twenty years. Thus far, we have been mostly successful in saving important battlefield acreage--areas where heavy and casualties occurred--simply because like-minded organizations have banded together and worked toward a common end. With superb leadership provided by the Civil War Preservation Trust, while supported by the Brandy Station Foundation, both battlefield preservation entities have worked closely with other groups--such as the highly-effective Piedmont Environmental Council--to accomplish noteworthy preservation and education goals. Whereas battlefield preservation advocates were formerly thought of as "no growers," we are now fully integrated partners in Culpeper County's land-use planning and economic environments. By the way, we have been relentless in this struggle, and since 1988, we have "kept our army in the field." There is much more work to do...

Protected how? From developers? From ranchers? From hikers? Some development must happen. It's that or everyone lives in cities which pollute more and have higher crime rates and are generally less pleasant to live in. Organic beef must be left to graze on large areas like ranches. Hikers opened these lands originally. If there were no hiking allowed they would never have been discovered so in reality hiking brought about all of the damage. Do you suggest we close ourselves out of the wilderness entirely? Of course not. You just want our beautiful peaceful areas to stay that way. Me too. But consider this. With the number of people using the wilderness for motorized recreation, if you kick them all out you lose a lot of the usage of parks and then lose funding. That's when the parks turn to logging companies to make ends meet. Charging the motorists extra fees is all ready done in the form of ATV vehicle registration. Care to tell local governments they can't have that money anymore because the fees are so high to use their atvs that most people stopped bothering? On top of that atv users provide a lot of land maintenance that is unnoticed by the government and unappreciated by the hikers and bikes that use it. They rebuild trails after washouts and they often maintain creek crossings and such. You will regret any harm done to the atv community because they are actually your allies in keeping the beautiful places from being developed and in keeping the trails available to everyone.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The atvs and motorcycles are responsible for the original formation of a lot of the trails I love to hike on now. As a hiker and mountain biker I definitely prefer not to compete with the machines, but I recognize the need to respect the outdoor activities of others and appreciate the contribution they have made by further opening the wilderness up to me with new and exciting trails. As a mountain biker I have seen many conflicts between non-motorized cyclists and hikers for the same reason hikers complain about atvs and motorcycles. They complain of trail and wildlife damage and the high speeds at which we come down trails. What the hikers don't know is that the cyclists do the majority of the trail maintenance for free in the woods. When cyclists were kicked out of a county park near my home many of the creeks quickly became impassible. Downed trees waited for months for country crews to get in and clean them out. Meanwhile new paths formed around them causing more damage to the forest floor. Hikers need to recognize that atvs make a contribution to our parks too. They keep the usage up which keeps funding coming in. They build sturdy bridges and maintain them at no cost to the tax payer. Yes there need to be divisions that are enforced. Motorized vehicle trails should be separate and often far displaced from hiking and other use trails, but that doesn't mean there is no room for them at all. If there were no atvs we'd probably lose funding for a lot of our parks and they would be bought up by developers. Anyone who uses parks is on the same side, so lets get along.

Well stated. The rarest and most sensitive species of plants and animals need large tracts of contiguous undisturbed land to maintain self-sustaining populations. I don't need to 'consume' them or their environs to feel I've gotten my fair share of our world. Rare plants and animals have value separate from human culture or economic needs. Wilderness is valuable for it's own sake.

Let's leave what remains of our Old Growth Forests alone. No logging whatsoever. We have plenty of previously logged forests that could be managed for logging without sacrificing the small percentage left of our original Old Growth Forests.

I have no idea how to solve this problem as both sides have their good points. However, travelling in the US and in Europe, I have noticed one very big difference in land use: In Europe, particularly in Germany, people live in (and I mean "IN") closed villages and smaller cities where you can walk, or have a shuttle service, to all amneties. A car is "not" a necessity! Once you step outside of the city or village, you can walk anywhere along service roads or paths through the fields and forests, privat, municipal or federal, enjoying the sights and sounds of nature along the way. Because of this, there is no real need for parks (outside of cities) as people are thinly disbursed all over the place. In contrast to this, in the US you do not have these closed villages. Homes are built everywhere throughout the countrysite and wherever you go, you see these "Privat", "No trespassing", "Keep Out", "Trespassers will be prosecuted" signs. As a result of this "My Property" mentality here, in order to enjoy the outdoors you are forced to either walk along the roads and highways or "hop in your car" and travel to some remote "Park" which is overrun by all the other people trying to do the same. This is where the concentration and overuse of puplic places and the inevitable confrontations stems from.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

It's about the wildlife and it gets stressed by the noise and intrusion of ATV. ATV enthusiasts have made trails on our private land without our permission. It is not the way to open the wilderness to everyone. Last week we heard the call of a crane nesting in one of our Northern Maine trees in the early evening. It is a sound I have never heard before. Animals and birds like that seek the uninhabited places. ATV noise disturbs them. Seems to me that is more of a racing sport and belongs on a licensed track.

I took the time to scroll up and read his post. What a waste of time that was. Why don't you petition for the street you live on to be closed. Then you can hike to work and not have to worry about your invasive vehicle.

I am not sure who is using my name but he is completely opposite of what I believe. Everything said is correct and ohvs are highly damaging to the environment and should NEVER be allowed anywhere near wilderness lands, national parks or vital wildlife habitat. I hope that is clear enough.

I guess there can be only one guy in the USA that is named? I will my tell my parents they are terrible people for not researching the possibility of another.

Good idea but I think the closed area should double every time an infraction is committed. 1st offense =1 mile, 2nd = 2 miles 3rd =4 miles 4th =8 and so on. Also a limit should be placed on the number of times an area can be damaged before it is closed permanently.

Boy a ohv user must get a major thrill running over a sea turtle. What kind of monsters are these people?

While your wife's comments and heart was certainly in the right place and this idea is promotable it is incorrect to think that all groups are good stewards of the land and should be given the same amount of input. The ohv community for example claims to be good stewards of the land but walk down any ohv or multi use path or even a path that is off limits to ohv use but used illegally, then read some of the comments regarding protections for threatened or endangered species and conservation of forests and you will see they are hardly good stewards of the land and wildlife and only want the land so they can use it for their own self centered pleasures and to heck with the animals that call that land home. Even the oil, logging and mining industry claims to be environmentally conscious with an eye towards preserving the land but I would hardly call them good stewards would you? As sad as it is to say even some non profits are out for the quick buck and care almost as little about preservation as the ohv, oil, logging and mining community. While it would be nice to see some cooperation between groups that really do care other groups would need to be screened out to prevent the same conflicts that exist now.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Here in CT we have "bad air" warnings anytime the temps reach above 90 (which is most days now) and they warn people with respiratory problems to stay indoors. We have regular beach closures and several rivers and streams are considered catch and release because the fish are dangerous to eat due to the pollution levels in the water. I always thought those movies of people living in domes or underground were pure science fiction but the more we do nothing about climate change and our idiotic ways the more I start to think it is a very real possibility.

Always good to point out the economic BENEFITS of preserving forests to the anti environmental crowd that roams this site. They still think nature is only good for being logged, drilled, mined or driven over.

I agree we need to preserve the habitat for the wildlife but what does this have to do with the debate between motorized and hiking traffic? I know of several places on the east coast that have motorized trails only and have not seen a decrease in the amount of wildlife. As a matter of fact the deer population has increased because of the lack of hunting on the property. For the last three years there have been population decrease deer hunts on the property to curb the deer. The deer use the trails we make not avoid them. Here in the mid west the deer population is out of control.

Brenda- Hello from a fellow CT resident. I will gladly back your account of bad run ins with ohv users here and as a hiker have had to grab my dog out of the way of some idiot on a motorbike who thought it would be fun to buzz us on his way by and he did not stop to apologize either and have had to pick him up and carry him over broken glass left on a trail. When I told this story on another thread I was told by another ohv user that I should have tried to stop him and have a polite conversation with the jerk like it was my fault for being on the trail in the first place. These people have no respect nor love for nature and no respect for anyone that uses the trails other than them and only want to use it for their own self centered pleasures.

The two user groups have been proven to work together. Please reference again Interlake Offroad Park. Trails are being used by motorized and equestrians/hikers. We are a multi use family. We have horses, jeeps, fourwheelers and we hunt/fish and camp. We seem to get along with one another and enjoy being outdoors. I wonder how that happens?

Good idea and I promoted it but I do not know if it would help. Many of our senators need their hands greased through "campaign contributions" (a nice name for BRIBES don't you think?) in order to vote a certain way so unless there is a grizzly bear or moose holding \$1,000,000 for them when the senator arrives I cannot see a visit to view the beauty of nature overtaking their greed.

I really have to laugh when I see people using the constitution without understanding at all what it really means.

***(cont.)***

Compare the amount of land that has been designated to hunting fishing and foot traffic only to the amount of land set aside for motorized use in Indiana. What part of that is fair? As an OHV user I have four thousand acres spread across the state to use. It is a good thing in the mid west some have opened private parks for us to use.

We can not turn more land into national or state parks. These resources are already stretched too far and that's just passing more onto the government. Private landowners, especially ranchers are wonderful land stewards. Getting them on board and helping them to take care of the land allows everyone to win without taking land away from the private citizens. How would a person in the city feel if the government decided their house, building, neighborhood needed to be taken over to create a mall or freeway. Most of those living rurally are trying very hard to take good care of the land and also be able to make a living to afford to keep the land. Putting more land into the governments hands just adds to the difficulty of them trying to maintain it. What about stimulus aid for those trying to take care of it on their own?

I agree. ATV's do not belong on public lands. My family and I go there to relax in the peace and quiet of nature. It's disturbing (to say the least) to hear the noisy engines and smelly exhaust of ATVs interrupting the tranquility and damaging fragile ecosystems.

I shudder to think what this country will look like in fifty years if we allow the ATV crowd to take over the parks and wild places (more than they already do). These people (even the ones who claim to be "families,") have the "this land is my land" attitude that many men (and the women that belong to them) do. They have no more "frontiers" to conquer or mammoths to slay, so, they do other things to relieve the overabundance of testosterone fogging their brains. It sounds like the Japanese government saying that the world's non-whale-murdering nations haven't the right to deny them their whaling (it's a "face" thing). If it ain't one pi\$\$ing contest, it's another. "I caught more whales," "my ATV (euphamism; look it up) is bigger/louder than yours," "I can stir up more dust than you." For Pete's sake - learn to spell; read a book to your kids; make love to (not just frack) your "old lady." Build a house for Habitat for Humanity, do something/anything constructive/meaningful with your free time. Just don't rip the world apart a piece at a time while you're at it.

If people (or their parents) choose to live near federal lands, it doesn't give them some inherent right benefit from the federal land. I am a US citizen living in Boston and contributing to our country's economy and community; do I have less right to federal land than someone living nearby? No. We all pay taxes and work for what we believe to be the common good. We all get a voice in deciding what parts of the country we are willing to plunder and what parts we want to preserve for ourselves and our children.

## Discussion Question 2

***(cont.)***

Really? e wv, If "Viro" is short for environmentalist, then I would first warn you against characterizing us a group; it's like saying "Americans want to watch Dancing With the Stars"; some Americans want to, but not all of them. Also you seem to be painting a really exaggerated picture, creating an "us vs. them" dynamic and thinking of environmentalists as simply crazy or villainous. Thinking of others in such broad terms creates unnecessary divisions. To your point, you *\*are\** caring for the land for someone else. You did not create the land; it existed before you did and will continue to exist after you die. We're all just temporary tenants. You don't have to worship pristine nature to have some humility about the role of man in the grand scheme or our ability to manage things.

Please leave more land free of machinery of any kind--motorboats, ORVs, snowmobiles.

National parks and wilderness lands in general need to be protected from ever-threatening noise, construction, and traffic pollution. The federal government, in concert with local municipalities and land-conservation non-profits, should provide economic incentives (grants, tax breaks) for smart development near pristine spaces.

No more wilderness or national parks? NONSENSE. This is just the time when we need more and more of them, Have you looked to see what is happening to the natural world. WHat kind of conservation work has been prevented. Building ORV trails? Building dams? Maybe conservation "work" wouldn't be needed if people hadn't messed it up in he first place.

Why can't some of the funds set aside for our highways be put aside for bike paths, and or sidewalks? Could you imagine a place where you could actually walk to the store, or walk down a tree lined street, without the fear of getting hit? Everytime you walk out your front door you have to get in an automobile.

While it's of course better the more people appreciate the outdoors, the reality is that motorized uses have orders of magnitude more impact on the fragile environment than walking does. I am of the opinion that motorized use should be restricted to designated areas to minimize the impact and to preserve the peace of the backcountry.

## Discussion Question 2

***(cont.)***

The west is a mosaic of lands controlled by different land management agencies; Federal (BLM, NPS, US For. Ser., Bur. of Reclamation, military) Tribal, State, local governments, and private. This fragmentation is highly inefficient. First; the federal government should consolidate land management under one agency, taking fully into account ecological systems, recreation, science, education, transportation and energy corridors, recreation, resource extraction and reclamation, and community needs. Second; all stake holders need to be at the table to participate in developing long term sustainable management plans taking into account needed short term needs. Third; public and in some cases private lands need to be consolidated into meaningful contiguous blocks through land swaps and in some cases purchases for efficient management with all stake holders represented at the table. Fourth; realize that access to wilderness areas is critical for management purposes, but needs to be controlled. With the wealth of exotic plants and animals in this country, over grazing, climate change, and pollution a hands off approach is no longer possible. There is almost no pristine land left. Managing and rehabilitating our public lands is, and will always be, a long term effort. Finally; there needs to be consequences for abusing our public lands! When someone pollutes (fine them meaningfully), poaches (take their guns), steals antiquities (claim their property), or drives illegally off road (take the offending vehicles).

All Americans have a responsibility to "watch the government." We ARE the government. However, your anti-Obama rants are not suited for this forum. This is a pro-idea forum that the Obama administration is using for green ideas. I concur with Melissa - do not make up data and call it science or research. Thank you.

Hmmm...not so sure that I'm really excited about exposing our President and his family to a highly publicized vacation in the outback with the ready access to high powered rifle-toters who are of extreme and dangerous political persuasion. Easier for the Secret Service to shore up a hotel than a 50 mile stretch of river. Allow the First Family to choose their own vacations while their security is at risk.

Motorized activities should be banned from public lands--especially national parks. There are commercial outlets where for ATV users can enjoy their vehicles without harming public spaces. ATVs and other motorized vehicles directly harm the environment where they are used. Their use should be restricted to commercial establishments that are equipped to repair damage that are caused by these machines.

\_\_\_\_ - your comment , "GOD gave us the earth natural resources to use so we can flourish if he didnt want us to use those resources he would not have given us so many." has only one flaw.... If the Great Creator gave us these gifts and the stewardship over them, don't you think that He may just be REALLY ticked off when He sees how we are wasting and destroying them through greed and selfishness?? Just a thought....

Let's also remember funding. If we can't get the funding to adequately care for major parks like Yellowstone and others, how can we presume to care for a flock of new special-interest parks or monuments?

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

No worries--they'll assign the pack to a staffer, and meet them at the drinks tent at the end of the trail conveniently set up by some corporate interest out for some special project. The basic idea is good, but until we fix the rules for congressional fundraising (hah!), not very practical.

I have been coming to the Superior National Forest, now BWCA, since 1965. It is a unique resource to the peoples of both the USA and Canada (with the Quetico Provincial Park). It needs to be protected from temporary incursions like mining and logging that decimate the area briefly for short term profit and leave poisonous residue for decades or centuries to come at the expense of the taxpayer and future generations, not to mention the wildlife that doesn't even have a voice. How many parks and recreation areas can claim lakes pure enough to drink without filters and chemicals? Where you can see moose, bear, eagles, otters and others, and hear wolves (I've seen the above; have yet to more than hear a wolf). The wilderness is a place to commune and share the peace (and occasional fury) of God's nature. It can also be a place to challenge yourself and your abilities. We should not allow extractive, poisonous uses of this beautiful area and the areas that feed it (watersheds). I have been coming to this area for many years (and hopefully a few more yet), and would like to pass this to children and grandchildren without damage from these intrusions.

Have not heard much from equestrians such as myself, so here goes. From my experience with public bridle paths in CT, the ORV folks have no respect for anyone, only themselves. They think they have the right to go anywhere, even on trails not meant for them & even going on private land. Some ORV riders were responsible for injuring someone a few months back by riding on a designated bridle path. A horse spooked, the woman thrown & the idiots left without even rendering aid. The woman, a single mother was badly injured & lost her job. Like some of the the other comments on this thread, quite a few of us want to be in a quiet, natural environment. That does not make us extremists. The bullying tactics of the ORV folks make me very angry, they create noise, make ruts in trails, destroy animal habitat & then call it "family fun time." They are too self absorbed with their own pleasure to think about contributing to the environment they so wantonly tear up with their noisy & smelly vehicles. On a political level the wasted use of petroleum/gas contributes to two wars & makes our country dependent on foreign oil. They might consider using a bike & getting some exercise for "family fun time." After all it is cheaper than an ORV.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

While 1 for 1 sounds like a good idea, I can't get on board. What is wrong with all of the wilderness that has already been designated? Why do we need more? If anything we need less restrictions on our PUBLIC lands. That being said I am the last person that wants to see our public lands degraded. I want it to be available for my kids and future generations. "Tread Lightly" for all forms of recreation on OUR public lands is the key. I love the great outdoors and that is why I am a regular visitor to our national lands and I enjoy many forms of recreation on them. However my passion is motorcycle riding. Just like the hiker, mountain biker, ATVer, rafter, kayaker, equestrian, and others, I love to go out and explore the great natural wonders this wonderful world has to offer. I think that is the draw for most people that venture into our public lands, no matter what mode of transportation they use to get there. Maintaining our public lands for MULTI USE should be the priority. I don't understand the hate, anger and elitist attitude that anti access activist have displayed on these forums. And as far as conservation goes, the different users of the national forests provide more service to the public forests than any government agency ever has. In Conclusion, since President Obama wants to know "What obstacles exist to achieving your goals for conservation, recreation, or reconnecting people to the outdoors", I would have to say that restricting access to our public lands is the single biggest obstacle to all three! Thank you!

Every activity has an impact. Sending the forest service out to post signs that a specific area is a zero impact area, has an impact. Our job should be to manage activities and thier impacts so that all creatures, us included, can enjoy the natural wonder the forests have to offer, for current and future generations.

I am sorry but has anyone ever wondered where our fertile valleys came from? It is called erosion! Without erosion of the mountains we would all be dead from starvation due to the lack of food bearing soils. The fact that the clean water act considers siltation as a pollutant is a clear indication that the environmental wackos who wrote the legislation have no concept of how the environment functions. We all want clean water and a vibrant environment but lets stop arguing with falsehoods and get our heads on straight.

I can't believe that I am going to agree (to a certain extent), but here it is. Licenses would have no effect here because you can not regulate stupidity. Whether it is the littering hiker or the irresponsible OHVer, stupid is stupid. The only solution to stupidity is education, and there are multiple groups out there trying to educate our citizens to respect our public lands. Government licensing would only create another inept wasteful agency and more taxes. So I am going to demote this idea, because in my humble opinion it would be as effective as licensing baby making.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Wow, a hot issue. I even heard a person suggest many be slaughtered and the meat sent to the developing world. I live in one of those developing countries and know how this would be received...."arrogant Americans always push their problems off on others." The meat and milk is delicious, also we all have our own horses, thank you. We don't have horse problems. Just accept that the horses, and burros, are on your lands, they have been there a long time, longer than the Europeans (it's true). So steward them intelligently and without heated argument. I suggest the responsibility for these animals be taken away from your BLM and given over to such as your ag universities, the horse genome project, and other organizations that must be capable of treating the issue in a manner that will protect the horses' right to life in such a way that is sustainable (no tax burden), does not harm others who need to use the lands in order to make a fair living. Genetically viable herds can be organized and placed in areas that will not disturb the latter. Intelligent management of these herds should have as its objective selective improvement of each of these herds. Is this an insurmountable challenge to one of the most brilliant nations in the world?

While I think it may be a bit too far to say that "any audible over-flights of wilderness areas should be banned and re-routed", I do think that there should be *\*some\** places somewhere that if not all, then at least *\_most\_* of the time are as free as reasonably possible from extraneous noise(s), especially industrial ones. I agree that the issue of sound pollution really needs to be more seriously considered insofar as to how this type of noise affects one's cognitive abilities and emotional predisposition.

Thank you Lisa Rutherford for drawing attention to the name-calling, which is very rude and inappropriate. As to the underlying issues: the primary problem with ATVs, OHVs, dirt motorcycles etc. is that their users have no regard for the land itself -- they LITERALLY rip it open, leaving deep raw ruts everywhere. The idea of "quiet vehicles like 4x4s" is just a contradiction in terms. I've never seen such a beast. Here's a secondary problem: the whole fun of the ATV crowd is to make as much of a raucous racket as possible, while tearing up the land and its fauna -- and scattering ruined debris of Mother Nature over every exposed boulder. It looks just awful, and it does NOT repair itself (as the ATVers seem to assume). Over ten years maybe, some of that damage might weather off, but not in any reasonable time period. Speaking of debris, there's a tertiary problem: the beer cans, garbage pits, etc. left by those same people. Then there's the stench of the fuel (irreplaceable petroleum) that they burn as they move along. It appears that they're accustomed to being poor neighbors at home in the city, and can't help but extend that behavior to the out-of-doors as well. Sadly, they are poor advertisements for themselves. The references they make to handicapped people, and the like, appear to be only a red herring. What tiny fraction of OHVs are used by handicapped people? What infinitesimal fraction of handicapped people drive or ride on OHVs? This argument is just a tail wagging a dog, not a realistic consideration. The cruise ships to Alaska are just one superb example of breathtaking scenic splendor that is available to handicapped. I personally would like to invite these folks to come backpacking, hiking, mountain-biking etc. and see how much greater a pristine, spiritual experience can be had in these ways. So far, they don't seem to be responsive to such ideas, and I think that's sad.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

"Open Space" does not mean protected. That land is owned and cannot be walked freely upon or camped on unless it is agreed upon by the owners in conjunction with some Park or Wildlife Preserve or Protected area. And as population expands, we will be carving it up for development just like the areas on the edges of our cities now. The wild animals that make it their home can be moved forcibly or crushed beneath the machines as the land is developed, and it will be developed. If it's not protected, it's not truly "Wild", and could become a mining area, a clear-cut forest, a condo development, etc,... If The Grand Canyon wasn't protected, it would no doubt be a mining operation or a housing development and its peaks would be lined with billboards and satellite dishes!

Love the idea, except make trails for hikers and bikers and get rid of the OHVs! OHV'ers need to be in separate spaces. I go to the woods to get AWAY from loud destructive machines that terrorize wildlife and rip up land. I see the devastation every time I go to the park after the rains. They sneak in and do "Doughnuts" and leave the land a muddy disgusting mess for the rest of us. I know it's fun to ride around in those things and tear up the mud and Earth, but, for the rest of us, who want to relax it is rightening and sad, and just plain LOUD and obnoxious!

OHV's are noisy, and take away the quiet enjoyment that most people want from nature. Ban them from parks altogether

At this moment, my daughter is being kept indoors for recess because Atlanta is having an orange ozone alert day with a heat index of 105 F, which makes it problematic to promote her connection to the outdoors. Similarly, the spring fed creek which runs through our property recently experienced a sewer spill of ~400K gallons of raw sewage spilling into it, so her enjoyment of that resource also had to be curtailed. When we camped in the national parks along the shore of Lake Michigan, local campers cautioned us about playing in the little stream running into the lake because it was chemical runoff from the golf course. The challenge is to identify the unhealthy environments and means to remediate them, and to find local, clean healthy outdoor environments to explore and enjoy.

I'd rather remove designated wilderness or at least make it available to quiet vehicles like 4x4's. Protect and preserve so nobody gets to enjoy it? If you look at the forest service surveys it shows less than 1% actually backpack. Backpacking is the only way to fully enjoy the huge amount of wilderness that exists. What about those with disabilities, people that can't carry a heavy backpack, small children, etc? If there was an allowance for quiet vehicles like 4x4's to access designated wilderness I would be more open to the wilderness designation. Until that day those that support it are closing some of nature's most beautiful areas to the handicapped and I am against that 100%. I think those that are not ignorant of the above and still support the current wilderness designation should be ashamed for being cruel and selfish !!!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

This is crazy. Protect and preserve so nobody gets to enjoy it? If you look at the forest service surveys it is less than 1% that actually backpack. Backpacking is the only way to fully enjoy the huge amount of wilderness that exists. What about those with disabilities, people that can't carry a heavy backpack, small children, etc? If there was an allowance for quiet vehicles like 4x4's to access designated wilderness I would be more open to the wilderness designation. Until that day those that support it are closing some of nature's most beautiful areas to the handicapped and I am against that 100% and think you should be ashamed of yourselves for being so cruel and selfish !!!

I'm voting no on this one. OHV's & mountain bikes do not make for a wilderness experience. Opening more wild, undeveloped areas to mechanized recreation will only mean fewer wild and undeveloped areas = degraded wildlife habitat, damaged riparian zones, permanent negative impacts to archaeological resources.

Great idea, except for the OHV/ORV part. Eliminate OHV from public lands. Their use is inconsistent with concept of conservation.

Why not try to develop a quiet alternative energy fueled vehicle that can take you quietly into the wilderness? Then perhaps we'll do 1:1.

\_\_\_\_\_ provides a good reason for the responsible use of OHV's. I wish that I felt that more OHV users were looking for this as their experience.

I agree with \_\_\_\_\_ and perhaps others. It is imperative that there are places for OHV's to go for their enjoyment too, of course, but these places were not established for loud machines. I'm sorry, it's a different view. Once we hiked a long way up Mt. Blanca's slope, to an alpine lake. And there was a camper who had driven there in a 4 wheeler, with a large radio blaring. It wasn't my idea of a wilderness experience at that point, but I was subjected to his style. These are mysterious places whose beauty is enjoyed in quiet with the sounds that have existed there for aeons.

Having multi-use trails for everyone is pretty much of a sham. Horses are scared by motorized vehicles. Hikers and wildlife watchers do not want the noise of motorized machines. The motorized machines, especially if they are numerous, can ruin the experience for many others who seek a quiet place to get away from the noise of the cities. The noise of an OHV can often be heard from a mile away. An excessive number of motorized OHVs, motorcycles, jet skis, ski-doo's, etc. can even cause a high level of air pollution, which is not desirable for anyone.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

It's time that all mining, drilling, four wheeling and anything else that tears up the ground cover and pollutes, forestry that requires road work is also destructive, is dis allowed in pristine land no matter where it is. There are enough places that have already been destroyed by these practices. Keep corporations and clubs that promote the destruction of the ground cover out of our parks. We need to keep the special places that can only be reached by a good days hike clear of the kind of damage that these irresponsible organizations and groups can cause in a few hours. If you can't hike there, it's not for you. There are already enough places that the winnebago four wheeler crowd have ruined for any but themselves. Dirt bikes are every bit as destructive if ridden in an irresponsible manner. It's time to save the very few pristine places left in this country. Selling off these special places to private interests is also a cause of friction among the locals who are used to using these places for generations. Save our pristine land and respect native land claims.

I hear your Sincerity and agree. We have no right to infringe on what has been long standing our only Graced Sanctuary.

\_\_\_\_, I applaud you. To the rest of you: if you drove on smaller roads and not 70 mph on the interstate, you would realize there are ranches and farms, where we grow your food, in those open spaces. Those lands are owned by private individuals, not the federal govt., and they would be surprised that you consider their land as wide-open and not being used. As for saving lands so your kids can't use them either -- if you don't save the land, your kids will never know the joy of getting out of the big city, getting away from other human beings, and seeing and hearing the sounds of nature uninterrupted by OHVs, radios or other human paraphernalia. There are already "citizens" living in the wild; they just happen to wear fur, fins and feathers.

You have the right idea. We shouldn't destroy more and more land just so people can have "access" to pristine areas, whether they are wilderness or not. I'm getting older and unable to hike to some places I used to go -- but that doesn't mean I should be able to use whatever offroad vehicle I want to go there. And people aren't the only ones involved; the further we go with our ORVs or OHVs the more the animals that have lived there for centuries are affected. Native plants can also be affected by the humans that pick them and the soil that is eroded. Mindless use of anything is generally not the best idea.

Do we need a different management system for our national public lands? I don't think one agency is the answer. Much of the time, the bigger an agency is, the more unresponsive it is because of levels of bureaucracy. It is probably more efficient for the various agencies to administer the lands under their auspices since each has specific legal mandates for those lands.

I was wondering when you were going to bring this up. Of course, Mount St. Helens is already protected as a National Monument, and it has strong local support to be expanded to include five nearby lakes. However, to maintain local support, recreational access, and funding and management efficiency, it should remain under Forest Service management, but with direct line-item funding.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Is it just me or does the Cape Hatteras closure expansion seem wimpish. On a OHV I could run over fifty turtles before I even had to speed up for the get away.

here in the west, the timber industry owns the air quality control monitors so we don't get air quality warnings. According to the ozone and pm10 monitors, everything's rosy here. I'd like to see a dome built to encapsulate every smokestack. That might help solve the problem. People who work at the business making the smoke can live inside the dome.

This is exactly the problem with forestry education. You say you are a forester, but you have no appreciation for the forest. To say "There is nothing unique about the area other than what some folks want to make of it" is a very telling comment.

Actually, I'm pretty moderate. When the president was running for office, I pretty much agreed with him on every speech, including on the environment, health care, bank bailouts, and regulation, ending the war. He Got 53 percent of the vote. So are you saying that 53 percent of the voters in the last election AND the president of the USA are "ecofreaks"?

You say "GOD gave us the earth natural resources to use so we can flourish if he didnt want us to use those resources he would not have given us so many." Wilderness is a resource for animals and god gave them the resource and they enjoy using it. You should learn about sharing. Fact of life: if you take away their resources, they will starve. If they starve, there will not be as many animals for you to eat. It's a downward spiral. There are so many people who think like you that some species of tuna are in danger of going extinct. TUNA. That's like saying that chicken is going extinct. Doesn't that bother you? Pretty soon all you'll have to eat is dog food. I wonder if you'll look as foolish as my dog does when you chew on your kibble.

If the fed is on your side and the locals disagree with you, you would be talking exactly the opposite. I've seen a lot of times when local enforcement people do exactly what they want no matter what the law says. That's not very good for our democracy. In fact, I think that happens more than half of the time. And it's ruining the country.

I don't get it. If the fed owns the land, why should the state tell the fed what to do with it? If you own a piece of land, I could understand why you would want very local control of the land, but this land we're talking about is owned by all the people of the US. I have a problem with local officials not enforcing federal laws pertaining to federal lands. I have a huge problem with adjacent landowners acting like, because of their proximity to federal land, they somehow should have more control over it's use than any other US citizen. This is just common sense.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I have to agree with you on one thing. I would love to see it all before I die... But the power plants are belching smog over it, the cities are paving it, power lines are criss-crossing it, fences are keeping me from it, and freeways are dividing it. The enviro-freaks (your definition), myself included, want there to be something left to see. What do you propose to see when it's all gone, not roped off or locked up, but GONE. How nice it would be to go back to the creek I grew up next to and cast a fishing line in the water and catch a real fish, not just a sucker. You know how many kids these days can't go do the basic kid stuff like fishing because the water's too polluted. You are lucky if you can drive a car far enough and see something that's not crapped on. The enviro-freaks don't want to lock it all up. They just want there to be something left to see when they get a chance to look for it.

Hey folks, a large number of new people have just come onto this list. I am "enviro-nut", and I need you new folks to quiet down a little and listen to the discussion for a while before you chime in. Please. When I first came here the ORVers dominated the blog and it put a lot of stress on people like me. Now I see the opposite point of view, and though I agree with you, I was developing a real conversation with people from other walks of life who have valid points of view. There are some very quiet and polite people on the other political spectrum and I wouldn't want to drown them out. Thanks a lot!!!

There is a huge difference in letting someone with limited mobility use an motorize off road vehicle as mandated by ADA law and opening more areas to Off Road Vehicles to anyone who wants to use them. I can no longer hike or climb, as I once did, so accept the limits to where I can easily travel these days. Until my doctors feel I need a scooter or motorize wheelchair, I will either plan my days to things I know I can enjoy without putting myself in too much pain or can do with help from those willing to help push my wheelchair. If and when I have a scooter, I will limit it's use on to those trails the scooter can handle. I don't need to be able to go anywhere I want to be able to enjoy my time outdoors. Just because I would love to be able to do something, doesn't mean I should be allowed to. When I was able bodied, I didn't go hike up above 10,000 feet, and then camp anywhere I wanted to set up my tent. Then I realize what the costs of having a military helicopter flown in, to rescue someone are due to mishaps at high elevations are. I just feel taxpayers should be ask to pay for irresponsible use of public lands.

I agree with \_\_\_\_'s remarks. OHV users SHOULD have designated recreational areas, but due to OHV's inherent high noise levels, engine fumes, soil erosion, speed and so forth, they need to remain isolated from low-impact trail users such as hikers, campers, hunters, anglers, bird-watchers, etc. Non-motorized outdoor enthusiasts simply cannot pursue their outdoor activities on the same trails with motorized users; the two groups' uses are incompatible, plain and simple, so separate facilities are critical in order for both to pursue happiness. To designate motorized vs.non-motorized use areas on a 1:1 ratio would eat up far too much national park/forest land. We need to maintain separation of motorized from non-motorized users, and to the extent feasible, consolidate multiple users on the same trails. Even current multi-use trails where equestrians share the road with hikers and bikers, leave the hiker/biker dealing with mounds of horse manure, but some compromise certainly is necessary to accommodate everyone.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

One of the biggest issues facing the "National Landscape Conservation System" is....the NAME itself. The American public will have a hard time learning about and embracing a collection of lands, when the name is long, confusing and misleading. Our National Parks invoke an image of Yellowstone's Old Faithfull and the Teton Mountain Range. Based on focus group testing throughout the west- National Landscape Conservation System invokes an image of shrubbery or a bureaucratic system. Please officially adopt the name- our National Conservation Lands to describe this relatively new but important collection of lands, waters and trails.

How do you track people who don't use OHV's and do vandalism?

Unfortunately they would find another reason to close access. They always do.

"As much as I HATE irresponsible riders who create their own trails through untrod soil over and over again, construction sprawl does more to kill habitat then bicycles." irresponsible hikers do that as well...

Lot's of people are so down on OHV's and the damage they cause. I ride a mountain bike and have seen way worse damage from horse. I like that OHV's maintain trails. I wanted to do my part, so I took the forest service certification course this year so I could volunteer as well.

Without looking at reports, I can tell you every time I'm out riding my mountain bike on trails, all over. I see way more people on wheels than hiking.

Thank you \_\_\_\_\_ for an articulate and well balanced perspective for long range preservation of our Great Outdoors. I strongly support working with scholarly organizations and I hope that ATV demolition of our Great Outdoors is severely limited.

It's actually about BOTH. You have the potential for injury to the user groups of: dog walkers - frightened dogs may bite, run away, attack a horse or wildlife, or worse, people. Equestrians: They may get dumped by a bolting horse who's been frightened by a bike or a dog, or is being chased by several dogs. Being thrown by a horse or falling off a horse is a potentially life-threatening injury, as many jockeys and other riders can tell you (Christopher Reeve comes to mind first). Wildlife can be badly frightened by bikes, dogs, and even horses (not so much the latter - the closest I've ever come to wildlife was because I was on a horse). They may abandon young and nests, or even stop reproducing. While a case can be made equally against dogs as it can against bikes, it's much easier to control a dog and keep it quiet than it is to muzzle a bike. So they are less likely to cause distress to wildlife and horses (the second user group) than a bike is. In a perfect world, all would be created equal; unfortunately, our world isn't perfect.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The problem I see with wilderness is that there will never be enough for the environmental industry. They continue the lobby for definition change so that more public land(also private lands) can qualify for consideration. The 1964 Act and resultant surveys and designations have long since established the true remaining wilderness areas of this county. The industry prays on your emotions to get you to donate money to support their cause, which is their bank accounts. We currently have enough wilderness and we should not grow more.

ATV users clearly do not value wilderness, habitat, the varied species that live there, clean air, etc. They just want space to drive fast. There are many of them. How about we give them places like abandoned airports and manufacturing areas that are already cemented over for them to drive their vehicles? Actually, can we encourage them to find a less destructive hobby? How about jogging? Photography? In terms of putting roads into the wilderness to accomodate the handicapped and elderly, I agree that access would be nice, but as an impending old person I think there're plenty of roads for that already. In my old age I'd rather know the planet is safe and pure than be able to access every inch of it by motorized vehicle.

The federal government needs to recognize, fund, and build on important community-support programs like RTCA, which has a long history of working with cities, suburbs, and small communities across the country on conservation efforts. In middle Georgia, much of the floodplain along a 50 mile stretch of the Ocmulgee River between the cities of Macon and Hawkinsville is managed under a patchwork of federal, state, and local jurisdictions. Because of this fragmented management, recreational access to the river has traditionally been very limited. RTCA is helping to change that by working with city and county governments to improve public access points along the river, creating a water trail, or Ocmulgee Blueway, that might eventually connect to the Atlantic coast.

No. Sorry, no fossil-fuel burning, loud, tread-heavy motorized ATVs should be part of the National Park experience. Period. Let them find, build and maintain their own roads and off-road experiences.

OHV use is a legitimate, sustainable use of appropriate public lands, particularly on National Forests and Bureau of Land Management Units.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Remember, it just takes one noisy, stinking, rut-making, plant-crushing, wildlife-terrorizing, irresponsibility-promoting, stream-blackening, tree-uprooting, topsoil-eroding, wilderness-abusing, serenity-destroying, all-intrusive fossil-fuel vehicle to ruin a wilderness experience for numerous considerate and responsible admirers of nature and wildlife. Wilderness should be kept wild and free from overt human and corporate intrusion, abuse and exploitation. Too much of the planet and its precious biodiversity have been abused, exploited and trampled by the inconsiderate, thrill-seeking, self-absorbed minions of self, the morally bereft corporate plutocrats who think the Earth is theirs to ravage in their greedy madness, and their servile lackeys in government. If their me-greed ideology were to persist, sterile eroded ruts, asphalt, concrete and neon perversions would cover Yellowstone and Yosemite, and Earth's wildlife would soon consist of flies, cockroaches and rats. Altruistic and ethical people must speak out and stand up now to protect and preserve our national parks, the remaining fragments of pristine wilderness worldwide, and Earth's precious biodiversity.

Keep wilderness wild and free from overt human and corporate intrusion, abuse and exploitation. Too much of the planet and its precious biodiversity have been abused, exploited and trampled by the inconsiderate, thrill-seeking, self-absorbed minions of self, the morally bereft corporate plutocrats who think the Earth is theirs to ravage in their greedy madness, and their servile lackeys in government. If their me-greed ideology were to persist, sterile eroded ruts, asphalt, concrete and neon perversions would cover Yellowstone and Yosemite, and Earth's wildlife would soon consist of flies, cockroaches and rats. Altruistic and ethical people must speak out and stand up now to protect and preserve our national parks, the remaining fragments of pristine wilderness worldwide, and Earth's precious biodiversity.

Yes, keep wilderness wild and free from overt human and corporate intrusion, abuse and exploitation. Too much of the planet and its precious biodiversity have been abused, exploited and trampled by the inconsiderate, thrill-seeking, self-absorbed minions of self, the morally bereft corporate plutocrats who think the Earth is theirs to ravage in their greedy madness, and their servile lackeys in government. If their me-greed ideology were to persist, sterile eroded ruts, asphalt, concrete and neon perversions would cover Yellowstone and Yosemite, and Earth's wildlife would soon consist of flies, cockroaches and rats. Altruistic and ethical people must speak out and stand up now to protect and preserve our national parks, the remaining fragments of pristine wilderness worldwide, and Earth's precious biodiversity.

Notice the words "large-scale forest landowners", sounds like an idea that will end up promoting the corporate lumber industry.

Bruce, without "super" predators to thin the ranks, wilderness suffers. Deer, elk, and other herbivores overgraze and unbalance the plant life, which in turn can lead to losses to smaller wildlife and to soil erosion. Why should wolves and bears not be in areas where they survived in a balanced way with other wildlife for hundreds of thousands of years before Man came along and decided that wolves were a threat to their profit margin?

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Albert, Along your lines of thinking then why does your type feel that your hiking shoes come with a permit not only to use them on public property but to also dictate who can and cannot use that public land. OHV recreation is an acceptable form of recreation in most states as is horseback riding, mountain biking and yea even hiking. If all of you hi and mighty feet on the ground types were really so disgusted with the combustion engine being out on the trails then you should stay off most trails since they are funded by OHV gas taxes, thru the RTP.

H. E. PUFFENBARGER (05 Aug 2010) Having been a forester on the Siskiyou N.F. I can see no advantages to having a Monument. There is nothing unique about the area other than what some folks want to make of it and .... there is already a Wilderness nearby. I am for conserving our national heritage but I am not a preservationist.

I wholeheartedly agree with Barbara here. We've overfished our oceans into collapse. We've polluted our air into of climate catastrophe. And we've fragmented our wild lands so severely that not a single regional-scale ecosystem is intact. When do we learn our lesson in humility and make a change? There are so many thousands of miles of backcountry roads in my homestate, Colorado, that there is only one place where an animal or bird can get more than 7 miles away from a road. And people think we need more of them?!

What many people don't seem to understand is that by destroying the environment, including other species, we are destroying ourselves. This is the only planet on which we can live. Once again, we need wildlife corridors because the wildlife spaces we now protect are inadequate for healthy herds/packs of wild animals. I do not hate other humans. It is because I want humans to be around for a long time that I am so concerned about the environment and what we are doing to it.

What sounds good on the surface is again another ruse to promote motorized vehicles in wilderness areas. Once again, they erode and destroy trails and they are noisy. They should not be allowed in wilderness areas. Also, the BLM has done a terrible job of controlling grazing on grasslands, timber cutting and mining on public lands. They do not protect the interests of the public in general. I am tired of my tax money subsidizing the timber, ranching and mining corporations (I should say conglomerates.) There aren't many families left who are making a living this way. Even if there are, the costs of their products should reflect the real amount of damage done to lands in the process, and no products reflect that today.

We need wildlife corridors between parks. The designated range for wildlife is currently too small to promote healthy herds/packs.

Although education is a good thing, motorized vehicles still should be prohibited in protected wilderness areas because they cause erosion and destroy trails.

I have just finished reading Bill McKibben's "The End Of Nature" so I am concerned about comments to manage for sustainability. The description of this sounds good but I worry about the economic reality and social benefit taking over from forest health. The forest was sustainable without our intervention. But we keep wanting more for our lifestyle and less for nature's way.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Most of the open space is ranch land, not national park or state owned land. So if ranchers would like to host off-roaders I would love to see that work out. They could make some money by allowing access to their ranches which are NOT wilderness and would not be disturbed by off-roaders.

Please allow more OHV recreational use of public lands for the benefit of current and future American families.

Rivers Alive at Wall Street Pier 13 Rivers Alive Maritime Pavilion (Ramp) Pier 15 A place where visitors will be able to learn, touch, and see the water and any tall Historic Ship that visits the NYC area. [www.riversalivenyc.org](http://www.riversalivenyc.org) The site is somewhat dated, but our web masters are hard at work updating our exciting components. Our partners in the Rivers Alive at Wall street team are the Open Space institute, Pace University, Raplh Appelbaum Associates, Albert Butzel, Esq., Plaza Construction, Al Landzbery, Tony Walmsley, and David Rocco of the Walkway Over the Hudson background!

Every year at my school, we have a clean up day. My school runs from Pre-K through 12th grade and each student does something to help the environment. High schoolers and middle schoolers take garbage bags and gloves and pick up any trash on the campus or on the road. Lower schoolers plant flowers and other plants in the front of the school which makes it look nice, but also helps the environment. Although there are some complaints here and there about not wanting to pick up other peoples' garbage, in the long run, everyone feels really good about what they have done. I've also heard kids say, "Wow, I guess I won't be throwing my trash out the window of my car anymore." This experience gets kids outside, working with their hands, and makes them more aware of pollution problems. What's great about this approach is that it is relatively cost free! There is no transportation cost (because we are working in a walking distance), and the teachers who would normally be teaching classes during the clean up time are the chaperones (so nobody needs to get paid for the chaperoning position). The only cost is for supplies like bags, gloves, and the plants which the smaller children plant. I think every school should have a clean up day.

When reading these comments, I sense a very different attitude by those making comments. I don't think that name calling or labeling will solve the problems that face us. There are many places that I will never be able to go because of my physical limitations, strength, etc., but I don't expect others to accommodate my needs. There are plenty of beautiful places I CAN see and experience. People who don't care for wilderness areas or public lands should experience places where all the land is owned -- Texas comes to mind - and see how trespassing on ORVs, etc., works there. There are a variety of reasons for establishing areas as wilderness. There are plenty of wonderful places to experience without running roughshod over areas that may be considered worthy of protection.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Getting people involved in helping with America's public lands is critical to having people buy into the idea of these lands being "our" lands and working to protect them. The services that oversee these lands have been stretched to their limits during the last several years and volunteers are needed to help in many areas. I support the idea of 4x4's teaching their folks how to preserve trails and keep to approved trails. There are, however, places where a quiet experience is expected by people who don't have to rely on a 4x4 or ORV to get them where they want to go. I appreciate the fact that some people have to use 4x4s or ORVs because of their physical condition, but it seems our nation would be healthier and the next generation be hardier if they'd do a bit more walking.

The challenge in the coming century will be to protect wilderness areas such as the BWCAW. It has been a challenge to protect such areas up to this point, but as we go forward in the coming years it will be even more difficult. Every year there are more and more attempts to increase motorized usage, to expand mining exploration, and bring more commercialization to the very edge of these wilderness areas. Once lost, wilderness areas are almost impossible to reclaim. Protecting these areas now means having them in the future for the next generations to experience. We should be able to expect the Federal and State agencies to protect these areas for us, the people, against the intrusion of corporate mining exploration and to keep the wilderness just that, wilderness. Wilderness areas were established and rules set up to manage those areas for a good reason, and those reasons have not, and should not, be changed.

All categories of public land should not be open to the same access. Wilderness and most National Parks should continue to be closed to motorized or mechanized access. Land and habitat destruction is inevitable. Even horses chew up the terrain, but nothing compared to 4x4s and bikes. They need access to land that can take the abuse. Walking is still the basic human activity, and should be supported.

Ok, I've been going through these pages for almost 2 hours and do I have a headache! Not from some OHV racing by on a nearby trail, but from the some of the ridiculous comments from both sides of the use arguments. For one thing, both sides need some coursework in biology and ecosystems. BOTH SIDES! There is science involved in the choices we make, but few of us take the time to learn anything about it before we jump on one bandwagon or the other and start calling each other names and spouting what is often just plain ignorance, but it's what their particular side claims to be the "truth." I'm already actively trying to learn the science, so that I can make wise decisions and comments, but I'm going next to find a website to get some clear definitions on how we designate public lands and the current allowable uses. I've gotten to the point in reading through the existing comments that most of us don't have a clue what we're really talking about!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

GG uses my favorite word, "balance." My husband works for a motorsports related industry, rides dirt bikes (only tracks and designated trails), and we both ride snowmobiles even though I'm the greenie in the house and influencing him more and more. Regardless of where the balance level of motorized to non-motorized use might fall, it's vital that uses are monitored and enforced. Even a hiker or hike in camper can do terrible damage by a misplaced foot, trash forgotten, or an improper fire.

I had to vote demote for this even though I support the work the volunteers do, because I don't think we should make the uses permanent. Changes in climate, wildlife/plant life, population using sites, etc. may require the ability to change the rules also.

If people were better educated about the issues, there would be more in the riding community making wise decisions about how, when and where to ride.

Encouraging biodiversity is key, and the primary threat and challenge is monoculture. According to Douglas Tallamy who wrote a great book called "Bringing Nature Home," only 5% of the US is truly wildlife habitat. The rest is urban sprawl and agriculture. Large, vibrant, and complex environments have been replaced with highly "efficient" and rather boring rows of houses, roads, monocultures of corn or soybean or turf grass. There is an overabundance of fear and ignorance out there when it comes to wildlife and wilderness, and needless destruction of our fellow living beings and their habitats. I am not against development, agriculture, or even a little bit of lawn here and there, but monocultures are very dangerous (risk of disease and blight, not to mention chemicals and pollution from sustaining them), and with just a little more effort, we already have ways to better develop agriculture and housing that allows nature to flourish with and alongside of it. We need to share and give back to nature (like to a "mother"), not simply exploit it (like a "resource"). One crucial challenge is to encourage more local native plants, which are the key to allowing wildlife to flourish (native bugs and birds, for example, have developed with native plants over the aeons and need them to survive, whereas exotic plant species often produce chemicals which native bugs are not adapted to, thus killing off local native bugs, in turn wiping out a huge base of the food chain). Since our population is growing, we need to either say goodbye to a diverse array of wildlife and get used to only a few adaptive species such as squirrels, deer, and sparrows (not very auspicious for our own species!), or learn to live in greater harmony with nature, and allow native plants and wildlife into our everyday lives, our schoolyards, our backyards. I believe most people would be very angry and upset if they knew just how much biodiversity we have lost and continue to lose. This is something that transcends the banal divisions amongst us, and we need everyone on board - republicans, democrats, independents, religious folks, scientists, farmers, ranchers, businesspeople, rural, urban, rich, poor, young, old - everyone can and must do a little something.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

There are hundreds and hundreds of thousands of trails and millions of acres of public land open to motorized users in this country. The lands of the wilderness preservation system are an important refuge from their noise, ecological destruction, air pollution, and other negative effects. As a non-motorized user, if I'm canoeing, hiking, cross-country skiing or finding another traditional way to enjoy the outdoors, and an ATV or a snowmobile or a motor boat passes by out of sight but within earshot, their presence is undeniable and a serious intrusion on my outdoor experience. On the other hand, that motorized user has no idea I'm just over the hill or behind an island. My use of the land has no impact on their experience, but their use has a serious, and profoundly negative, impact on mine. Non-motorized activities like those I mentioned above are truly traditional activities. They have been around since the dawn of time. ATVs, motor boats and snowmobiles are recent inventions and their claim on our public lands is completely overstated. As newcomers to the outdoors, they should show some respect for the people who have been quietly enjoying the outdoors for many generations.

The single most sensitive indication of the health of any wild ecosystem is the health of its soundscape. Preserving the intrinsic sounds of a wild natural place from the extrinsic anthrophony (human-generated sounds) should be one of the highest priorities in the management of wilderness and other natural areas. Sound has long been ignored as an indicator of the health of an ecosystem. The Park Service has a small soundscape research group, but their work is not particularly influential. For example, even in the most remote portions of Yosemite National Park, jet overflights are audible more than 50% of any given day. Sound sources like roadways, railways, and especially over-flights should all be managed to preserve the pristine wild-natural quality of wild places. In particular, any audible over-flights of wilderness areas should be banned and re-routed.

3)) Not close-minded, just fact. Once you put machines on the landscape, you eliminate the desirability and usefulness of that area for "passive" recreation, such as hiking, skiing, birdwatching, or any other form of recreation that is rewarded with peace and quiet. So your saying you can only hike on groomed trails?

I agree but that is also part of being a parent and teaching your children, cant count the cars and trucks I have seen driving down the hwy with the kids throwing their fast food garbage out the window as mom and dad set in the front seat and say nothing, take a look at your ditches any place in America if you think it dont happen.

BWCAW is exactly what? GOD gave us the earth natural resources to use so we can flourish if he didnt want us to use those resources he would not have given us so many.

99% of the places I go to ride OHV's I am alone their is nobody else, at night I have to sleep with the radio or TV on its so spooky quiet, I suggest you rethink where your driving to when you want to "escape the noise" because your doing something very wrong, if when you get to your location and you find a bunch of motorized or man made noises. Please dont drive to the local mall on black Friday to do your Christmas shopping then complain about the crowds and noise.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Your statement is the same as smoking vs non smoking. What a smoker does hurts another. What a non smoker does hurts no one. Whether you like it or not, noise pollution as well as gas emissions from dirt bikes, ATVs, or any motorized vehicle hurts. It isn't that we are being dishonest. I have no hatred of dirt bikes, ATVs or motorcycles. I just don't think they belong in a nature setting where the noise alone upsets the balance. If you actually hike, then you will know that most hikers travel the trails almost in silence or in soft spoken voice so that the very things they are there to enjoy aren't scared away by noise pollution. And it is sad, but there are more than a 'few bad apples' who have no interest in working on laws and enforcement. They use short cuts or travel off the trails causing untold damage. The mentality of most dirt bikers and ATV's is more of competition/excitement than it is of enjoying nature. HOW can anyone enjoy nature while creating the very thing which removes the natural sounds? I have an equal dislike of hikers or horsemen who take shortcuts, switchbacks or leave designated trails so my opinion applies across the board. There are areas suited for ATVs, dirt bikes, and the like, but a forest or park is not the place. The hatred, distrust or angst you feel may not be from all hikers/walkers/naturalist or horse enthusiast. I think it is more that they are aware that the damage done by motorized vehicles is far more damaging than even horses. AND as I said, you are trying to compare apples to oranges. Hiking does no damage to the quality of the air or destroys the sounds of nature. Unfortunately....motorized vehicles of any kind does. Let there be areas for ATVs and dirt bikes AWAY from public lands that are shared by hikers/campers/naturalist or those seeking quiet and peace AWAY from what they have to live with while at home. Again...the analogy: Smokers hurt others by second hand smoke (we won't get into increased medical costs which is passed along to non smokers by smokers)! Non smokers DO NOT HURT OTHERS. That's about as simple as I can state it. Noise hurts just as much as the smells and emissions. Does this make the picture clearer for you? I certainly hope so. I don't think the two will ever reach an agreement. I know you won't find me in an area where multiple use is in effect. To be able to enjoy and enjoy the peace and quiet of nature along with nature itself (birds/squirrels/snakes/slugs/lizards/whatever is in nature)...IS THE REASON I LEAVE MY NEIGHBORHOOD/COMMUNITY/CITY/TOWN/ETC. ! TO GET AWAY FROM THE DAILY NOISE/TRAFFIC/MOTORIZED VEHICLES/HURRY/AND CROWDS IS THE REASON I GO/SEEK/VISIT FOREST/PARKS/NATURE SETTINGS.

I like your post. I just don't understand why those who want to take motorized vehicles into can't see the difference. Just because it's there, doesn't mean we should use any means to get there. I agree with you. Thank you for your posts. I tried to explain to \_\_\_ that this is like trying to compare apples and oranges. To put it simply and maybe in a way some can finally understand: It's like smoking. What a smoker does...harms others. What a non smoker does by not smoking does no harm to anyone! SIMPLE!

Go drive your lousy vehicles on a private track.

Bar all off road vehicles from public lands. Too lazy to hike? Tough luck.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Community Forestry Conservation Act of 2009: Financing the Conservation of America's Working Forests The Setting The US Forest Service estimates that 23 million acres of forestland will be lost by 2050. With economic conditions encouraging such forest loss, the long-term viability of rural mills and jobs are threatened, along with public values including habitat, water quality and carbon storage. At the same time, approximately 84% of America's industrial forests have changed hands in the past 10 years. This unprecedented level of transaction activity creates opportunities for largescale working forest conservation purchases – with funding for such purchases being the limiting factor. A New Conservation Tool The Community Forestry Conservation Act of 2009 would authorize Community Forestry Bonds to be used as a new financial tool that conserves working forests while providing jobs and respecting landowner property rights. In short, tax-exempt revenue bonds are issued to allow for the acquisition of forests by a qualified buyer. The low-cost bonds will be revenue bonds, backed by the revenue stream generated by the low-impact management of the land. The land will be owned in fee by the qualified buyer. The municipal bond market financed approximately \$386 billion in public benefits projects in 2008 and will allow qualified forest organizations to borrow tens to hundreds of millions in an efficient and timely way. The Concept A group of conservation, business and other interested parties with a desire to conserve specific land would become a qualified buyer and reach an agreement on what land would be acquired and at what price range. • Typical of private buy/sell transactions, discussions with the existing land owner would occur as a first step. Subsequent to reaching agreement with the seller, a management plan and a conservation easement would be finalized. • Pursuant to the agreement, tax-exempt revenue bonds to fund the forest acquisition would be issued by an appropriate government authority on behalf of the qualified buyer. • Title to the land would be held by the qualified buyer and the land would be managed to service the tax-exempt debt in a manner that would comply with the management plan. For providing increased public benefit, the qualified buyer would be able to borrow money at a lower cost. Competition with private sector buyers is eliminated by the increased acquisition cost and limitations on commercial returns. • When the bonds are paid off, the qualified buyer would retain ownership and would continue to operate the working forest as it best sees fit -- conservation, revenues for schools, roads or community projects, or other uses. Benefits of the Community Forestry Conservation Act & Community Forestry Bonds: Good for Landowners - All land sales will be voluntary and non-regulatory so property rights will be protected. Moreover, all transactions will be negotiated with the landowner at fair market value. Good for the Environment - Working forests and open space would be protected and qualified buyer organizations will have greater financial flexibility to apply lighter resource management practices on the land. Good for Natural Resource Businesses - While qualified buyers will own and manage lands, forest products will continue to provide raw material for mills and jobs for communities. Good for Governments - Local governments will continue to receive tax dollars that result from the continued land management. If a municipality participates financially it could benefit from revenue flow. Also, public environmental benefits can be achieved across a broader landscape at a much lower financial and political cost. Good for Communities - Qualified buyers will become groups where communities can unite and share responsibility for managing their natural resources. As bonds are paid off, communities will benefit from locally owned and managed forests. Make Community Forestry Bonds a Reality Community Forestry Bonds requires

## Discussion Question 2

***(cont.)***

legislation that clarifies unique issues associated with a nonprofit organization's ability to service debt with sustainable timber harvest proceeds. Versions of the Community Forestry Conservation Act have passed the House and Senate in various forms in the past but never through conference committee. The Community Forestry Conservation Act of 2009 was introduced on July 22, 2009. Senators Patty Murray (D-WA), Mike Crapo (R-ID), Maria Cantwell (D-WA), Ron Wyden (D-OR), and Jeff Merkley (D-OR) sponsored S. 1501 in the Senate, and Representatives Mike Thompson (D-CO), Jim McDermott (D-WA), and Dave Reichert (R-WA) sponsored H.R. 3302 in the House. This idea was originally posted in the Private Lands Conservation category where it had a total of 14 votes. The following comments were posted before that idea was "archived" in late June: Original comments: 1) Thomas O'Keefe (04 May 2010) This is an example of the kind of great and innovative approach the MOU seeks to identify as stated in Section 2(c)(i) "It should recommend efficient and effective use of existing resources, as well as opportunities to leverage nonfederal public and private resources and nontraditional conservation programs." For the original list of votes see the archived idea here: { <a href="http://ideas.usda.gov/ago/ideas.nsf/0/4AFD72DB57A9485E86257717006F30F0?OpenDocument" rel="nofollow" target="\_blank">Link</a> }

Sounds to me like another boondoggle by the lumber industry.

In this era of rapid environmental change, solutions to ecological problems rest on people understanding how the state of the Earth's land, air, and water is linked to their everyday lives, health, and well-being. Parks, nature preserves, and other protected green spaces worldwide offer opportunities to capture data on the earth's systems and then to "translate" it into information that helps people connect with nature, strengthens and supports scientific research, and informs policies to improve environmental conditions. There is tremendous opportunity to apply the burgeoning field of green technology and green business service solutions to creating an informed and motivated citizenry and, in turn, protecting the natural environment for current and future generations. Shifting manual processes to digital systems is not a simple process, but is critical for reducing operational costs and increasing organizational efficiency. For example, greater use of the Internet reduces the cost and time of transacting memberships and daily fees and helps free up personnel to provide other critical visitor services. Interactive kiosks or smart phone technologies provide information to engage visitors at strategic locations. Greater use of the Internet to disseminate information enhances organizational ability to reach members, volunteers, visitors, policymakers, the media, and the general public. Application of GIS mapping applications are critical for effective planning and management.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The Hudson River Valley is a National Heritage Area with a population of 2.2 million. Ulster County, in which the Mohonk Preserve is located, has a population of 180,000 and an over-65 population expected to grow 62% by 2030. Currently 150,000 persons come to Mohonk Preserve each year. This number is expected to grow as the 22 million residents of the New York-Newark-Bridgeport, NY-NJ-CT-PA combined statistical area spend leisure time closer to home due to economic realities and a trend toward “staycations” making scenic recreation areas such as the Preserve more attractive destinations. The Preserve must be prepared for increases in the numbers and changes in the needs of the visitors it serves in order to properly steward the land and maintain the organizational capacity to meet new financial and operational challenges.

Economic Impact – A study conducted by Business Opportunities Management Consulting using economic impact models used by the National Park Service determined that tourism and operations at Minnewaska State Park Preserve, Mohonk Preserve and Sam’s Point Preserve generate an economic impact on the local area of \$10.7 million and support 352 local jobs.

- Annual visitors to Minnewaska State Park Preserve, Mohonk Preserve and Sam’s Point: 392,695
- Annual spending by visitors to Minnewaska SPP, Mohonk Preserve and Sam’s Point: \$13,051,000
- Annual local sales taxes generated by visitors to Minnewaska SPP, Mohonk Preserve and Sam’s Point: \$459,000
- Total economic impact of Minnewaska SPP, Mohonk Preserve and Sam’s Point on the local economy: \$10,669,981
- Number of local jobs supported by Minnewaska SPP, Mohonk Preserve and Sam’s Point: 352

Defining "sustainability" is so important in these dialogs. In the case of this report, the goal seems to be a balance of environmental, social, and economic goods. Emphasizing one - any one - way over the others does not get us - the west, the US, the world - where we need to be.

We have enough wilderness areas already. The public land belongs to the public. All of the public not just one segment or another. Wise use of those lands involves all parties. Some areas should be left in their original state and others should allow managed OHV use.

last times seen have wilderness area get away rest us,plus nat forest are public land

did any one forget that are wilderness area want get away for ohv use,i am off road and love the outdoor , that seen on my fan page on facebook is robert thigpen off road adventures and other trip

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

This is my first visit to this web site and I am amazed at the arguments people have here - I love Mr Sutherland's thoughtful post too however. I do think that all the arguments will be irrelevant though if we continue to argue and bicker down "party lines" as it seems everyone does now. The pollution continues to dirty our air, animals continue to be pushed from their homes, the ocean gets dirtier and we get unhealthier. We need to stop arguing and actually do something positive - cross the party line divide and do what is best for the planet. It won't matter one jot who has the biggest and most powerful Off Road Vehicle if there is no gasoline left. And it won't help the polar bear swim for its life from one melting ice floe to another. We are way too selfish a species. Perhaps we should try to come together and help the earth we have already so badly damaged, starting with our superior attitudes and beginning small, in our own homes.

This is how it all worked out with the recent purchase of Plum Creek lands in Montana: The Nature Conservancy purchased a bunch of Plum Creek land using interest free bonds from the Feds. They slapped restrictive covenants and conservation easements on those lands and then sold them to the Forest Service, complete with restrictions, and perhaps at a profit. We ended up with a bunch of highly restricted public land without any open, transparent, or public process.

\_\_\_\_\_, I agree with the title of your thoughtful idea, but disagree with your characterization of the issue. I would point out that the various committees and collaborative groups you mention are typically dominated by professional paid employees of wealthy conservation groups whose job is to attend and join such groups. The listening sessions for the AGO Initiative are an example. These sessions are held during the work week during the day when most ordinary citizens have to work. Yet professional, paid representatives of conservation organizations showed up by the hundreds -- just doing the job they are paid to do. The outcome of these listening sessions is predictable -- they will support the addition of 13 million more acres of National Monuments as the organizers intended them to do.

I do support multiple use trails, while also supporting wilderness area designations (and their expansion where the original designation was flawed). \_\_\_\_\_ seems like a reasonable person proponent of these things, and that part of his proposal is fine. Don't read much more into his proposal than what is there. He is not proposing to strip the wilderness of its protections, or to cut down every tree. "Sustainable timber harvesting and grazing" are acceptable ideas, if the Forest Service and BLM could be trusted to practice them. History is not on the side of that idea, however, so I will reluctantly vote against this proposal. If he were proposing to put some teeth into regulating these things, I would change my mind.

Some of the arguments in favor of "managing" forests seem to be conveniently forgetting that natural ecosystems do a fine job of managing -- without human intervention. These arguments may be instead promoting logging. Fire has been proven to be a natural benefit to western forests. Go to Yellowstone NP & see for yourself how the fire of '88 has improved the ecosystem. Some plant species need fire to open their seed pods, such as the Lodgepole Pine.

**(cont.)**

The administration should apply the lessons learned from the National Parks Centennial Challenge effort and launch a new campaign and partnership to protect and fund our national parks and better connect them to communities and young people. With the approaching centennial, national parks should receive the funding they need so they are fully restored and ready to serve the country for another hundred years.

We don't need to spend \$ on people and gadgets in of for parks. We need to preserve more lands, protect them, and connect them. Otherwise the "smart parks" of the future will be in our living room through virtual technology.

Many of our Western Wilderness Areas are shot through with both private lands (inholdings, 400,000 acres) and state and local government lands (400,000 more acres). These are like time bombs waiting for development - and that's already happened in CA, OR, Co, etc. We need to finance the buy-out of willing sellers in these areas and negotiate with state and local govts to greatly reduce these gaps in our existing wilderness. They have the potential of great reducing the human values embodied in the Wilderness Act and certainly causing immense degradation of wildlife habitat.

Here is the kind of thing that can happen to those pockets in the wilderness. Is this what Muir, Leopold, Zahniser, and many others had in mind? Is this what we want? Is this the future of wilderness in the USA? In Oregon: { <a href="http://oregonshores.org/narrative.php5?nid=557" rel="nofollow" target="\_blank">Link</a> } { <a href="http://www.katu.com/outdoors/featured/95424464.html" rel="nofollow" target="\_blank">Link</a> } { <a href="http://www.oregongoldtrip.com/goldopportunity5.htm" rel="nofollow" target="\_blank">Link</a> } In Colorado: { <a href="http://www.denverpost.com/recommended/ci\_15058325" rel="nofollow" target="\_blank">Link</a> } { <a href="http://www.huffingtonpost.com/2010/04/15/developertom-chapman-pla\_n\_538872.html" rel="nofollow" target="\_blank">Link</a> } }

Most of the land west of the Mississippi or either farmland, rangeland, oil and gas, or otherwise developed. Much of what is left is desert of montane. Little quality habitat remains. And about the geart profits the Nature Conservancy is making, they are falling down laughing! Do you just make up what you say as you go along? Do facts and reality have no bearing on life?

No activity that degrades the environment. Period. Multiple use does not mean multiple abuse. Dispersed recreation (wreckreation) is contrary to the best interests of nature and future generations. This proposal is a Trojan Horse people. Read it carefully.

Environmental groups are in fact pushing for forest thinning, but NOT for taking out the last of our Old Growth. Get the facts straight.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

We need more open space areas. The human population is increasing and many plant and animal populations are decreasing. We have recently seen how our government works when they deem an area is needed for a political agenda. The removal of the wild mustangs, even though we had the ROAM Act to protect these herds, which some politicians changed for some political agenda. Now it is questionable whether or not these animals will have viable populations. The killing of the reintroduced wolf populations, so that once again it is questionable whether or not they will be a viable entity. And on it goes..... So, yes we need to have more wild areas, so that we can maintain organisms that exist today for our future and future generations. Once they are gone, how are they going to be replaced?

We need our public lands. I believe that much of the problem comes from a lack of education about the wildlife and plants that inhabit these areas. I think that if people are educated about the organism that are in these areas and how important they are to the habitat and the individual's life, they would view them differently. Of course there are some people who would take advantage of this and they need to be controlled. Education needs to be provided for all age groups and people from all walks of life. Man needs to learn how important these areas are and how to reduce human impact on our natural areas, so that we will have a future.

Really, you're lives and attitudes are presumed better in you're eyes simply because you want to believe them. Really didn't your kindergarten teacher teach you to share. Many areas being proposed are not true wilderness areas by definition, they are merely larger tracts of land that have not been locked up, and so in the fervency of the movement, more is more, is more, is more. Get a grip on reality. I drive by elk and prairie dogs whiten feet of my car daily and they do not seam to mind sharing with us..

So far the only one suggesting running over sea turtles is... This idea is asinine. Using this logic, the entire Apache-Sitgraves National Forest should be closed to hikers, since one who was lost decided to start a 250,000 acre signal fire a few years ago. I refuse to be punished for the actions of others.

Instead of deferring estate taxes, just do the right thing and permanently do away with them.

If anything, we need more protections for citizens, states and local governments who take on the federal government. All too often the federal government makes decisions and rules that they have no business making.

What is ruining our republic is a federal government that does not recognize its limits and states that continue to allow those limits to be overstepped. If the federal government would stick to the 3 things it is actually constitutionally authorized to do (Provide for national defense, conduct foreign policy and PROMOTE interstate commerce) this would be a non-issue. My state and its residents are largely in line with what I think should be happening. If they were not, I would be working on changing that or finding a state that better fit me. Preferably without an over-reaching federal government getting in the way.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Public land is just that, public. While people are out enjoying the great outdoors it's best to respect the land and each other when passing. OHV's have their place and should stay away from areas hikers trek and vice versa.

GG, as others have stated, has a reasonable suggestion on user fees as management funding, but motorized vehicles and quiet enjoyment are the issue here. This is an either/or thing: pedestrians and horses can not coexist safely with motorized vehicles, no matter how responsibly the machines are handled. By having a motorized vehicle there, that does not give someone the right to infringe on another's enjoyment of that area, but that's what occurs. Noise, fumes, and risk of bodily harm are accepted by the OHV user. Non-OHV users do not accept those negatives, but have those forced upon them. These two user groups must remain separate.

Programs like this are an excellent idea because, like all science, environmental science is best learned in an authentic, hands-on manner. Alas, it is true that because there is no state-mandated test for science, all science curriculum is becoming marginalized. Also many, if not most, teachers feel anxious about taking time out of the classroom until the state tests are completed. In our state that means no one is interested in big field trips until May. May may or may not be the best time to observe any given ecosystem or to integrate those observations into the curriculum, but certainly no state park, hatchery or watershed district can handle every school in the region in just one month. So I would agree with the above author that the current educational policies do interfere with the schools' attempts to utilize our national natural resources. Could something be done?

Human recreation should be done in the areas we've already decimated -- not in wilderness or park areas that we are trying to preserve. Using motorized vehicles on trails should not be allowed in any wildlife area -- it opposes all reasonable thought when it comes to protecting our great outdoors. We are not a vocal minority -- it's just difficult for us to believe that people actually feel it's okay to destroy so much of what has been preserved -- and the destruction is not only physical, but the incredible noise of vehicles adversely affects other people as well as wildlife.

And the intrusion of motorized vehicles is no way to protect anything in the wilderness. The loudest sounds wildlife is exposed to -- without human intervention -- is their own calls of mating and claims of territory. Not much of what a rider of ORVs does supports wildlife -- and not only is wildlife disturbed by the noise, but so are so many of us who are trying to get away from it by heading to the wilderness area, forest or park. I know that ORVs have a right to ride their vehicles -- but it should not be through area set aside for wildlife. That's not fair to those of us who care not to see the damage or hear the engines -- and it's certainly not protective of anything wild.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Intolerant, yes -- of so many people who are focused on the, what's in it for us, mentality. What should be looked at is the impact on wildlife. The unnatural intrusion of loud, destructive vehicles that have no place in the middle of a forest, or meadow or mountain valley should be limited to areas outside any park land. What in the world makes anyone believe that these motorized vehicles lend themselves to wilderness protection?! What we need is firm protection of those lands that have been set aside as parkland. If we want to visit it, we should do so on foot -- the least intrusive and disruptive way possible. It's so amazing to camp out with family listening for the natural sounds of a forest, day or night -- away from human-made sounds that most of us have to listen to in our everyday lives.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

OHVs belong on well-regulated private tracks, not on public land. Off-road vehicles (OHVs, ORVs), aka All-terrain vehicles (ATVs) are not compatible with hiking, nature study, and other healthy, environmentally-friendly use of our public lands. But there is strong pressure to allow more ORVs on public lands. Manufacturers and dealers are working to open up public lands to ORVs. ORVs have important environmental significance as well as health and safety implications. Some ATV's are even advertised as suitable for users six years of age or older. The Forest Service maintains an ATV trail system in North Carolina. It is reported that usage of the area is causing multiple plumes of visible sedimentation in the Tellico River and its tributaries. The ATVs have cut deep passages in the soil as they repeatedly traverse this steep area of loose soil and big rocks. Trout Unlimited and other environmental organizations served on the Forest Service a Notice of Intent to sue. The purpose was to force the Forest Service to stop the destructive sedimentation of trout waters. The exhaust of all terrain vehicles (ATV's) contains unburned hydrocarbons. You will sometimes see a blue haze. Because of the known dangers of unburned hydrocarbons, our automobiles are designed to reduce these emissions. Automobiles utilize a four-stroke-cycle engine. There is an intake stroke, compression stroke, power stroke and exhaust stroke. And many modern auto engines are designed with two exhaust valves and two intake valves for each cylinder. Many ATV's utilize a two-stroke-cycle engine. Two-stroke engines combine functions and use ports for intake and exhaust. This arrangement simplifies the design and produces a higher power-to-weight ratio. The tradeoff is much higher noise levels, poorer efficiency, and abominable pollution levels for ATV's. Based on some calculations, the pollution due to one ATV equals the pollution due to fifty automobiles. ATV's cause other problems as well. Many ATV's are inherently unsafe due to the lack of a differential. They are destructive of trails and make our open space areas unsafe for hikers, nature lovers, and other users. The vehicles can wreak environmental havoc by eroding hills or streambeds. And riders who illegally speed through back yards usually favor the least effective mufflers possible, endearing themselves to no one. There are private tracks available, but it is unlikely that more will be built due to safety, noise, and air pollution concerns of potential neighbors. ATV owners and dealers are asking for more access to parks and other public land. The owners and dealers are well-organized and polite as they advocate multi-use trails. But, hikers and other trail users are unsafe on trails frequented by ATV's. One watershed/forest preserve allowed the owners of ATV's and motorcycle dirt-bikes to have an opportunity for off-road recreation on designated off-road-trails. They reasoned that the logical management plan was a "permit process" that would encourage and limit "off-roading" to a special use area within the forest, while discouraging and preventing it in the off-limits areas. As the numbers of off-roaders increased, the permit process failed. ATV's overran the watershed and had the run of the place. Unfortunately, the designated off-road-trails led directly to all the hiking trails, bridle paths, colonial roads, and utility rights-of-way throughout the forest. But, the off-road environmental degradation didn't stop at the borders of the forest. The mechanized destruction within the ecosystem spread unchecked onto State Park Lands and private land holdings. When the rains fell, illegal off-roading churned and turned forest hiking trails into muddy streams and historic colonial roads into scarring rivulets. Brooks, upland ponds and wetlands - along with the very life they supported - were choked to death by the wash of silt and debris torn-up by off-roading. The Centers for Disease Control and Prevention and other agencies have noted that we are facing an epidemic of health

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

problems, partly due to lack of physical activity. ATV's interfere with healthy and environmentally-friendly recreation. ATV's just don't belong on our public lands.

Multi-use trails that allow motorized use are no longer suitable for hiking or cross-country skiing.

I am an avid hiker and love the outdoors but it seems awful closed minded that people feel they can ride mountain bikes and horses on public land's but are against those of us that want to ride Dirt bikes and ATV's . We have a State forest near us that allows everything and we all have designated areas for all of us,the ATV trails are always trash free and there is never any horse crap in the middle of our trails,you can hike and hunt on our trails.Riding Dirt Bikes and ATV's is a great family activity and we don't do any damage staying on our trails.There are very few places for us to ride and I pay the same taxes as everyone that opposes this,I think all of you that oppose this had ought to be fighting all the new sub divisions that totally destroy forests but most that oppose this are buying the new houses in these wilderness clearing sub divisions.

Nobody prohibited from enjoying lands protected by wilderness or National Monument designation; instead, certain types of usage are restricted. But anyone can hike or canoe these areas. And the public isn't being "forced onto smaller and smaller areas outside of Wilderness." That's ridiculous...the reason these areas get wilderness designation is because there aren't any people (or even evidence of civilization) there!

What rips my heart out is when I see people say we should use up the resources we were given as if there is no value in having some areas in their natural state. Every day we are surrounded by asphalt, roads, buildings, cell phone towers, cars, trucks, construction, stores, and noise, noise, noise. It is everywhere except a few unique places where you can go to get away from it. I am a city girl but have been going into the Boundary Waters Canoe Area Wilderness for the last 23 years. I started when I was newly married and now my children are going with me. There is something so amazing about paddling into an area with none of the above. It cannot be described. Once you experience a paddle only trip into the wilderness, you realize its value is beyond anything that can be built or bought by "us." Please take the time to experience this and it will forever change your outlook on protecting wilderness areas. I cry every time I leave the BWCA because I always worry that it will go away and this may be the last time I see it. People are too greedy for every piece of dirt, land, and section of water. Let us learn to preserve things of value or they will not exist. PLEASE!!!! Take one trip and when your trip is done and you paddle out across that line into an area that allows motors and cabins, it is so jarring that the stark contrast says it all deep down to the bottom of your soul - save the wild places! - There are so few of them left!!!!

## Discussion Question 2

### **Written & Online Comments**

**(cont.)**

One of the biggest challenges facing our non-profit 501c3 educational operation are insurance costs. We are developing a unique idea and providing unique opportunities for tourists to experience. Plus throw in there working around animals of all sorts, you can see premiums skyrocket. &lt;br /&gt;&lt;br /&gt;Granted, we have a unique idea. The statistics that are being drawn together by the insurance companies bring into account many more factors than what most organizations experience. But when you are looking at developing an historically rich agricultural experience, it is inevitable. &lt;br /&gt;&lt;br /&gt;Some of the areas we are getting into include agriculture, historic preservation, historic revitalization, international agricultural, operating original machines ranging from threshers to locomotives, raw material processing facilities, herds of domesticated animals, operating whole agricultural industry centers that are the model for the world to follow, and much more.&lt;br /&gt;&lt;br /&gt;Could it be possible for subsidies to go to insurance companies who are insuring historic preservation organizations?&lt;br /&gt;&lt;br /&gt;We are doing something that is unique and on a scale never seen before in American history and it is being done by a private organization. There is so much to it that I can not explain here. If you are interested in learning more...

Actively managing any resource is folly. We as humans think we have the answers but more often than not we create more problems than solutions. I am sure there were healthy forests long before humans and logging existed. Nature will find a balance if left alone. We may not like that balance but we cannot fight it forever.

I almost promoted this except for the fact that it states nuclear energy is the only alternative. The real truth is that we do not yet know what the solution is and there is no clear energy source with all upside and no downside. What I think we need diverse energy sources so that a fault in one type of source does not bring the whole system to its knees.

I agree with \_\_\_\_ in one sense, that there is no such thing as saving the Earth. The Earth will be here long after humankind disappears. There is only preserving humanity and possibly the natural world as it exists now. However, I do not think logging in our public lands is the panacea that stops forest fires. Forest fires are a natural phenomenon that many species of organisms have evolved to take advantage of. The problem seems to be where the fires negatively impact humans.

OHVs cause erosion, air pollution, noise pollution, contribute to global warming, cause injuries, consume fuel that must be imported, and detract from the outdoor experience of all other users of federal lands. Their use should be banned except for maintenance and rescue purposes

Designating areas specifically for OHVs may be appropriate in some places, but in others it could mean a terrible sacrifice of public lands and waters. For instance, the Upper Tellico OHV Area in the Nantahala National Forest was so severely eroded, the Forest Service had to shut it down. The OHV groups have sued the Forest Service to get it reopened.

I totally agree. This practise is totally medieval and we shouldbe long beyond it. I did not realize it was permissable on public lands

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

This idea as stated is confusing. Is the proposal to bring OHV and wilderness land into a 1:1 ratio? Is it a proposal to create this ratio only with newly created public lands?

The degree of noise pollution in our society can be overwhelming at times; those of us who live in heavily populated areas seek the wilderness in part because we need a break from this constant stress on our nervous systems and because we want to hear the wonderful sounds of nature without human noise for a change. Off-road vehicles in national and state wilderness parks make no sense! As a society we are also in serious need of reducing our gasoline consumption. It costs so much more in so many ways than most people seem to want to acknowledge. The survival of the human race is at stake.

Everywhere the OHV is allowed access, hikers and horse riders decline. Is their idea of shared use? Don't be fooled by their BS. They want the park for themselves and any hiker that doesn't get the message is what is known as a target.

So, I know I'm going to get flamed on this, but I really enjoy taking my dogs with me on vacation. While I'm all for getting rid of private autos (my husband and I just circled the earth on public transportation), unless there are shuttles designated for people and pets, this effectively locks us out of these parks. My dogs are better behaved and better managed than most young children, but no one suggests leaving the kids in a kennel at the entrance.

If we are to use the logic preferred by the anti-OHV crowd that all OHV enthusiasts must be punished for the actions of a few then we must remove hikers and horses from our parks as well. Some of the most filthy, neglected areas I have ever been in have been hiking trails. OHV organizations do clean up and maintenance volunteer events ALL THE TIME. I have NEVER heard of ANY of my hiking friends volunteer to clean up a hiking trail.

You are being dishonest. You say the OHV crowd should stay in "their" areas, yet you also promote closure of lands. If you feel you should be allowed to protect your access to public lands, the OHV community should be allowed to protect their access to public lands. There is no need to change the status quo, unless it is true that the non-OHV community wants it all for themselves.

Rob K you said it. My words exactly. They don't care about anything as long as they get what they want. I ride responsibly and respect nature. I have seen plenty of hikers yelling, running down slopes kicking up rocks etc. Maybe they should go back to their peace painted vw buses.

I do believe in climate change, but tell me, do you own a car? Are you generating your own electricity from a carbon neutral power source, to power your computer, to add your one sided views to this forum? Didn't think so. By the way, how many hiking trails have you worked on in your life? Probably too busy shopping at Whole Earth Access for you manufactured products! You really need to look in the mirror and see the hypocrite that you are!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Come on people, get real! The offroaders I know aren't asking to go riding in the wilderness, they're asking that the trail systems that we already have/had not be shut down! Again, how many of you exclusionists don't own a car, don't own a computer, don't as a matter of fact use anything that doesn't put a tax on Mother Earth & nature. If you were practicing your day to day living like Colin Beavan aka: No Impact Man, then I would say you were justified! However, I think even Colin would concede that in today's "modern" world, it's impossible to have absolutely no impact. Now I know what you're going to respond, "we're not talking about no impact, we're talking about the wilderness!" Well if you don't think that hiking, camping or riding your horse in the wilderness causes any stress to the areas that you trample on, think again. What about the insect that you stepped on that could have fed a baby bird or the vegetation you pitched your tent or sleeping bag on. How about the deep hoof prints that your 1500 lbs horse left and the vegetation that it ate or trampled. or the introduced non-native vegetation it brought into the wilderness in its dung. As far as noise & pollution go. I already know what's going to happen when I get my electric off-road motorcycle that I will charge with my currently installed solar panels. You exclusionists will complain that it's too quiet and is a hazard. Until we realize what Woody Guthrie sang about in his great song "This Land is Your Land" we will never reach a workable solution! I and most of the OHVs I respect are more than willing to respect your wants & desires, as long as they're reasonable and respect mine also. Sadly I don't see that!

There are areas for this type of use. It's called OHV trails, and they're being shut down everywhere. As far as \_\_\_\_\_'s comment on what stated. His comments are factual. I don't think he was comparing which is better, he was just stating the fact that horses do cause erosion damage. You have obviously never gone back to see what happens to a trail used by a horse, that is not maintained. Just like a motorcycle trail that is used frequently and not maintained. The OHV community however has been taking - forced upon us - progressive steps by maintaining the trail ourselves. This in spite of the fact that we actually pay a fee to have these trails maintained by the Forest Service. Maybe we should start charging equestrians and hiker \$50.00 a year, and then spend that money on something else, all the while locking them out of more and more land. Oh yea, that won't work. It doesn't suit their wants & desires!

Calling Mountain biking low impact is an error. I have been hiking the trails in Pinckney State park in Michigan since 1985. They were beautiful forest paths, slightly springy, pretty much level with the forest on either side. They started allowing mountain biking at some point and the trails were immediately degraded. Now they have to bury plastic webbing to try to halt erosion, the trails have sunk several feet in some places, they're dusty and rocky. I don't understand the bikers -- they're riding so fast they don't see much. I have talked to some of them and they have no idea how much damage they have caused because they never bothered to walk these trails. I feel like something valuable has been stolen from me.

Motorized vehicles make noise that carries a long long ways. They steal the natural sound of the environment from those of us who are willing to use our muscle power. They have no place at all in wilderness areas.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I agree completely. These vehicles completely destroy the wilderness. Why do machine users need their machines so badly? Walking or skiing connects you to the land you are in. Driving through it devalues it.

Land that is converted to human use today will not be wilderness within the lifespan of many generations. Land left wild can always be 'used' later. Land that is used can't go back to being wild. This means that if we err, we should err on the side of caution, preserving lands wherever possible.

We must set aside these lands. I think everything is out of balance now. There should be more land/wildlife with areas being dedicated to human habitat since we change are living space so dramatically.

I must say comment #9 is definitely out of touch with what "nature" really means! Too say that horses are 2nd to being destructive to the wilderness/environment. Please explain this one too me. Are you kidding me! Horses are living breathing species that aren't noisy, don't pollute and bring true spirit to the open land heritage. Anyone that thinks a machine is better than a living animal needs to re-evaluate their true outdoorsmanship.

Often designated Wilderness Areas include parts that do not qualify as a TRUE wilderness. DON'T drop the standards that make a wilderness, just to change a title of an area.

I have seen acts of disrespect by hikers in the back country. Piles and piles of garbage in places where the general public has easy hiking access to. In Wilderness Area's I have help to extinguish fires that had gone beyond a careless backpackers fire ring and cleaned up areas that is only assessable to hikers. Should all hikers and backpackers be considered as " ..have no respect for nature or the rights of others. Please ban or restrict their access to public places" as well? There are and always will be the small few that are the problem. I don't advocate keeping hikers/backpackers out, but they are a problem.

Once the land was destroyed by the use of vehicles, it would probably never be back to the way it should be, wild and peaceful.

I am against any vehicles in forests or beautiful, peaceful places I am able to go and enjoy nature. That would take away from the beauty and peace for me and my family.

Damage from ORVs can be extensive and irreparable. To see a photo taken in Big Cypress by Broward Sierra Group member, visit { <a href="http://www.nationalparkstraveler.com/2007/12/big-cypress-national-preserve-more-orv-access-bear-island-unit-wise" rel="nofollow" target="\_blank">Link</a> }

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Contrary to the comments here UTVs can be very quiet compared to ATVs. I know that my UTV mule is so quiet I always can sneak up on deer with it. I don't consider it annoying any wildlife. While I understand the ban on cross country atv use I do not understand the ban on riding ATV/UTV on existing gravel roadbeds in the forest. These roads are not traveled by street autos due to poor condition however they are legal for auto use only. I also do not understand why no ATV trails exist in my area. They say its the cost but they won't let us build them if we pay for it and they tell us where to build them. I also do not understand why the legal trails do not allow side by sides UTVs which do less damage to the trails because they have auto rearends that can be unlocked. It appears that these rules were not made on the local level because no one on the local level agrees with them even the forest service.

If we are not going to be able to use the land that belongs to us then it should be sold at auction. Why because the feds are not paying state and local taxes on this land. To compensate us for this loss of tax rev we should at least be allowed to use it if not then it should be sold to someone that will pay the taxes or it should be transferred to the state so the locals can control the rules and not some enviro in CA. The opinions of out of state hikers complaining about ATVs on land where no hikers even exist or know about is total nonsense. The only people I have ever seen walking in the forest for 60 years were hunters.

Off road vehicles have their place but their proponents seem unwilling to really see the damage they do. It is true that in relatively lush areas damage is quickly grown over--unless it's in a place where water concentrates and erodes it into a gully. But in the desert it not only can take centuries for a trail created by an ORV to disappear, but because it's often pretty flat with sparse vegetation, riders very often go off on their own, leaving tracks that'll be there for a very long time. I have yet to hear of a quad or ATV that has differentials for its driven wheels. This means that every time the vehicle turns, one or both of its driven wheels must skid--and if you'll take the time to look closely at the tracks left by one, you'll see that every turn will have some degree of damage because of that skidding. In the desert where my wife and I spend the winter there are ATV trails everywhere. You can still see the tracks made by army vehicles training during World War II--and the new trails will last at least as long. In addition, the dust kicked up by these machines literally clouds the air--it often looks hazy even when the air is very dry, and you can see the dust rising in the distance every time one goes by, and the noise at the peak of the winter season is almost continuous and is audible for miles. So. While I can empathize with ORV lovers, and when I was younger did my share of dirt bike riding, It seems to me that proponents of these machines need to set their emotions aside and take a serious interest in seeing just what the real affects on the earth their machines have--and with that knowledge in mind make proposals that genuinely take these affects into account. You might encourage manufacturers to create machines with differentials, for example, as that would significantly reduce the impact those machines make. And seek to design trails that minimize impacts. And acknowledge that there are impacts on wildlife that may be very hard to see, on nature in general, and on people that need to be taken into account.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

At the Grand Canyon, I was delighted to find that the western arm of the rim road had been closed to private cars. This allowed visitors to escape the crowds around the South Rim commercial establishments. Can something similar be done in other parks? Decades ago, Yosemite proposed closing out all cars except for overnight visitors. Instead, why not block cars from the roads that reach into the valley beyond the lodges?

OHVs are an abomination

Although I don't understand what is so enjoyable about ripping up our planet with noisy, destructive contraptions, a lot of people really like it. So, I think we need to designate specific areas for obliteration. It just shouldn't be everywhere. People who like quiet and undisturbed natural places should have that right too. My definition of grace: Getting to where you are going disturbing as little as possible on the way. The Homo Sapien is graceless. We rip up, tear up, slash away everything on the way.

I believe this idea to be well intentioned but zoning, unless only for safety reasons will mean LESS access to the entirety of a place for everyone who goes there.

Does that mean you would support the use of our homemade swamp bugtgies and airboats down in the swamps of So Fla? We do not import them yet. Not a big enough market for China.

I grew up and still live on a 460 acre farm. I love the peace and quite of the country. Nothing is more disturbing to this peace than the noise from a 3 or 4 wheeler. I hate these things. To me, they are the lazy person's way to see nature. Keep them off of public lands for the noise that they create and the damage that they do to the environment, particularly erosion. And, add snowmobiles too for the noise that they create, plus the people who are so stupid that they ride in avelanche areas and cause avelanches.

You're right. Let me put it this way: "All of the off-road enthusiasts with whom I have dealt have no respect for nature or the rights of others." There. On the mountain to my east there is a large, clear field that is very steep, like a San Francisco hill. Four years ago the timber company owning the land just below that steep terrain put in a road. Today, when I look at that mountain, there are scars running from the clearcut below to the peak above. Two men died on that hillclimb, yet those with no respect for nature continue to come. The echoes of their assaults ricochet off the steep draws and canyons around me. The land on the hillclimb is public land. BLM has closed the hillclimb, but still they come. I witness it on a nearly daily basis and, while there may be a few in the hardcore enthusiast category who actually care, they are in a very small minority.

Let's compare apples to apples here. You can't ride a Prius on a trail or a Coleman stove for that matter!

Just what we need on protected lands - more exhaust stench and noise.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I've always wondered about a country who bases its economy on building buildings. That's why basing the economy on conservation and clean energy is a much better idea. Yes, some areas will have to be destroyed for that as well, hopefully with much study by scientists concerning the impact of alternative energy sites, but why is "development" even necessary. We have put under concrete some of our very best farmland, which a lot of times exists right outside of cities. Support local food production and organic farming. Get rid of the 50 little townships in a county, each one's hands being greased by the local contractor, and have real county and state planning about what to do with existing farm and wilderness areas. Start teaching our children about our connection to nature.

Let's make sure our kids are fat and lazy by putting them on ORVs when they're not busy at home playing video games. That way when the foreigners invade we can just be pushed over. Having kids on ORVs is child abuse! It ought to be illegal.

If I had not clicked on the full description of the point being made, I would have been like many people I am sure who disagreed with this proposed statement. Needs clarification from the beginning.

The CBD, the Sierra Club, and a lot of folks here are saying that OHV users are "taking over" trails in the park system. As an OHV user, I can tell you that we are trying to take over nothing! We are trying to keep a place, some place, just about any place, that we can still enjoy what we love. We lose more and more trails every year, even tho our increasing vehicle fees are supposed to be helping our cause. I certainly haven't seen a green sticker on a pair of hiking boots. More land is taken away from us and given to you, but you 'environmentalists' never have enough land. You took half of Glamis Sand Dunes years ago, after agreeing to take no more if you got that, then you took half again. Now you are trying to "renegotiate" once again, and we both know what that means to you, don't we? There is a huge swath of Glamis closed to all vehicle traffic. Do you want to know how many hikers I have seen there? That is right. None. Zip. Nada. The 'environmentalist's' self-important, self-serving ways have cost them any sympathy from me and many others.

I don't like ORV's, the noise, the pollution, etc. But to make a blanket statement damning ORV users as having "no respect for nature or the rights of others" is incorrect and mean-spirited.

ATV registration is responsible for maintaining many of our outdoor spaces. Getting rid of atvs is a good way to lose funding for the parks. Local state forests have turned to logging to make up the financial difference. You think atvs cause damage? Check out a fresh logging trail sometime.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

We have got to STOP OFF ROAD usage in our forests and wilderness areas! Also campgrounds, BLM lands. These areas are for enjoying the outdoors-not destroying it with noise, gas fumes, loud machines! If these people want to ride their tricycles with motors, then they can do it on county roads-not where people camp, hike, fish! And, what about the wildlife??? It's their living space-NOT MANS. WE ARE GUESTS!!! If we keep allowing motorized toys, etc., everywhere, there will be no more places for wildlife, or people who want to enjoy these places. Also, these places were set aside for man to enjoy nature-NOT TO DESTROY IT. This needs to stop!

The problem with motorized vehicles is that they destroy the outdoor experience for hikers and other non-noisy, smelly users. When used near horse trails they freak the animals. There should be areas for this type of recreation, but it should not be allowed to destroy the outdoor experience for the rest of us.

In a world of roads, our national parks are about the only place I can go to get away from the noise of our times. I used to walk in the Ocala National Forest and nearly be run over by motor bikes that were so fast they seemed to appear through the brush before I could even hear them. I would dive to the side as they whizzed by. Naturally I could never ride my horse in these areas as the scare of a rapidly approaching bike would scare my horse and have me killed. I think the woods is all about the quiet use of the land. Leave the motors out. This is an opportunity for motor bike enthusiasts to buy their own land and whiz around all they want on it. It is no place for conservation and national pride in wild lands. This is about preserving for our grandchildren, as our grandparents preserved for us. This isn't about racing or bringing motorized vehicles in to the woods. I am so grateful my Great Smoky Mountains National Park does not even allow the rangers to use chain saws except for one week a year to preserve the silence and the peace for the animals.

since you grew up in Nebraska, one would think you would "love" tree-huggers....home of the influential and important Arbor Day Foundation!! Seriously, do you really think the best way to gain peace, reflection and natural solitude is by roaring through hill and dale at a fast speed...not to mention the homes of countless creatures living there? It goes right back to the human ego...all things on Earth are here for their express use and pleasure!

Well said. I live in CT and there are virtually no places I can go to escape man. I can hike a couple miles into the forest and still hear planes overhead or noise from neighboring houses. I cannot find "back country" because none exists here. Ohv use has also taken many areas I used to hike away from me and I now have very few areas to go where I can relax and enjoy what peace and quiet I can find. That is just my own personal enjoyment. When you factor in the need for wildlife to have wilderness for food, water and their home it is even more important to protect what areas remain. Wilderness designations are a wonderful thing and there needs to be far more of them.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Do you think the forest belongs to you? Does the OHV group have the same right to enjoy the land as you do? How many square miles of land do you have to hike on compared to the OHV group? How do you know what the majority of any group of people does? The OHV community is a very diverse group of people that have both responsible and irresponsible people. Could I say the same about your group of hikers and climbers or are you perfect? I have seen what is left after the climber trash has left the rocks trash and fecal matter everywhere. Get a clue you are wrong.

We dont want to ride on "your" hiking trails. We want land set aside away from where you are to use. Why would we want to be in the same area with people that just complain all of the time?

Just to be clear I ride a jeep on state owned property and I dont ride to see wildlife. I am there for a completely different reason. I take my family with me and we enjoy being outside together. Why is it we cannot enjoy being outside our way. After reading some of the post above you would think we are practicing scorched earth principals everytime we go out. I have a log of how many hours I have spent cleaning up someone else's trash on the trails and on cleanup days. How many of you tree huggers have organized trail cleanup events?

Here's an idea bubbas... keep the national "natural" park areas and conservations areas free from OHVs period. They have NO place in nature beyond destroying it with damage from tires, noise, oil and gasoline as well as damaging the air quality. Animals are harassed by the noise and from idiot OHV users chasing them down. I also doubt that the damage done by horses is close to OHV users. Hike it, bicycle it, wheelchair it or ride a horse. As for the comment on fecal matter & trash... at least trash can be collected by more conscientious nature lovers and fecal matter is a byproduct of nature that breaks down. You can't claim the same for oil, gasoline or other motor fluids whether you're a "responsible" OHV user or not.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I appreciate your caring, your concern for the environmental cause, thanks also for the answer given previously, even though it isn't on tract with what I asked. I do think your heart is on tract though. The information for endangered species is varied, for every reason to make more wilderness, there are reasons not to. As stated, some are way off course from any reasonable cause to make one. Politicizations are the root cause for designating Wilderness areas, not environmental concerns or helping endangered species. My point in asking questions was to show that there are no inherent differences between a wilderness area and the surrounding national forests, which are also set aside, except for access by wheeled contractions, human powered or otherwise. Grazing cattle in wilderness areas is allowed. Horses are allowed. Those two alone, horses and cattle are very destructive to the environment. Hikers are destructive as well, look at some of the fourteeners in Colorado to understand. Taking game is allowed. How conducive are any of those activities to endangered critters? That is one reason I say making more wilderness is not mean to protect endangered species. Here is an example, LaGarita Wilderness in Colorado has a 300 ft wide corridor for five or six miles to the Wheeler Geological Area, the first National Monument in the U.S., (if I recall correctly), anyway, wheeled ingress or egress does absolutely no environmental harm when travel is limited to the existing roadway. LaGarita Wilderness designation came a long time after the Geological National Monument area as well, so, point is why the Wilderness? Why are there so many Wilderness areas? Some of these Wilderness Areas I used to travel with four wheel drive vehicles, I don't see any harm that caused. The roads are still there, now used for hiking or horse travel. Why take an area that has roads, for a hundred years or better, then turn it into a man-made wilderness? I don't see the point except to keep the majority of folks out.

Wilderness areas provide recreational opportunities that other public lands do not. Perhaps this is not apparent in all areas of the United States, where public lands are plentiful, but in Minnesota, the Boundary Waters provides a unique opportunity to enjoy recreation in a different way. I can't get the same experience anywhere else in the state. I recognize that this is not a true wilderness, being managed by man, but it is the closest we can get, and for that reason it is valuable. Motorized boats and vehicles have opportunities to recreate in other parts of the state, but to canoe in total isolation without the hum of a motor is something difficult to obtain elsewhere than in the wilderness. In addition, the Boundary Waters Wilderness is currently threatened by a mining project as well as cell phone towers within its sightline. I respect ATVers having areas for their recreation, but they are plentiful in the state of Minnesota. I hope they can respect my desire for an area for those who enjoy as close of a wilderness experience in the Midwest as possible.

I love how all these retards are bitching about noise and how OHVs are disrupting their time with nature. As long as you get what you want, no one else matters, right? Hey Lucille, maybe when I'm hiking I don't want to step in a bunch of horse crap, ever think of that? Self righteous hippies interfere with my ability to enjoy nature as I see fit, should they be banned from public land? Should we close every hiking trail currently open to the public because some hiker scared away an endangered chipmunk? The mindset some of these people have is amazing. They are all for keeping people off public lands, as long as it doesn't effect their idea of recreation.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The idea that OHVs contribute in any significant amount to the amount of fossil fuels being burned is a poor argument. If you're that concerned about the amount of oil being used, recycle your cars for scrap metal. Don't sell them because that's just transferring the pollution to someone else. Boycott all use of any petroleum products including, but not limited to, rubber and plastic. Do not purchase any food except that which is grown in your own backyard. Do not use any electrical appliances except that which is power by solar panels on your roof or wind turbines in your back yard. I have just as much a right to ride the trails as you do. Your very presence on the trails is rude because you are in my way. Every argument about "rights" goes both ways and for "environmentalists" to claim that the way I choose to enjoy the outdoors is selfish is hypocritical. Your ASSumption that no OHVers enjoy any other outdoors activity is profiling, stereotyping, shallow, and narrow minded. If I ever meet you in person, I'd happily share my stories with you about the thrill of racing to a state wide 2nd place overall finish in offroad motorcycle racing and that same year, spending 10 days backpacking in Ansel Adams Wilderness listening to the wolves howling as I slept under the stars at 6000 ft. I will also share my pictures of my father and I on my first successful hunting trip harvesting a deer that eluded me for 3 months and in the same sitting show you the pictures of my family helping release baby sea turtle into the Gulf of Mexico. Please stop the charade that the only way to enjoy being outside is via hiking or other so called "eco activities". I am proud to responsibly enjoy both sides of this topic. To those who suggest we support what riding areas we have: Where do you think we have to ride?! The places we can legally ride at are decreasing in number at an alarming rate. In my state, there is one place within 3 hours of me and it only has 50 miles of legal trail. The attempts at private riding areas have failed because the government refuses to permit them and what private areas do currently exist are getting shut down as well and if you turn out to see the number of people at the private areas, you will realize it is NOT because of lack of rider support.

Well I live the metroplex in fort worth and it keep spreading and spreading. You used to find bob white quail right off 820 and 35. That was just 10-12 years ago. We have to start finding ways to stop the onslaught of our grown to such threatened species. Study areas long before we tear through them with homes or businesses. And then making the home builders better find land to conserve not just for wildlife for us and our kids. Working together city to city working right down to asking people about the local wildlife. Creating wilderness areas and wildness connection so wildlife can go in different directions not having to worry about a car running them over. We have to get innovative as we lose more land everyday to subdivisions, malls and businesses.

ATVs and OHVs (recreational use especially) directly harm roads and trails. They pollute the air with exhaust and noise. They should be banned from all public lands and used only in places that are equipped to repair the damage they cause.

The arguments for the use of OHV's reminds me of Japanese arguments for continued whale hunting--preserving a traditional way of life. Just because we are used to do something does not mean that this is the thing to do. If lands are called "public", does that mean that everybody should have the right to use them whichever way one wants? I agree with #54 that in the absence of individual personal responsibility the economics of land (ab)use should play a role.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

All federal lands? Why do people contribute ideas that are idiotic on their face? The federal government currently claims about 60% of all land in the western half of the U.S. You and the people who support stupid suggestions like this suggest that you are not capable of thoughtful, intelligent dialogue and are likely to contribute no ideas of real use or value. Please continue.

Please see our series "What We Need To Know About Oceano Beach and Dunes" at [safebeachanddunes.org](http://safebeachanddunes.org). Thousands of fossil fuel burning vehicles plunder our beach, creek, and dunes in Oceano California. The Oceano Dunes State Vehicular Recreation Area is a health and safety hazard. In addition to the carnage and destruction to the environment, its activities cause life threatening concentrations of particulate matter downwind. This noisy, dangerous "recreation" is an unabated nuisance that we subsidize with \$65 million a year from our state fuel tax. It needs to be stopped.

"(Hikers) cause erosion, air pollution, noise pollution, contribute to global warming, cause injuries, consume fuel that must be imported, and detract from the outdoor experience of all other users of federal lands. (Hikers) should be banned except for maintenance and rescue purposes" All of this can be said about any group that uses federal lands. Just put what ever you want in the parenthesis and wala you are now the champion of the cause. Lets try this one...  
"(Skunks) cause erosion, air pollution, noise pollution, contribute to global warming, cause injuries, consume fuel that must be (ex)ported, and detract from the outdoor experience of all other users of federal lands. (skunks) should be banned except for maintenance and rescue purposes"

"People who (have no respect for nature or the rights of others) have no respect for nature or the rights of others. Please ban or restrict their access to public places." If your are going to make general statements about an entire group of people that you do not associate with and have no understanding of, please make it general enough to be true. Bigotry has no place here.

Off-road vehicle use has taken over our forests and public lands to the point where it is a joke to call them "wilderness areas" or "wildlife management areas". They ruin the experience for everyone else - hikers, horseback riders, bicyclists, etc., not to mention the wildlife.

Yes, \_\_\_\_\_ wins the civilized man of the decade award -- a decent chap, who actually goes out of his way to avoid and minimize the downsides that are normally associated with OHVs etc. If all other offroad drivers chose their vehicles as he does, and used their vehicles as he does, we'd have a lot less to argue about. Unfortunately, they don't. Before too long, however, we are all going to run out of petrol, permanently. Just read a little from the "depletionist" authors, and realize that we are already on the downslope of inexpensive and ample fossil fuel -- as well as all other sources of artificially generated energy. Yes, the crest of the curve has already been passed. You may be in denial, but I'm sorry -- you will soon be unable to maintain that attitude.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

OHV's have no place out in the Nature that we all share in the Parks. there should be private lands that cater to your need to bring machines out into wilderness and you should pay for the privilege so that they can fix the earth afterwards so you can mess it up again and again. Someone could make some good money creating OHV parks around the nation for you to rip up the land and be loud in. It is just inappropriate to make us hiker and biker share space with you. It's like asking joggers at your local park to share space with Motorcycles! Every time I go to the Parks after the rains I see huge scars and muddy "Doughnuts" tracks and destroyed fields that are the habitats of animals such as bunnies and foxes! I saw a dead snake in the road that had been killed by and OHV, it had a perfect OHV tire track right across it's middle. Look, with all the leaf blowers and lawn movers and construction sounds and traffic and airplanes and helicopter sounds, loud music from neighbors, saws, beeping backing up trucks, augh! I REALLY need to get AWAY from Machines and their destruction and noise. You dominate the whole world, why can't Nature, and the rest of us, get a break from you in just a few wild places?

"ATV and off-highway motorcycle riding encourages and promotes physical fitness." that's a bit of a stretch.

What IS the current ratio of OHV to wilderness land...is there an actual law? It's hard to vote "yay" or "nay" on your vague proposal.

People who drive off road vehicles have no respect for nature or the rights of others. Please ban or restrict their access to public places.

These devices spoil my time in nature. They are noisy , polluting and destructive. I do not want them in the wilderness.

How can you "enjoy wildlife" if the noise of your vehicle has chased it away????

Something I have not seen addressed here is the pollution-noise and smoke- that accompany all vehicle use. This is extremely disruptive to wildlife and to those who try to find nature a sanctuary from the hustle and bustle of daily life. Why can't vehicles stay in urban areas, and leave the quiet of nature to those who can't find it elsewhere, and to the animals, who live there?

Leg-hold traps are dangerous to humans and pets recreating on public lands, and do not discriminate among species not approved for trapping, endangered or not. The practice is inhumane in the same way cockfighting or dogfighting is inhumane. There is NO EXCUSE for this sort of barbaric practice to be allowed on public land.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The extremist so-called environmentalists are the real problem. The last time I checked, the public lands of this country are exactly that, PUBLIC! That means they belong to everyone; OHV, hikers, bikers, fishermen, hunters, equestrian. You name it, it belongs to every tax paying American. If I want to go to an area and drop a line for some fresh trout, I have that right. If I want to go hit designated trails with my dirt bike or 4x4, I have that right. If I want to chill out with the camera and form lasting memories for my living room wall, I have that right. What I, and everyone else DOES NOT have to right to is to determine who gets shut of our PUBLIC LANDS!!! If you want to shut people out, then pool your cash, find a piece of land that's for sale and buy it and then you have earned the right to shut out whoever you please. You do not have that right on PUBLIC LANDS!!!

And what on earth is 'healthy' about motorized recreation???

I don't agree on this. I've personally encountered horse trails in my state parks. The horses' hooves tear up the soil, and produce very large, deep, clumpy grooves. When it rains, this muddy soil destroys nearby plant life. I know you mean well, but these large animals and the added weight of the riders have a very MAJOR impact on the land.

We can all have access, but we can't all have access to all. It's just not feasible. There needs to be some separation of activities, or the entire public land system will only be suitable for motorized recreation. The fact that motorized travel detracts from the enjoyment of non-motorized travel is neither party's fault. Some hikers like to think that because their preferred use of public lands (and mine) doesn't annoy anybody else by creating noise, it is therefore less invasive. But this isn't exactly true. The very nature of wilderness hiking requires that there be no motorized recreating nearby. This detracts from the OHV rider's options. The only solution is to have dedicated uses of different segments of public land. There will be an ongoing fight on how much should be dedicated to whom, but it certainly can't all be opened up to OHVs.

Dear \_\_\_\_, As \_\_\_\_ said, ohvers are directly contributing to terrorism. I wonder why you think it's so important to use fossil fuel to propel yourself forward when you could use your own two feet. All I can think of is that it's FAT behavior. Your fat is telling your brain what to do. You seem so adamant about using gas, maybe you work for BP.

If mountain bikes are causing that much damage, then the trail is probably not properly designed. I've seen trails open to OHV's that are smoother and more narrow than a popular horse trail in Wilderness.

Why is it a strange idea? He didn't say "mess them up" or anything about "cutting down trees" or "rock music". No, he said share the land with all users. Why is this such a hard concept to grasp? Everyone has different likes and dislikes, it's what makes us individuals. Why is it usually the hikers that are unwilling to share?

Have you seen the traffic jam on some of the National Parks?? No thanks, I'll take the quiet multi-use national forest land.

## Discussion Question 2

### **Written & Online Comments**

**(cont.)**

As Idbf said. Footsteps also disrupt the soil....the footsteps of people, and animals. Does that mean you want the animals out too?

Our parks should be for foot traffic only. We should not disturb the land, we should not destroy land, we should get exercise. OHVs can find land to mess up outside of parks. As the world gets noisier it becomes more important to have a quiet place to go. Our mental health depends on that. Keep OHVs out of parks

Intrusive, irresponsible, noisy, polluting and destructive activities have no place on public lands, where responsible others enjoy the serenity of God's pristine, soul-reviving wilderness, and wildlife live and have homes. Let the irresponsible boys play with their destructive, noisy and stinking toys on dirt tracks on their own properties. Then they won't mind when trees and other plants are torn out by their roots, and crystal-clear streams and other freshwater sources are fouled and rutted into filthy mud holes. And they won't mind when topsoil erodes and washes away, depriving wildlife of plant forage that once grew there. The real problem is irresponsible selfishness, and self-absorbed promoters of such a depraved ideology can't comprehend that the natural state of pristine wilderness always takes precedence over intrusive and destructive activities/behaviors. Following their attempts at reasoning, they would be fine with drag racing down residential streets, or open, illegal drug use in public parks, libraries and schools. It's called wilderness for a reason; leave it wild. Keep your abusive, noisy, fouling, adolescent, destructive, irresponsible, self-absorbed intrusions to yourself, and leave beautiful, serene, untrampled wilderness to God's creatures and responsible adults, who know the value of unspoiled wilderness and will fight to protect and preserve it from the likes of selfish off-road abusers and other exploiters, who will despoil all wilderness into an eroded, sterile rut if they have their way.

I can't say it any better than Patrik Jonsson, but I'll add a few points. The people riding ATVs are not in it for the wilderness experience (what deer is going to hang around with that noise going on?) ... they're out to destroy and disrupt. It's like radios on the beaches ... I go for the sounds of nature and have to put up with interference. Keep them off our public lands. They have enough landowners who don't mind whoring their piece of wilderness for profit.

Ban them now! The noise alone ruins the experience for everybody else, not to mention the wildlife. And they are generally loud, yelling to be heard over the obnoxiously noise of the engines. Who wants to hear that when they are trying to have a wilderness experience. Not to mention the destruction of habitat and pollution.

Oil is a precious natural resource. Wasting this finite and important fuel on ATVs, Snow Mobiles and Jet Skis is extremely short sighted. People who place their pleasure over the greater good of others are simply selfish and greedy. These recreational vehicles should be banned from all government lands for the greater good of society. This is not to mention the pollution they create, the noise that disturbs tranquility and the damage done to the land.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Public lands are open and "accessible" to the hilt. Even our most restrictive designation -- the gold standard of Wilderness protection -- still allows all citizens to enter. Just not our machines, industry, development, and other damaging uses. We need more pristine lands preserved for their ecological values, not destroyed just so we can use them up even faster.

Off road vehicles tear up the trails and cause erosion and noise. Keep them out of our public places!

First of all, motorized vehicles on trails greatly erode them. Even if I were deaf, I wouldn't want them on the trails for that reason. I am not deaf, however, and I resent the noise they make as well as the torn up terrain. It's hard to see wildlife when there is noise.

I worked with Volunteers for Outdoor Colorado for 9 years. We went out and, among other things, built hiking trails. All wheeled vehicles are destructive to trails, as they channelize, or deepen the center, of the trail. Water collects, creating either mud or a small creek whenever it rains. The creek erodes the trail, and the mud is easily squished up to the sides creating a deeper creek; alternatively, people move over and walk/ride beside the trail causing an ever widening track and more damage. Also, ORV's like to go "off trail", damaging previously undisturbed plant life. Heck, my DOG doesn't like motorcycles with mufflers near our house! Imagine the stress it causes to pregnant, lactating, nesting, baby, juvenile wildlife!!! Stress kills animals as surely as it kills us.

Terrific concept. In the pursuit of food, some species will go a certain distance. If that is interrupted, some species will not "jump" the gap. Loss of habitat and food, loss of species. Check you the Nauter Conservancy and their thoughts on just your comment! Be well.

Indeed when travelling to Yosemite a few years back, I couldn't help but feel guilty that I was entering the park in a big gas-guzzling car (the only rental available when I arrived in CA). I was fairly disturbed upon entering the park to find that I had nowhere near the biggest vehicle around, and that there was a road infrastructure leading everywhere through the park. I agree that something must be done to address the fact that even casual 1-day visitors should be granted access to the parks, and that some method will need to exist to shuttle these people around and let them see the wonders they came to see. Perhaps allowances only for electric vehicles to certain points, and only authorized park vehicles/shuttles in others would be a way to keep "drive-by tourism" to a minimum. As was suggested elsewhere, perhaps a balance could be found by levying a large fee on private vehicle usage in order to subsidize the lower-impact access by others...

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Most of the comments regarding OHV's focus on the land--but what about climate change? Scientists telling us that we need to add no more than a trillion tonnes of CO2 to the atmosphere before 2100 to escape grave consequences for the Earth. It sounds like a lot, but it's not. This means our opportunities for using fossil fuels are limited. There are a lot of things we're going to need those opportunities for: to heat our homes, to power our industry, and to get people and things where they need to go to keep our economy functioning until alternative energy sources are more economical. Why waste these opportunities on providing a minority of citizens an adrenalin high from off-road vehicle use? I suppose the reason that nobody has mentioned this aspect is that they don't want to argue with the inevitable "climate change is a myth" deniers. But the high probability of global climate change can't be swept under the rug with rhetoric. It's something we have to deal with. Given all the other reasons mentioned above for limiting OHV use, AND the high probability of OHV use contributing to the dislocation of whole ecosystems through advancing climate change, why are we even considering anything but a gradual phase-out of OHV use?

My family just completed a 10,000 mile trip from Florida through the SW to the NW and back. I can not conceive of being able to experience all the Parks we visited without an automobile. My family just completed a 10,000 mile trip from Florida through the SW to the NW and back. I can not conceive of being able to experience all the Parks we visited without an automobile. Of course we stayed on paved roads, It was a wonderful experience for our grandchildren. In the past I did extensive backpacking and canoeing and found that the crowds diminish rapidly after the first four or five miles or first portage. Lets not shut the parks down for those that now enjoy a less physical visit. As far a wildlife goes, it appears that automotive presence does not impact it much as proved by traveling through Yellowstone. It is the hunting that alters the behavior pattern of wildlife.

I am an avid mountain biker, however, I completely disagree that mountain biking is 'low impact'. Any trail I have traveled on which mountain biking is allowed has become a great mountain bike trail, but it is no longer "wilderness". We need to leave wilderness areas alone. There are thousands of square miles of other park lands and more developed areas that serve up a wonderful choice of mountain biking trails.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I know we have shirking recourses and both groups have legitimate concerns But I think one of the biggest problems is developers buying up land and building big projects in the middle of what should be reserved land for all including the animals that have an equal right to it. This is not going to happen unless the government starts buying the land and does a better job of management for all to enjoy. I really enjoy the out doors I use to hunt and fish and miss both a lot but now the only way for me to enjoy the out doors is use my OHV and I except most limitations the forestry and fish and game have come up with however I see more trails being closed to me. There are different types of disabilities and age is one that affects me I also have other friends that are affected by the same disabilities that depend on OHV's to be able to enjoy the out doors as well. Destroying the trails and back roads is not what we are about but when I see another trail closed because someone in good health wants it just doesn't seem fair. It is a law that you can not discriminate against disabled persons but no one thinks about it when it comes to the out doors. I hope the forestry takes this into account when making future changes.

OHV's do not pay enough to overcome their damage to land. Second: There are those of us who are in the forest/nature trails/camping areas, etc. and we are using our two feet to get around these areas. We are not contributing to the pollution of the environment from the gas/smog/smells/etc which are put off by all ATVs, dirt bikes and the like. In the future, when gas is even more limited or people are so fed up with the pollution, ATVs, dirt bikes will not be as proliferate as they are now. ATVs and dirt bikes is a totally different type of recreation those who travel to forest for hiking/camping/nature/photography enjoy. I don't build fires unless I am camping in weather where the temperature drops to about 45 degrees. I see building campfires in warmer weather as nothing more than pollution. They aren't needed. When the weather is cold and I am going to be around a camp site after sundown, I have a very small 'campfire ring'. It isn't blazing huge and while it is pollution, the amount is small. It is another of my 'peeves' when campers build fires just because they are camping. They don't need them. As for the fees for the areas I use. They have increased, but I was one that voted for or agreed to an increase so that we could hopefully have more rangers in areas and to help in the upkeep of parks/forest/nature trails. I don't mind paying a little more. Many aren't going to like this, but I also suggested putting up 'toll kiosk' to cut down on those who use things like the Blue Ridge Parkway as a short cut or way to avoid traffic on public roads and the Interstate during 'rush hour'. So far this has not been implemented, but I'm hoping it will be. There is enough travel on these roads by those who are there driving slowly to enjoy the scenic views it was designed to provide. Between vehicular travel and the extremes in weather (cold winters) the road has to be repaired. This is done by taxpayers and those who use the Parkway. It is a nuisance to have someone driving behind you (tail-gating) because they are using it to avoid traffic and get home a little faster. It's a nuisance to feel you are being 'pushed' or have to pull over to let those who are 'flying by faster than posted speed limits'. That's not why we are there in the first place. Putting tolls kiosks at the entrances to areas like this would cut down on this type of activity and until it's done, those of us who are there to travel at a leisurely pace, enjoying views and nature are going to have that peace and enjoyment ruined. I hope the Park Service takes this recommendation into consideration and implement it.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

If I wanted to hear motorized vehicles of ANY kind, I'd stay home. The only sounds I carry with me are the radio in my car and that is used for weather ONLY. I don't even carry my most favorite or soothing music with me when I travel to the forest to camp and SPECIFICALLY NOT WHILE I'M HIKING ! There are areas which are already designated for these vehicles. Let them pay the fees required there and race, sling mud, make noise and create mayhem all they want in those spaces. BUT NOT IN OUR FOREST! Some privately held lands are already allowing dirt bikes and all terrain vehicles to the use of their land. Some are even charging fees. Personally, I wonder if they report these fees to the IRS as income. What snow mobiles have done for areas where snow skiing was once the only thing in the forest during the winter...is what will happen to our forest. The majority of people who own these all terrain vehicles or dirt bikes have no respect for the land. They get caught up in the 'race' or the competition and they leave the designated trails. It only takes one vehicle leaving the designated trail to do damage AND to leave a trace that the next vehicle may mistake for a trail and also use it. Before long you have trails off the designated trails. IF I WANTED TO LISTEN TO ANY MOTORIZED SOUNDS.....I'D JUST STAY HOME. THEY SHOULD BE BANNED ALL TOGETHER IN OUR PARKS AND PUBLIC FORESTS. LET THEM TEAR UP THIER OWN LAND! IF THEY DON'T HAVE ENOUGH LAND TO RIDE THESE VEHICLES THEY DON'T NEED TO OWN THEM. I'M DISGUSTED WITH THE PROLIFERATION FROM COMPANIES THAT ARE BUILDING THEM IN THE NAME OF 'ENJOYMENT' AND 'ENTERTAINMENT'. LOOK AT THE STATISTICS OF ACCIDENTS. THAT ALONE SHOULD TURN OFF MOST PEOPLE ON OWNING THEM IN THE FIRST PLACE. THERE ARE DIRT BIKE TRACKS, JUST LIKE GO CART TRACKS AND RACE TRACKS THAT ARE SET UP FOR THIS PURPOSE. LET THEM USE THOSE. PLEASE, KEEP THEM OUT OF OUR WOODS, FORESTS, NATURE PARKS, NATIONAL PARKS, STATE PARKS, HIKING AREAS AND PRESERVATION AREAS. LET'S DO ALL WE CAN. I DON'T WANT TO HAVE DESIGNATED DAYS EITHER. THAT MEANS I WOULD ONLY HAVE CERTAIN DAYS TO ENJOY THE QUIET, AND THE SOUNDS OF NATURE. WHAT IF THOSE DAYS AREN'T THE DAYS I CAN AFFORD TO TRAVEL TO A FOREST, PARK, OR HIKING AREA? PLEASE, PLEASE PLEASE....VOTE TO KEEP THEM OUT OF OUR FOREST!

## Discussion Question 2

### *Written & Online Comments*

*(cont.)*

For those riders who say they like to hike, I want to laugh. I've seen NO ATV or DIRT BIKER hiking anywhere and I do know some who use these vehicles as 'entertainment and competition. THEY DON'T HIKE AND FOR THE MOST PART DON'T CAMP. It's become a personal joke between us. So it's laughable when I read responses that say they like to hike. While we're on the subject of impact on the forest trails from hikers, I'm one of those who pick up after those who have gone before. I'm one of those who DOES NOT LEAVE THE TRAIL! I'm one of those who believe that every trail should, for the benefit of Mother Nature to heal ....should be shutdown for at least one year. It would not hurt any of us to have the areas rotated and specific trails, hiking area and camping areas closed for one year in order to allow nature to 'heal' from what impact we do have on her. So far, my feelings on that subject have not been listened to. The only time a campground is closed is because it was damaged by severe weather over the winter and they are clearing it, but this doesn't allow sufficient time for nature to heal itself. The same goes for camp grounds. The only time I've seen one closed was because that specific campground decided it was time for an upgrade of features, resetting tent pad sites, doing some repairs where rain water run offs was causing erosion, etc. It wasn't just closed to give 'Mother Nature' a year off to heal. As for fees and costs. I've have maintained that fees should be raised. Not only would it help the parks and trail systems, but the increased fees might make those who are not dedicated to nature out of the environment. Easier to find a free or cheap man made 'water park' or other 'entertainment' area to have a little fun. Those of us who travel (and I have to travel a pretty good distance to get to a 'nature area free of motorized vehicles' (other than one government military facility which excludes all motorized vehicles from trails other than parking two small parking areas. The road (much larger than a trail in some areas) is full of runners/joggers/walkers and ALL are on their own two feet. They allow horses which are kept on the grounds, but in all my years of visiting this area on a military base, the only place I've seen the horses was on the grounds where they are kept which. There are riding rings etc. They are allowed on the trails, but I've never seen anything to indicate they have been there. Maybe that is because they are not there in great numbers. But I certainly don't see any 'impact' from them. If I have to travel for more than an hour to find a nature trail where I can spend time walking, hiking and just enjoying what 'Mother Nature' put there, I certainly don't want to hear the buzz of a motorized vehicle. **MOTORIZED BIKES, ALL TERRAIN VEHICLES, AND THE LIKE ALREADY HAVE PLACES WHERE THEY CAN CREATE MAYHEM ON THE EARTH. KEEP THEM IN THOSE AREAS AND OUT OF OUR PARKS, OFF OUR HIKING TRAILS AND OUT OF OUR PUBLIC OWNED FORESTS!** I do my part to keep any place I visit cleaner than it was when I arrived. I hike out more than I ever carry in and I consider myself very environmentally aware of what I do to the forest. I still remember a friend who went hiking with me years ago telling me "When you have to step on a root of a tree while hiking, ask the tree for forgiveness." That particular friend is almost a 'woodsmen'. That friend could survive in a forest with nothing more than the bare essentials. They taught me a lot. I'm aware that every time I use a trail, I do make an impact. I travel light, light footed and I stay on the trails. Perhaps the answer it to alter the trails in some areas at times. That would decrease the 'foot fall damage' of our feet, but again, that is the same as my original suggestion of closing down areas for a year to give 'Mother Nature' time to heal from the impact we do place upon her in designated areas.

## Discussion Question 2

### *Written & Online Comments*

*(cont.)*

One more response and I'm done for today on this subject: You say the places that have all terrain trails are shutting down. WHY? Could it be you are causing so much damage the owners can no longer afford to continue the upkeep? Is it because the fees you pay are so low that the owners can no longer afford to keep that designated area open for you to use your ATV or dirt bike? Maybe those of you who choose the form of recreation/excitement/competition should be willing to pay a bit more to keep your areas open or pay enough to allow the owners to maintain the areas. We don't want motorized vehicles, no matter how small, in our forest/parks/nature trails. We are there to enjoy nature. Your ATV or dirt bike is noisy and a nuisance. It scares away any creatures we might otherwise get to witness in a natural habitat. Want proof of what you do when you 'buzz through'? Try WALKING into a forest. Listen. When you walk into an area, you may notice it gets quiet and still. Sit down for 10 minutes and keep listening again. The forest will once again become alive with movement and the natural sounds of birds, bees, etc. Hikers, walkers, naturalists know to keep as quiet as possible so that they don't scare away or cause what is there naturally. **UNDUE ALARM!** We still get to listen to the birds and other sounds. Even the sounds of a breeze through the leaves of the trees is a joy to most of us. **BUT** to understand this, you would have to get off that ATV or dirt bike and actually use your feet to hike/walk in to the forest. From the sounds of your posts, I doubt you'll ever do this so you'll **NEVER UNDERSTAND** what we are trying to say. This is what we find when ATVs and dirt bikes are constantly on the trails. We no longer get to hear or see the things we are there to see and hear. We won't mention the tracks (man made vehicles) changing the scenery and making enjoyment or photography unaffected by man made machines. You talk about "COME ON NOW...." Well come on now and look at it from our perspective. **KEEP YOUR BIKES AND ATVS IN AREAS DESIGNATED FOR NOISE, THAT 'RECREATION/SPORT/COMPETITION' AND PLEASE, LEAVE OUR FOREST, PARKS AND NATURE ALONE.** Be willing to pay for your sport. Support the areas you have with adequate fees and maybe they won't be shutting down. Another thing to think about is this: Maybe the area you are using is now being populated by homes. I can assure you, most don't want to hear the constant buzz and noises from ATVs and dirt bikes in their homes and they don't want to live with the dust and dirt thrown up into the air. Maybe you should start attending your local city/town/county council meetings and find out where homes are going to be built and how close they are to your 'trails' or facilities. This may also be a reason they are being shut down. I attend meetings and keep abreast of what is being planned and the impact it is going to have on areas where I live. Can you say the same thing?

No vehicles in our wild places. Too lazy to hike? Tough luck. Lard-assed? Go on a diet. Disabled? The world ain't fair.

Ban them! Get rid of them now! They're a recipe for destruction and abuse of our wild and rural lands!

global warming is joke, is sun get hot

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I am compelled to "weigh in" on a couple of comments on this idea. In comment #28, an obvious Wilderness advocate, does not feel that he is in the minority in desiring a primitive outdoor experience. Actually, you are decidedly in the minority. The NVUM surveys indicate fewer than 4% of all visitors to our National Forests go into Designated Wilderness areas, yet some 20% of NF lands are Designated Wilderness, which are designated for the exclusive benefit by "quiet" uses!! So you are a member of an exceptionally well-rewarded minority. Comment #41 seems to claim that we are making our kids fat and lazy by allowing them to participate in ORV activities. Obviously, hasn't tried snowmobiling, motorcycle riding, or mountain biking. I think the obvious point here is that any outdoor activity is preferable to sitting in front of the TV, endlessly texting friends on the iPod, surfing the web, or experimenting with drugs.

What a strange idea. The parks belong to all of us, so you should be free to mess them up? Try cutting down trees in your neighborhood park, so you can build an overnight leanto! Of course there should be park and public lands suitable for car camping and wheelchair access, etc. But if you set up your 1000 watt rock music rig in the campsite next to me, or even run your generator all night, I'll be the first to pull the plug. And when you want to drive your camper into a wilderness meadow and set up camp there, you are just plain nuts.

You overstate the case. There are lots of national forest lands that belong with the national parks, but there are lots that don't. As for clear cutting and bulldozer mauling of the landscape, I would agree with your notion if that were the only way to harvest the forest. Take a look at how they do it in Europe. If you could restate the question in a more neutral manner, I would certainly vote for it. But this version looks too much like a political overstatement. For now it's "no opinion" from me.

Emotion is not the proper way to address issues involving others. Feelings are not facts. You have a very narrow minded view on this subject and of the majority of OHV users. Tolerance was taught to me at a young age, was it not taught to you as well? First, we the people own the NFS and Public lands, not we the hikers or we the Sierra Club. Second, since you feel so strongly about the environment, I assume that you travel barefoot and do not own modern appliances. You must realize that the impact of your daily life far out weights the impact of daily OHV use. How many trees did it take to build your home? More than you think. What was the impact of manufacturing your car? ECT.

We went to the Pacific North West recently and were shocked at the deforestation (clear cutting) of National Forest Service lands. It not only looks awful but it also causes land slides, reduced variation in species, and death of many animals. The logging companies may be "reforesting" some of sites, but they end up being one species of tree that are all the same age. This greatly reduces diversity.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Someone suggested user fees for equestrians. That's something that many horse owners do thru local riding club memberships. Trail maintenance and improvements come from that funding mechanism, supplemented by club fundraising efforts. Many have spoken well here on behalf of keeping motorized vehicles off of federal hiking paths and I support that. This is an either/or thing: pedestrians and horses can not coexist safely with motorized vehicles, no matter how responsibly the machines are handled. By having a motorized vehicle there, that does not give someone the right to infringe on another's enjoyment of that area, but that's what occurs. Noise, fumes, and risk of bodily harm are accepted by the OHV user. Non-OHV users do not accept those negatives, but have those forced upon them. These two user groups must remain separate.

Public land needs to be available for everyone to use...

The continued closures to multiple use and motorized recreation is unacceptable. Search and Rescue, weed management, fire and fuel reduction, responsible oil, gas and mineral development for our national security, access for the very young, elderly, and physically challenged. All these needs require multiple use access and multiple use management. I would not want my children and grandchildren to experience lands locked away for wildlife with only small human corridors available to enjoy and this is where I fear our federal land managers are heading. The current actions of these land management government agencies is contrary to the vision of reconnecting people with the landscape as portrayed by Obama's great American Outdoors. The 2 listening sessions I attended were clearly stacked with anti human access organizations demanding full funding of the Land and Water Conservation Fund. This fund is used to facilitate more government land purchases which in turn hurts small communities and their tax base. Higher cost of land managers with more land to mismanage, higher taxes, more debt and less access. This is not about the environment anymore but is all about money. Money to support organizations with only one mission and that is to restrict or remove human enjoyment of the land. A land once created FOR the enjoyment of the people. Environmental organizations collecting billions of dollars through the Equal Access to Justice Act and then turn around and use these tax dollars to file lawsuit after lawsuit against any active management project or multiple use road or trail being open. Nothing will change until these agencies are exposed in their backroom deals of concealed emails and communications. I know when I ride the trails with my quiet four stroke motorcycle, I have never have had a bad experience with other user groups. Everyone is more than happy to SHARE IT. Shame on those that would distort trail conditions, user conflicts or wildlife disturbance just to make those less familiar with the great outdoors think multiple use visitors destroy our environment. Fact is less active management and less access is far more destructive to the land.

There should be local park/track access to people who want to ride their motorized vehicles for pleasure. A wilderness area set aside to protect wildlife should not be one of those places -- it is dichotomous to the whole point of protection. Studies show that a great many ORV riders are disrespectful of the places they ride, and the noise their vehicles create do nothing but harm and disrupt the local wildlife.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

There is very little about offroading that is good for the environment; from soil degradation to noise pollution, very few offroaders actually respect the ground they so callously tear up. Wilderness should remain as such -- wildlife, in its natural state, is not exposed to loud noises -- and those of us who wish to visit wildlife in its natural state should be able to do so without the loud intrusion of human folly.

Fine, Black Mesa. Tell that to the Rubicon Trail OHV users that have also claimed about ten miles of the Pacific Crest Trail. The only reason they don't trash more of the PCT is that blowdowns make anything but walking harder. I can always tell when I'm getting near a FS road/ohv use area. The brush is beaten down, trail bed washed out, trash under bushes, and the signs see lots of use for target practice. Around where the Rubicon crosses the PCT I couldn't even FIND either trail, for a mile the area was too beaten down. I have had an ohv user drive his rockcrawler through my camp in the middle of the night. Watson Lake, Tahoe Rim Trail, summer 2005. "Oh, sorry dude, didn't see ya there....." Family fun. right. I say, leave it better than you found it. OHVs are big peoples toys, play nice or don't play. The bigger the toy, the bigger the traces. Nothing sadder than a high mountain meadow with 40-year-old 4wheel tracks where somebody did donuts in the middle of it. Jackson Meadows, Sierra Nevada. For what its worth dirt bikes can be fun. I used mine to herd cattle, ride fence lines. I'm also a long-trail backpacker. Like I said, I can ALWAYS tell when I'm getting into OHV territory.

After a long week in the city it used to be comforting to be able to go to the mountains and just chill. Listen to the sounds of the wild and catch a fish for breakfast or dinner. Not much of that anymore. People here in Calif do not respect the sounds of nature. All one hears anymore are the machines. Even the wildlife can't hear their babies or mates if they were in trouble. And if there were a bear within range of camp one would never hear the crack of the branch it might have stepped on before an encounter with the camper. All I long for is a peaceful day or two with only the sound of a running stream or the animal and bird calls of God's creatures. Oh and one comment about the horse droppings next to a stream or on a trail. Does a bear, deer, cougar or other creature Sh.. in the woods next to the stream they depend on for their water? Not much difference. I am an avid fisherman or women and have encountered many a pile along the creek. Does not bother me one bit. Would much rather see that than spilled oil or gas along side the stream or trail.

Climate change is already drastically affecting the earth's climate and causing damaging mega-storms and drying out tinder dry forests causing them to be extremely vulnerable to fire. Motor vehicles in the United States are now on about every available road and trail through out the country. This type of vehicle adds to the pollution that the US Government needs to begin reducing. Animals are being pushed further and further into smaller and smaller spaces by the intrusion of motor vehicles into their realm. The recreational use of motor vehicles on federal lands is destructive to the land, destructive to wildlife habitat, noisy, polluting and has reached a stage where it needs to be curtailed and reduced. They have a limited role in a forest environment if the forest is to protect water, wildlife, and soil.

## Discussion Question 2

### **Written & Online Comments**

**(cont.)**

A "hefty" fee??? Sometimes an individual's exploration of one of the National Parks does not fall in line with utilizing public transportation. Make public transportation an attractive option for those for whom that would work in how they choose to enjoy the various parks, but don't talk "hefty fee" for those for whom it wouldn't work.

This idea would also disallow mountain biking and horseback riding, and perhaps the person whose idea this is thinks those are evil also. But there is plenty of land that areas can be available for hiking, mountain biking, horseback riding, and ORV. After all, footsteps also disrupt the soil, so soon, under this idea, no one would be able to enjoy the public lands!

off-roading should be done on private land whose owners do not mind flooding caused by soil erosion and deforestation. let them take their childish toys out of the public lands.

Hikers do not create major annoyance for offroaders with noise or smell, but the loud stinky vehicles bother a lot of people. get them out of our parks!

As parks expand, the private property within the newly designated 'coveted boundary' becomes an "inholding". As park expand their boundaries to encompass tracks of private land, NEPA should be MANDATED to document the effects ON these private tracks of land and their owners.

"Theodore Roosevelt would turn over in his grave if he saw how our refuges have turned into today's killing fields" Are you aware Theodore Roosevelt was an avid hunter? Many of the first wildlife refuges were developed by money from hunters for the enjoyment of hunters. Without funds from hunters many of these wildlife refuges wouldn't exist!! Anyway, legal hunting in the US is completely sustainable, and hunting organizations actually positively impact wildlife conservation around the country.

"WISE USE" - a term coined by the great conservationist John Muir - has been co-opted by the people who want to mess up the wilderness. It is promoted by Bush's minions, one of whom said, justifying logging, that "forests need to be managed" - and one might wonder what in the world the forests did for the first couple of million years. BEWARE the use of this term, since once you have accepted "carefully-planned" projects, you don't know what you are going to get. Check out 'wise use' and 'dominion theology' on google, and you will get an eyeful.

30 years ago ATV and "mountain biking" did not exist. Our National Parks are no place for loud, fossil-fuel guzzling, heavy tread machines--bicycles are included as the continuous tread(s) is orders of magnitude more invasive to the environment vs a footprint. The ATV, like the mountain bike, communities should thrive (if they can afford to) just not in our Nat'l Parks where only the natural sound of foot-falls (man's and animal's) can be detected along w/the wind in the trees and the singing of birds.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

As a volunteer land monitor for about five years, I have had many interactions with atv riders. The biggest problems I have are unsupervised teenagers and adults who lead their children to disrespect the property of others. These vandals live outside the law. There seems to be no way to communicate effectively with the vandal minority other than through coercive enforcement-- fences, ditches, helicopters, and sheriffs. Many of the atv riding adults have been respectful. After hearing once that they are on private property, they don't return. Some of the adults and most of the children have not been respectful. They put bullet holes in the "no motorized" sign, break it off, and throw it in the weeds. When I step into the path and ask them to stop, they do a wheelie and threaten to run me down. We don't try to block the paths, because they drive around the blocks and tear up more vegetation. After talking to the same trespassing family group two or three weekends, they still claimed they were lost and did not know they were on private property. Of course, the atv dealers and, perhaps, some mature individuals would use public lands responsibly. However, based on my experience, most of the atv riders are vandals.

As with many of the other proposals, a balance of uses and resources is required. There is no one purpose that should supercede all others, with the exception of maintaining a park system, which is paramount. As a result of cutbacks, restrictions and overall lack of adequate funding, promoting low impact usage is consistent with low maintenance costs, and the current restricted budget. I support allowing use of parks to be as open to all interests as can be reasonably allowed. Fees for uses that incur maintenance costs should be imposed. For example, if ATV's are allowed in restricted areas, which I do not oppose so long as the areas are truly restricted, a usage fee should be imposed (through licensing and requiring displayed sticker similar to automobile license plate requirements) because these vehicles do cause damage which intermittenly need repair.

the idea of wilderness is not silly. In a world with a population over six billion still growing, the idea that we should set aside some land as a connection to nature and to the past is an extremely important one. Being born in Montana or moving there doesn't give the people of Montana some special right to the place any more than the people of modern Egypt have a right to the pyramids; they belong to all of us as much as they belong to any of us.

Core samples show that prior to the arrival of cattle in the Southwest, dust storms were unknown, and dust was not a factor in the melting of snow in the mountains of New Mexico, Utah, Colorado, Arizona, etc. This is because the soil surface in arid areas is alive and able to withstand high winds and water--until someone steps on it or rolls over it. Recreational use is only one way the living soil crust is destroyed, but it is a significant one. The situation could be helped greatly by helping walkers and riders of all types to choose to stay on trails and by limiting the number of trails. It is a matter of keeping humans healthy as well as protecting arid ecosystems. The challenge is helping people understand the importance of not loving our land to death. Education and self-enforcement is ideal, but has not yet solved this problem.

Designate lakes and rivers with a noise component so human or wind powered vessels would utilize the waterway 1/2 the time and engine powered vessels the other half. Also during the human/wind powered time, no amplified sound equipment could be utilized.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

EWV, the various non-wilderness use arguments are irrelevant because they have 97.3% of the contiguous 48 states already dedicated to their purposes. What little is left -- what has already been protected as wilderness -- is wholly insufficient to sustain natural processes, or provided for historic animal and bird populations, let alone continue to cleanse our air and water as we pump ever more toxins into them. This idea is not a band-aid. It extends the WSA idea into a default selection, so that rather than the default being 'develop everything until we run out' it's switched to 'preserve what little there is left until we can protect it permanently.' And Devlon, your lawsuit point is moot. Every governmental action is open to lawsuits, and almost every action is challenged. The number challenging this idea would likely pale compared to what are filed now by conservationists because these protections are not in place.

although I agree the population issue needs to be dealt with (or at least acknowledged) I have to demote because "population control" is out of the realm of consideration by the US Government (NFS, USDA, or anything else) as a means of enhancing park/wilderness areas. I'm also for gun control - but this isn't the forum for that either. Please make a concrete suggestion the government (we, the people) can implement in a concrete way at the current time. We can't throw money at population control and call it "wilderness funding." It is an entertaining thought, though. Save the wilderness - practice abstinence?

fly in or out of Phoenix and you'll see hundreds if not thousands of tracks in the desert crust caused by off road vehicle use. They are not on "trails" they are on just about every bit of open land there is, private property or public, including in parks. You can see every move the vehicles have made, circles, loops, figure eights etc. clearly etched in the soil. These are permanent. Once the crust is broken, erosion and dust occur. As the city expands so does the damage to the surrounding areas. When I moved to Phoenix in 1972 "dust storms" were few and far between, now they are very common and much of the surrounding desert, even in parks is coated by a layer of dust. I'll only speak of Phoenix since this is the city I've flown in and out of the most and have personally seen the damage caused by ATV use but I am sure the same situation is occurring surrounding other desert cities though I have not witnessed it myself. While cattle certainly damage the rangelands of the West and there are millions upon millions of cattle and sheep on our public lands at a cost to the US taxpayers of hundreds of millions of dollars a year using cattle as a reason to create more trails for motor vehicles on public lands is a joke.

Food for thought: the last time the earth went into a long solar minimum (prolonged lack of sunspots), the earth went into a mini-ice age. We just started coming out of a long solar minimum in January. Yes, we had a harsh winter, but there certainly is no ice age, with glaciers visibly melting all over the world. We thought we would have wars over petroleum? I fear wars over water. When the fresh water glaciers melt, what then? We have got to stop basing energy usage on carbon. There should be a carbon tax on all carbon used. We must start paying the REAL cost of what we are doing to the only planet where we can live! Preserving wildlands helps absorb some of the carbon, any way. It will take a lot more to "fix" what we have destroyed, if we can! How about some stewardship of creation here? How about renewable/sustainable energy? Bark beetles are caused by stresses in the environment. Wake up before it's too late.

## Discussion Question 2

***(cont.)***

Can we leave the last 1% or so to the animals or must we cut down every tree, dam up every river, pollute every lake and send every animal species to extinction because of "human needs"?

From Foreign Policy, via UN Wire (United Nations Foundation) On Aug. 8, 1975, geoscientist Wallace Smith Broecker published "Are We on the Brink of a Pronounced Global Warming?" in the journal *Science*, the first time the iconic phrase "global warming" was used in a scientific paper. Broecker -- known by all as Wally -- was already a prominent scientist by then, having served on Columbia University's faculty for 16 years. Today, at age 78, Broecker is recognized as one of the fathers of climate science, with more than 450 journal publications and 10 books to his name, ranging from paleoclimatology to chemical oceanography. "It's Going to Make a Huge Mess." An interview with the man who coined the term "global warming." The past 35 years have also seen humanity answer Wally's question in the affirmative, running a radical experiment on the only planet we inhabit. Carbon dioxide levels have risen 40 percent to 392 ppm from preindustrial levels of 280 ppm, and the global mean temperature has risen 0.8 degrees Celsius, on 1.3 trillion tons of carbon dioxide. Humanity has produced 60 percent of that global-warming pollution since Broecker's paper was published. As a result, the planetary ecosystem has fundamentally changed -- weather has become more extreme, seasons have shifted, and global ice and snow are in decline -- with more rapid and radical change on its way.

you don't need scientists to tell you there is a global climate shift going on right now. All you need to do is watch how the growing season is getting longer. Don't believe the scientists. But make sure your corn is in the ground a month earlier than you planted it 30 years ago.

Mountaintop removal/valley fill mining is a huge threat to Central Appalachian Cove Forests, which are the most biodiverse forests in the temperate climate zones. The Federal Government does allow this mining to happen. Fortunately, citizens across Appalachia and beyond are trying to change this.

I absolutely agree. We can all be at one with nature without throwing tax dollars at it. Our "rail trail", that goes behind homes in a rural area, is a popular spot for attacks and for thieves to use as an escape route after breaking into homes. They can watch houses without being seen. Crime in our rural community has gone up since the rail trail gives easy access to criminals. I say use your own money to recreate the way you want, not mine. Recreation and parks are not a priority over safe roads and infrastructure, and security/police.

I agree. We do need jobs, and we definitely consume resources. However, the multiple-use mandate given to the forest service has been heavily tilted towards silviculture since its inception. We don't need to increase logging activity on our public lands. The idea that the forests need us to "reduce their fuel loads" and that they are "overgrown" is ridiculous. Those are G Dub's "scientific" policies still lingering.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I am astounded that there are still individuals denying global warming (or preferably worded, global climate change). However, I have also heard there are some folks who believe that the moon-voyage was a hoax, who believe the earth is flat, and who believe Adam and Eve were real people (because they had a secretary there who documented it). I know there are also adults out there who still believe in the Easter Bunny and Santa Claus. The regrettable thing about the "climate-change-is-a-hoax" tragedy is that these folks are so loud when they scream. They must scream because they can't convince anyone using logic, science, or even the most basic tools of observation and common sense. Sigh... I think we should put more money in education, honestly.

I am very much against ORVs in wilderness and protected areas

I believe you kind of fooled me with the title of this idea, ENFORCE existing laws. We have PLENTY of laws on the books now, we just need to write more people up. I'm tired of picking up trash after others wherever I go. I went to the LA listening session, I'm not impressed with Ken Salazar. I would like to know just how much taxpayer dollars are spent for these people to travel all over and talk to us for 2.5 hours and then listen to us for .5 hours...

I do agree, but sadly at the moment our education system is so strained for resources schools are lucky if they can provide any field trips let alone days in the wilderness. But we can certainly bring the subject into the classroom and many schools do have life labs or gardens where the kids can grow their own plants. Education is certainly one way to do that.

I do thank and appreciate the environmental folks of the 60's and 70's that caused some real problems to be addressed albeit not perfectly - but they did their best. I must confide that I do not even listen to Rush's shows and never heard of Hannity and do not watch Fox news. I look to public TV for news and in depth interviews (e.g. Charlie Rose). People like yourself could help bring folks to understanding your point of view or at least listen, if you would simply stop bashing humans and being so mean spirited. Have you ever thought about possibly being visibly accepting of the cultural traditions and activities of all the others needed to be on board to improve things you worry about. If you could find it within yourselves to do this maybe you wouldn't have to resort to name calling and disrespect of others commenting on this site. You might be surprised but when I am hunting in deep Cypress swamps I do connect with a higher being. I won't mention Him though since it might frustrate some atheists here. The skills of a hunter might be very well needed if the catastrophe y'all are worried about happens. Just for your information hunters have been the ones conserving wildlife for many many decades prior to the environmental movement of the 60's. They learned quickly that game as well as other animals and habitat must be managed in order to maintain renewable resources. I'm sure some hunters disagreed with that in the old days but luckily they didn't win that debate. Seriously though you folks need to put that chip on your shoulder away for a while. Try it you may like it and actually get closer to your goals faster and cheaper. Shame on me too for sometimes pushing folks buttons.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I don't see the sense in this idea - somehow reversing protection on "commodity" resources would be helpful for conservation? This seems very anti-conservation, actually. Don't forget about the phenomenon that is the Tragedy of the Commons.

I love motorcycles and I love our environment. Our parklands are preserves and only should be enjoyed by the masses if it doesn't harmfully impact that preservation. I go to be in nature for the peace and majesty. If I have to listen to others noises, I am taken away from my full enjoyment of the beauty and connection to nature. Motorized entertainment in our Parks should be restricted.

I oppose funding non-profit organizations like TPL and TNC with public tax dollars. In my experience, these organizations use public money to purchase land and then attempt to restrict or eliminate public access. If public money is used to purchase land or conservation easements, then the public should expect responsible and sustainable access.

I remember "multiple use." It was almost universally interpreted, and was always argued by the exploiters, to mean all uses on all lands at all times. This often resulted in degrading the public lands indiscriminately to the lowest, most devastating uses, as these obviated all others. You can't simultaneously have clearcut logging, watershed preservation, wolverine habitat, minerals extraction, camping, ORVing, and wilderness hiking; these are almost all mutually exclusive. But clearly the less exploitative uses do not close the door to the others -they don't make the other uses impossible should the need for them arise. But minerals extraction, for instance, obviates all the rest indefinitely. Clearcutting is next in line. So more intelligent than "multiple use" are "appropriate use" and "best use" (note: not as in "highest and best use," which throws a bias toward financial gain). Each resource area needs to be evaluated based upon its inherent character, its sensitivity and uniqueness, the impacts each use option will have for adjacent areas, critical habitat, sensitive species, migration routes, fragmentation, water quality, contiguity, and so on, so that the areas selected for consumptive exploitation are most appropriate.

I strongly agree. Wolves are an integral part of the animal and plant habitat. Studies have shown how elk and deer herds have devastated watersheds when their populations are not controlled through natural predation. Hunters don't fill the same role as wolves.

I support balancing the protected lands with lands open for general use. Hunting would be improved if some areas were left for wildlife replenishment, and your comment about green peace hippies is childish and ignorant and diminishes your entire argument.

I wanted to make it clear that I am not defending cattle grazing on public lands. Less than 3% of US beef is produced on the range but it is at a cost of hundreds of millions of dollars a year to we, the people. Huge corporations and millionaires own most of the grazing rights, not small family ranchers. The price paid to graze a cow calf unit on public lands is about a buck fifty and fair market value is five to ten times as much depending on the location. Organic grass fed beef produced by family ranchers is a good thing but that is not what is going on.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

If I knew that 100% of the user of our public lands would respect our natural resources, I wouldn't mind opening more areas to OHV users, or any users at this rate. Problem is even those who hike on just two feet often don't care to take care of the land or follow park regulations. The day I can walk out of a park without more trash than I brought in, and can enjoy a day in my campsite without having to listen to noise levels that can damage my ears, I'll be happy to open more area for any access others want. I stay on the trails and camp only where allowed so not to cause damage to meadows or natural drainage along trails. I can no longer hike far as I wish, due to pain, but that doesn't prevent me from enjoying myself when I go to parks. At Cunningham Falls St. Park in Maryland, I just took the shorter trail that didn't require walking up steep hills. If I was in my wheelchair or a scooter, I still could have seen the falls and help my boyfriend spot trash to take out of the park. The state provided trash bags for use in the park, yet we still found a diaper along the trail.

I'm not a big fan of snowmobiling, but it has the potential to be less of an impact than other off-road motorized vehicles. You ride on snow, not the ground. It's still noisy as all hell. Just sayin' the rules for snowmobiles can be a little different than for "mudding."

I'm with you, there is no reason to go into protected areas. Those that do should be fined dearly. As a member of many OHV organizations, that is what we attempt to do, Educate those that use public lands. I've used peer pressure many times while out on the trails, most people get it, some are just a-holes and don't care even about themselves. I've walked into a group of people leaving trash on the ground, had to be careful on how to approach them. Told them they would be helping the Sierra Club close down the area they love to ride in, their camp was spotless when they left... OHV use has increased in recent years yet available areas have been reduced. This creates safety issues and environmental issues as well. Many go to recreate on holiday weekends, that is when the typical family has the time off work to travel outside the concrete and asphalt of the cities. Average time to get there is about 4 hours drive from my city. Once there, it is so nice to relax and enjoy nature, have a campfire and explore the surrounding areas on my OHV.

It boggles my mind that there are so many people who want to deny the fact of global warming given the photographs of melting glaciers, soft permafrost, and an ice-free Arctic. 99% of the scientists who study the Earth have no doubts about it, and the other 1% are flacks for the oil and coal companies.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

It's late to be arguing about whether the warming is man-made. The increasing carbon dioxide driven warming is heating the tundra and releasing methane, a more powerful greenhouse gas. The ocean, the great heat sink, is slowly warming. The warmer water will melt the methane hydrates and release more methane. The warmer ocean surface is preventing the upwelling of cold nutrient-laden water that feeds the phytoplankton, which has declined 40 percent since 1950. Phytoplankton is at the base of the food chain. Phytoplankton respiration produced perhaps 50 percent of the oxygen in the atmosphere. The decline in phytoplankton may have contributed to the fact that there is less oxygen in the air we breathe. The respiration of the phytoplankton is the smell of the ocean. It includes sulfur; particles of sulfur form the nucleus of rain drops. The ocean is absorbing the carbon dioxide we put into the air and becoming more acidic.

The OHV community is tired of always being assaulted at every corner. We don't want to tear everything up. We don't want access to every acre of land. What we want is to be included in land management decisions, and we want to be able to continue to use the lands that we currently have access to. Outlandish generalized comments about our behavior only continue our resolve to fight back. The same comments that are made about the OHV community can be made about every other user group.

the original post states that modern environmentalism started in the 70s. Your assertion that the wilderness areas have sustained little damage since the 70s defeats your own point. Nora, what about my right as an American to enjoy some peace? The notion that one persons desires must be balanced against another's is at the heart of government; no one has the "right" to do whatever they want whenever they want. So much of this country is already the domain of noise and machines; do we really need to start adding more? I agree with Elana. Public lands are a shared property. Nothing destroys the peace and silence of others enjoying nature as quickly as a noisy vehicle screaming through the woods.

Please check your facts. President Theodore Roosevelt established our first national wildlife refuge in 1903. Even though he was a hunter, he clearly saw that our nation's wildlife was being annihilated by hunters. Our first wildlife refuges were true sanctuaries. No hunting was allowed until 31 years later when Congress changed the law in 1934 to allow limited hunting. Theodore Roosevelt would be appalled by the mass killing of millions of animals every year in our National Wildlife Refuges. This is not sustainable, especially with today's wildlife management practices, such as allowing predators to be killed off so that there are more animals for hunters to kill. Our wildlife needs help, not hunters. It is past time to restore our wildlife refuges to being true sanctuaries.

I have read in a few articles that climate change and over hunting has caused as much damage if not more to elk in Yellowstone as wolves. Predators bring a natural balance, climate change and increased hunting throws that balance off.

## Discussion Question 2

### *Written & Online Comments*

*(cont.)*

Just some quick thoughts about "global warming" Well it's easy to believe it when you doctor your findings so that they tell you what you want to know. 99% of the scientists told Columbus that the world was flat and he would fall off the face of the earth too. The idea that today's climate should remain stagnant through out time is ignorant and arrogant. Mother nature is far smarter than us and has been changing her climate constantly from the beginning of time. I for one am quite happy that she has, since I enjoy the fact that I don't live in a cave in the middle of a heavy ice age.

Lotteries are a form of taxation and most lotteries are regressive. (There is some evidence that large stake lotteries are less regressive than small jackpot lotteries.) Use fees target those people who actually use a facility, and may seem more fair, but they are regressive, in terms of income, and can contribute to the inaccessibility of facilities to people with low income. Income taxes, although not perfect, are the least regressive of these options.

those "few, hand-picked individuals" are ALL the students of the younger generation who have been educated about the environment. Attaching this to the PE program is dangerous since PE is one of the subjects that has been cut back over recent years. Less required PE classes. More students per teacher. That makes this difficult to execute.

Mountaintop Removal not only destroys the forests, it also destroys our water, our communities, and any vision we have for a sustainable future. Mountaintop Removal needs to end now!

1st 2 sentences of the idea. I am just very sensitive to and critical when I see any statements that can be interpreted as one type of public lands visitor knocking another's type of use. My philosophy is we all should be mutually supportive of all of us who want to enjoy and access these marvelous places we are truly blessed to have. There are many very arbitrary rules and planning processes that limit access by dividing the visitors into bickering groups. Example - NPS zoning management for recreation needs to be kept to the absolute minimum to facilitate real not perceived safety issues (e.g. horses vs. bicycles). Zoning carves up large areas into smaller chunks for small user groups and simultaneously separating us. In doing that diverse types of visitors never have much of a chance to socialize in the woods and possibly rid themselves of the misconceptions they may have about each other's uses or misuses they have heard a lot of hearsay about from the extremists or the media. Therefore it is very difficult for folks to come together to form something other than very narrowly focused special interest groups (hikers, bicyclists OHV'ers etc.) fighting over the crumbs being offered in the zones. My feeling is we all should work together to have more of the entire area to share together than a smaller crumb for a small group even if it is our own group. Zoning means less for all to me.

people don't understand the real issues. The beetle destruction in Utah to the public forests is thousands of times greater than the damage caused by those few people who abuse the land.

Not sure how to vote on this, so I demote. OHV use in the wilderness is utterly destructive. OHV'ers SHOULD listen to each other, but it's obvious that too many don't. Because of the rampant abuses by so very many (not just a few) I am one of many wilderness users that would absolutely support a ban on OHV use.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Nothing we do is sustainable and much of that is due to the fact that there are simply too many people using finite resources. For example, in 2007 according to the USDA the U.S. farmed 405,733,317 acres and the U.S. has a total land area of 2,263,960,601.6 acres, which is 17.9% of the U.S. The CIA states, on their "The World Factbook" page for the U.S., that 18.01% of the U.S. is arable. Therefore, we are currently farming virtually all of our arable land and farming is the driving force behind human encroachment into wildlife habitat and depletion of freshwater resources. Only those severely delusional think that we can add another 1/3 to our population and meet their needs. It is time that the U.S. government end subsidies for children and act globally to reduce human population because everything that happens in distant parts of the world affect us and even more importantly, affect those that live in those distant parts, both human and nonhuman. Only those that exist have rights, those that do not exist have none, and no one has the right to take resources from those that exist in creating a person to satisfy their desire to have a baby.

Off roading on the Central California Coast in the Oceano Dunes State Vehicular Recreation Area was recently linked to life threatening concentrations of particulate matter downwind (Phase 2 Study [slocleanair.org](http://slocleanair.org)) Please see the "Danger Downwind" series at [safebeachanddunes.org](http://safebeachanddunes.org). Health trumps recreation.

OHV's are noisy. That's all we need to know. Silence is becoming the ultimate luxury in our overcrowded world and we don't need motorized vehicles in one of the last refuges left to us.

Our parks are our nation's greatest treasure. As a non OHV enthusiast, I am not in favor of expanding opportunities for OHV recreation use on public lands. Balancing preservation and access was originally a common practice "everyone" understood ... leave no evidence of your visit behind you. Based on observance of this one single premise, access should be expanded to all Americans and its foreign visitors. When engage in low-impact activities, there are still park rules and visitors may be ejected for non-compliance and subject to penalties. Mudding, obviously, sounds irresponsible and engaging in it should be subject to severe fines. OHV supporters should be willing to balance the fun of having the privilege of being in the parks with respect for the land and the animals which inhabit it. OHV users who believe in respect first should weigh in and provide some positive commentary.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Since I was a kid in Idaho forty years ago, I've watched one outdoor space after another replaced by desecrated wastelands of cement inhabited by cars and big-box retailers instead of animals and trees. First the areas become dusty mazes of ORV/OHV trails, then no one cares when the bulldozers come in. The fact that--150 years after Thoreau--we're debating how to "share" the slivers of nature that remain (slivers that are UNnaturally separated from each other), reveals the sad truth of the inevitable. Humans have too little memory and even less ability to imagine what no longer exists. (A coworker of mine who grew up in India once bemoaned how "lonely" she felt because of the lack of population density here--and that was in a major U.S. city.) First, regarding roads and development: There are vast tracts of unused, already developed lands available for business and recreation; there is no "need" for another road or slab of concrete EVER. Second, unless we human beings somehow become rational enough to curb our own population, we will destroy ourselves along with the rest of the planet, like bacteria that overtake a petri dish and then die off.

So true. Overpopulation is the root of most, if not all, environmental evils. Unfortunately, it is also the third rail - no politician or policy maker is willing to touch it.

The best way to protect wildlife is to preserve some land for them. The biggest threat to our wildlife is development. I don't think we were meant to develop every bit of our land. More should be set aside for future generations. Developing all our land for the quick buck would be a mistake.

The damage that can be caused by a minority of less than a tenth of a percent of OHV and ATV users is surprisingly huge. So peer pressure alone isn't enough even in a perfect world where only an exceedingly small number of them are either callously indifferent to or unfortunately ignorant of their actions. If an individual person walks off a trail the damage is far less than any one vehicle. Whole families could go off a trail on foot and cause less damage than a vehicle. Add to that the simple fact that the rouge family on foot can only cover a fraction of the distance that the vehicle can cover and the scale of the difference in damage becomes apparent. Invasive weedy species (in dryer environments than the everglades) prefer ground that has been disturbed as in wheel ruts, not occasional foot prints. They are adapted to take advantage of the very disturbance that kills the original, natural species. I promote this because until there is no detectable OHV or ATV trail abuse they have no place in our wild areas. Only an extreme cultural shift toward a group mindset of collective protection of the environment not short sighted personal freedom will be able to achieve this goal.

The idea is great. Make the government maitnance worker be involved, in stead of spending all their time on less needed tasks they can help with this activity. Yep I see them take a lot of breaks too at restaurants/coffee shops... and I pay with my tax for their extended breaks. regular bikes for city trails. Renting a bike for 20\$ /hour is way to expensive. Make it affordable.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The main challenge of resource management in parks is maintaining a balance between preservation and access. The two somewhat mutually exclusive objectives are to protect and preserve a park's natural resources while providing access to those resources by the general public. Clearly, if the first objective is to be met successfully, public access must be restricted to low-impact activities, such as hiking, tent camping, picnicking, rockclimbing, cross-country skiing, fishing, kayaking, canoeing, rafting, sailing, Nature study, and photography. Such high-impact activities as dirt-biking, ATV use, alpine skiing, mudding, and snowmobiling are incompatible with resource protection and preservation and should therefore be prohibited or heavily restricted.

The opinion that global warming is not man-made, is man-made; mostly it's made by those who don't want to take responsibility and deal with the changes facing all of us if we want a future with any kind of quality of life for our grandkids and their grandkids....

There is plenty of land to use ORVs. Wilderness should be set aside for future generations. Hiking, fishing and hunting are fine. Use the land in its natural state. Why do we need to take our vehicles to every last acre of land. Walk in and enjoy the solitude. It will cleanse the soul.

This idea and comments 1 and 2 are the extreme of extreme and do expose the anti-human nature of many so-called environmentalists. I am surprised they didn't mention Reed Noss along with the supreme anti-human person in America E.O. Wilson. I actually witnessed Wilson admit while being interviewed by Ben Wattenberg that he thought treating/curing/preventing malaria in the 3rd world was a BAD idea. Now if that is not anti-human I don't know what is. I would not doubt that some folks commenting on this idea are part of the Human Extinction Project I stumbled into on the internet. If not my mention of it may get them looking for it so as to support the idea. Malthus probably thought we humans would be long gone by now but we are still here aren't we. In my opinion that is because we have the capacity somehow to right the wrongs we do as we discover them. It would be great if we could see as Ms. Glover suggests - generations ahead to avoid our mistakes but we don't seem to be capable of that. All of us should read the book "Black Swans" to understand why. We have proven ourselves capable of solving tough challenges when they confront us. That is what counts whether it is food supply or land management or economic collapse. One thing for sure is that all humans need to protect themselves from the lethal attitudes expressed in this discussion. We in So Fla have already seen an Everglades Restoration project knowingly designed to endanger human safety on a major highway in order to save money. Myself and others squashed this bad idea of DOI and their accomplices by shining the light of truth upon it. When that occurred the cockroaches ran away from it and found the money to do the job without lethally endangering So Fla residents in order to dump water into Everglades National Park. What all humans reading this need to understand is that the moment we allow environmental concerns to take precedent over human needs is that HUMANS will then be on the road to extinction because of their own stupidity. The well organized voting campaign for this idea between 8:54 am and 11:38 on Aug 4 also exposes the well oiled anti-human machine out there in cyber space. My compliments to your organizational abilities in your war against humanity but I must admit I hope you lose.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

This is an important concern. I live in the Mojave Desert and the the destruction caused by the illegal use of ORVs is a documented threat to desert ecosystems, ranchlands and animals, and the social, health, and safety systems in rural areas. From the air it is easy to see the multiple tracks going in all directions impacting root systems, animal burrows, feeding areas, and the drainage patterns that distribute life giving water. There is no consideration whether the land is public or private. Fencing is cut and signs destroyed. Law enforcement is ineffectual and, on occasion, supportive. Those that complain are subject to intimidation, retaliatory threats, and even physical violence. This problem is nationwide. The Bureau of Land Management has testified before Congress that it cannot handle the problem. A 2009 General Accounting Office confirms this for all federal agencies. ORV numbers and riders escalate by the millions making it impossible to properly train and educate riders. Manufacturers and user clubs promote reckless use and intimidating behavior.

This is such a complicated issue. Population growth just by itself is so complicated. We already have many cultures on this earth that are on the road to destruction because of lagging childbirths, in fact most industrialized nations are statistically on their way out. How do we weigh the impact of too many people with loss of diversity of cultures? How do we save our wildlife, freshwater and forests without raising the cost of living beyond the average Joe's ability to financially support it? All or at least the majority of destructive ideas and projects were at one time good ideas. So, how do we make decisions today that will not backfire on us and become those bad and destructive ideas in the future. Clearly a whole new set of parameters needs to be carefully thought out using multiple disciplines before we go off half-cocked. Life was never really simple. Every action has an opposite reaction, many of which will not be felt until decades and centuries later. I believe the first step is to begin to think not just globally, but generation-ally.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I'm glad your thoughts are admittedly "quick" as it's clear you didn't put much thought into them. Apparently you believe that the thousands of scientists that have produced the many thousands of studies pointing to anthropogenically-induced global warming all doctored their findings because they all had some perverse reason to want the public to believe the earth's heat budget is out of whack. The fact that a very few of those scientists smoothed their data or omitted anomalous outliers that made no substantive difference in their findings, employing accepted statistical methods has little bearing upon the legitimacy of their work and certainly none on the body of work as a whole. From the Contrived Facts Department: 99% of scientists telling Columbus the Earth was flat? Please! If anyone was telling Columbus the world was flat it was likely not a scientist, but perhaps a lay person unwilling to accept what he could not himself perceive (sound familiar?). As early as ancient Greece, Pythagoras, Ptolomy and Aristotle all wrote of a spherical earth. As did Thomas Aquinas in the 1200s, and Dante early in the 1400s. The issue was not the shape of the earth, but how far to get to Asia. No one is suggesting that the Earth's climate should (or could) remain "stagnant." It's a question of superimposing upon the natural fluctuations, variations and oscillations a massive and long term input that could push the Earth's climate hard in one direction. "Mother nature" isn't sentient, much less terribly smart. Unless you subscribe to the Gaia Theory, or have a Pagan belief in the Earth/Mother Nature as a kind of sentient goddess, there is no rational way to justify your faith. Even then, your statement is irrational, as you attribute Her with both ending the Ice Ages because she is so smart, and, apparently with causing them (because she's so smart? so stupid? Or ???).

Too many children in our rural areas are taught from an early age that our wild areas and parks are for human entertainment, not for the birds, plants and animals that actually live there. Even in urban settings there are opportunities to learn about the wonders of nature, through school gardens and trips to local forest preserves. Make environmental education part of school curriculum, an awareness of our connectedness to nature. For too long, those who feel it's their right to graze cattle, cut trees and tear around riding off road vehicles on public lands have managed to damage what belongs to all of us for their own benefit. Now guns are allowed in our national parks, something that will keep many people away. People with guns tend to shoot them, at birds, at animals, at campers, there are many targets. If we get young people involved in saving our precious national parks, there is hope for the future. If we don't their parents may leave us all with nothing but dirt tracks and blowing dust.

We cannot give engine activity the same amount of time as wind or human activity because it is a known fact that activity using fossil fuels is much harder on the environment (plant, marine and air quality).

We go to the parks to get AWAY from the sounds and sights of destructive machines! already they are sneaking in and doing "Doughnuts" in beautiful open fields and leaving huge scars in the mud after rains "just for fun" I get it, it does seem fun to rip the Earth up and drive a loud machine, but NOT in a pristine wilderness! But an old farm and transform it into an OHV Park.. It would be a great way for someone to make a little money and provide a place for OHV'ers to go and the money could pay for constant fixing of the damage to land that the OHVs do.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Well spoken, we have to come to grips with the population and understand that growth is not good in this regard. Seven point five billion people is too many when there is genocide in Rwanda, and drug wars in Mexico... Yes, I'm saying it... these things are caused by population pressure. E.O. Wilson et. al. dictate that no more than two children per woman is necessary to achieve zero population growth. That might be a good place to start.

Well there is an old adage that still rings true : " There is a time and a place for everything. " Our Parks are not the place at anytime for Motorcycles. Thank you for your comment

What land that is left that has not been developed should be saved. There are plenty of areas that have been developed and used by people to set aside the remaining wilderness. Do we need to drill in every valley left?

Why doesn't the US ban the shark finning we don't need the Chinese and Japanese to ban this horrible practice. Everybody but these guys want to stop finning and most all shark declines. Stop finning all together its cruel find other uses for the rest don't just fin and throw them back still alive man greed is definitely the end of us. We have to stop our unchecked harvesting first and see if we can talk the Chinese and Japanese to sustainably harvesting theirs just like any other animal we use for food. You keep killing at an out of control pace then what do you think is going to happen. Even the ban of others to stock back up because it takes years before they breed again and some usually only one and it's not guaranteed to live. Message to Chinese and Japanese we need predators just as we do prey they all serve a purpose. You can't have ours just like you want have all our turtutles in the states cause you ate all of yours. Sorry.

I just returned from the local mountains. Taking walks there has become a nightmare. What used to be a very quiet and serene experience--one in which I could spiritually connect with nature-- is now turning into a stress-inducing nightmare because of all the motorized vehicles whizzing by. As soon as one had gone by, it turned around and came by again, just as two others did. Simply awful. When I was a kid, our parents taught us to appreciate the quiet and serenity of nature and to even keep our voices down! I had no idea this motorized vehicle thing had happened--I guess I hadn't been on a trail in awhile. What a mess we are letting our beautiful wild areas become. Too many toys and not enough areas to simply reflect.

"Bottom line is they are not going to go away, and making them illegal on public lands won't stop them from coming" quoted from author. I appreciate your point of view and acknowledge that off-road vehicles are very much a part of many American pastimes, but the lack of respect by OHV operators for rules, wilderness, and non OHV users has got to stop. What has our society come to when we allow law-breakers to set the standards?

"How can you be so one sided? Do you really think the land is there only for your enjoyment? Do you realize what OHV and hunting groups have done for the enviroment?" Alright, I am with you on that one!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

"these units are looking to 'their' public lands for places to ride?" "Their" public lands are my public lands, too, but I'm not destroying them. I've hiked in the vicinity of the Paiute Trail, and the segments I crossed were barren and case-hardened.

A hiker does not disturb anybody. A single user of an OHV creates noise, pollution and stench I agree !

All vehicles and bicycles should be kept to designated routes. I've seen the ohv damage in utah, it might as well be a parking area or torn up lot. how about designated play areas so they can race around and not general cross country travel anywhere else?

Areas that are protected wilderness should not allow the use of motorized vehicles on trails. These vehicles destroy trails and cause erosion and noise.

As the world population increases, wildness decreases. Vehicles in these areas have significant negative impact on habitat, flora and fauna: increased noise, erosion, land degradation, air pollution, introduction of invasives. One vehicle can disrupt wilderness for miles, with immediate and long term consequences. If we wash our boots before treading in the wild places, let us consider the importance of the wild things that reside there, and continue to recognize the need for their preservation.

ATV's and off road vehicles are the noisiest and most destructive means of transportation available. Most of their operators tear up the ground "jest cuz its fun" - ridiculous. Only the park personnel should be able to operate these things in our beautiful parks. tell the redneck element to go tear up their own property.

Ban the sale and use of all Trekking Poles 90 to 95 percent of all thru-hikers on just the Appalachian Trail use trekking poles. And all of them are having a significant impact on the environment. Impact on Vegetation, Impact on Soil, Impact on Rocks, and Social and Aesthetic Impacts. If we truly do want to preserve this pristine environment the sale of trekking poles should be outlawed. There is no possible way for them to be used without some type of environment harm.

Clear cut logging, drilling for oil or gas, Mining, commercial development and off road vehicles do not belong on our land. The ONLY OHV or ATV used in a National Park should be one registered by and used by the National Park Service to maintain trails or one used by a Rescue Unit to save lives.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Comment 9 got it right. OHV use is an optional activity, just like drinking and sex and recreational drugs. But OHV use doesn't just damage the user, it damages the very planet that sustains us. I see people spending \$10,000 to \$20,000 for a "play machine," and none of the user groups I'm familiar with donate a dime to help society through social organizations that help the underprivileged. All of the fundraising, in my experience, goes to further their goal of national trails and cross-country riding everywhere and anywhere. Propogandists for the industry continue to parrot the argument that "managed use" will solve all the problems, but my experience says the argument is a smokescreen for "give us more land."

Count me in as supporting muscle-power only in our parks and recreation areas YES !!

Does anyone know what wilderness designated lands are out there. I have to admit, before this I didn't know how many there were myself. I think we have adequately set aside important lands. So why do so many want to keep everyone else out of the forest. We should all be allowed to visit the forest and enjoy its beauty and natural wonders in a variety of venues. Everyone finds renewal through the forest in different ways. One of the biggest obstacles to "reconnecting people to the outdoors" is restricting access to those outdoors. It is really hard to reconnect people to the outdoors when access to those outdoors is so restricted.

Existing park space should be fully usable by the people, not preserved and made inaccessible. We have millions of acres here in NYS that the government cannot afford to manage, but they try to keep the people from having the full usage. The governments role should not be in purchasing additional land for preservation with tax dollars.

So you were fine with it when an anti environmental group took over the site some 500 strong and in 2 days demoted every conservation idea while promoting every ohv idea yet an environmental group comes here to add some balance and all of the sudden you are up in arms with outrage? You are as transparent as you are ignorant.

Well said, like the other said he does not go into nature to see wildlife or enjoy nature they go for "other" reasons. It seems most ohvers could care less if every animal species on earth went extinct. To whoever said I think everyone who hikes is a nature hater I never said that. I hike and backpack and I love nature as do most of my fellow hikers and backpackers. On the other hand the opposite is true for ohvers who seem to turn a blind eye to the damage their machines do to forests and wildlife habitat.

What about the Animals !?! Are you crazy or just naïve !?! How would you like OHV's driving past your front porch randomly.

How can you be so one sided? Do you really think the land is there only for your enjoyment? Do you realize what OHV and hunting groups have done for the enviroment?

I agree entirely! The notion that wilderness areas should be sandboxes for motorcycle enthusiasts is absurd.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I agree with all of the people who do not want ATV's in our parks. We go there to get away from city noises, and humans in general. I want to listen to the birds, and the breeze in the trees. Aside from what I want...how about the needs of the wildlife? These poor creatures have been beaten down enough as we take all of their living space with our urban sprawl. Give them a break!

I agree - if an area is currently designated as wilderness, we should continue to forbid motorized vehicles - some of these ecosystems are too threatened; if new land is being designated as NP or wilderness area, I think the studies suggests are good.

I am against increased OHV on federal lands. OHVs are too noisy and cause too much pollution and create erosion problems. Those are the cold facts. They should only be allowed on private land, not federal land. Federal land is basically set aside to preserve it and OHVs destroy the land.

I am an environmentalist first. I also ride a snowmobile and grew up riding 3 wheelers (I don't think they even make them anymore). I have always said that OHVs need areas to ride, which should be separate from wilderness areas (national parks, etc.). I would not want to destroy nature with my hobby. I think alot more land should be set aside as wilderness. Using me as an example, I would be happy to find an appropriate place to ride if the area I usually went to did not allow snowmobiles or OHVs anymore. Mr. Reid has a good point. Also, I read a comment about a focus group. Maybe the person who posted the comment about a focus group should just accept that there are alot of people who don't agree with his views. The first day I found this site, there were alot of OHV users making comments. I was alittle disappointed with most of the points of views. I think the environmental group just found out about the site. There seems to be alot more people who are concerned about the envirnment, rightfully so.

I am puzzled by the insistence of OHV users. We all complain about having to spend too much time in the car, and yet we decide to do more of the same for recreation. And all that when obesity and lack of healthy activity are a huge problem. On top of that, with each moment of excessive driving we increase our dependence on foreign oil. A hiker does not disturb anybody. A single user of an OHV creates noise, pollution and stench, and destroys trails, denying others the experience that they look for in the nature. Even worse, OHV use jeopardizes the very existence of some of our greatest resources. What will our children think of us if we do not act more responsibly?

I am sick and tired of seeing people and their kids polluting our natural streams by bathing in them. Every summer all you see are dammed up areas of the streams with people sitting in the water. They leave their trash behind including dirty diapers. Their kids pee in the stream and the wildlife down stream find only a trickle of water in which to drink. The trees are dying off as well because of the lack of the natural water flow. Used to be a law in place that read one could not alter the "natural" flow of the water but no one is enforcing this law. WHY? We have many public parks with pools in which to swim or sit in. Why does Calif continue to let these people dry up our natural resources and pollute the streams? It is so bad that they no longer stock the stream because of it. Water can not maintain a level to support the fish.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I believe that different types of users should have their own areas. I hike a little & spend a great deal of time on horseback. When someone on an OHV doesn't slow down when approaching me, I usually have a wild ride with the horse. Only so much desensitizing can be done to any animal. Those riders that understand horses, slow down & give me a little room, which I will also do in return. I've been run into several times, resulting in expensive vet bills. I understand that we all have our different ways to recreate, but some courtesyto each other would be nice.

I can appreciate the want and need for OHV use. However, we need to take into consideration the damage to the land they cause. There should also be limits on the decibels that any particular machine can put out and limit where they are allowed by determining places where there is the least impact on the environment. Allowing them in back country where they can create washout causing erosion and water and noise pollution should be a first consideration

I disagree as well. When land is purchased by the government for conservation purposes, it should \*explicitly\* be up to the government to decide what uses this land can be put to. Opening all land to usage by anyone who has access would degrade the value of protecting the land to begin with. I venture to central NY state frequently, and there is an abundance of usable public parks and lands which already allow high-impact camping, snow-mobiling, etc... we don't need more of the same. Conservation is about conservation, not "everybody have a good time". That being said, I agree that there are areas of the country which are underserved in that regard as well, and that isolating lands from development and allowing public use is a step in the right direction in those areas, but that should be considered separately from conservation.

I formerly enjoyed OHVs. However in recent years I have seen them do more to destroy wilderness than anything else around. I am for stronger penalties, not for making this a model. Get this stuff out of our parks.

I have some experience with the damage that OHV's do to the environment and their use needs to be tightly controlled and vigorously policed. I'm not sure how many desert tortoises have already been killed, but even one more is way to many. Plus the damage they do to the ground and vegetation is severe. Land open to OHV's needs to be carefully selected so that the inevitable damage does not affect the surrounding areas.

I live in Washington State and I have seen astonishing damage done to trails and roads on public land by ATVs, especially in the Gifford-Pinchot National Forest. Come see for yourself if you do not believe me. I will take you around! There is no justification for allowing--at the public's expense--the use of ATVs on any public land. Just because these idiotic machines exist does not mean they should be allowed on our public land. Let the crazy motor-heads ride in their own backyard and destroy their own land. Then maybe they will recognize why we don't welcome them on public land--anywhere! Michael Shurgot 8/4/2010

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I obviously should have placed more definitive information along with the Idea. One of several articles. The main advantage of a trekking pole is for stability, other advantages as well. But the use has an environmental impact. Published by Appalachian Trail Conference Jeff Marion, Ph.D., is a research biologist with the U.S. Geological Survey who studies visitor impacts to national parks and other protected areas. \_\_\_\_\_ is an associate regional representative with the Appalachian Trail Conference. Bob Proudman is the Conference's director of trail management programs.

**Impact on Vegetation**—Trailside vegetation can be damaged from the swinging action of trekking poles, particularly from contact with the baskets, which can get caught in lowgrowing plants. One North Carolina hiker noted in an e-mail to ATC that "the ground was becoming torn up by spiked walking poles. On the uphill side of the trail, moss and wild flowers were torn from their bedding. On the downside of the trail, parts of the trail were also torn away." The potential consequences of such damage include a reduction or loss of vegetation cover, change in vegetation composition, and trail widening.

**Impact on Soil**—In wet or loose soils, pole tips can penetrate up to two inches and leave holes one-half inch in diameter. These holes are often V-shaped, wider at the top due to the swing of the upper pole once the tip is embedded in soil. Under some conditions, we have also seen soil lifted by pole tips and dropped on the ground surface. In a letter to the Appalachian Trailway News (ATN), a Virginia hiker observed, "These things are tearing up the trail on each side of the footpath. Some places look like they have been freshly plowed." Such disturbance could cause the loss of organic litter, expose soil, and increase erosion and muddiness. Research is needed to document if, and to what extent, pole use can increase rates of erosion. When surface water runoff after rainfall fills the holes created by pole tips, to what extent does it cause muddiness? Does increased water and soil contact in areas with high densities of holes turn trailsides to mud, as often occurs on horse trails when water fills hoof prints? Trails that are outsloped for water drainage would not prevent such muddiness; water bars and drainage dips would prevent muddiness only on the downhill sides of trails. Significant impacts from heavy pole use could even make the trail more difficult to use or increase maintenance work and costs.

**Impact on Rocks**— The carbide tips on trekking poles leave visually obvious white scratch marks on rock surfaces and also damage lichens. A hiker in Maine related in an ATN letter that "the scratching is so pronounced on granite surfaces that it is sometimes easier to follow where the poles have been than to locate a white blaze." In a letter to Backpacker magazine's Web site, a hiker in the Adirondacks wrote, "I was upset to see all the rocks had little white marks on them. Not just a rock here or there, but all the rocks on the trail were chipped by hundreds of people.... It got to the point where I could not concentrate on anything else but these thousands of little white gashes in the rocks I was stepping on. It really left a bad taste in my mouth and a grim look to the future."

**Social and Aesthetic Impacts**— The audible scraping noises that trekking poles make when used on hard surfaces can also be an irritant to fellow hikers. One Internet "newsgroup" correspondent likened the sound to "'fingernails on a chalkboard' when crossing rock surfaces." For some hikers, visual impact "takes away from my experience because I feel like someone just walked by there a few minutes ago...bye-bye wilderness." Collectively, those impacts have the potential to trigger conflict between trail users, much the same as conflicts between hikers and horseback riders or mountain bike riders.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I repeat and will continue to do so every time I read about more OHV's in our parks or forests. Why are they allowed to be there in the first place? Only park employees and volunteers doing trail maintenance should be allowed to have these. After all the original trails were put there for the nature lover who enjoys being out in nature and listening to what NATURE has to offer. Besides they are driving the wild out of the forests and into our back yards. What a stupid idea. Who wants to go on a sight seeing tranquil trip and have to listen to a lot of un-natural NOISE in the forest or wilderness? Bad enough already that we get shot at by hunters if you happen to get in the way or scare off what they were trying to shoot just for sport.

I see why the author is frustrated.....but a evacuation with 6 people, walking on either side of a litter making a vehicle-sized swath, plus a second team, plus prepping the patient, or landing a helicopter, causes a MUCH greater impact than trekking poles. So if you don't want there to be trekking poles, you'll have to remove rescue programs too. And generally, the public doesn't like it when people die. So good luck with this idea.

I think the problem is there are too many roads and not enough land set aside for wildlife to flourish. What is left of wild lands should be saved before there isn't any left.

I want to add my voice to those calling for increased OHV opportunities on public land. I hike, snowshoe, kayak, mountain bike AND ride an off road motorcycle. OHV's are a great way to enjoy the back country and explore the great outdoors. There are plenty of places on BLM and National Forest land to expand OHV opportunities in a sustainable way, while still addressing the needs of conservation and other outdoor enthusiasts.

If OHV drivers want to drive more in the wilderness, they should invent silent OHV's, with smaller footprints (Tire tracks). Sorry guys, I know it's fun to ride those things, but lets face it,... they are a nuisance to everyone else. Look machines rule the world and are dominating our lives in the form of noise and pollution and scarring of the earth. I really need to get away from all that and enjoy the sounds of God's nature and let the Earth dominate the space for awhile. Your OHVs can really tear up the land and they make a horrible racket that just ruins any enjoyment of nature and wild animals. I have also seen that you have a hard time staying on the trails and there always end up being alot of damage ito beautiful fields filled with bunnies,... it's like OHVers just can't resist ripping up the land and throwing mud off their tires! I get it. But just buy an old farm or something and rip up that land, 'cause the rest of us want to get AWAY from destructive machines! ". Sorry, but there are a lot of imature OHVers ruining it for the rest of you, as well.

If you mean this site I will tell you. I received an email with info about DOI holding behind the scene meetings about Monuments and Wilderness proposals - basically development of a short list of these things. Certain other things were mentioned and with a little searching on the internet I found this site and decided to participate. I must admit I am not an industry insider just an American and like many others very worried about our future albeit from my own perspective as a member of the Gladesmen cultural community.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

If you're concerned about being shot at by hunters, you'd be well advised to not go where people legally hunt during hunting season. By the way, I don't want to listen to the car you drive or the airplane you travel in to get around this country, so if you could please limit yourself to walking or bicycling only, I'd sincerely appreciate it. I find it distasteful to be enjoying my pool and have to listen to the roar of a 747 as it passes overhead.

I'll have to pass voting on this since I DEFINITELY don't support ATVs in native habitats. Get rid of the ATV part, and then you'll have my vote of support.

I'm against OHV use anywhere, certainly not in public land such as National Forests and Parks. We do not see them on highways and we should not see them. There is at least one reason: they are not safe. And they pollute the air with fumes and pollute the peace with loud unnecessary noise. In this country, there are way, way too much gadgets that soak up oil from power tools to powerful engines of all kinds. Now is the right time to start using our own energies in brain and brawn.

It has been a long time coming since that first Earth Day, but we as a species (human) are beginning to understand the limits of the only planet we have. I grew up in the machine culture and everyone I knew wanted a hotter car, a faster motorcycle, a bigger boat, etc. etc. etc. Like the majority of our species, I have since learned that we were ignorant of the full costs of internal combustion engines. Continuing to operate on "what we have today" fails to consider the future. Native Americans often based their decisions on the impact to the next seven generations. I'm ashamed to say that the legacy of my generation does not bode well for my children and grandchildren. However, we can admit our mistakes of the past and build a better future. Economic arguments for damaging culture (OHVs) are worthless, since we can see in the last few years just how well those kinds of economic models have served us. Time to hang up your spurs, dirt-bikers, and admit your days are limited.

It isn't about money! It is about the land and we only have one planet. Because someone purchased an off road vehicle doesn't mean we have to give them a place to operate it. The assumption should be that they have a place to operate the vehicle is why they purchased the vehicle in the first place. Long after they are tired of their vehicles and they have been scrapped and/or rusted in oblivion the land will still be scarred.

It's important to realize that it's not sensible to make all areas of our nation wilderness access to various vehicles. Motorize vehicles compact soils, destroy plant life and pollute natural resources far faster than humans on 2 feet. The rules and decisions on land use should try to protect as much areas, while balancing the public's use as much as possible. With the right vehicle I been able to car camp at the Jackass Dike camp ground in the Sierra National Forest, taking the Con Ed jeep access roads, when the Kaiser pass was open, in our Datsun 240. One just had to plan for the weather and make sure to bring medical supplies in case of an emergency, since it was a 3 hour drive to the nearest ranger station. I also suggest book for Wilderness medicine for anyone who may be visiting an area away from phone lines.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I've never driven an OHV. I am a hiker, walker, backpacker, runner, paddler. But public lands are public. Your emphasis on excluding various categories of users from all public lands will only serve to create a backlash against those with a lighter "foot print". Have some tolerance for others. I live in the city now and love getting out into the wild lands of our beautiful country. I used to live in small towns. Many OHV users come from rural communities or small towns. Recreation opportunities like theaters, clubs, arts, etc. and even parks are limited. These wild spaces are in their backyard. They have every right to recreate there. Wilderness areas (and most National Parks to a lesser degree) are the exclusive preserve of hikers and those of us with lighter foot prints. Applying this to all public lands would be elitist, and in the end foolish. The backlash would turn what remains of the conservation/environmentalist movement into pariahs. There is much more common ground between OHV users and us than you realize.

Lazy, lard-ass ATV riders go to private lands to wreck the woods!

Let's also ban hiking boots! In reality, using poles helps you cross streams and go over obstacles safely, the alternative, going around these causes more damage via these "new trails"

More land should be preserved by the government in the form of national forests, national parks, wildlife preserves, etc., before it is all developed.

underpasses for wildlife where I am at have at least 1 - 2 miles of fencing each side of the structures. The fences are 10 feet high with 3 strands of barbed wire on top at a cost of \$35.00 dollars a foot - yes foot in addition to the \$4,000,000 dollar a pop underpasses. The fences stop other species from migrating to water when water levels drop along with preventing normal feeding and breeding behaviors of the very endangered species and other species they are supposed to protect along with merely moving the road kills beyond the fencing at each end of the project. The up side is that road builders get some work out of these boondoggles that also prevent access to any public land on the other side of the fence.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

My family owns, and uses (camping, hiking, hunting, fishing, etc) nearly 300 acres in on the Wisconsin shores of Lake Superior. Our land was once open to OHV/ATV and Snowmobile access, but is now closed to the former. This closure was prompted by the abuse and misuse by a majority of the OHV/ATV operators "borrowing" our land. We would often see new "trails" tearing through the woods, vandalism to our established camp sites, litter, and excessive erosion on and around the established trails. About five years ago we closed the land to the OHV/ATV traffic and have seen most of this go away. Despite our efforts to maintain OUR space, we have found evidence where OHV/ATV operators have "broke brush" to circumvent our gate and posted "No ATV" signs, along with vandalism to said gates and signs. I fully understand that it is not the entirety of OHV/ATV operators that disrespect private property and land-owner wishes, but there are always those bad apples that ruin it for everyone else. Yes, it is a slippery slope, but if the OHV/ATV community can not police their own actions, and respect private property, how on earth are we supposed to trust them on public lands? There are numerous public OHV/ATV trail networks throughout Minnesota and Wisconsin open for their use, yet are closed to those of us who ride slower, and lower impact, trail motorcycles. The lobby is strong, but time and again local communities come together to prevent or further limit OHV/ATV trails in their areas. The local populace are the ones that have to clean up the messes left behind by the trail abusers, and are frankly becoming tired of it. I say, maintain the amount of public lands these users have already, and leave the pristine wilderness devoid from this misuse and abuse.

My suggestion is to reinstate the Roadless Rule to protect National Forests (and Parks) from new road construction. This rule should also limit the deforestation and poisoning of our waterways that result from unnecessary road construction in our parks and forests.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Name-calling doesn't cut it, gang. There are just as many "extreme" off-roaders as there are environmentalists. I notice the off-roaders continually refer to their "rights" to use public land. Too often they forget that the right to swing your arm ends when it connects with someone's face. Public lands mean just that.....they belong to ALL the public and should be managed in balance for ALL the public. So if any one form of activity takes a disproportionate amount of the public space, it is out of balance. That is what has happened with off-road vehicles. Because they can cover 90 miles in one day, their impact is far larger than almost any other form of recreation. And let's not forget this is recreation we are talking about. Optional activity. Swimming, bowling, skateboarding and other forms of recreation all have appropriate places for their activity, yet off-roaders want full access to all public lands. It is out of balance. I live in the backcountry. 40 years experience with off-roaders tell me they are selfish, disrespectful and terribly ignorant about nature. Their noise reaches me from as far away as two miles. Their stench lingers on the mountain long after they are gone. Their trails have resulted in high sedimentation in local creeks. And, in my area, their local enthusiasts' group is constantly trying to expand their riding areas. Relying on history to support more riding is ridiculous. The few dirt-bike trespassers I had to contend with 40 years ago are nowhere near the numbers causing trouble today. That they have been allowed to expand their unrestricted riding across public lands is the fault of a government that has not followed the law. (Executive Orders 11644 and 11989) Just because you have "taken" something does not give you a "right" to it, particularly when that supposed "right" takes away from society at large. Two more points. Calling the Blue Ribbon Coalition a "multiple use" advocate is like calling Osama Bin Laden a great religious leader. And, for those of you who brag on riding 90 miles in one day, I would ask how many wildflowers you identified across that terrain, how many game trails did you see, how many different types of vegetation did you encounter, how many mice or snakes or bugs did you watch, how much windsong did you hear, how many bears did you hear grubbing, and how many hawks did you watch ride a thermal? You do not see these things are 30-, 40- or 50mph. What else will the children do? Why, explore the outdoors on their feet and actually learn about nature.

No ATVs on public lands! Go drive 'em elsewhere!

Nothing should be done that would in any way compromise the status of forbidding motorized vehicles in areas currently designated as wilderness. There is no acceptable use of motorized vehicles in wilderness.

Off-trail, cross-country riding may be the most destructive way to use a vehicle. It results in a spiderweb of ORV tracks subdividing wildlife habitat into small units and destroying the vegetation that holds the soil in place. That's why the Forest Service and BLM have closed most lands to cross-country travel.

OHVs drive out hikers and other environmentally-friendly users. The idea author wants to open more public lands to OHVs, noting that OHV riders will use these lands whether legal or not. Is this a good reason reduce recreational opportunities of those who wish to enjoy peace and quiet in our public lands?

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

One of the worst problems any generation will ever face is the one we face now - global climate change. All forestry policy and wilderness policy should be shaped to protect the planet from further global climate change and the destruction that will come from it. We need to get OUT of our vehicles and we certainly do NOT need to be driving all sorts of little personal gas guzzlers all over what wilderness and wildlife habitat we have left. We need to guard against more pollution and more greenhouse gases - and most especially this is so in sensitive lands.

Over mining, drilling and logging yes but not over the preservation of species. Man has enough area to play on while wildlife has very little left to survive on.

Perhaps if trekking poles are needed the design could be changed, so that there is less impact on the environment. Again, too many people using the natural areas. We need to set aside more protected (national and state park) areas and national recreation areas.

Preserving land is a valuable use. That's the only way future generations will have access to wild land.

Protect Wildlands for the Benefit of Wildlife. Many of the comments on this forum talk about how we manage our public lands for different public values, whether it be for OHV use or experiencing the solitude that wilderness avails. Even things like watershed and habitat protection are often mentioned as a value for PEOPLE to have clean water and see wildlife... One of the challenges we face in land management decisions is to adjust our collective outlook to also value watersheds and habitat simply for other living things besides us. It is a valid "use" of some small amount of our landscape to simply protect it from human use, not just abuse or over-use, but any use.

Remember, it just takes ONE noisy, stinking, rut-making, plant-crushing, wildlife-terrorizing, irresponsibility-promoting, stream-muddying, tree-uprooting, topsoil-eroding, frog-flattening, wilderness-abusing, serenity-obliterating, fresh-air-polluting, all-intruding fossil-fuel vehicle to totally ruin a wilderness experience for NUMEROUS considerate and responsible admirers and advocates of nature, peace and wildlife. Wilderness should be kept wild and free from overt human and corporate intrusion, abuse and exploitation. Too much of the planet and its precious biodiversity have been abused, exploited and trampled by the inconsiderate, thrill-seeking, toys-and-amusement-addicted, self-absorbed minions of self, by the morally bereft corporate plutocrats who think the Earth is theirs to ravage in their greedy madness, and sanctioned by their servile lackeys in government. If their me-greed ideology were to persist, sterile eroded ruts, asphalt, concrete and neon perversions would cover Yellowstone and Yosemite and other magnificent splendors, and Earth's wildlife would soon diminish to flies, cockroaches and rats. Altruistic and ethical people must speak out and stand up now to protect and preserve our national parks, the remaining fragments of pristine wilderness worldwide, and Earth's precious biodiversity from all abusive and destructive intrusions and ravagement.

***(cont.)***

Since this is a comment from a New York State resident, I assume the comment was directed at the New York State Forest Preserve (Adirondack Park and Catskill Park). These areas were set aside as a wilderness preserve whose usage requires the vote of the full voting population of NY State to alter. For instance, when the NY State Northway (I-87) was proposed, it had to go through the entire length of the Adirondack Park's eastern region. Since the Adirondack Park is NYS Forest Preserve, the only way to allow this non-wilderness use was to have the entire state of New York vote on an amendment to the state constitution that would allow it. The idea was extremely controversial (conservationists did not approve), but the citizenry spoke, and the amendment was passed by the vote of the people. Every time you drive the Thruway from Lake George to Plattsburgh on the way from Albany to Montreal, you're getting full use of the land as defined by the will of the people of NY State. However, those large areas that are classified as Wilderness or Wild Forest are preserved and protected by law, as outlined in the constitution of NY State. No trees may be cut, no roads may be built, no trails may be cut or blazed unless they are approved by the APA and DEC, which is as it should be (in my opinion). No development may occur, no electrical lines strung, no pipelines dug, no structures built, unless an exemption is voted upon and approved by the people of the state as an amendment to the NYS constitution. People complain about it, but the results speak for themselves -- the Adirondack Park is a world class wilderness preserve in the most densely populated part of our nation. Individuals own about half of the Park, while the other half is owned by the state and is kept as Forest Preserve. The state also helps purchase conservation easements where the original owner can use the land for forestry or mining, but agrees to prevent development (sprawl, subdivision) of the land. I see that as a model the federal government would do well to imitate. If by "full usage" you mean the right to take your SUV out into the woods and dig ruts in old woods roads, then I do not agree. If you mean the right to take off-road vehicles of any kind into a wilderness area, then I do not agree. If by full usage you mean that you should be able to go cut down a tree to build your garage or remove some rocks for your back yard (as in our National Forests, the "land of many uses") then I do not agree. Wilderness in the vicinity of NY City, Boston, Montreal and Toronto needs to be protected, both for the people and for the natural resources.

So we should advocate increasing the potential of injury in remote areas that could lead to death in some cases. Hopefully the author is just ignorant of the importance of maintaining ones balance in challenging terrain. Otherwise we might suspect the author is affiliated with the anti-humanists that have recently found this site and supply ideas with a built in voting block in an attempt to fool those who read the results that Americans actually support these questionable ideas.

## Discussion Question 2

***(cont.)***

I can see where your personal enjoyment of your OHV is threatened if this passes. Environmentalists are accustomed to being pariahs, although it's usually those with commercial/industrial interests who have a problem with environmentalists. It is difficult to comprehend your support of air pollution and noise in natural spaces. If you're so concerned about those who can't make it to the theatre, why don't you start educating them about the damage their OHV's cause long-term--air pollution, noise, habitat destruction, death--and teach them about the excellent feeling, and consequence, about enjoying nature without contraption. Yes, you will hear the, "It's our land, too, and we can mess it up any way we want to!" reply, among others. True, it is their land...it belongs to ALL of us...we are its stewards and must protect it forever. I encourage you to think very long-term. I agree that OHV users and non- have common ground--literally and figuratively. Elitist is a very charged word to inject into this argument. What do you invest in, Soren? Let's see, by promoting OHVs, commercially, one would be promoting the following: oil usage, gasoline usage, tire manufacture, engine manufacture, paint manufacture, plastic manufacture, OHV clothing manufacture, OHV trailer manufacture, trucks/trailers to tow the OHVs, grocery supply, alcohol supply. How many of these areas of commerce to you own stock in? Or are you just one of those free-enterprise guys? Libertarian? I'm sorry, but your rational sounding comment seems to cover something more visceral, or manipulative. The only people that use words like "elitist" and "pariahs" in their arguments have a separate agenda, usually political.

State and nation parks are refuges for the wildlife and make available for people to enjoy nature in its natural state. ATVs, snow mobile, and mountain bikes are an invasion of these areas and an attack on nature. These vehicles despoil the peace and tranquility to both the nature lovers and the wildlife that lives there. The least offensive are mountain bikers, most of which I meet are more respectful of nature. These parks must be kept as a sanctuary for nature and all wildlife. ATVs and snow mobiles are environmental nightmares and they must be banned from every local, state and national park and recreational area. Mankind does not own this planet, we share it with many other species and mankind must respect these species and safeguard them from those who do not.

I thought a roadless rule is already in place. But regardless, it is going beyond a roadless rule to a "removal rule" in all our forest now. Its even having an effect on non-OHV uses like family camping. "Forest Service Proposes to Close 500 Miles of Roads in Magdalena Ranger District" "The Magdalena Ranger District revealed its Travel Management proposal today which would ban the use of all motor vehicles on around 500 miles of the existing roads in the District. This will affect all vehicles includes motorcycles, ATVs, and 4WDs. It also affects all members of the public, including hunters. Per the proposal put forward, the nearly 1400 miles of roads currently available to the public would be reduced to just over 900 miles. The proposal also dramatically reduces the areas allowed for 'car camping'. The proposal would limit 'dispersed vehicle camping' to 300 feet either side of only 390 miles of roads, using a motor vehicle for camping alongside roads."

Stop being a hypocrite and never step foot in an automobile again. Sell everything with a motor and go live in a cave

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Thank you for promoting what many would consider foolhardy. Yes, leave wildlands for wildlife. Global population is escalating to the point where there isn't enough of everything for everyone.....much less our planets' wildlife. We are losing species at an alarming rate. We are losing forests at an alarming rate. We are losing rainforests at an alarming rate. We are polluting our oceans at an alarming rate. We only have our one planet.....doesn't anyone remember the picture that was taken from space in 1969? Ours is the only habitable planet so far in our galaxy. Let's not end up having to live under domes due to pollution.

Thanks, but I don't ever remember asking for OHV access to be given to national parks and wilderness areas.

That's kind of funny. I just can't picture it. How many bridges/tunnels would it take to be effective? Separating freeway lanes in some areas is just not feasible without a massive construction undertaking.

The gas-fume heads don't get it...maybe the fumes have affected their meager comprehensional abilities. Intrusive, irresponsible, noisy, polluting and destructive activities have no place on public lands, where responsible others enjoy the serenity of God's pristine, soul-reviving wilderness, and wildlife live and have homes. Let the irresponsible boys play with their destructive, noisy and stinking toys on their own properties. Then they won't mind when trees and other plants are torn out by their roots or crushed, and crystal-clear streams and other freshwater sources are fouled and rutted into filthy mud holes. And they won't mind when topsoil erodes and washes away, depriving wildlife of plant forage that once grew there. Or terrorized wildlife vacating their once-peaceful homes. The real problem is irresponsible selfishness, and self-absorbed promoters of such a depraved ideology can't comprehend that THE NATURAL STATE OF PRISTINE WILDERNESS ALWAYS TAKES PRECEDENCE OVER ABUSIVE, INTRUSIVE AND DESTRUCTIVE ACTIVITIES/BEHAVIORS. Following their attempts at reasoning, the intrusion advocates would be fine with drag racing down residential streets, or open, illegal drug use in public parks, libraries and schools. It's called wilderness for a reason; leave it wild. Keep your abusive, noisy, fouling, adolescent, destructive, irresponsible, self-absorbed intrusions to yourself, and leave beautiful, serene, untrampled wilderness to God's creatures and responsible adults, who know the value of unspoiled wilderness and will fight to protect and preserve it from the likes of selfish off-road abusers and other exploiters, who will despoil all wilderness into an eroded sterile rut if they have their way.

The huge number of animals killed on highways is a major issue. Highways need to be designed with wildlife in mind, and if that doesn't work, lower speed limits. Freeways should not be a wall to wildlife migration. Freeway lanes should be separated in heavy wildlife areas so animals only have to negotiate 1 lane at a time, and speeds should be reduced.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The Idea is not just for the AT, but for all areas. The Appalachian Trail was used as an example for the verification on the article stated in a later post. There are so many people who want environmental change out there until it affects them personally. Anywhere Trekking Poles are used they have an impact! Just because it is listed as a trail mean you should not care about the environment impact of it? Start "Its only a trail and not Pristine" and that's a excuse for OHVs to start to move in on it!

The problem is people keep trying to add to the list, without considering alternative designations to protect land from development, but still leave it open for responsible recreation.

The title of this idea is contradictory if you believe in government of the people, by the people, and for the people. If our democratic government, consisting of representatives elected by the people, decide that land must be preserved, then "the people" are doing what they want with the land. If a minority of the people want to exploit the land, well, they're going to have to convince the majority that it's the right thing to do. Good luck.

There are plenty of places to ride ohv's already. Most of our trails accomodate them in some form. Because of the increased power to get places, folks on them think they need more and more trails.

There has to be some roade to get to the parks but limiting them is a good Idea. you have to put limits on what can be done and if this means limiting the # of camping spots that that is how it has to be done. parks may have to start taking reservations for spots. I enjoy camping but there needs to be some space between the camp spots to really enjoy your time with nature.

there is no need to spend money on "studies".....motorized vehicles only on existing roads through the parks and wilderness areas.....the wilderness is for the wild ones and not noise pollution, gasoline smells, tearing up the fragile earth.....we need to walk softly on the earth and respect it and the creatures whose home we quietly enter to restore ourselves.....as the signs already say, "Take Nothing But Photographs...Leave Nothing But Footprints"...

These are public lands, and as such, need to be available to all RESPONSIBLE usage. My biggest fear of off road usage is, probably, the same as most people's - We don't want to see the destructive side that can be brought out. After fighting for decades to keep loggers, miners, etc out of these areas, to see another group come in and "dog out" the areas that were meant to be protected, that is just as horrifying. All this being said, these are public lands and, as such, need to be available to those who will be responsible to the "nature"(pun intended) of the land and keep it for those others wanting to come in and enjoy it, study it, etc. Find a way to provide the balance so that everyone can enjoy them, e.g. unendangered areas that won't be affected by the bikes, atvs, etc.

This idea if properly implemented adds to clean water, clean air, and a clean earth. Great idea

## Discussion Question 2

***(cont.)***

This is a good comment on selected streams but it would be a tragedy to prohibit swimming in most of the streams in the east. That is one of the joys of experiencing the outdoors.

This land belongs to ALL the people however some use by us is destructive to our land and degrades the pleasure and use of others. Clear cut logging, drilling for oil or gas, Mining, commercial development and off road vehicles do not belong on our land. These activities do long term damage to the land. They damage streams, dig gullies, are noisy, polluting and even dangerous to other non destructive use like hiking, walking, bicycling, regulated fishing and hunting, photography and just viewing the wild lands and it's inhabitants that still survive our arrival. Save OUR LAND for the future, INTACT and WILD with the native trees and wildlife in balance with minimal disturbance by humans. This means that our native predators must also be returned to their native habitat where they have been extirpated. Humans do a poor job of keeping the wild life healthy as we choose the healthiest animals to kill but predators choose the sick and weak to kill, return our native predators, wolves, bears, eagles, wolverines, and cougars.

I LOVE your ideas. If people want to drive huge, gas guzzling trucks and suvs to make up for their tiny man parts then let them pay for damaging our environment to do so and if they want to live in a huge house they do not need just so they can show off let em pay for that as well!

Uh yeah as a taxpayer I want to pay for a cross country OHV path, NOT! There are way too many better uses of my tax dollars. IF you want to ride your OHV buy yourself a farm to ride it on.

We need to disconnect from our technologies and reconnect with the natural world. There needs to be quiet places for people to go - non-motorized please.

While I am 100% behind this idea what about damage caused by the fact that hikers are damaging in the first place no matter how responsible they are?

While I am 100% behind this idea what about damage caused by the fact that ohvs are damaging in the first place no matter how responsible the driver?

While I sympathize with those that are pro-ATV use, these land-destroying machines are not meant for our National Parks. These beautiful and fragile lands were designated for protection for a legitimate reason. Keep ATV's off of these lands is key to saving the land.

Why are they allowed to be there in the first place? Only park employees and volunteers doing trail maintenance should be allowed to have these. After all the original trails were put there for the nature lover who enjoys being out in nature and listening to what NATURE has to offer. Besides they are driving the wild out of the forests and into our back yards. What a stupid idea. Who wants to go on a sight seeing tranquil trip and have to listen to a lot of un-natural NOISE in the forest or wilderness? Bad enough already that we get shot at by hunters if you happen to get in the way or scare off what they were trying to shoot just for sport.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

With reference to comment, 900 is a lot of miles. It makes sense to reverse a trend that's gone too far in one direction. Yosemite Valley suffered decades of road, facilities and parking lot construction which created a blanket of smog and a proliferation of concession stands. I've read that, thirty years ago, 80% of visitors were overnight campers, now 80% are day users. Yes, restricting vehicles affects all member of the public, but so does degradation of wilderness areas.

You folks who say "get serious". Seriously, have you ever hiked on a soft-dirt trail and looked at hundreds of small holes? Unattractive. If you find poles help, please - use rubber tips, so you won't dig holes or scratch rock, and put the poles away when they're not needed.

New conservation policies and initiatives must be supported and informed by state of the art science.

An inherent problem with collaborative processes like this one is that they tend to lead to "middle ground" solutions. When the issue is Nature Conservation, middle ground policies and programs have led so far to the incremental and. ongoing degradation of nature to the point of crisis. Obviously, middle ground is not always the "right" ground for. protecting nature.

In my oral comments I mentioned the Mexican wolf (an endangered species) recovery program taking place on Forest Service Lands in the Gila and Apache National Forests. And I stated that the Forest Service was not doing enough to protect and conserve the Mexican wolf—only 42 wild Mexican wolves exist in the wild! And the population has declined over the past 6 years. The problem is that the Forest Service has no programs for recovering wolves and still gives higher priority to cattle grazing than to endangered species recovery. Cattle grazing on these forests is an out of date use. It is ecologically destructive and serves no necessary public good. If we cannot protect and conserve nature on our public lands, the America's Great Outdoors initiative is doomed to failure.

Protecting the outdoors is our greatest challenge. The competition by various users creates an unsustainable situation for the small amount of native California we have left. Public land needs to be protected for all of us. Allowing off-road play on public land is counter to that protection. The use degrades all that is important to the public—biodiversity, tranquility, clean air and water and native California. I vote for vehicular access and touring using street legal vehicles so that rules and regs can be followed. Speed would be kept lower than 20mph keeping roads safe for all users and minimizing road maintenance, soil erosion and air quality problems. If an off-roader likes speed and fun on his/her vehicle, private entrepreneurs need to respond and set those areas up. Those areas are not suitable for the general public's outdoor needs and should be in contained areas off of public lands.

Federal control of land is the reason there is so much OHV access in my state. More national forests (and parks) are exactly what is needed.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

in California's Wilderness Areas, Vol. 2 (pp. 221-2), promotes closing all of the dirt roads from the San Bernardino Mountains to the Colorado River, creating one vast wilderness area. As enticing as this sounds, it would effectively close this region to all but the most hardened desert backpackers. Sorry, five gallons of water and a block of cheese isn't my idea of a good time. Our challenge is to protect these areas while promoting informed access to them. In the absence of sound scientific reasons for closing an area, it must remain open and accessible the public. In SE California, this means open to Jeeps and similar means of off-highway travel. I therefore promote this idea, noting that the NE may require a very different approach to OHV management.

When OHV's neither pollute the air with effluent or noise, and the tracks destroy no more biodiversity than a foot-fall, I will stand in favor of their use on public land[with the similar restrictions to trail-breaking that hiking requires]. Instead of voicing consternation about the lack of access because of these vehicles' short-comings to fellow citizens, perhaps complaining to the manufacturers, for using 100 year old technology that should have banned decades ago, would advance the issue more satisfactorily for the vehicles' users.

I can appreciate the passion on both sides of this debate, but as I've grown older I come down squarely on the side of protection and preservation of the natural world. Off-roaders - you have no idea how violent, intrusive, and damaging your sport is. You are the nature's equivalent of a graffiti artist! I am always thrilled to find myself in a place where there are no sounds of engines or machinery. It's pretty rare these days. Most wildlife will avoid an area with people just walking dogs, let alone wailing two stroke engines. There is less land and resources for wildlife now - there are fewer, smaller places to retreat to. This leads to extinctions. Ecosystems are shrinking, and being dramatically impacted. I think we should keep more than enough of the natural world around because we actually depend on it for sustenance. Instead of tearing the place up, why don't we put some healing on it? Let's move away from activities that don't sustain the best world we've got. Love your Mother!

I am impressed with how many commenters cite an American citizen's "right" to access public lands. It might be helpful to draw a distinction... You do and should have the right to access public lands. But does your machinery qualify as an "American citizen"? I was raised in a culture where consideration of others - of not imposing yourself on others - was a highly regarded personal duty. This means no obnoxious smells, no deafening noises, no torn up landscapes - and no wild chaotic distractions. These are all impositions on others. This might explain why other posters are truly offended by their personal experiences with motorized vehicles in the great outdoors. That said, tread lightly and quietly, if you must.

After the OHVs are gone, the mountain bikers will be next on the agenda, then the equestrians, then the kayakers, then the hikers. In a few years we will have pristine wildernesses, protected from everyone and enjoyed by none. Please don't be fooled...

Please don't judge our community by the minority that you witnessed in your one location among this vast country. There are certain locations that will tend to attract a particular crowd. And yes there is room for improvement in the OHV community. But there is an equal amount of room for improvement in every user group that uses our public lands.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Global Warming is definitely a national and international problem. I have just recently begun to visit national parks in the USA. In 2011, I plan to visit Glacier National Park. From information I received from Glacier NP, the glaciers have receded at an alarming rate. Not only have the glaciers receded, but polar bears are affected also with the global warming. Other wildlife are also affected by global warming. Legislation needs to be passed to deal with global warming.

I think if we don't get a handle on the direction our country and the world is going the matrix will look good. The rich will be living in air conditioned domes or headed to other planets, with the rest of us struggling to survive on a dying planet. Somalia, Darfur and the US Mexico border are the models of our future. We desperately need to rise up and get rid of NeoLiberalism, Regonomics, Supply side, whatever you want to call it. It can be done.

We need to also eliminate fuel resources that are basically outdated (i.e., oil).

Once again people the OHV crowd is not asking for access to the whole national park system. We want to keep the trails we have now. New trails would be nice to have but right now just keeping what we have would be great. As for the original idea. What do you consider plenty of room for the OHV crowd? In the whole state of IL there is not one state owned offroad park. The same can be said for many states. How many thousands of acres are in the state of IL for hikers and horseback riders? Would it not be fair for the state to set aside one thousand acres in Shawnee National Forrest for motorized traffic? I ride horses there and I am sure the land is there to be shared.

Setting aside lands as wilderness was a great idea at a time when we had none and every piece of public land was open for development. However, today we have adequate wilderness and with all the additional set-a-sides for monuments, special use areas, old growth reserves, etc. we do not need more wilderness. Especially now that study after study shows that use of wilderness areas is decreasing at significant rates. What we need is good holistic management of our public lands and resources. People who say we cannot do both have never worked in natural resource management. If they had they would know there are many many different laws and regulations which allow for the protection, management, and withdrawal from access and use for certain non compatible purposes when it can be justified. Setting aside large blocks of land for limited or no access to most of the citizens of the US is extremely selfish by a few elitists. Yes, I do use wilderness areas every year. I also use non-wilderness public lands every year. The difference is access. In the wilderness areas, once I get 1-2 miles from the boundary there are very few people who have the means to get there and use the public lands. The special protections for certain natural features, wildlife, or vegetation can be accomplished with restrictions at certain times of the year, or certain types of vehicles, etc. We have adequate wilderness now! We need good management on the rest.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I disagree. With all the land we have used and continue to use for development, I believe we should set aside both more wilderness and non wilderness land. I have never been able to use wilderness land. Someday, I hope to visit some. The knowledge that it exists gives me piece of mind. This is more true today than ever, with a growing population, oil spills, mountain top strip mining, large mining projects in prestine areas, oil drilling, logging, etc. I don't think I know of one area that isn't under pressure for some kind of development.

I believe with all we have already developed and the pressure for more development on any wild land remaining, most reasonable people would agree more land needs to be preserved. I don't know about you, Cory, but I can drive for hours and see nothing but developed land. Most people that don't want to preserve the land are in the business of exploiting it.

OHVers are quite the special interest group! For every acre set aside for current and future generations to enjoy: we get an acre to do our thing.

should North Face buy you a mountain to climb? Should Evian or AquaFina purchase or build a stream for you to wade through or fish in? Maybe the world doesn't revolve around you? OHV groups would love to share the land. You on the other hand want it all for yourself.

I like the 1 for 1 idea. Because closing areas to OHV uses does not releave the demand for OHV riding areas. When an area is closed to OHV use the demand or use that took place on the now closed area is just transfered to the remaining open areas thus compunding the impact on those areas. Maybe closures should require the agency closing the area to purchase the equivalent numbers of OHV's that used that area thus removing them from the use pool. Or we could all get along and share OUR PUBLIC LANDS.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I cannot believe the moronic reasoning that people give for not wanting OHV's in wilderness areas. Stop acting like OHV owners are irresponsible and would not stay on designated trails, or that their rigs are junk. Those who want to return the land to it's "before there were people" stage do not realize that is impossible. It will never happen! Why? Look at the "wilderness" areas the government now has and cannot police well, or at all. Two Examples: California -- Redwood Forest, marijuana farmers in the middle of this wilderness with wildcat trails and fields of this stuff growing where they have cut down trees. Arizona -- Wilderness Areas along the border -- wildcat trails from smugglers of humans and drugs, five to six feet wide "trails" of trash and human waste from the border to Phoenix -- we now have over 180 miles of wilderness area Americans are warned not to travel in or are kept out because of these illegal aliens, yet they continue to use this land -- what do you think is happening to these areas of fragile desert? I am sure there are stories about OHV abuse, HOWEVER, most MODERN OHV owners are responsible caring citizens, pick up their trash, stay on approved trails, and now have vehicles that are not noisy, smokey, or leak. These OHVs are no different than your huge SUV and travel trailer -- in fact most OHV's have Toy haulers, which have black water tanks, just like your travel trailer, only they cost twice as much. Your giant SUV driving down a small dirt road in the National Park, too large to fit on the road, causes the road to enlarge, then what happens when you meet another dinosaur of your own kind, one of you pulls to the side of the road, breaking baby trees and small plants that hold the soil from eroding. After you leave and it rains, what do you think happens? Talk about hypocrites -- take a look at what you are really doing when you go out there to get away from it all -- what kind of footprint and I don't mean carbon, are you leaving behind?

When I buy any recreational equipment, that doesn't give me the right to demand that the US government provide me with a place to use that equipment. I don't care whether it's a pair of hiking boots, an ATV, or an RV. Federal land managers should look at the capability of the land for different types of recreation, and provide opportunities for those that are consistent with that capability. When any form of recreation exceeds the capacity of the land, it should be cut back. That's been done with hiking for many years as trails have been closed or relocated. It's now being done with OHVs. Limits apply to everybody.

I spend a bunch of time in SE California, where Jeeps and OHVs are the rule. I cringe at the environmental damage I find almost every time out. Unfortunately, we must tolerate this state of affairs in a free society with an inadequate education system. The jerks are going to gain access regardless, so an outright ban on OHV travel on public lands seems misguided. I promote this idea, for discussion at any rate.

We are in dire need of a comprehensive approach to protect wildlife from climate change. Otherwise, our planet will become uninhabitable, not only for wildlife but for human beings as well.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

What regulations make it difficult to take a child backpacking? Is it the leave no trace which children don't understand and parents unable to enforce? Is it the pack in/pack out that would make it a burden on parents to actually think through what they bring with them so that it can be adequately packed out? While I'd fully support options to increase family participation in the parks, I do hope that the parents do their part to enforce the few rules that are actually there meant for resource and visitor protection.

This isn't about packing out garbage. Here's your list, from Mount St. Helens, where the rules are more extreme than most, but could be a glimpse into the future. 1) It is ILLEGAL to step off the trail. This doesn't mean no cutting switchbacks, it means no stepping off the trail, period. Has anyone ever seen a child hike over 1 mile without wanting to go look at a flower, bug, rock, or need a pottie break? At one visitor center over 70 signs were posted telling people they would get \$100 tickets for stepping off the trail. People must sit in the trail to rest, not on logs or on the side. (I know, I worked there) . I've seen groups sitting in the trail trying to have a picnic! Most of this area is now so grown up in brush and non-native vegetation, the rule is just plain stupid. When I bring my kids here (it's the closest trail to my house), I am constantly saying "don't chase the grasshopper, don't touch the flower, no picking up rocks". 2) The first campsites are 6-9 mile hikes, one way. How many kids can backpack 9 miles, (the first 6 not stepping off the trail). 3)The regulations limit groups to 4 backpackers, so if you have 3 kids, and two parents, you are not allowed. 4) One trail follows a lake shore, which is a few feet away, but kids can only touch the water in two places (mile 1 and mile 3) No, you can't go splash in the water. 5) In the winter, no playing in the snow. 6) And forget about taking kids fishing or huckleberry picking. Visiting Mount St. Helens with children teaches them that they are "bad" by just being normal kids. No wonder kids would rather sit on the couch! Is this what we want the future to be?

My point is: the environmental community must acknowledge there is a "cost" associated with over regulation. Not a monetary cost, but a true negative environmental cost. I know it is counterintuitive-- if you restrict use and don't let people in, nature will flourish and take care of itself. In fact, many think, keeping people out should be the ultimate goal. No people means no campsites, no garbage, no "sanitation" issues, no problems! But this is a naive world view. In reality, people are ultimately in charge, everywhere. If we push recreationists out, we lose PEOPLE WHO CARE. We lose votes, we lose tax support, we lose the next generation of conservationists. It is already happening: Hunting and fishing licenses sales down, Nat. Park visitation down (pre-recession), disconnected youth (eg. Last Child in the Woods). At Mount St. Helens, due to the added restrictions Park designation would bring, there is NO local support for making the Monument a National Park. How much more support for expanded wilderness areas would there be if they simply allowed bicycles? People who watch nature on TV, or are preached at about how "bad" people are, will never care as much as people who actually touch the land. Think about this-- what would America look like today if Teddy Roosevelt was never allowed to hunt, or John Muir was never allowed to hike off the trail?

***(cont.)***

The Second Century Report recommended full and permanent funding for the Historic Preservation Fund - \$150,000,000 annually for State and Tribal Historic Preservation Offices to administer the federal preservation programs nationwide, including grants, tax credits, and other programs that work to support private investment in our communities and neighborhoods. With full funding, local preservation commissions, working with city leaders, stand to benefit from a dramatic increase in federal funds to support the programs that make neighborhoods and Main Streets more viable and inviting for people to explore. The Great Outdoors begins as soon as we open our front doors, and in addition to getting people out into parks and trails, we should encourage the stewardship of the public spaces in our communities and protecting the things that make each of our communities unique. By encouraging local stewardship and community engagements, we encourage the stewardship of the federal inventory, as well.

So few natural places still exist in our nation that we need the expansion of our National Parks...and not just those modeled after Zion and Yosemite. We also need space like Hot Springs and the monuments of D.C. We need nationally owned and maintained property that Americans can know will be preserved for generations now and to come as a part of our heritage.

Mount St. Helens Nat. Monument, currently under USFS management, is small and has goofy boundaries. Logistically, if it was transferred to a different agency it would create a red-tape mess of two federal agencies managing and funding different sections of the same roads and trails. Look at most national parks in the west. They are surrounded by Nat. Forest lands, and most access roads to the parks, must first pass through the National Forest. The Park Service has a better supported budget, but they do not "share" with the USFS that must maintain many of the support roads that reach key park areas. This problem hits most Nat. Parks, and should be addressed with cost sharing or some other road-use agreements between agencies. Additionally, the Monument has strong recreational use by key groups (horseback riding, bicycling, hunting, fishing, snowmobile) that are not usually embraced by the Park Service.

Our National Parks are a unique and irreplaceable national treasure that should receive full funding.

Many people have fought to establish our National Parks. Other countries are envious. Of course we should fully fund them and celebrate in a huge way

We need to leave something beside concrete for future generations, this will be our way of preserving earth

When I visit other countries I see how they preserve and protect their natural and historic places, and then compare them with our seeming policy of benign neglect I feel we live in a truly third world country. We can and must do better!

Funding of our National Parks should be a top concern of our Representatives - restore full funding!

## Discussion Question 2

***(cont.)***

The BLM is yet another renegade Government agency. They slap the law in the face. The BLM has taken millions of acres away from America's Wild Horse. Their horrendous management of America's Wild Horse and the BLM's flaunting of the 1971 Wild Free Roaming Horse and Burro Act is staggering. I thought we were a Nation of law? Where is Congress in this? What is the Dept of the Interior doing? Our voices are being ignored, swept aside just like the law. We are no longer a Democracy. We are ruled by special interests. The management of our treasured wild horses is a shining example of our country being taken over by those with money. For whom does the BLM work as demonstrated by their management of America's Wild Horse? Where are the scientific facts that substantiate the BLM's actions towards this now threatened, vulnerable, suffering animal? Threatened, vulnerable and suffering at the hands of the BLM. What is the REAL reason America's Wild Horse is being driven from our public lands? President Obama, Sec'y Salazar and Congress, I demand an answer based on scientific fact. Nothing less than a study done by the National Academy of Sciences will suffice. Public hearings need to be conducted. All actions of the covert BLM need to have sunlight shone on them. Why are these roundups conducted without public observation? The whole thing rather reminds me of the MMS, BP and the destroyed Gulf of Mexico. By the way, speaking of environmental degradation, cattle will degrade our Public Lands horses do not.

I retired from a BLM office in which I worked for 29 years. Only once did I get asked by management to rephrase wording in an environmental assessment to not be so negative. I was only asked. I'm sure there are other offices under pressure from user groups to be less open. The comment seems to put the onus on Obama and Salazar. That's okay, but the comment still needs specific ideas on how to give managers more backbone to do the right thing. There is the Public Lands Foundation into which whistleblowers can blow. Any more ideas?

Housing or business developments must never be considered near our national parks. They infringe on the wildlife habitat. Nor should highways be constructed through the national parks if they do not benefit the park. Routes should be explored outside the national parks. Oil and gas drilling in or near our national parks must stop now. We have seen a national catastrophe with the BP Oil Spill that has affected lives, waters and wildlife. Government cannot and must not give in to the special interest groups such as the gas and oil companies.

We need further funding for park space, especially national and state parks and forests. Future generations are counting on us.

No child is educated enough to be a citizen if he or she has not experienced at least some travel to unfamiliar places. Could we make a class credit, and perhaps even a financial help, for family National park vacations if accompanied by a photo diary; or school guided trips, so that kids can experience the totality of this great country instead of just seeing it on a screen. This would be another advantage of year-round school: a summer semester for seminars on adventures outside the classroom.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Our government should STOP letting big companies do whatever they want or should I say do what they want and face no really penalty if they get caught. Take a good look at BP right now. What banalities are they facing? Our own government has yet to file any federal charges or make them totally responsible in any way shape or form. If it was a small to medium business'; they probably would be in jail with outrageous financial penalties hanging over their heads. If our government started passing strong, tough, no loop hole or grandfather clauses; but real honest to goodness Conservation laws - then our government would collect a lot of money for the ones that can afford it and they could use that money toward Conservation programs. Bio Gems is a great resource and A strong, non-profit company that looks out for the Planet, wildlife, the environment, our Oceans, etc. I truly believe that our government can do a whole lot more. Heck, I am fighting to get recycling of Plastic and glass in my town. Plastic which is so highly used and they don't want to be bothered. Think if our Government made the recycling law; my town would have to follow it or pay fines. Which do you think they would do. And if you want a real kick-in-the-teeth - a great family had started their own recycling business and the town shut them down and charged them all kinds of financial fees. They were at the farmer's market every Saturday to take your stuff, pick up once a week at your house, they made a lot of people much more aware and encouraged them to recycle. I still can't believe it. Our family went from using 3 garbage cans a week to at the most 3/4 of a can a week. Big difference. Now if our Government made it Federally Mandatory and everyone started recycling; the money saved and/or could be made. Companies are looking for large loads of stuff to recycle and will pay for the used product and recycle it and make money. See our government could start and/or fund some new recycling companies (either collecting; distribution; recycling; etc.) There are a lot of possibilities and this would greatly help the dumps, wildlife, pest and bugs would decrease, general waste; just to mention a few. I really pray this idea gets off the ground. I see so much potential with little work but a few small changes that will really add up.

This seems like using public funds to help buy private land: too much potential for misuse, loopholes, not following through, etc.

I was neutral and voted "No Opinion" on your idea about third parties, but this seems like a good idea. In fact, while I was writing about the other idea, I was thinking maybe tax breaks would be okay, but giving public funds to private landowners just doesn't seem right.

Economic Development may go with conservation but Federal Transportation dollars are spent were wealthy political influences not only ask for it but can demonstrate a need. The various other items are considered in any environmental public hearing here in Texas. I've been to many of them to stop toll roads and custom designed Federal Highways (toll roads). Nothing has stopped the permits or what the Federal Government and their appointed Regional Mobility Agency (over 35% or more of those voting & seated have a financial stake in building this with 16 elected politicians not even included in this but greatly influenced by big business). Water Conservation, pollutions, climate change, historic losses and NO alternative analysis - even when done for the US, State and Local governments at NO costs - is dismissed. Government will do what they want to no matter what the public would like is my experience.

## Discussion Question 2

### *Written & Online Comments*

*(cont.)*

Please stop putting words in my mouth. Just exactly where do I say: "William Hoffman wants the only human activities allowed in this area to be walking & hiking ---!" What I said is: "There is an off-road vehicle plan, primarily for Cedro Peak, following an extensive two-year hearing process with local residents." Check it out: { <a href="http://www.fs.fed.us/r3/cibola/travel-management/tm\_sandia/index.shtml." rel="nofollow" target="\_blank">Link</a> } It accommodates many competing uses and interests, especially among local residents who were badly conflicted and fragmented. Several years ago, I had the awesome experience of Bronco four-wheeling in Colorado with my son-in-law and daughter on Medano Pass, northern Sangre de Cristo (Rocky) Mountains, west to the Great Sand Dunes National Park, with an incredible view few will ever experience. Our public lands are just that -- for everyone -- not just someone's private property, with preservation, access and safety paramount for all.

Here is a prime example of doom and gloom irrelevant comments "there are more of us than mice or rats" First show us where your scientific data your using who exactly is counting the rats and mice. Next tell the the significance of humans outnumbering rats and mice. Here is more irrelevant negativity, "We are exceeding the planets carrying capacity" I am not sure where this person lives but I have seen hundreds of billions of EMPTY acres of land all over this world perhaps you need to fire up Google earth and take a look around.

Here it is. For an example, the federal government has paid millions of dollars to build a road so the local lumber company can extract about \$100,000.00 worth of timber. The one I'm referring to took place in the Tongass National Forest. Seems like a giant waste. This is one of the best ideas I've heard.

Here's the key, folks: "a CONTINUOUS supply..." Put that together with securing "favorable conditions of water flows," and it's pretty clear you can't do the high-grade logging of the glory days during the last half of the 20th century. SO - if we are to fulfill the prescription of our forebears AND the rulings of our highest court, we must first repair the damage done from failing to follow the plan, then manage the resource so it can fulfill the plan. Unfortunately, too many people use these "phrase selection" techniques to argue for continuing the unsustainable practices of the past.

I absolutely agree. I lived in Berkeley CA for years and saw view after view destroyed by big buildings - the views given to the owners/renters and taken away from the citizens, on foot or in cars, whose taxes pay for the streets and roads. Sound walls have taken away hundreds of wonderful views, to give sound protection to a view and make sound worse for those a bit farther away. It breaks my heart to see all that wonder removed from the view of people in cars and on foot - what will keep a sense of wonder alive if wonderful views keep disappearing.

I agree that OHVs should have access on roads and designated trails.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I agree that smaller ones are also important, but let there be a state-side version of the program that allows states to help prioritize the direction of some federal (and obviously state and local) programs toward conservation activities. I don't think this initiative is about not funding any of our existing investments, its about how to focus some portion of investments on what's most important.... and federal agencies have a huge challenge in working together across agencies and departments so a smaller list of important places - with strong accountability to perform there - has a better chance of breaking down some of those institutional barriers.

I agree that we need fees and federal funds. Donation drives on a needs basis would help also.

I am going to demote just because this is an illustration of the slippery slope of wilderness and similar designations. "Wilderness" is increasingly used as a tactic to keep certain groups of people out, rather than honest effort to preserve areas untouched by man. Be careful what you ask for, you just might get it.

I believe in recycling however I do believe in logging, mining, oil rigs, farming, fishing and other uses of the land that may disagree with.

I believe that existing OHV trail systems should be analyzed, improved, and allowed. Then enforcement of trespassing, trail-blazing, etc. should be ruthless to include the loss of the perpetrator's vehicle - permanently. There is enough room to allow many different uses.

I believe there needs to be many sources of funding for parks and recreations. We currently are using a mixture of all of these: Federal, State and local taxes, business contributions and maintenance of certain areas, local citizens, trusts, restricted government use such as land banks contributions & donations, local citizens fund raising for more anything more than maintenance of our parks and recreational areas. Business provide jobs and have supported teams, pavillions and maintenance here. Business, Government and Local Citizens are doing just fine but like everyone else - yes we'd like more money. However, we choose not to spend more or tax our citizens and businesses for more than we ABSOLUTELY NEED!!! Why would you want to bite your own hand (as a citizen/consumer you'll be paying for any tax hike which will be passed on to you as a price increase) Government & Business make them hit their hand futher out demanding taxes and send most major businesses overseas quicker by higher taxes?

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I believe vehicles should be required to drive no more than 10 miles per hour in wild life areas. I think that vehicles should have there on seperate trails - since animal/bird watching, fishing and other nature activities are near impossible with engine noise anywhere around. Due to the popularity of vehicles I do believe they need more not less trails. However, they would be required to provide the following: A. Pay fees for the use of the trail, B. Provide governmental issued picture id (requiring I be at least 18 years or older) with full \$50,000 or more general liability insurance which would be copied prior to allowing on the trail, C, Have a helmet. D. Sign an agreement with fines, fees and laws that the driver of the vehicle on natural lands agrees to abide by or pay the cost of if violated. E. Be required to return to a designated checkpoint within a matters of hours on the same day. I had to do this just to rent a pedal bike - why should it be any different for a motor vehicle?

I completely agree, I personally know first hand that Nuclear power is safe, reliable, and far more efficient than any other form of energy besides fusion power which Obama recently cancelled any hopes of attaining for the near future. I've worked with nuclear power for a large portion of my life and know just how great it is, and also just how ignorant the general public is due to so little education and so many false rumors. I still don't understand how Obama could intelligently cancel the constellation project knowing just what can be accomplished by it. The project would have mined He3 from the moon to power clean, safe, and reliable fusion power plants. Just one shuttle load is equivalent to billions of gallons of oil. It's the only thing that beats nuclear power in efficiency, and nothing else comes even close to nuclear power! This was Bush's idea too, he also started the research on fuel cell vehicles. People need to quit listening to the Liberal politician's lies! Obama said he wouldn't cancel the constellation project, but he did. He was flat out lying just like Clinton did under oath. The economy didn't start to falter until congress was taken over by Dems and they started passing their laws. It didn't happen when Bush took office like the Dems would like you to believe. Bush didn't take office in 07' Pelosi and Reid took the reins of congress then. Vote for the people that work for you, not the ones that work for themselves.

I guess I don't understand. Most people chose to live in an area that is surrounded by federal land. There must be benefits. Could it be a tranquil setting? No crowds of people? With a gowing population and more pressure for development, some land use rules have to change. If not, eventually won't increased use and development change land use anyway? More land should be preserved. Both as wilderness and as multi use land. Soon the country will be one big suburb.

I have to agree with this. What's the old saying - One bad apple spoils the whole bunch. That goes for any group including non-OHV groups. I don't know why the OHV group was singled out, shouldn't everyone be included?.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I haven't heard anyone say that OHV's should be allowed on every acre of land. All we are asking for is to keep the trail system that is already in place, and not to close more trails. In some areas where there is overcrowding there does need to be a few more trails to lessen the overcrowding. It seems to me that the selfish ones are the environmentalists. They want the land to be used only by hiking, and sometimes for equestrian use. I look at a mountain range every day that is over 120 miles long. There are 3 OHV trails, and many many more hiking trails. That is fine with me, but there is a big push to close one of the trails that was originally made to access a cabin, and lake at the top. This cabin was built by my great grandmother, and the cabin has been there for over 100 years. Hikers have taken over this road, and declared it as theirs. You tell me who is the selfish ones?

I may not be an endangered critter, but I know how much it disrupts my day just to have a big bike or running competition which utilizes the roads and trails near my home for a day or two. It's not just the runners or bikers, it's their support people who clog up areas that cross roads and totally ignore traffic besides doing things like leaving behind trash. I can deal with the irritation, but it absolutely doesn't need to take place in wilderness areas. I can't imagine how bad that could be!

I say the land that is targeted for new parks should be left as wilderness. What upkeep is there for that? There is plenty of land left for development. Most of the country is in private hands. What would be wrong with these large companies that want to develop land doing so on private property. Is the reason they want to do it on federal land because it's alot cheaper for them or because the land that was protected long ago now has the only resorces left. Either way, it's a good arguement for preserving the last of our wild lands for the environment, people, and the other creatures that depend on non developed land to survive.

I see the extremist voters think of this as a pro-OHV idea. It's not. It's a diverse recreation idea. If you don't think there is enough room for diverse recreation activities on public lands, then well, you're an extremist. A few highlights from my weekend enjoying the great outdoors. A downhill mountain bike race, where many hikers were sharing the other trails (open to bikes) without complaint. A trip to a public park with a skatepark and dirt jumps. A scenic drive through a National Park, which despite the road, and traffic is one of the most beautiful places I've been. The bottom line is there are many kinds of "public land". It's not all Wilderness worthy. There is more than enough to spread the wealth among all the recreation activities be it hiking, biking, skateboarding, driving, OHVing, bird watching. Of course we could needlessly restrict everything and make it so boring to get outdoors, that no one would want to, but isn't the point of this to reconnect people to the outdoors?

I strongly disagree with the "fair market value" comment. Spending time in nature is critical for mental/emotional/spiritual health - it is not a "commodity". Private businesses can offer more services if they want to attract people at higher \$\$ rates. KEEP THE GREED MOTIVE OUT OF OUR PUBLIC LANDS. I find it despicable that some parks charge higher fees for "view" or "waterfront" sites. Talk about catering to the wealthy!! This is disgusting and should end immediately on all public lands.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I'm a year older and a long time runner, and I agree with him. You can run anywhere. We have no need to use wilderness areas for racing events.

I'm not sure what this topic is advocating. I believe we need to preserve more wilderness and multi use land. I'm not an environmental extremist. I just can't stand the thought of our last wild areas being sold off for the quick buck. A growing population and pressure for development mean we either lose what we have or we choose to preserve it.

Instead of putting people's jobs on the line to fund the parks why don't we have a day use fee to fund the park? OHV parks in the mid west and east coast are mostly privately funded so it can be done. We pay upwards of \$50 per day to enjoy the parks we go to. That only gets you in the gate. The park can also make money on concessions and even merchandise. Not every want needs to be a burden on the already overtaxed taxpayer.

It seems that there is a huge divide between those who like OHV use and those who don't. We need to find a way to work together so we can all enjoy our wild spaces. Education, training, and respect are the keys. Towards that end, let's create a new class of driver's license for Off-Road Driving. It could include training in safety, technique and skills, rules of the (off)road, courtesy and respect, and conservation. This was a good idea, too bad it was withdrawn.

It's already in place on a FED level. Whether folks realize it or not all outdoors sporting goods, fishing gear and firearms have an excise tax above and beyond the state and city taxes and have been taxed since the 1930s for this very purpose.

allow sale of yearly passes or monthly use fees for locals and seniors. Keep the revenue from these passes in the areas where they are used. Note that the White Mts charge a parking fee at trailhead accesses and locals can buy a pass if they visit often. User fees are better accepted than taxes. Seniors get a lot for free and can mostly afford to contribute to the parks they use.

Congress cannot be trusted to fund the parks on a long range planning basis. States should help and volunteer orgs can add funding for special projects. Who gets cut first? Parks and recreation! Western states think they can regain the park land by being obstructionate.

tax only if dedicated to park funding or salaries and not subjected to Congressional grasp. I am aware that a small tax exists but a county tax to be used in that county could help people shop locally or choose where their tax would be dedicated by checking a park.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

First you say the vandals are a minority! "...communicate effectively with the vandal minority" Then you say many are respectful and do not return to private property once informed. "Many of the atv riding adults have been respectful. After hearing once that they are on private property, they don't return." Then you say - "However, based on my experience, most of the atv riders are vandals." Do you see the conflict with what you are trying to say? You're dealing with that very small percentage of ALL ATV riders, those that either don't care (minority) or are misinformed (and once informed don't come back). You go from "minority" and "respectful" and then you still can say "...most of the atv riders are vandals"? Credibility disappears with statements that are conflicting.

Let's just think about this one. You seem to think that hikers and hiking trails pose no threat to the environment. Allow hikers in and keep all other trail users out. That seems to be your motto. Let me in and keep everyone else out. This is the main thrust of the "me first" generation. You say you want to preserve our natural environment for future generations. Not my children, but yours. The main culprit to our natural environment is erosion. Trails erode because there is no vegetation growing on the trails. The presence of any type of vegetation with its root structure stops erosion. It is not the means of travel along these trails that causes erosion whether it is the soles of hiking boots, the hoofs of horses or the rubber of off road tires. It is the very presence of the trails themselves that causes erosion. Stop being such a hypocrite or I will personally sue to stop hiking in these areas because of damage to the environment and the destruction of habitat for endangered species. I know that the hiking trails near my home are bulldozed once a year after the rainy season where the soil is ground up and pushed into the ruts only to erode again during the next rainy season. These trails are only used by hikers.

LWCF is oil revenue. LWCF funds have been stolen by Congress for other things. This cripples it's ability to protect threatened farms, forests, riparian corridors and shorelines-especially the Stateside program. BTW-These are voluntary programs-the land owner must be a willing seller. LWCF should be fully funded and it should require 2/3's vote of the House and Senate to remove any oil revenue from it.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Many National Parks, National Forests, and BLM allow certified volunteer sawyers to operate chainsaws. Certification is usually renewed on a cyclic basis (1-3 years) and the majority are certified for cutting downed trees only (not falling). Certification includes other matters like communication plans (many volunteer groups have their own radios to communicate with park personnel) and evacuation plans. National Parks that allow volunteers to run saws do monitor them very closely, much like their own paid trail staff. The main issue that I know of is how the minimum tool exemption for administrative uses under the Wilderness Act applies to when chainsaws can be used in designated Wilderness areas for things like fire fighting or keeping trails open for firefighters, border patrol officers, and recreational access. While limited use in Wilderness areas is certainly not at issue, no use is (which is the prevailing USFS policy - not the NPS). Trails may stay blocked to access for decades unless a window of use being opened up for chainsaw operations - say a couple weeks each year for a specific trail. No one is trying to upset Wilderness character or change Wilderness law (which allows for this). It is difficult to administrate and access lands without some means to do so. And don't think that Wilderness doesn't need administration throughtout the world. In many ways, it needs more. There are a lot of people in this world (over 8 billion), and they all interact with the outdoors one way or another. If you truly want to protect Wilderness, don't hamstring the management of it.

you are the problem. But really what problem are you talking about? Blaming the US for the worlds pollution and ignoring other countries like China and India who polute more and have virtually no environmental safeguards in place. or The problem of an over politicized and bloated EPA that will not allow truly fuel efficent cars to be built or imported. Plus a governmental structure that takes so much money from oil companies that it is not in the oil companies or the governments interest to make fuel efficent cars. or The problem of letting our own timber rot in the forrests or burn in wildfires every summer. This while we are importing so much timber from Canada that most of the mills in the West have closed up and left entire regions of the rural West as destitute as an inner city.

No, I am talking about the Clinton Era "Roadless" rule areas. There are no wilderness areas in my county, as it was settled thoroughly during the Gold Rush. The rules do indeed prevent maintenance in a roundabout way. Road maintenance in a "roadless" area requires more paperwork. Protests often occur (Is it maintenance or the forbidden "reconstruction"?) These headaches mean road managers can hardly do their job in a roadless area and many give up in frustration. Once the road is unmaintained, then to reuse it you must "reconstruct" incurring the wrath of people who have never seen the area in question.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Nonsense. There are enough roads in National Forest alone to go to the moon and back (several times). No one is stopping you from using those roads that are open - which are in the thousands and thousand of miles. Plus motorized wheelchairs are allowed in many wilderness areas and elsewhere. I am sorry for you physical problems, We don't need to destroy the rest of the country to appease you. So what about the blind, should public lands be fitted with brail inscriptions or audio stations every hundred yards or so? How about those who don't have the physical capacity to scale halfdome in Yosemite, should we put in an escalator? And those who can't climb Mt Rainier, should we helicopter them to the summit? You guys just don't get it. We are running out of Mother Earth. Quit seeing what you want to see and open your eyes (somewhere other than a dirt bike trail).

do you know how they come up with the number of tags they issue the hunters? Overhunting is not a problem. Are you pulling these comments out of a hat or what?

Your opinion is just that an opinion. Calling hunters cowards is childish, and shows that you have no knowledge of the sport of hunting whatsoever. There are over 14 million hunters in the US who add Billions of dollars to state and local economies every year. We pay an extra 11% tax on firearms and ammunition which goes to state fish and game agencies. the money from all the licenses, tags, and use permits we have to purchase also go to wildlife conservation, hunters have done far more for wildlife conservation than any other group.

U are sooo full of non-sense ! We do not want more- more- more- like you say. This is what happens: We have been OHV riding in certain areas for years. Some do- gooder in Congress wants to leave a legacy, so they get behind a Wilderness Bill. This often times wants to apply "Wilderness Designation" to land that already has roads, trails and mines on it. (Shouldn't be "Wilderness") Thus the OHV groups must fight the designation, because it is not true "Wilderness" and shuts down land already in use by OHV'ers. We don't want More-More-More, we just want to keep what we got.

Some of the minimum maintenance roads here in Nebraska are already impassable for any normal cars or trucks

Not sure where you people are seeing all theses problems your crying about I have been recreating all over this great United States and never see these problems and damages your talking about perhaps you can be more specif with your allegations, as I drove thousands of miles to get to my off road destination I see billions of acres of EMPTY lands I have been recreating for more than 45 years and never see all this doom and gloom everybody is beating their war drums over you sound like Al Gore with his "hide the decline" global warming thing that only works when you use LEFTIST tainted science to LIE TO THE GENERAL PUBLIC. The more I read here the more I see that the stuff spewed by the anti off road groups DOES NOT MATCH what is really going on in the real world, just like the global warming LIES that were told for years and years. { <a href="http://www.youtube.com/watch?v=ftVDI8522p0" rel="nofollow" target="\_blank">Link</a> } Its a shame people have to lie to make their position seem plausible.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

O.K. This thread is all over the Map, so I'll go off on my tangent.... Bottom Line is: Too Many Humans. If birth control requirements to limit over-population, globally, is not established, we are doomed to "destroy the earth" whether from over use, depletion of resources, war over natural resources (Can you spell "Afganistan" ?) etc. There will NEVER be enough cheap energy. Boy, this is off on a tangent, I know ----- and has 'nothing to do with the subject' Riiiiight.

Off-road drivers and riders and pedestrians cannot be equally free or safe on parklands. The off-roaders threaten hikers and ruin the experience with noise and fumes.

Our ancestors literally shed their blood on these fields. Their memory and sacrifice by perserving these lands. We shouldn't bury their memory under parking lots.

Personally, at times I wish that the local lands could be voted on by those living and residing there as to how public lands will be used. Unfortunately, the Federal Government will always have the last and final say - so good luck working with the Feds. Normally, whatever they want they and their corporate interests get!

Rachel, the government will spend several million dollars to build roads so lumber companies can log in an area that will produce \$100,000.00 worth of lumber. Your point is it would be too expensive to pay someone for their property if the land was turned into a national park? I say it would be a worthwhile expense. What I was talking about was not every area needs facilities (park store, full time employees, new roads, etc.). What I've seen in my state is when the federal government creates a national park or forest, the people who have property there stay until they want to sell, then the federal government is given the first shot at buying the property.

Recreation!!? WTF!!? Humans are the most prolific mammal on Earth, now....there are more of us than mice or rats. We are exceeding the planets carrying capacity and you want yet MORE recreation? How about considering these "parks" protected wildlife/wilderness areas and denying humans any access to them whatsoever!

Responding to comment is at the heart of this issue. "This is one of the issues at the root of some of the OHV community's problems in getting organized. Most of us are by nature, not the type of individuals prone to joining groups." Neither were mountain bikers, of which I am one. You OHV users need to put aside your pride and elitism as we bikers have had to do, and realize that the only way that other user groups are going to be willing to discuss terms with you is if they can put a name to a face, so to speak. Get organized and get involved and you MAY in time earn the respect and understanding of other user groups, as we have done. As long as people see you as an un-organized band of noisy, fume-emitting full-helmet-wearing faceless rogues, who roam the public trail systems ripping, widening and rutting multi-use trails, you will be shunned and excluded. I promise you that. Start showing up at trail meetings and trail days to work on building and repairing trails, and people might see you differently. The ball is in your court. We do not have to let you have access to the trails we work on and maintain. If you want to come into the house, you ring the doorbell, you don't break the door down off the hinges and expect the residents to invite you to sit down to dinner.

***(cont.)***

Ross does not say how trees growing or being "harvested" have anything to do with roads and their condition. The conditions of roads is due to how often they are traveled and how well they are maintained. And what does the ESA have to do with road maintenance?? The ESA protects endangered species, not roads. In fact, roads endanger wildlife. Maybe we should just do without them. Or should we just do without wildlife and wilderness? What gives us the right to cull forests anyway or invade wildlife ranges and corridors?

Running in wilderness isn't the smartest thing. Some of the wildlife that live there will see you as prey. We have MANY areas in our country appropriate for competitive events, many are near wilderness. We also don't have that much wilderness left, and when a runner is attacked by a cougar/mountain lion/puma that is only acting naturally, people then want to kill that animal. This isn't the best idea.

Running is already allowed in wilderness areas, and many runners are enjoying it every day. It's only competitive events that are barred, and there is good reason for that. I've seen the impacts left by competitive runners on non-wilderness trails. They run off the trail tread to pass other competitors, leaving trampled vegetation that may take years to recover in alpine or arid country.

in other posts you have said things like 'support your facts' and 'stick to the truth'. Well, I want you to know that I get the drift of your comment about the billions and billions of acres, but there ARE 1.8 billion acres in the US lower 48 and most of that is not government owned. There's railroad land and big timber company land and big ag land and big ranch land and big mining company land. You can drool about driving and camping on that land if you want. You probably didn't see the no trespass signs. Please, go talk with the owners.

This is where wrapping yourself in the flag gets us all in trouble. Since you seem to pick on China did you know that this week China closed 2,087 factories because they did not meet environmental standards that they were given to make but made to effort to achieve? Did you know China has committed to plant 1 BILLION trees in an area the size of Ireland to help combat global warming and to help clean their polluted air? True India is a cesspool and very polluting but we still beat them and we have far less people. Putting the countries as a whole aside though you missed the point of the idea and that is that we all share in the destruction of our wildlands and WE ALL need to make lifestyle changes if we want it to survive. True government is in the pockets of big oil and coal but they are not forcing you to drive a gas guzzler or warm your home to 80 degrees in the winter. There are plenty of cars that get over 30 mpg and emit low emissions, I have been driving them for many years now and what is wrong with wearing a heavy sweat shirt around your house and keeping your thermostat set at 68. Responsible harvesting of trees can help forest yes but how often do you see that? Instead you see timber companies go in clear cut old growth, new growth and anything in between until it is completely gone and what is left is eroding top soil that cannot support regrowth in many cases and destroyed wildlife habitat. The point is the choice is yours to make and if you want to see this country return to the beauty it once possessed then you, me, your next door neighbor, your co worker and the guy who bags your groceries have to stop wrapping ourselves in the flag and stop thinking everything america does is right and we all have to make those changes together because the government is either too corrupt or too uncaring to do so for us.

Somehow, though, we need to figure out how to take ACTION when a plant or animal species is endangered. "Incubator" habitats need to be instantly created or something, where reproduction can still occur naturally - as opposed to the last poor gene-bearers of a species waiting for the end to come at a zoo; it's too late at that point! The Blue Karner butterfly for example is endangered. One of the things they need are Wild Lupines - the only plant their caterpillars feed and grow on (just like Monarch Butterfly's larval plant is Milkweeds only). It seems to me that there should be a way for an empowered agency to identify where these Wild Lupines used to exist, to plant a whole bunch of them, and make sure the Blue Karner makes a steady comeback. Then figure out ways to spread this habitat back into places it used to exist. I live in an area where Blue Karners probably existed at one time, so I am going to plant some Wild Lupines in my yard. A drop in the bucket, I know, but it's something! However, continued development (i.e. habitat loss) and suppression of natural fires (trees start taking over areas where the little Lupines grow) means the Karners probably don't stand a fighting chance. We need developments to prevent the loss of habitat (build around nature's envelope) or to replace the habitat as much as possible after the roads and foundations are poured. And probably most difficult of all, the average consumer would have to love nature much more than they love their turf grass, to plant more local native plants where their lawns would "normally" be.

Thanks for a reasonable thoughtful comment. You changed my mind as you are right, runners can run in thousands of other areas. My apologies for my not so well thought out comment. It never hurts to learn.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The damage that livestock cause to wilderness areas is obvious for those who visit. Furthermore, having livestock in those areas creates a mockery of all the other protection legislation: why should hikers not swim in rivers or lakes when a herd of cattle is crapping in them?! There are many other such incongruous examples, so it ends up undermining respect for the land and the laws associated with it. Many others have commented on the subsidized nature of grazing on public lands and that few (sometimes, but not always, wealthy) individuals benefit. Like many other progressive ideas, there is no question that grazing on public lands will end sooner or later. Let's start by phasing it out of wilderness areas. It makes the least sense there.

the funny thing is, I would have voted yes on this idea if the language was different. I'm definitely not opposed to nuclear, but sweeping generalizations about environmentalists and dismissal of solar and wind as potential sources without any evidence to support your claims, I have issues with.

The idea said we must stop compromising with the republicans on drilling.... It's not about Dem vs GOP, or liberal vs conservative, the lands are for ALL to use, that means ALL it does not mean exclude ranchers, miners, oil and gas companies, hunters, ATV/OHV users, it means work out a plan so ALL can use the lands! Hunters and fishermen/women, and all the groups formed by them have done more for land and wildlife conservation than ANY other group has, yet we are the first who the Enviro-whackos want to ban from using the lands!

The individual parks should charge what it takes to maintain themselves well like private parks[e.g. Longwood Gardens in S.E. PA]. Funding should also come from Friends of the Park Associations, especially businesses that depend on the park for their income.

The more land we conserve in the public commons the better. We need to have a national strategy of having as much development as possible be clustered around rail termini in places where people can live, work, shop and recreate within walking distance. Save as much land as possible in as wild a state as possible. Encourage low footprint access and recreation to all. Note that off road vehicles are not low footprint, they destroy the wild character and habitat capacities of our wild places.

The OHV crowd pays user fees. The money we pay should be used to keep the roads open. Our RTP funds need to be used properly.

Over-hunting and climate change is a tremendous problem. I am sure the nra, or any right wing news source, will admit that but it is true. I actually read articles based on science norm and that is where a lot of my comments come from. You should try it sometime, you might actually enjoy it and you might actually learn something.

The population went from 3 billion to 6 billion in a very short time. That is a first. I went to google earth, all the roads looked like a plate of spaghetti. I'm still looking for the billions of acres. You live in your own strange world.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The problem is, there are areas where vast expanses of land are publicly owned. There isn't private land available to support OHV recreation without trailering for miles, or causing excessive demand on a given area. Certainly, encourage private land use, but not by way of eliminating public land use.

The roadless rule stops new roads from being built. It does not eliminate existing roads. The reason the local road has not been maintained is probably because the federal government doesn't have the resources for upkeep on the large amount of roads it has on federal land. It seems to me the solution is to have less roads. Rachel, if you are referring to wilderness, I would avocate that more be designated in areas that have little to no private landowners, roads, etc. Also areas that are already federal land. Like areas in Alaska, Idaho, Montana, etc. I think more land should be preserved, both as wilderness and as multi use land. The only problem with private owners is the current owner may do a wonderful job at taking care of the land, but once the land is sold, someone in the furture may decide to develope it. Not that all development is bad, just that we should preserve the little wild areas we have left.

The time has come to repeal the multiple-use mandate for National Forests and establish a new management policy that favors preservation over exploitation. Since the passing of the Multiple-Use Sustained Yield Act of 1960, the guiding principle behind National Forest policy has been "to achieve quality land management under the sustainable multiple-use management concept to meet the diverse needs of people." This includes grazing, timber production, hydroelectric dams, landfills, utility corridors, and other invasive activities. While the multiple-use doctrine may be a workable management strategy in some National Forests far from major cities, it is becoming an increasingly unsuccessful and contentious model for National Forests near population centers. The four National Forests in Southern California (Cleveland, San Bernardino, Angeles, Los Padres) are a prime example. These "forests" are different from all the others in the National Forest System because they are almost exclusively used for recreation by a growing population. In addition, these lands are not typically covered by forests at all but by unique shrubland ecosystems, especially chaparral. These shrubland dominated landscapes need to be viewed and managed for what they are: urban parks that provide citizens opportunities to renew their enthusiasm for life as well as land preserves that protect the valuable wildlands found within. By continuing the current forest management model of multiple-use there is a significant danger these lands will be lost by multiple-degradation as they are exploited for a wide range of consumptive uses. We offer an alternative approach in our California Chaparral Preservation Plan. A copy of the Plan can be downloaded here: { <a href="http://www.californiachaparral.org/chappreservationplan.html" rel="nofollow" target="\_blank">Link</a> }

The title of this idea smacks of xenophobia, but the description of what's done overseas, at least in Europe anyway, is persuasive. I'm wondering about the logistics: I guess you can present your Driver's License/state issued ID at the counter, but what if you buy a ticket online (can you even do that)? I'm going to have to demote this idea.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

There are green conservation areas in my subdivision that preserve some of the land we are required to maintain. Unfortunately the rest of this preservation of land Kirk Manecke (author of this idea) isn't practical, realistic or economically feasible since we have to have buses, cars and at least a 2 way street and 2 exits. Texas, County and local laws requires platts and no by right permitted use options of any land. Based on what you wrote we'd have to have more than 80 acres to have no more than 20 homes with families here. Single Family Dwelling Houses would cost way more than from \$84,000 and up with that much land plus our home owners association dues would be more than \$261 a month - just to maintain that much more land. You forget we have to mow all this area to less than 4 inches to prevent poisonous snakes, lizards, mice, rats, and other dangers that are Governmentally required land useage - reducing fire hazards and dangers to households from animals already. At about \$1,000 per mow - where would you find the extra money from to own a home or maintain it plus how many criminal and civil charges are you willing to pay? Your ideas are totally ILLEGAL where we live and probably in most places for good reasons.

These concessionaires are taking control of our public lands.

This is another example of the power of the almighty dollar. People would be willing to sell one of the last truly wild areas to make the quick buck. I have heard the company proposing this mine is from a foreign country (I think China or Japan). Once this area is gone, it's gone forever. We can look back, just like the tragedy in the Gulf of Mexico, and say "we should have" or "we could have". Do we need to drill and mine in every last valley? Is there no place in already developed areas to mine? It makes me think either these companies save a ton of money going to pristine areas or we have used up all the resources in the developed areas. Either way seems like a good argument to protect the area.

I'll keep to the roads when you keep to the sidewalk. The tread on my tires is rubber, just like the tread of your shoes.

I grew up riding three wheelers and motorcycles. I still snowmobile. I'm not against roads. There are just too many of them. Maybe it's different where you live. I doubt it, though. The amount of roads in national forests is huge. So huge, the government is not able to keep up the maintenance. There is room for OHVs and wilderness, some roads are good. I say preserve more wilderness and mult use land. When OHVs have access to an area, it does degrade the wild character of the area, especially if there are a lot of users. That's why there should be more areas preserved for all types of recreation and for the health of the environment(clean water, clean air, habitat for other creatures that depend on solitude, etc.). I've stated before that most outdoor people making comments here, even though they may have differing opinions, still have more in common than they have not in common.

To find what's motivating these lawsuits, "follow the money" - What an eye-opener , if this is true ! Are the lawyers using the Eco-Groups as their Pawns to get billable hours? Is the government an unlimited source of funds for these lawyers ? Wow !

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

"why should that "management" include logging and grazing? How does that serve us or the land?" It creates jobs for the people who live closest to the federal land, whose families lived there before it even became federal land.

"And in return for this fantastic volunteer help, off-road recreationists are first at the table when decisions about where to ride are made. When I hear the off-road vehicle groups have given a million dollars to the Susan G. Komen Foundation (breast cancer), then I'll have my first example that they act in anybody's interests but their own." So now we are going to judge people by how much money they have donated for your cause, you must be a US Congressman or maybe Rod Blagojevich one thing is for sure your part of some sort of self serving good ole boy network, you should be ashamed trying to strong arm people to serve your cause let me guess you keep 65% of the money you collect for breast cancer as a fee or bonus like all other charity's are run. Nice try.

"China closed 2,087 factories because they did not meet environmental standards" Oh wow, those factories would have never been allowed to open in the US. "Did you know China has committed to plant 1 BILLION trees" No I did not know that. How many trees will be planted in the US? The Arbor day foundation says their members planted 8 million trees last year. I would say that was pretty good for a private group. Who knows how many trees the USFS and BLM planted? "The point is the choice is yours to make and if you want to see this country return to the beauty it once possessed" Yes it is my choice to make thank you. I have lived in the Northwest for my entire life except for a couple years in Europe and have never noticed a degradation in the beauty you speak of. What I have noticed is an extreme limitation on the ways that people are allowed to access the outdoors. I drive vehicles that allow me to get the best MPG's in order to suit my needs, I do keep my thermostat below 68 degrees and I heat with a renewable resource (AKA wood). I do all this in the name of being self sufficient and saving money not to worship at the altar of environmentalism. "Responsible harvesting of trees can help forest yes but how often do you see that? Instead you see timber companies go in clear cut old growth, new growth and anything in between until it is completely gone and what is left is eroding top soil that cannot support regrowth in many cases and destroyed wildlife habitat." You are spreading typical environmental lies and disinformation. Where have there been clear cuts on public lands in the last say 20 years? The Forest Service has not allowed clear cuts for years except in very limited circumstances, such as fires or bug infestation. The only clearcuts you see now take place on PRIVATE land. As long as the land owners follow the rules as they are specified there is nothing anyone can do to stop what they are doing on private land. Your environmental emergencies feel fabricated to me.

"I agree, but some recreation should be only allowed in designated areas." Hello! Recreation is only allowed in designated areas already I am not sure what point your trying to make perhaps you can elaborate some.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

"The forceful arm of the EPA" That needs to change also,too many times the radical enviros use the EPA in ways it was not intended to be used,to advance their position of no logging, no ATV's/OHV's, no grazing, no fishing, no hunting,no boating,no swimming,no horseback riding,no campfires,no charcoal grills,no hikng except on trails, no mountain bikes, no rock climbing,no hang gliding,no activities at all other than taking pictures,and sniffing the air. The intent of the EPA was to stop industrial pollution,not to stop all human activities.

"We used to do 4 wheel off roading but stopped after seeing all of the damage done by people leaving the established trails. OHV people need to understand that by many of them not obeying the rules in the already established OHV areas, they are shooting themselves in the foot. OHV areas also need to be located away from areas where people go to enjoy nature. Coral Pink Sand Dunes State Park in Utah is a good example of where the OHV activities disturb the enjoyment of the other visitors to the park because they drive fast in areas that are shared by people walking and the noise from the vehicles themselves can be heard all over the area." Tell us or better yet show us all this damage your talking about I would like like to see this, sounds pretty bad and you make it seem wide spread should be easy for you to show us. The "trail damage" if you want to call it "damage" I have seen looks horrific it might make some literally sick to their stomach its so bad, then you zoom out step back and look at the surrounding lands and REALIZE the damage is insignificant compared to what mother earth has been and is currently doing, I have seen areas where trails were all rutted up and the lands were "damaged" then that area was closed, 2 years later you cant even see where the trails are mother earth fixed them but you can still see all the other damage mother earth is still creating, then if you think about it you feel real stupid for closing the trail at least that is what the forestry employees has told me, they feel stupid closing trails and closing lands, step back open your eyes and look at the bigger picture.

Please ! NO 4 wheel vehicles in Parks ... except in very specific areas ! They destroy everything where they are ... Faunas as well as Flora ! Please show us all this destruction. Please define "destruction"

Ahh the slippery slope argument. The big difference is that a bicycle doesn't have a motor. A bicycle is "human-powered", just like canoes, kayaks, hiking poles, skis. No, mountain bikes aren't suitable for every trail in Wilderness, but some trails would be perfect for it. Interesting read about the exclusion of bikes in Wilderness { <a href="http://www.imba.com/sites/default/files/Penn%20State%20Law%20Review%20TS.pdf" rel="nofollow" target="\_blank">Link</a> }

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Air, Water are public resources that do need to be protect. The "Stake Holders" I understand are the owners of the land only. This writer does mention the Indian tribes and the US/State/Local Governments and there maybe other private land holders. Public hearings with written reports are normally required for any use of land - which is the real reason the writer made this suggestion. Understand that vehicles have and will be allowed in the area - please William Hoffman ---- Instead of insisting that these be removed from all activities allowed on these land. Seems to me William Hoffman wants the only human activities allowed in this area to be walking & hiking ---! We may not always agree with these decisions - but once decisions that have allowed vehicles -are made normally there is little we in the public may do. Greg Denzler Aug 17, 2010

All Federally owned and managed land should be open to public access except where there is a compelling national interest, Exceptions should be made to limit access to military installations or nuclear power sites. Access should include balanced opportunities for use on foot, equestrian and motorized off road vehicles. Hunting should permitted in accordance with state and federal hunting seasons and regulations. The carry and use of firearms should be permuted in accordance with state regulation.

An imbalance and multiplicity are the problems of preservation. Animals and plants are vulnerable to the momentary whims of the recreationist. The open space is used and discarded by repeated intrusions....and the damage is permanent. Once overused, fertile meadows or forests or waterways are damaged beyond repair. To scar it is to lose it., which leaves out motorized vehicles, getting off the path and leaving behind any trace of your presence. Leave it as pristine as you find it is a hard sell to those bringing in anything heavier than a boot or backpack. That speaks for treading lightly on the land. Just look at the places we frequent vs. places which are inaccessible. The evidence speaks for itself.

As the spouse of a Disabled Veteran who is unable to walk without a motor - I do understand. We live in an area of 20 miles per hour or less and have nature with walking/roads near by in a park. Now we have pedal bikes, skaters, skate boarders and those with pets and scooters on our walk ways. Those in New York City New York will spend hours to truly get to a quiet conservation wilderness area as you all are talking about. We understand this - but prefer the economic and social benefits of working/living here. Remember the parks are for the people. I too have picked up trash for over 54 years from the public area. At times I have searched for trash cans to find none. Why? Removing trash costs money - so I end up taking my and others trash many miles away - just so I'm not disturbing or polluting nature.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Bruce hemming Agree 100% The endless lawsuits by radical enviro-nazis,who have contributed nowhere near what hunters and hunting groups have to wildlife conservation,still insists that the wolves are not hurting elk populations. B.S. I have seen it with my own eyes,in NW Montana,wolves have killed elk,and not eaten even a bite out of them,same with mule deer,they have ripped a calf out of a cow elk giving birth,and eaten niether one,just killed the calf,and left the cow to die. Someone on this thread said wolves increase elk populations,more lies,let them come to Montana,or Idaho and see for themselves. More radicalo enviro-nazi news....The Center for Biologic Diversity has filed a petition with the EPA to ban ALL lead ammuniton. Lead shot is banned for waterfowl hunting now,lead fishing sinkers are a thing of the past,and the amount of lead from eating wild game has been proven to be below harmful levels, despite what the CBD says.

Check into what happened in CO along the front range and specifically in Boulder county over this issue. In the 1990s USFS/BLM took exception and told the folks either quit or pay because building a house on an old mining claim is not the intent of the law. Those that chose to pay had to pay current market value for the land they had essentially "squatted" on. Those that quit had to tear down the residence and put it back to original condition.

we live in Utah and right now we're trying to rally everyone to work together to keep decisions about Utah land use in Utah. We all have to work together: OHV riders, mountain bikers and horseback riders alike. We also have groups of OHV users who get together and volunteer their time not only showing up but organizing trail meetings and trail days and we're happy to let you have access to the trails that WE work on and maintain. Let's get together on this stuff! Know that we in the dirt biking community do our part as well. In fact, as I went on the local mountain biking forum I came across a post describing how to sneak into a local area and avoid paying the fees that are used to maintain one of my favorite riding areas! I was shocked. That's not responsible! We all have to do our part. Anyone can point fingers. Let's work together instead and accept the fact that there are good and bad in every group.

With statements such as this, you and other "hikers-only" users show your narrow-minded and selfish attitude towards other user groups. We all need to work together to build a community of responsible trail user groups who respect one another's PRIVILEGE to use public lands for their preferred method of recreation. Excluding and alienating other groups because you don't understand them, or choose not to, based on one or even several bad experiences is not right. People like you should be ashamed of yourself. Once the people who see themselves as entitled to first dibs on trail usage start seeing this issue in a new way, like the rest of us do who are relative new-comers to trail use in this country, we might start making progress towards a common goal of conservation supported by all user groups. By supporting out-dated exclusionary concepts such as yours, you only reinforce the walls that have seperated user groups for decades. This is not the way to promote "grass-roots" conservation efforts. I personally do not believe that ANYONE should be allowed in Wilderness areas, hikers included.

Competitive events have no place in Wilderness. IMHO.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Exotic invasive plant species are able to displace native plants only because those factors that control their spread in their original locales were not transported here with them. The serious problems caused by exotic invasive plants -- well noted in several other previous comments -- need practical, sustainable solutions...not bizarre hypothetical distractions such as your Comment #5.

Enough studies, already....it is clear our activities are exceeding the earth's carrying capacity.

Erosion is a natural process, what do you think made the Grand canyon? There are enough restrictions on OHV/ATV users as there is, those who enjoy these activities should not be banned from using the lands. Some of the lawsuits are absurd, like prohibiting ranchers from using 4 wheel ATV's to herd sheep/cattle on BLM lands, get a grip here, the land have been used for grazing for over a hundred years, now all should change because some enviro- whacko group says so? Excessive runoff from logging roads, or even in the few cases where it is from overuse by ATV's can be stopped, so work to fix that, not to ban certain groups from using the land to enjoy their preferred type of recreation.

Exactly - a perfect illustration of the effects of keeping people out of an area. Multi-use or no-use.

For those of us that are middle class wage earners, this tax incentive is a tremendous incentive to conserve our family forests or farms. Our local land trust has conserved thousands of acres, thanks in part to this tax incentive. Lets make it permanent!

For too many years, too many people have spent too much time watching the shallow local "news" on tv, which portrays an unrealistically awful, violent picture of our communities. Turn off the tv and come outside!

Forest fires do not disappear once they hit thinned areas. If you want to thank anyone in the IAB system, thank the Hot Shots, members of numerous tribes who go headlong into the forest fires and put it out. Their methods may include clearing some brush and trees, as well as setting backfires, but ask any Hot Shot in New Mexico if they think that thinning the forests in Lincoln County would be preferable. Forest fires are a problem, but before you assume that tree thinning would help, or that all the pressure can be put on Tribal Councils (who already have no money-how would they do all this? Simply out of the goodness of their hearts in a system in which they live in abject poverty?), move to a state where forest fires and IAB are actually prevalent, so you understand what happens in those situations.

## Discussion Question 2

### **Written & Online Comments**

**(cont.)**

Geez, if you're worried about not having tax dollars for basic services, perhaps you should let your Congressional reps know they should stop spending A TRILLION DOLLARS (!!!!!!!) on endless wars! With the money we're handing over to the military industrial complex we could have free health care, beautifully managed national parks & forests, free college educations for our children, a healthy Social Security system, and on and on. Our military budget is MORE THAN ALL OTHER COUNTRIES ON THE PLANET COMBINED. Think about what else could be done with that money to benefit all of us.

Get in your car and drive coast to coast using any major interstate and you will see billions and billions of acres of empty land, if you cant make the drive and I suspect you have never done so or you would not be asking us, then fire up google earth, zoom in and follow the interstates from coast to coast billions and billions of acres of empty lands. Have you seen how much land is already in control of the government. { <a href="http://www.freerepublic.com/focus/f-news/1749440/posts" rel="nofollow" target="\_blank">Link</a> } The population has been growing since the beginning of time its nothing to get all worked up about sooner or later something will come along and greatly reduce the worlds population again its happen many times before, it might not happen on your time table but you seem unhappy about so many things I doubt it really matters.

Give me a break, guys. I'm 67 now, but was a long-distance runner most of my life, including Imogene Pass and Pikes Peak competitions. Have you ever actually run in a trail race? The Imogene Pass run is NOT is wilderness and is run on roads. But picture the hundreds of runners in an almost continuous line for several miles traversing wilderness. Think of the trail damage, and the degradation of the qualities that people seek in wilderness. There is NOTHING stopping you alone or you and some friends to go running in wilderness if that turns you on. You just can't do it as a sanctioned event. And there are thousands of miles of roads and trails OUTSIDE wilderness. So go to it! Run, and quit complaining. It's better for you!

To lay down, give up and let large corporations have all the tax exemptions and subsidies they want is essentially flushing our country down the drain for good. If you look at the countries that were least affected by the economic crash that destroyed us, you will see a pattern. Their politicians don't take money from those companies like ours do. They also have much higher regulations and taxes and WAY more social programs that support their average citizens. Big oil and coal cost the average American more than they benefit us. The top 10 percentile in the world controls something like 90% of the economy. Why is it that the no tax, no regulation and trickle down fantasies have done nothing for us in the last 40 years but create a greater disparity between rich and poor? Why have we continually fallen down the ranks of education and our money is devalued amongst top nations in the world? Taxes on the rich and the corporations MUST be GREATLY used to dig us out of this hole. Our population will not disappear, therefore the demand for those services won't either. Let the rich and the corporations run away and leave. They will lose all the business from the 350+ million people still living here and it will open up the market to new companies who care about the triple bottom line. During the greatest economic times the US has ever seen, taxes were upwards of 90%. Almost everyone was doing well back then. TAX THE TOP, it's the only way.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

To paraphrase Ben Franklin-If we do not all hang together, than surely we will all hang seperately. Creating division between dirt bikers, atv/utvers, Jeepers, and even mountain bikers opens the door for even more restrictions. Face it, the tree-huggers want everyone out of the forests.

Turning management over to state and local governments is the wrong way to go. They lack the national perspective and don't really appreciate the value of long-term sustainable management of the land. In their hands, "threat of catastrophic wildfire" could become the latest excuse to log off roadless areas and leave them with a spiderweb of roads.

Uninformed support will lead to this re-plumbing of the Glades having more water stored deeply then ever before in history. Even some factions of the local conservation community in So Fla is very concerned over this. Beware when the gov't. comes to you with 20 billion dollars of money saying trust us we are to help. The agencies had to do extra EIS's due to the public exposing serious highwat design safety flaws in the original project that they knew would result in a faulty DANGEROUS Tamiami Trail post construction. Without citizen study of every sentence of a 5 inch thick EIS document the 2 sentences exposing safety issues would not have been discovered which at least led to a safer design not that the project will work for the Glades.

Unlike the "other" I actually own horses nd I dont belive the government should be in the horse business. Even at 200 horses I would hate to think of what the cost to the taxpayers would be.

Us hunters already contribute an 11% tax on firearms and ammunition,you want us to pay even more? We pay our share,besides the tax,we pay for licenses,tags,land use fees,etc. Hunters,fishermen/women and all the hunting and fishing groups like Ducks Unlimited,Whitetails Unlimited,Pheasants Forever,Rocky Mountain Elk Foundation, National Wild Turkey Federation, Trout Unlimited,and on and on. These groups,and hunters/fishermen have done more for wildlife conservation than any other group has. Tax the rest of the people who use the land.

Using brownfields, rooftops, parking lots, abandoned shopping centers, etc. for renewable energy is the best idea. These areas can also be used for electric transmission. Energy conservation as the first energy will also help us move in the right direction.

VOTE (DEMOTE) PLEASE &gt; CONSIDER BEFORE VOTING.THE PROCESS IS A BIT SLANTED IN MY OPINION AND CONFUSING. I have visited the area in question and saw the beauty of those who have lived there many many years and love the small town feeling of some communities. This would be interrupted by promoting a monument being constructed in this area. It is costly and will be the ruin of many families homes and solitude. The current times we are living in do not promote still another tax and expense for unnecessary ventures. PLEASE Think before you vote about how you would feel if your home for many years was in jeopardy.

We need to keep open land for all forms of recreation. We will also need to preserve these lands through programs like out Tread Lightly organization.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

We're trying. But the truth is that if there is nowhere legal to ride, then those who don't care about the law will ride where they want to. Gates will only keep out the responsible riders. It's really had to promote responsible OHV use if there is nowhere for responsible OHV use.

What if the US joined other countries where the losing party had to pay the legal costs of the winning party. I agree we need checks and balances. Some lawsuits are extreme conservationists who want no multiple use land. Some of these lawsuit have real merit. However, most of them are civil matters about following the money and corporations with sometimes the full knowledge of the government forcing the public to do something - the public really doesn't want in my experience.

Why make everyone pay for something they don't necessarily use? I don't think I want new visitors who may not appreciate the park system simply there to extract their pound of flesh. If you use the park, pay for the park. Otherwise, it just becomes another societal tax because the system can't responsibly manage its resources. Considering the financial crisis that CA is in overall and their state park system specifically (yes, we used to live in Norcal), I wouldn't support this option of funding. I agree, though, with other park plans (really of the very large parks, i.e. Grand Canyon, Yosemite, etc.) that already have public transportation systems to encourage leaving your car parked centrally or at your campsite in favor of other means of getting around.

Yes, rural areas need jobs. One of the problems is growth from people who live in rural areas but work in town. Rural should not mean suburban, but it is quickly becoming that. Further exploitation of the resource base will not solve the problem. Preserving rural space by preventing conversion to homesites is critical and can't be done if we continue the "log and sell" policies of the past few decades. The biggest growth in rural employment I've seen is from tourism, sustainable agriculture, and local markets for rural products from food to crafts. "Growth" is not a solution for rural problems.....unless you consider eliminating the rural areas as a solution.

Yes, Stop privatizing our national parks and forests

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

You cannot have your cake and eat it too. Parks are created to preserve a bit of Nature before it is too late..Remember the song"The Big Yellow Taxi" by Joni Mitchell? Do we want to make a parking lot out of our Parks? OHV are damaging to our environment and to the parks. As a Travel Facilitator-Interpreter for foreign visitors for over thirty years, I see the damage caused by reckless visitors and even just the visiting cars and tour buses to the trees along the road. So why even bring more pollution? Here are the words of The Big Yellow Taxi to make you ponder. They paved paradise And put up a parking lot With a pink hotel, a boutique And a swinging hot spot Don't it always seem to go That you don't know what you've got Till it's gone They paved paradise And put up a parking lot They took all the trees Put 'em in a tree museum And they charged the people A dollar and a half just to see 'em Don't it always seem to go That you don't know what you've got Till it's gone They paved paradise And put up a parking lot Hey farmer farmer Put away the D.D.T. now Give me spots on my apples But leave me the birds and the bees Please! Don't it always seem to go That you don't know what you've got Till it's gone They paved paradise And put up a parking lot Late last night I heard my screen door slam And a big yellow taxi Took away my old man Don't it always seem to go That you don't know what you've got Till it's gone They paved paradise And put up a parking lot I said don't it always seem to go That you don't know what you've got Till it's gone They paved paradise And put up a parking lot They paved paradise And put up a parking lot They paved paradise And put up a parking lot

You say that OHV use consumes public land resources more than any other use. This is the myth you use to banish a sport you don't like. In California I pay \$50 every two years to ride my off road motorcycle at public parks, plus I pay an entrance fee each time I visit my park. With over a million OHV users paying into that fund there is a lot of money to maintain our trails. Trails used by hikers in the Bay Area where I live are bulldozed once a year to fill in the ruts caused by the rainy season. The cost of this maintenance is covered by the general fund unlike the cost of similarly maintaining the motorcycle trails also subject to erosion during the rainy season. If you repeat a lie often enough it enters the public discourse and becomes fact, except that it is a false fact. There are many examples of false facts including the ideas that are espoused in this site, specifically that OHVs consume more public resources than other uses. Other examples of false truisms are everywhere these days. Think electric vehicles having no carbon footprint. The lie is that when it is plugged in it has a very heavy carbon footprint considering that nationally one half of our utilities are powered by coal.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

It will reduce roads which will reduce access which will further reduce recreational opportunities. It will eliminate thinning, even to reduce fuel loading. The proponents are quick to claim otherwise, but this is the undeniable net effect of 50 years of environmental activism in all our national forests, including those in the Siskiyou. Furthermore, catastrophic wildfire danger is increased by the reduction in road access that I mentioned earlier. The only possible reduction in fire danger comes from the reduction of recreational opportunities that I also mentioned earlier. It will stifle tourism by reducing recreational opportunities (see above) thereby damaging local economy. It will eliminate thinning (see above) thereby damaging the local economy. It will eliminate grazing (just like thinning) making local ranches financially unviable thereby damaging the local economy. By eliminating thinning, the forest will lose its biodiversity by reverting to monoculture brush fields (after fires) or chokingly thick timber (before fires). As evidence, consider that in California, Sierra Pacific Industries has more documented mating pairs of spotted owls on its lands than does the USFS, even though the USFS owns half of all the land in the state. You don't know of which you speak.

Electric and hybrid vehicles SEEM environmentally friendly because we're a step removed from the damage, but a great deal of our electricity still comes from COAL - one of the most environmentally hurtful fuels there is. Nevertheless, public transportation could be more fuel- & emissions-efficient than individual vehicles, and it could cut down on damage done by careless drivers.

This is an excellent idea, how would it be funded is the problem. Then tie it to welfare is not practical, as most on public assistance are from urban areas, most of the parks are in rural areas. The idea is great, just need some more input, and more ideas about how to make this practical, so it can work, and not cost much money from the parks budget.

Wonderful idea. I will also post a sister-idea about noise pollution as well to potentially control flight paths over selected parks. As a current SE Utah resident, you really appreciate the dark skies around Monticello, UT (for example).

When the criminals stop roaming around at night, I will stop leaving outside lights on. The idea of dark skies is a good idea, but it just is not something that will happen. There are some areas with minimal light pollution, and these areas could possibly be used to make a few select areas, that no more lights can be added. The biggest light polluters that I see, and I have travelled the country extensively, are the neon signs that are advertising for businesses. Maybe attempt to enact laws that limit the time these can be on, turn them all off, by 10pm on weeknights, midnight on weekends? I can remember seeing large areas of the Rockies with little to no lights visible at night, and huge areas on the coasts, the best was the Outer banks of NC, years ago, about 80 miles of beach, no city lights visible at all, now you can see maybe half of the stars that you could see back in the late 60's early 70's. While I do somewhat agree with your idea, it just is not very practical.

I would support this if I didn't already see this act get abused and exploited. Too many lawsuits pervert this act with falsified animal studies by groups with alternative motives.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The law should be restricted to its intent, which is to help endangered species. To comment on the animal you specifically referenced; I have lived in the upper midwest my entire life - wolves are not endangered here, they have not been endangered here for any portion of my life (I'm still fairly young). The populations here in Northern MN and Northern WI are very, very healthy. Wolves need to be delisted, and would have been long ago if not for the political perversion of the endangered species act. I love and respect wolves, and I see them and their sign constantly. I want them as part of my world, but they do not need the protection of the ESA.

It's vital to keep family camping affordable. Get the concessionaires out of our national forest campgrounds! Rehire USFS employees to manage them. It's distressing to see some forest service campgrounds now costing more than \$25 a night! Get the profit motive out of a nature experience!

Good luck with that! In 2010 urban America, how many of us are fit for labor? Where would you find men who know how to work with pick and shovel? In some states, more than 30% of the population is obese. At Yosemite National Park, I heard, 99% of the tourists never go further than 100 yards from the pavement. Would you waste scarce resources on building materials for lodges to compete with private sector hotels?

I can't advocate building more facilities in many of our National Parks, or even our comparatively sparsely developed National Forests. Don't forget that every new trail or structure comes with the burden and cost of ongoing maintenance. We'd be better off better funding our land management agencies so that they can get a better handle on upkeep of the existing infrastructure. They'd have to hire folks to do the work... I'm not sure we need a government program teaching young men construction skills either. This is not the career field we need to be investing in right now. Where will they work when they go back to the private sector?

let's not forget the whale population in the Arctic Seas, also Polar bear. Another "accident" such as BP's fiasco this summer would destroy the eco-system in the Arctic Seas and lands, as there is no way to clean oil from the ice. There should be no oil and gas drilling in ANWR or in Arctic waters.

As with other issues pertaining to earth's natural resources and wonderlands such as national parks, conservation is the key to saving ourselves by preserving and caring for all the earth. There is little time to waste to turn things around and put the brakes on our rush toward "hell on earth".

Our government needs to take care of domestic concerns, and stop funding foreign businesses, foreign investments, and foreign countries. This would provide the money necessary to care for our National Parks.

the horrendous maintenance backlog in our national parks is a national disgrace. the time has come to fully fund repair of our nation's best idea.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I agree with #27. I do not want guns in our parks nor OHV's. Even bicycles can do damage in the wrong places. We need to protect the areas around our parks. I was appalled at the changes outside Bryce in just 10 years-Bryce City, what a joke. Just a bunch of tourist traps. I do like the buses though, they help hikers. What about Yellowstone??

The area I live in would be devastated if all of our parks were shut down. Northern CA. Last year we had the threat from Gov. S. of closing the (state) parks down. It is a gorgeous area but very poor. (370 miles north of San Fran) It's dependent on our State and National parks for much of it's income. (tourism) Residents and tourists alike has seen the results of cost cutting. Some of the parks are both State and National, so the cutting is coming from both entities. Some area's were damaged because of lack of manpower to police the area. Please fully fund these treasures. Not only for the "locals" but for the nation to visit and appreciate along with all the international visitors.

It's an embarrassment to visit a National Park and see rotted steps, broken hand rails, trails closed etc. We the people should take better care of some of the most beautiful places in the world, the United States National Parks. Fully fund our Parks.

Until we get the deficit under control, we should not be spending more money on the parks. Visitors should clean up after themselves. Parents can, with a little research, or using park pamphlets teach their own children about the importance of caring for our National treasures. There should be opportunities for tours supplied by private contractors who are supported by fees. It is not possible for all of these functions to be supported by tax dollars when our nation is so massively in debt to China and Saudi Arabia.

I love our national parks, state parks and local parks. We are in a recession and \$13,000,000,000,000 in Debt. How much will this cost and where is the money going to come from each year to pay for it? Government spending needs to decrease for while until we get the debt paid off. Then we can talk responsibly about increases to staff and funding. Is it true that there is currently about a \$10,000,000 backlog on existing park projects? If that's true, we have the cart waaaaayyyyyyy before the horse in talking about expanding our parks and programs. Think Responsibly, Act Responsibly!

This is a good idea, and I would normally support it enthusiastically. But the idea seems to deliberately exclude motorized uses, so I am demoting it. It is not necessary to exclude the public from public land in order to "protect" it.

If Mississippi has 80% wildland remaining to this day, then you better keep hush about it, because it won't stay that way for long!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Petroleum is handy - but it sucks! Back in the old days... It is said you could wade into the Penobscot river and shovel the fish out with a pitchfork! I have heard and read many similar accounts of the natural bounty of our Country. WAKE UP!! These stories tell us what a healthy ecosystem looks like - what our land was like and the Life it is capable of supporting. What we have now is so diminished from what it was. With an growing population and a belief that we can/must constantly expand our economy, Nature is in serious trouble. Not only should we be protecting everything that is remotely worth it - we should be working steadily to return this land to the naturally abundant place that it once was. You need to set aside land, and reduce or eliminate human impacts. It is amazing how nature rebounds when we just get of her back.

I am stunned by some of the comments here... Example: Equating urine with gasoline. Urine is a waste product - but it's sterile, and mostly water. If you had to, you could clean an open wound with it. I appreciate that sooner or later you are "going to take a leak". Go ahead. Spilling even "two ounces" of gasoline in a clear-running healthy stream is a crime against God and Nature. Off-roaders - you so discredit yourselves with the many short-sighted comments you post. And yes - as others have pointed out, s-e-l-f-i-s-h! It's just sad.

When I was growing up in SW Florida Gulfcoast, there were only 3 golf courses in our County, everyone had a boat and used it, fish were plentiful, the water was pristine and full of live shellfish and baitfish and hatchlings. All of the non-developed land was fence free with a noticeable absence of No Trespassings signs. Now there are over 150 golf courses in the same county since they are designated 'Green Areas' and developers use them to meet environmental requirements. Fertilizer runoff from these has killed the entire bottom life of the back bay areas out to 30 miles, everthing on land is fenced off or behind gated walls in the entire county. Almost no one uses their boat anymore because there are no fish to catch that you can eat because of the mercury levels. It is pointless to own an ATV since you can only ride it in your yard. We all need to clean up our own back yards first, plant ten trees for every house including existing ones, then worry about the rest of the planet.

I live in Colorado. This used to be a seven street dirt road town. We could hear and see, coyetes, raccoons, deer, and an occasional badger. It used to be a place where there was very little traffic, no air traffic, and if we wanted more variety in wildlife, we could drive across the road (Now I-76) and be at Bar Lake. However, progress began moving in. Our streets are paved, there's more developement, DIA in which we are in a direct flight path, and most of our wildlife has either been shot, hit by cars, or hopefully, found new, more suitable places to live then around here. Bar Lake is now off limits unless you have a pass. Off roaders have destroyed most of our free space, irreponsable people with gun are out there shooting in the middle of the night. The reason that we moved here is very simple, we enjoyed the peace and quiet. I hate progress and the damage that it so often brings.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I live in Nebraska, and have been to all the states west of the Mississippi. Much of that "open space" in the Great Plains is used for agriculture. The pheasant population, for instance, suffered tremendously when thousands of acres of farmland were taken out of CRP programs. Now fields are planted fence post to fence post--even ditches are mown for hay in bad years. Also not all areas are suitable for all animals. I wouldn't want a wolf population or a grizzly population living near Omaha or Fargo or Sacramento. Such sweeping generalizations demonstrate a lack of research and knowledge.

Wildlife are lacking space and they should have more space, especially the Wild Horses that should left to run free and the BLM should stop rounding them up. They are part of our past and should be left alone to run wild and free.

We need to assure that wildlife will survive long after we humans have killed ourselves off with our foolish ways.

this depends on your definition of wildlife. If you include pigeons and rats, or even coyotes (which can live anywhere) then yes there is enough habitat. If you include black bear, moose, elk, etc, then it is a ridiculous claim that there is already enough usable habitat.

"If all you know about wildlife corridors comes from some black-helicopter-private-property-rights-UN-conspiracy type web forum, you might want to check some of those "facts" before you make this kind of argument again" The wildlife corridor map, and the agenda 21 stuff just keep going around the net. A few seconds of research can prove it to be false. The problem with this forum is that at this point it does happen to be dominated by the eco/enviro whackos. ATV/OHV use does not destroy the land as much as most of the commenters claim, A horse does as much damage as an ATV. No one should spill gasoline in a stream, and the majority over 99% off off road vehicle users would not do so. You are just so dead-set against the use of ATV's/OHV's that you just assume all users are lawbreakers, and out to destroy the environment.

Honestly I haven't read all the posts in this war of words, however I like to ski and hike in Northern Wisconsin and the UP of Michigan and have also visited national forests in No. California, Alaska and So. Dakota where I did those things, also canoeing and biking (on old RR trails). It just doesn't work well to have motorized vehicles on paths with non-motorized users. Why? Because part of the thrill for the motorized user is speed. And when you are barreling down a relatively narrow trail at 40-60 mph, it is difficult to avoid crashing into a "pedestrian" unless that person leaps out of the way (which they might know to do because the motorized vehicle is quite loud)--although on some trails the only place to leap to is down a mountain. It is not especially easy on water either, although at least most lakes and rivers have enough clearance to avoid getting smashed into by the powerboat or jetski user. For the same reason I don't ride my bike on the sidewalk.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

It simply amazes me when some people can read so much into what is written. I don't see anything of the kind that would have indicated that I was "... you who feels entitled to more than your fair share as well"! If you would take the time to read the Idea you would have noticed things like "I am not suggesting opening all trails up to multi-use ..." In reading your comments "...will the government buy me an OHV vehicle to use at the parks?" - YOU are asking for something in an entitlement way! I am suggesting "... many trails can be adapted or new ones made for multi-use and enjoyed in an environmentally safe way by so many more people rather than single use users." BIG DIFFERENCE THERE! Your comment of "You want full and equal access since you have the means to enjoy it all." Just amazing how you came up with that one! You are way off base. I believe in True Wilderness Areas where there should be no motorized access at all! I get to enjoy the solitude along with everything else the Wilderness Area has to offer. So could you point out to me where I stated I want "FULL" and equal access? I don't think I gave any indication that all trails are created equal. I gave you an example of just one of a few trails I travel on that does give equal access to an area, for everyone that wishes to use it. It's a multi-use trail I use to get to a Pacific Crest Trail head, where I backpack into a Wilderness Area, where there is limited access. The Slickrock Trail is a prime example of a single use trail (Motorcycle only at one time) that was changed to a Multi-use trail now (added Mountain bikes)! I'll differ with you on "...part of our park that is only reasonably accessible to those with high-clearance 4WD vehicles" as well! It has been a couple of years since I was in Moab and things may have changed. But I never saw anywhere that would have fit your statement at all! People backpack in Death Valley and Moab roads and trails are easily more accessible than backpacking in DV! And at least when I was there – hikers were there as well. Here is a statement from the BLM Moab web site – "Other users of the roads--miners, ranchers, riders of pedaled or powered cycles, and hikers--..." But then again perhaps there are some people out there that feel "they are the only ones that are entitled" to be in a certain areas.

I agree with your comments. Off road vehicles must be restricted. Corporations that have grazing rights on public lands should be removed or at least charged more with the fees going into mitigation funds. The family farm needs to make a comeback and corporate farms need to disappear. If this makes our groceries more expensive, so be it. It will be better for the earth and the economy in the long run.

Our semi-arid lands west of the 100th meridian were dominated by grasses that retained their vitality when grazed by bison and other, earlier, native herbivores. In many places these grasslands have been wrecked by years of intensive cattle grazing. Federal lands management should become less about cattle grazing and more about ecosystem restoration.

There is a big difference from a cattle drive and a few people walking off a trail. Mountains are the way they are from rain and erosion. Flat deserts have their flash floods. This sure looks like typical conservation taken way too far.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Perhaps if it could somehow be ensured that motorists would be responsible, then this would be a viable idea. However, it is incredibly difficult to enforce proper use of off-highway vehicles (OHVs)... and, sadly, we cannot depend upon the conscience and common sense of the individual. The mistakes of campers and hikers are damaging to a national park, but not half so much as the mistakes of a motorist. (Not to mention, of course, that even responsible use of motor vehicles only further impairs the environment.)

You had me up until "OHV." I'm sorry, but for all the talk about OHV's being sustainable, they seem to do an amazing job of tearing up the places I've seen them. I'm certainly not against OHV use, but it should be done on private lands where they can charge a reasonable usage fee to build trails that can survive OHVs and to combat the erosion inevitably caused by their use, and where the noise won't disrupt the experience for other users.

How many of you drive electric cars to your trail heads to "get away"? Ill bet most of you have and drive SUV's. Before blasting the OHV crowd look at what you are doing and what you can do to help before condemning the rest of the world. I just returned from the Serras and only seen 5 hikers total in 12 days-they werent more than a mile in off the main highway. I seen 3 of them while on horseback and 2 while 4 wheeling. I covered more than 500 miles in that time in a 4x4-I could have never walked that far in 30 days considering the terrain and elevation changes. I got to see than most will see in a lifetime. I enjoy the outdoors just as all of you do but maybe in a slightly different way-whos to say which way is right? I also picked up 2 bags worth of trash someone left out there.

There is an attempt to control the debate by using misleading language. Looking at this site, the first thing it says is "conservation". There is no mention of "multiple use". "President Obama has launched a national dialogue about conservation in America to learn about some of the smart, creative ways communities are conserving outdoor spaces." I saw a bobcat, a deer, turkeys, grouse, and wild pigs yesterday at Hollister Hills OHV park, while on a 3 hour ride. So obviously the animals are thriving with dirt bikes all around. There are trees, streams, bushes, flowers all around. Yes there are some trails and dirt roads, so what? Making dirt bike parks obviously "conserves" the land! Say goodbye to places like Moab and many others if the radical "wilderness" and "national monuments" legislation go into effect. No mountain biking, horses, SUV's on dirt roads, etc. Only walking/hiking will be allowed on millions of acres of land. Personally, I can only hike about 5-10 miles max in a day and that's pushing it. And I don't really enjoy it, it often feels too much like trudging on a death march. Making places like Moab "walking only" will effectively lock out millions of people since the distances are so vast (hundreds of miles) and since most families can only walk short distances of a mile or two at a time. It's really sad that the radicals want to lock the people out of their land... and that the Obama administration is following their lead, making secret plans.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

For me the most critical aspect of trails and roads isn't whether it is for hiking, biking, riding or OHV; it is whether the trail/road is well constructed to avoid damage to the environment. It's far better to have ohv's on well constructed roads and trails than have them making their own tracks straight up the hillside, causing massive eroision. Even the light local ohv traffic in my local area, by local residents is causing major erosion damage on the blm land close to me. Trails need to be well constructed and popular ones need to have rules enforced. It doesn't do much good to have laws in place and have them ignored because they aren't enforced. I'm thinking particularly about damaging short-cuts and users crashing forbidden trails.

Logging of younger trees in Old growth forests makes them much more like their natural state than totally protecting them ever would. Without intrusion by the Park Service and BLM, these so-called Old growth forests would be much more sparce, and healthier than they currently are. Sid Goodloe, a New Mexico rancher, has made great strides at returning portions of his land to its natural state by clearing the younger growth of the region, much as fires would have done in the past if not interfered with my the forest service. He knows what the land used to be like because he was able to locate some very old photos. Through his land management efforts he has seen a much livelier ecosystem emerge and the re-emergence of several species to the area. Many seem to have a false belief that dense, moss-laden, Old growth forests are natural. They are not. Nature would have thinned that land regularly much as the loggers are doing today if left alone. I personally know of many forests where grass no longer grows because the forestation is so thick that it doesn't have a chance. This was not the way it was before we began "protecting" it. Leave this policy alone before we end up screwing things up again like we did with the no-burn policies of the past.

There are many miles of Arkansas rivers that are not able to be developed with ut massive excavation. This is killing our aquatic life at all levels. There needs to be incentive to place this land in conservation easements and not worry about trying to get it in before the current law expires.

The Great Outdoors is impacted by what happens in cities, for example: 1. When you wash your car in the driveway, the toxic dirt from tires, brake pads, engine oil, etc. drain into the storm sewers, which drain directly into the streams and oceans without treatment. 2. Acid rain from coal burning impacts trees and lakes. 3. Smog covers views and damages vegetation. 4. Real estate development replaces what was there before.

Well in 2000 in the domeland wilderness in the Sequioa NF a hiker caused a wildfire that caused 70,000 acres to be burned down. That was nearly 60% of the entire wilderness designated area. That wasn't legal or ethical. So the question of "Why should one user be able to degrade the public land more than another?" is a good one.

## Discussion Question 2

***(cont.)***

Nice idea written on pure emotion their seems to be a trend of these ideas that are just simply someones emotions, feely good ideas, some sort of guilt trip someones feelings has given them now they want others to abandon the good common sense GOD gave them and blindly follow others emotions, how about an idea based on hard verifiable facts. Dont get me wrong I respect your good intentions but as we all know good intentions usually when not carefully thought out and properly executed end up creating all kinds of problems of their own. If their is a shortage of life please show it to me I cant go in any direction more than a few feet without being bombarded with life forms of every kind and every size. Pollution is easy to see and easily verified drive down any road in America and at random stop get out and walk the ditch you cant go more than 20' and not find pollution, the people running our government want to lock up land to preserve it but has not lifted one finger to combat the REAL pollution problem they could easily, efficiently clean up heck we have enough FREE convict labor we could clean every ditch in the USA and recycle all the garbage, we could have a GREATER ecological impact cleaning up our ditches than if we completely locked up every acre of public land, be honest how many people here has went out and picked up garbage in a public area, while were being honest with ourselves when was the last time you tried to teach someone the importance of pickup up trash when they see it.

I am especially concerned about those parkes located in the state of Florida as that is where I live. The restoration work that has been done on the Florida Everglades has been outstanding. But the great work of the Army Corps of Engineers and the South Florida Water Management District is far from complete. We need to continue funding this project until the Everglades is restored to the pristine ecosystem that it once was!

Thus far, the Great Lakes have been promised far more than has been spent. Recently we have seen the reemergence of dead zones in Lake Erie, the shallowest of the lakes, likely a consequence of fertilizer runoff from farm fields. Many cities are having difficulty separating storm and waste sewers in this toxic economy, leaving the lakes' beaches impossible to use after heavy rainfalls. Most of concern are the Asian carp, which are on the doorstep to the Great Lakes now and could easily soon enter the system if we do not disconnect the rivers and canals at Chicago from Lake Michigan. We need to spend the money now to rescue the greatest source of fresh water on this planet and save it from the decimation that would result if Asian carp get through the existing inadequate barriers.

Our nation's wetlands are in critical need of further protection, especially the Great Lakes and even more especially the Everglades, as they minimize flooding damage.

Living in Green Bay, we see the effects of the urban and rural environments on Lake Michigan on a daily basis. The struggle to protect the Lake is fundamental to our life here and to the national interest. Every summer, beaches are closed, rivers browned, invasive species introduced to the Lake. We need urgent action that continues the good work of the Great Lakes consortium of Governors and States and Canada to save the greatest watershed in America.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Even with water crossings, not all cases are equal. In areas with waterways with soft, muddy bottoms and muddy hillsides, motorized crossings can do significant damage, there is little argument to that. But in western areas, most creeks and streams are either coarse gravel, rocks or boulders. I specifically discussed the issue of stream crossings with the federal F&G biologist in charge of endangered bull trout restoration. HIS statements were that, unless ORVs were driving across active spawning beds (rheeds), or were in muddy areas (not much of an issue in this terrain), they posed no harm to the recovery of this endangered species. So, in this case I'd choose to listen to a highly trained professional in this field, rather than uninformed opinions posted on the internet. A (small) number of trails designated by the forest service in my area do cross waterways, and always in rocky areas. R Holloway, do you have any pictures or documentation of ORVers "pouring hazardous waste into water"? I have yet to meet any ORVers that haul their hazardous waste into the backcountry to dump into waterways...perhaps things are different where you are. In all honesty, my on-road vehicle contributes more to water pollution than my ATV. I have a slight oil leak and get the occasional drop of oil on the garage floor, I expect many if not mostmost on-road vehicles are comparable. These contaminates eventually run off into waterways. The seals on my ATV have no such leaks.

For many years the National Parks have been the playground of white America. It is great that a more culturally diverse park system is emerging. This needs to be supported in the expansion plans of the parks. New park space should reflect the diversity of Native Americans and the many immigrant people who have made this country their home. Our rich tapestry is one of the unique identifiers of this country. Our park system can tell that story as no other entity can.

I agree that this is an excellent suggestion. For three years during the 1970s I worked as a crew leader or environmental education staff member for the Youth Conservation Corps. I got to observe and participate in helping teenagers grow in their appreciation for the natural world while developing cooperative abilities and while accomplishing valuable and important conservation projects. Given the backlog of unfunded conservation projects, the critical need for items such as invasive species removal, the high rates of youth unemployment, and the difficulty many recent college graduates and skilled tradespeople have in finding jobs, a reinstatement and dramatic expansion of the YCC would provide tremendous benefits to our nation, in both the short and long term.

I live in a small town in S.C. and this is just the thing I have been looking for. I moved here thinking the job market would be good, living between two large cities. Things are worse! If I could get any information on getting a green space/community garden started in my community I would be forever grateful!! This is what ALL towns, large and small need!!!

When the deer start applying for permits, then we can talk about allowing ATV's in the National Parks, until then: NO!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Citizens of the USA already contribute via the tax system to the upkeep of National Park infrastructure while foreign visitors do not except for the nominal entrance fee that is required. Our National Park system should increase entrance fees for all guests because they are artificially low and introduce a tiered system where citizens are charged one fee that takes into account their contribution as a citizen and a higher fee for foreign guests.

I agree that humans are completely overpopulated and are destroying the planet. I don't agree that it is a right to have as many children as you want. In nature, most offspring die. Humans have removed themselves from nature and made their own rules up resulting in massive overpopulation, a decline in the overall health and well being of our species, and the gradual destruction of our only planet. Drastic steps need to be taken to stop this disastrous progression and to reverse the effects it has had on the Earth. Laws need to be passed to restrict who can breed as well as how many offspring they can have. Mandatory sterilization needs to be put in place. Humane euthanasia must be an option for hopelessly ill individuals. This entire belief system that revolves around human life being sacred and valued above all else needs to change. Humans need to be forced to realize that we are not the end all and be all of the planet. We are but one species on it. We should have no special rights or privileges. We need to be humbled, or our arrogance will be our undoing.

I disagree we need more conservation areas not less. Instead of building suburbs that spread out for miles build up save space, I know people have to have homes and we have to have shopping. The wildlife has to have a home to. Humans are creating a toxic world not only for wildlife but for people to. I can't even drink the tap water in Fairfield Oh it tastes like chlorine which is a known toxic chemical. Find ways to clean the water up without toxic poisons to do it. By using toxins to kill germs and bacteria you are poisoning the population and the wildlife. We need to find non toxic, non harmful to man & animal ways to clean up our water. Man needs to learn from nature how to do this. The Native Americans did it for hundreds of years before money, greed, and selfish humanity ruined it. We need to get back to the basics of what is important and that is life man animal fowl all forms of life,

Of course wildlife are lacking habitat, all man has ever done was to take more and more land away, fence it in and claim it as his own. Have we completely forgotten that this used to be natural wildlife corridors before we arrived? There are better ways of using the land than what we do even though sharing is not a national trait, it would behoove to start realizing that this is one earth for all of us to share and not any one has a greater claim to it than any thing else.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

It is time to start cleaning up what we and our forefathers disregarded. The air is so bad now that there are hardly any places to breathe freely. Having lived all over the world, in some of the worst allergy climates, I was completely distraught to be diagnosed with asthma at the age of 30 after 10 years "back home"; in the land of the free and the brave I found discrimination and hatred at a level I had not seen anywhere else, the environment is a total example of greed and excess. Since I have lived in Texas the last 30-odd years it simply blows my mind that everyone builds low and flat, no one builds up to conserve land. Utility companies take new land to put new superstructures on, instead of replacing existing poles with more adequate poles. We build roads but few sidewalks and wonder why there are such obesity problems.

Keep in mind that in many cases, landlocked public land is landlocked because the surrounding land was a free or nearly free gift from the public through homesteading, mining grants, etc. While I don't advocate renegeing on the transfers of ownership of those lands, I do feel that the current landowners owe some consideration for the public's interest in the landlocked public property. Possible approaches are 1. Deny grazing or other rights for landlocked public lands to owners of surrounding lands who do not allow public access across their lands. Granting the access doesn't cost the landowners anything substantial, but restores the balance of fairness for public access. 2. Grant property tax relief for land dedicated to public right-of-ways across private land adjacent to public land. The Federal Government would compensate local governments for the loss of revenue that results.

Some people don't mind limiting others use of the land, but have a real hard time thinking there's a place they can't hike into. Wilderness designation should mean no people(except those willing to go in naked with no food water or gear).

I guess we need to ban all handicapped and elderly from our parks. What is wrong with electric off road vehicles. They make very little noise. Their soft rubber tires if driven responsibly would do less damage than a steel shoed 1200 lb. horse or a 1500 lb. moose on the trails. I can't understand the narrow minds that want limit use to only " muscle power " I have a proposal lets limit use to those willing to go in naked with no gear, food, or water. Lets keep our parks pristine and natural. There are thousands of places in the western states where you can hike for days see spectacular country and if you screw up you don't come out. Muscle power, adventure and danger, no people no orv's no trails...TOO SCARY WYATT?

If you truly believe only 5% of the us is wildlife habitat you need to visit AZ., Ut., Nv., Wy., Co., Id., & Mt.. I could take you places in these states where you could walk for days without seeing another human. And this is a good thing in my opinion. If you want to see alot of people just go to a designated primitive area; what a joke. Thats where city folk go to get away from it all. If you want a true wilderness experience go where John doe had to cut off his arm to get out in Utah. That was just one semi remote canyon of thousands that you can die in if you screw up like he did. Or go rafting down Black Canyon on the Gunnison in Co. Its a self rescue canyon. If you don't make it out they won't let anyone go in to look for you. Its a wild ride and a 3,000 ft. plus free climb out if you screw up. Not much fishin done there.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Also, to respond to \_\_\_'s comment above, our school does not teach anti-hunting or fishing; there are actually many activities that discuss population control and responsible use of natural resources.

Get such a kick out of people such as yourself that make statements like "What does that accomplish, except to disgust people like me." When your comments help to throw fuel on the fire! Simple as your comment in item d). When in fact The Wilderness Act clearly states "...no use of motor vehicles, motorized equipment..." is there any need for comments when the fact is ATVs and OHVs are already not used in Wilderness Areas? Is it a lack of knowledge or that you wish to create a higher level (as you put it ) disgust?

I think the #3 comment for an exit fee to help fund the national parks is a great idea! If the government also cut its overspending on unnecessary and ineffective programs and advertising, recouped monies from overpayments and owed funds, and simply kept a more stringent control and review of given loans and grants, we would have plenty of money for our parks!

There should be areas for OHVs (and areas without them as well). Presently, there are enough roads in national forests to go around the Earth 17 times. I'm not for closing all the roads, but I don't want to see more roads built into roadless areas. I agree we should protect the land, allow access with some roads, just not have roads everywhere.

I think it refers to wind farms and solar networks with transmission lines on public lands. I don't think this idea was demoting renewable energy.

I agree IF you add National Wildlife Refuges.

I am pretty sure we are ALL part of the public in "PUBLIC LANDS" mentioned. We simply need to control all of the a-holes. Can't we all just get along? The amount of land used by recreation is minimal. In California deserts, it is less than 2% and that is for ALL forms. I am not happy to be disallowed from the 98% but lets be realistic. There is so much land. Lets figure out how not to be the strip

I know a lot of people go to the forest or wilderness to get away from everyone. I do also. I just happen to enjoy riding my dirtbike in those areas. I am quiet and always think about the others around me. I/we try to be part of the solution instead of part of the problem. These problems are evident in society today. It does not matter where you go. I feel many go to these places to get away from a-holes. I am trying to get away from them too. As society becomes overengorged with people and we create more idiots and irresponsible trash flinging slobs, think of this> All of what you do; tailgating, failing to use your turn signals, being a jack ass in a parking lot, littering, is an insult to your fellow man. I challenge any one of you. Stop acting like a martyr or prophet. Let us try and work together to solve these issues. " Can't we all just get along?"

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

And there are millions of acres of land never close to a motorized vehicle. Public lands mean just that

Too many parks are noise polluted - city dwellers have forgotten not only what dark skies look like, but also what quite nature sounds like. Buffer zones separating parks from cities, freeways, railroads, and airports are essential!

I believe the above comment is more an issue of badly designed and built trails than horse use. I've been on several trail builds out West where we're trained to build the trail right to last and for heavier animal use as well as route it away from water flows that the damage the trail. I switched my belief long before owning horses when building trails in Utah's naturalist basin, Grand Canyon and lake Tahoe area's.

Short answer is that there are better methods and more flexible machinery than the large equipment you describe. Steep terrain is very accessible with smaller harvest vehicles. (I've done it.) Removing the harvest is, indeed, a consideration. These smaller type operations would not require the fleet of trucks used by larger outfits. In my area a lot of the family forestland owners deck their harvest and then contract with a self-loader. There are too many roads on public land as it is; we should not be building permanent roads, as the BLM and USFS have done for the past few decades, to accomplish a management practice that won't require that kind of access for another 50 to 80 years. The surplus of roads I see in the West has resulted in fragmentation of the landscape in many ways. As late as the 1960s many loggers put in skid roads for a harvest, then ripped and re-planted them. Fifty years later many of those temporary roads make for a nice right-of-way harvest. Building and maintaining permanent roads in these situations is not cost-effective. Unfortunately, timber sales are contested because they are poorly developed. The government too often fails to present the kind of balanced management necessary. The motivation also comes from a distrust of the agencies because of past bad practices. I agree that facts and common sense are often overlooked, and it's my hope that this site will inspire the government to increase theirs.

## Discussion Question 2

### **Written & Online Comments**

**(cont.)**

I purchased a UTV from Bristers in LA in 2007. bristers.com will re-direct you to their new name, American Sportworks. It's a 13HP Honda on a stout frame with independent suspension, differential lock and, of course, 2WD & 4WD. At the time, it was the most reasonable machine I could find that was designed strictly for work. With a winch and block-and-tackle, I've pulled logs down mountainsides that make San Francisco hills look tame. From a skid road made to match the 50" wheelbase. I have also done testing support for a local company, Barefoot Motors, who have developed electric ATVs for vineyards and orchardists and are soon to come out with a UTV. You can see it in action at { <a href="http://www.youtube.com/watch?v=YJnGTEv6CQI" rel="nofollow" target="\_blank">Link</a> } Unfortunately, in my area, in 1-2 years the skid roads are rutted by off-road vehicle traffic, in 3-5 years they're spewing wash-outs down the hillside, and in 10 they are left trashed and unused because they're no fun anymore. During my forestry studies I learned that many old-style skid roads in the northwest were built to be stable and re-planted. My experience with agency roads over the past few decades is that they are put in for convenience first and integration with the landscape a secondary consideration.

"Unmanaged recreation, particularly off-road vehicles, are one of the four great threats to our National Forests." Forest Service Chief Dale Bosworth, March 2004 "Off Road to Ruin", 2001. George Wuetherer's "Thrillcraft." I could name a dozen more publications that contain study after study, photo after photo, showing the destruction from off-road recreation. It is not personal, folks; what we see on the ground is why we are compelled to limit the impact of this form of recreation. "Most people either can't or don't want to backpack." The latest study I've seen (2008) shows hiking as 30% of public land usage, backpacking at nearly 20....and OHV use at 5%.

Thank you for your educational and thoughtful post. The comments I make deal with the forests I am familiar with in the inland northwest, I make no attempt to speak about other areas and conditions. In much of the West, fire was historically the dominant force that shaped our forests. Forests often consisted of widely separated, mature Ponderosa Pine, White Pine and Western Larch (Tamarack). Every few years wildfires, set by lightning and native Americans, would burn through these forests, consuming ground fuels (grass, brush, small trees). Mature trees would typically not be damaged by this type of fire. Since the early 1900's, the forest service's primary response to fire has been suppression. The goal was to put out every fire by 10:00 in the morning the day after it was reported. These efforts were often successful...too much so. Most national forests now are choked with very thick, dense stands. These stands are also species that would typically have been consumed in ground fires. They are generally unhealthy and prone to disease and insect attack. As anyone that spends time in our National Forests knows, many entire mountainsides are covered with dead and dying timber. This fuel load leaves these forests susceptible to a destructive, high intensity crown fire, not the low intensity ground fire historically seen. Careful management, including thinning via logging, can help get these forests back to a more natural and healthier state. Ideally, this would be a state where low intensity ground fire could be used to maintain these forests. This isn't necessarily the solution in all areas, but it's ignorant to rule out properly managed logging as a tool to restore a healthy forest.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

In principle, I agree with you. I hate to see the loss of a resource, and the devastation that occurs as a result of the type of wildfire you describe. If the area in question is National Forest, this is a resource for all people and should be protected as you describe. However, if this is National Park or wilderness, I would support leaving it "as is". A "300 year" fire, while intensely destructive to timber, wildlife, habitat and watersheds, will also provide a vital educational experience and provide an area to study as it regenerates...perhaps over the course of centuries. Look at St. Helens for example. While not preventable and therefore not comparable, the resulting destruction has been related to the forces of 2500 Hiroshima-type bombs and obliterated a huge area, extending as far as the eye can see. The level of devastation and recovery time are proving educational, and may be similar to your scenario.

I've seen the same situation you describe in Yellowstone just last weekend. We were on the McGruder Corridor, a primitive road that runs between 2 wilderness areas in central Idaho. At least a third of that road ran through burns, many 20 years old. The vast majority of the trees left were still standing. While there was some natural regeneration taking place, it would seem like the high fuel load of dead, dry timber would put that regeneration at extreme risk should another fire sweep this area. It was pretty depressing seeing these mountains, even in unburned areas entire hillsides were covered with dead and dying timber. As you say, a fire in these conditions is very destructive, burning any organic material out of the soil, and creating massive issues with mud flows and uncontrolled runoff. I'd like to see more of these dead trees harvested for some useful purpose. Heat production and perhaps power generation come to mind. It's questionable if this can be done economically.

While I promoted the idea, and like it, I'm not sure how applicable it is in our Western forests. I strongly agree that fuels reduction efforts are critical, as is replanting with suitable species, not necessarily those that bring the quickest harvest cycle. The difficult part in my area is that the steepness of the terrain requires specialized equipment to harvest. While some areas are suitable for feller buncher operations, or wheeled skidders, most are too steep and require hi-line operations. I don't know that these scale down well to the smaller equipment you anticipate using. Another issue is removal of the harvest from the forest. This typically requires "full sized" logging trucks, with the resulting infrastructure. Did you anticipate anything different here? Our area is investigating biomass utilization. Some fuels currently use logging slash to power their boilers. This is only marginally cost effective as it is, due to the cost of transportation, I'm not sure how your idea impacts that. I like the overall concept and would enjoy discussing implementation.

The other thing I should have brought up is that, in my area, virtually every timber sale is contested in court by some of our well meaning, but often ignorant, environmental organizations. Many fuels reduction efforts have been halted this way. A proper harvest, with replanting with species suitable for the site results in a healthier, less fire prone forest. Yet common sense efforts are being blocked by an emotional response akin to a phobia over a chain saw, rather than by facts and common sense.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

do you have any links to the type of harvesting and transport equipment you're describing, as used on steep hillsides. I'd like to learn more. At some point I hope to have enough timber to justify a harvest on my property. Some I can skid with my tractor or quad, some is just too steep. It'll be a while, currently a root rot infestation is turning my timber into firewood faster than I can keep it cut. Self loaders are common around here, I'd anticipate decking it for one. With regard to skid roads vs permanent roads, they are still common in my area where practical. That would be places a wheeled skidder can traverse. Much of our terrain is too steep, hence the line machines. Helicopter logging is also pretty common around here, especially in areas that are more remote. From what I have seen, skid roads are rarely removed in this area. However, it's sort of a moot point. In 1-2 years they are covered in grasses, 3-5 in brush and in 10 they have pretty well filled in with small trees and Alder. Some areas where roads were obliterated they did more damage with sedimentation and soil disturbance during the obliteration process than the road's existence ever did.

thanks for the information on the Brister UTV. These days there are lots of choices for UTVs in this size range. If you are seriously looking at an electric one, Polaris now has one out. IIRC it has about a 50 mile range. I'd really wonder if any UTV is rugged enough for day to day use as a skidder. I've been pretty impressed with what I can pull with my quad, it's been helpful getting downed timber out of places I can't take the tractor. Just the same, I don't think it would hold up for day-to-day use. Someone really needs to come out with a more useful, universal tool for the small-scale land owner that can be run on hilly terrain. I'd really like to see something like a small wheeled skidder, set up with a cat 1 3-point hitch and a front end loader. Some European tractors are really cool, they have 4 equal sized tires, and a low center of gravity for hillside work. What's really cool is that the operator platform can be turned 180 degrees so you are driving "backwards" with a good look at what your implement is doing. This would be ideal with a snowblower or brush mower. Unfortunately, they don't have much ground clearance, don't come with a FEL and don't have good US distribution.

I'd also add, in most logging areas in my area, a UTV wouldn't be able to traverse the slopes, they would flip over due to the steepness of the terrain. In this country line machines are commonly used. They lift the logs off the ground while bringing them to landings, minimizing as much as possible the ground disturbance. (think Ax Men) . This is done in places too steep to work with a wheeled skidder, which itself can operate on much steeper terrain than a UTV. IMO the bad part of line machine operations (high-lines) is that they are best suited for clearcutting or at least very heavy logging within a given area. It's hard to take just a few scattered trees this way.

I can see some of these people's points. We have literally thousands of miles of trails where motorized use is banned, and that avoids conflict. Perhaps it is time to ban hiking, horse and bicycle use on trails built by and for OHV use, with OHV funds. Since the OP is dealing with funding provided only by OHV use, this perhaps isn't a problem. I would hope we could all be adults and play together, but perhaps that's not so.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

We have attended park staff talks at all the major nation parks. A few times we have gone to commercial activities. The park staff has always been more interesting and better informed than the commercial offerings. Funding for staff should be expanded and upgraded. It is for all Americans and for the future generations. The best investment possible.

Love this idea except I think that unemployed should receive compensation for their work just like you suggested that the military be "retained".

Overpopulation is a myth. There are huge areas of available land. People just don't want to use it. They all want to cluster around cities. If we stop urban sprawl and instead populate rural communities, a lot of the problems attributed to "overpopulation" will go away.

I'm not a OHVer, but I think quiet OHVs should be allowed on all NF and NP roads. I'd guess you can enjoy nature at speed from a distance and when you stop (to eat and/or camp).

Too confusing. I'm voting no opinion. PS: OHV users are not all lazy. Some couldn't hike if they wanted to.

I'm all for reducing pollution, but not in an effort to reduce global warming. Everyone takes it on faith that the warming is caused by human actions. It is far more likely that such a huge global affect is natural. Yes, we should deal with the fact that the earth is warming, and yes we should reduce pollution, but let's not get bent out of shape thinking that our efforts at cleaning up the environment are going to prevent the inexorable flow of climate change.

I'm not an OHV user (though I'd like to be), but if electric OHVs were used on designated trails I can't see anything wrong with it. Responsible OHVers shouldn't have everything ruined for them by a small group of idiots. Make the penalties for irresponsible use more severe - and enforce them.

I believe they call them off HIGHWAY vehicles now because they are usually responsibly used on park dirt/rock roads. Yeah, they shouldn't stray from those roads, but that's not what you said. Demoting...

OHV use that just tears up an area (the sort that happens in areas like you are describing) is not what is being discussed on this site. These discussions are more to do with OHV use in natural areas. I don't think anyone has a problem with OHVs in areas that have been ruined already (strip mines and the like).

Why don't they open up more land for OHV use -AND- make punishments for irresponsible use of the land more severe? That, it would seem, would make everyone (except the irresponsible idiots) happy.

I'm for responsible quiet OHV use, but only on designated trails. Sharing the trails with hikers and horses is a bad idea.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

We saw dated stands of timber planted by paper companies when we were in Washington state a few years ago. That kind of tree "farming" seems pretty responsible to me. America is far from perfect regarding the environment, but we do a lot right too. Let's just keep working on it and getting better.

From reading this site, I'd agree with you. The responsible OHVers need to tell the idiots how stupid they are being. Unfortunately, I doubt it will have much effect on morons like that. Too bad it ruins it for the responsible OHVers...

Develop electric OHVs and only use designated trails. Make the penalties for irresponsible use more severe - and enforce them.

I'm fairly conservative, but Irene Schmidt makes a good point. We do spend way too much on defense. Being the only remaining superpower, you'd think we could cut back a bit now...

I can demote this idea (already did) because the warming we're experiencing is too large an effect to be anything but natural. We can remove pollution of any kind you want to mention (and we should), but it's not going to stop the warming. We need to get used to the idea and figure out how to deal with it.

Sure - as long as people aren't allowed to sue the gov't when they pick the wrong mushrooms and end up sick or dead...

Well said. My two cents: Some things are too important to put them in harm's way. Harm's way in this case being the vagaries of profit, power grabs and selfish destructive use. Yes, science is currently being made into a villain. Al Gore was perceptive in using the title "An Inconvenient Truth" for his film. Those who are inconvenienced by competent research are fighting back with everything they've got--and some have vast corporate wealth to invest in this. The view among some on the political spectrum is that people must be stopped from listening to anyone who is a scientist, or who works for a university, or who has witnessed the damage being done. Call these dedicated people "elites," and devalue their information before it is taken in by the ordinary folk.

We all have to act responsibly. On most of the dirt roads I travel, it would be foolhardy to exceed 10 or 15 mph most of the time. (Sometimes its 1 or 2 mph!) The problem is that when the roads are closed, no one can enjoy the land because there is no access. I first got excited about exploring the California desert after buying and reading the book "Adventuring in the California Deserts", published about 20 years ago by the Sierra Club(!). Today, about half of the roads listed in that book are no longer open to the public. Let's protect the land, and also allow people to continue to enjoy and appreciate their lands by keeping the existing roads open.

To encourage camping, keep the existing roads open. Allow people to explore and enjoy their lands using the existing roads. Let's protect the land, but keep it accessible.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The BLM has been mismanging our public lands for decades. Foreign corporations such as British Petroleum rule. They are right now removing thousands of wild horses from several states to make way for the Ruby Pipeline. All at taxpayer expense. They allowed the BP Gulf disaster to happen and they are allowing mining and drilling on public lands without environmental studies. They do make money on mining and drilling leases but they are not at fair market value. They are at fees that were set decades ago. When the West was vast and unpopulated. They've blown hundreds of millions of dollars on wild horse and burro "control". They are feeding 38,000 stuck in pens in the Midwest right now. They've emptied lands set aside by Congress for horses and burros of horses and burros. They paid one family over \$12 million dollars to round up horses using helicopters in the last ten years. They lose hundreds of millions annually on the cattle/sheep grazing permit program. Yes, I said LOSE. Large corporations, some foreign owned graze over ten million cows on public land for pennies. Not even close to fair market value. Producing less than 3% of US beef but at a ecological cost and taxpayer cost of billions. Family ranchers hold a small minority of permits. Ted Turner has permits though. He could certainly afford to pay fair market value, ya think? The Myth of the Cowboy and Good Old Boy politics has ruled the BLM for decades. The General Accounting Office (GAO) has documented their excesses and waste but nothing has been done. Secretary of the Interior Ken Salazar is a Democrat but has acted like a Reagan/Bush Republican during his time in office. Oh yea, he is a cattle rancher....

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Horses did evolve in North America. This has not been in question look in any textbook on the subject. Horses spread to Asia and Europe via the Bering Sea Land Bridge. Humans came to North America via the same land bridge. Horse bones that have been dated to long before Columbus have been found in North America with spear/knife marks on them. Recently, cliffs in Canada have been found with hundreds of horse bones with tool marks on them below, indicating that early Native Americans drove whole herds off the cliffs to their deaths for food. While climate change may have played a part in the possible extinction of horses in North America, human predation did too. When the Spanish brought horses to our shores in the 1500's they were re-populating them not bringing an invasive species. Regardless they've been here 500 years which is far longer than most of our ancestors..... The Bureau of Land Management has been in the horse business for thirty years. They have spent hundreds of millions of taxpayer dollars. They have 38,000 horses in pens in the Mid West right now. More than on the range. There are tens of millions of cattle on our public lands in the West and about 30,000 horses. Do the math, cattle are destroying the ecosystem, not horses. There are scientific studies that prove this yet the BLM persists in removing horses spending hundreds of millions of taxpayer dollars in the process. The BLM grazing permit program loses over \$100 million annually. Most permit holders are large corporations not family ranchers producing less than 3% of our beef. Foreign owned mining and drilling corporations are raping our public lands as well. British Petroleum is part of the Ruby Pipeline going through several states and thousands of horses are being rounded up this summer to make way. Horses with nowhere to go but feedlots in the Midwest costing the taxpayers millions to feed as they stand nose to tail in misery. Madeline Pickens has proposed to buy land for a sanctuary with her own money and donations not taxpayer money. She has proposed to take all of the horses now in pens. She has asked the BLM for grazing leases surrounding the sanctuary to pay for horses grazing instead of cattle and they have refused. They have refused all offers from all groups to have grazing leases to let them go to wildlife or horses. The BLM is lying in the first place about them being over populated. There are only about 150 mustangs in all of Montana. How can that be over populated? Look on a map. Lands set aside for mustangs by Congress in 1971 are being emptied out. The BLM is zeroing out whole herds all over the West. Colorado is close to losing every mustang. There is no cost to leaving them be. It would be a huge savings and if the BLM spent a few million on parking and signage and advertising tourists would come by the thousand to try to see a wild horse. American Mustangs are fantastic riding horses that are very trainable and very healthy, their feet and legs are far healthier than modern horses. There are multiple groups and programs working to get some trained and adopted but the horse market is terrible now due to over breeding by pros and back yard breeders. Slaughter was a dirty little secret for many professional breeders and now that it has been stopped breeders must cut back. Mustangs should not be caught in the crossfire. We should be advertising these healthy hardy horses to the world not treating them like worthless plugs. They are just as much a symbol of America as the bald eagle and the bison.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

FYI Madeline Pickens is a long time horse owner. She isn't some do gooder with no clue. Her former husband was Allen Poulson and together they bred and raced some of the top Thoroughbreds of the last twenty years such as Cigar, Azeri and Rock Hard Ten. She has a website and a Facebook page detailing her plans for a mustang sanctuary and is taken seriously by everyone but the BLM.....

There is no comparison between the population of white tailed deer in the East and wild horses in the West. There are 30,000 horses left according to the BLM covering a far larger area. (Oregon, Montana, Wyoming, Colorado, California, Utah, Arizona) Pennsylvania alone issues more than 100,000 deer tags (hunting permits) annually. 150 horses in all of Montana. In the Pryor Mountain Wild Horse Refuge. That's it.

54 Congressional Representatives sent a letter to the BLM in July of this year asking them to stop the round ups but they were ignored. The BLM insists they are "saving" the horses and they have convinced many including Congress, the Senate and several Presidents that this is true. There are about 150 mustangs in all of Montana. Look on a map and see that saying they are over populated is ridiculous.

Please fully fund these National Treasures!!!!!!

The BLM is a rogue agency that is managing OUR wild horses and burros on OUR public lands into extinction in order to pander to special interests in their incessant land grab of rangelands designated by law to our wild equines as stated in the 1971 Wild Free-Roaming Horses and Burros Act. The BLM refuses to be transparent, they lie about EVERYTHING to justify this shameful equicide, they waste taxpayers' money, they break one law after the other and they apparently answer to NO ONE and all the while the will of the American people to preserve these national treasures is completely ignored. THIS MUST STOP NOW! It is time to clean house!

This opportunity needs to be available to all of the nation's K - 12 students, not just title 1 schools. This may also provide a good opportunity for the private sector to help with the funding of the TRT salaries. The more people that have a vested interest in the education of our children the better.

I am strongly opposed to the government closing more federal lands to multiple use and even more against the government purchasing more private lands. Wilderness type of lands are nonproductive lands and with the economy so bad these days it would be the wrong thing to do.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

National parks are supposed to be natural, they are supposed to rot and burn, and can always be used as a bad example, in my opinion. The same problem exists on National Forests, where something like 50 million acres are at high risk of conflagration. These areas should and could be salvaged. In some cases, trees can be salvaged even after a fire. However, the Forest Service has a system that delays salvage for at least a year, when most of the timber is spoiled. Areas that are heavy to standing dead timber create a huge risk of fire, and these are not nature's groovy way of rejuvenating the forest. Take a look at Yellowstone on Google earth, and after more than 20 years (I'm not sure how current the photos are) you can still see vast areas of gray ash with dead trees. The fires have sterilized the soil and killed the seeds. Logging in these areas is far more controllable, allows much of the carbon to be sequestered, can leave buffers along streams and critical wildlife habitat, and creates income that can be used for replanting and other conservation efforts. These are all things the fire will not do. Meanwhile we import wood from places like Russia and South America. Wood is good. Think globally, act locally.

It is my understanding that the USDA is planning cruel and inhumane wolf killing tactics such as gassing wolf cubs in their dens and shooting them from helicopters. Such behavior is unconscionable, scientifically unsound, and an outrageous use of Americans' tax money to attack and destroy our wildlife heritage. The USDA needs to support methods of constructive interaction between wolves and human interests rather than cruelly exterminating wolves, which as other posters here have noted, just harms the entire ecosystem.

I know it's already said in those many comments, but let me say it one more: OHV, and enjoying nature does not go together. Motorized recreation is NOT healthy, walking is!

I too, have never seen any ATV, dirt bike, jetski, or snowmobile that was quiet enough to not disturb any wildlife around. For those who cannot hike, or use a bicycle to travel on trails, most can walk or use a golf cart. For me, it would *\*have\** to be a golf cart, since I'm no longer able to hike very far at all. RV parks would be great, and you can bring along your bicycle or golf cart. ATVs, dirt bikes, motorcycles, and snowmobiles are not only loud and intrusive, but they do so much damage that it does take years to ever resemble what it was before they were introduced. Golf carts also use rechargeable batteries, are quiet, yet allow one to get around in many areas, IF there are trails. I do agree there should be areas set aside for those who enjoy those hobbies, but it should not be where it would drive off the wildlife, or others who wish peace and quiet. Noise should also be limited to no loud music, etc. Sadly, most people cannot be inside a home anymore without having the tv or radio on. What ever happened to plain old conversation? Don't interrupt the show until time for advertisements. Everyone in natural lands needs to be aware of not leaving a footprint, e.g. no trash thrown out (carry a bag with you), have enough Park personnel to maintain quiet areas, versus areas where motorized vehicles are used.

Of course, but it is difficult to impose this on private lands. How could we protect the old growth on private land?

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I support the idea of this park, but I agree - the Eastern US needs more public lands - particularly more old growth forests. Please see my idea for an Old-Growth Forest Network (America's Next Idea) that would preserve a forest in every county where forests can grow. This is not either/or. Let's do both of these!

thank you for your support. I have read up on actual ancient forests and I have been in many of them. Unfortunately I have to drive very long distances to visit various old-growth forests. In most cases the reason they are so scarce is LOGGING and not fire. Currently less than 5% of our forests are old-growth, and in the east that figure is around 0.2%. These figures were much higher before industrial logging. Different forest types have different levels of susceptibility to fire. I realize that "protecting" a forest on paper does not mean that fire, or insects, or wind are no longer a threat; but it does improve the odds that the forest will attain or keep its ancient old growth status.

This is a really good idea! The broadest threats to biodiversity are now (1) invasive weeds together with (2) overbrowsing by deer and their relatives. There are many local threats to biodiversity -- local losses of habitat -- which are important. What has now emerged are the two broad threats that cross property lines and cross roads -- that are slowly destroying the possibilities to grow forests in much of the US. People who work for solutions will be doing a great service for sustaining nature in the US. Governments have been absurdly slow to react because the problem is not sudden. It emerges over months and years, and can be stopped only in its early stages.

## Discussion Question 2

### *Written & Online Comments*

*(cont.)*

Ok, hello: everyone is hopping mad at everyone else. What does that accomplish, except to disgust people like me. Here's what I think: a) Wildlife corridors are essential to maintain a healthy gene pool in the species now contained in National Park areas, and to ensure the safe migration of myriad species who do not know about "boundaries". They deserve safe passage, and don't deserve to run amok of trophy-hunters outside of the protected boxes we've stuffed them in. b) MORE wild land needs to be kept from development, the petroleum and mineral industries' greed, and from rampant hunting. (Sorry, boys; telescopic point & kill ain't my idea of a reasonable relationship with our wild companions -- unless you can't afford to buy your protein sources at the local Piggly-Wiggly. How about spending that money on groceries instead of buying an assault weapon and bullets?) c) Where on earth does our arrogant species get this idea that the whole world is here for our benefit alone, and thus is exploitable at our whim? We call everything we want a "resource", and what we don't want (e.g. which is inconvenient for promoting our enjoyment, profit, or "progress") we eliminate, like the Wolf. Frankly, I look upon humans as a sort of noxious, rapidly-increasing, bacterial growth that is strangling all in its path. d) ATVs and OHVs do not belong in wilderness areas. Period. They make a helluva lot of intrusive noise; they smell terrible and pollute with their emissions; they mash down plants and destroy delicate ecosystems. Trust me: our local ATV/ORV/Snowmobile Club members destroyed a large part of a small meadow we own. They got disinvented. E) GUNS DO NOT EVER, EVER, BELONG IN NATIONAL PARKS. Why do gun-owners want to take guns into the parks in the first place? I question their motives. Forget it; leave the Kalishnikov at home. Firearms in national parks are completely unnecessary, dangerous, and inappropriate. If you're worried about a face-off with a Grizzly then walk in Grizzly-free territories; guess who was there first anyway? IT'S THEIR HOME. As a life-long NON-gun-owner I do not want to even walk past a gun-totin' visitor and you know what? I have my rights, too. My tax dollars help pay for the Parks. F) The beautiful National Park in my state provides low-impact, "green", bus service to enable visitors to see the Park without driving their cars through it. I applaud this, and urge more services like ours in all wilderness areas, and State and National Parks. G) Parks need more funding. Park rangers and conservation officials need higher salaries. Their numbers should be increased. More must be provided by the feds for the upkeep and maintenance of park facilities (trails, bridges, shelters, et cetera), and interesting educational opps should be provided for the public. They ought to -- they deserve to -- know about, and learn to respect, the ecologies and wildlife they are visiting. Oh -- and p.s. -- I do not live on +/-1200 acres of selfishly-guarded private land, nor do I have a "redwood-lined" study. Nope; I live a desperately frugal life on 2.3 acres, in an old house that lets the wint'ry winds in. But I do drive a car that gets 32mpg and I love Mother Earth.

In Washington designated "forestland" gets a huge property tax break, with the property tax bill for 1,000 acres of timberland about the same as a medium sized home. This tax break is in place because forestland has public benefits, including outdoor recreational access. Since this tax break was put in place, many large timberland landowners have closed their land to recreation, even charging a fee. These type of property tax breaks should be reduced if private landowners insist on keeping the public out. The resulting revenue could be dedicated to providing recreation on public land.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

biodiversity in the Ancient Forest National Park Proposal is considered to be a 10. Also, scenic resources and recreational opportunities are a 10. Water and air quality in the proposal are also a 10. I support an old growth forest network, but ancient forests take hundreds of years to grow.

...and what on earth is the evidence for "renewable energy may do extreme harm to our public lands and wildlife?" This I can assure you of: global warming will do extreme harm to our public lands and wildlife.

I agree that there should be some public lands where ATV enthusiasts can do their thing--it's their land, too, and hey, it's fun! However, the thing that people proposing 1:1 and similar solutions forget is that the noise of those vehicles spreads far beyond the actual space they use. You can be miles away from the fumes and the erosion, and still not be able to have a quiet outdoors experience when OHV's are active, especially in natural areas with large bodies of water, where sounds travel farther. For those who go to public lands for quiet relaxation in a natural setting, a nearby OHV trail can completely ruin a camping, fishing, hunting, or nature-watching trip, even if they never come across a vehicle in person.

As a non-hunting hiker, I give a big thumbs-up to this idea. I've often felt hunters and anglers put us backpackers to shame on the "put your money where your mouth is" front! Most wildlife enthusiasts I know voluntarily donate to conservation organizations, but I doubt the average casual weekend backpacker is putting up %11 of what they paid for their boots, tent, pack, and camp stove. (should be aware that most tent-camping and hiking gear not related to hunting or fishing isn't included in current federal excise tax programs.) Granted, some hikers aren't going to use their gear on public land. Well, some hunters belong to private hunt clubs, and some anglers fish on private property, but they're still paying the excise taxes on their gear.

Work for renewable energy sources, beneath it all, because if we can't get off coal plants, our natural places will be destroyed along with our lungs and general health. The coal plants have nearly destroyed the Great Smokey Mountain National Park. We need a national energy policy that includes an huge tax for producing carbon dioxide! Please read up and contact your legislator. Everyone's afraid for their re-election in November and don't want to LEAD in this direction, but we need to show them we're all serious about a clean energy future! Thanks, Dina Nash, Little Rock Sierra Club and Ozarks Society Mbr.

You should not group all user groups into such a bad category. I recreate off-highway, and make sure to clean up after myself and others when needed. I follow the tread lightly of leave no trace that I was there. Can others say that? Not always. I have helped on many OHV trail cleanups, and not once have I seen someone from the Sierra Club or other group that wants to close the trails present. If they think we are such bad people, they should come out and meet us in the fresh air and on a trail cleanup to see how nice we really are, and how we respect the environment for the natural beauty that it provides us and others. Public lands are here for all to use, no matter how you recreate on them. If you use motorized recreation, it needs to be done responsibly all the time.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

wrote that no one had ever actually suggested opening up vulnerable areas to OHV use, but that is not true. I just found a bill currently pending in the Michigan legislature that would allow persons who are 60 years old or disabled to ride OHVs anywhere on state-owned land -- on or off trails -- specifically including areas where nursery planting stock is being grown, dedicated natural areas, and other environmentally sensitive areas. Under that bill, so long as you were at least 60 years old or disabled, you could ride an off-road vehicle anywhere on state-owned land, on or off the trail, apparently without regard to the consequences: { <a href="http://www.legislature.mi.gov/documents/2009-2010/billanalysis/House/pdf/2009-HLA-4411-1.pdf" rel="nofollow" target="\_blank">Link</a> } I am sympathetic to people who have physical limitations, but some places should be off limits to motorized vehicles. Apparently, some politicians think otherwise, influenced, no doubt, by vocal OHV enthusiasts.

At the very least, the federal government should prohibit children under the age of 16 from driving ATVs on public land because that practice is simply too dangerous according to the American Academy of Pediatrics and other medical, safety, and health groups. Pediatricians and neurosurgeons who have to deal with the deaths and the brain and spinal cord injuries to children on a regular basis want to see this practice stopped. Young children do not have the physical or mental abilities needed to safely drive these vehicles. The federal government should take the lead by banning this dangerous practice on federal lands since the Consumer Products Safety Commission and other agencies are well of the risks.

Strenuous, perhaps, but very dangerous for children under age 16. Nothing so dangerous (killing or injuring over 40,000 children every year) deserves the "family friendly" label. Family friendly should be reserved for activities kids can do with their families without such a high risk of injury.

Haven't people read about the horrible off-road accident that just occurred in the Mohave desert on federal lands? A off-road truck driver killed 8 people and injured dozens of others when he lost control of his vehicle. So there are major safety as well as environmental issues involved with this sort of thing. It is already allowed in some places, and rather than being expanded, a moratorium should be placed on all racing events on public land while the safety and environmental issues are studied. Perhaps someone could propose this as an idea here?

## Discussion Question 2

### **Written & Online Comments**

**(cont.)**

Me, My family, My Club and friends operate OHV's and ATV's on Federal Land in California. Every able member of my family is certified by the ATV Safety Institute and we are truly stewards of the land.... land that you simply cannot access without an OHV! And I say, Unbelievable! I can't believe that a group of people (like those leaning here) would want to pull down an entire industry and recreation activity by "Banning OHV use on federal lands". Last month, on my ATV, sitting atop a dune on federal land, I started up a conversation with a man parked next to me. After a bit, I learned that he was from Oregon where he did a lot of trail riding. He then showed me a scar across his shoulder and told me of his injuries from a Steel Piano Wire that was strung across the trail between two pine trees, each containing carved text stating "Tree Hugger". The wire pulled him off of his bike ultimately causing extensive damage to him and his bike. No question about it, his tall height saved his life, as the wire was placed at height to hit someone in the neck... and take their head off! He was on Federal Land, on an open and legal riding trail. I was blown away! I had never heard of that kind of thinking! I see now what actions these kinds of discussions spawn. Not cool folks!

So you want to isolate your MC sport from others OHV users? This, at a time when Off Road Enthusiats needs to unite? No thanks!

Where in America is there land still available for animals? I highly doubt there is any land in America that has not been spoken for, owned by individuals, corporations, federal, state, and local governments. Wildlife knows no boundaries. This is evident as we read news accounts of more frequent interactions between bears and people. Usually, these interactions result in the relocation of the bear and many times, the death of the bear. Some will have you believe this is happening because there are too many animals and therefore, they should be culled usually by hunting. The real reason, I believe, is because there is not enough land for wildlife and it is not contiguous to support their roaming patterns. In my mind, we need more land for conservation of wildlife.

Here we go folks more proof the environmentalist that want to keep everybody and everything OFF Public Lands just dont know what they are talking about. This is why I keep insisting you deal with FACTS and not their emotional driven ideas that never never backed up with FACT Speaking of health and OHV recreation, a new study coming out of Canada was just released on August 26th. We all know how strenuous OHV recreation is, but this study, conducted by York University, proves this very point. If you would like to learn more details about this study, please read the ATV/ORM Health Benefit Study Fact Sheet. Here is a link to the FACT SHEET -----&gt; { <a href="http://www.arra-access.com/site/DocServer/2010\_ATV ORM\_Health\_Benefit\_Fact\_Sheet2.pdf?docID=321" rel="nofollow" target="\_blank">Link</a> }

Light shields to direct light where it is needed rather than up in the sky and over to my property should be mandatory. This simple idea to keep light where it's needed and on the property that benefits rather than all over the place shouldn't cost much. Conserve light, energy and be considerate of your neighborhood which includes the whole globe when it comes to putting light just where it's needed.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Our natural beauty should be protected at all costs. People who say that Global Warming is not happening are hiding their head in the sand. If something isn't done soon we can lose all the beautiful places in this country.

We have a unique opportunity to use the 150th Anniversary of the Civil War and the attention it will draw to make a difference probably for the last time to preserve the battlefields of that conflict. Whether it is to support increasing land preservation or fighting to keep urban sprawl and traffic from interfering with tourists visiting those hallowed grounds (i.e. Walmart at Wilderness or Casinos at Gettysburg to name a few.) Mr. President, please support any efforts to at least maintain current funding for preservation and the National Park system if not increasing those budget items. Even taking 1% of what you are attempting to save in Defense spending and putting towards these efforts can help. If it was important enough to the veterans of the Civil War to work together North and South to preserve the battlefields of that conflict, its the least we can do and the current generation to do the same.

Exercise of the body rather than the fingers and thumbs on video controllers is a great idea and we are nation of obese people - but Off Road Vehicles and killing animals don't strike me as either a very Green or compassionate way of solving the problem. Get people off their butts and out into the great outdoors yes, but not to destroy the soil, plants and the wildlife. What is it with our attitude? I don't understand the destructive needs of people to show their power and superiority with bigger louder machines and guns killing small creatures. Go run off the excess macho energy.

I wonder what effect all this light pollution has on night time creatures such as owls trying to hunt and who need the dark to be just that - dark? I cannot imagine it can be a help to them. I totally agree that lights are polluting. Like grey noise. Imagine if cars were all electric - how peaceful it would be.

There are enough wilderness areas now. Closed lands are not public, they are just that closed. Responsible management is the answer. To many people will never be able to see some area's of this great country because there is no access. Education is a better answer. Tread lightly.

Nonsense. Roads and motorized vehicles kill the wild. Check the science.

One only has to look at the successful rebuilding efforts in New Orleans to understand the difference between government initiatives, however well intentioned, and the better model: community based non-profits who can channel funds where they are most needed to do the most good for people who live in the region.

How do we trespass on public land?

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Wildlife ARE lacking habitat. This author's ideas of open space must be corn fields, soybean fields, and wheat fields. Approximately 2.5% of the lower 48 contiguous states are designated as wilderness. And unless you go to a zoo, you will find that different species live in different areas, requiring protected land sprinkled across the globe. Leading biologists estimate that we need to protect vastly more area from development than we are currently protecting, particularly in species-rich habitats.

As a person with a disability, I think that there are a lot of places that could be easily accessed and those areas should be expanded for those with disabilities and leave the more remote places wild with the option for those organizations that help people go where they normally wouldn't figure out how to get them there safely. I live near Highland Lake in Windham, Maine and even though by living here I have right of lake access, there is no handicap access so living 100yard or so from the lake doesn't let me enjoy it or go in it and it would not take a lot to make a ramp to a dock here. I'm sure there are a lot of places like this. We just need to use our "common" sense.

"self serving greedy Environmentalist" The last thing environmentalists are is self serving and greedy, the self serving and greedy are the absolute capitalists. Those who want to make as much money as possible without any regard for future impacts to anybody or anything. "The other things everyone forgets is these far left wing extremist hate Humans." Says the human loving far right wing non-extremist? (insert sarcastic tone here) I don't hate humans, but people who don't think about long term consequences and don't take facts into consideration are really annoying. People like you. "Make that 63 realistic people vs 8 human hating FREAKS." Didn't your mom teach you manners? You guys make no sense, you call people these hateful names while calling them hateful. But you are not trying to make sense are you, just trouble. If you have a point to make then make it, but keep your hate to yourselves, we don't need your feces.

During the great depression our society supported the unemployed by creating programs such as the CCC. The unemployed were hired to build and maintain parks, roads, and other infrastructure for the betterment of our society. What do we do now, we spend billions of dollars providing extended unemployment benefits for 70 to 100 weeks so they can sit at home and do nothing while our parks are closed and deteriorate due to lack of funding. Get a clue and push for constructive support of the unemployed by giving them a chance to "payback" society for the support they have been provided over the last 2 years. Limit unemployment benefits to 20-30 weeks and any additional support after that comes with participating in a supported employment program like the CCC. The individuals benefit, parks would benefit and society as a whole benefits.

As technology advances and as we grow more accustomed to the indoors for so much, we lose sight of nature. Even if personally, someone doesn't enjoy going to parks and what not, we can't just be selfish and say no. We have a responsibility as human beings; what about animals? Parks are a breath of fresh air in urban areas. We should take advantage of these opportunities. Parks should be everywhere.

## Discussion Question 2

***(cont.)***

I have seen much destruction by snowmobiles like chasing the deer in the snow off the trails and even running over some of them. I live in Florida and everyone knows The Villages. Their concept is quiet golf carts to everything because everything one needs is accessible. I am very much against OHV's not for responsible users but I have seen the irresponsibility. So one has to way both sides. I also live on the Homosassa River and see many boats who are to travel at low speeds in the rivers because of Manatees. No such luck. Many are killed by reckless boat runners. Rangers should not have to patrol the trails for violaters just like teachers should not have to be disciplinarians, they should be using the time for teaching. Speed should not be the issue and they should be manufactured with reduced speeds. If you want to speed with these vehicles you have no right to be in the wilderness. Speed limits would help but they have to be built in to the vehicle.

Oh and by the way I pay my dues to ride my ATVs. How many of you of clean up your poop? do u use a pooper scooper? bet not. You know that puts your scent out and the animal's won't come close to it, they run from that too.

We've evolved into a 24/7 society addicted to light, and as a consequence the true, pristine magnificence of the night sky has been lost to 99% of Americans (P. Cinzano et al, 2001). So the National Parks serve as an important and increasingly critical refuge where we as humans can reconnect with the night sky. There are economic and environmental issues for keeping light pollution minimized, as others have commented, but there is a need to preserve the night sky as part of our natural heritage. As naturalist Henry Brewster wrote (The Outermost House, 1928): "Our fantastic civilization has fallen out of touch with many aspects of nature, and with none more completely than with night . . . With lights and ever more lights, we drive the holiness and beauty of night back to the forests and the sea . . ."

I find such waste and much anger at our Government is the BLM is from taking our wild horses from the wild which is where they belong, But they take them by the thousands each year and send them to slaugh to Mexico and Canada for food, This is plain wrong!!! The lease out the land to cattle and sheep to graze on it so whats up with this. To me this is very undermining the people of our Country plus they want to start drilling again thats why they took the horse's to run the Ruby pipeline, They thing we are stupip but they need to know too that we know of there dirty deed too.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I disagree. The Obama administration came into office with a deficit, two wars, and this country's infrastructure on the verge of collapse. The previous administration instigated policies, internal and external that nearly ruined us, and whaty did it matter to them, they would be gone and leave the mess for the next President. In one year he has accomplished, against all odds, what others could only dream. Our tax dollars are finally being used for the good of the people, and our country's crumbling infrastructure rather than lobbyist or corporate interests. We are fixing problems that have been ignored for decades. I wholeheartedly agree with everyone here and am uplifted by all of your remarks. It gets abit unsettling and discouraging at times when we seem so gung ho on destroying or compromising our planet at such a rapid rate. Once these protected lands are gone, they are gone; no amount of human endeavor would ever be able to make them right again. Not in the way they were made. These majestic parks are our young nations monuments, cathedrals, and museums. We can do this. look at all we've accomplished once we have set our mind to something. We can do this. Fully fund our national parks before its too late.

From the sounds of it, the most strongly opposed to OHV's have the least first hand knowledge of them or there users. I'm not talking about the yahoo's spinning in circles in the parking lot or the guy tearing up a creek bed, everyone shakes there head at them, even other OHV users. The people who get out and enjoy the trails and forest on there OHV's are no different from you so why should they be treated different? You didn't walk to the trail head did you? You most likely drove 30-100 miles to get there while dumping "fumes" in the air the whole way, maybe we should limit city folk from venturing out the city, how about that? That's basically what your saying when you want to limit OHV use. I'm from rural USA, and I think everyone should have the freedom to enjoy our country's freedom and having free & open access to national forest, BLM, and state land no matter how they choose to use it. Locking it up from OHV users just limit's people access, and why would you want to restrict anyone from enjoying the outdoors?

Its simply incredible that states - "OHV stickers I've seen are most often torn and illegible". That means it's the majority of all - now why could that be? I see hundreds of riders and have yet to see this problem. Is it that everyone that rides OHV's in that area do this? Or could it be that the one person making this statement sees only what he wants to see to make a point! But then again maybe point of view is based on "...a whole lot of enthusiasm, but not a lot of intelligence."!

I think this idea is requesting a LARGER plate or sticker than the "Green (or red) Sticker" that California now uses for non-street legal OHV's.

If the National Parks are not preserved, then future generations will not be able to see the beauty of America. Please save our National Parks and all Wildlife. Wolves are a necessary part of our ecosystem.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

For anyone's information, on 08/05/2010 a federal judge ruled in favor of Defenders Of Wildlife. By this ruling he has put the wolves back the Endangered List. This ruling came in the Federal Court in Montana. Judge Molloy was the judge who ruled to protect the wolves. Idaho and some other states still want to kill the wolves. Even though the ruling was ruled in favor of the wolves. Wolves keep the herds of wildlife healthy by weeding out the sick, weak, lame and old. Ranchers and farmers say they are going after their livestock. If (they) the ranchers and farmers would dispose of the carcasses of the dead livestock. Then the preadotrs would not come after the carcasses.

As beautiful as blue L. Ontario is, we know that there's more to this than its obvious scenery. There are chemicals still in the lake sediments, invasive mussels, snails, fish, eels, fluctuating lake levels which affect shoreline animals like mink and otter, as well as the marshes, impending wind farms and hydro-diversion in the Niagara R. and constant runoff from agriculture, lawn chemicals, waste water treatment. Blue-green algae blooms, giant green blobs of floating algae and now water lily beds which were never there before. Where have we been sleeping while the great lakes just seeped in this and we along the shore let it go on over the past decades since Lois Gibbs pointed out the birth defects at Love Canal?

This is a hidden, community-building resource which if ignored. It is supported by public school systems, but often is self-sustaining. This vast area is rarely tapped for its potential to work cooperatively with state/federal/non-profit environmental organizations.

I noticed your comment focused on coal mining. We need to start moving away from coal to more green energy sources. Things that don't pollute, like wind and sun. I know the technology is not there yet for all our energy to come from green sources, but it is something we should be working toward. Countries like Germany are far ahead of us with the amount of energy they produce that comes from these sources.

When I moved to my current residence in rural north central Massachusetts, the night sky was dark, and the Milky Way easily seen on a summer evening. In the three decades that have elapsed since then, I've seen an alarming increase in light encroachment, as the Milky Way is no longer readily visible from my residence. We may not be able to control rising human population and development, but we can control the use of lighting to preserve the legacy of a dark, star-filled night sky.

Continuing with the lawn travesty, don't forget the fertilizers, weed killing chemicals and pesticides that are used to maintain this killing field! They all end up going down the drain and into our sewage treatment pants where they are then recycled into the water we drink without sufficient removal of the chemicals! Next time any bald person begins to re-grow hair without the use of products specifically developed for this purpose think of lawn fertilizing chemicals. If you are rapidly losing your hair think of weed killing chemicals. If you are considering Viagra think of pesticide chemicals! When you flush your expired prescription or over-the-counter drugs down your toilet, think of how stupid you actually are!!! When you open your mouth about how destructive responsible, legal, historical motorized uses of Publics Lands are . . . see the items listed above.

***(cont.)***

Posted elsewhere but belongs here too given the whole digression above - Wilderness Designation LOCKS PEOPLE out. DO not lock us out of OUR public land. I hike, I mountain bike, and I explore remote areas, all with my children that cannot endure week long expeditions. It is not necessary to designate "wilderness" simply to prevent development and protect wildlife. I have found solitude even in the non-wilderness forests of NJ for the past 30 years, it is possible and it is easy if you try, and it is not necessary to lock people out of the lands they collectively own. It is incumbent upon those people who want more wilderness to visit each one of the existing "Wilderness" areas before asserting that we need more. How would you know if you have not even taken the time to experience the entirety of what is already there. If you abdicate more wilderness in an area that you do not frequent or at the least have not even visited first hand then you are nothing more than a one dimensional, fear mongering, keyboard jockey.

Thanks to the Obama administration, this country is totally broke. I do not support additional funding to fully staff national parks until the country is on the road to financial recovery; that will have to come after the change in administrations in 2013.

Thank you, my family loves to recreate on public land with our ATV's. I am super discouraged about the future of public lands recreation for my kids after reading all of these forums though.

Wilderness areas are not something the BLM should be allowed to unilaterally create. Only Congress has the authority to create wilderness areas. Wilderness means you can't bring anything with wheels in. More than six percent of Arizona (and that's a huge state) is already in Wilderness designation. Coincidentally Arizona's wilderness areas are also drug cartel-controlled and the 'pleasant' hiking experience is at the risk of getting shot in cold blood like Rob Krentz. The area where Deputy Puroll was shot is just 30 miles south of Phoenix. It is in the Sonoran Desert National Monument where there are already 3 National Wilderness Areas. Puroll was shot in the Table Top Wilderness area. This wilderness area is 65 miles north of Mexico. Now the BLM has posted signs saying it isn't safe to enter. So creating wilderness areas in our border states is just another way to create no-man's land corridors for drug smuggling. Just say NO to more wilderness.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

There is no jaguar "population" in Arizona and in recorded history there never has been. Perhaps back in the early Pleistocene but AZ was tropical then. Occasionally a jaguar from Mexico crosses over the border. A lot of historic "sightings" of jaguars in past history in Arizona are several people seeing the same jaguar. Back in the 1960's hunting guides were transporting jaguars up from Mexico and releasing them for clients in Arizona, Texas and New Mexico. Some got away. Also people thought it was cool to have baby jaguars as pets-these fads would spring up from time to time but faded quickly when the pets matured- people discovered their "kitty" was one of the most vicious cats on earth. Such happened to the famous Lily Pons, a famous NY opera star back in the early 1930's. But jaguar hunting and live capture were being done all the way back to the start of the 20th century and so was jaguar transport world-wide. This was not governed by law at the time, so no permits or documentation exist other than old news articles. Prior to that, all the historic documentation back as far as 1867 confirmed that only occasionally a Mexican jaguar wanders over the Arizona border. Look up what Eliot Coues wrote. The jaguars seen in the last decade or two in AZ were manipulated. The camera traps were baited with scat of a pregnant female jaguar collected from the Phoenix zoo. So a jaguar that might have gone back to Mexico hung around the camera trap fooled into thinking a mate was nearby. The same dishonest biologists that set scat at the camera traps were also responsible for deliberately baiting mountain lion traps with female jaguar scat and have been thoroughly discredited.

The drug cartels love your idea! Arizona wilderness areas, nature connectivity corridors, national monuments, etc. have restrictions on law enforcement that restrict them from traveling freely and make them ideal corridors for drug and human smuggling. Federal lands in Arizona are THE entryway of choice for murderers, rapists, and terrorists. More than 50% of all illegal entry into this country is through federal lands in Arizona. There are restrictions on BLM employees telling them where they can and cannot go just to protect their lives because of all the thugs out in the National Monuments protecting their drug loads and have no respect for human life. Ranchers are getting shot. Not just Rob Krentz. Ranchers 50 miles north of the Krentz ranch have been shot at while just minding their business. The cartels will always have guns. They are murderers. My home is on the smuggling trail. There is a rape field near my house, a whole roadless area full of rape trees. In the Sonoran Desert National Monument just 30 miles south of Phoenix and 80 miles north of Mexico, there are signs warning citizens not to travel there because that land is owned by the drug cartels. Border Patrol Chief Aguilar called the area from that point south to the border a "third country. And you want to take guns away from law abiding citizens? People live and work in these areas. They have the right to go on living!

that is an ignorant statement. We go through hundreds of hours of planning with state, local and federal agencies to plan any new ORV trail.

I'm an ORV user. I pick up 1-2 bags of trash every time I'm out playing on the few legal trails we have. The trash is left there in camp and at hiking, biking and horse trails. Have you ever seen the amount of horse crap left behind by people riding horses? Have you ever seen the trail cut through from Canada to Mexico call the Continental Ridge trail? garbage everywhere. I recently stayed near Timothy lake in Oregon, the hiking trail was more abused than any ORV trail I have ever seen. Get off your high horse.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Getting kids out into urban parks is a great idea. For those kids lucky enough to live close to an existing park, class field trips work well. And it would be great if those field trips could occur often, perhaps monthly. For those kids who don't live near urban parks, let's create some. One way to create urban parks is to purchase private property either with federal and/or private funds and turn it into an urban park. The private property could be a few city blocks in need of improvement, perhaps an abandoned factory, a lifeless downtown with empty storefronts, or an area in a redevelopment district. Buying quasi-distressed property would presumably both keep purchase costs down and improve the neighborhood. And while we're creating parks, why not set aside some of that property for an urban garden? This way kids can work in the environment while studying it. Perhaps a few schools could share the responsibilities of one park/garden, which would also teach the value of personal responsibility. Caveat: I've seen urban parks turn into hangouts for gang members and other people whose presence is incompatible with classroom parks/gardens. A barrier should be considered. I hate to recommend a fence with a locked gate since this keeps kids and their families out during non-school hours. Anyone with ideas on how to handle this issue? Another method of creating urban parks/gardens is to locate it on the school grounds, either on existing school property or acquiring adjoining property to build a park. Then funds could be gotten through a local bond measure, which would presumably give schools more control over the park/garden. This solves the 'hangout problem' since schools would be allowed to fence their own property. BTW, thanks to NPCA for creating this website and making it so user-friendly!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

While I agree with the idea to increase staffing in the national parks, the phrase "fully staffed" needs to be defined. It is not like a given park, if given carte blanche, could only hire x number of people and no more. Any superintendent with creativity and vision could hire virtually every applicant with the relevant skills to aid the mission of his or her park. For example, so much is unknown about the biota which live in each park, NPS could hire every available specialist in the world to study each park's lifeforms and the biology of most lifeforms would still remain little known. In interpretation, for example, would full-staffing mean that everyone who visits the park has the opportunity to attend a ranger talk or walk that is suited to each visitor's schedule and ability? Or would it mean that a ranger has had the time to personally talk with everyone who visits the park about the needs and features of the park---even if they didn't want to? (After all, the people who are the most likely violators of park values are those who don't feel the need to talk to a ranger.) Would full staffing for maintenance mean simply that the park is on the way to catching up with the backlog of replacing or renovating deteriorating structures, is able to keep trails reasonably safe and clear, and essential services such as water, sewer, and electrical are functioning and safe? Or does it mean that the park is also able to build and maintain additional structures such as restrooms and shelters that meet current and near-term projected demand; that the park is able to survey and build new trails that help visitors better experience the park? Would full staffing for fee-collection (a role I've filled for NPS) mean adding additional booths so that no one has to wait in line longer than, say, five minutes? Or is twenty minutes OK during peak times? Does it mean that you would have an entrance gate staffed earlier in the morning and later at night, so that the park collects fees at most hours, so long as the volume justifies paying the fee collector? If so, how much extra risk from nighttime duty do you want to lay on the staff? For law enforcement, does full staffing mean that in the developed areas, there will always be a ranger less than five minutes away to respond to any emergency? And in the backcountry, less than an hour away? Or what? We need, therefore, to create goals for each of these park functions. Once you set desirable numbers, which will almost always (and perhaps always) be higher than the existing staffing levels, you then have to concern yourself with where to put new staff. In many parks, housing for staff has long been a problem, even with lower staff levels of the past. Many parks are in remote locations, and gateway communities may have little or no private housing available. With more funding, this can be increased both inside and outside the park, but to be done correctly, in an environmentally sensitive manner (e.g. no ten story apartment blocks just outside the park or within the park), this takes time. So when you are talking about increasing staffing, you are almost inevitably talking about increasing housing and associated infrastructure. Office space is also often limited. Not everyone needs their own office, of course, but many functions do require office space at least part of the time, and in some parks this is already shared to capacity. So you might need to build more offices (using portable buildings temporarily), and if the park's electric and water grids are already at capacity, this, too, could require upgrading that infrastructure. In summary, I'm all in favor of increased staffing, but understand that this is not a simple matter of upping the NPS personnel budget 30%, or whatever number.

## Discussion Question 2

***(cont.)***

Great discussion. Glad to note most of the comments stay on wildlife corridors and what they mean to the health of our planet and our own health. Interesting to watch the usual suspects from the OHV crowd try to turn the focus on their issues. I am not a scientist. I do have a forestry degree and training as a land steward. So my observations are based on 40 years of living, working, hiking, and studying a small headwaters in southern Oregon. In my travels I have compared this small ecosystem to other areas. In the little mid-elevation migratory corridor where I live, 40 years have seen a lot of changes. There are no more pheasant. The timber wolves are gone. There are fewer hawks, more ravens. Both grouse and quail are in decline, while flocks of turkeys now roam the hills. There are fewer porcupines, more raccoons. Fewer bobcats, more cougars. I have no illusions that these changes are the result of changes in this one drainage. The landscape is changing, and changes in the valley bring changes to these mountains. The real problem is that no one is asking why. Our government is doing a poor job of protecting our health by failing to protect the health of our planet.

I spent a decade working for an electric utility. This idea was promoted, albeit poorly, as part of our conservation plan. A great deal of research has been done on both natural and artificial lighting. We are not going to eliminate "night lights," but we can change how we use them. Sensors, downlights, task specific lighting, etc. etc. can substantially reduce light impacts on the night sky.

O.K., Sonny, I'm trying to follow the logic here. You don't like rich people who live extravagantly. Got it. Have to agree. They are the ones telling you your activities are ruining the planet. If so, that is, of course, hypocritical. But - are they the only ones telling you about the problems they see with your activity? These minions you speak of.....would that be the government employees that (supposedly) work for all of us? Not just the rich.....although maybe their bosses just work for the rich. Admittedly, our citizenry is a bit confused on that point. Now here's where I'm having trouble with your logic. You want to strike back at rich people by spending ten to fifteen thousand dollars on a play machine, a couple thousand more on a toy hauler, and then rip up the public commons? That, my friend, is not logical.

Here's the deal. As a caretaker for private land, I have been confronted with guns, threatened with tools (crowbars, wrenches), and once had a dirt-biker try to run me down. Even those I catch say "I don't carry identification when I ride." OHV stickers I've seen are most often torn and illegible. As for "facts" concerning OHV views on legible plates, I make the conclusion based on what I read on off-road enthusiast web sites. Their message boards have a whole lot of enthusiasm, but not a lot of intelligence.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I've read your spew on other topics. You make a great many assumptions about people. Let me address the ones you make about me. I do not work for the Susan G. Komen Foundation or any other non-profit. I am, in fact, retired. I'm not judging people on "how much" they give to any cause. What I'm saying is that, in my experience, the off-road enthusiasts trumpet their horns about cleaning up trails (for their own use) and the trash left in the woods by their own crowd. They call that community service. They hold events and make money.....which they plow back into buying land, lobbying and promoting their cause. Horseback riders, mountain bikers, hikers, joggers and a whole host of other groups regularly hold similar events.....and donate a portion of the proceeds to area non-profits. The off-roaders act only in their own self-interest, while the majority of other groups show consideration for the broader community. As for you, I think you should try some sensory deprivation before shooting off your mouth again. You're shooting blanks.....lots of noise, but no impact.

Ask and you shall be told. I live on private property. I confront trespassers. I am a Vietnam veteran and, according to the government, crazy. If that makes me a "bad MoFo," so be it. You want I should maybe just lay down and let them trespass? I've been shot at and run down. I will continue to confront lawbreakers whenever I can. There is a special fund for the ATV folks in Oregon administered by the Oregon Parks and Recreation Department. Go to their website and read the numbers for yourself. It's this kind of special interest feeding at the public trough that needs to be undone. BTW, I own a "quad." I use it for mowing fields, harvesting timber, keeping my gravel driveway smoothed out, blading snow in the winter, hauling firewood, etc. etc. etc. I consider my machine an investment. Most of the "I want to ride" crowd consider machines toys. Sad.

UPDATE: Notice of Intent to sue: { <a href="http://www.sharetrails.org/uploads/NOI\_Final\_05-03-10.pdf" rel="nofollow" target="\_blank">Link</a> } From reading the complaint, the reason the trail became so eroded is the fact that the Forest Service was responsible for maintaining the system, yet failed to do so. The state of North Carolina gave the Forest Service money to maintain the trails, yet the money was returned. \$49,000 in 2007 alone. It also appears that the supposed turbidity levels were taken under questionable circumstances, i.e., right after a storm event when all streams were running with high levels of turbidity. It also looks like there were multiple procedural errors involved in the whole process of closing Upper Tellico. The OHV trails were not the only ones not maintained. The foot and equestrian trails did not meet the USFS standards either. Yet those are being upgraded. I still find it extremely odd that there was no money to maintain the OHV trails, yet over \$2 million was found to reclaim them. Money was also found to rehabilitate the other trails. If even half of what was filed in the lawsuit, then the anti-OHV movement has just taken a huge black eye and lost a considerable amount of credibility. Not that they had much to begin with. Nice how the Forest Service can break the law and then close a trail system by making it look like it was the OHVer's fault. This will NOT turn out well for the Forest Service.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I completely agree with suggestion #15. At Yosemite, a wildly popular and overcrowded NP, a mere \$20 per car entrance fee allows ALL the occupants of the car seven days in the park. So if you arrive with 8 people in an SUV, it's still \$20, although those folks certainly use more resources, even mundane ones like toilet paper! Since many people treat the park like entertainment, charge them accordingly. People are willing to pay \$10 a pop to see a 2 hour movie or ridiculous prices for one day at a stupid theme park. Charge each person in the car \$10 to enjoy a breathtaking natural resource.

Stuff your tea party back into your pot. This is a forum for suggestions on funding for NP's, not a forum for baseless political rants. And guess what? I don't have a job, but I want to see the NPs funded. And part two, I would adore working in a NP. Thanks for the suggestion.

I agree that this program should be for all students not just Title 1 schools.

The statement is incorrect. Many Off Road groups care for the lands that everyone uses. My family enjoys driving on the legal public trails. Our group host work parties and clean-up to keep areas open. My 4 little kids race to pick up trash others left behind. You want to take something away from many responsible ORV families by banning off road use.

First, why is O'Bama to blame for everything? He inherited the majority of our nation's problems associated with his presidency. I blame the oil companies and Wall Street for our financial woes, not O'Bama. And, oh by the way, I believe that George Bush got us into this fiasco of a war. Now, to the matter at hand. Have you people ever even visited a national park? We have enough hotels, casinos, and Wal-Marts, which don't need to be built in, on, or near park boundary lines. We don't need ATV traffic or snow mobiles left to run rampant through pristine wilderness, destroying fragile Eco systems and harming wildlife. I totally support park funding. I volunteer annually at two separate national parks and I've seen good park employees lose their positions due to budget cuts. I've seen interpretive programs cut. I'd much prefer some of my tax dollars go to park funding, than to financing an expensive war. Our parks and waterways are crucial to preserving our environmental legacy. If you aren't part of the solution, then you're part of the problem. We voted these people into office, beginning at local levels. If you're unhappy, show it at the polls. Don't punish the park system. Educate yourself about the environment. Spend time at a park. And, thank you NPS, for providing free admission days to help families escape into an environment without chaos, if only for a day; providing a lifetime of memories. I'm proud to be an American and an NPS volunteer. I appreciate the opportunity to witness the awe inspiring vistas of the Grand Canyon, the vast sand expanses of Sleeping Bear Dunes and Indiana Dunes, the extensive cave system in Mammoth Cave's Biosphere, and the sandy shores of the Gulf National Seashore, just to name a few. Preserve our parks for our future generations. Maintain our environmental legacy. Please, support national park funding now. By the way, I'm a registered Republican. Thank you.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Livestock can only spread noxious weeds that were on the land in the first place. The ranchers do have the right to have continued access to the lands that have been historically used for grazing. Because a vocal few want grazing leases to stop, is not a valid reason to stop allowing ranchers access.

"again you choose to make this about your own personal crusade against OHV's? Ridiculous" Glad to see someone else notice this, any mention of OHV use, and a good idea gets voted down. "As usual the OHV crowd is killing another good idea. It is a true shame that such a good idea as this forum is being ruined by right wing loons and organized OHV groups" But it was okay, as long as radical enviros and left wing loons controlled the forum? The OHV groups do contribute a lot, and most, if not all groups do cleanups, and trail maintenance. Hunting needs to be allowed when it is used as a wildlife management tool. Hunters also contribute a lot, between the extra 11% tax we pay on firearms and ammunition, and all the license, tags, stamps, and land use permits we pay for, Hunters contribute far more to wildlife conservation than any other group. Plus all the hunting orgs. Like Ducks Unlimited, Pheasants Forever, and many, many more all contribute to land, and wildlife conservation. More could get done, with better results, if the various groups worked together, and each side compromised some, and it would be better for all of us, and our children.

The people who don't want firearms in the parks are mainly those who get all of their firearms info/knowledge from places like The Brady Center, and other anti-gun groups. The law has been passed, people carry in parks, and no one has been shot or killed due to allowing firearms in our parks. The crazies with guns are the criminals, and they will carry a gun into a park whether they are permitted to by law or not.

People trap for a living, and for extra income, because you do not agree with it does not make it wrong.

What about other users such as hunters, fishermen, trappers, OHV users? Because some do not agree with these activities, the groups who represent them should not be allowed to have a voice?

A wise man once said, 'In Liveable Cities is Preservation of the Wild' -- Michael Houck, Urban Greenspaces Institute, originating co-creator of the Connecting Green Alliance in Portland, OR. 'Build up, not out' will only work when we make it green and liveable!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

There are factors at play that supersede for me the conflict between hikers and off road vehicles. Climate change will have a huge effect on all of nature, and how we address those immanent changes may be the deciding factor on our ability to enjoy it in any recognizable way. It is hopeful to me that innovative thinking is a human faculty, and that this man, Tony Barnosky of the University of California at Berkeley, is making an effort to 'see' how nature (and that includes human nature) itself might continue to exist. Here is a short interview from June 2009, in which he acknowledges that, yes, we all need to examine the challenges inherent in reconciling conflicting interests in wilderness preservation and further suggests that, 'nature, especially the wilderness aspect of nature, and now the climate on which nature depends, is a moving target.': { <a href="http://news.discovery.com/earth/end-nature-wilderness-lost.html" rel="nofollow" target="\_blank">Link</a> } A new paradigm is needed for thinking about preservation. And (even relatively) free interactions of species protected in interconnected wilderness areas are increasingly being seen as crucial to the survival of the diversity that all life depends upon.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I want to help define some terms and clarify some thoughts on this contentious issue. Wilderness (with a capital W) is federally designated on Forest Service land for essentially no human change. There is no firefighting, timber cutting, mining, motorized vehicles, etc. There are over 100 million acres in the US, with a large part in Alaska, but quite a bit in the western states. Smaller portions in the eastern US forests. wilderness (small w) is whatever we think it is, usually land without houses. Some is private, or public. Some is managed for timber production. There is something like 600 million acres of forest land in the US, plus hundreds of million acres of open/desert/range land that provides wildlife habitat. West of the Mississippi, over 50% of the land is owned and controlled by the federal government. Total for the US is something like 43%. Add the state and local government land, and conservation easements, and well over half of the nation is protected from development already. How we use that land (timber, wilderness, wildlife habitat, mining, ranching, etc) is open to constant debate and change. Over the last 30 years I have seen that change more and more to Wilderness and semi-Wilderness use. We are a wealthy nation that can afford to "not use" our land, as long as we can import food and wood from other nations. The Nature conservancy is a non-profit multinational corporation that has accumulated over 2.7 billion dollars in assets. Most of the species of wildlife in America are doing just fine. Black Bears for example, which use huge swaths of habitat and are an indicator of healthy landscape ecology, are on the increase in all the northeastern states. When we discuss perishing species and loss of "biodiversity", this is mostly in developing nations and not a huge problem in the US. There is an extreme proposal called the Wildlands Project, which has published maps of huge areas of land as basically off limits to human use, with connecting corridors and buffer areas where farming and forest management might be "allowed". Several states use these maps for their long term planning. They promote the government taking these lands and designating them as they have proposed. The federal government has a track record of either taking huge swaths of land from citizens, or creating conditions where the land become valueless, (such as losing water rights,, access, or development rights) and the owners become "willing sellers" or willing donors to groups like TNC. A quick cruise through google earth will show any interested party the extent of undeveloped "wilderness" that is available for wildlife. The USA imports a large proportion of wood products from other countries, while our western forests burn and eastern forests rot. Wood is the very best raw material on environmental grounds, using less energy and creating less pollution than almost every other raw material. Think globally and act locally.

I agree and I am completely for full, if not additional, funding for NPS. If you look at NPS funding over the last 10 years, it hasn't even kept up with inflation, while the agency finds itself facing a growing \$8 BILLION in maintenance backlogs. However, I would point out that in addition to NPS, even more importantly is funding and support for state and local parks. Accessibility to outdoor recreation areas is a top factor in addressing issues such as obesity, stress, depression, ADHD, and living active lives. Simply put, people get out in the outdoors more often and experience related incredible health benefits - when and if access is nearby. Unfortunately, national parks are not a 10-20 minute drive for most people. Local, county and state parks need more funding, as quite honestly, they serve more people, more often, and likely have greater impacts than NPS (although I would never want to lessen the impacts of national parks - they need our support too).

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I agree with a recent article by Kurt Repanshek, the basic premise of which is that its not we/USA/Fed gov't doesn't have the money (we do, as we have a budget every year) its that many of us believe the priorities are out of whack. And while I agree the deficit is an issue and we need to reduce, if not abolish it, I STILL believe we should fund national parks, a new CPCC, etc. Again, its about priorities, and mine lie here. Here is an excerpt from the article: "The chronic underfunding of the National Park Service is not now and has not been for the past 50 years a matter of money – it is a matter of priorities!" Dr. Pitcaithley told those who attended that conference back in April. "Five billion dollars amounts to 0.002 percent of the president's 2008 proposed budget." For the sake of comparison, while the National Park Service slogs along with its insufficient budget, the Defense Department is funded at roughly \$550 billion, the professor points out. Just one B-2 bomber costs \$2 billion, he adds for emphasis. "Do you really think the American people would notice if this country's military industrial complex held one less bomber than it does today and that those funds were transferred to the National Park Service?" he wonders. "The president and Congress took less than ten minutes to determine that the economy needed an economic stimulus package totaling \$150 billion. Do you think anyone would have complained if it were \$148 billion? And the resulting \$2 billion saving were given to the National Park Service?" Over at the U.S. Marine Corps, Dr. Pitcaithley points to the Osprey aircraft that cost \$110 million apiece. "They are currently being sent to Iraq even though military analysts believe they don't work as designed," he says. "Here's the punch line: Several branches of the military are planning to purchase 400 of these flawed aircraft! Four hundred times \$110 million equals \$44 billion!" The money is there. The problem, though, is we let Congress get away with more than a few decisions that are terribly misguided. The problem is that there are not enough advocates for the National Park System. "It's not a matter of money, it's a matter of priorities and the National Park Service over the years has not developed a constituency that will lobby on behalf of it. The National Park Conservation Association is simply not enough and clearly no match for other park interest groups. If you doubt that in any way, consider the recent ... effort by the National Rifle Association to change decades-long NPS policy on guns in parks," says Dr. Pitcaithley. "A goofy idea by any measurement, but one that went unopposed except by a handful of editors. "In the world I envision for the National Park Service, the 50 congressmen who endorsed the (gun) proposal would have been instantly balanced by 50 congressmen and women who opposed it – delegates in Congress who had been cultivated over the years to support various pieces of legislation that benefit the national parks and, through the parks, the American public. Where are those congressmen and women? Why don't we do that? The Department of Defense passes up no opportunity and spares no expense in cultivating congressmen to support its programs. Why doesn't the National Park Service do the same?" When you realize that a single B-2 bomber retails for \$2 billion, is it really far-fetched to want to believe that the National Park System with its 391 units stretching from Acadia National Park to Zion National Park is worth at least three bombers?

While at first glance the idea seems worthwhile, I recommend you read the chapter in *Made to Stick* by Chip and Dan Heath on the "Don't Mess with Texas" anti-littering campaign. The main point - not all programs (such as bottle deposit) work everywhere. Each region/sub culture/state/etc is different - and sometimes all you need to do is tap into existing value systems (for instance in TX the campaign promoters tapped into Texans pride). Nothing prior to this worked, but once this campaign started everything changed. Hence, perhaps a deposit isn't what would work in Virginia.... Just throwing out suggestions. The entire book is interesting, but that chapter alone bears relevance to this discussion.

While I agree with the main intent of this comment, I'm unsure about one portion of a comment above - that is "no timber cutting even around them". How can we do this? I agree viewsheds are critical to the impacts and benefits of our national lands. But how do you stop adjacent private land from developing? The only true way is to outright purchase it (which I am for - that is, the expanding of national parks), but then that simply moves the "issue/concern" to a new border, or to place it under a conservation easement (another method I'm well aware of and favor). But in the end, you'll still have a boundary where the public lands end and private begins. I know there are on-going issues w/ drilling proposed literally outside the gates or within sight of some parks. I hate to see this, but I just don't think there is an easy answer (again, unless we the people buy the land or buy the development rights/place a conservation easement on the land - which the landowner needs to do).

While much of what you say may be correct, I simply disagree with your vs. approach. That is, you believe or make the argument that land set aside for recreation, wildlife benefits, watershed/drinking water protection, etc. is land "out of production" and hence not worth it. I would argue that that is not the case. Tourism is the #1, 2, 3 business in every state in America - the large majority of which depends on natural areas, scenic vistas, lands free of pollution, and opportunities for outdoor recreation. These lands DO provide jobs, and I'm betting more so that you realize. For instance, here in NC alone outdoor recreation (which needs these wild, open space lands) is responsible for \$7.5 BILLION to the state economy, and supports 95,000 jobs across the state. It also produces \$6.1 Billion in retail sales. Just because open space isn't being used for mining, resource extraction, or some other industrial use, doesn't mean it doesn't provide valuable public services while creating jobs.

The point of National Parks is to provide as natural an experience as possible for visitors. This includes a dark-night experience without unnecessary outdoor lighting. This is very important since dark skies are becoming more rare as outdoor lighting becomes more the standard. Do we need extensive outdoor lighting in our national parks? No! Very modest lighting- fully shielded and of low intensity- should be used strictly for safety related purposes. It should be subdued lighting directed downward and applied only to specific areas- paved sidewalks and building entrances where significant numbers of visitors walk at night. It should not be used for "decorative" purposes to "improve on nature". Nor should trails far from visitor centers be lighted. Driving on roads should rely solely on the car's headlights, which work fine- no roadway lighting should be used. Visitors will learn that very low level lighting works fine if there are no other bright lights in the area to spoil our eyes' natural dark-adaption.

Creating a "toolbox" to assist with preserving cultural heritage would indeed be very helpful. Oftentimes people at the local level in the field are well intending, though do not necessarily have the resources, time, or patience to be fully effective. The Preservation Briefs and NPS Bulletins are helpful to a certain extent, though what you are suggesting would be far more specific and provide assistance at the level of needs. One community might not have undertaken a cultural resource survey, for instance, so guidance on how this might be started would be helpful. Likewise, when working on a specific type of property like a bungalow, it would be really helpful to know more about this building type, its structure, and qualities of craftsmanship, so maintenance and preservation work may be done in the most responsible manner.

FYI, 4-stroke vehicle noise tends to carry much further than that emitted by 2-stroke vehicles. Obviously there are many other factors to consider but purely based on noise your statement is false.

If you have ever seen the damage of OHV in the Nanahala National Forest you would support the banning of all OHV from public lands

Right now Cape Wind is planning to build approximately 300 wind turbines smack off the south coast of Cape Cod. In the middle of Nantucket Sound, within view of the coast for miles and migratory path of numerous birds, fish and sea creatures, these turbines will forever blight the horizon and destroy a unique and pristine place forever. The facts are this "green" project will not only cause harm to environment, but will forever raise the rates of customers to rate levels that will break the backs of Massachusetts rate payers and tax payers. Land based turbines in Falmouth, MA neighborhoods are creating physical problems not only for wild life, but for the residents near these turbines. They are experiencing numerous physical problems due to the noise level. Exposure to these low level, audible fixtures needs to be researched thoroughly. Hundreds of these turbines, immediately off the coast, will not only blight the eyesight of residents and tourists, but will have an unknown affect on the health and welfare of wildlife and humans exposed to these turbines. We need to thoroughly examine the effects on ratepayers, taxpayers, wildlife and humans never mind what color they should be painted. In our desperation to reach out away from fossil fuels, let's not create yet another hazard despite the good intentions or politics that are designed to enrich one company at the expense of all. After all the profits that went to oil companies, let's not create the same scenario with companies taking advantage of the current "green" initiative.

Interestingly, The contractors who were awarded the \$1.8 million in ARRA monies are obliterating the Tellico OHV trails are not using any erosion controls. None at all. The loose dirt is literally pouring into teh creeks and streams with no silt fences, no hay bales, nothing at all. The Forest Service's "Forest Plan" states that no visible sediment is allowed to reach the water resources. The contractor who is doing the work has stated that no one from the Forest Service is monitoring the trail obliteration. The water quality is worse than ever after these ground disturbing activities. Too bad for the brook trout...

I have to agree with others that Native American ownership/management of the natural resources/land should have the standards of agreement spelled out. I do think there is a very strong ethic amongst Native Americans about the preservation and improvement of the land, but as with any immigrant group, assimilation brought corruption of core values due to the poor values of the dominant culture. I do support the management by Native Americans and would seek to ensure their supremacy in this position. Too often the source of money attempts to impose control over the direction of the project. That is my major concern.

LA's backyard Yosemite! The San Gabriel Mountains are an exceptional resource for Angelenos, but are overstressed by visitation. Proper planning could expand recreation while improving protection of natural resources.

casinos are everywhere ..there is only ONE gettysburg..and it's an awesome, peaceful tribute to the history that happened there. i agree there is enough development around our ntl parks/battlefields, and living near several casinos, the traffic congestion that occurs is NOT what i envision when i think of visiting this site. haven't voted on this one as i can't tell if i vote FOR IT i'm voting for or against the casino. but i vote NO CASINO built near gettysburg!!!

Your points need to have some validation... Not just because you say it's true... Like this statement... Many ATVs are inherently unsafe due to the lack of a differential. Who told you this? Was this a scientific study that you conducted or is this just your OPINION??? Your first Paragraph makes No sense? Have you ever tried to do these activities on an ATV/OHV? If not then these are just your opinion... I on the other hand have done both the Hiking and ATV'ing! Some Places are more adept for Hiking, smaller places, easier access by foot. Some places are just so Large the terrain is easier to see while on an ATV! That is my OPINION Based on my Actual experiences, not something I read on an eco-site... It is reported that usage of the area is causing multiple plumes of visible sedimentation in the Tellico River and its tributaries. Reported by WHOM? Someone sitting creekside taking measurements? Are these same scientist sitting creekside EVERY TIME IT RAINS to see/measure the same Sediment flow? Are you suggesting we stop the RAIN ALSO? 2 Stroke Versus 4 Stroke motors... Again, I am sure this is something you are familiar with? I bet your weedeater smokes as bad as the 2 stroke Motorcycle my son rides... I have both a four stroke and 2 stroke ATV's and when tuned properly, they will not pollute any more than the SUV that drives the kids to school... Are you willing to give the SUV up and let the kids ride the school bus, you know a 20 year old diesel bus like most rural districts use because our tax dollars are being waisted fighting lame lawsuits from eco-freaks... "Based on some calculations, the pollution due to one ATV equals the pollution due to fifty automobiles." Whose calculations??? Please state your sources for us!! IN FACT WE DEMAND YOU GIVE US YOUR SOURCES!!! The SKY IS Falling! As reported by Chicken Little... That is something we can look at a research, and then see for ourselves that This Chicken Little guy is either quite knowledgeable or just a "Quack" Paron the piun!

OH and until you actually ride one of these ATV's don't assume the reason the world is FAT is because we are all riding around on an ATV! I am 47 years young, and every muscle in my body is well used after a good ride thru our Parks! Enjoy your next happy meal thinking about that!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

yes it is about the money!!! Look at the coffers of these large groups and tell me this isn't about money!

Slavery??? So now as a responsible atv owner I am in the same class as a Slave owner... Would you people PLEASE bring facts and figures to the table!!! Leave the name calling to the kids on myspace... IN theory an ATV or OHV trail actually uses up twice as much per foot ground as a hiking trail... only because they have 4 wheels not two... and that's if the hiking trail is a one direction loop. In reality I see 20 times as much of natures beauty because I can cover so much more ground than you can... I am not an industry insider, but a end product user. I found this site after receiving a link on a message board regarding the Government taking something that is mine away from me! This land is our yours and mine and until you are named eco king we will have to quit fighting like school kids and come to the table and learn to share... In my opinion OHV's and ATV's deserve MORE land than hikers because we volunteer many hours in trail maintenance (Blue ribbon coalition) among others, pay taxes on the fuel we use... and provide jobs to not only the ATV manufactures but trailer and camper manufactures, apparel and safety gear retailers where as a hiker buys some shoes and a walking stick??? Now that is how silly an arguement as one can get, but remember what you learned in grade school it is best to share...

500 lol where did you get that figure from??? I don't see many ideas with that many pro ATV votes period... much less all at once... now if you look to the right and see the "top innovators" there are people who have posted 6-7 thousand times??? Go read there views and see who they are...

My dog was caught in a trap once. If I had not been there right away to take the trap off, he would have been seriously hurt. People do not need the pelts of trapped animals anymore. There are alternative materials.

I love Civil War battlefields for their historical significance and their natural beauty. It is ironic that one can find so much peace in a setting that once witnessed so much violence and carnage. Civil War battlefields should be preserved and protected, because of their priceless legacy to our nation's heritage. Housing developments and shopping malls can be built anywhere, but there is only one location where each of these battles was fought. It would be a terrible tragedy if we were to lose the timeless virtues of honor, duty, courage, and sacrifice that these battlefields symbolize for so many Americans to the short-term economic gain by a few. We can do better as a nation and a people and we should do better. Thank you.

When animal behaviorists discover that human presence is enough to cause a female wolverine to abandon her offspring, then people should stay away from those remote mountain tops where trails do not already exist and wolverines likely use to have their young. We need to share. Also, some of us humans think the EPA does need to act on new knowledge about how to preserve ecosystems. Industrial pollution can be generated in small amounts by individuals whose activities with industrial chemicals produces industrial waste. 'Forceful arms' come from all kinds of entities. While we sort it out amongst ourselves, the victims are the residents of the forests and parks. I can take the criticism and debate, but ecosystems still need to be protected for future generations no matter what the reason for the establishment of the EPA.

## Discussion Question 2

***(cont.)***

Perhaps we need a new political party that respects the public nature of the environment and the need to respect the work of scientists while still holding individuals accountable for their own personal needs and for budgeting independently. I don't think the government needs to provide everyone with everything, but we don't have a private company creating air, water, and wildlife for individual sale. No, we do share some things in this world and must manage them with the understanding that one cannot create scientific principles the way we create art or ideologies. No, science is something that has to be understood and accepted. It is not like the fashion industry, politics, entertainment, poetry, etc.... that has cycling trends. We can't just 'will' oxygen to be produced with the shake of a magic wand. We can't avoid food shortages or desertification by putting all our trust in the charismatic twinkling smile of a talk show host, corporate CEO, or scientifically illiterate conservative or liberal politician.

I agree. Furthermore, we need to have more people study the impacts of off-road vehicle noise and activities brought about by increased access to remote areas. I envision more waste dumping, more illicit drug growing, more wildlife breeding disruption, and more water and air polluting with increased access to wilderness designated areas via off-road vehicles.

"While the multiple-use doctrine may be a workable management strategy in some National Forests far from major cities, it is becoming an increasingly unsuccessful and contentious model for National Forests near population centers. "So, there is no need to change the policy for the entire Forest Service. The forests near population centers just need to do a better job at management.

As the climate changes...???? Are you kidding me. Global Warming/Climate Change as the Vehicle for the expansion of the Federal Parks System? You are a Sidewinder.

NP is the only thing standing between industrialization and a world of processed medal. I rather not go to see a monument stating, "this is where the National Park of New York City WAS"

What? Totally false statement. Since there is no/limited funding for ORV parks and FS land....who do you think volunteers their time to keep these places open for all to enjoy? That's right Offroader's volunteer many hours so that you can enjoy your outdoors.

While volunteering with an inner city school group outing at a state park, I learned that one of the 5th graders had never seen an aspen tree and another didn't know that the yellow dandelion flower comes before the fluffy seed head. But they enjoyed learning about them. Connecting kids to nature is absolutely critical to creating future stewards for the parks. But, equally important, I think it helps kids blossom. Urban parks that are easily accessible would be an invaluable resource for urban families.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

OHV recreational use of public lands should be preserved for the benefit of current and future American families.....Do not agree. For the benefit of future American families OHV users should be educated about how to develop a healthy less impactfull recreation that the the whole family can enjoy, without a motor. What did people do before they had engines??OHV use is a legitimate, sustainable use of appropriate public lands, particularly on National Forests and Bureau of Land Management Units..... What exactly is sustainable about riding an OHV??Motorized recreation is a healthy family activity and provides a great opportunity for families to “get away from it all,” and to experience the great outdoors.....What exactly is Healthy about motorized recreation. I agree that you can see some sights, but why not do it on a bike or hike? No need to pollute the environment and disturb others with noise in the process. OHVers, like other recreationists, seek opportunities to not only enjoy the riding experience, but also opportunities to learn more about cultural and historical context, take in scenic views, observe wildlife, camp, hunt, fish and other activities.....Agree.The overwhelming majority of OHVers are conservationists, who seek to preserve the same outdoor experiences they enjoy for children and grandchildren.....In my experience the greater majority of OHVers are not AT ALL conservationist. They only seek to sustain the woods as a hunting farm for unsustainable hunting practices such as shooting only the trophy animals and leaving the small and sick to reproduce (the opposite of natural selection). ATV and off-highway motorcycle riding encourages and promotes physical fitness..... YOU HAVE TO BE KIDDING. Hop on a mountain bike sometime and you'll learn what physical fitness is. HMG!OHVs provide the opportunity for Americans of all ages and physical capabilities to enjoy the outdoors..... Agreed. There should be some exceptions for those that can not walk or ride a bike due to physical problems (not due to obesity which is there own fault) so that they can ride a 4 cycle ATV in certain areas.

There are bad apples in every crowd. That's just a fact of life. Take for example the people that hike into pristine alpine lakes and leave their trash and human waste behind them. Does this make all hikers bad? should we ban all hikers from the forests ? Of course not. There are many (most) ORV users that simply use their vehicles as their way to enjoy our nations forests. We are respectful of nature (by staying on the trail) and we are respectful of others (by not trying to ban access) Blaming all OPRV users for the actions of a few is just ignorance and intolerance at its best.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Ah, here we are again with the discussion having degraded to an online shouting match and digital hate-mongering. So much for the spirit of cooperation. Maybe we should all take a breather for a moment and examine our own personal agenda (and we all have one) for our vested interest in this topic. If we are being honest here, each one of us has our own skewed view of very other user group represented here, and consequently our own opinions of why our viewpoint is more valid than everyone else's. In order to make any progress towards the goal of better management of the wild undeveloped lands that are publicly owned in this nation, we all have to learn to at least try to understand other people's views and needs FIRST. Once we have all put down our knives and pitchforks, may be then we can gather TOGETHER and make reasonable, logical decisions as to who gets to do what activity and where and when. Every user group needs to be humble enough to admit that their use should not be allowed in EVERY circumstance. Not because the other user groups condemn them as destructive or invasive, but because IT JUST MAKES SENSE not to be there. It does not make you less of a man to admit that you and your horse, or your mountain bike, or your OHV should not be using a certain trail. You are not surrendering in some sort of battle. You did not lose the fight. There is no fight. The Native Americans who occupied this continent before "we" came here held the belief that no person could "own" the land. Even though our European-based way of thought has us brainwashed to think otherwise, perhaps if we thought more like the indigenous people of North America did and still do, that we would think of the Land and its needs to stay "alive and sustainable" before our own wants and desires to use the Land as WE see fit. Is there a line in our Constitution or any of its Ammendments that states "All citizens shall have the in-alienable RIGHT to use publicly-owned land as they see fit for whatever uses they so choose"??? Did I sleep through that part of CIVICS class?

I agree. I think Title 1 school programs get way too much as it is All children should be able to benefit from this

Every second you have your computer turned on your destroying fragile Eco systems and harming wildlife! You ever seen the carbon foot print of a computer, you have any idea what the carbon foot print is for all the worlds computers, you have any idea how much bigger the worlds carbon foot print is since Al Gore invented and popularized the internet, SHAME ON HIM just think of all the environmental DAMAGE Al Gore has caused just by making the internet popular. Google built their new computer building next to a POWER PLANT it consumes so much power supporting your computerized self gratification habits. Al Gore personally has the carbon foot print of what 35 average Americans. Someone please list the campaign promises that O'Bama made he has lived up to I cant find any. O'Bama inc. knew all about the government oversight controlling the oil company's in the gulf was flawed, they made a limp writsted non effort to correct this problem shame on them, shame on them for not taking the bull by the horns and fixing the known problems Bush created.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

No money left because \* The federal government cannot account for \$24.5 billion spent in 2003. \* A White House review of just a sample of the federal budget identified \$90 billion spent on programs deemed that were either ineffective, marginally adequate, or operating under a flawed purpose or design. \* The Congressional Budget Office published a "Budget Options" book identifying \$140 billion in potential spending cuts. \* The federal government spends \$23 billion annually on special interest pork projects such as grants to the Rock and Roll Hall of Fame, or funds to combat teenage "goth" culture in Blue Springs, Missouri. \* Washington spends tens of billions of dollars on failed and outdated programs such as the Rural Utilities Service, U.S. Geological Survey and Economic Development Association. \* The federal government made \$20 billion in overpayments in 2001. \* The Department of Housing and Urban Development's \$3.3 billion in overpayments in 2001 accounted for over 10 percent of the department's total budget. \* Over one recent 18-month period, Air Force and Navy personnel used government-funded credit cards to charge at least \$102,400 for admission to entertainment events, \$48,250 for gambling, \$69,300 for cruises, and \$73,950 for exotic dance clubs and prostitutes. \* Examples of wasteful duplication include: 342 economic development programs; 130 programs serving the disabled; 130 programs serving at-risk youth; 90 early childhood development programs; 75 programs funding international education, cultural, and training exchange activities; and 72 federal programs dedicated to assuring safe water. \* The Advanced Technology Program spends \$150 million annually subsidizing private businesses, and 40% of this goes to Fortune 500 companies. \* The Defense Department wasted \$100 million on unused flight tickets, and never bothered to collect refunds even though the tickets were reimbursable. \* The Conservation Reserve program pays farmers \$2 billion annually to not farm their land. \* Washington spends \$60 billion annually on corporate welfare, versus \$43 billion on homeland security. \* The Department of Agriculture spends \$12 billion to \$30 billion annually on farm subsidies, the vast majority of which go to agribusinesses and farmers averaging \$135,000 in annual income. \* Massive farm subsidies also go to several members of Congress, and celebrity "hobby farmers" such as David Rockefeller, Ted Turner, Scottie Pippen, and former Enron CEO Ken Lay. \* The Medicare program pays as much as eight times the cost that other federal agencies pay for the same drugs and medical supplies. \* Congressional investigators were able to receive \$55,000 in federal student loan funding for a fictional college they created to test the Department of Education. \* The Army Corps of Engineers has been accused of illegally manipulating data to justify expensive but unnecessary public works projects. \* Food stamp overpayments cost \$600 million annually. \* School lunch program abuse costs \$120 million annually. \* Veterans' program overpayments cost \$800 million annually. \* Earned Income Tax Credit (EITC) overpayments cost \$9 billion annually. \* Better tracking of student loan recipients would save \$1 billion annually. \* Preventing states from using accounting tricks to secure additional Medicaid funds would save several billion dollars annually. \* Medicare contractors owe the federal government \$7 billion. Keep creating more government programs America! Keep sending Washington MORE MONEY! Intelligent people would solve their perceived problems in the private sector where they are forced to make a profit and are held accountable.

## Discussion Question 2

***(cont.)***

You have probably been reading a bunch of mindless replies please read them all very carefully look for FACTS there are a bunch of literary experts that like to write with emotions but these replies contain you guessed it no solid facts they are just feelings. They feel OHV's are doing damage it sounds good anyways, ask to see the damage they clam up and never reply, more often than not the "damage" they are talking about is 50' of trail in the middle of 20 million acres of land, the "damage" is erosion something that all 20 million acres has been enduring for the past 5 + billion years, please use your head when reading about their OHV complaints made by environmentalist .OHV's foot print is actually just a fraction of one percent of the land thats open for OHV's this needs taken into consideration when teaching others about land use, many imply that OHV's foot prints consume the entire allotted land, simply not true. Where as 100% of the acreage that is closed to OHV's can not be used, that is the entire 100%. Can you also provide verifiable data on how OHV's affect the wildlife and the habitat, from what I have seen everybody just assumes this happens, it sounds good anyways but I need to verify that it actually does happen.

I think we need to use Obama care to open up free liposuction clinics we can kill two birds with one stone. Suck the obesity right out of all these over weight people then convert the fat (stored energy) you sucked out into bio-diesel. Lets take a dent out of our energy shortages, improve the health of Americans reduce our dependence on foreign oils, recover all that stored energy. In another 5 years bring them back in to harvest more of their stored energy to fuel Americas needs. Win win for everybody no more having to worry about wasting those leftovers you have after each family meal you can stuff yourself and then spend that energy at a later date powering your car. I can just imagine what you would want to be teaching these kids with your forced education.

Is this why almost a hundred percent of the forest land in the US under private ownership has been clearcut? Is this why most of the private rangeland and farmland in the US sheds polluted water? Tell the rest of the story, out of ALL the land that has been clear cut EXACTLY how much has NOT been restored or replanted? We need verifiable facts.

Due to modern medicine humans are living longer than ever, thank GOD. Now we have national health care (thanks Obama) we ALL will live longer, Canadians have national health care they live on average 5 years longer than Americans. Better get use to your perceived overpopulation problem its hear to stay breed baby breed! The more GREEN this world goes the LONGER more populated this world will be (thanks AL Gore/ Obama Inc.) the reduction in the use of fossil fuels will lead to a huge longevity boom in the near future hooray !

Currently tracking 4,767 airborne aircraft with 115,731,326 total flights in the database. FlightAware has tracked 52,981 arrivals in the last 24 hours. { <a href="http://flightaware.com/live/livemap.rvt" rel="nofollow" target="\_blank">Link</a> } we really need all these planes flying over head dumping their spent gases all over us? In June they consumed over 1.5 billion gallons of jet fuel. { <a href="http://airlines.org/Energy/FuelCost/Pages/MonthlyJetFuelCostandConsumptionReport.aspx" rel="nofollow" target="\_blank">Link</a> } Any my OHV is causing "global warming"

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Study blocking events -----&gt; { <a href="http://www.google.com/search?q=blocking+events&ie=utf-8&oe=utf-8&aq=t&rls=org.mozilla:en-US:official&client=firefox-a" rel="nofollow" target="\_blank">Link</a> } Natural cooling cycle based on reduced solar sunspot activity That is why, in the midst of a new and natural cooling cycle based on reduced solar sunspot activity, we are having a very warm summer and possibly even a very warm year thanks to a jet stream experiencing "blocking events." We all need to get passed the notion that humans have anything to do with the weather. It is too vast, too chaotic, and too unpredictable to rationally suggest that a little bit of carbon dioxide is driving the whole thing. It has virtually nothing to do with the climate whereas the Sun has everything to do with it. There are rumors that the Senate will attempt to take up yet another version of the Cap-and-Trade bill passed in the House during a lame duck session. Based on the bogus global warming, it is a total fraud, a scheme to sell "carbon credits" and make a few people rich while the rest of us are fleeced by rising energy costs. If it passes, those that vote for it will truly be traitors because they will have doomed any economic recovery. It is a nation-killer. "Green is the first socio-political movement in which every single leader and spokesperson is filthy rich."

## Discussion Question 2

### *Written & Online Comments*

*(cont.)*

If you stand by ANY water way and wait for it to rain you will see multiple plumes of visible sedimentation, this is why water has cut into the earth and created the water way, now if you zoom out and look at the big picture its been happening for BILLIONS of years its called erosion its what cut all the ditches, valleys canyons.If what your seeing is affecting the wildlife then that means you have done a study please give us the details of your study so we can view them and independently verify the results, your bleeding heart liberal emotional findings are completely meaningless we need to see verifiable scientific studies, we also dont need to see any of that "junk science" the left wing has been using either.Obama used more than 9000 gallons of jet fuel flying around for nothing (some popularity contest thing) on EARTH DAY now someone here wants to convince me to give up using my OHV because of its emissions.Obama created MORE CO2 in ONE DAY than I have enjoying my OHV for 40+ years and MORE than I will if I continue to use my OHV for another 40 years so why are you trying to punish me?Al Gore has the carbon foot print of about 70 average Americans I havent seen him make any move to reduce his foot print in the past 20 years every year his carbon foot print gets BIGGER! Now your going to come here and demonize OHV'sEvery second you have your computer turned on your destroying fragile Eco systems and harming wildlife!You ever seen the carbon foot print of a computer, you have any idea what the carbon foot print is for all the worlds computers, you have any idea how much bigger the worlds carbon foot print is since Al Gore invented and popularized the internet, SHAME ON HIM just think of all the environmental DAMAGE Al Gore has caused just by making the internet popular.Google built their new computer building next to a POWER PLANT it consumes so much power supporting your computerized self gratification habits.People on this site complaining about overpopulation Obama is giving everybody FREE health care for the sole purpose of MAKING PEOPLE LIVE LONGER.GREEN is all about making the world cleaner so we all LIVE LONGER die from less toxins this has to have those anti-overpopulation people puking buckets of blood.What is wrong with the message you people are trying to send to the world, you look at the big picture the left wing looks like they dont have a clue as to what they really want other than to complain and butt their nose into everybody else private lives and to run everybody else lifeAnybody that owns a ATV or OHV can plainly see your completely clueless if you think you know something then show the world the FACTS we have heard enough bleeding heart liberal crapola to last a lifetime. If your REALLY a environmentalist and are really CONCERNED about the EARTH and health and welfare of others why have you NOT addressed the litter problem in this world? How come we never hear a peep out of these so called environmentalist when it comes to REAL issues you can make a HUGE IMPACT on when you correct these problems. Drive down any road in the USA stop any place you like get out and walk the ditch you cant go 20' and not find trash, the learned behavior is to throw all your trash out the window dont leave it in your car until you get home then carry it into your house for proper disposal.Trash is thrown right into the ditches and thats throwing poison right into our worlds drinking water.Their is billions of tons of trash in our county's ditches yes you never see a environmentalist say one word about this global problem that could easily be cured and billions of tons of trash cleaned up.

## Discussion Question 2

***(cont.)***

Your all nuts for even trying to argue with these so called environmentalist look at what they have been typing on this site. Everything they type is all bleeding heart liberal crapola unsupported by FACTS, we need to make land use decisions based on FACTS. You use feelings for decisions made to YOUR PRIVATE LANDS, FACTS and science for Public Lands. If you want to reply to these bleeding hearts then ask them the questions they don't have the guts to ask themselves as I have done in my last reply, when you STOP defending their stupid unfounded ideas and ask for FACTS to support their position they all run and hide. Look at the global warming thing, that's long from over, they used junk science and LIES to fool the whole world, the world took them for their word they proved they CANT BE TRUSTED.

Obama can do a \$328,835 publicity-photo shoot destroying the planet with his 757 jumbo airliner but I can't use my OHV -----&gt; { <a href="http://www.bloomberg.com/apps/news?pid=newsarchive&sid=aHJkHaApn4o" rel="nofollow" target="\_blank">Link</a> } They use more fossil fuel starting his jet than my OHV consumes in 4 years of use. How about this 8,000-mile, fossil fuel-burning fun raiser that cost TAX PAYERS 2 million dollars I bet there is a underfunded park some place needing that money and can't get it. This is one trip how many trips has he taken so far every time I turn on the news he is getting on a plane to fly some place, I bet some environmentalist here can produce these numbers, Obamas carbon foot print for flying a plane since in office, well? ??? Here is your chance to show the world just how much you really care produce the numbers. Do they really care? Can't use Al Gore's internet to stream cast some of these events to help SAVE THE EARTH by NOT burning thousands of gallons of jet fuel. There are how many THOUSANDS of jet airliners in the air over National Parks dumping how many TONS of carbon on the wildlife 24 hours a day 7 days a week 365 days a year? How come we never hear environmentalist showing concern for land that has a constant stream of jet fuel dumped on it, where is the CONCERN? And your worried about a OHV's running over crickets.

Al Gore has the carbon foot print of about 70 average Americans, take a close look at the Obama foot print he spent more than 9000 gallons of jet fuel on Earth Day, I haven't burned 9000 gallons of fuel in the past 30 years now I am suppose to give up my OHV change needs to start with men at high places.

## Discussion Question 2

***(cont.)***

Another nicely written emotional cry for help, please provide some factual basis to support your idea. I think there should be a world wide ban on lawn mowing, have you ever seen the destruction caused by mowing lawns, have you ever witnessed the death and harassment of the wildlife, you can see bugs fighting for their lives trying to escape the suction of the massive steel blades turning thousands of revolutions per minute. Some are able to escape death's grip but sadly enough many don't make it, THOUSANDS die just so these greedy nature hating evil lawn owners can impress their neighbors with a manicured lawn, you can hear the grass in pain as it's cut, you look close you can see each blade of grass bleeding and crying out in pain it has to be suffering, you see body parts of insects litter the ground like a battlefield, mice, frogs, toads and baby rabbits are also caught up in the fight for life but more often than not the lawn mower wins and they meet a grizzly painful death. Millions of insects are crushed to death by the massive weight of the mowers weight. Then if it's not bad enough they terrorize the land with a lawn mower they spray it with all kinds of chemicals to kill bugs and weeds and to make it grow faster so they can terrorize nature more frequently with their mowers of mass destruction. Oh the humanity please make them stop.

The sound does not impact the wildlife if it did there would have been facts supporting this made available to the general public by now. How many different forms of wildlife do you have to see on the trail not scared by your OHV before you understand this. Why does every form of wildlife natural in my area walk across my yard or fly over me whilst I am on my OHV or mowing my yard, or running my chain saws. Why do honest hard working Americans continue to allow themselves to be brain washed by environmentalists come on I know we're not all this dumb.

The Clean Water Act does not conflict with recreational pursuits. Try reading it.

I strongly support and applaud this idea. There are many BLM roadless areas throughout the West with identified wilderness characteristics that deserve and need interim administrative protection until Congress makes a decision on their ultimate fate. The Bush/Cheney administration was openly hostile to such protection, and that's why former Interior Secretary Norton jumped at the opportunity provided by the State of Utah's lawsuit challenging such protection. The infamous Norton/Leavitt Utah "no more wilderness" lawsuit settlement reversed a longstanding legal interpretation, and not only prevents new BLM interim protections but also voided some previous BLM wilderness inventories, as well as a long-established BLM wilderness handbook. However, now the shoe is potentially on the other foot. There is a similar, current opportunity for President Obama and Interior Secretary Salazar to reverse this "no more wilderness" policy and put things back where they were before the Norton/Leavitt settlement. There is pending litigation challenging some recent BLM RMPs that applied these "no more wilderness" requirements. Thus far, I think that the federal attorneys have been defending these RMPs and the Bush/Cheney status quo. Why? Most American voters voted for change, and repudiated the Bush/Cheney trainwreck on federal lands and environmental policies. Obama and Salazar can and should revoke the "no more wilderness" policy through settlement of this pending litigation. That would truly represent "change we can believe in."

I strongly support the Endangered Species Act (ESA). I also share the concern that the U.S. Fish and Wildlife Service (FWS) has not adequately fulfilled many of its ESA duties. For example, it has an abysmal track record of greatly delayed and backlogged processing of ESA listing petitions, and it excessively uses the "warranted but precluded" finding on those petitions. This poor track record not only occurred during the eight Bush years, but sadly it is also continuing thus far in the year and a half of the Obama administration. In addition, FWS officials often fail to do what is actually needed to protect and recover ESA listed species. There are many examples of this lack of courage. In southern Nevada, FWS officials have been aware of chronic trespass livestock grazing in Mojave desert tortoise critical habitat for many years, in apparent violation of the ESA, yet they do not intervene. Developers have also destroyed Mojave desert tortoise habitats, and likely killed some tortoises, in Mohave County Arizona without having a FWS approved habitat conservation plan and incidental take permit. Again, the FWS takes a pass or looks away. ESA may be strong law on paper, but it is weakly enforced. FWS needs a strong backbone, not one made out of jello.

Closures of OHV trails on public lands are about protecting sensitive environmental areas from continued degradation -- they are *\*not\** about some sort of "collective punishment" for the bad behavior of a few that is imposed upon the innocent, particularly upon the mobility-impaired (there is no mechanism or justification for collective punishment in our laws). Since you posted your idea, by the way, there's been much discussion about how the mobility-impaired can gain greater access to natural areas (such as the idea "make handicapped access a priority when reducing OHV traffic" [on August 17th])...please return to this conversation with your further thoughts.

wrote at the top of this discussion: "Keep track of all the ideas I post." As of August 22nd, you have not submitted another Idea, a single Comment, or a single Vote! Particularly given the lack of follow-through -- I'm concerned and hope that you're well, by the way -- I was disappointed that your idea included no actual mechanism to increase recycling, and so it generated only a few actionable policy recommendations in the Comments that followed. My advice is that we write clearly, concisely, logically, and factually about practical solutions to real problems (though the occasional humorous comment should be allowed) at every opportunity. For example, there are machines that exchange certain recyclable items for cash and these could be placed next to the vending machines that deliver those items (particularly in higher-traffic areas). Care to comment (anyone)?

***(cont.)***

Great idea! Everyone should be able to enjoy the sky at night as part of our national heritage. In the northeast there are many cultural sites which are unidentified or unstudied. These sites were meant to be viewed at sunrise, sunset and during certain night events, such as the Perseid Meteor shower. These ceremonial landscapes played a 'lost' role in our nation's history. The federal government could now play an important role in supporting the identification and protection of these sites. The federal government could also play a role in reforming our nighttime lighting - inefficient fixtures, wasteful timing and overuse of lighting. 'Dark sky' street fixtures are no more expensive than traditional fixtures. Residential lighting can also be manufactured to be 'dark sky' friendly - I own several. The federal government could provide incentives to states and towns to become more lighting efficient. Public education could go a long way. A one night national 'dark sky' event could bring partners together to raise awareness of the beauty of the night sky as part of our great outdoors and to generate support for more year round changes. In the recent National Geographic issue, a nonprofit in New York working with community farms asked children who had participated in their programs if they had seen the stars - sadly only two children who had recently immigrated from Africa could answer 'yes'. Viewing the stars should part of the outdoor experience for every child. Consider starting with a 'Big Star Night' on August 11th each summer to coincide with the Perseid Meteor shower. Partners around the country would offer local family oriented events (a sort of 'Trails Night' similar to Trails Day). When everyone realizes what we've been missing, it'll generate excitement for restoring our national night sky.

The tallgrass prairie has been called the most endangered ecosystem in North America by the Nature Conservancy. Only 3 percent of the original tallgrass prairie remains unbroken. It is also one of the most misunderstood systems. Since the time pioneers emerged from the eastern forests onto the tallgrass prairie, they wondered why such a large expanse of land would remain treeless. Even today, the lack of trees in the prairie causes misunderstanding and low levels of appreciation. People equate trees and forests with healthy ecological environments and view prairie as a big empty field. This is unfortunate. We need more prairie conservation and education on the significance of the prairie.

I say bring it back and get them working on our national infrastructure. We need to invest in our own country and stop sending hush money to these other countries. National Defense needs an overhaul and needs to have some pork trimmed out of it's budget. So much money is being wasted that it's absolutely appalling. As far as problems with sexual harassment or civil rights, this is baloney. Just pre-screen the applicants and ask for references. Make everyone sign a liability release and a form saying that they understand this work has inherent risks and that they will not hold the US liable.

## Discussion Question 2

***(cont.)***

Light pollution control in the National Parks system is needed for the following reasons: 1. It wastes energy, all the light that does not go where intended (such as up into the sky), is wasted energy. 2. Glare from bad lighting design is a safety hazard to automobile drivers, especially seniors. 3. wasted energy contributes to greenhouse gasses, global warming, and wastes tax dollars 4. light trespass onto neighbors' property is rude and unwanted 5. excessive nighttime lighting is bad for the environment and to humans. It upsets circadian rhythm in most species, especially birds. 6. Sky glow near federal lands prevents the viewing of our natural heritage - the night sky and the Milky Way. The sickly light glow over most towns and cities prevents children from seeing the real sky.

Who is this person???? Where exactly is this mysterious open land that does not need to be recognized and protected? I think today we need to have everything in writing when it comes to protecting our environment and what is left of our wild places.

I am amazed at how all the naysayers of OHV use, speak from ignorance. I would bet a dollar to a donut most of them have never once ridden an ATV. My family has 4 ATV's and we ride them thousands of miles a year in the National Forest. We have had to stop countless times to let deer and other animals "walk" across the trail not 20 feet in front of our running ATV's. They sure did not seem scared. Riding clubs have taken over many areas and volunteered their time and money. Making the trails cleaner than they have ever been. Seeing trash on the trail is now the exception where we ride. Obviously these ignorant folks believe you start an ATV and it drives itself and requires no effort. You come ride 150 miles a day at 100 degree temperature on mountain trails with us and we will see how physically fit your are. You better pack some Ben-Gay and Gatorade. Our family loves to ride and it brings us closer. Where is your son or daughter on Friday or Saturday night? Ours are across the campfire eating marshmallow and telling stories. No cell phones, computers, video games, or TV. Just family. You have a lot more chance of getting hurt or killed driving around in you Smart Car than we have riding our ATV's responsibly. The more OHV areas closed the more pressure put on the ones that are open. The so called solution only increases the problem. Typical government response. We currently have less than 1% of the National Forest opened to OHV's. No way we are going to destroy the forest while only accessing 1% of it. If you do not want or like OHV's thats great. Do not try to stop us from riding ours. Once they start restricting use they never stop. If you think your recreation activity is safe because it does not have an internal combustion engine. Think again. If you once went to an area where OHV use is allowed and you saw trash on the ground and some moron doing donuts in the parking lot. Sorry, but that does not make you an expert on the subject. True anything can be abused, and there are bad seeds that participate in every outside recreation. Punishing the majority because of the minority is ridiculous.

Forest roads are not trails. If I wanted to ride on forest roads I would just drive my truck. We are talking about OHV trails. Yes, less than 1% of the National Forest is actually OHV trails. Check out the BRC website and educate yourself.

***(cont.)***

The "Elites" fly around the world on private jets. Live in huge houses with thousands of dollars in electric use each month. Drive their entourage around in SUV's and tell us we are ruining the planet. Meanwhile their minions sit behind computers and tell us, OHV riders, that are 1% of the National Forest access is too much. Give me a break. Your arrogance makes me sick

Community support is essential. In Gettysburg, PA, the Park Service and the Foundation will not express an opinion as to the negative aspects of placing a proposed casino 3000 feet from the National Military Park along the Journey Through Hallowed Ground, a scenic byway extending from Monticello to Gettysburg. It dishonors the 51,000 casualties suffered in that epic battle that helped to define us as a nation, and will cannibalize the existing vibrant heritage tourism economy that has supported the area and kept it charming (not without other such conflicts) for 147 years. We community groups do all the heavy lifting with our own time and money....we need some help to ward off the ongoing attacks from predatory, inappropriate and greedy developers who only see lining their pockets as a goal.

I might add the caveat - put forests where forests should be. I appreciate trees where they belong; however in Nebraska people believe that forests should be planted in areas that were historically tallgrass prairie. Grasslands are a vital part of the landscape in many areas of the midwest and should be encouraged as well. They hold soil from eroding better than trees and they store as much or more carbon in the soil while providing copious amounts of oxygen, just like trees.

Yes it should be a park not a zoo, but there must be a balance between protecting the animals and protecting the animals for people. Ideally a roadway would not be fenced but if the choice is between that and risking the death of animals, I would go with the fencing. But with proper planning it should not be an issue.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The Endangered Species List is being used like a club for the federal government (under threat of lawsuit) to maintain control over the wolf population. The problem that was unforeseen (or unheeded) is that with wolves there is a cultural/societal population limit. I would love it if wolves were found in all of the areas they did pre-settlement; however in this day and age with so many more millions of people in this country it's not feasible, at least not in the large numbers they had before. The wolf populations of the Northern Rockies are recovered as indicated by numerous wildlife biologists who live there. Ranchers and others who have lost animals are indicating that the numbers are too high in some areas. Allowing the states to have control gives them the freedom to manage the population as they see fit, while allowing for the long-term survival of the species in that state. Keeping the wolf on the ESL does not provide for their long-term survival because it: 1. Cheapens the ESL by keeping a species on the list that no longer requires protection to survive. 2. Increases the angst and frustration of local landowners who cannot deal with livestock losses without fear of legal proceedings and fines. The only way that wolves will have long-term survival in a locality is to get the local landowners to understand and value them as part of the ecosystem. Some will never understand and will choose to demonize the wolves regardless. However, if a majority of the people in an area value wolves the consensus will turn to discourage the hatred that wolves currently espouse. This situation is also being replicated in the Great Lakes wolf population that has been recovered for the last decade; to no avail.

your base assumptions are just incorrect. You make assertions of your opinion sound like fact when they are not. Properly placed leg-hold traps are not dangerous to humans and are seldom problematic for pets. And while at its most basic level a trap is indiscriminate, the placement of the trap will most often dictate the species that is caught. A basic leg-hold will capture an animal and, if it is a non-target animal, will allow for it to be released - often undamaged. Your comparison to cockfighting and dogfighting is foolish - you compare trapping which utilizes fur from the trapped animals as a commodity; to pointless bloodsport that is purely recreational "entertainment". Trapping has a value and a place on all public lands. It's too bad that you choose not to see that.

It saddens me to hear anyone say we have plenty of open land. Population growth in the US and around the world has destroyed so much.. cutting down trees, laying pavement, building homes (esp those McMansions !!) -- anyone just needs to take a look around, REALLY look, to see that animals and birds are being squeezed out more and more. Please, open your eyes, travel a bit so you can understand the enormity of the situation for wildlife.

Easements are not, however, a "free-ticket" to open space conservation. Using conservation easements to protect working forests requires the administrative oversight to enforce and manage these often-complex agreements. Recent DEC experiences in the Adirondacks with large scale working forest easements have shown that major time and staff investment is necessary to verify that the easement agreements are being followed by the parties and that unauthorized public use or private actions are not taking place. Publicly-held conservation easements require a corresponding investment of resources for staffing and non-personal resources for administration and management to protect all parties' rights and interests.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Forestry incentive programs have been used in New York to promote and facilitate preparation of Forest Stewardship Plans for private forest owners, and implement various forest and environmental improvement practices including timber stand thinning, invasive species removal, reforestation, riparian buffer establishment, wildlife habitat improvement, forest road stabilization and water quality protection. Demand for these practices from NY forest owners and managers has always well exceeded available funding, indicating a far greater potential for applying conservation practices on the ground.

Currently, the large majority of the funding available under EQIP goes to farmers for legitimate conservation practices on agricultural lands, which diminishes the funding available for the implementation of sustainable forestry practices on private land.

Community forests can provide outdoor recreation and education, forest products for community use, sustainable biomass for community based energy systems and carbon sequestration. The USFS is preparing to roll out the program soon, but the initial appropriation of \$1 million for the program is woefully inadequate. Here in New York alone, there is great interest in this program, and increased assistance from the USFS Community Forestry Program will leverage significant local and private resources for this exciting new program.

While much work has gone into this effort, there is no national standard or program that has yet been developed to provide direct financial assistance to forest land owners for the significant carbon sequestration and ecosystem benefits forest lands provide to society at large.

New York and the rest of the Northern Forest and New England region also are on the front lines of the battle against invasive forest health pests, including the Asian Long Horned Beetle (ALB), and the Emerald Ash Borer (EAB), among others. These destructive forest health pests pose grave risks to the integrity of the region's forests. New York State is facing huge costs to slow the spread of the EAB, discovered for the first time in New York last year, with new outbreaks reported this year within 50 miles of the forests of New England.

I'm pleased to say that an overwhelming number of DU supporters are outdoor enthusiasts and participate on a regular basis in activities that bring them close to nature. Whether it be hunting waterfowl over an early morning marsh, hiking a mountain trail or simply enjoying a peaceful moment in a natural setting, they understand and support with their time and money DU's important habitat work and the relationship between conservation and the added value it brings to their lives. It is that kind of connectivity and passion for all things wild that needs to be generated in greater numbers of people, young and old alike, if we hope to kindle the political and financial support it will take to conserve enough of our natural heritage for the use and enjoyment of generations to come. Those who enjoy sport hunting and fishing know this first hand and have always been at the forefront of conservation efforts in this country and thanks to their financial contributions and strong advocacy efforts, we all have more places to visit and enjoy in America's great outdoors.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

For example, the prairie pothole region of the United States and Canada remain our number one priority for conservation in North America. It is where 80% of all waterfowl are produced. Tragically, native grasslands and wetlands -- the natural resources that make the Prairie Pothole Region a national treasure -- are disappearing at an alarming rate. It is imperative that we conserve enough of this unique grass-wetland landscape to secure a viable future for waterfowl. If we fail here, it is unlikely that we be able to meet the population goals established by the North American Waterfowl Management Plan-an international effort set forth in 1985 between the US, Canada and Mexico, that provides a blueprint for the recovery and long-term sustainability of the continent's waterfowl.

A Governors Task Force on Northern Forest Lands some time ago warned that changes in land ownership from the timber industry to property development for second homes and the like, would likely have an adverse impact on open space, forestry, farming and recreational uses on private lands. As downturns in the economy of the forests industry occurs, millions of acres of timber company lands are often offered for sale. When this occurs at time of a strong regional economy, working forest land is at risk to developers and prospectors interested in recreational developments.

Here ten district ecoregions converge, making the 24-county southeast Texas region one of the richest and most environmentally diverse in the nation.

This is a key stopover habitat for millions of migrating North American neotropical birds.

Our metropolitan region, currently homw to over 5 million people, is expected to grow by 50%, reaching 7.4 million by 2020. The need to set aside green space today is urgent.

The LWCF state assistance program has helped to develop thousands of trails, recreation fields, and other park facilities for Americans to use in their daily lives, as well as acquire new parks and recreation lands in every state in the nation. It was created by congress in 1965 and is authorized to receive \$900 million annually from a portion of the federal revenues from oil and gas leasing of the Outer Continental Shelf. This amount was to be divided equally between federal funding and stateside projects. Unfortunately, thge program has been woefully underfunded in recent decades. As a result, all the states report a huge unmet need for local parks and recreation resources totalling more than \$27 billion in eligible projects.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Just last Friday, the latest opportunity to provide substantial, dedicated funding for the state side portion of this program was again lost. The Consolidated Land, Energy, and Aquatic Resources Act, or CLEAR Act was passed by the House, including language on dedicated funding to the Land and Water Conservation Fund. That's the good news. A proposed amendment to this Act would have provided a guarantee of no less than 40% of funds for the stateside program. The day before the vote, this amendment was withdrawn by its sponsor, Representative McGovern of Massachusetts. Coincidentally, in a July 29 letter from Secretary of the Interior Ken Salazar to Rep. McGovern, he indicated that the Obama administration was committed to full funding of the LWCF by 2014 through the budget process, but there was no assurance that the stateside program would be guaranteed funding. Based on this letter, it appears that the withdrawal of the amendment was based at least in part on the administration's lack of support for dedicated state-side funding for this program. That's the bad news...

In the same letter, Secretary Salazar refers to the President's America's Great Outdoors Initiative, saying "we are hearing from state and local governments, recreation advocates, non profit organizations and other supporters about ways to enhance the State-side grant program" If you are indeed listening, this is my strong message to you today -- Fund the State-side portion of the LWCF, fund it fully and fund it consistently.

As a professional in the field for 26 years and a member of the National Recreation and Park Association, I have gone to Washington annually with my peers and have listened to lip service to fully fund this program going back many administrations, and in all candor I find it frustrating when an opportunity such as the one I just described comes up and is not supported by the administration.

I hope these listening sessions provide you with many examples of the value of recreation in reconnecting people to the outdoors as well as fighting obesity - I also hope you come away from these understanding that we need your help to make this happen. Committing to consistent, dedicated state side funding in the LWCF would go along way to showing me as a parks professional that the America's Great Outdoors Initiative is willing to put its money where its mouth is.

4. Environmental Justice Parks. Low-income neighborhoods and especially the children who live there often do not have access to green space; many of these places are located next to noxious factories, sewage plants, waste transfer stations or landfills. A special program to bring the amenity of parks can go a long way to making these areas healthier and raising them economically.

Last year the General Assembly passed a law making it harder for local governments to condemn properties that have conservation easements on them. Similar bills could be introduced in other states.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I am a long time resident of Yellow Pine, Idaho. I am deeply concerned with destruction of certain cabins by the USFS Payette National Forest. I've studied the 106 National Historical Preservation Act and believe the USFS has knowingly and willfully violated it on multiple occasions, at Stibnite, Idaho. I have called and asked for the forest archeologist. He denies all knowledge of the USFS destroying any cabins at Stibnite, on the national register of historical places since 1982. I have watched the USFS many times, destroying historical parts of a historical ghost town, with much of their destruction on private property. Through FOIA, all I have obtained for documentation thus far, is a receipt (attached) where the USFS paid \$6990 to destroy \_\_\_\_\_' residence. No documentation has been provided as to the destruction of the cabin built by the Boy Scouts of America in 1942, along with several others, possibly as many as 100 total. Many witnesses can be provided to prove the USFS burned down the cabins, although the USFS deny any knowledge of the destruction.

Obtained through FOIA, I have proof that the Payette National Forest knowingly and willfully falsified documents regarding Bill Timm's cabin, located in the historic town of Roosevelt, Idaho, named after Theodore Roosevelt. Review of the structure and testimonies suggest the cabin was built around 1901, when the town of Roosevelt was named after President Roosevelt. A landslide in 1909 dammed up Monumental Creek and turned the town of Roosevelt into Roosevelt Lake. Bill Timm's cabin was above the water line and is likely the sole surviving intact structure remaining from that historic town. Most people in the Payette National Forest do not like the current claims owner Jack Walker. Therefore it is my belief they falsified the documents so they could destroy a historical structure while the very elderly gentleman who owns it lies fighting for his life in the hospital. The USFS has let a petty argument cloud their judgement, and have a stated agenda to destroy an excellent piece of history, simply to settle a score with an honorable elderly man who can't defend himself. Which is selfish, ruthless, and unethical.

Thank you for initiating this invaluable effort to reconnect our people with conservation and the outdoors at a national scale. Given the massive & multiple challenges facing our society and world, it is tempting to overlook the power and importance of our environment. Yet when we don't respect and care for it, civilizations fall. I live in Montana, but won't be able to attend any of the listening sessions being held this Wednesday. How long to I have to submit ideas/comments on line? What is the timeline for moving ideas into action?

There are two principal issues in the Chesapeake region that serve as barriers to getting more citizens outdoors and more engaged in preserving our heritage: 1) a lack of adequate resources for land conservation; and 2) a lack of public access to our rivers and the Bay. We believe that these issues can be addressed and the goals of the America's Great Outdoors Initiative can be best achieved by:

Fully funding the Land and Water Conservation Fund and dedicating a portion of those funds to a public-private Chesapeake Treasured Landscapes Fund that leverages private and other public financing. The Chesapeake Fund would be used to acquire lands targeted by a new Federal-State GIS-based conservation planning tool that is modeled on state platforms such as Maryland's GreenPring program

## Discussion Question 2

***(cont.)***

Establishing a new 21st Century Chesapeake Bay National Park, as recommended in the Chesapeake Executive Order and the Special Resources Study submitted to Congress in January. A new unit of the national park system in the Chesapeake would not only help address critical needs for landscape preservation, but improve opportunities for public access to the Bay, education, and ecosystem protection, in partnership with State and local governments, and non-profit organizations.

Fully funding the activities called for in implementing the comprehensive management plan (CMP) for the Captain Jon Smith Chesapeake National Historic Trail, and the Chesapeake Gateways and Water trails Program. With funding support, these model initiatives will greatly increase targeted conservation, engage citizens in environmental stewardship and expand heritage tourism throughout the 64,000 square mile Chesapeake watershed.

Public access to waterways should be given due consideration in the transportation planning process and in conjunction with new construction, reconstruction or repair of road and bridge transportation facilities, except where such use is unsafe, not permitted or inappropriate.

U.S. Army Corps of Engineers recreation areas should be established in the Chesapeake Bay watershed.

The Secretary of the U.S. Department of Education should be fully engaged in the America's Great Outdoors Initiative and should support policies and fund programs to ensure that all students - from pre-K to 20 - have the opportunity to learn about the environment and natural world around them.

The state's fiscal situation has eliminated funding for these two important partners recently; federal waivers for reduction or elimination of partner matches would help restore these important stewardship collaborations on state lands.

New York faces environmental a range of problems that will require a greatly expanded and diversified workforce to manage: stewardship of 4.4 million acres of state conservation land; dilapidated state and municipal parks; homes that need weatherization to conserve energy; a growing list of invasive species and damaged ecosystems. With funding from the U.S. Department of Labor, NYSDEC and our sister agencies could initiate a summer youth employment program focused natural resource conservation and stewardship projects. We would envision placing unemployed young adults at as forty regional facilities such as field headquarters, fish hatcheries and education centers to where participants would work as part of existing DEC crews on projects such as trail maintenance, campground upgrades, invasive species removal, tree plantings, and ADA enhancements.

Much progress has been made in ensuring cleaner estuaries and natural shorelines in Rhode Island over the last forty years. But with continued development pressure compounded by threats from climate change, our estuaries are as threatened as ever.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

On Thursday, July 8th, I was in the audience at the Listening Session held at Occidental College in Los Angeles. I listened with interest to those who were chosen to speak to the panel during the entire afternoon, but not one of those who were chosen to speak addressed my concerns. It seems shortsighted of those who arranged the event did not arrange for any opposing viewpoints to be aired and considered by the panel. I was also concerned that those who spoke asked for money from you for their special interests. We ask nothing but to enjoy the multi-use designation of the land that's still there.

was there in the 1990's when it was decided to close off additional vast areas of public land to the public. It's important to note the growth in population at that point, as opposed to the shrinking amount of areas available to the public to enjoy.

am here in 2010, and we have yet another Desert Protection Act! I believe they have come to take the last public land that is open to the public and keep it from the public to enjoy.

First, the talk force asked what is working effectively in our strategies for conservation, recreation and connecting the public to the outdoors. In our experience, the answer is partnerships. We attribute our successes to our full embrace of public and private partnerships, including those with local, state and federal organizations, for conservation activities and initiatives that make sense, improve our economy and protect and restore our environment. Strategies that marry responsible, predictable funding with sound local and grassroots planning with partnerships that engage all levels of government and private organizations are at the heart of our long list of successes.

Future listening sessions should be announced well in advance so people can plan their calendars and so interested organizations can assist in spreading the word. The website needs to be kept up-to-date. It also needs to be kept simple. I have heard some complaints from people who find it hard to navigate. And while I understand and support the need for registration to make comments and to vote, I think it is not a good idea to have one's votes linked to one's personal profile for all other users to see. ( I have no problem with the comments themselves being linked, however.)

Of course, AGOI does not exist in a vacuum, and there are other issues which affect it, but which were probably beyond the scope of the listening session. But without an examination of these other issues, AGOI cannot be totally successful. Most important is funding , although population (which was mentioned at UCD) needs to be taken into account as well

This is a big issue, but the main issue is really one of national priorities. There is money available for programs, but the Administration and Congress need to push much harder to shift spending priorities toward programs that directly benefit Americans and our environment. That might mean, for example, that departments that have huge budgets, like Defense, have funding shifted away from them.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Also, our system of government subsidies needs to be overhauled so that money is not going to support activities that harm the outdoors, like to oil and gas companies (which seem to have no problem being very profitable).

Agriculture and transportation subsidies also need to be examined for their environmental impacts.

We can't hope to make outdoors accessible to everyone if the population keeps growing. We need to come up with a policy to minimize population growth and even reduce it. It's not just a matter of immigration, either, although projections seem to show that the bulk of future population growth will come from immigration and descendants of present immigrants. This is important for both urban outdoors issues like city parks and recreation areas and facilities as well as wildlands.

Land managers must remember that users of public lands are the owners of those lands. There is an increasing trend in which land managers view the public as customers, when in fact, American citizens are the owners of the land and the employers of the land managers. Even if the idea behind this thinking is to promote "good customer service," the thinking is backward. Land managers need to see themselves as "public servants" and act accordingly.

It was disconcerting to see Secretary Salazar say that land use decisions would be made at the local level in Utah when politicians and others in that state, representing a minority of Americans, voiced opposition to the possibility of new national monuments. This is not to say that local opinions should be ignored, but federal public lands belong to all Americans. Only a small minority of Americans lives in those states having the most vocal anti-public lands attitudes, and this minority should not be allowed veto power over proposals and management policies that benefit the majority of Americans.

Not everyone can go everywhere. People need to face up to this fact. Therefore, not every group of persons should be given the same level of access-- not because they are less deserving as people, but because some methods of access are destructive of other important values. There have been proposals in Yosemite National Park, for example, to build tramways to the tops of Glacier Point and Half Dome so people can get up to the summits more easily. High levels of motorized access should not be allowed everywhere, because they are destructive of wilderness values, for example. Not every trail should be paved

Off-highway vehicles should not be allowed free travel everywhere. In fact they should be severely curtailed, as they are destructive of habitat, solitude, and quiet. Furthermore, quiet recreationists-- hikers, hunters and anglers, photographers, rafters, birders and wildlife viewers, cross-country skiers, and others-- make up the majority of the users of America's public lands. Their desire for peace and quiet in the outdoors should take precedence over the noise of OHV and snowmobiles. OHVs and snowmobiles ruin the experience for them, but the reverse is not true.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Resource management decisions must be made on the basis of sound science and not private desires

Concessionaire fees must return a fair value to the agency since it is a public resource being exploited for private gain (even while providing a public service). But charges to the public (citizens) should not be exorbitant, either, such that average citizens are priced out. Prices for lodging in the national parks are becoming far beyond the range of ordinary Americans to enjoy. A quick look at some lodging shows the following examples: Yosemite Lodge, mid-week, after Labor Day, \$208 minimum for 2. Awahnee Hotel, Yosemite, 2 adults, mid-week, after Labor Day, \$498 for 2. High Sierra Camps, Yosemite, (tent cabins, including dinner & breakfast), 1513/person. Zion National Park Lodge, mid-week after Labor Day, minimum \$158.95 for 2.

Secondly, concessionaires are closing "non-profitable" campgrounds earlier and earlier every year, whereas the Forest Service used to keep campgrounds open, with bad weather being the more decisive factor. The trend toward concessionaire operations is depriving people of opportunities to enjoy their public lands in an inexpensive manner.

It was disturbing at the Davis sessions to hear OHV proponents say that OHVs are good ways to get kids away from their computers, and that as a consequence, more public lands should be made available for OHV use

OHV recreation may get children outdoors, but it does not get them close to nature. Instead the thrill comes from driving the machine. And OHV use does not promote physical activity. Far better for both purposes is to get children out hiking. (OHV use also exposes children to pollution from exhaust and to the risk of accidents.)

Overall, OHV use is not good for our public lands. The temptation to go off-trail is great, and user-created trails, once established, are hard to eradicate.

OHV use contributes to soil erosion, and increasingly, there is evidence that the dust blows away, sometimes on snowpack, causing earlier and more rapid snowmelt.

Although, with the rapidly changing culture, society has shifted its' focus and has instead advanced in ways that impact our lifestyles. It is proposed that the introduction of technology like video games and construction development in communities have restricted today's children from wanting to explore nature hi their backyards. Children in today's society think that "playing in nature seemed so....unproductive. Off-limits. Alien. Cute. Dangerous. Televised." (Louv, 2005) These, factors can possibly lead to what Richard Louv (2005) calls "nature deficit disorder".

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

In the article titled "The New Relationship Between Children and Nature" Richard Louv (2005) describes "nature deficit disorder" as a problem that involves children who have little to no desire to play in nature. Louv (2005) believes that this can be detrimental to the development of a youth's childhood. The author states that being outdoors can stimulate children's curiosity and imagination; essentially nature can calm, focus and excite their emotions (Louv,2005). Within both of the articles Nabhan, Trimble (1994) and Louv (2005) agree that being outdoors is beneficial. In many ways, solitude in nature "enhances children's creative play and encourages the presence of adult supervision" (Louv, 2005).

The greatest challenge is the trend to lock up the outdoors in order to preserve it instead of allowing wise use. These efforts to decrease rather than increase access are seen by many only as an effort to eliminate their sports and have created a polarized battlefield between two sides whose ultimate goals are the same - healthy, vibrant rivers, streams and oceans, forests and fields, with habitat for all living creatures.

This rush to preserve without use is advocated on many fronts. Government, often under cover of insufficient funds, is also a culprit. For instance, the Pacific Southwest Region of the US Forest Service manages 20 million acres in California or almost 20% of our state. If one looks at its Mission, Motto, Vision and Guiding Principles however, the word "recreation" does not appear.<sup>1</sup> Whatever happened to the motto "land of many uses"? It is no wonder that we are losing touch with the outdoors when access is not a priority for one-fifth of the entire state.

There are enormous stresses on our natural resources today. What was acceptable years ago is in not possible with our current population. But the answer is not in locking these resources up. Efforts to do so have dissuaded Americans from enjoying their resources and have been seen as a threat by those who do get out. Instead, what is needed is a forum for users and nonusers to work together to develop solutions that include appropriate use of public lands. We thank you for an opportunity to come together and work together.

Studies have shown that preserving habitat on waterfowl breeding grounds is extremely critical for both maintaining and increasing waterfowl populations. Areas such as the PPR are being converted to agricultural use every day, and thus many endangered prairie plants and wildlife species are losing key habitats. While gains have been made in many areas of the country, over the last century, much of the PPR has been converted to intensively cultivated cropland and heavily grazed or hayed grasslands. This loss of habitat has caused steeper, more consistent, and more widespread declines in grassland birds over the past 25 years than any other North American bird group.

As a lifelong resident of Eldorado National Forest, I object to spending over \$2,000,000,000 of my tax dollars locking the majority of the public out of more of their public lands through inappropriate Wilderness and Monument designations

The majority of their public recreate on Non Wilderness lands. Designating more Wilderness only discourages the public from enjoying the outdoors.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Wilderness and Monument designations are the most restrictive forms of land designation and reduce access. We need to revert some of these lands back to Multiple-Use in order to promote access for urban youth and all Americans. The President needs to include the two largest forms of recreation as a priority in his plan to reconnect Americans with the Outdoors: Off Highway Vehicle recreation and Mountain Biking. More areas need to be opened to people who enjoy these most popular ways to enjoy the outdoors. The Back Country Designation championed by the Blue Ribbon Coalition is vastly superior to Wilderness Designation because it provides the same environmental protection without locking up the land from public access. please take the time to learn more about this alternative a land protection plan:  
<http://www.sharetrails.org/backcountry>

Over 80% of lands west of Mississippi are open space. Wildlife have plenty of land to prosper. There is simply no need to create Wildlife Corridors or designate additional Wilderness Areas, unless the purpose of this initiative is to further the goals of the United Nation's bogus Wildlands Project by forcing people from rural communities and pushing them into urban areas.

The Creation of Wildlife corridors will have a disproportional and severe negative impact on rural communities. It appears that organizations such as the Nature conservancy stand to make huge illegal profits by swapping lands to the government for Wildlife Corridors.

The President stated that he is interested in local involvement in his plan, yet no multiple-use groups have been included or invited. The initial plan has clearly been created by a small segment of special-interest groups who seek to limit access to our public lands. Those who live, work, play, and protect our public lands are the ones who should be consulted -- not those who simply want to lock up public land from public use.

The coalition group that formed to sponsor this event represents diverse interests both on a national and local scale on issues such as wilderness protection, diversity parity and equitable access to parks for all of our communities, urban parks, river parkways and wetlands restoration just to name a few. We fully expect to continue our collaboration to insure that the policy and funding opportunities we have identified are reinforced with our Federal agency partners through on-going dialogue with agency and political representatives as appropriate.

We invite you to hold one of the public meetings here in Seattle. We believe that the Puget Sound area and its surrounding watersheds and forests present an ideal opportunity of the kind of area that has tremendous natural resource values, significant and growing public use, and need for a more comprehensive and coordinated level of protection and management. This important and sensitive eco-region is anchored by three national parks (Mount Rainier, Olympic, and North Cascades) and a number of designated wilderness areas on the national forests. The watersheds that drain into the Puget Sound sustain salmon and steelhead, however, most of the runs are listed as either threatened or endangered and face real challenges for recovery. The lower elevation watersheds and working forests are mostly privately owned and contain a key part of the ecosystem and are important for corridors and connectivity for fish and wildlife - particularly in a climate changing world.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The challenge to engage outlying and rural communities within the Mississippi River watershed is encouraged by any local organizations and leaders who recognize the importance of stewarding the natural resources of America's River. There exists a need to engage local communities and empower them with the resources and information they need to fully realize the recreational and environmental benefits the Mississippi River has to offer. In response to the challenge put forth, we have attached a concept paper for a "Great Rivers Stewardship community of Practice," outlying a path forward and recommendations for advancing the efforts of America's Great Outdoors Initiative and the positive impact it can have on the resources and people of America's River, the Mississippi.

The lack of predictable, reliable funding, ORRG concluded, has been a major stumbling block to effective planning and implementation. We argued in our report that the long term solution to a chronic scarcity of funds would seem to entail dedicating by statute a percentage of revenues from energy development on public lands offshore to land and water conservation -- drawing on the precedent for a 12.5 percent set aside for stateside LWCF in the Gulf of Mexico Energy Security Act of 2006. The rationale, in effect, a quid pro quo: as public resources are exploited, something is invested back into conservation. This rationale has become more pronounced in the wake of the oil spill in the gulf, with which you and others are now contending.

More funding is the only part of the issue. As we suggest later in this memorandum, America's Great Outdoors could be a catalyst for change. The federal government must spend more wisely what is currently available from disparate programs. Better targeting and widespread leveraging of state, local, and private sector financial resources are needed. So, too, are clearer, easier, more coordinated processes by which partnering organizations can apply for and secure funding to further land and water conservation and publicly accessible outdoor recreational opportunities.

the pursuit of greater funding for land and water conservation -- even if it takes longer to reach the desired level of support -- and more effective use of currently available federal dollars should continue vigorously

Resurrecting the Urban Park and Recreation Recovery Program, created in 1978 to rehabilitate critically needed recreation facilities in more than 300 localities but which has not been funded in several years. Funding for urban parks and recreation has not been a priority for most states with their share of stateside funding under LWCF, too few dollars to spread around, making the requisite planning effort by localities not worth it. Yet observers, including the Newark Mayor Cory Booker, have noted that close to home parks and recreation are the destination of choice for great numbers of Americans in urban areas.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Locally, we have seen movement in Emery and San Juan counties in response to the possibility of new National Monuments, but those efforts have stalled out, and they are in danger of being poisoned by parties who are hostile to the federal government and do not want meaningful protection. They are acting in these counties now, Secretary Salazar, to get you to leave them alone, not to advance important and lasting protection. These are the places where we still need your help – to help us see that shortcutting real protection can have real consequences. Locals can only drive the process when they do so with respect given to the national interest, and that is where we need your leadership. We need the power of Interior to help spur us along. With that help, I know we can

We have a once in a lifetime opportunity in San Juan County in the southeast part of the state, and we have a chance to do it right. We need to expand Canyonlands National Park and Hovenweep National Monument so that their conservation vision can be realized. We need to protect BLM and Forest Service Wilderness on Cedar Mesa, on Elk Ridge, near Natural Bridges and in the Glen Canyon region; we need to protect the wild and scenic Colorado and San Juan rivers. Cultural resources deserve protection too. Southeastern Utah is unique in that a longer slice of human history is better preserved there than anywhere else in the world. We need to make sure that these internationally significant cultural resources are not lost forever due to either malice or neglect.

Nationally, we need you to rescind the Leavitt/Norton No More Wilderness Agreement, we need a new Roadless Rule for National Forests from your administration, and we need robust and full funding for the Land and Water Conservation Fund at \$900 million of OCS proceeds annually as Congress intended. Further, we need science to resume a leading role in guiding land management decisions. We need sound decisions based on sound science without conflicting politics getting in the way.

Given the SCOPE of your outreach, I'm going to limit this to the National Parks even though the GREAT OUTDOORS covers BLM land, farms, ranches, the Gulf, and much much more. I was a conservation chair, and I was always brought back to the same cause and effect. People. Too many people. You can't protect the land when there are too many stresses on the resources. Over use, development, pollution. You NEED to include the Department of Education in this endeavor. Kids are our future. You can reach them through the schools.

It is difficult to get young people involved. What is amazing is that people will spend money with outfitters, when they can have a free event with the Sierra Club. I would say the average age of our group is 55 or older. The Desert Peaks was declining, but we are now, through outreach and monthly potlucks that move around Los Angeles, increasing our numbers. We also have a great new website which is updated by one of our members. All the Desert Peaks events are volunteer. We have some awesome, responsible leaders.

Many people carpool. For many of our peaks you need 4 wheel drive to get to the trail head

## Discussion Question 2

### *Written & Online Comments*

*(cont.)*

We are a small group within the Sierra Club. We have roughly 300 members. We sell a Road and Peak Guide which generates most of the money we make. We are nonprofit.

Keeping the Park wild, but letting people in. For the animals and plants sakes it is a double edge sword. With a few billion and counting, this does NOT bode well for the wilderness. Population and conservation in ANY form is an oxymoron. I know. I w

I don't see a lot of young people in the parks. I do however, see lots of Europeans. They LOVE our parks which I'm sure you are aware.

The railroad used to be connected to many of the parks. That era being bygone; you are left with bussing people in. A hook to get people to take mass transit. I am a railroad enthusiast and the railroads are a part of the Park's history. The railroad association / community is huge. You have a huge ready-made audience.

1. At Disneyland, my FAVORITE ride is the California Adventure Ride. This ride gives the sensation of flying over California. Not only do you see the tops of mountains and fly through canyons, you also smell the air (pine, orange, ocean water). Why can't you do the same at ALL the National Parks and keep changing and updating the footage? One of my comments at the breakout session was many young people don't go to the parks because for the kids the static displays and format is "lame" (I'm quoting the kids here).

a. For kids, the Ranger Programs are old and out of date. They want something new. They want what they get at Disneyland and Sea World. Although they want to touch the animals I strongly am opposed to this, you end up caging the animals in zoos, and that is not a good thing. Instead, offer video showing where the animals live and why we should protect them. Many will never (and this is a good thing) hike the wilderness and experience firsthand, to see or touch these animal's habitats. Too many people in the wilderness is not a good thing for the plants or the animals. But with the video, it would be a way to help get the kids connected.

a. I have talked to several people in all walks of life. Their comment is, you have too many restrictions which puts people off and makes them NOT want to visit the parks.

MANY PERMITS / RESTRICTIONS / LITIGATION to participate

NO DOGS ALLOWED – do you have any idea how many people have dogs?

Government bureaucracy and red tape continues to be obstacles to effective and efficient partnership response to enhancing conservation and increasing opportunities for outdoor recreation. While adding another layer to the federal bureaucracy seems counter-intuitive, collaboration among federal agencies would probably improve with the establishment of an inter-departmental coordinating council or committee. The Secretary of Interior would likely head said council.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

To be a better partner, the Federal government needs to be more responsive. Forest Service and Bureau of Land Management have been slow to react to stewardship contracting authorities. Some of this is no doubt due organizational culture and structure; leadership perceptions; lack of initiative; fiscal constraints, limited funding and inadequate knowledge of or availability of personnel. Even with the slow response to embrace this new tool, there have been some notable successes.

The Oconee Stewardship agreement project is one of 22 stewardship projects NWTF is currently working on. This project started small and over the past 3 years has leveraged Forest Service funds (\$60,000) with a Corridor of Flight Grant (\$70,000), NWTF Stewardship Agreement (\$200,000) to do: Timber Sale (thinning), 320 acres of midstory control, 24 acres of wildlife openings, 16 RCW inserts, RCW Monitoring, 2000 acres of prescribed burning

Currently, we have the tools necessary to inform, coordinate and collaborate; what is lacking is long-term commitment, in terms of both consistent funding and available human resources, to making a difference, especially when you are talking about conservation at the landscape scale.

The potential of IRS denials of legal and proper tax deductions for conservation easement donations

1. The perception that the federal government will control property protected by conservation easements

1. Funding for conservation easements

1. Funding for land trust capacity

1. Lack of accepted practice for valuing the services that intact ecosystems provide such as clean water, clean air, carbon sequestration etc.

1. Lack of understanding by the general public of the value of protecting private lands even when physical public access is not allowed.

1. Don't let funds get swept for single species initiatives like NFWF monies

1. Require the IRS to honor the intent of the law in allowing federal tax deductions for conservation easements.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Our major concern is rapid erosion runoff, which causes river bank and lake bank collapse, plus the resulting siltation. This siltation is clogging the necessary flow paths in the river at several locations, and causing reduced water quality and pollution. We are actively seeking assistance in addressing these problems through the federal Water Resources Development Act of 2007 (WRDA) and various grant programs.

Although much has been accomplished, more work remains and more collaboration is needed. In order to build upon this success it will take increased funding to meet the backlog of interest. America's Great Outdoors Initiative will bring much needed attention, funding and cooperation to help protect and restore the important natural resources in New Hampshire, and most importantly, yield critical benefits to its citizens

People come from great distances to snowmobile, white water raft, sky dive, hunt, fish, camp, and hike. They also come to see wildlife and the beautiful scenery. We are currently trying to develop an all-terrain vehicle component through the construction of multi-use trails that will bring a huge increase in outdoor tourism and boost our economy. The success we are having in these areas is due primarily to one major factor: our major private landowners. What works for Maine? Its working forests.

But today, we find the great forests of Maine and our way of life being challenged by those who would take both away from us. The forests of Maine have been privately owned working forests for almost 400 years. These forests provide owners their livelihood as well as the livelihoods of thousands of Maine families. This private ownership has provided the public wide-ranging recreational opportunities, chances for appropriate economic development, and many other benefits. These have occurred without intrusion by the federal government and without the interference of environmental groups who now seek to use funds from America's Great Outdoor Initiative to make drastic, negative changes to our forest industry through expensive, restrictive, and unneeded conservation easements and other options. Please respect the people of Maine by rejecting the use of these federal funds to support the environmentalist schemes over the history, tradition, and needs of Maine's working forests and working people.

This initiative and its components such as the Treasured Landscapes and All Lands Initiatives are viewed by the extreme environmental lobby as their newest piggy bank to finance themselves and to effectively bring private ownership of Maine's forests and thousands of jobs to an end by controlling these private lands through restrictive conservation easements that freeze in place current uses and generally prevent the development of new opportunities, such as the ATV trails mentioned earlier. Freezing in place today's status quo via conservation easements is to sentence the Maine forest products industry to no future growth by socializing our private forests and ceding control to the environmentalists who seek to shut down this critical Maine industry.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Conservation easements have become a trendy growth industry for those who seek further control over privately owned land. These easements end economic growth, block or restrict public access, and cost taxpayers huge sums of money for no public benefit or gain. These easements are in perpetuity. No one has a crystal ball to know what our needs will be in 25, 50, or 100 years. Easements placed today could have terrible impacts in the future as times and priorities change. The Town of Millinocket is not willing to support such efforts that could bring such great hardship to our State, our major industry, and our people based on the shallow promises of certain environmentalists that they are here to help us. History clearly demonstrates that they are not.

Nighttime satellite photos of the United States show a great dark void where the woods of Maine are located and it is the largest uninhabited area east of the Mississippi River. It is dark because it is a privately owned working forest. Environmentalist plans to “preserve” it are not necessary as the landowners themselves keep it this way because they make their livings there.

While some of the environmentalists adamantly deny it, we believe that these efforts are intended in the long-term to create a 3.2 million acre Maine Woods National Park that would eliminate the core of Maine’s most productive forest land. This newest initiative presents them yet one more financial opportunity to realize this goal. Millinocket rejects the park, the key political leaders of Maine reject it, and the people of Maine reject it.

Given these major challenges that face us, taxpayers would be much better served by a program that enhances the various uses of the Maine forests. Recreational activities continue to be a major part of our economic base. Federal monies used to enhance these opportunities through grants for things such as publicly funded multi-use trail development can help Maine, especially when done in working partnership with Maine’s private sector. Conservation easements that impose a status quo and stop any consideration of growth take us in exactly the opposite direction of where Maine needs to be. While there may be specific, limited land parcels that are worthy of purchase, landscape scale conservation easements are simply not necessary and are, in fact, a direct threat to our economic well-being and future.

On behalf of the Town of Millinocket, I urge you to reject the use of America’s Great Outdoor Initiative and its related funding programs to economically lock down our State’s major industry and destroy our economy in the process. Rather, use these funds to directly enhance recreational opportunities and forest practices that actually encourage people to partake in outdoor activities, create jobs, and improve our economy. Thank you.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

TPL and the western water collaborative Carpe Diem now seek to partner with DOI and USDA to develop a comprehensive new collaboration that can address the growing challenges of watershed adaptation and working lands conservation in this region. Climate change projections show major potential impacts, including loss of snowpack and major forest health challenges for the region's forests that would impact forest products and habitat values alike. TPL will synthesize a range of vulnerability assessment from public water supplies to coldwater fisheries to forests and then seek to work with DOI, USDA, the Washington State Department of Forestry, Washington State Department of Ecology, municipal water utilities, and a range of other partners to design integrated land conservation, restoration, and stewardship response. This will include actions such as continued consolidation of federal holdings in checkerboard lands where that ownership pattern impedes effective watershed management, and conservation of impaired watershed lands to gain site control so that restoration actions can be initiated. This will also include collaboration with private landowners to support easement conservation of important working lands that can be managed for climate resilience using DOI and USDA incentive funding.

#### USDA/USFS/Forest Legacy Program

As revealed by the compelling new U.S. Forest Service report, *Private Forests, Public Benefits*, communities across America are threatened with loss of access to forest values through accelerating conversion of private forests. These threatened forestlands are often needed for essential community and tribal purposes, including water supply protection, the timber-based economy, wildlife habitat, youth outdoor education, and recreational opportunities, including hunting and angling.

The Forest Legacy Program was established in 1990 to provide federal funding to states to assist in securing conservation easements on forestlands threatened with conversion to nonforest uses. Over the past 20 years, the Forest Legacy Program has prevented the loss of almost 2 million acres of forestland in 42 states and Puerto Rico and has leveraged an equal amount of state, local, and private funding for every federal dollar spent. In FY 2011, 39 states submitted proposals for 60 FLP projects and a robust President's budget of \$100 million will provide full funding for only a portion of these identified projects, leaving thousands of acres of important forests in many parts of the country at risk. TPL urges the Administration to increase its investment in this program in order to ensure the permanent protection of the myriad benefits provided by our nation's private forests.

#### USDA/USFS/Community Forest and Open Space Program

The new Community Forest and Open Space Conservation Program (CFOSCP) provides another means for individual communities and tribes to address threats to the forests that sustain them. CFOSCP is a 50-50 matching grant program established in the 2008 Farm Bill to give communities, tribes and non-profits funding to take a leading role in local forest protection by purchasing economically, ecologically and culturally important forestlands for community and tribal owned forests. The program also funds technical assistance through state forestry agencies to help interested grantees to plan for and implement outstanding forest management. Despite the urgent need on the ground and broad support for the program, it has not yet gotten off the ground due to administrative delays.

## Discussion Question 2

***(cont.)***

In FY 10, Congress allocated \$1 million to finish rulemaking for the program with an eye toward opening the program for grantmaking in FY11 or FY12. Delays in rulemaking over the course of FY10 have delayed program start-up despite a strong community of 130 interest groups and government entities that has written to the U.S. Forest Service and Congress in support of the program over the last two years. As a result of these delays, there are many deserving projects that urgently need funding now to ensure important forestlands are not developed and can instead become sustainable community resources. The CFOSCP is well-designed to help implement the goals of the America's Great Outdoors Initiative if the rulemaking were completed, and if funding of \$10 million or more were allocated in FY12 for a first round of grants from the Community Forest and Open Space Conservation Program.

This is a critical moment for land conservation in America: projected population growth will put additional pressure on existing parks and reduce remaining open space, an entire generation's health is at risk from a sedentary lifestyle, and climate change threatens to alter many of our important natural systems.

Over the past three decades, childhood obesity rates in America have tripled, and today, nearly one in three children in America are overweight or obese. One third of all children born in 2000 or later will suffer from diabetes at some point in their lives; many others will face chronic obesity-related health problems like heart disease, high blood pressure, cancer, and asthma. In order for children to live a healthy lifestyle and become connected to the outdoors for its myriad benefits, they must have access to places to play, hike, bike and run. LWCF provides a direct means to that end perhaps more than any other single federal program.

Nevertheless, creating great city park systems, or upgrading older rundown ones, is a major challenge that cities have formerly been tasked with on their own. There are needs for trees, irrigation, water management, sport facilities, lighting, erosion control, restrooms, fountains, pathways, playgrounds, benches, signage and much more. Some cities have an even more basic need: more parkland for growing populations or underserved neighborhoods.

In addition to funding for planning and park system analysis, cities need help funding land acquisition for new parks, site clean up, and park design and development.

There is currently no federal agency that has full responsibility for urban conservation projects. Numerous agencies have partial interest and partial jurisdiction, such as planning, acquisition or development. But completing an urban conservation program today is often so bureaucratically challenging that many communities give up or don't even try. Thus, we call for the creation of an urban department within the Council on Environmental Quality to streamline and coordinate funding by multiple federal agencies for urban park and conservation programs to help accomplish these national goals.

The ranchers in northwestern New Mexico are suffering grievous harm through pollution of their water and soil by the chemical used in hydraulic fracking in oil and gas drilling. It is imperative that the DOI seriously control this business considering the thousands of drills along the Rockies. Our Rockies.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Conservation service can be a strategy to address youth unemployment. Young people (age 16-24) face the highest youth unemployment rate -- 19.6 percent -- since the Labor Department began compiling the data in 1948. For low-income and minority youth, the job prospects are worse. By providing paid and stipended service positions, young people are able to receive hands-on training and life skills to help prepare them for careers in conservation. Again, we recommend scaling community conservation summer jobs program across the country.

Childhood and adolescence obesity have reached epidemic proportions in the U.S. More than one-third of children and adolescents are estimated to be overweight or obese. Obesity is a key predictor for many future health problems, including diabetes. Youth conservation service can help tackle this epidemic. Indeed, many existing conservation programs by SCA and the Corps already get young people moving outdoors by, among other things, building trails, restoring habitats, and building boardwalks. In addition, many of SCA's programs, particularly residential programs, help young people make informed choices about nutrition and how healthy food connects to the land. We recommend piloting initiatives as part of SCA and Corps programs that incorporate nutrition education for participants, provide healthy meals for economically disadvantaged youth, and allow nonprofits to develop or use tools to measure and evaluate the exercise, nutrition, and recreation components of such initiatives.

Many workforce challenges, including diversity recruitment and retention, loss of critical skills, and impending retirements, confront public land management agencies. The impending retirement of interpreters, visitor services staff, and senior firefighters, for example, comes at a time when demands for those positions are growing within the agencies. Yet, SCA and many of the Corps receive training in these areas through a variety of our career training programs. Many want jobs with the federal land management agencies, but are not eligible for noncompetitive hiring status. As recommended above, these participants and other SCA/Corps trained participants and interns should be used as a key workforce pipeline by federal land management agencies.

The American Motorcyclist Association (AMA) is disappointed with the ongoing America's Great Outdoors "listening sessions" currently being held nationwide by the Department of the Interior. These meetings were originally billed as a chance for all citizens to meet and speak with their federal officials on numerous public lands management issues, and possible public-private partnerships. However, these "listening sessions" have turned into pep rallies to urge public support of the administration's preferred pre-determined disposition of public lands.

Information and a comprehensive list of "listening sessions" are not being noticed properly for the general public prior to the pre-registration deadlines. For example, a recent meeting held in Davis, California was never listed on the official website. Despite this lack of a public invitation, organizations, such as the California Wilderness Coalition, sent e-mails to their members promoting this "listening session" in advance.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

This is no way to make important decisions about our public lands. A fair, honest and transparent process is paramount, not a meeting of like-minded individuals and well-connected insiders. Indeed, each of these important issues deserves full public consideration and input.

There may be a lull in development in the natural areas of this country right now, but it will not last. As soon as the economy improves, the cost of open space will go up. We need to secure public outdoor spaces now and make them integral parts of our communities.

While recreation, economics, and personal connections are *\*very\** important considerations when encouraging people to get involved with the great outdoors, we must ensure that there is sufficient natural habitat for those people to enjoy when they get there *\*and\** for wildlife to enjoy when and where humans give them some space of their own.

Don't let people define "the only true camping experience." Different people have different needs, yet still should have access to public lands. Making them tent-friendly only is NOT in the best interests of our nation.

We have plenty of land already designated as wilderness, all this does is prevent most people from actually enjoying it, and reserving it for a select few. This is not freedom.

ORV's are permitted on many "Public Lands"... so what broken law would justify confiscation? This 'idea' needs to be clarified. If it is, even I (a law abiding off-roader) can agree to it, that is until all Public Lands are closed. At which point, Off Roader's "machines" become worthless and you will see a "I'll ride it where ever I want, as long as I can" mentality. Economic impacts aside, if you take everything away from the ORV community, they will have nothing left to lose.

Any taking of personal property, or life, or liberty, for that matter, can only be done in accordance with the Constitution after due process. The punishment has to fit the crime.

We sure don't need any more wilderness here in western Colorado! Plenty of designated wilderness already exists. I'm appalled at what the NPS & USFS have done to our cultural & local history landmarks to try to make multiple use lands into "wilderness". Both the NPS & USFS have burned buildings. Previously grazed land has been eliminated, with fences and stock ponds removed. The USFS has closed off & obliterated roads, denying access to thousands. What we need is better, longterm, scientific management of our natural resources without the forces of the current political party interfering!

OMG! We already have plenty of un-enjoyed wilderness. Have you seen it? Not if you couldn't drive 200 miles to see it. Try hiking for 50 miles into the high mountains to enjoy the serenity of the wilderness. What are you going to eat? Where are you going to sleep? For heaven's sake, where are you going to go to the bathroom? I couldn't enjoy nature if I couldn't ride an ATV or 4X4 into it, if I had to hike. And I don't sit behind a desk in a city.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

While it seems that there are good intentions behind your idea, you wrote, "(Wilderness Protection) is important for the enjoyment of future generations". Congress designated Wilderness Areas remain just that until an act of congress re-designates the Area. In the meantime, access is substantially restricted. Hiking is permitted, but like another poster stated, a 50 mile hike half way into a wilderness area is not feasible for most of our society. Something else to consider, is will the ground permit your foot travel for such a distance? A good example here is the North Algodones Wilderness Area in the Southeast corner of California. This 26,000 acre Area was designated by congress as part of the California Desert Protection Act of 1994. As holds true with any designated wilderness area, you are permitted access either by foot or horseback (if you haul in your own feed). Neither current nor future generations of the human species will see any enjoyment from the 26,000 acre North Algodones Wilderness Area! You see, 99% of the area is covered by towering Sand Dunes which are impassable by horse. Hiking brings to mind the expression "taking one step forward, brings you two steps back". As a result, no one has hiked more than a mile into this Area's perimeter since it was designated as wilderness area. It was "protected", and human access has been completely restricted since the Wilderness Area designation hit the ground in April of 1999. (The above statement in no way implies that the author is seeking, petitioning nor advocating unauthorized recreation in a designated wilderness area, nor does it condemn any current standing Wilderness Areas or restrictions thereof. The, author seeks to illustrate the ramifications of such designations and illustrate that it's impossible for "Wilderness Protection" to bring anything to future generations of the human species. )

mixed use. Motorized access is more restricted then any other group. Yet if you look at the factual data, we give the most back. If the liberal agenda wants to take away from one, then take away from all and shut the whole area down to ALL recreation

There are plenty of designed "Wilderness" areas for you to enjoy peacefully. I am glad you enjoy it. But don't try to take away my right to life, liberty, and the pursuit of happiness. I along with millions of others enjoy riding ATV and enjoying the great outdoors. I also can ride all day and not see another human except my group. BUT, I do see deer, elk, and bear. I have seen more wildlife from the back of my ATV for the last 10 years, than I have in 40 years prior as an outdoorswoman, walking in the forest. If you don't like ATV go to Yellowstone or any other national park, or any designated wilderness area, there are millions of acres. Good luck getting into the center of that wilderness area. That alone tells me we have too many acres designated already.

If the places to ride are taken away then people will just ride illegally. I know I will because I love to ride!! But if we have the outdoors to enjoy then the likelihood of places getting destroyed are a lot less because people will stay in the designated areas.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Are you promoting illegal riding? The problems that exist today have come about because most public land has been "open unless designated closed" and trails have been created for no other reason than that someone wanted to go that way. As an earlier poster said, when this happens with hiking trails, they get closed. The OHV crowd has been prolific at pioneering trails because they can cover more ground more quickly. Now land managers must do what they should have been doing the past forty years (Executive Order 11644, February 8, 1972), which is to determine the compatibility of OHV trails. That means trails you have been using, created without adequate study, will be closed. Just because you want it, doesn't mean it's right.

Off Road Use is already limited and restricted on Public Lands. Exactly what is the proposition here???

I am not an off-road user and I have a seriously high regard for the environment. Sometimes though I think the issues can be much more complex than simple yeas and nays. It does seem on this forum that to say "OHV" is a sure bet for a bunch of negative votes. Guess some folks have their minds made up. Once I was in a USFS area with single track trails and a somewhat inebriated quad user was illegally driving his machine down the trail when he lost traction and it rolled down the nice watershed and landed in a tree above the stream. Fortunately for the fellow, he came off between two logs on the trip down and was not seriously hurt. He was determined to rescue his machine from the tree, and I didn't want either the thing to end up in the creek.....or for the rider to end up in traction. So we somehow got the still running quad out of the tree and back up the hillside to the trail, and from there back up to the road. Okay, the thought "Darwin Awards Candidate" came to mind. On the other hand this fellow and his friends were enlisted men on vacation between tours of duty (this is a true story). So the rest of the time they weren't hanging wheelers up in trees.....they were off defending my right to type this.....and all of our rights to save the environment. They were keeping Wildernesses from becoming nuclear winters where nothing could live. They were defending our rights to be free and to vote, even cast the slew of anti-motorized votes for this idea. So, I won't promote this anti-motorized idea. In fact, I have a non-motorized trail on my land that I built and many hikers, bicyclists, equestrians, and environmentalists use. If you are a vet, you may use your ORV on it. It's the least I can do. Don't expect mercy though from those greeners who are disconnected with how fragile their safety in this nation is.

Responsible OHV use is a means for many individuals and families to develop a relationship with the outdoors. Many OHV users that I know believe strongly in conservation and sustainability. By saying that these people "have no respect for nature and the rights of others", we're alienating a group of people who could strengthen our national movement to protect public lands. We're also making a statement that is baseless and probably a little stupid.

All public land use should be managed responsibly. Hikers, bikers, OHV users, horses, logging, mining, and cattle can all cause damage. Sounding off on OHV use sounds like a personal bias. We should focus on managing all forms of use in a way that balances access and protection.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

A local OHV area is a checkered private land with BLM, who occasionally contracts with the private land owners-logging companies. It is pretty laughable that environmentalists are worried about a 20in swath of trail that is maintained VOLUNTARILY by OHV users, when 1/2 mile away the area is shut down and being ravaged by logging companies. But we need paper and the government needs funds. A much more relevant argument for public land is responsible logging. Some bikes are too loud. I can hear my cell phone ring over mine. I do not lose sleep worrying that I have traumatized deer, either. They bound a few feet away, then turn around and look at us creatures with those funny looking, colorful heads.

5% off the environmentally conscious rule breakers don't harm the planet? really? The majority of forest fires and brushfires are not caused by a missing spark arrester on an ATV or an RV camper using a propane stove or lantern. They are caused by an environmentally conscious hiker cooking over an open flame or dropping an ash from a cigarette in a non designated area that they hiked to. Staying on the trail is a responsibility for everyone to follow and you shouldn't condemn the responsible OHV drivers with the irresponsible ones. I don't condemn the responsible campers along with the irresponsible ones that feel the wilderness is theres to ravage because they are on foot, those that feel they don't harm anything by hiking out off trail where they are trampling protected plants and animal habitats.

This Idea appears to sidestep the scientific evaluation of what impact is environmentally sustainable in any given habitat.

Your comment about the fact that OHV and environmentalism cannot coexist is a joke. Hitler thought Jews could not coexist with Germans. You have the same kind of perspective, control everything and your point of view is the only one that matters. I know my example is extreme and the comparison of killing jews and riding a dirtbike in the woods seems stupid but I have heard environmentalists talk about how all OHV user should be shot. I have seen that exact statement on bumper stickers. I have never heard an OHV user mention how a hiker should be shot for hiking. Fossil fuel is a fact of life it is the cheapest form of energy at this point and we need to use is responsibly butt to say don't use it at all is rediculous. And this isn't even mentioning the seudo science used to show that fossil fuel even has an impact on global warming. Try reading up on Solar effects on global warming. On the quiter OHV I agree I even talk to people who are riding that have overly loud vehicles and try and use peer presure to get them to be more resposible.

yes and this idea especially those trails that are historically for OHV recreation also need to be preserved for future OHV recreation, Mnay historic OHV trails are in jeaprody, alot of these roads have been used since the invention of the first OHV the motorcar, or stagecoach

These inland seas are the largest supply of fresh water on the planet. How could anyone NOT want to preserve and protect this precious supply?

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I agree with you that all users should be able to share trails. It seems like such a simple thing, and I know of no ATV users that really oppose such an option. However, as you see, some members of the non-motorized community don't want to share. I guess they weren't taught to play well with others when they were kids. I would propose trail sharing to a point. Once there is conflict, the limited number of designated OHV trails, which are currently shared with the non-motorized community, should be closed to non-motorized use. Non-motorized already has vast trail systems and far more cross country areas they are allowed to use that the OHV community is prohibited from. Many users that complain about motorized use on motorized trails do so only to create conflict.

Who elected you king & gave you the right to tell me I cannot use public lands, which I own just as much as you?

An "agriculture professional" is not the same as a "farmer" and "how food is really produced and how natural resources are managed" in industrial 'agriculture' today is not the same thing as "sustainable agriculture" yesterday, today, or tomorrow

A model that would support this idea can be found in New York's Hudson River Valley in the state sponsored Hudson River Estuary Program Action Agenda. This regional collaboration brings together stakeholders from diverse backgrounds to inform a regional restoration plan and action agenda. It then provides incentive grants for municipalities and not-for-profits to implement the agenda. Visit { <a href="http://www.dec.ny.gov/lands/5104.html" rel="nofollow" target="\_blank">Link</a> } for more details.

I would like to see *some* recognition of environmental impacts in the presentation of this Idea -- while recreation, economics, and personal connections are *very* important considerations when encouraging people to get involved with the great outdoors, we must ensure that there is sufficient natural habitat for those people to enjoy when they get there *and* for wildlife to enjoy when and where humans give them some space of their own.

If we the people had an input as to what is taught then maybe this would work. However enviromentalist with flawed information should never be allowed to teach anything.

Yes we have save the animals from disasters. Its awful what happen in the Gulf. Alot of marine life are endangered there. The former President of BP should pay for this.

SP: What's wrong? Is your idea not getting enough attention? Banning Children under 16 from Driving OHVs on Public Land = { <a href="http://ideas.usda.gov/ago/ideas.nsf/0/0CAB12FFE50095A686257791000C5FD8?OpenDocument" rel="nofollow" target="\_blank">Link</a> }

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Establishing an Ancient Forest National Park is simply a matter of re-designating the land. The vast majority of the proposed park is already established wilderness. What would be needed? Some infrastructure in the front country? Environmentalists need to have a higher consciousness of the rural poverty that is endemic in many of these areas. A national park designation immediately raises the stature of the land, it brings significantly more tourists, and allows for some benign economic development in these rural enclaves. The National Park System needs to be significantly expanded. The excuse that other units in the system are underfunded therefore we should not add more is fallacious. Many of these potential national parks are under constant development pressures, national monument status still allows many of them to be exploited by timber, oil and gas, grazing, mining and agricultural interests. If you want more money for conservation, parks, and environmental initiatives then it will be imperative to re-task money already in the budget, 52% of which goes to "national security" in the form of the budgets for DoD, DHS, and various intelligence agencies. That's an abomination, we spend more on "national defense" than the next 30 countries combined! As for the notion that ranchers are responsible stewards of the land, that is a dubious statement at best. Most ranchers are a subsidiary of Big Agra, they exploit federal lands, exhaust the resources, socialize all external costs, then internalize the profits. I dare anyone survey a grassland after it's been invaded by tens of thousands of cattle. The evidence just doesn't support the notion that ranchers are responsible stewards of the public commons, they may be better at caring for their own parcels of land where they cannot pass off the external costs to taxpayers, but I've seen what's happened to grasslands in Oregon after grazing interests ripped the hell out of the place, and it wasn't responsible stewardship. Ranchers masquerade as free marketeers, but in reality they're just free loaders.

I believe you want to eliminate OHV's all together. Tell us what you REALLY think. Stop making a mockery of this process.

We must ALL come together on the climate change, government, non-profits, and the people at large. Can't anyone realise that as we kill the climate we are forcing our great-great grand children to find an off earth home? Will the technology be there to find one or do we doom them to a horrible death here? As a world, we are one but to argue and push each other away for fear and loathing we ALL loose!

Note: We are protecting humanity by the protection of wildlife and habitat/ecosystems. This action needs to involve all functional and restorable systems, including ALL federal lands.

All forests should be very carefully stewarded, as they protect our water supply, sequester carbon, provide habitat, etc. None should be allowed to be clearcut. Certainly old growth forests need to be maintained in the healthiest state for them to thrive.

I'm afraid there days are numbered. Like the Indian pony, the covered wagon. It's called progress. I'd like to see them from my ATV. I don't want them logged either.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

they used some of the same tactics to keep the wild nature of an area in my state on state land. I'm all for it. I think most reasonable people would agree that overall, as a country, we have far too little wilderness and too much land open to development and land that has been developed. 50% of our national forests are currently open to development. I would say that is more than enough. Don't forget, there is still state land and private land open to development. I think most people are leaning toward preserving more of what is left.

Why am I even wasting my time with this? Why should the NPS have even more land to mismanage? Right now, the Crown Managers are planning on a conference about how they are going to "protect" Glacier by encouraging buffers around the park. As in, let it burn, don't allow access, let the wolves eat everything, close all the roads, kill all the non-native fish, blah blah. This Treasured Landscapes initiative is a scam.

I am one who believe wildlife should be protected at all costs. The problem in my opinion is , big bussiness has taken over our government, no lobbying on either on either side of the room. We must break up busseness like goldmen sachs, BP etc, this must be done for our country to survive.

Lower taxes.

Don't charge picnic fees for a family to picnic in our N.M. forest during the day. If you want families with children to go to parks that would help.

Our metropolitan region, currently home to over 5 million people, is expected to grow by 50%, reaching 7.4 million by 2020. The need to set aside green space today is urgent.

The nation's most populous state needs your help to preserve its remaining wild lands that give us clean air, drinking water, open space, beautiful recreation areas, and wildlife habitat. From our old-growth forests in the north, to the rugged Sierra Nevada, to the vast desert in the south, California's enormous population growth puts some of our most precious outdoors destinations at risk. Development, increased visitation, and budget cuts are impacting some of our most iconic and important places.

By restoring our northern forests in the Sierra and the Klamath, or the San Gabriel Mountains in Southern California, we can spur economic growth by providing needed jobs, and improve recreation opportunities. Green jobs can include removing illegal roads and forest restoration projects in northern forests, and cleaning up San Gabriel Mountains and River areas that lack enough trash cans and restrooms.

Create a comprehensive "Quiet Recreation Strategy" for federal lands in Colorado. This strategy should variously provide for non-motorized activities such as hiking, mountain biking, fishing, family camping, wildlife photography, and more. A formalized acknowledgment should create more sustainable use of our lands while encouraging things like stewardship, trail maintenance, volunteerism, and getting youth outdoors. Using Colorado as a pilot project for a Quiet Recreation Strategy will also provide a sustainable use model for the rest of the country to follow.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

New Mexico, the birthplace of wilderness, is home to some of our country's wildest remaining public lands. From the southern desert grassland Otero Mesa to the wild and scenic Rio Grande, our vast public lands support native wildlife and plant species, significant water resources, and imperiled desert ecosystems. These amazing places are beloved by New Mexicans and many more Americans for their hiking, hunting and fishing opportunities. But they are constantly under threat from oil and gas development, and many pristine lands and important habitats have been destroyed.

Utah needs your help to preserve its precious wild lands that give us clean air, drinking water, open space, beautiful recreation areas and wildlife habitat. From Cedar Mesa to Red Cliffs, Utah offers an extraordinary home to wildlife and outstanding recreation opportunities. However, development, increased recreation and climate change has put some of our most precious outdoors destinations at risk.

Wilderness designation for vast San Rafael Swell in southeastern Utah would protect this unique and spectacular geological region which supports a wide array of rare plants and wildlife, including the big horn sheep, antelope, bald eagles, pronghorn, peregrine falcon and Utah prairie dogs. The Swell is also a popular destination for hikers, river runners, hunters, horseback riders, and climbers. Emery County is currently working on a public lands proposal in partnership with conservation organizations, ORV users and ranchers.

The San Gabriel Mountains soar above our homes, from Santa Clarita to San Bernardino, providing much of our public open space. These mountains benefit our quality of life and the health of our families by providing us with clean air and water and incredible natural beauty. Our region's youth obesity and diabetes crisis has brought new urgency to connecting our people and communities back to our mountains and rivers. I urge you to recommend the creation of a robust San Gabriel Mountains National Recreation Area that would improve the visitor experience in the mountains and better connect families to the recreational opportunities inside the forest.

I object to spending over \$2 billion of my tax dollars locking the majority of the public out of more of their public lands through inappropriate Wilderness and Monument designations.

Multiple Use lands are where the majority of people recreate, as well as where much of our timber and beef products come from, but these lands have been closed at an alarming rate. The President must protect these precious lands by designating them permanently as Multiple Use.

The creation of Wildlife corridors will have a disproportional and severe negative impact on rural communities. It appears that organizations such as The Nature Conservancy stand to make huge illicit profits by swapping lands to the government for Wildlife Corridors

Government Landscape Wide Planning beyond the borders of public lands is inappropriate, costly and complex. The agencies managing our public lands have more than enough problems managing the lands currently under their care.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The President is interested in local involvement in his plan, yet no multiple use groups have been included or invited. The initial plan has clearly been created by a small segment of special interest groups who seek to limit access to our public lands.

The initial Wilderness Act envisioned about 20 million acres as suitable. Today we have over 120 million acres of Wilderness where public access is restricted. The majority of the public have been forced onto smaller and smaller areas outside of Wilderness. In order to encourage Americans to enjoy the outdoors we do not need more Wilderness areas, we need less.

Over 80% of lands West of Mississippi are open space. Wildlife have plenty of places to live. There is no need to create Wildlife Corridors or designate additional Wilderness Areas, unless the purpose of this initiative is to further the goals of the United Nations Wildlands Project by forcing people from rural communities and pushing them into urban areas.

Also, the proposed Wildlife Corridors along with the proposed Wilderness and Monument designations would harm rural areas, push people out of their homes and force them into cities. This destruction of our Rural Communities, also known as the United Nations Wildlands Project, is detrimental to the interests of all Americans and should not be supported in any way by the Outdoors Initiative.

Ducks Unlimited, in partnership with the federal and state agencies, numerous NGOs and private landowners, including the U.S. Fish and Wildlife Service, have worked to curb habitat losses in the Prairie Pothole Region to ensure the future of migratory birds and related natural resource conservation opportunities. Despite these efforts, the native grasslands and wetlands of this cultural and ecological treasure continue to disappear faster than they can be conserved. For these reasons, I urge the administration to recognize the Prairie Pothole Region as a Treasured Landscape.

We take pride in our treasured landscapes and share a responsibility to leave the next generation healthier and better connected to the natural world. A changing climate, pollution, and poorly planned development have put a growing strain on our wildlife, our waters and our lands, and we must act now to conserve the majestic landscapes and diverse wildlife they support.

A recent study commissioned by the National Parks Conservation Association found that every federal dollar invested in national parks generates at least four dollars of economic value to the public. In 2009, as the recession took its toll on Americans' pocketbooks, national park visitation increased on average by nearly 4 percent, demonstrating the enhanced value of our national parks to our people in difficult economic times.

We applaud your effort to promote and support innovative community-level efforts to conserve outdoor spaces and to reconnect Americans to the outdoors. Stakeholders from across our region have been involved in exactly these types of efforts for many years. Whether it is connecting residents of the New York City metropolitan area to one of our country's greatest landscapes or working on regional-level through the Greenway to conserve our historic, cultural and natural resources in the face of persistent population growth, the Hudson River Valley has been at the forefront of promoting innovative and cooperative solutions to our challenges.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I invite you to consider scheduling a public meeting in Seattle. I believe that the Puget Sound area and its surrounding watersheds and forests present an ideal model for your Treasured Landscapes Initiative. This important and sensitive eco-region is anchored by three national parks (Mount Rainier, Olympic, and North Cascades) and a number of designated wilderness areas on the national forests. The watersheds that drain into the Puget Sound sustain salmon and steelhead, however, most of the runs are listed as either threatened or endangered and face real challenges for recovery.

However, all of the efforts to protect the environmentally sensitive areas of western Washington would greatly benefit from a higher level of integration and attention. I believe the mountains, watersheds, forests, and Puget Sound provide an ideal place for realizing the full potential of the America's Great Outdoors Initiative.

New Jersey is home to a myriad of unique natural landscapes, from the Pine Barrens and Barnegat Bay in the south to the Harbor Estuary and the New Jersey Highlands in the north. New Jersey also hosts many state parks and forests, five national wildlife refuges, Morristown National Historical Park and portions of the Gateway National Recreation Area. Even with these natural and recreation areas, however, it is important to note that New Jersey is the nation's most densely populated state, where more than 40 acres of open spaces are lost each day to development.

In our country, only one in five homes have a park within a half-mile and this number is even higher for New Jersey's cities, which are some of the country's most densely populated. All Americans are adversely affected by limited green spaces, deteriorating community facilities, health problems, and juvenile delinquency. Research shows that healthy and vibrant urban areas play key roles in improving the economy, health, and quality of life in our communities. Urban parks are instrumental in helping our nation achieve important national goals of increasing exercise, providing safe, healthy alternatives for at-risk youth, and spurring local economic development. Providing cities with outdoor resources is a necessity and will reconnect people to the great outdoors.

Located along New Jersey's Atlantic coast, the 660-square mile Barnegat Bay watershed drains into the 42-mile Barnegat Bay estuary. This region, a national treasure that includes the Edwin B. Forsythe National Wildlife Refuge, is home to a multitude of plant and animal species. Unfortunately, intense development and population growth continue to degrade the nation's delicate habitat and compromise water quality in the bay, a shallow estuary where pollution is filtered out very slowly. Contamination threatens the Kirkwood-Cohansey aquifer, which replenishes the bay and supplies most of the region's drinking water. Researchers have already confirmed the decline of various plants and bird species.

Twenty million people live around the New York/New Jersey Harbor Estuary, an area that is also home to a broad variety of plant and animal species. There is a great need for protection of underdeveloped land in densely populated communities where open space is scarce and public access to the estuary and its tributaries is often limited due to past industrial use.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

One potential initiative that we would like to explore through this listening session is how we can more effectively meet the existing unmet demand for grassland and wetland easements, which are particularly popular with our agriculture producers in the Prairie Pothole Region. This area includes significant expanses of native prairie upland grasslands and abundant wetlands, and provides habitat for hundreds of species of upland birds, waterfowl, and other wildlife. There are currently over 800 interested landowners representing roughly 360,000 acres of habitat waiting to be considered for a grassland or wetland easement on their property. Since its inception, landowners have enrolled 1.8 million acres in the easement program, and it is anticipated that demand for easements is sufficient to enable conservation of many additional acres of this unique habitat in the future.

The same scenic, recreational, health public values that federal dollars provide for, on federally owned lands elsewhere need to also be protected, with federal dollars on important private and state owned lands in Maine, in a way that works with Maine traditions. Much high public value land in the Western states is federally owned, and federal dollars continually acquire more federal land and pay for the management and infrastructure needed to derive the most public benefit from those lands. Those of us who work protecting public values on Eastern conservation are left to fend for ourselves, with comparatively little federal money available to us.

Forest, like humans, can be classified as young, mature, or old. Because of past disturbances old forests are the rarest. Sometimes disturbance comes in the form of a tornado, or an intense fire; but most often the disturbance has been from logging.

Old-growth forest acreage has declined every year since European settlement of this continent. In Western States the percentage of old-growth forest area is measured in single digits, while in Eastern States old growth is measured in tenths of a percentage. Consequently, the ecological and cultural attributes provided by old-growth forests are not being fulfilled. If we are able to reverse the decline in old-growth forest acreage we will be the first generation to have done so.

In some counties that have no State or Federal lands a county or city itself may have some property that could become part of the network. It is impossible to determine without further research, but perhaps two-thirds of the network can be built by identifying forests already existing on public lands. Although it will be more difficult to build the network in counties with no appropriate public lands, those are the very places where forests are most needed, and this process will help identify them.

Where no appropriate public forest lands exist, organizations such as land trusts or The Nature Conservancy may consider adding one of their forests to the network. In the less common situations where there are no public lands and no non-profit organization lands which can be included in the network, a county may appeal to a private donor or apply for federal grant funds.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Many children growing up today have no idea of what the natural appearance of the land surrounding them would be if it were undisturbed. What species of trees would grow? What animals would live there? We speak of "nature-deficit disorder" but how is it to be remedied if there are no places to show these children, but only stories in a book about what their town "used to" look like and the animals that "used to" live there?

Connecting people to nature is a core objective of America's Great Outdoors. From urban communities to rural working landscapes, the challenge for our nation is how to connect these diverse interests that are in their own way connected to their local landscapes but not connected to each other. If our nation is to address the enormity of threats to our natural heritage, from climate change to habitat fragmentation to invasive species to polluted waterways, we as a country have to work together to conserve nature at the landscape scale and promote conservation innovation that sustains "America the Beautiful" for future generations.

Although this model consists of many parts, the most basic and important portion should be the fact that Science is the proper tool for the discharge of Wildlife Policy. Herein lies the rub. For the most part, I feel that hunters, ranchers and politicians have taken the lead in what has become the 'driving force' in Agency management decisions, leaving Science secondary to their interests.

What I have witnessed many times over is that there is a growing sense of 'entitlement' among hunters and ranchers. This results when the hunters 'pay' license fees and taxes on hunting paraphernalia and ammunitions and the farmer/rancher at times seem to be 'raising' the animals who live on their land.

During meetings regarding the wildlife and decisions regarding policy, it is overwhelmingly obvious that these two groups feel that they alone OWN the animals and managing agencies give little attention or concern to the general public, which is of course a larger majority, yet for sure is much less 'vocal' or demanding. Such attitudes and undue influence must stop!

One of the biggest problems we have is Agriculture's control over the Natural resources. We must insist on all levels, a separation of Agriculture and Natural Resources committees and commissions...some states have this, many do not, with SD being one such. Agriculture, now just another horrendously large business cannot be allowed to have the final say in wildlife or natural resource management. One of the best ways to accomplish the removal of this strangle hold held by agriculture is to place the USFS under the Interior Department, similar to the BLM, and remove it from the influence of the USDA and APHIS.

With the Keeping Maine's Forests initiative and others all looking for federal funds to obtain forestland in northern Maine, our challenge is to maintain the well-managed, working forest that is the backbone of the rural economy in Maine. The private landowners have a vested interest in managing their land for the long term and with less government regulation and intervention they can continue to do that.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Our challenge in northern and eastern Maine is the plans of the environmental community to save the woods from ourselves. Since our outcry of opposition to the first public announcement of a national park, the plan for a takeover of the northern forest has taken several avenues and rewordings, but it's still the same plan – to preserve between 3 and 4 million acres of our working forest. This idea has been extensively promoted on the web sites and print publications of the environmental organizations active in Maine today. These groups make no secret of what they want to do to landownership in northern and eastern Maine.

If you hear nothing else that I say here today, you must know - although the terminology has been changed from “national park” to “Treasured Landscape” the intent is the same – to lock up the Maine woods from the people who live and work here.

The Maine Woods Coalition has been joined in our opposition to the Keeping Maine's Forests plan by many municipalities in northern Maine, including the counties of Aroostook, Penobscot, Franklin, and Lincoln, at this point in time, and we expect more to sign on.

At the Chesapeake Bay Regional Listening Session this summer, representatives from TWS were disappointed by the lack of attention given to climate change. To protect America's Great Outdoors and the wild places and animals that people love from a changing climate, Congress must pass comprehensive climate change legislation that reduces greenhouse gas emissions.

The administration must also do its part to encourage lawmakers to put aside partisan politics and address this pressing threat to our natural heritage. We can make natural resource conservation efforts even stronger by directing revenue from auctioning emissions credits to an adaptation program. Climate change is the backdrop against which all conservation activity must take place.

One of the principal barriers to effective and efficient conservation of fish and wildlife species the lack of dedicated funding for the full array of fish and wildlife. For decades, the Pittman-Robertson Act and Dingell Johnson Act have provided critical funding for states to conserve game species, successfully bringing back wild turkeys, striped bass, elk, and many other species. However, they do not directly address the needs of over 90% of the nation's fish and wildlife that are not hunted or fished.

For nearly a quarter century, conservationists have advocated for dedicated funding for all species, particularly those at-risk. Although the plans are being implemented in all fifty states and six territories, current federal funding through the State Wildlife Grants Program, averaging about \$1.2 million per state/territory, is insufficient to meet the needs of the 12,000 species that states determined to be at-risk. A steady funding stream allows states to make long-term management and conservation plans. The State Wildlife Grants Program and Teaming with Wildlife Act can provide that security for the future.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Preserving and strengthening our great outdoors also depends on science-based decision making; when policy and management plans are not based on the best available science, our conservation goals suffer. Science is the bedrock upon which natural resources management must stand to responsibly and objectively manage and sustain this nation's limited resources, including fish and wildlife populations. It must guide natural resource management and conservation decisions; the information supporting these policies should be available to the public, and the process used to make the decision must be transparent.

The public deserves to be fully informed about resource decisions and to understand the role science plays in the decision-making process. While we understand that natural resource decisions must take many other factors into account, we feel strongly that all options should be identified, the potential consequences fully understood, and the final decision justifiable.

In an open, democratic society, it is never appropriate to suppress or alter scientific findings to reach a predetermined decision. This country's professional natural resource scientists and managers deserve to work in an environment where scientific findings are appreciated and valued, and where decision-makers apply them properly.

American Trails sees three formidable challenges in regards to reconnecting people to the outdoors; the need to improve the health status of Americans, the need to better educate the American public regarding the great outdoors, and the need to provide a consistent stream of funding for acquisition and trail development.

1) Health: We are concerned that adults and youth are becoming more disconnected with the outdoors as evidenced by a Center for Disease Control and Prevention report that over 60 percent of Americans are overweight or obese, and that nearly 20 percent of children are obese. With such a vast array of natural resources, how do we entice the public to break away from their cocoon style of living and re-discover the great outdoors.

2) Educate: We believe that successful achievement of number one above is highly contingent upon a strong public education component. With today's technology promoting a less active lifestyle, there is a strong and urgent need to create innovative programs that will entice the public into the out-of-doors. This education approach must begin in the early years of childhood in order to instill a consistent lifestyle.

3) Funding: Of course achievement of both 1 and 2 above would not be possible without the effort to preserve and create more outdoor places to enjoy. Continuous, long-term funding for trail development needs to be permanently established at the federal, state, and local levels, which would help to establish trail master plans at the community level, and collectively provide a larger network of trail connectivity across communities. This is a challenge that would enhance the livable community concept, create more non-motorized transportation opportunities, and conceivably reduce the level of pollutants in the environment.

We know America's farmland is under threat from continuing urban development throughout the country. Steps must be taken to protect this land and we look forward to the America's Great Outdoors Initiative identifying definitive measures to do so.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Most recreational riders do not have access to large tracts of private land to ride on and depend on public land to ride. Recreational riders also need well maintained trails, trail heads for horses, access routes, picnic and camping facilities, restrooms and stables to make use of our nations public lands. In recent years a reduction of trails, trail heads and the closure of federal lands to horses and pack animals has been a growing concern for recreational riders around the country. There is a feeling among riders that access to trails historically open to equestrians is being lost.

In 2009 the AHC launched an effort to collect information regarding equestrian access issues on federal lands and earlier this year released the 2009 Report on Equestrian Access on Federal Land. This report was intended to provide a brief overview of the responses the AHC received from equestrians to its ongoing access survey in 2009 (the report is included.) In all, the AHC received 45 reports of issues on federally managed land from 26 states. These reports primarily fall into several general categories of access issues; loss of access due to maintenance issue, instances where access has been restricted or a trail closed and reports of trails or areas that have become unusable due to user conflict.

It is the experience of most equestrians that land managers work with all user groups in good faith; however, that is not always the case. Respondents to the access survey report some instances of seemingly arbitrary closures. Often they did not know the reasoning behind these closures. Some reported new management plans that resulted in the loss of trails, and some reported rumors of bias against horses by local land managers or pressure from other user groups for the closures.

It is certainly true that equestrians need to engage and build relationships with the managers of the land on which they ride before there is an issue and work with other user groups. However, if the goal of the President's initiative is to connect more Americans with the outdoors, policies should be explored to ensure land managers accommodate all recreational users where appropriate. It is clear to the equestrian community that there are some areas not suitable for equestrian use. However, access should not be denied based on the personal bias of a land manager.

The AHC hope the Administration will explore all options to educate federal land managers on equestrian issues and encourage state and local governments to do so as well.

Maintenance issues are a major concern for equestrians and all recreational user groups. Many of the access issues reported by equestrians are maintenance related. According to A look at the future of trail access on our National Forest System Lands; written by Dennis Dailey, BCHA, the Forest Service alone has a huge backlog of trail maintenance and capital improvement work - in excess of \$450,000,000. The need to adequately fund our federal land management agencies cannot be understated.

Today's children have had less contact with nature than any generation in human history, spending more than six hours a day plugged in to TV's, computers and video games. They are spending half as much time outdoors as children did just 20 years ago.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

While this is a troubling trend for the future of American conservation, our economy, the health of our children and the well-being of our communities are also at stake. Over the last 20 years childhood obesity has doubled, adolescent obesity has tripled, and instances of ADHD have increased. The childhood obesity epidemic's impact on our health care system, coupled with declining sales of hunting and fishing licenses and waning visitation to public lands, will have an increasingly negative impact on our nation's economy.

Without economically viable markets for the services and values that forests produce—from sawlogs to recreation opportunities to carbon sequestration—many private landowners are increasingly led to develop their forests for other uses.

Demand for each of these and many other uses for Maine's forests has ebbed and flowed over the years as technology, competition from other places and other raw materials, and new transportation routes (like the Panama Canal) have continuously challenged and effected markets for Maine's timber. Indeed, the markets for Maine's forests today - pulp, paper, lumber, furniture, biomass energy, and forest-based recreation - have never been static.

By all accounts, the results have been striking: five major mills have re-opened with the assistance of this position, directly saving nearly 2,000 high-paying jobs. Also, new investors have been connected with Maine mills (e.g., Old Town Fuel and Fiber, Moosehead Furniture, etc.), and many mills have successfully implemented new energy strategies, becoming more financially and environmentally sustainable. Unfortunately, and despite the success at keeping rural jobs in rural places, the patchwork funding for this position is inadequate and not sustainable.

Furthermore, many of Maine's rural mills are not eligible for REAP funding because of ownership restrictions, which disallow foreign-owned mills and include the size of the parent company when determining if an applicant qualifies as a "small business." Therefore, we encourage USDA Rural Development to increase the cap on REAP grants to \$5 million and allow foreign-owned mills to participate if they employ mostly American workers and use wood primarily from US forests. To further allow Maine mills to participate, the size of the parent company should not be used to determine if an applicant qualifies as a "small business".

Poor access to broadband is constraining economic development and community revitalization in rural places. Business leaders say that increasingly, the solutions for today's rural businesses - from forest-based tourism to natural resource - require high-speed broadband access and that they are less likely to invest or locate in communities without broadband.

Maine's rural destination and experiential tourism businesses need access to broadband because many potential customers expect it and take their business elsewhere if it is not available. In fact, a 2007 report from the Brookings Institution found that for every one percentage point increase in broadband penetration in a state, employment is projected to increase by 0.2 to 0.3% per year.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Maine has recently received three awards from Rural Development's Rural Utilities Service Broadband Program funded through the second round of the American Recovery and Reinvestment Act of 2009 (ARRA) totaling \$9,404,866. However, the State has never received an award from the Rural Broadband Access Loan and loan Guarantee program or the Community Connect Program (in fact, despite extensive outreach on availability of the programs, there is no record of applications being submitted). Many of Maine's rural communities with a critical need for broadband are not eligible because some broadband access may exist in the area. Also, many of Maine's businesses with the talent and determination to connect communities to broadband do not meet program requirements for cash-on-hand.

Ninety-five percent of Maine land is privately held, and private landowners provide significant public benefits by allowing the public to use their land for forest-based recreation. But Maine's unique open access tradition imposes significant costs on these landowners, including loss of privacy, increased road maintenance, property damage, etc., and many landowners feel unappreciated despite the benefits they provide and the costs they incur. As a result, more landowners, particularly in the southern part of the state, are posting their land, limiting many outdoor activities that are important to Maine's forest-based economy.

Tourism industry leaders say that a stronger relationship between the forest-based tourism industry and private landowners will help create jobs and revitalize rural areas dependent on outdoor recreational opportunities, and keep land open for current and future generations of outdoor recreationists. Landowners say that carrying costs for allowing the public to access their land must be mitigated.

Leaders of Maine's forest-based tourism industry say they need well-maintained recreational trails to deliver a high-quality experience for their customers. However, landowners who provide the public benefit of public access to recreational trails often carry significant costs associated with trail use. Maine's businesses and communities must find ways to minimize the costs to landowners and concentrate the development of trails and other important infrastructure (trailhead facilities, trail signage, safe and accessible parking, GPS mapping, and visitor centers) in landowners' preferred areas, and to reward landowners where public access has been secured.

Like you, we are concerned about the rate at which our nation is losing its natural heritage and losing touch with the outdoor places and activities that help define the American spirit. We have witnessed this firsthand in North Carolina, where the population has grown by 40 percent while developed acreage has increased 65 percent over the last two decades.

At a time when our nation is facing new environmental threats and budget constraints, it is crucial that we establish a conservation policy that is better suited to our current needs and helps maintain our environmental legacy. Fortunately, communities across the nation are developing new and innovative approaches to conservation.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Challenges associated with reconnecting habitat are growing as infrastructure ages, and culverts that were designed to last for 50 years are deteriorating and becoming impassible for fish. Inadequately sized or designed culverts and poorly maintained road/stream crossings plug up then blow out during intense storms causing massive landslides and debris flows.

TU has worked with private timber companies to replace impassible culverts, and to remove roads and culverts that are no longer used to access timber. Inadequate funding for the Open Rivers Initiative and Fish Passage Program are considerable challenges. We recommend increasing funding from these programs while using partnerships and careful prioritization to maximize the impact of available funding.

The need for these programs is growing, not diminishing. Historically, as many as three-fourths of the eligible producers seeking conservation programs have been turned away due to lack of program funds.

Another limiting factor is the new payment cap under EQIP (\$50,000 per individual or legal entity per year). This cap unnecessarily restricts our ability to complete habitat restoration projects in cooperation with some landowners.

A prominent challenge associated with habitat restoration is the effective coordination among the various state, federal, local and private entities engaged in restoration work. Only through a concerted, scientifically-driven approach to restoration can resources be effectively leveraged and impact maximized. The National Fish Habitat Action Plan is helping to ensure that such coordination occurs, and the National Fish Habitat Conservation Act would provide a necessary set of tools to help ensure the success of the Action Plan.

The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and the Clean Water Act (CWA) are outstanding tools for holding polluters and other potentially responsible parties accountable for their actions and for preventing water pollution. But on many of the sites where we work, there is no potentially responsible party, or the area is not high enough of a priority to warrant federal funding or enforcement actions.

According to the U.S. Geological Survey, "More than 218 million Americans live within 10 miles of a river, lake, or estuary that is considered impaired because it cannot fully support its aquatic biological communities or other designated uses or conform to fishable/swimmable water-quality standards.

If we are to clean up our nation's waters, we need strong public awareness of the factors that influence water quality and the measures that can be taken to restore our lakes, rivers and streams. Yet the amount of environmental education occurring in schools has leveled off and may even be in decline for the first time in three decades. Further, lessons that are confined to the classroom "remain abstract and irrelevant, beyond the experience of the learner and inconsistent with cultural norms.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

There are numerous demands for the time and attention of our nation's youth that compete with outdoor activities. These can be overcome by taking advantage of existing academic and extracurricular programs to deliver outdoor activity and education. The examples named above draw on existing school programs, mentoring programs, and introduce environmental education and hands-on outdoor activities to students.

Another persisting challenge is that of access to places to enjoy the outdoors. As more lands are developed, the places to fish, hunt, and enjoy nature dwindle. This is a challenge that must be met through habitat conservation and access initiatives such as the Open Fields program in the Farm Bill and smart planning for safe access through infrastructure development.

Too often, such access is overlooked during road and bridge construction. Many bridges and roads along waterways lack shoulders, pull-off areas, or parking. More often than not, they are constructed or reconstructed without consideration of how safe access to the waterway from the roadway or bridge could be accommodated or improved for fishing, kayaking, or other recreational uses.

Competing demands for the use of backcountry areas and low funding for land protection programs are recurring challenges. There are also challenges associated with the management of existing protected areas. The maintenance of trails in designated Wilderness areas using traditional tools and techniques is one such challenge, and must be addressed through programs that educate the next generation in the use of Wilderness trail maintenance methods.

Another challenge associated with the management of existing Wilderness is the prevention of illegal uses such as motorized and mechanized access in vast expanses of land. Partnerships with local law enforcement and more effective deterrent penalties must be used to discourage such illegal use.

A number of interests compete for the use of backcountry areas, from extractive industries such as timber, oil, and gas and mining to incompatible recreational interests such as off-road vehicle use. With time, we have learned of the tremendous value provided by roadless backcountry lands through watershed health, recreation, and biodiversity. These irreplaceable values make it imperative that priority is placed on the protection of backcountry lands. There are more than three million acres of national forest lands currently recommended by forest plans for Wilderness designation. The Wilderness characteristics of these lands are threatened by mechanized and motorized uses that could undermine their suitability for future inclusion in the National Wilderness Preservation System.

Finally, under-funding of land protection and public access through the Land and Water Conservation Fund, NRCS Conservation Reserve Program, NRCS Open Fields Initiative, and USDA Forest Legacy Program have limited their effectiveness. Even in challenging budgets, the value of these programs must be matched by funding levels.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

One such watershed exists in the area surrounding Bristol Bay, Alaska. The area is currently threatened by plans to construct a massive open pit gold and copper mine in the headwaters of Bristol Bay. The administration should do all that it can to prevent harmful impacts of mining on this vital resource. In addition, we recommend the management approach taken in the Pacific Salmon Stronghold Conservation Act of 2009 by identifying and protecting a network of wild salmon strongholds and empowering voluntary, incentive-based actions to achieve salmon conservation goals.

Open spaces are essential to the functioning of nature's systems that support not only the quality of life but life itself. The greater the reduction in natural open space is the less will be the ability of nature to sustain us and our children.

does not say how trees growing or being "harvested" have anything to do with roads and their condition. The conditions of roads is due to how often they are traveled and how well they are maintained. And what does the ESA have to do with road maintenance?? The ESA protects endangered species, not roads. In fact, roads endanger wildlife. Maybe we should just do without them. Or should we just do without wildlife and wilderness? What gives us the right to cull forests anyway or invade wildlife ranges and corridors?

Running is already a part of wilderness areas, and many runners are enjoying it every day. It's only competitive events that are barred, and there is good reason for that. I've seen the impacts left by competitive runners on non-wilderness trails. They run off the trail tread to pass other competitors, leaving trampled vegetation that may take years to recover in alpine or arid country.

This is where wrapping yourself in the flag gets us all in trouble. Since you seem to pick on China did you know that this week China closed 2,087 factories because they did not meet environmental standards that they were given to make but made no effort to achieve? Did you know China has committed to plant 1 BILLION trees in an area the size of Ireland to help combat global warming and to help clean their polluted air? True India is a cesspool and very polluting but we still beat them and we have far less people. Putting the countries as a whole aside though you missed the point of the idea and that is that we all share in the destruction of our wildlands and WE ALL need to make lifestyle changes if we want it to survive. True government is in the pockets of big oil and coal but they are not forcing you to drive a gas guzzler or warm your home to 80 degrees in the winter. There are plenty of cars that get over 30 mpg and emit low emissions, I have been driving them for many years now and what is wrong with wearing a heavy sweat shirt around your house and keeping your thermostat set at 68. Responsible harvesting of trees can help forest yes but how often do you see that? Instead you see timber companies go in clear cut old growth, new growth and anything in between until it is completely gone and what is left is eroding top soil that cannot support regrowth in many cases and destroyed wildlife habitat. The point is the choice is yours to make and if you want to see this country return to the beauty it once possessed then you, me, your next door neighbor, your co worker and the guy who bags your groceries have to stop wrapping ourselves in the flag and stop thinking everything America does is right and we all have to make those changes together because the government is either too corrupt or too uncaring to do so for us.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Seeing all the anti-everything but hiking ideas, one would think that hiking is the only accepted activity in the great outdoors. Doesn't that seem like an extremist view? We're all different. Not everyone likes the same music, the same food. So why should we like the same type of recreation? Recreational uses should be managed at a local level. Just because a certain type of recreational activity doesn't work in one location, doesn't mean that it's not perfectly suited to another location. I think it's safe to say that all recreational users want to preserve land. Most people don't want to see condos going up at their favorite camping spot, or a road going in over their favorite trail. Doesn't it make sense to have as many people on one side fighting that kind of development as possible?

Simply doubling all fees for RVs would ensure that they pay their fare share. RVs use many, many times as much resources as other campers, and require expensive facilities such as "dump stations", electrical hookups, and electric pumps. They need to pay their fare share.

So which of you all wilderness, no recreation proponents will volunteer to haul my disabled rear end around in a litter so I can visit the woods after you ban my only transportation into the forest?

So who should be allowed to use the land only hikers with soft soled shoes? I guess the hunters are really hurting the land as well right. Wellum you are wg.

So you're saying my grandmother and grandfather should ride their mountain bikes to their camp and sleep in a tent? Remember "Recreation means different things to different people." By the way OHV riding, particularly off-road motorcycling, burns more calories and gets the athlete's heart rate up higher than any other sport except soccer and it's a tie.

Sorry , I don't buy this. In Nevada we have to beg the hunters to give the wildlife and the landscape a break by actually getting off their OHV's and hunting ethically. But wait, they can't because they are gly obese, caught up in the moment and could care less about the mess they are leaving behind. As for history, destruction of history is what happens when OHV's are tearing acc the landscape and destroy Native American artifacts without even knowing it. While clubs may groom and maintain trails, not enough people are educated in proper handling of an OHV and the etiquette that goes along with riding. It may be the minority that gives OHVers a bad name so I suggest a little more outreach and education on your part.

Species diversity is crashing throughout the hemisphere as more and more populations become isolated, fragmented or otherwise denied the resources they need for successful reproduction. 1/3 of the worlds species are facing extinction in the coming century. The notion that threatened or endangered or wildlife in general can just go somewhere else is two-dimensional thinking. Wilderness and wildlife corridors are essential in mitigating the damage being created by the ever-expanding human footprint.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Stable wildlife populations require healthy and connected ecosystems. Some species migrate seasonally, others require large territories to hunt, and many--especially predator species--need to be able to move ac great distances to maintain the genetic diversity that is key to their survival. Human encroachment on intact ecosystems leads to habitat fragmentation, recognized as a primary cause of the decline of species worldwide. Roads and highways, in particular, are a principal cause of habitat fragmentation, creating barriers to wildlife movement and resulting in animal-vehicle collisions. Global climate change will alter ecosystems and force wildlife to shift their range, underscoring the need for wildlife to move ac the landscape. The issue of habitat fragmentation needs great attention now, in order to protect key remaining habitats and restore crucial linkages between habitat areas.

Staff at National Parks need to be increased for both maintenance and for teaching. While many of us go to a National Park to peace and quiet, we also go to learn. I'd would rather interact with staff than read a sign.

Staffing must be maintained. Many California State Parks are deteriorating due to decreased funding and staffing. We cannot let this happen to our national treasures.

State and nation parks are refuges for the wildlife and make available for people to enjoy nature in its natural state. ATVs, snow mobile, and mountain bikes are an invasion of these areas and an attack on nature. These vehicles despoil the peace and tranquility to both the nature lovers and the wildlife that lives there. The least offensive are mountain bikers, most of which I meet are more respectful of nature. These parks must be keep as a sanctuary for nature and all wildlife. ATVs and snow mobiles are envimental nightmares and they must be banned from every local, state and national park and recreational area. Mankind does not own this planet, we share it with many other species and mankind must respect these species and safeguard them from those who do not.

Stop watching Fox, read some books by real live scientists and check out some independent media sources....though it will scare the hell out of you. We are definitely the frog sitting in the pot of water, slowly boiling to death. Ask the folks in Moscow dying of heat and fire induced smoke inhalation if they discount global warming. Absolutely agree with a tax on all carbon used. Massive subsidies for nonpolluting renewable energy sources (and build those manufacturing plants in the U.S.). No more subsidies for oil & gas.

Substantial, majority support from the government makes sense. However, some support "out of pocket" makes one personally more aware responsibility for the parks. At the same time, this personal responsibility should not be such that anyone is barred from the parks.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Texas has limited time and funds which are mainly dedicated to providing testing and teaching skills for most of the students to pass these educational level tests starting at age 4 until graduation. Teachers here have no funds or normally not add school hour time to transport students during the school hour days to "field trips". Any non school approved transportation, field trips or outside activities must be funded and sponsored normally by the parents of the students. I'd encourage this Watershed Education Coordinator to contact via web sites & e mails Parents, play groups, Day Care, Day Camps, Churches, youth groups, etc to get the word out and educational session appointments.

Thank you for contributing your 5 years of experience to this conversation. I also have seen the damage these off road vehicles do to the environment. As for family fun, while I'm sure there may be some responsible adults out there, the ones I know of who are into this "sport" fit your description of irresponsibility. "Families" really means "the boys" and if their wives knew they were putting the younger children's lives in danger, as the injuries and death statistics show, I doubt this would be legal. The only reason it IS legal for young children to drive these vehicles is that the automotive industry makes out like bandits on the sale of these mac. Of course the lack of available law enforcement in the wilderness plays its part also. These vehicles are unsafe for EVERY living thing, environment AND people.

Thanks for exposing some folks for distributing false info on this site that The Wildlands Project (TWP) is not real. Apparently you know it is real and are one of its high level promoters. I must say that I hope all of the worst for TWP and Spine of the Continent projects since they seem to be elitist and economically discriminatory with its support of horsepacking over any consideration of OHV use even in a managed manner. Looks like you and your kins have counted folks out prior to the completion of the public process. Nothing new for folks out to totally control others and hoodwink them. That will not have a positive impact on re-connecting Americans with their Great Outdoors ( not exclusively yours). My hope is that folks in the great State of Utah and elsewhere will deeply and repeatedly penetrate TWP and the Spine's core areas with numerous long trails for their OHV, Snowmobiles etc. by their participation in the public process should others such as fail at stacking the deck against them as DOI and their accomplices have already attempted. Have a good day and say hello to Reed Noss alias Diamondback for me.

The "roadless" areas in my county all have roads on them- not sure how they were designated when they already have roads, but so it is. One of the roadless areas has been a traditional woodcutting area for the nearby town (less than 2 miles away). The roadless rule has made access and maintenance of the roads difficult. these roads were used to protect the town during the last wildfire. What will we use during the next fire? I am sure there are some genuinely roadless areas on the list, but not any I've seen. Can we sort through and pick out the ones that are real?

The bad economy is probably not helping them much right now I am sure funding will return when economic conditions are better, tighten the belt, reduce spending, make cuts, we will all make it past these rough times.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The big ones are very important. But what about the smaller ones? There should still be places accessible to those on a limited income who don't have the resources to drive or fly hundreds of miles away. Its also hard to put a price on bio-diversity, some smaller parks, such as the Okeefenokee Wildlife Refuge, though small in size, are home to the most diverse ecosystems. Some of our smallest National Monuments, though not as large or well visited, are also important to preserve for future generations. I don't think we can afford to lose any of our National Parks, Monuments or Refuges. They all need to be funded.

The BP Deepwater Horizon oil disaster in the Gulf of Mexico is a tragic reminder that oil and water should not mix. After viewing Off-Highway Vehicle (OHV) recreational uses in California, Wisconsin, and Utah over the past many years, I've come to a similar conclusion: that OHVs and water should not mix. Water tends to be a natural attraction for people, especially on hot summer days. But there is a stark difference between people getting into water, versus bringing in heavy mac. I've seen clear streams turned into turbid, muddy waters by the churning tires of OHVs. I've seen deep rutting in wet meadows from OHV trails. I've seen a rare temporary pond in the desert, fragile home to tadpoles, salamander nymphs, and other aquatic life, turned into an OHV "splash zone" and destroyed. In these and other cases, I'm appalled that people who tend to defend their recreation as responsible act so irresponsibly. Even the media glorifies this conduct, with OHV advertisements often showing uses in or through streams or wetlands. With most aquatic habitats in the West already in degraded condition, and the prospect of prolonged droughts from climate change further stressing these habitats, the challenge will be to educate OHV users that they need to park their mac before going to play in the water.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The Bureau of Land Management loses hundreds of millions of dollars annually on grazing rights leases on public land and what they take in for mining and gas leases doesn't even out the loss. Both grazers and miners are paying fees that are decades old and not fair market value. The BLM is also losing hundreds of millions on wild horse and predator control when both are not needed. In Montana there are only 200 wild horses left in the entire state and that is on a refuge but they are emptying the refuge too. Small family ranchers are being blamed but it is big corporations like Hilton and millionaires like Ted Turner who own most of the grazing rights and who are taking advantage of the system. Less than 3% of US Beef is produced on the range yet most of the public lands in the West are managed for cattle grazing. The West does have a lot of open space but not pristine open space. Desert soil is very fragile and off road vehicle use does cause permanent damage in some areas. When you fly in or out of Phoenix AZ for example you can clearly see all the damage. This damage to the top layer of desert soil causes erosion and dust in the air. Of course, ATV users should have access to ride and enjoy but so should everyone else. Motor vehicles ARE noisy. Unfortunately, some that use ATVs also bring guns with them and not only do they increase the noise level but they are dangerous and what is up with shooting every sign and tree in sight and leaving shot up beer cans all over the place? You also should consider that some of the biggest cities in the US are West of the Mississippi. Population counts only the cities themselves, not their surrounding suburbs. All of these cities take up huge portions of land. Miles and miles in many cases and they run together in some states with little to no wild open land in between for wildlife movement/migration. Los Angeles (2), Houston (4), Phoenix (5), San Antonio (7), San Diego (8), Dallas (9), San Jose (10), San Francisco (12), Ft. Worth (17), El Paso (22), Seattle (23), Denver (28), Portland (30). From Seattle to Portland there is city or suburbs almost the entire three hour drive. From San Francisco to San Diego same thing. From Los Angeles to Phoenix, same thing. The Northwest is clear cut and farmed in a checkerboard pattern that does leave wildlife nowhere to go in many cases. You don't see most of the clear cuts from the roads because they are required to leave trees along them in most areas but from the air it is horrifying. There are roads everywhere. Yellowstone National Park is surrounded by ranchers who are afraid that bison will transmit a disease, Iosis which causes cows to abort their calves so the government pays to have hundreds of bison shot every year when they migrate out of the park during winter. Bison don't understand park boundaries. They go where they have water and forage. There has been not one case of a cow catching this disease from a bison yet hundreds of bison are shot at the taxpayer's expense every year. If more wilderness areas and wildlife corridors are not designated our National Parks are going to end up like Disneyland, surrounded by commercial interests as little islands of nature consumed by city.

The federal government should fund our parks to a certain degree, but we should also involve the public thru the initiative that allows tax-paying Americans the privilege and opportunity to donate any portion of their income tax refund to the park system. Let this replace the useless Presidential Election Campaign fund on the ft of every IRS 1040 tax form. I am aware that this initiative has been tried and has failed in the past, but it is a "grand idea" and worthy of continuing attempts until it is adopted.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

the funny thing is, I would have voted yes on this idea if the language was different. I'm definitely not opposed to nuclear, but sweeping generalizations about environmentalists and dismissal of solar and wind as potential sources without any evidence to support your claims, I have issues with.

The future of the Siskiyou Crest area (national monument vs. no national monument) needs to be decided by the people who live there, not by government officials and/or by the input of "outsiders." Yes, wild areas need to be protected, but maintaining healthy forests and other natural areas over the long haul is a complex process and the locals understand best what is needed, based on decades of living right in the middle of it, and caring DEEPLY about the area's "well-being" in all ways. Declaring a national monument in the Siskiyou Crest area might sound like a popular idea to a politician, but it is fundamentally irresponsible, as it works directly against the best interests of the local environment AND the wishes of the people who call the area home. Please "Just Say No"!

The great wild areas of the west are in peril of being lost to off-road vehicles and I strongly agree that they need to be banned from our most sacred areas. I also couldn't agree more about the importance of maintaining and re-establishing ecological resiliency, including reserve connectivity. We can not do this with off-road vehicles chewing up and destroying the soil and permanently ruining the hydrology in an area. EVERYTHING is connected and without functioning soils or stream systems, we can never achieve ecological resiliency. Save our lands and ban off-road vehicles!!!

The idea of promoting "all forms of recreation" is without discretion. Despite the hard facts of science, there are some people who want to enjoy parks their way no matter how much damage they do to the natural environment. Discretion is necessary because there are people who don't understand, or refuse to abide by, the importance of protecting animals, ecosystems, and views. Just for one example, there are people who want to ride snow mobiles anywhere they want, including in areas in winter where animals like bison usually don't run too much in order to conserve precious energy--as their food supply is not plentiful in winter--yet these animals would be made to run away from snowmobilers who don't care about such hard facts. These people also don't care about the air and noise pollution they would introduce into an otherwise pristine environment, where the natural silence of winter is a part of the natural experience others come to enjoy. The fact can't just be conveniently overlooked that our parks are also the homes of wild animals/entire ecosystems. Science-based knowledge about the facts of the conditions these animals need to survive, or ecosystems in general, as well as views, need to be protected from being indiscriminately damaged.

The idea said we must stop compromising with the republicans on drilling.... It's not about Dem vs GOP, or liberal vs conservative, the lands are for ALL to use, that means ALL it does not mean exclude ranchers, miners, oil and gas companies, hunters, ATV/OHV users, it means work out a plan so ALL can use the lands! Hunters and fishermen/women, and all the groups formed by them have done more for land and wildlife conservation than ANY other group has, yet we are the first who the Enviro-whackos want to ban from using the lands!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The lakes and streams of the upper midwest are generally in sorry state due to some agricultural practices, specifically non-point pollution sources. Since wetlands are the sponge that filters these contaminants and we have lost over 90%, I think more needs to be done with state and federal partnerships to restore much needed wetlands.

the letter we are commenting on states in part, "OHV'ers, like other recreationists, seek opportunities to not only enjoy the riding experience, but also opportunities to learn more about cultural and historical context, take in scenic views, observe wildlife, camp, hunt, fish and other activities". My position comes from years of observation of mixed use, designated or restricted use and , and areas where there are no signs or regulations on public land. Every area that has motorized use has no wildlife near it other than crows and squirrels. The 'trails' have turned into mud or sand depending on rainfall amounts, and the noise and litter make them useless for anything else. My hikes and photography or quiet observation of wildlife does not take away the opportunity of others. That is the big point here. Does what you do on public land make it impossible for others to do what they would like? Stop being selfish.

The most respected AND most democratic nations in the world realize the value of their natural landscapes and treasures. I want my country to be counted among them !!!

The OHV crowd pays user fees. The money we pay should be used to keep the roads open. Our RTP funds need to be used properly.

The OHV people should ONLY be allowed to use land which their ilk have already destroyed and degraded. What sort of brutality does it take to go into peaceful, serene land and tear it up and make a lot of noise and pollute the air?

The OHV riders refuse to acknowledge their noise and damage and how offensive it is to everyone else. They remind me of my noisy neighbors at home. If you truly want to bond with your family and introduce them to camping, you need to get off of your vehicle and sit, listen, and share. Today, people don't share and communicate. Sitting together, reading the newspaper, watching tv, playing games, etc. is about being in the same room and not communicating. Sitting at the dinner table and talking about what happened today and how it affects you and your family is sharing. Teenagers do not need to be talked to. They don't listen. It's too late. You need to listen. Listen. Listen. OHV is not about family. It is about noise and destruction. When you invade the forest with noise, engine roar, and destruction of the forest ground, it terrifies its inhabitants. It offends campers. Camping, wilderness, woods is about QUIET. Sit still and listen. Be. It is not about motion, noise, destruction, erosion, terrorism. QUIET. Be still. Take in the environment. How you think that engine roar and QUIET can be compatible, you are in denial. I wish there was a way. Wilderness does not equate to engine roar.

The other -Over-hunting and climate change is a tremendous problem. I am sure the nra, or any right wing news source, will admit that but it is true. I actually read articles based on science norm and that is where a lot of my comments come from. You should try it sometime, you might actually enjoy it and you might actually learn something.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The promotion of OHV use in the formerly pristine outdoors is proof positive that the American education system is in general, a failure. OHV'rs believe that the earth was created for them and them alone, and it's too bad if there's water, air, or earth remaining for the next generation. What a selfish bunch of no-minds these folks are. ME ME ME! My entertainment! My pleasure! OHV = ME sigh... Folks, sorry - but it really ISN'T all about you.

The Siskiyou Crest is an area of high botanical and geologic diversity. It is of utmost importance as a genetic bridge between the Siskiyou Mountains and the Cascades. Humans roam nearly every inch of this planet, and will continue to have access to this land even when it becomes a Monument. Let's humble ourselves and think of the needs of other creatures and life forms that are being pushed to the brink by human encroachment. It's not just about US!

The study in the link from comment 11 concerns outdoor activities in ALL settings including urban, suburban, rural, etc. Therefore, the statics comment 11 cites are misleading: "Scroll down to Table 2, which shows a comparison of the different types of recreation for ages 16 and up, revealing that 17.4% enjoy ORV, ATV or Motorcycle use, which is actually exceeded by hiking (32.7%), birding (31.8%), and a number of other outdoor activities." Of course the percentage of all participants was higher for hiking, the study did not limit what locations were considered for the activities. Hiking is available basically EVERYWHERE from city sidewalks, city parks, and all the way out to Wilderness trails. So hiking participants in ALL locations would outnumber OHV participants who are extremely limited on where they are allowed to ride. The same idea applies to birding - you can go birding in any environment. I am an avid motorcyclist but if I count how many miles I walk, it far outnumbers the number of miles I ride because I walk everywhere and only ride where I am allowed to.

The true agenda of this question comes through when you get to "We need more trails of all varieties, but especially motorized ones ..." I disagree: this is not consistent with conservation. As says (#37) they cause erosion (which I have seen first hand) and degrade trails. There is no way vehicles, especially motorized ones, can be considered consistent with conservation. Once destroyed, these lands take a long time to recover. We're spending down our 'biological capital' every time we open wild lands to such use.

There are already plenty of places to use OHV. Too many of OHV's are irresponsible and cause much habitat destruction.

There are already way too many 'motor' access areas. i.e. Most of the country.

There are forms of "recreation" that damage the environment (including wildlife), are not safe (for humans), and destroy the tranquility normally associated with the great outdoors. It seems inappropriate to promote these forms of recreation.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

There are green conservation areas in my subdivision that preserve some of the land we are required to maintain. Unfortunately the rest of this preservation of land Manecke (author of this idea) isn't practical, realistic or economically feasible since we have to have buses, cars and at least a 2 way street and 2 exits. Texas, County and local laws requires plats and no by right permitted use options of any land. Based on what you wrote we'd have to have more than 80 acres to have no more than 20 homes with families here. Single Family Dwelling Houses would cost way more than from \$84,000 and up with that much land plus our home owners association dues would be more than \$261 a month - just to maintain that much more land. You forget we have to mow all this area to less than 4 inches to prevent poisonous snakes, lizards, mice, rats, and other dangers that are Governmentally required land useage - reducing fire hazards and dangers to households from animals already. At about \$1,000 per mow - where would you find the extra money from to own a home or maintain it plus how many criminal and civil charges are you willing to pay? Your ideas are totally ILLEGAL where we live and probably in most places for good reasons.

There are still many stream cings on designated OHV trails in national forests and BLM public lands. Damage is still being done to aquatic and riparian habitat. Water cings should be closed and replaced by bridges or by rerouting.

There in lies the problem. Just because a person is able bodied doesn't mean they should be ald exclusive use of the outdoors. This is anti-American and discriminatory against those of us with various forms of handicaps. Due to an injury I incured while serving this nation and defending your right to use public land, I injured my back and hence have a very difficult time accessing many areas to share time with my sons fishing or camping unless I am in an area that accomodates ATVs. I even work as a volunteer to help maintain many many miles of motorcycle and ATV routes while educating my fellow recreationists as to respectful use of the forests. As was mentioned in another thread, all of us who use the back country are all conservationists to one level or another. None of us want to see the access go away nor do we want to see the backcountry destroyed. We can all share the same resources but I also agree that some areas should be set up so they are more attractive to various groups but not exclusive.

There is no Planet B. We've just about completely wrecked Earth, so let's do everything we can Right Now to preserve what is left of our beautiful Earth.I want my grandchildren to experience at least some of the flora and fauna that I so love.We should stop the insane developers NOW, before the planet is nothing but concrete, stupid shopping malls and ugly houses.We should be working to make every space not currently "developed" into National Park land to be cherished by all; to leave some wildlife habitat; to provide us with air...

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

There is no responsible use of OHVs in parks unless you are a park ranger. I keep seeing vast scars and "Doughnuts" and mud bogs created by driving repeatedly through mud and destroyed fields at our parks here in Texas. We go to the parks to get AWAY from obnoxious machines that rule the Earth and non-stop bombard us with noise and more noise. When I go to a Park, I want to let Nature rule and I don't want to see machine tracks marring up the land and hear them approaching. It's hard to tell where they are coming from and hard to walk far enough away from the sound. Sorry OHV'ers, but the reason you have no trouble sharing with others but others have trouble sharing with you, is not because we are selfish and don't like sharing, ... It's because we literally CAN'T share with you, we just basically have to give up on our experience altogether... Because your fun ruins our nature walks with muddy scarring and deep tread marks--sometimes worse like huge ruined fields of ferns and bunnies--and of course, you are LOUD and we cannot get away from it, so there is no sharing. You dominate wherever you go... when you show up there is no sharing, just you and your mess and noise and the rest of us might as well give up.

There should never, never, never be any motorized vehicles allowed on wilderness lands. They disturb wildlife, destroy peace and silence and damage the environment.

There's more than enough privately held timber land in this country. I would imagine that the reason the timber companies prefer to take timber from public lands is because the taxpayers build their logging roads for them and they've already done the damage to the private lands and want to clearcut our lands too. Time to transfer our National Forests away from the Forest Service, make it a division of the Park Service, and transfer those employees who have shown sensitivity to the new NPS division. Ban all future corporate logging on public lands.

There's no way this is true. A private landowner can divide, develop, pollute and degrade the land in any way he/she sees fit. All of our wide open spaces are being turned to ranchettes because of the stewardship of private landowners. Like businesses they have no other concern but the bottom line. This is not stewardship.

These vehicles destroy trails. Vehicles should be on roads, not trails. Any increase in the use of vehicles should be resisted.

They should all be rejected. We do not need any new wilderness areas. You already admitted that they are doing just fine as is. When land is changed to wilderness it becomes both a non-used area and a fire hazard as well as a beetle hazard. We do not need to create any more fire hazards or lock up any more areas from oil leases.

This is an off-road enthusiast suggesting that we give their special-interest group a tax write-off for doing what they want to do.....building and maintaining trails. My view - ANY group or individual that invests time and energy (and money) into the optional activity of recreation.....in whatever form.....should receive no special consideration for that investment. Optional means choice.....and what the bean counters call "disposable income." Spend it how you want, but don't expect me to pay more in taxes because you want a break.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

This is complete nonsense. OHVs whoop their way through the woods leaving a trail of butts and beer cans and garbage, ruining the place for those who come to enjoy it.

This maybe is not a bad idea. What I don't think works is the idea of "multiple use," as the motorized by the nature always dominate.

This sounds really stupid to me: these vehicles do a heckuva lot of damage. What is so great about tearing up the countryside? Do you know how long it takes for desert to recover from this kind of damage? Just so some guys can hot rod around? Do this on private land, not public.

This summer I signed in at a trail head in a remote area. They asked where we were from. In our party were 4 locals and 2 from ac the country. The trip was mainly planned for the visitors. If using that for a survey, how would you record it? Like most trailhead sign-ins, it had space for a name, number in party, where from, day in (but to my surprise, no day out.) I don't know of any hiker/camper who would like to spend much more time filling out a survey when they are anxious to get going. And you are correct about the way questions are phrased. They are usually designed to get the answers they want.

I grew up riding three wheelers and motorcycles. I still snowmobile. I'm not against roads. There are just too many of them. Maybe it's different where you live. I doubt it, though. The amount of roads in national forests is huge. So huge, the government is not able to keep up the maintenance. There is room for OHVs and wilderness, some roads are good. I say preserve more wilderness and mult use land. When OHVs have access to an area, it does degrade the wild character of the area, especially if there are alot of users. Thats why there should be more areas preserved for all types of recreation and for the health of the enviment(clean water, clean air, habitat for other creatures that depend on solitude, etc.). I've stated before that most outdoor people making comments here, even though they may have differing opinions, still have more in common than they have not in common.

To find what's motivating these lawsuits, "follow the money" - What an eye-opener , if this is true ! Are the lawyers using the Eco-Groups as their Pawns to get billable hours? Is the government an unlimited source of funds for these lawyers ? Wow !

To paraphrase lin-If we do not all hang together, than surely we will all hang seperately. Creating division between dirt bikers, atv/utvers, Jeepers, and even mountain bikers opens the door for even more restrictions. Face it, the tree-huggers want everyone out of the forests.

So, after you 'take back the country', what will you do first? Put black people back under slavery, take women's right to vote away, or finish killing off the remainder of the first americans? Always amazes me that you corporate apologists hide behind patriotism, when what you're really saying that anyone who doesn't like what's happened to our public lands in the name of sheer greed or ignorant nonchalance must be unpatriotic. I'm not using the language that you deserve because women or little kids might read it, but that language would include every swear word I know, in at least 5 languages.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Too many youth in this country grow up never spending time outdoors. Better funding for services and educational opportunities for youth are important if we are to raise healthy, responsible adults.

Trail riders and hunters who utilize this equipment would not be served well by this idea but it would and does provide a place for what I refer to as ACTIVE OHV use such as high speed operation, donuts and intentionally challenging operators skills against the terrain. It can be very profitable for landowners without governmental edicts and bans. One 640 acre place like this in Fla draws 10,000 people on a weekend at \$25.00 per head to enjoy camping, drunkenness, mud fun with mac and big name country bands. It is kind of red neck heaven for the young folks that participate even though parents would worry about their kids being there if they knew what goes on. One needs to understand that the old homestead will not look the same where they allow this fun to happen. Lots of money out there for private property owners willing to chip in the aesthetics of their property while the bucks roll in.

Trail riders should ride on designated trails and should carry feed that is certified weed free and yes, they do exist. Horse hooves tear up trails far less than OHVs do. Most OHV users that I've come into contact with out camping or hiking don't even use trails they just gouge their way through. I have been to a state park recently that has a section set aside for horses only and the trails in it are in exct condition. Sadly, I can still hear OHVs screaming through the forest while riding in this park.

Turning management over to state and local governments is the wg way to go. They lack the national perspective and don't really appreciate the value of long-term sustainable management of the land. In their hands, "threat of catastrophic wildfire" could become the latest excuse to log off roadless areas and leave them with a spiderweb of roads.

Uh, , one of the biggest causes of cheat grass expansion is hot wildfires in areas that are overdue for burning. Actually, most ranchers work very hard to reduce cheat grass on their range because it is poor quality feed. You may not wish for grazing on public lands for whatever reason, but let's at least be factual not emotional. Also, invasive species generally are brought in by ATVs and highway mowing equipment (thank you, anti-herbicide folks), judging by the pattern of spread I see in my area. - judging by your posts, you are filled with such rage that you are unable to talk politely with people of different views, and thus are unable to persuade them. Mr. Spotts has a point. I assume you don't want more cheat grass. Why not be polite and find a way to communicate about things you might have in common?

Unfortunately, however, wilderness areas as enacted are not always roadless. As an example, the Coconino National Forest in Arizona is currently considering an attempt at wilderness designation for 10 areas. Most of these areas are roaded and several have motorized recreation as the primary ROS. Some of them even contain structures from ranching and mining. This is why so many of us have concerns with wilderness designations. Most of the areas offered up for it don't fit the definition of it and are currently used for activities that do not fit within a wilderness area. Keep the appropriately designated areas as they are. Just make sure that future designations are what they are supposed to be.

## Discussion Question 2

### **Written & Online Comments**

**(cont.)**

Unlike the "other" I actually own horses and I don't believe the government should be in the horse business. Even at 200 horses I would hate to think of what the cost to the taxpayers would be.

Utah politicians are able to get away with anything, even organizing mass motorized invasions of wilderness study areas. The BLM and Forest Service offices are staffed with long-time Utah residents unwilling to stand up to local politicians.

Very good point, I believe most of our parks should be used to preserve wild areas. If you want to go to an amusement park somewhere else, you have that option.

VOTE (DEMOTE) PLEASE &gt; CONSIDER BEFORE VOTING. THE PROCESS IS A BIT SLANTED IN MY OPINION AND CONFUSING. I have visited the area in question and saw the beauty of those who have lived there many many years and love the small town feeling of some communities. This would be interrupted by promoting a monument being constructed in this area. It is costly and will be the ruin of many families homes and solitude. The current times we are living in do not promote still another tax and expense for unnecessary ventures. PLEASE Think before you vote about how you would feel if your home for many years was in jeopardy.

We all want the same thing; to have plenty of places to enjoy the outdoors. To do that, we'll have to work together and stop the infighting. I've been hiking and seen people go off trail damaging the tundra and I've seen OHV's doing the same thing. I agree when I'm camping, I don't want to hear an OHV whizzing by, but at the same time it's not fair to selectively open the wilderness to certain groups. What about people who can't hike? Are you going to lock them out because their only means of access has 4 wheels? Environmental preservation (not isolation) is the first priority, then fitting our activities into it should be next. After all, if people can't get out and enjoy the wilderness, what reason do they have to preserve it?

We also need to be able to get to the parks, so the CCC should include transportation infrastructures.

We are putting increasing amounts of CO2 into the air. The CO2 does not stay in the air forever. Some of the CO2 is absorbed by the ocean. The ocean is becoming more acidic. The increasing acidity of the water harms life forms that build shells. Whatever the cause, the atmosphere is warming. The heat does not stay in the air forever. The biggest heat sink is the ocean. The ocean is becoming warmer, more slowly than the atmosphere. As the ocean warms, the volume of the water expands, raising the sea level. The rising sea level covers land that people used. The warmer surface water prevents the upwelling of cold nutrient-laden water that supports phytoplankton. The loss of nutrients has caused the phytoplankton to decline by 40% since 1950. Phytoplankton is the base of the food chain. The smell of the sea is the respiration of phytoplankton. Phytoplankton breath includes sulfur. Sulfur particles are a nucleus of raindrops. Phytoplankton produced 50% of the oxygen in the atmosphere. The warming atmosphere melts the tundra, releasing methane, a more powerful greenhouse gas. The warming ocean melts the methane hydrates locked in the continental shelves, releasing more methane. Methane caused the extinction of the large animals once before, leaving the world open to the dinosaurs.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

we can see from experience in the klamath nat'l forest (the area of the proposed siskiyou crest monument) that since all or most of these extreme environmental policy's have been put into effect things have just gotten worse. there is less game, less fish, much more fuel loading, fires have been left to become giant brush patches. there is no logging going on in this area on public land, there is no mining except for a few hobby miners, the grazing is minimal. so ks wild is trying to hype this proposal by telling people the lie that all these so called destructive practices are happening. what groups like ks wild do to our public lands is truly destructive come see for your self what a mess the forest are. they protest and appeal every effort by the usfs to do any restoration or rehab on burned areas and will continue to protest any positive activity even after it becomes a monument. so please think objectively and research this for your self. we need sustainable forest and we need to manage them properly. thanks

We could easily go very far afield from what's intended here, so I'm going to do my best to make this my last comment on this issue. The government often has a role in drawing attention to things. The problem I see with this, though is where does it end. Smoking is a great example. In my state it is unlawful to smoke in business establishments. My problem with this is that it infringes on private property rights. If I own a business and desire to smoke in it, others are free to avoid buying things from me and free to not work for me. If I own the building, I shouldn't have to kow-tow to the desires of others when they can avoid the situation entirely. That's a fictional example. I enjoy a good cigar now and again, but I also find it refreshing to go into an establishment and not have to deal with cigarette smoke. It just makes me nervous about where this type of intrusion ends. At what point does someone else get to control my television, reading material and anything else. I understand what you are saying about bringing attention to the issue, but what happens when the issue being attended to is something that you feel differently about? I just think that areas like this are best left to parents, families and private organizations. People making poor life choices is one of the hazards of living in a free society. But, I still think it beats the alternative.

we need to keep everyone out of the wilderness areas. We can look in through the razer wire

We need to keep our Wilderness pristine. Everyone should stay out and just look in through the razer wire.

We need to restore our national parks to the status and condition they were in before "tle down" was conjured up and corporatization began its abuse and plundering of our national natural resources.

We needed to protect more land to provide more green space.

We should be ashamed in the way we have funded and maintained our national treasures.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

We should expand our National Parks Project for our future.

We spend almost all of our vacations in National Parks and are upset to see how many visitors do not know how to properly behave in the park. We spend hours picking up other people's trash when we could be enjoying the park instead. We have had to rescue people from dangerous situations because they did not obey posted signs. We have stopped potential accidents from happening when we have warned people not to feed or get too close to the wildlife. We have been bombarded by the sound of loud music playing when we are there to enjoy the sounds of nature. While many parks have embraced the Leave No Trace organization and have included the LNT ethics in their park materials such that visitors are introduced to these ethics, other parks either have not LNT information or hide it in a back section of the newspapers they give out. The public needs to be exposed to these ethics not only while they are in the park but also in schools.

We that live here care more for the land than any of you "people" that want to try and save it. What are you trying to save it from? There is no road building, logging, mining, or anything else going on that "might" have an adverse effect on the land. Oh, and you know why nothing is going on? Yes, that's right. Thanks to you dogooders that think you are so much smarter and care so very much for OUR land there is no more logging, mining, or any other jobs for people to do around here anymore. The schools are going to pot, with enrollment way down and no money to fund things such as sports, etc.. By the way, timber dollars went a long way in funding for schools, roads, etc.. Once again, thanks to the enviro whackos there are no more timber dollars. So thanks to idiots who think you can "restore" the land, maybe he will use a cotton ball to push dust around with so he doesn't leave a "footprint" on the land, we have no jobs, schools are going downhill, and our forests are tinder boxes with dead trees and being overgrown by brush. We DO NOT want or need a siskiyou crest national monument.....

We used to do 4 wheel off roading but stopped after seeing all of the damage done by people leaving the established trails. OHV people need to understand that by many of them not obeying the rules in the already established OHV areas, they are shooting themselves in the foot. OHV areas also need to be located away from areas where people go to enjoy nature. Coral Pink Sand Dunes State Park in Utah is a good example of where the OHV activities disturb the enjoyment of the other visitors to the park because they drive fast in areas that are shared by people walking and the noise from the vehicles themselves can be heard all over the area.

Well its clear you do not live in the 90% of rual america that is affected by these strange anti ATV UTV rules because I have never even seen a hiker or walker in the forest. And I live in it. The rules should not be made by city slickers who want to hike near cities. They should be made in the local area by the people who want to use them. Why should we be prevented when we have no hikers here?

Well said. Additionally, designating an area as "wilderness" should not mean - as it does currently - that envimentally ign recreational activities like trail races and orienteering events are banned. Therefore, the wilderness rules should be modified to allow (permitted) on- and off-trail running events, subject of course to review based on local conditions by the land manager.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Well spoken , and I stand corrected someone is advocating OHV in wilderness. I don't think a properly designated wilderness area is the right place for OHV. However that being said I think there is an opportunity to explore new ideas when new technologies come out. Like an access trail for disabled visitors to points of educational interest. So that everyone has the ability to see, learn about and conserve mother earths creations.

We're trying. But the truth is that if there is nowhere legal to ride, then those who don't care about the law will ride where they want to. Gates will only keep out the responsible riders. It's really had to promote responsible OHV use if there is nowhere for responsible OHV use.

What a great idea. More of my hard earned dollars going to another government program. How about if more users get out and volunteer to help maintain what we have.

What is wild? I have friends who think I live in "the wilderness" despite the state highway less than a mile away. The "roadless areas" in my county have miles of existing road in them. Shutting off access to traditional wood gathering and fishing areas is hard on local communities. Remember, Native Americans actively managed the land before Europeans ever arrived. Why not just give it back if we don't want to use it? I think some people here need to quit frothing at the mouth and learn to be polite, or they will turn off any potential supporters they might have.

What's your point ? Hikers need trails.

When increasing funding for the Park system, don't forget the seriously underfunded USVI National Park. Coral reefs are disappearing at an alarming rate all over the world, so we should take special precautions to preserve what's left in the US Virgin Islands. This is a unique and beautiful park in our system, but appears to be very underfunded.

When will you all get it? Wilderness and ORVs don't mix. If I want to share space with motorized vehicles, I can take a hike along the freeway.

While I agree that OHV vacations bring families together, OHV recreation does NOT belong in our national parks and is abhorrent to conservation goals. A footprint is invasive yet far less so (by orders of magnitude) to even the constant tread of a bicycle tire, let alone a 3-, 4- or 6-wheel ATV--and the NOISE of motor vehicles echoes throughout the wilderness so even if you do not see the fossil-fuel burning toy you can hear it all around. (frown) Sorry. OHV/ATV recreation DOES NOT BELONG in anyone's outdoor experience in our National Parks.

Who could be against a few runners trying to stay extremely fit? Answer - Many of America's Great (LOL) enviro groups. Sad but true.

Why would ORV users who go off trail not continue to use a trail that exists but is signed as "closed"? This sound like an unenforceable strategy to me.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Wilderness is important for the survival of certain species, biodeversity, etc. Wilderness is also deeply valued for cultural, spiritual, and moral reasons and is vital for the human spirit. There are plenty of places to ride OHVs, drill, or mine. These activities can be done anywhere (private property, farmland, non wilderness, etc). More should be set aside as wilderness, it not only efits humans with recreation and clean air and water, it efits plants and animals that don't have a voice. I may never be able to afford to see some of the wilderness that is available. Most of it is on the other side of the country. The knowledge that it exists gives me piece of mind. There should be more land set aside for wilderness and for non wilderness as well. I don't think we need to drill in every last valley.

Wildernuts, ecofreaks, enviuts. People like you are very creative. You're a real leg slapper. What a hoot. You should be a comedian on TV. Did you know that the traditional use of land is wilderness. The established way of the world is nature's way. You live inside of nature's way, at the mercy of it. If people screw up the planet, nature's way will not give one hoot for any of us. Better not screw up, eh?

Will everyone who supports this still support it after realizing the windmills or solar arrays will wipe out the viewshed near a visitor center with 5 or 10 acres of these things visible nearby. Even if you would other enviros would probably sue to stop the project as they are already doing elsewhere.

With millions of acres of desert in Nevada, CA. AZ and southern UT why is it so difficult to promote an offroad race? The BLM charges a fortune for the privilage of playing on public lands and the events are held on existing roads/trails and are 100% previously disturbed lands. The rules change without public hearings and land use plans, the maps and rules are confusing, we need a comprhensive land use plan and approach that includes horses, bikes, OHV, off road racing and wilderness.

Nonsense. There are enough roads in National Forest alone to go to the moon and back (several times). No one is stopping you from using those roads that are open - which are in the thousands and thousand of miles. Plus motorized wheelchairs are ald in many wilderness areas and elsewhere. I am sorry for you physical problems, We don't need to destroy the rest of the country to appease you. So what about the blind, should public lands be fitted with brail inscriptions or audio stations every hundred yards or so? How about those who don't have the physical capacity to scale halfdome in Yosemite, should we put in an escalator? And those who can't climb Mt Rainier, should we helicopter them to the summit? You guys just don't get it. We are running out of Mother Earth. Quit seeing what you want to see and open your eyes (somewhere other than a dirt bike trail).

## Discussion Question 2

**(cont.)**

- If you really paid attention to the gulf oil spill you'd know it wasn't the lack of regulation that was the problem. It was the combination of being required to use known bad government supplied current information and regulators ignoring that regulation sign-off reviews are not paper in an office. Both BP and THE GOVERNMENT were/are equally at fault. Oh, and sign-off was by an Obama appointee not a Bush one. All lands that are open to the public should be owned/operated by the states and local communities, or subcontract operation to private parties, NOT the over-bearing-it's-good-for-you federal government. Look at the misery the federal land management is causing in many of the western states. If the federal government had it's hooks into proportionately as much land in the east and far west, this new expansion would be quashed summarily.

slinging insults rather than dealing with the arguments- how are you going to deal with overgrazing and damage by herds that procreate quickly? BTW most herds were kept in check in the past by native americans who captured them for use and also ate them. Also they were rounded up regularly for use as working animals- but we don't need them anymore. so how do we deal with overgrazing?

U are sooo full of non-sense ! We do not want more- more- more- like you say. This is what happens: We have been OHV riding in certain areas for years. Some do- gooder in Congress wants to leave a legacy, so they get behind a Wilderness Bill. This often times wants to apply "Wilderness Designation" to land that already has roads, trails and mines on it. (Shouldn't be "Wilderness") Thus the OHV groups must fight the designation, because it is not true "Wilderness" and shuts down land already in use by OHV'ers. We don't want More-More-More, we just want to keep what we got.

I think your view of many of these so called "non-profits" is a little off. Many of these organizations have gone the way of corporate giants such as Exxon, General Motors, and BP. They have lost all touch with reality and are only out for personal gains, posing as wildlife sympathizers. For instance, according to their 1998 tax form the Sierra Club spent about 50% of donations on actual preservation. The rest went to wining and dining the fat cats at the top of their corporate ladder. { <a href="http://www.sovereignty.net/p/ngo/sac-1.html" rel="nofollow" target="\_blank">Link</a> } Another example is the Nature Conservancy, who made nearly \$400 MILLION dollars after expenses in 2000 alone. Remember, because they are classified as a "non-profit", no income taxes were paid on any of this money. As of 2009 they had \$5,637,205,000 (that's over \$5.5 billion) in assets, a number I'm sure has only gone up since then. That is some serious cash, enough so that I have a tough time calling them anything but a corporate giant. { <a href="http://www.undueinfluence.com/nature\_conservancy.htm" rel="nofollow" target="\_blank">Link</a> } { <a href="http://www.nature.org/aboutus/annualreport/files/fs\_fy2009.pdf" rel="nofollow" target="\_blank">Link</a> } I don't know about all of you, but I am tired of big business calling the shots. Don't let these companies pretend to care about the enviment so they can line their pockets. If you want somebody on a federal committee, how about asking a neutral source such as an independent biologist. That way actual facts and figures would be heard by those in charge, not just extremest ramblings by envimental corporations looking to make a buck (or 400 million).

## Discussion Question 2

### **Written & Online Comments**

**(cont.)**

Not "no" but "Absolutely NO!" to KS Wild enabling the Department of Interior's locking up our Siskiyou Ridge. It's our land, not DC's and certainly not KS Wild's! Anyone confused about what's lead us to this covetous governmental action, just click a region on this { <a href="http://takingliberty.us/TLByRegion.html" rel="nofollow" target="\_blank">Link</a> }

Not ALL forms of recreation. Motorized ORV noise/pollution destroys habitat, harasses wildlife, and damages the peace/quiet/"wild" experience for other users.

Not sure what this idea is. Why wouldn't the fee just go to the park instead of to an outside entity? The website link did not clear up my confusion, so I'm demoting, because it would be easier just to pay the fee to the park being visited and have them use it.

Nothing will stop the green industry that is coming from degrading many vistas with solar and wind arrays. SOME wished for it and now THEY will get it whether they like it or not at scale - large scale. Don't worry totally though because China will probably produce the hardware off shore so a lot more factory spece won't be needed except for the research we may do.

Now that we have made steady progress in strengthening laws aimed at protecting wilderness areas and untouched lands that are protected by the government, we have to make quite sure that those laws remain shaply intact and untouchable for ages. We have to protect old growth forests in their entirety, and not just the old trees themselves, but give the same kind of protection to other trees that were planted for years and new trees that are located in wilderness areas our any untouched pieces of land protected by the government. Recent forest management proposals ignore this, suposedely in an attempted move beyone management controversial issues of the past, and we believe that forest management should finally be toughen up. Instead of focusing on saving old those trees, we need to designate entire forests of old growth, that way both envimental priorities and moneterly desires can become solved. Proposed logging of young trees in Old Growth Forests would impact the ancient balance that nature has so well maintained. Nesting habitats for Spotted Owls and other threatened and endangered species would clearly be disturbed, any youn trees that are removed would remove vital nutrients from the forest life cycle, and activity of machinery would subject fragile forest topsoils to erosion. Now let's protect what we have left of these Old Growth Forest Ecosystems, so we can protect the entire Old Growth Forests, not just old trees within them, but new or recent trees as well.

Off road vehicles are the toys of a spoiled rotten few mo types. Let them go ride their stupid toys on private dirt tracks.

Off-road vehicles have nothing but negative impacts on the enviment. They create air pollution, noise pollution, cause soil erosion, and frighten the wildlife. I ought to know; I used to ride dirt bikes and four wheelers before I came to my senses.

Oh, so you want your land-disturbing activities--horses, bikes, OHV, off road racing, etc.--none of which I am opposed to per se, to take place on "undisturbed lands"? Take a moment hink about the logical merits of that statement. This is a lousy idea.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

OHVs do not belong in the wilderness. If a person needs noisy destructive polluting vehicles for recreation, then s/he should be in already developed areas rather than destroying the little bit of quiet that we have left.

OHVs don't belong in a wilderness. Period. They would be more acceptable in national forests and other wild areas IF they were quieter, lighter, AND the persons riding them were responsible. They are so intrusive for those of us who hike and camp, though, that my knee-jerk response is to say ban them all; the OHV riders I've seen tend to have loud music, go off trail even when it's not allowed, drink alcoholic beverages and yell to one another almost constantly. Maybe that's just in my area?

Okay, I am reading all you are saying about this. honestly, I am. I hear about God, his trees and his bushes and his crystal clear water. okay, there is that little thing about how the .gov can't get into the God debate, so you can just make the whole side of the argument go away. I hear how you love going, walking, sitting where it is quiet and tranquil for you. How you love seeing nature, and how you hike and how you this, and how you that.... and then you can me and other OHV user selfish. yah, the issue runs deep in this one. I hear you say "Ride on private land", okay, you hike on private land. Oh yah, this is about you isn't it, everyone else must change so you are happy. By the way, just who's private land are we to ride on? I will throw down my annual tax bill with just about anyone, let's see who all pays what for our Public Land. It isn't just for me, or you, or the squirrels. It is for all of us. You want to split the land down the middle? You take half and we take half? Great deal for the OHV crowd, because we have way less than half now. How about you hike where we AREN'T?? We have very little land to ride on, so it shouldn't be too hard for people of even limited intelligence to find out where we are not allowed, and then just go walk your little butts off.

On a case by case/trail by trail basis allow mountain bikes access to Wilderness. Especially the more remote areas where conflicts are not likely. It's proven that mountain bikes have about the same impact as a hiker and far less than horse. The mountain bike is almost the only human powered recreation not allowed in Wilderness. In more crowded areas, since new trail construction is allowed in Wilderness, create separate trails for Mountain Bikers.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

On May 18, 2010 there was a Board of Supervisors meeting held in Yreka to discuss the effects the National Monument would have on our county. In attendance were the Board, representatives from USDA Forest Service, BLM, neighboring county officials, representatives from our Congressman and about 300 very concerned citizens. KS Wild the proponents of the monument excused themselves from attendance via email so we were deprived of their responses to the many questions this issue raises. In a nutshell we learned that no one really knows what the effects will be of making our area into a National Monument. The decision on who will manage it will not be made until after the declaration. It is between the USDA, BLM or the Parks Department. Each administrative entity have different guidelines on how things will be managed. Howard Hunt, the assistant manager with BLM for the Cascade-Siskiyou national monument outlined the guidelines which the Cascade-Siskiyou Monument have to work with. A few of the restrictions include: NO mineral or geothermal extraction. NO use changes of private property within the monument. NO commercial harvest of timber or other vegetative material except when part of an authorized science based ecological restoration project. NO off road vehicle use. Road density reduced. Fighting fires is far more complex. NO road development or improvement. Road maintenance restrictive due to budget constraints (the timber industry was paying for the maintenance through timber sales) The forest management plans which were supposed to take 2 to 3 years to complete and either are still not complete 10 years later or took 6 to 8 years. The monument has been restrictive to any vegetation management plans due to appeals and protests and still does not exist. (guess who is tying things up?) I recorded the meeting and have the video if anyone cares to dispute this. The issues we don't know about and are very concerned about are: NO firewood cutting. NO undergrowth removal from the forest. Runaway Fires as a result. Uncertainty about our water rights. Loss of any and every industry we presently have in our area with the exception of tourism. It does not follow that tourism will increase because we have so little of it presently and our area is already one of the most pristine in the country. What color we can paint our houses. NO new building permits. NO improvements to our homes and businesses. Stories from other National Monument victims of having to sell out to the government for ten cents on the dollar. I challenge anyone to look at these restrictions on their own homes and businesses and welcome them. On the surface having another National Monument to enjoy sounds like a really good idea. Guess what, the American people already own the land, it is already managed very effectively by the Forestry Department lead by Ken Harris in our area. We do not need any additional restrictions to keep things beautiful. Come here and see for yourself. This is one of the most beautiful places I have ever seen and I have been all over the world. This boils down to who is in charge of managing our resources, man or nature. Our constitution says we are. The environmentalists believe nature is. President Obama gets to decide.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

On National Park Service land RV's get an absolute gift of far below cost campsites to the point that nearby privately operated campgrounds cannot compete. That is a guaranteed fact in Big Cypress National Preserve. In So Fla market RV campsites are a heck of a lot more than the 14 - 18 dollars a night that NPS charges. And privately operated dump stations are not allowed to be on the honor system. I sympathize with retirees on a fixed income but you have to come see these \$250-500,000 dollar RV's down here getting NPS RV sites for 14 or so dollars a night when local campgrounds are barely surviving on account of it.

Once again an ECO NAZI misses the point intentionally. If you were trying to be at all honest you would have described how setting aside all this land has an effect on you. You didn't, so that tells me it won't have any impact on your life. Chances are you don't own anything and therefore have nothing to lose. We who live here and own property and business do. If this land grab goes through, Do you really believe that you won't lose also. What happens when the Federal Gov. comes to you and landlocks your land. What will you say then. You won't say anything because you probably will never own anything of value. The fact is that with one swipe of his pen, our "president", can make it so that the only way anybody who owns property, in a national monument area, can access their land is by helicopter. Your proposition would remove roads there by limiting access to only the most physically fit, if even they were granted access. So are you that hateful to seniors or the physically challenged. Or is it that you feel guilty for destroying the environment in which you reside and want others to suffer for your guilt. The fact that you claim to be protecting the health and diversity of other living creatures is a farce. You value these creatures over my life and livelihood. You sir are a fool. If you think you can destroy this amount of personal wealth without any blowback on yourself you are even more of a fool than I currently take you to be. I hope that you are prepared for the fight that is going to land on your doorstep. I will be noticeable when I bring this fight to your doorstep in the same fashion you brought this fight to my doorstep. This is not an argument about your rights to try screw over your neighbors. It's an argument about IF it's for RIGHT for you to SCREW YOUR neighbor over. If in your mind that's OK then you won't have any problem when Siskiyou County shows up on your doorstep, IN OREGON, and requires you to answer for your actions. You are very generous with everybody else's money why don't you use your accumulated life's wealth to just buy all the land at or above fair market value. Instead you seem like the sort who will wait until the Government has driven the property value down. Then you can come in and develop the area for a dime on the dollar. Just like the Sierra club saying that you care about life so we need to save this area is a joke and so are you and those who think like you. Take care of your own back yard, then your block, then your city, then your state and maybe then you will have SOME credibility. DON'T try Destroy My Business, MY Property and MY HOME so you can feel less guilty about how YOU have RAPED the environment in your area. If you really believed this crap you would have the guts to come down here and talk to us, but you lack integrity and therefore won't.

Once again, motorized vehicles destroy trails, cause erosion, and cause noise pollution as well. They do not belong in wilderness protected areas.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Once again, NO to motorized vehicles on trails. They cause erosion, noise pollution and destroy trails. Also, alcohol is currently prohibited and should continue to be prohibited. Enjoy the sunset while drinking, juice, tea or coffee, or water, not a cocktail.

one more time, gee obesity versus walking, obesity versus walking maybe not that many people want to get off- or out of - their misery making vehicles

Our challenge is to preserve and protect our natural habitat (and the natural habitat of the entire world) to minimize degradation and consumption whether by timber harvesting, grazing, recreation, mining, pollution, etc. Unchecked, human beings will consume and eventually destroy every natural area in our country and other countries if that activity can generate a profit. Simply recall what has happened to our great virgin forests and our great plains because there appeared to be an abundance of them in the 18th and 19th centuries. Consider what happened to the passenger pigeon and multiple other less well known species of plants and animals. Additional areas must be included in protected areas now before it is too late. Multiple use like any other set of guidelines/programs must be limited by tight and clear regulations with out loop holes for clever lawyers and business to exploit. These regulations must be accompanied by vigorous enforcement. Business interests with a stg profit motive ueber alles are the greatest enemies of nature, much more so than those of us who merely want to get out and enjoy it. Our "destruction" is lack of respect for what we have and not destruction by intentionally consuming to generate profit. I am not anti capitalism. I am a registered Republican. But competition which can both successfully support and control business ventures won't work in protecting our natural resources and areas. With entrepreneurs only one side exists, the profit side, and there are no altruistic principles that control the profit goal.

Our national and state parks are the preeminent signs that we have intelligent life in America. Any culture that does not put preservation of its natural resources ahead of anything else is a culture doomed to fail. It is the natural environment that gives us fresh air, clean water, and silence to restore our spirits. Man made cities may have have thrills like restaurants, movies, and concerts but they also produce landfills full of disposable waste and decibels of noise. Long ago troubled individuals could live in the woods away from citizens who found their homelessness or crazy rants disturbing. We "progressed" to mental hospitals then "progressed" further to allow them to live in the streets. We have a diminishing population without immigration. If we allow immigration but continue to limit our population, we can reclaim this great nation instead of further progression toward a concrete jungle.

Over 80% of lands West of Mississippi are open space. Wildlife has plenty of places to live. There is no need to create Wildlife Corridors or designate additional Wilderness Areas. The creation of Wildlife corridors will have a disproportional and severe negative impact on rural communities. It appears that organizations such as The Nature Conservancy stand to make huge illicit profits by swapping lands to the government for Wildlife Corridors

## Discussion Question 2

Paperwork showing the current trails are required. Yes, I agree it would be better done every other year with one year's cost of doing the trail paperwork spent actually on the paperwork. However, unless the paperwork is done in a timely manner - which is determined by Government - no body may walk on this trail as I see things.

Parks are a place to enjoy and learn how to care for nature. We need to show where our values are.

Parks are not a business. That is one problem the Dept of Outdoor Recreation is having right now. They are trying to run the dept like it is a money making business. If you want to make money on a national park you have to sell something. I dont think anyone on this forum wants to see the Dept of Rec get into the the business of selling natural resources.

Paying ones taxes doesn't merit tearing through desert ecosystems. We pay taxes so this countries land is protected and preserved for low/no impact usage of its citizens. We don't pay taxes for the right to rip it up. I'm a mountain biker, a dirtbiker, four wheeler, backpacker, paddler and a hunter, but I'm also an ecologist. There are plenty of appropriate places for the more impact pe/invasive activites. The desert is not one of them. U.S. desert ecosysems are extemely diverse (believe it or not), fragile and are already highly stressed. Lets look at the science FIRST, and not base our land use policies on what give us instant gratification. Screw this up once and it's gone forever.

Perhaps if 50% or more of our income wasn't eaten up by taxes and government fees, more time could be spent in the outdoors, without additional mandates on business.

Please - Do not let people who do not live in the Siskiyou Crest area determine the future for the area. A national monument there is a bad idea. The current residents are doing a good job of preserving the natural habitat - after all, it is their home. A National Monument will hinder fire fighting, tree management, recreation, and much more.

Please ! NO 4 wheel vehicles in Parks ... except in very specific areas !They destroy everything where they are ... Faunas as well as Flora !

Please increase funding. This is vitally important.

Please protect and fund our national parks. These parks need to be preserved from ATVs and snow mobiles and all types of drilling, logging, mining, etc. In the future they may be the only untouched land we have left for native plants and wildlife.

Please protect the BWCA and the watershed of northern MN as I value it and want it for my grandson as well as others. PLEASE and Thanks!

please.increase the funding for the national parks because they need it thank you bryan trent

***(cont.)***

Problem is, ORV use actually destroys resources. If we allow these lazy folks to ruin everybody's land, there won't be any resources left. Not to mention becoming dependent on terrorist regimes for our imported oil, so the ORVs can run rampant on our beautiful country!

You are absolutely right about starvation forcing people to cause environmental havoc. I think agriculture is required to produce way too much food today because people eat and waste way too much in this country. Also, hamburger takes a lot more land to produce than rice and potatoes. As always, living on Earth is a balancing act. In my opinion, this is the best of three alternatives I put forward, not ecotopia, but we may not go extinct in the next few years on this course.

, I have to agree with you on one thing. I would love to see it all before I die... But the power plants are belching smog over it, the cities are paving it, power lines are criss-crossing it, fences are keeping me from it, and freeways are dividing it. The enviro-freaks (your definition), myself included, want there to be something left to see. What do you propose to see when it's all gone, not roped off or locked up, but GONE. How nice it would be to go back to the creek I grew up next to and cast a fishing line in the water and catch a real fish, not just a sucker. You know how many kids these days can't go do the basic kid stuff like fishing because the water's too polluted. You are lucky if you can drive a car far enough and see something that's not crapped on. The enviro-freaks don't want to lock it all up. They just want there to be something left to see when they get a chance to look for it.

Ranchers work closely with the BLM. The great American Cowboy is a persona that many foreign visitors imagine as well as those in urban areas. They are the fabric of the West who deserve to have their history preserved as well. In creating these National Monuments, many ranchers who have maintained their family ancestral properties will be forced to leave. I cannot in good conscience vote yes to this as I realize the impact this would have on those families and the communities in which they live.

Recently the National Forest Service has allowed logging in the national forest directly behind my home..Pike Natl Forest in Colorado.. It had closed the 2 sections of the park where logging was established and recently reopened the sites.. but one in particular i went to see recently and it is a mess with logs, and pieces of wood from the choppers, all over the ground..should there ever be a forest fire in this area, there certainly would be enough fuel for it all over the 5 acres where they logged.. why didnt they accommodate cleaning up? They had given reasoning for it, due to forest fire prevention or beetle kill..which there is little of in this area. Better to use manpower to cut down the infected trees (which are few and far between) as the wood can be used for flooring, walls, furniture etc. as the beetle kill has a very beautiful blue tinge in areas of the wood. I think it is just plain desecration of our standing forests and i have been in this area 14 years and never seen a forest fire here..In addition, living trees roots provide storage for water in rainfall and run off.. Must everything be destroyed for profit which it seems was the reason truckloads of the logs went over the roads twice a day(2 lane country roads already potholed) and the heavy trucks making the roads worse than nature does. Decisions like this we could live without.

***(cont.)***

Responding to V's comment is at the heart of this issue. "This is one of the issues at the root of some of the OHV community's problems in getting organized. Most of us are by nature, not the type of individuals pe to joining groups." Neither were mountain bikers, of which I am one. You OHV users need to put aside your pride and elitism as we bikers have had to do, and realize that the only way that other user groups are going to be willing to discuss terms with you is if they can put a name to a face, so to speak. Get organized and get involved and you MAY in time earn the respect and understanding of other user groups, as we have done. As long as people see you as an un-organized band of noisy, fume-emitting full-helmet-wearing faceless rogues, who roam the public trail systems ripping, widening and rutting multi-use trails, you will be shunned and excluded. I promise you that. Start showing up at trail meetings and trail days to work on building and repairing trails, and people might see you differently. The ball is in your court. We do not have to let you have access to the trails we work on and maintain. If you want to come into the house, you ring the doorbell, you don't break the door down off the hinges and expect the residents to invite you to sit down to dinner.

Responsible use of public land is the only thing that makes sense. Land that is managed and utilized for grazing and timber harvest is much better for the land and the enviment. MORE GOVERNMENTAL REGULATION AT THE PROMPTING OF ENVIRONMENTAL RADICALS IS THE LAST THING WE NEED! SUWA – GO HOME!

Right now the parks have a lot of funding for the centennial initiative, a push to repair and maintain the parks in prep for the 100 year birthday party in 2016. However after that I'm afraid that many of the jobs that I've had and my friends hold won't have funding behind them to continue. Despite the Centennial Initiative, parks are still understaffed. And what's worse is that the other public lands of America like USFS and BLM are in even worse situations with funding and staffing. Soild, long-term funding from a tax would be immensely helpful to parks in planning for the future. Increasing user fees is would be exclusive and is not the solution. Many groups like the CCC and the SCA provide a ton of support to the parks and a great opportunity for young adults to get a taste of life outdoors. For some like me, a summer volunteering can even start a career in the parks or forests. We could use more programs like this. Funding for Conservation Corps would create jobs and get people interacting with the natural world again. Rangers spend lots of time educating visitors in the parks, mostly to protect the natural resources that exist there. When proactive education isn't effective in protecting the park, we have to stoop to law enforcement to enforce the laws that have been broken (i.e. feeding bears or cutting trees in campgrounds). Needless to say, a little preventative education is far cheaper and more effective than reactionary enforcement later on, in protecting park resources. Rangers should be staffed year round rather than temporarily. They could spend the busy season in the visitor center and on the trails, and then in the off season they could be visiting local schools and teaching programs about envimental conservation. The most profound effects in protecting our national treasures will come when people truly care about the land. Since so much of the population today are urbanites, it's hard for them to know how to interact with the land unless somebody takes the time to teach them about it and get them to care. Rangers are part of the missing link, and they love what they do. So pay for them to stick around all year rather than keeping short term seasonal jobs without any efits. Right on . I love how all these OHV supporters and so called nature lovers also always include that they "like to hike" also as if that gives their ideas more credence or somehow will make us that know better think OHV or ORV use in not damaging to the land and the species that call that land home or just an outright nuisance to those of us that actually do like to hike and enjoy the peace and quiet of nature and the great outdoors.

Right! NOT! Just let every TD&H have access to the public lands to do what they want. Screw the future....let's just get ours. You have got to be kidding!

I find the fact that bicycles are lumped in with OHV users a bit misguided. I think that bicycles should be added into 100% of the places a horse is allowed. Bicycles have a considerably r impact on the environment and the trail systems than horses or OHVs. To directly compare them to a horse bicycles weigh in at about 10 to 75lbs depending on the bike compared to a horse weighing in at around 1,000lbs. Bicycles use rubber tires to contact the ground, horses usually have ridged steel shoes to put considerably more weight down. When was the last time you had to step over or around bicycle poop? I think that in many cases bicycles should be added into the same areas as hikers. Not all hiking trails can facilitate bicycles but there should be an easy way for bicyclists to request access to a particular trail, possibly by submitting a video of them hiking the length of the trail, or a forest service employee should hike the trail. These should be processed in a timely fashion, ruled upon, and the signs should be updated. I would think that a trail designation could easily be changed in a 1-2 month period. To overview I think that bicycles should be removed from the mechanized travel restriction list and added anywhere that horses are allowed as well as being allowed on the hiking trails they make sense to be allowed on.

## Discussion Question 2

***(cont.)***

OHVs belong on well-regulated private tracks, not on public land. Off-road vehicles (OHVs, ORVs), aka All-terrain vehicles (ATVs) are not compatible with hiking, nature study, and other healthy, environmentally-friendly use of our public lands. But there is still pressure to allow more ORVs on public lands. Manufacturers and dealers are working to open up public lands to ORVs. ORVs have important environmental significance as well as health and safety implications. Some ATVs are even advertised as suitable for users six years of age or older. The Forest Service maintains an ATV trail system in North Carolina. It is reported that usage of the area is causing multiple plumes of visible sedimentation in the Tellico River and its tributaries. The ATVs have cut deep passages in the soil as they repeatedly traverse this steep area of loose soil and big rocks. Trout Unlimited and other environmental organizations served on the Forest Service a Notice of Intent to sue. The purpose was to force the Forest Service to stop the destructive sedimentation of trout waters. The exhaust of all terrain vehicles (ATVs) contains unburned hydrocarbons. You will sometimes see a blue haze. Because of the known dangers of unburned hydrocarbons, our automobiles are designed to reduce these emissions. Automobiles utilize a four-stroke-cycle engine. There is an intake stroke, compression stroke, power stroke and exhaust stroke. And many modern auto engines are designed with two exhaust valves and two intake valves for each cylinder. Many ATVs utilize a two-stroke-cycle engine. Two-stroke engines combine functions and use ports for intake and exhaust. This arrangement simplifies the design and produces a higher power-to-weight ratio. The tradeoff is much higher noise levels, poorer efficiency, and abominable pollution levels for ATVs. Based on some calculations, the pollution due to one ATV equals the pollution due to fifty automobiles. ATVs cause other problems as well. Many ATVs are inherently unsafe due to the lack of a differential. They are destructive of trails and make our open space areas unsafe for hikers, nature lovers, and other users. The vehicles can wreak environmental havoc by eroding hills or streambeds. And riders who illegally speed through back yards usually favor the least effective mufflers possible, endearing themselves to no one. There are private tracks available, but it is unlikely that more will be built due to safety, noise, and air pollution concerns of potential neighbors. ATV owners and dealers are asking for more access to parks and other public land. The owners and dealers are well-organized and polite as they advocate multi-use trails. But, hikers and other trail users are unsafe on trails frequented by ATVs. One watershed/forest preserve told the owners of ATVs and motorcycle dirt-bikes to have an opportunity for off-road recreation on designated off-road-trails. They reasoned that the logical management plan was a "permit process" that would encourage and limit "off-roading" to a special use area within the forest, while discouraging and preventing it in the off-limits areas. As the numbers of off-roaders increased, the permit process failed. ATVs overran the watershed and had the run of the place. Unfortunately, the designated off-road-trails led directly to all the hiking trails, bridle paths, colonial roads, and utility rights-of-way throughout the forest. But, the off-road environmental degradation didn't stop at the borders of the forest. The mechanized destruction within the ecosystem spread unchecked onto State Park Lands and private land holdings. When the rains fell, illegal off-roading churned and turned forest hiking trails into muddy streams and historic colonial roads into scarring rivulets. Brooks, upland ponds and wetlands - along with the very life they supported - were choked to death by the wash of silt and debris torn-up by off-roading. The Centers for Disease Control and Prevention and other agencies have noted that we are facing an epidemic of health problems, partly due to lack of

**(cont.)**

physical activity. ATV's interfere with healthy and environmentally-friendly recreation. ATV's just don't belong on our public lands.

"All forms of recreation" is a call for "lets put our own short-term fun above the survival of the ecosystems...ecosystems that we, however, want to be there for us so we can have fun the way we want to, never mind the long-term damage we cause." Guess what? The natural beauty you want to be there for you to indiscriminately use any way you want wouldn't be there if it weren't for conservationists who learned about and understood that natural beauty and protected it up until now. Conservationists bother to know the science of what sustains an ecosystem and respect those conditions. Millions of people also inherently, naturally "get" that, without having necessarily studied it. People who don't understand the vital importance of the conditions vital for the survival of natural beauty, or who refuse to abide by those conditions, run roughshod over science just like they do over the delicate ecosystems they damage.

"And in return for this fantastic volunteer help, off-road recreationists are first at the table when decisions about where to ride are made. When I hear the off-road vehicle groups have given a million dollars to the Susan G. Komen Foundation (breast cancer), then I'll have my first example that they act in anybody's interests but their own." So now we are going to judge people by how much money they have donated for your cause, you must be a US Congressman or maybe Rod Blagojevich one thing is for sure your part of some sort of self serving good ole boy network, you should be ashamed trying to stg arm people to serve your cause let me guess you keep 65% of the money you collect for breast cancer as a fee or bonus like all other charity's are run. Nice try.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

"China closed 2,087 factories because they did not meet environmental standards" Oh wow, those factories would have never been allowed to open in the US. "Did you know China has committed to plant 1 BILLION trees" No I did not know that. How many trees will be planted in the US? The Arbor day foundation says their members planted 8 million trees last year. I would say that was pretty good for a private group. Who knows how many trees the USFS and BLM planted? "The point is the choice is yours to make and if you want to see this country return to the beauty it once possessed" Yes it is my choice to make thank you. I have lived in the Northwest for my entire life except for a couple years in Europe and have never noticed a degradation in the beauty you speak of. What I have noticed is an extreme limitation on the ways that people are allowed to access the outdoors. I drive vehicles that allow me to get the best MPG's in order to suit my needs, I do keep my thermostat below 68 degrees and I heat with a renewable resource (AKA wood). I do all this in the name of being self sufficient and saving money not to worship at the altar of environmentalism. "Responsible harvesting of trees can help forest yes but how often do you see that? Instead you see timber companies go in clear cut old growth, new growth and anything in between until it is completely gone and what is left is eroding top soil that cannot support regrowth in many cases and destroyed wildlife habitat." You are spreading typical environmental lies and disinformation. Where have there been clear cuts on public lands in the last say 20 years? The Forest Service has not allowed clear cuts for years except in very limited circumstances, such as fires or bug infestation. The only clearcuts you see now take place on PRIVATE land. As long as the land owners follow the rules as they are specified there is nothing anyone can do to stop what they are doing on private land. Your environmental emergencies feel fabricated to me.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

"Don't mindlessly transmit your chosen faction's talking points, but use your actual experience to mold your opinion." I do use personal experience to mold my opinion and I would venture to guess so do most others here. I have seen first hand trails rendered impassable to hikers because of OHV use, seen animals I was watching run away as a motorbike buzzed by, seen streams and meadows torn apart by 4wd vehicles and motorbikes alike, seen trails off limits to motorized vehicles with motorbike tracks on them and have many times picked up and carted out trash left behind by OHV users. Seeing all these things personally it is not hard to imagine others stories or pictures that show the damage OHVs do. That is why I oppose giving more access to the OHV crowd not some sound bite or "political buzz word". As far as not going to places where ohvs have access that may be easy on the west coast but here on the east coast between the lack of wild places remaining, the amount of access given to ohvs and the fact so many bikes go where they are not supposed to go it is hard to find places to hike where you do not have to share the area with an ohv. This forum has also been very enlightening in terms of exposing the ohv crowd. To give credit where credit is due a few have tried to come up with common sense ideas to help out and minimize the damage they do plus have expressed and shown a desire to protect and preserve nature but the overwhelming majority have proven that they not only do not respect or love nature but that they are just as or even more happy to see it drilled into, mined on or driven over as seen it preserved and would just as soon see all wildlife extinct as saved. How do you support someones ideas when they are so ignorant and totally opposite your own views? To be fair though I will say I have picked up trash obviously left behind by hikers and have once seen a meadow that was been damaged by a camp site and even though I have never seen a trail degraded anywhere near the extent of OHV trails I suppose it could happen if there were enough people using the trail over many, many years. That is why I have stated time and time again, as someone who loves and respects nature and sees it's importance far beyond my own self centered enjoyment, that there should be areas that are off limits to all human recreation and encroachment and I do not need a "political buzz word" to tell me that is one true way to go.

"During the NPS General Management Plan (GMP) planning process, NPS identifies those backcountry or primitive areas in national parks that they believe appropriately qualify for wilderness protection, and those areas receive interim administrative protection as "proposed wilderness."" As an OHV user, I've witnessed first hand how lopsided this plan is. Notice the word "they", instead of, everyone believes. We, the OHV community, have watched as our green sticker funds have been raided so that proper trail maintenance and enforcement could not take place, and then have suffered the loss of untold access of forest & BLM land because it is unmanaged! This in spite of the the thousands if not millions of volunteer hours, people who really care for our lands have done on trail and erosion control. I care greatly for the outdoors & the enviroment, but remember this is all our land and equal access should be available for all! Thank you President Obama, for giving us all a voice in these important decisions that effect us all! I hope it works for everyone.

"I agree, but some recreation should be only ald in designated areas." Hello! Recreation is only ald in designated areas already I am not sure what point your trying to make perhaps you can elaborate some.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

"Leaders of non profit environmental groups are radical people. They are radicals and extremists and oppose all development. They are people who have dedicated their lives to wearing tin foil hats. They know nothing about what areas are okay to develop on and what areas should be off limits at all costs. They use the power of scare tactics to win cases over the big money of the oil, gas, coal, logging and ohv industry" I fixed your first paragraph for you . No need for a thank you I am glad to help.

"Nature's way" ...in some parts, maybe. Most trails open to multi-use recreation are just fine without Wilderness designation. And maybe, just maybe, if the so called "conservationists" would be a little more open minded, and cooperative, and not sneaky liars then people wouldn't come up with names like wildernuts, ecofreaks, and enviuts. Seriously though, all user groups essentially want the same thing. To preserve land for future use. Understandably not every trail is appropriate for multi-use, but the ones that are....leave them open. Closing trails just concentrates all that use in smaller areas and fewer trails. Multi use can be done responsibly and sustainably

"Noise pollution drives away animal life, stunts plant growth, can prevent germination -- when you add the pollution of oil and gas and exhaust, you have a recipe for the destruction of wild places. I see no legitimacy in destruction." Apparently the wildlife in my area loves the noise. On a daily basis, within the city limits, I would see about 6 deer a day. On my commute to work, the deer are so terrified of the noise that they stare at me while I honk my horn so they'll get out of my way. Two point bucks stop to lick themselves next to the road that is being repaved in ft of the high school. I could have slapped a doe on the rump as I passed her on my motorcycle commuting to work. My job takes me into the national forest. Every year, the forest is reclaiming the road that is travelled daily by dozens of cars from the day that the snow melts, until the day that the snow returns. Methinks the only recipe is in some peoples minds. It's not happening like you say it is.

"The forceful arm of the EPA" That needs to change also, too many times the radical enviros use the EPA in ways it was not intended to be used, to advance their position of no logging, no ATV's/OHV's, no grazing, no fishing, no hunting, no boating, no swimming, no horseback riding, no campfires, no charcoal grills, no hiking except on trails, no mountain bikes, no rock climbing, no hang gliding, no activities at all other than taking pictures, and sniffing the air. The intent of the EPA was to stop industrial pollution, not to stop all human activities.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

"The overwhelming majority of OHV'ers are conservationists, who seek to preserve the same outdoor experiences they enjoy for children and grandchildren." As a volunteer land monitor on private conservation land for the past five years, I have had many contacts with OHV riders. Most of the adults are respectful, stop, and talk civilly and do not return when informed they are on private land. However, most of the riders are unsupervised children, who at times threaten to run me down rather than to stop. They put bullet holes in the "no motorized" sign, break it off and hide it in the brush. They roll the barrier rocks out of the way. They cut trees and ride over seedlings and shrubs to make new paths. Conservationists? Vandals. The roar of three or four atv's going round and round for hours is a great enhancement to an outdoor experience. Someone bought a new jeep and when they found they could not get past the barrier rocks and ditch they drove back and forth on a muddy bank next to the parking lot to put mud on their vehicle.

"The public enjoys motorized access and OHV recreational opportunities on our public lands. It is a very healthy form of recreation and provides a great connection to the out-of-doors.  
"Absolutely!!!

(this is in response to OHV enthusiasts wanting to keep all forest roads open)I don't care if it costs a billion bucks. I need trails to hike on. Taxpayers should pay for installation and maintenance of a new trail system for hikers only. Just like the forest service road system OHV'ers want to use, my hiking trails should be built along 500 foot contours. I gotta see it all. And there are a hundred million people just like me who want to see it all. And we wanna hike, so no motorized vehicles. And, because there are so many of us, we're all paying taxes and that's how we want our money spent. Actually, why don't we make some trails up and down the ridges too, so we can hike at 1500 feet for a while and then hike up a ridge and get on the 2500 foot contour. This'll be great for wildlife too. Bears love trails. They'll be able to get to their favorite blackberry patches a lot easier.

... and transportation and power grid! There are a lot of brilliant, able, willing and even eager for a job that can pay a living wage! Less money to the Military Industrial Complex, more money to social programs that would have to include a Renew American Confidence Know!

My feet get MUCH better gas mileage than your motorcycle. Motorcycles and Prusus are not elements that occur naturally in nature, feet are...

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Quoting a list is not an answer to the question I posed. Is there a stated reason these things are on the endangered list set by \_\_\_\_\_ (fill in the blank). Are you saying, in quoting that list, that OHV's, road use by modern methods, are what caused this list? How big was that list say 50 years ago, 100 years ago, 200 years ago? Were the same organisms on it then. Honestly, I am not a biologist nor do I pretend to be, however, common sense tells me making wilderness areas that keep wheels out, (bicycles included), or any motorized equipment out is not an answer to saving the whales or planet. This time I say whales due to the endangered sturgeon on that list, especially the gulf sturgeon. Colorado is not home to sturgeon, wilderness areas are not going to save them. Inappropriate wilderness designations do not mean that suddenly any endangered species will then flock to the new wilderness en masse, as if in a great rush to save themselves through the evolutions of the worthy all knowing self proclaimed saviors of the endangered.

"Prior to the Wilderness area locking up the trails in my area, volunteer MOTORCYCLE groups did 95% of all trail maintenance on this patch of 300 miles of trail." If there were 300 miles of trail in an area that was then declared as Wilderness, then it was one more case of an area that did not meet Congress' idea of "untrammelled" country, and it should never have been declared as Wilderness. But now it is, and the law prohibits mechanized as well as motorized use. Carving out some sort of exception for one group while excluding others makes a mockery of the law. Either the Wilderness Act means what it says, or it doesn't--at the cost of one more chink in the foundation of law our government is supposedly based upon. Demoted.

"Given the effect rampant ORV use would have on cattle ranching, I wonder how ranchers are reacting to the apparent push for greater access for those destructive machines." First off, it's OHV, not ORV, which would be eliminated by increased Wilderness Area designation; and most ranchers understand that sanctions against OHV also impact their ability to do their work.

even if they're not "big city legislators," they're often eastern state legislators like Rep. Hinchey (D-NY22), who keeps sponsoring western state Wilderness legislation. I said it elsewhere; one for one--for every acre someone like Hinchey proposes, he should have to find an acre of proposed Wilderness in his home district.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

your use of the terms "wilderness area," as in "you are still operation a heavy, noisy, polluting, gas burning machine into wilderness areas" ignores the fact that the term has been defined in federal law (earning itself capital letters in the process) as an area where motorized travel is prohibited. People who ride into WAs are already violating federal law and should be prosecuted. As for the rest of public lands, some are legal for OHV use and some are not. Expanding use may be appropriate in some areas, curtailing use in some likewise, but the opportunity should exist because Americans can rightfully expect that some of their public lands be made available for motorized recreation. As for your idea, I presume that your goals for having licensing are to educate and regulate users to some degree, a process that already happening in many states with requirements for OHV registration and safety training. Until such time as you could provide more detail to your idea, such as whether your licensing regime will allow kids who can now legally join their adult family members in riding on public land, I would have to defer either promoting or demoting your idea. We have recently seen states make youth riding at various ages on certain machine types illegal, despite the facts that most youth injuries occur from unsupervised, untd use of adult-sized mac. I can show you child after child who can safely use a child-sized machine with training and supervision. Would you allow them to be licensed?

"Looking at your voting record I can plainly see you are no fan of nature, wildlife or the preservation of either so I am not surprised by you comments but the least you could do is provide a valid argument." No, , he just doesn't perceive those things the same way you do. The idea that one set of values is the only "correct" set is exactly the kind of fundamentalism that our nation's constitution was constructed to avoid.

If the country is broke, we need to make a choice on what our spending priorities are. What are your priorities? 1. Accomplishing worthwhile conservation goals while providing training and employment opportunities for young adults 2. Providing more subsidies to private companies (forcing citizens to give their wages to private business), in the hope that this time they will do what we want instead of just increasing their profits Tax money is not "your" money - our democratically-elected representatives have voted to levy taxes on workers and allocate the money as they see fit. That's how our government works. I'm sorry if it's not in your best (financial) interests - welcome to the working class's world for the past 30 years. If you don't approve, you're free to leave!

Motorized vehicles allow access. I'm 73 with my leg in a cast and see people out with all types of access. They all seem to get along. Seems like people on this site want to stop access and are not the same friendly people I see on the trail.

As parks expand, the private property within the newly designated 'coveted boundary' becomes an "inholding". As park expand their boundaries to encompass tracks of private land, NEPA should be MANDATED to document the effects ON these private tracks of land and their owners.

## Discussion Question 2

### **Written & Online Comments**

**(cont.)**

ATVs, 4x4s, dirt-bikes, Mtn-bikes horses and hikers, snowmobilers, x-country skiing and snow shoes etc.etc all need a trail network. Most of these activities would prefer trails be designed for their purpose and visitor conflict between activity types are common place. Land managers just need to become more transparent with their decisions regarding access, restrictions and limits. Ratios showing comparing recreational opportunities available within each planning area to participation rate demographics for each activity would provide a helpful tool for planners and highlight the available trails for visitors. Rivers should be treated the same as trails. Motorized watercraft, paddlers, anglers and swimmers all desire to recreate and travel in these waterways causing obvious potential conflict.

– Right on the money! It was started once back in 1972. I always thought it was a great idea but not sure where it went. I don't see the maps being displayed on the website any more, but here is the opening statement and web links. State Motorized Trail System: This is our Motorized version of the Pacific Crest Trail going from Mexico to Canada. During the formation of the OHV Program in 1972, legislation specifically stated that we would have the State Motorized Trail System. Website link { <a href="http://www.smts.info/" rel="nofollow" target="\_blank">Link</a> } I think California Trail Users Coalition (CTUC) was on it at one time { <a href="http://www.trailusers.org/" rel="nofollow" target="\_blank">Link</a> }

I am also in agreement that OHVs are too loud for many trails...but the idea of making them more quiet, and more stealthy, will also make them more dangerous for bikes, Horse, and hikers. I would rather know if an OHV is about to round a blind corner when I am hiking with my kids or biking with friends. OHV riders deserve opportunities to enjoy the outdoors, just not everywhere and separated from hikers.

I don't own an OHV. I hike a lot and have never encountered an OHV. Maybe I live in a state that has already shut down State Park and National Forest trails to OHVs - I don't know. As someone who isn't already emotionally invested in a "for" or "against" stance, there is one trend in the comments that I find striking and telling. Most (not all) comments for restricted OHV use focus on environmental impacts. Most (not all) comments for more OHV opportunities focus on personal pleasure. I don't doubt that there is a lot of family bonding, enjoyment of the outdoors, exploring rare areas, and fitness efits. None of these positive things have to do with "protecting the PLACES you love" This forum is for the Great Outdoors - protecting an actual place. Not protecting family traditions or favorite activities. The PLACE - the land. Not the mac or an individual.

In principle, this is a good idea. I would argue more along the lines of mitigation, though. In other words, if an area traditionally used for OHV recreation is closed to that purpose, then an area of similar recreational value must be opened to that purpose in compensation.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Local area politicians usually speak for local citizens, and local citizens should be given more weight as to how federal lands in their area are managed. Too often national lobbies organize a public comment campaign designed to alter park policy. These organizations usually distort or misrepresent facts in order to get members to write the majority of the public comments favor their position. What is needed is balance! Local authorities should never have the only voice,, but they should be weighted more heavily since they better understand local needs and concerns.

, Thanks so much for the input, this is what I was hoping people would do - comment about balloons after having had an experience in one. I too do not want commercialization of the parks, but if we could come up with some ideas like these - a quiet way to see the animals and terrain, - I'd love to have this as an option.

Please look at the commodity prices for Timber over the past few decades. Prices for timber have not kept pace with inflation even during the building boom. The Timber industry is still viable, but harvesting more trees on public land will not help timber prices during a building slump or be necessary as we move toward a paperless society. Some sections of our forests should be dedicated to non-use values while others should be open to varied types, and amounts, of recreation while other areas should provide for sustainable forestry.

Protecting the 'surroundings of preserved assets' is simply asking the agencies to dictate use on the private land surrounding the parks. NEPA should include how agency planning will impact (directly and indirectly) the landowners as well as how local land development might impact the resource. The expansion of NEPA beyond the boundaries of the park should look both ways; NEPA should include the impact the park has on local landowners as well as what local landowners might have on the park.

Turning wildlife conservation areas into free-for-all zoos, is not the answer. I am comfortable with being limited from wildlife conservation areas, so long as the reason provided for this conservation is transparent to the public. If wildlife-dependent recreation demand is pent-up in this area, registered tours conducted by the fish and wildlife service at the appropriate times and in the appropriate places, should minimize wildlife disturbances while offering those eager to visit this area the desired opportunity.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Do you want us to be able to meet the current and future challenges to producing sufficient food for yourself, your children, and others? Do you appreciate clean water and clean air? Do you take advantage of modern medicine, and do you support continued medical progress? Every one of these things is dependent upon BIODIVERSITY. This is a fact, supported by overwhelming scientific evidence. But please don't take it from me -- I invite you to search the scientific literature yourself. Not sure where to start? Here is but one book which provides a detailed summary of this overarching concept: *Sustaining Life: How Human Health Depends on Biodiversity*. Editors Chivian and Bernstein{ <a href="http://www.amazon.com/Sustaining-Life-Health-Depends-

Biodiversity/dp/0195175093/ref=sr\_1\_1?ie=UTF8& s=books& qid=1275233704& sr=1-1" rel="nofollow" target="\_blank">Link</a> } Edited by two physicians at the Harvard School of Public Health, it provides detailed explanations and numerous examples backed up by long lists of references which prove beyond a doubt how we depend on healthy ecosystems - yes, on other species - for food production, clean water, clean air, medical innovation, and other ecosystem services. How does this relate to connecting with the Great Outdoors? Understanding how we depend on other species forces us to appreciate the existence of the many plants and animals which occupy that Great Outdoors. It helps us see why we should not destroy them. Why am I asking you to learn and teach about biodiversity? Because most people do not yet understand it and education is urgently needed. Even on this very website, check out the comments and voting on some of the "Ideas", and see how many of them deny the need for, or even ridicule the concepts of, environmental education, nature appreciation, and habitat/wildlife conservation. Sadly, these people are advocating for ignorance, pollution, extinctions, hunger, thirst, and disease. Maybe they do not understand the need for such conservation efforts, or perhaps they fear it will be a threat to a chosen way of life. But YOU can do something about it. Learn what biodiversity is, and why it is important. Arm yourself with any of the many examples of what it does for us, as well as examples of disasters consequent to habitat degradation and species loss. REALLY learn it. Learn it until you are able to discuss it with others. Then teach at least one other person in your life. It WILL make a difference.

Our national parks have paved the way showing that providing wildlife with habitat protection and reintroducing species that those species can survive and in many cases thrive when left alone. The same cannot be said for our public lands and national forests where over development, over hunting and human activity have decimated wildlife populations in some case to extinction in that region. Habitat restoration and protections will provide more areas for animals to live, an abundance of food and cleaner water which will cause larger animal populations and reintroduction of species will provide a greater number of species for people to see which in turn will spur a greater interest in our parks, forests and public lands. Even the OHV crowd should support this, greater habitat and animal populations means some areas now off limits can be opened up to you.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The Problem: Federal agency officials continue to resist the idea that easements and other alternatives are effective cost-saving alternatives to fee acquisition of lands. They talk about using alternatives but rarely try to implement them. The Solution: Incentives need to be established for officials to use easements and other cost-saving alternatives. Penalties need to be created for buying more than the interest necessary to achieve project objectives. Federal officials have often, and inaccurately, misrepresented the cost of easements. A popular notion is that easements cost 80% or more of fee title. The key is to buy easements early when development is far away. Easements increase in cost as development gets closer. However, officials have made little or no attempt to use easements or other alternatives, and instead go to great lengths to avoid them. Inholders have actually been scared out of using easements because of very restrictive terms and negative statements from federal officials. For example, the State of Minnesota successfully used easements on a cost effective basis on the Kettle River. The Park Service was unable or unwilling to use easements on the nearby St. Croix to the degree suggested by Congress. The result was costs much higher than necessary on the St. Croix and poor landowner relations. The Fish and Wildlife Service has also successfully used easements to protect wildlife habitat at costs approximately 40% or less of what the fee title would have cost. The inability of the federal agencies to use alternatives to fee title has actually led to the protection of some areas and wasted funds. The result is that there is now a huge backlog of unprotected lands. Some landowners want to sell but can't because of the shortage of money. In addition, relocation and human costs associated with fee acquisition are not considered by agency officials. Nor do they consider the project effects when inholder communities are left intact. There may, in fact, be a long term management and maintenance cost, especially when landowners remain in areas where significant cultural and historical values exist. An example is the Buffalo River. Local landowners were so mad at the Park Service that they would not even show the agency how to run a historic grist mill. How much better it would have been to have kept the grist mill in the hands of the original owners so visitors could have seen living history. There needs to be better training of land managers and acquisition officers and more information for landowners, so that all parties can understand the benefits of using reasonable alternatives and avoiding unnecessary conflict. The bottom line from the federal agency viewpoint must be to acquire only the interest in land necessary to meet the intent of Congress. This issue was developed in cooperation with the American Land Rights Association [www.landrights.org](http://www.landrights.org)

Please ! NO 4 wheel vehicles in Parks ... except in very specific areas !They destroy everything where they are ... Faunas as well as Flora !Please show us all this destruction.Please define "destruction"

A bicycle hurling down a narrow trail at you can only be considered as a threat to your health and well being. I know that perhaps most mountain bikers are considerate of other users, but there are enough that aren't so that any hiker on a trail with mountain bikes has to be prepared to scamper out of the way when one comes rocketing past. Another problem with letting mountain bikes in Wilderness areas is that it makes it very difficult to restrict OHV's if you let mountain bikes in. They are both mac and they both run on rubber tires.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

A bike isn't gonna do anymore to cause erosion than a 1000 pound horse. A long time ago mountain bikes were ald in Wilderness. The signs used to say "human-powerd" only. Pretty much takes care of the slippery slope argument about allowing electric vehicles in. I never could get how fellow mountain bikers are alright with being needlessly shut out of great riding areas.

A fabulous vista is as important to our spiritual well-being as anything else. There should be a way to protect a viewshed just the way land can be protected using a conservation easement. Developers should not be able to spoil a vista that millions of people might enjoy every day by building something on a mountainside next to a highway or city that defaces the view of a natural landscape.

A huge problem with motorized vehicles is their noise!Have you ever been enjoying the quiet of a winter landscape and have a bunch of snowmobiles show up? They turn the place into Grand Central Station.

A lot of species are threatened by habitat loss. Where do you get the idea that habitat loss is not a problem

ABSOLUTELY NO Gas nor Oil digging in Alaska !

Absolutely no to OHV's and off road racing! Even wild hogs who do extensive ecological damage in The Great Smoky Mountains National Park, don't do as much damage as ORV's and racing. In polite society people don't ride their bikes up and down the isles of the symphony orchestra theater. It probably isn't against the law. It's against a common code of ethics. The great American parks are our symphony orchestra theaters. The parks are there for all to see, hear and feel. They quiet the mind and heal the soul. They are not there for the "pleasure" of trashing.Listen to the call of the Owl, the bugling of the Elk, howls of the wolf, drumming of the Acorn Woodpecker, wind in the Pine needles. Smell the scent of pine and wonder at the pattern of a butterfly wing. That is only a glimpse of the players in the theaters that our national parks protect and preserve. We can not recreate them. We can only destroy them, or protect and preserve them.

Absolutely, anyone who shows a lack of respect and a lack of love for nature has no business being there. Nice try but this still does not mean ohv users should be given access to national parks and wilderness areas.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Access by definition conflicts with preservation. If we open up more public land to vehicles, etc., without regard to preservation, there will be nothing left to preserve in a generation or two. Sometimes you have to set good things in reserve so there will be a good thing left when we've used up or destroyed the rest. As far as I can see, *\*all\** use creates damage. Hikers aren't leaving the land untouched, either. The more remote the place, the fewer hikers there are....but even one hiker does tread on something that causes damage. Opening up those remote places so non-hikers can get to them just uses them up faster. For those who think singletrack vehicles and mountain bikes do no damage, there are plenty of state and local parks and other locales where the evidence of damage is plainly visible.

Agreed, . ATV/snowmobilers have a powerful lobby (they have turned the tourist seasons around in northern Wisconsin). That's fine for established tourist areas, but don't cave in to the motor-mouths in the wilderness.

Ahhh, the wilderness. Cats chirping, frogs croaking, birds singing, bees buzzing and the sound of dirt bikes and gun shots. Oh boy, can't wait to go camping.....

If you don't see any recreation in those things, I suggest you don't do them.

Thanks for the comment. I do travel from my home with National Forest just out my back door to other Forest's, Death Valley National Park, Mojave National Preserve and many others. There are so many Wilderness Areas in Central and Southern California alone, in looking at a map it appears to be one third of that section of the state. But I understand the point you are trying to make. But! Where did this "... 99 percent of this country doesn't meet wilderness criteria" come from? Can we back out some of the Wilderness Areas that may not belong now if we have more than one percent total land in wilderness now? Just kidding! A tidbit of information for you: Wilderness areas in the United States - Content Source: Congressional Research Service In total, more than 17% of all federal land, and nearly 5% of all land in the United States, has been designated as wilderness. Alaska, because of its size and relatively pristine condition, dominates wilderness statistics — more than 53% of designated wilderness is in Alaska. In total, nearly 16% of all land (federal, state, private, and other) in Alaska has been designated as wilderness. In contrast, 3% of all land in the United States outside Alaska has been designated as wilderness. And with so much more Wilderness designations on the way! I do hope any new Designated Wilderness Areas truly deserve that title!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Thankyou for your comments. I too believe that we should be free to disagree. I think that is one of the best attributes of our form of government. We are able to openly discuss our opinions free from government oppression. In fact I think this website, provided by the govenment, is one of the best thing I have ever seen. Already I have been inlighted by the differnt rage of ideas and concepts proposed here. I am however preplexed by your comment "I think I am most offended by the way this list has been taken over by an OHV group and every other so called idea is about driving ATVs through the wilderness." Please do not be offended that OHV users want to express thier opinion. And I have yet to see anyone post that they want to drive ATVs through the wilderness. They are just tired of places they currently ride always under threat of closure due to potential wilderness designation.

What OHV group has taken over this list that so greatly offends you? I thought it was an open forum for individuals and not groups. And even more importantly who is posting "...every other so called idea is about driving ATVs through the wilderness." If I have voted in support of any one suggesting ATV's should be within a "wilderness" area I would like the opportunity to correct my mistake! A true wilderness is roadless area, untrammled by man that deserves protection where NO motorized vehicles belong. But I don't recall anyone suggesting an idea which would allow ATV's to be driven in wilderness.

You really feel "Military and other jets are so dominant in the sky over places like Death Valley". I just haven't seen it at all like that within the Park. Now back in the early eighties a couple times in Saline and Panamint Valley's (which at that time were outside of the boundary of the Monument) I remember the jets just screaming up some narrow canyons over us. Got to tell you it was kind of cool to see the pilot tip his wing to us and the feel of the heat coming from the engine of the plane. It was close! Remember the signs out there warning you of the low flying aircraft? I thought that with the large expansion of additional acres and going from National Monument to a National Park there were real tight limitations place on the Military flyovers of any type. Not real sure on that though. I have seen in the Los Angeles, Antelope Valley, and Mojave areas the "checkerboards of contrails" on many occasions. Most I have heard on this was the speculation the government was doing weather control experiments. Who knows what they are doing.

you could not even ride a bike if you were 400lbs. I have ridden a dirt bike most of my life and I can tell you it is a work out. I DO NOT tear up the land doing so. I stay on the trail, and respect others. I have however seen hikers going off the trail running down the mountain kicking rocks downhill and scaring any wildlife they would ever hope to see. Irv, my dad taught me how to ride responsibly. I have taught my kids and they will teach theirs, so that our childrens's children can enjoy riding the trails!!! -right on! If I am depressed, once I get on my bike it all melts away. It is encredible. I too am healthy and happy when I am riding my dirt bike.

said "Off-road motorcycle and motoc riders are some of the most agile, fit, high endurance people. You don't see 300lbs massive bodies suffering from diabetes and choking from 50 feet walk ac parking lot here. "That's how they looked to me, but maybe 400 pounds. If you are getting any exercise from your dirt bike, you are seriously tearing up the land you are riding ac.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

All aspects of running a National State Park need to be funded. This includes the personnel who staff and maintain the educational, maintenance, administrative, cultural, ecological and environmental aspects. These personnel are usually very enthusiastic in their work and are eager to share their knowledge and love of their respective park settings... let's pay 'em.

All off road vehicles should be forever banned from National Forest and National Park lands.

An idea whose time has come. Hunters and vehicle recreationists always claim that their dollars support conservation while wilderness recreation is free. National park and wilderness visitors complain about user fees. Maybe the Outdoor Retailers Association won't like it, but a small federal tax on outdoor recreation gear could help fund wilderness and parks.

And in return for this fantastic volunteer help, off-road recreationists are first at the table when decisions about where to ride are made. When I hear the off-road vehicle groups have given a million dollars to the Susan G. Komen Foundation (breast cancer), then I'll have my first example that they act in anybody's interests but their own.

Another vote for a new WPA! The US has been grievously neglected since the 1980s, whether we're talking about protecting nature or our infrastructure. Millions need jobs, and there are millions of jobs that must be done. Connect the two. Put a moratorium on ALL corporate tax relief; it has left us with fewer, not more, jobs. Wind down our wars. Invest in ordinary American people, from basic needs to education to job training. So many already have their sleeves rolled up, and are eager to start rebuilding this country.

Any new areas recognized as Wilderness should allow existing uses to continue. If the Wilderness must have new Wilderness, instead of one of the many other land protection designations, to make themselves feel good, then at least allow traditional uses to continue.

As a member of the Siskiyou County Sheriff's Possee, Search and Rescue, I have traversed the Siskiyou Mountains - on horseback- for 40 years. While it is true that overgrazing is detrimental, open range cattle kept the meadows open. Former meadows are now so choked with brush that it is impossible to walk or ride through. Instead of fodder for wildlife, these "pristine areas" have become fuel for devastating fires. The present governmental "caretakers" of our region are understaffed, undertrained and underfunded to preserve and protect their existing areas of responsibility. The Federal Government can't take of itself now - let's not add to the problem.

As a private landholder adjacent to BLM, I can tell you there is no way in hell I will give those bureaucrats any more than a temporary easement, nor do I want to give access to the "public," which most often want to treat private land as their own.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

As a Tour Director-Interpreter of the southwest of the US, I would like to point out the tremendous amount of Tourism dollars the National Parks generate for the Economy. It is therefore of the utmost importance that the Parks should be properly managed and funded. I wrote several times to the National Parks to prohibit cigarette smoking in any of the Parks (the butts end very often in the stomachs of wildlife!), to also police and properly all rubbish generated by campers and visitors and implement the rules. It would be recommended to involve school children in their education of the National Parks and the importance of the safekeeping of these National Treasures which belong to all of us. Bring awareness of our impact on Nature and to continue the fight to keep Big Business, logging and mining out of "Our Parks" There should also be a summer programme for teens as volunteers summer camps to study and maintain the Parks and all of its fauna and flora. We have to prepare the next generation. Last but not least, we should "Green" energy consumption particularly in the parks.

As a Utahan who has seen the damage, I completely oppose this idea. There is already enough torn up land that is useless now for anything other than events like tohos races.

As I reread a lot of the posts here I find myself wondering what part of the country some of you live in. I ask because here in Indiana the OHV areas are few and very far between but in Alabama offroad parks on private ground are plenty full. In the mid west and the eastern part of the country we ride on private ground while the western states mainly ride on public ground. The other references all of the OHVs ruining his outdoor experience but after a quick google search I find not one public OHV park.

As in times before, let the USFS take care of the upkeep of the campgrounds in the National Forests. Or, at the very least, make sure that the grounds are kept up by a campground host. I know that Vallecito Campground in CO has operated both ways in the past. I was told that last year, by the campground host, that they were to be laid off as a new "private administrator" was taking over and that things were to be more or less run on a less than desirable basis. No supervision or campground host(s) were to be on site and they were just to collect the money. The pit toilets were to be cleaned only once per week. If this is the case, the American camping public is being shortchanged. All in the name of PROFIT. I propose that the USFS take over the administration on the campgrounds as it was in the past. Things really worked out for the best. How are we to experience a clean outdoor experience if we don't? I am a firm believer in a multi-use format, but not at the camping public's expense!!!

As long as an individual pays taxes that support our government's ownership of land, that individual should have the ability to exercise use of said land to a reasonable extent. The facts of the issue are that a significant number of American families choose to participate in OHV use. These same families make up a significant proportion of the national tax payer base. Thus, these family's land uses deserve to be represented along with everyone else's. No one is proposing running a race through the Grand Canyon...

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

ATVs and OHVs damage (and in some cases, destroy) the land where they are used. The National Park system should not be required to restore the damage these machines cause. They should be banned from public lands and used only in facilities that are equipped to repair the damage they create.

ATV's, OHV's, etc. cause almost as much environmental damage on the National Forests in Georgia as the US Forest Service does. There is no legitimate use for these vehicles on the National Forests which were established primarily and essentially (although their use has been corrupted by putting them in the Dept of Agriculture) to restore and protect watersheds.

Before government campsite charges by States or Feds are cut for anyone they should be required to study local private businesses rates offering similar services. No government pricing should be allowed to be below the fair market rate for the specific locale the government is competing with private folks in.

Before strictly enforcing this Act it has to be reigned in to its original intent that was to protect species really endangered with actual extinction and to maintain populations of them but not at land carrying capacities.

Like your idea, yes wheelchair access and access for all of the handicapped is needed, but not sure how you would accomplish this. I would think a great deal of construction would be needed even if it was for a wheelchair, there are a lot of safety concerns that would have to be satisfied. If you are making this a proposal for within Wilderness Areas I doubt that after safety aspects were addressed that it would be a true Wilderness Area. I know that you are for preservation and wilderness so I am hesitant to bring this up and open a can of worms. But there are many groups that get the handicapped their access to the backcountry, no way near enough of them do this or are available, but it does happen. Four wheel drive clubs and other OHV groups transport them often. I have taken quadriplegic's on ATV's that they can operate on their own. While it is not in the National Parks it is in to the backcountry and only up to wilderness boundaries. Feedback often is it was something they never thought they would experience again.

Boundary Waters Canoe Area Wilderness, designated federal Wilderness hiking trails, backcountry primitive camping - these all signify what is truly special about the great outdoors and what has stood the test of time. Long after ATVs/OHVs have lost their appeal, the same immutable qualities that have characterized America's wild lands since before humans first arrived will still be here, truly defining the experience. That is what we need to protect and covet, instead of caving to the influential motorized-use lobby.

I own horses several of them as a matter of fact. You should know as well as I do that it takes a lot less than the sound of an engine to spook a horse. Here in Southern Indiana we have a state owned offroad park that is multi use and it works well. The horses don't seem to mind the jeeps and ATVs at all. That being said they will spook over something that they "think" they saw or heard. You won't like this but I feel like if your horse spooks that easily it is due to the lack of time spent with your horse or your substandard training.

## Discussion Question 2

### **Written & Online Comments**

**(cont.)**

Agree 100% The endless lawsuits by radical enviro-nazis, who have contributed nowhere near what hunters and hunting groups have to wildlife conservation, still insists that the wolves are not hurting elk populations. B.S. I have seen it with my own eyes, in NW Montana, wolves have killed elk, and not eaten even a bite out of them, same with mule deer, they have ripped a calf out of a cow elk giving birth, and eaten neither one, just killed the calf, and left the cow to die. Someone on this thread said wolves increase elk populations, more lies, let them come to Montana, or Idaho and see for themselves. More radical enviro-nazi news.... The Center for Biologic Diversity has filed a petition with the EPA to ban ALL lead ammunition. Lead shot is banned for waterfowl hunting now, lead fishing sinkers are a thing of the past, and the amount of lead from eating wild game has been proven to be below harmful levels, despite what the CBD says.

But if they are bought up by federal and some state funds, they can be "managed" and logged by BLM, etc. That is my concern.

By definition alone a Wilderness Area is roadless and it needs to stay that way. Everything else I applaud you on, but it needs to be in a NON-Wilderness Area.

By promoting parks and other units that reflect the rich cultural diversity of our nation, we have the chance to reach out to minority communities that are under-represented in visits to national parks. This expansion will not only reflect our rich and varied history, but it will also hopefully recruit more people who are committed to the preservation of our national parks system.

Certainly there are places vehicles should not travel. Why would we want to harm our public parks. What we are asking for are designated spots to enjoy our sport. We don't want all of the land like you guys do we just want a small parcel to enjoy ourselves.

we live in Utah and right now we're trying to rally everyone to work together to keep decisions about Utah land use in Utah. We all have to work together: OHV riders, mountain bikers and horseback riders alike. We also have groups of OHV users who get together and volunteer their time not only showing up but organizing trail meetings and trail days and we're happy to let you have access to the trails that WE work on and maintain. Let's get together on this stuff! Know that we in the dirt biking community do our part as well. In fact, as I went on the local mountain biking forum I came across a post describing how to sneak into a local area and avoid paying the fees that are used to maintain one of my favorite riding areas! I was shocked. That's not responsible! We all have to do our part. Anyone can point fingers. Let's work together instead and accept the fact that there are good and bad in every group.

Thanks for pointing out that restrictions are already in effect. (Sidenote: I wonder if these rules are consistent across all "wild" places? Is this national policy? How about various state policies?) I also wonder if there are exceptions for certain types of vehicles? Anytime I've encountered the smaller OHVs (motorbikes and snowmobiles, in particular), they've been awfully loud.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

One of my favorite trails goes into an area that has a couple of single –use only hiking trails (one being the PCT) a couple single track (motorcycle) trails most the way in, but most of the backcountry users accessing this area by one multi-use trail. The hikers and equestrian have several different trails to access this area , but I always get to stop and talk with hikers that make a choice (as you could make a choice) to use the multi-use trail rather than the single-use hiking trails. Horseback riders on their way into The Golden Trout Wilderness area, mountain bikers and fishermen in 4X4's going to the South Fork of the Kern River to fly fish, cowboys moving grazing range cattle from one meadow to another. Yea, the motorcycle trail riders do buzz by at a faster rate than most sometimes, but I guess the people (riders) are more courteous out this way. A couple of years ago I noticed the signs marking this same trail for snowmobile use in the winter. Eight different user groups ald into the area, I don't think eight different separated trails to the same destination point would make sense. But I guess it is too much to expect the majority of one group (Hikers) to be capable of learning to "Share the Trails" or travel into the same area on a single-use only hiking trail! Multi –use Trails work!

Well maybe I live in LaLa Land if multi-use trails are a fairytale! One of my favorite trails goes into an area that has a couple of single –use only hiking trails (one being the PCT) a couple single track (motorcycle) trails most the way in, but most of the backcountry users accessing this area by one multi-use trail. The hikers and equestrian have several different trails to access this area , but I always get to stop and talk with hikers that make a choice (as you could make a choice) to use the multi-use trail rather than the single-use hiking trails. Horseback riders on their way into The Golden Trout Wilderness area, mountain bikers and fishermen in 4X4's going to the South Fork of the Kern River to fly fish, cowboys moving grazing range cattle from one meadow to another. Yea, the motorcycle trail riders do buzz by at a faster rate than most sometimes, but I guess the people (riders) are more courteous out this way. A couple of years ago I noticed the signs marking this same trail for snowmobile use in the winter. Eight different user groups ald into the area, I don't think eight different separated trails to the same destination point would make sense. But then again I only live in LaLa Land and it's all a fairytale about Multi-use trails. Or could it be that the real fairytale is to expect the majority of one group (Hikers) to be capable of learning to "Share the Trails" or travel into the same area on a single-use only hiking trail!

With statements such as this, you and other "hikers-only" users show your narrow-minded and selfish attitude towards other user groups. We all need to work together to build a community of responsible trail user groups who respect one another's PRIVILEGE to use public lands for their preferred method of recreation. Excluding and alienating other groups because you don't understand them, or choose not to, based on one or even several bad experiences is not right. People like you should be ashamed of yourself. Once the people who see themselves as entitled to first dibs on trail usage start seeing this issue in a new way, like the rest of us do who are relative new-comers to trail use in this country, we might start making progress towards a common goal of conservation supported by all user groups. By supporting out-dated exclusionary concepts such as yours, you only reinforce the walls that have seperated user groups for decades. This is not the way to promote "grass-roots" conservation efforts. I personally do not believe that ANYONE should be ald in Wilderness areas, hikers included.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Concessionaires are supposed to maintain the facilities in return for the fees. we need to hold them to the contract!

Currently, when an area is designated "wilderness", it effectively becomes off-limits to competitive events like trail runs, adventure races, orienteering, and rogaines. This is unwarranted. Federal land managers should modify the language associated with wilderness designation to allow environmentally-ign recreational activities like on- and off-trail runs to take place, subject to permits administered by the local land manager.

Defining "sustainability" is so important in these dialogs. In the case of this report, the goal seems to be a balance of environmental, social, and economic goods. Emphasizing one - any one - way over the others does not get us - the west, the US, the world - where we need to be.

Designated wilderness has always been intended to be free from motorized travel. There is no reason to change this now. Instead, we should be focused on what areas ought to be designated as wilderness and avoid designating those that do not fully fit the definition in the wilderness act.

Designated wilderness should be accessible by quiet vehicles, including quiet motorized vehicles. Very few people actually backpack and get the needed permits to hike in the wilderness, yet the amount of designated wilderness is huge. This often excludes the handicapped, young children, and others that cannot or will not carry heavy backpacks to fully enjoy these vast lands. With technology like the spot gps satellite messenger any risk to those going off designated routes through the wilderness can be mitigated. Please support access to designated wilderness by slow, quiet, responsible vehicles. This will benefit everyone; not just those that are fit enough to backpack.

Designating an area as wilderness currently automatically means that the area becomes off limits for runners participating in a race, such as a trail race or a map-based running competition like orienteering, rogaining, or adventure racing. It makes more sense to allow these sort of activities, with a permit and the superintendent's permission, since there's little to no evidence that they lead to any environmental damage or significant disturbance of any kind. Therefore, I suggest modifying what wilderness designation means such that these type of recreational activities are allowed.

Can we solve our problems without compulsory work? Getting people to agree with you takes more than indoctrination in school. When I was in class, I argued with the teachers "just cuz". Last time I checked this was still a democracy, so only presenting one set of beliefs might be a problem. Exporting demand to other countries has not been good for the environment. Physical education used to be part of school- not sure why it isn't now.

Disagree. While it sounds fair, recreation on public land should be controlled enough to limit uses that degrade or damage the environment, including noise & air pollution.

Diversity, diversity, diversity. If the National Parks belong to us, the people, then they should reflect our diverse population!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

who are the "outsiders" you refer to. We all own this federal land and all deserve a say in what happens to it.

Equestrian access to public trails is one of the most threatened and diminishing resources, particularly in the eastern US; only OHV users have less access to public land. Though Federal lands like National Forests seem to stay committed to all forms of outdoor recreation, this open-minded ethic has not been transferred to State and local governments in their planning for parks and recreation. Repeatedly I encounter State and local planners and land managers that are absolutely oblivious to the equine industry around them, and (one of) the erroneous assumptions they operate from is that as urbanization increases, horse ownership decreases. I support organizations that raise awareness and educate, and do the best that we can, case-by-case. However, an increased push from the Federal level to equally consider ALL forms of outdoor recreation in the planning process would be helpful, particularly if any part of the land purchase or facility development receives federal funding (CWMTF, RTP, Land and Water Conservation Fund, Federal Aid in Wildlife Restoration Act/Pittman-son funds, etc.). ALL uses should be OBJECTIVELY evaluated before being ruled out based on sound scientific/technical reasons, not based on elitist preservationist or just plain uninformed opinions.

- Horseback riding and carriage driving are legitimate and culturally-significant forms of outdoor recreation.
- Riding and driving, along with the care and maintenance of equines and equine-property, is physical activity which gets people out of doors, encourages exercise, and causes appreciation for the natural ecosystem.
- As urbanization increases, so does the equine population and the demand for recreation opportunities. This is, in part, because well paying jobs and disposable income are clustered around urban areas, and many fast growing areas still have ex-urban areas where traditional agricultural lands are being redeveloped as hobby farms or commercial equine operations.
- Use of Federal funds to purchase land that will allow any form of recreation (including hunting) should mandate the inclusion of ALL forms of recreation. The exclusion or prohibition of equestrian, mountain bike, and/or OHV use should occur only through a methodical, transparent and reproducible evaluation process that includes input from all stakeholders.
- State and local tax codes need to be revised to recognize equine operations as agricultural, not commercial, enterprises to be eligible for tax relief, farmland preservation, and/or voluntary agricultural districts.
- As traditional agriculture is replaced by hobby farms, federal state and local conservation incentives need to be developed and/or strengthened to recognize the open space preservation value of equine farms.
- Similarly, incentives and stg indemnity laws should be developed for private land owners to allow trail easements on their properties. Public/private partnerships between local and state governments and large residential developers should be strengthened to allow public recreation opportunity.
- Greater opportunities for "ft-country" equestrian experiences in local and State Parks must be developed, so that people (and their horses) can gain the skills and appreciation to progress into the often more-challenging National Parks and Forests.
- Equestrians need to become better educated about conservation ethics, impacts of trail use on the environment, the importance of volunteerism, and training to prepare themselves and their mounts for the multi-use trail future. This can be done through funding to agricultural extension, soil and water conservation districts, and state horse councils and equine industry commodity groups.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Erosion causes more damage than bikes and hikers on steep trails, and they need to be redesigned. Not sure how bikers aren't honest about the effect we have on trails. I see lots of signs at trailheads explaining responsible riding. What I don't see is the same thing for hikers. "no cutting switchbacks" for instance. As far as conflict, I'm lucky to live in an area where it's a rare. Most everyone is reasonable whether you're on foot, horseback, mountain bike, or OHV. If you ask me user conflict really boils down to attitude more than anything. Some trails in Wilderness should remain foot only (keep the horses off too), and it wouldn't hurt to have a few trails for mountain bikes only as well. If the hardcore "preservationists" would learn to share, and be a little more open minded, maybe they could use some of the money they waste on lawsuits to do something worth while like combating the pine beetle.

Erosion is a natural process, what do you think made the Grand canyon? There are enough restrictions on OHV/ATV users as there is, those who enjoy these activities should not be banned from using the lands. Some of the lawsuits are absurd, like prohibiting ranchers from using 4 wheel ATV's to herd sheep/cattle on BLM lands, get a grip here, the land have been used for grazing for over a hundred years, now all should change because some enviro- whacko group says so? Excessive runoff from logging roads, or even in the few cases where it is from overuse by ATV's can be stopped, so work to fix that, not to ban certain groups from using the land to enjoy their preferred type of recreation.

Even when used in the most sensitive way OHVs are irrefutably damaging to the environment as they promote erosion and disturb wildlife. They also disturb me in my pursuit of outdoor recreation. For many of us, the single most revitalizing aspect of outdoor recreation is the serenity of being in a natural setting without the oppressive din of engines all around us. This is what always what I seek, whether I am camping, backpacking, hiking, fishing, or recording nature sounds. Please don't bring the city noise to the parks - these are the last places that the rest of us go to escape! By the way, I don't doubt that many OHV users love the outdoors just as much as the rest of us. But unfortunately it seems that many OHV users' love of their recreation blinds them to the impact of their pursuit on the land and the people they attempt to share it with. The use of OHVs on public lands should not be banned - obviously this form of recreation is a great source of enjoyment for many people. But I still advocate limiting OHV use to designated high-impact areas.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Every 3 years, I license all 6 of my motorcycles(2 dual sport, 4 dirt bikes) and every weekend that I go camping and riding, I pay a fee to camp in a forest campground. How much do hikers, Mt. Bikers, and equestrians pay? When I was younger, I did a lot of backpacking and mountain biking. I got kind of upset when a motorized vehicle intruded on my solitude. Now that I'm older and don't have the time and energy to devote to human powered endeavours, I enjoy dirt riding with my family, friends, and especially grandchildren. Motorized travel also allows the sr and weaker to keep up with me so we can all enjoy the outdoors together. I can easily hike a 30 mile day, but the rest of my family sure can't. There are hundreds of places to hike in my state, dozens to ride an atv, only a handful that allow off highway motorcycles. I can go for a walk out my back door. I have to load and transport dirt bikes no less than an hour in any direction before I can ride on mostly limited trail. My closest riding area has a measly 11 miles of trail, and most of it is usually closed. Instead of hikers and horse back riders complaining about me riding in one of the few areas ald, and trying to take away my right to enjoy the outdoors in the manner I choose, why don't they just go one of the places I can't go? It's not about tolerance and equal rights for all, it's about control and expressing the views of your own special interest. Don't ask why people are riding where you hike, ask yourself why you are hiking in one of the few places people can ride if it bothers you. You have the choice and the opportunity to go somewhere else. I don't. I have private farm land behind my home, and I get upset with snowmobilers who ride there (without the farmers permission, of course) but that doesn't make me want to ban snowmobiling everywhere. Don't punish everyone for the crimes and ignorance of the few. I'm an avid dirt rider. I'd never ride on the walking trails near home, and I'd read the riot act to anyone I caught doing so.

Excellant, well thought out. Agree that the most destructive types of use must be severely restricted, especially motorized devices such as snowmobiles and ATV's. I have seen first-hand the kind of damage these vehicles do to natural parks. They are a plague here in the East, where I live, we must not allow them to ruin the great conservation areas of the West.

Expansion of the Parks should be fully funded. There are areas which require management or they will be lost due to the lack of concern and care.

Families don't always have time to spend outdoors, especially when both parents need to work to make ends meet. It is shameful that we are the only developed country without mandatory paid maternity leave. New parents that can't afford to stay home have to leave their young ones with someone else, often a daycare, and get far less outdoor time than they could if they were at home with mom or dad. Busy schedules also lead to more dining out, fast food, or easy and often fatty meal prep at home and thus higher rates of obesity, and even less desire to go out and play.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Fees charged on Public and National Forest and Park lands should be similar to fair market value for all permits/fees. RVers should pay more than tent campers but just doubling current fees without market research is w/g. If the going rate for RV spaces is \$25 a night then the government should not be charging only \$12 a night a mile down the road on public land. I do not know any specifics about recreational use fees but I do know that grazing, mining, drilling and logging fees are significantly below fair market value. The Bureau of Land Management loses hundreds of millions of dollars annually on cattle grazing permits alone. Huge corporations and millionaires own most of the grazing rights, not family ranchers and the fees paid haven't been raised in decades. A few are efiting to the detriment of many.

Thanks for the explanation. I agree that the DOI, as with many Federal entities, is not capable of implementing another large program; however, I must have poorly communicated my idea if that is how you interpreted it. The Task Force would use existing DOI data to identify Conservation Priority Areas. Ideally, the Task Force would be composed of representatives from DOI, other Government entities, NGO's, and private industry, which would require minimal resources or administrative burden for DOI. Essentially, this program would use existing data and knowledge to address serious conservation issues on private lands. I'm sure an avid outdoorsman such as yourself, based on your numerous comments to other ideas, could support such an objective. If this is not the appropriate mechanism for achieving such an objective, you should submit your own idea and allow others to vote and comment on it as well. Thanks again for your explanation

-Can we leave the last 1% or so to the animals or must we cut down every tree, dam up every river, pollute every lake and send every animal species to extinction because of "human needs"?

Fully protecting these wonderful lands is something that has to be TODAY because without them there is nothing to protect the beautiful animals nation wide and that is a fact.

we already pay our fees through off road registration programs and fees to enter certain areas. What fees have you paid? OHV use is great for family togetherness. Some do have radios and communicate, most stop from time to time and communicate about what they have just seen or done.

Give priority to recreation

Given the rapacity of corporate enterprize (and their allies/servants in all levels of government) and the cumulative damage done to our natural areas over the decades, the US does not have nearly enuf wilderness protection. When I hear comments about 'we're locking up too much public land', I automatically assume that the apologists for the miners, the timber comppanies, the oil and gas producers, the cattle grazers, the ORV groups and the other exploiters are pushing that sentiment. Our public lands belong to ALL of us, not just the monied interests!

Good idea. Of course it all takes money. It would be helpful if there was money earmarked for such events. Some schools offer these programs, but funding is always a problem.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Gosh what a lot of emotion. Some folks obviously have had a different experience than me. I am not an ATV rider. I have pack animals. 99.9% of all ATV and motorized bike riders stop and wait for me to go past. they are friendly and courteous. The ones that aren't are generally young idiots. ON the other hand, 80% of mountain bikes riders don't slow, I assume because they think that not making noise, they can't possibly be frightening to animals. Of course, they are wg. These uncourteous riders often have gray hair- in other words, old enough to know better. I still don't think that mountain bikes should be banned, I just want them to follow a few rules for trail etiquette. Can we try to be polite on the trail?

, Nobody will loose their private property because of this proposal. No one has ever lost their private property due to a national monument designation. There are private property parcels even in our oldest national parks. You can retire in peace and serenity knowing that the land next door will never become a clear cut.

Grazing is a (poor) substitute for natural fires that clear out the underbrush and destroy sick trees and bark beetles. Grazing does not eliminate the beetles. I have hiked in some areas where the sole source of water had cattle standing in it as they defecated, thereby polluting the water for miles downstream. After selective removal of sick trees and thick brush, forests should be "managed" with controlled burns in areas near habitations, and wildfires should be ald to burn naturally at higher elevations. When Lewis & Clark came West they noted that a man could run full-out through the healthy forest, as there was sufficient distance between the trees. People need to update their ideas with newer science-based data regarding healthy forests before they accept or reject forest management schemes of any sort.

: Please stop putting words in my mouth. Just exactly where do I say: "William Hoffman wants the only human activities ald in this area to be walking & hiking ---!" What I said is: "There is an off-road vehicle plan, primarily for Cedro Peak, following an extensive two-year hearing process with local residents." Check it out: { <a href="http://www.fs.fed.us/r3/cibola/travel-management/tm\_sandia/index.shtml." rel="nofollow" target="\_blank">Link</a> } It accommodates many competing uses and interests, especially among local residents who were badly conflicted and fragmented. Several years ago, I had the awesome experience of Bco four-wheeling in Colorado with my son-in-law and daughter on Medano Pass, northern Sangre de Cristo (Rocky) Mountains, west to the Great Sand Dunes National Park, with an incredible view few will ever experience. Our public lands are just that -- for everyone -- not just someone's private property, with preservation, access and safety paramount for all. William Hoffman Aug. 17, 2010

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

It is not the genes themselves that anybody is worried about. It is the introduction into the environment of traits that have unknown effects. An ecosystem exists in a delicate balance and altering that balance can have disastrous effects. These systems have developed slowly over millennia. To change them within a generation is inviting consequences that we don't understand. What's more, just the foolishness of using a single species to the exclusion of others is a bad idea. Biodiversity is being threatened. This is the goal of GMO producers and it is a very shortsighted and selfish goal. I don't care if there's been no research supporting the finding that GMO's are bad for humans. It is simply irresponsible to create an organism that has not been tested in the laboratory of evolution. By the way, it is impossible to prove that they are NOT harmful and until that can be done, there is no way I would ever support their creation.

Have parks multiuse and be sure to make room and safe pathways for hikers.

and There is a very simple solution for both of you. Get out of the areas where OHV's are allowed and get into a Wilderness Area where they are not allowed! It's really not that hard!

Here it is. For an example, the federal government has paid millions of dollars to build a road so the local lumber company can extract about \$100,000.00 worth of timber. The one I'm referring to took place in the Tongass National Forest. Seems like a giant waste. This is one of the best ideas I've heard.

Hikers don't want to be on the kind of trail you're proposing, so "multi-use" really means "motorized." But it might serve all interests to have a designated route that would both serve the ORVs and contain them on roads designed for this kind of traffic and away from sensitive woodland trails. It sounds like most of the route already exists in forest roads and just needs to be designated and put on maps. If segments have to be added, options should be studied and their costs detailed (both money and ecological).

Hiking is an optional activity go buy yourself a farm to hike on. I wonder if you even have a clue where your tax dollars are going? Would you even notice if you were funding a country trail system? I know I have no idea where my money goes but I am sure some of it goes toward some tree hugging agenda that I am firmly against. Do you know of the inner workings of any OHV organization? Obviously you don't because if you did I wouldn't have to correct your posts.

Hmmm.. I wasn't under the impression that we (as OHVers) were fighting for the right to utilize wilderness areas. What MOST of us (and I would probably say all, but there's always that 1%) want is the right to continue to use the already designated areas that we have enjoyed for decades. We continue to lose designated areas yearly, and what does this do? It increases use on other areas. I have been fighting for years to keep the Rubicon Trail open for public use. We just lost another month of use on the Dusy-Ersheim trail. Last year we lost the Clear Creek area. If you enviro-extremists want wilderness area, fine! I like to hike and camp also! But I also enjoy off road vehicle use! All we ask is that you folks leave the already designated areas alone.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Honestly not all ATV's do 30 mph all the time. Maybe I am different but when I compare my ATV dashboard LCD readings of mileage and time of engine running my average speed is between 2 - 8 mph depending on the terrain in flat So. Fla. I do not let the engine idle and waste gas either so the engine time is right on. Where I go and considering what I do (hunting) I intentionally seek to be quiet, move slow and keep the wind in my face. The only time I get up around 10 or 15 is enroute to a hunting site in terrain I am extremely familiar with and even that is risky where I go. Most everyone I know operates ATV's similarly since if you don't you WILL end up seriously injured or dead.

Horses, yes. OHVs, no. There's a big difference.

How can we call them National Parks and not fund and protect them?

How is getting on a smelly ORV family time. Family time is doing something where you actually spend time talking to your kids and having some quality time with them. Sitting on an ORV which could cripple or put your kid in the hospital does not seem to fit that parameter.

How is listening to a motor for hours "getting away from it all"??

How is there family togetherness when you race through protected lands on separate OHV's You can't talk with one another. Since OHV's damage the landscape much more than other methods of recreational enjoyment, charge them appropriate fees. Given the revenue needs of the park and forest system, a seasonal fee of \$1,000. per OHV used in each land unit is a good start.

How many times am I going to have to write this? Motorized vehicles destroy trails. They cause erosion. They are noisy. They do not belong in protected wilderness. When they are let in, it is no longer "wilderness" no er how many families enjoy them.

Hunters are hurting the land you bring shame to the name .

I agree 4 wheelers give all ohv's a bad name.

I agree . There should also be areas that are for OHVs. There should be more wilderness preserved, too. One thing that amazes me though, is when people have access to wild lands, it seems they can't wait to develop the land and don't care about conservation or protection for the land, other than their own use of the land. More land should be protected for the good of the plants and animals that don't have voice. A healthy environment means a healthy human population also.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I agree that all user groups need to find a way to share a limited resource. I don't think every group needs to share it in the same way or exactly share the same space, but all users need to have a place to play. If everyone could compromise for each other it would be easier to move forward. I hope that Salazar can continue to try to find the middle ground and move forward to making everyone happy and continuing to protect our precious resources.

I agree that we should promote all forms of recreation, but every form has its proper place. I don't think too many people would disagree with that.

I agree there are few children outside. Most of the adults I know are either working, have other time priorities and/or not willing to expose themselves to legal liability. So how, where and when will you find the 6-12 adults for the equal number of children to make this happen? My case - I was present while a child fell down. Later that child's mother had already spoke to police authorities and charged me with assaulting her child. When the police finally ask the youngster what happened - the truth was learned - they fell in an accident which I had nothing to do with. However, I had already been written up and lost my youth position with the Church based on this. I like well behaved children but due to today's litigious set of parents - unless in a group setting with plenty of rules, cameras, regulations and insurance - I would not work with kids again for awhile!!!

I agree with ald on the funding part

I agree with Carpenter: stop roads in the Tongass. I think the Tongass should be declared a national monument immediately.

I agree with this, because the sad fact is, many people using ORV's simply aren't willing to use the parks in a responsible manner. Allowing ORV access for people with a severe handicap that prevents them from using the parks any other way is one thing, but allowing people who just want to feel the dirt rip out from under their tires? No. Rupert, that's a good point, there are people, especially families who are willing to be responsible and follow the rules, and so there should be some areas in the parks for ORV use, but the fact of the matter is, even responsibly used, an ORV/ATV causes damage and air pollution, so these areas need to be severely limited.... grow up and take off your tinfoil hat.

sounds like she has a vested interest in land being available for development. There is already enough land available for development and enough land that has been developed. Time to preserve more.

I agree! There must be adequate staffing in all areas (interpretive, natural resource management, protection, maintenance, and administration) to ensure the visitor is receiving the best possible experience in the enjoyment of the parks. And all visitor age groups need to be addressed. Young people are certainly the future and will carry on the conservation of the parks as they become adults. But "adult education" is important, too, as these are the people with the potential funds to help the parks NOW!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I agree, but some recreation should be only allowed in designated areas.

I agree, in part. Let us ALSO teach our children that ALL of the outdoors is to be protected and respected, not just the National Parks. Children (and adults) need to respect and care for our cities, our playgrounds, our suburbs. Stop littering....stop damaging and vandalizing areas just because they personally do not belong to you or your family. If you wouldn't throw trash in your own yard, don't throw it in someone's else's yard, or in the street, or by the side of the road, or out your car window because you want to keep it clean inside. Enjoy the outdoors--YES, by all means--but remember that others also have a right to enjoy a pristine view, without litter and damage (and this includes our wildlife, whose home the outdoors really is).

I agree. We need to support multiple use of these lands. Races can be an economic boost to small desert communities. Let us get off the couch and get outdoors!

I agree. { <a href="http://ideas.usda.gov/ago/ideas.nsf/0/AF9E289C790DF2B68625772100497AE4" rel="nofollow" target="\_blank">Link</a> } Go to this great Idea and promote it! We need to be teaching ecology and the history, etc of our lands and how science is used to form management decisions. Oh, yea, history, science, reading and Writing, all subjects in school. Why not incorporate field trips that remove the student from the blackboard and mortar classroom and put them into the land that provides life? Let's develop some lesson plans, learning objectives, etc and share with each other to move this along. K-12 is where to start.

I am a mountain biker. There are plenty of places like logging roads for me to ride on already degraded lands. I don't need to take my bike into the wilderness where it might add to the trail erosion problem and degrade the wilderness experience. It would be hard, once you have allowed bicycles in wilderness, to exclude other mechanical transportation devices, even though they might degrade the wilderness experience. If you allow bicycles, it might be argued, why not electric bicycles; why not all terrain wheel chairs?

I am all for a race series. Look at Baja in Mexico. We have enough land here in the USA to have a tract of land set aside for an endurance race. I think OHVs have a hard time hurting sand and rocks.

I am an OHV user by choice but also due to injuries incurred while serving this nation but I am also a hiker/backpacker and I see more littering and trashing of areas that are accessed by foot. I have seen many hikers cut across switchbacks and while in a dispersed camping area off the main trail we run across piles of trash that hikers were too lazy to pack out. We use these as learning moments with our Boy Scouts to teach them the Leave No Trace principles. When out with a group of ATV riders, we tend to carry out more trash than we carried in. I agree that OHV enthusiasts need to work harder at patrolling themselves as a couple bad apples seem to be some of our own worst enemies.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I am disabled, and incapable of visiting the wilderness as a hiker. But I would never take a vehicle into it -- noise pollution can be as damaging to plant and animal life as any other kind. Animals flee, if they're able. Plants stop growing, and many stop germinating. Then considering the fumes, the constant drip of oil and gas that comes from any internal combustion engine -- this constant drip tears up our stg asphalt roads (talk to anyone who paves roads or runways if you don't believe it), so imagine what it does to the life of a forest or other wilderness.

I am pretty sure that cars use gas too and there are way more of them than OHV's. Do you support your own vehicle? Maybe you should walk everywhere and get rid of your own car.

I am the executive director of Western Wildlife Conservancy in Salt Lake City, Utah. WWC is a non-profit wildlife conservation organization with approximately 300 members, most of whom live in Utah and recreate in the American West. I am also a member of the Western Governors Association Wildlife Council Stakeholder Advisory Group. Our specific charge is to aid the WGA Wildlife Council in implementing the WGA Wildlife Corridor and Crucial Habitat Initiative. Additionally, I am a member of the "Spine of the Continent" Wildway steering committee under the aegis of Wildlands Network (formerly The Wildlands Project). We seek to create a "mega-corridor" of functionally connected wildlife linkages up and down the Rockies, from the Brooks Range in Alaska to the Sierra Madre Mountains in Mexico. I have read the full draft BLM discussion paper on Treasured Landscapes. I find the vision embodied in that document bold and exciting and believe that it is urgently needed. Moreover, as a member of the WGA WC SAG, I know that it is exactly what is needed in order for the WGA Wildlife Corridor and Crucial Habitat Initiative to be successfully implemented in concert with another WGA initiative, the Renewable Energy Zone Initiative. I believe that the most important thing the Obama administration can do for public lands in the United States, is to protect their ecological integrity and resiliency. Therein lies our future. We must protect, and where necessary restore, our beautiful iconic landscapes, our watersheds, and the resiliency of our ecosystems. This will provide us with clean air, clean water, abundant wildlife, and a variety of types of outdoor recreation into the foreseeable future. It will preserve and enhance the possibilities for horsepacking and backpacking adventures. Combined with swift but prudent implementation of the WGA Renewable Energy Zone Initiative it will also enable us to move toward a clean energy future, which in turn will provide new jobs for our citizens and help preserve the quality of our environment. For all these reasons, I urge the Administration to set its sights on protecting connected landscapes and ecosystems. Protection of our ecosystems, watersheds and iconic landscapes will not only require that the protected landscapes be functionally connected to serve the needs of wildlife, it will require that we limit access to much of it. So be it. OHVs, ATVs, snowmobiles, and the like must be restricted to areas where they will do the least harm. In addition, livestock grazing must be curtailed in many areas where it is inflicting severe damage on watersheds and wildlife. Energy development, including renewable energy zones and transmission corridors, as well as other types of development, must be located outside the most ecologically sensitive areas. Finally, but not least in importance, it requires wolf recovery and healthy populations of all native large carnivores.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I appreciate that many folks enjoy using motorized vehicles, but the big picture is being lost in this discussion. Natural areas all ac this nation have been devastated by development and industrial/residential growth - we have a tiny fraction of even somewhat wild lands left compared to what used to exist on this continent. (and this is the pattern all over the world) . We need to preserve whatever is left for the peace and quiet, the biodiversity and the scientific discoveries that can't be found anywhere else. Motorized vehicles are simply not compatible with this. THERE ARE AN INFINITE NUMBER OF PLACES TO RIDE MOTORIZED VEHICLES IN THIS COUNTRY. Go enjoy some back roads somewhere, but not on public wilderness land. There's simply way too little of it left compared to more "civilized" areas. If you really want to go deep into wilderness, get in shape and walk out there! But don't ruin the experience for the rest of us.

I believe in recycling however I do believe in logging, mining, oil rigs, farming, fishing and other uses of the land that may disagree with. Aug 17, 2010

I believe roads and sustainability go hand in hand. We need to be envimental stewards while allowing social and economic activity. We need them all in a fair balance. Aug 17, 2010

I believe that existing OHV trail systems should be analyzed, improved, and ald. Then enforcement of trespassing, trial-blazing, etc. should be ruthless to include the loss of the perpetrator's vehicle - permanently. There is enough room to allow many different uses.

I cannot believe some of the closed minded ideas and accusations being thrown around here! I am an OHV user and there are many things we do to help...yes I said HELP the enviment! I live in the beautiful state of Oregon. Twice a year, SOLV (Stop Oregon Litter and Vandalism) has a beach clean up. Guess who drives up and down the beach, picking up the garbage bags! That's right, OHV clubs! How about helping BLM remove garbage, junk and abandoned cars that they can't get to. Done it! I have not met a single Sierra Club member on ANY of these events! Like someone said earlier, OHV land is a very small percentage of the forest. There are plenty of places to hike where there aren't OHVs, so why is it so important to hike where there ARE OHVs? My experience is that OHV users are generally the ONLY ones that promote use for everyone. There are many that want them completely eradicated from "their" forest. It is not "their" forest, it's everyone's! I believe the selfish ones are the ones who don't want anyone to do anything they don't like. Private property is actually a good idea, but there can be problems with it. Cost, insurance, regulations etc. Farmland? I don't know about you, but I prefer that remain a productive farm. Here on the West coast, private forest land is all but impossible to come by. Yes, it IS a legitimate family activity. I can spend the entire day, in my Jeep, driving around the woods with my family. We talk about some amazing things, when there are no other distractions and it is truly some of our best family time. Oh, and Ms. Foster, while you are entitled to your opinion, what qualifies as family time for my family is not up to you to decide. I have suggestion to those of you that oppose OHV use. Step outside your comfort zone and contact a local club. Spend some time with them, maybe even... \*gasp\*...go on a day trip with them. Experience it. You don't have to like it (although I suspect you will), but it may give you a different perspective and you will see that we are people, just like you. A responsible club would welcome you're visit and be glad to show you what they do. Would you do the same for us?

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I don't go to the local mall on black Friday then complain about noise and over crowding, I suggest you rethink where your going camping, all the places I go to its so quiet I have to keep the radio or TV on so I can sleep, I visit about 6-8 different states annually, most the time I am alone on the trails.

I don't have time to read all the comments, but I don't fully understand this proposal. Is the author suggesting that for every acre of wilderness set aside, land managers should open an acre of wilderness to OHV use? If so, this is simply unsustainable and irresponsible. Wilderness cannot be created, or even restored; it can only be preserved. Even when used in the most sensitive way OHVs are irrefutably damaging to the environment as they promote erosion and disturb wildlife. Any "wilderness" that is opened to OHV use will quickly cease to be true wilderness, and that can never be reversed. I am an avid birder, camper, and hiker, and I mostly keep my recreation in medium- to high-use areas. I love wild places, but I've only set foot in a true "wilderness area" as designated by the government on a few occasions. Even so, I'm comforted by the existence of such areas. I expect all unselfish outdoor enthusiasts would feel the same way. Whether we are hunters, hikers, boaters, OHVers, birders, climbers, fishermen, or any other form of recreationist, we don't need to be drooling and scheming to get into every untouched natural area just because it exists. Even if I never set foot in a wilderness area again, I hope for the sake of all of us and our future generations that no wilderness area is ever opened to OHV use. OHVers, I respect your love of the outdoors. I believe there is a place for OHV recreation. But it's not compatible with wilderness. Once OHV use is allowed in a wilderness area we can never get it back.

I don't know what kind of ATVs people use in your area, but I have yet to find an area that was passable by ATV and not on foot. I have, however seen the converse of this many times. Be that as it may, I agree with most of what you're suggesting. Many times damage occurs because of a combination of irresponsible use and lax enforcement. It's also possible that the place you live does not have a statutory provision for the destruction of roads. My state does. A person can be arrested for criminal damage for causing damage to a muddy road surface, for instance. Try getting in touch with your local OHV groups and see if there can be some agreement and then approach the land management agency with your mutual concerns. Most OHV operators realize that the type of damage you refer to is what causes problems for us and will be willing to work with making repairs and working on ways to prevent future damage.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I don't know where these "billions" of acres of empty land are. One thing for sure, our population is growing (from 200 million to over 300 million in a short time). I say more land needs to be preserved as both wilderness and multi use land before we are all smashed into a few small areas to "recreate". I also promote all forms of recreation. Hello! You would have to read some of the ideas posted above mine to get the point of "some recreation should only be ald in designated areas". Here is an example, though. In my state, they were trying to preserve the wild nature of a certain state forest. They closed the area to OHVs and also closed roads to everything except foot traffic. It worked and the area still has a wild nature. At the time, we hunted in the area and also road motorcycles and three wheelers. We still hunt there today, but OHV elsewhere. I don't see any problem with most OHV use, but they are not and should not be ald everywhere. Most people would agree that this applies to all forms of recreation. That was the point. Some people are not only concerned about recreation, but also the health of the eco system so there is clean water, air, and habitat, for both people and the other creatures that depend on the enviment. It is important to me and people like me to have areas set aside from the threat of development. Maybe it's because we haven't seen these billions of acres of vacant land you have access to. I think most people are concerned about the enviment and I would say these different groups (OHVer, hunters, fishermen, hikers, etc.) have more in common than they we think.

I don't think any development is "smart".

I don't think any reasonable person would be against access for traditional wood gathering or fishing. I also believe OHVs should be ald in designated areas. For example, some places in Alaska allow native communities to use snowmobiles, etc., to continue traditional (hunting, fishing, etc.) practices, even though the area is designated wilderness.

I don't understand why mountain bikes aren't considered to be "eco-friendly" by some. No pollution, quiet, and very little impact to the soil. Maybe the reason a small minority hate mountain bikes, is because they are selfish radicals who expect everyone to hike hundreds of miles with 40 lb backpacks on? And they know that will never happen... so what they want, is in effect, to lock the people out of the forests and deserts. Sad really. Common sense tells you that a bicycle on a trail harms nothing at all.

I don't want to see, hear or smell OHVs when I am in the wilderness. These places were set aside to preserve them for all. It goes against the very idea of wilderness to allow these vehicles into wilderness. Also, it sends a message that it's acceptable to pollute the air and continue to support oil use. When I am trying to commune with nature and get away from noise, I don't want to have my serenity disturbed by loud and smelly OHVs. My world is loud enough, thank you. Get off your behinds and walk.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I feel BLM needs to be reviewed for the present and the future. Too much say is represented by the big ranches and they tell us to get rid of the wild horses. I feel we need to save as much wilderness that we can. Lets not have the attitude that we should use every natural resource in the present. Lets preserve for future generations. If people have to use a orv then I feel they don't understand the value of wilderness. We have raped just about every piece of land with exploration like gas/oil/coal/minerals. Lets stop and smell the roses for a time.

I fully agree with you. I grew up on a cattle ranch in California. I have watched my family have to sell off portions and rent out portions just so they could pay the taxes to keep their homes. Now with the new water taxes coming out that is just another hit. Private land is just that, Private. Public land is where families should be picnicing and camping and such. Public lands are the property of all the people and should not be restricted. Private lands are the land owners to say who can and can not enter.

As the administration considers how best to protect America's great outdoors in the 21st century, it is imperative to remember that we face far different threats to conservation than we did in the 20th century. Already facing increased habitat fragmentation and development, pollution, invasive species and overuse, America's great outdoors are increasingly experiencing the effects of climate change. Indeed, climate change is directly threatening many of the conservation investments made over the last century. As the administration draws up its blueprint for conservation in the 21st century, it must include strategies to reduce carbon pollution and safeguard natural resources from the impacts of climate change that are already occurring.

Conservative estimates of the economic value of the vast range of ecosystem service provided by the natural environment range into trillions of dollars annually. Examples abound of how healthy natural systems help people and the economy. Among other things, they provide clean drinking water and clean air, protect communities from extreme weather events, and help pollinate crops, and agricultural resources ranging from timber to pollinators. These services are in direct jeopardy due to sea level rise and increased storm surges threatening coastal wetlands, declining snowpack threatening the availability of drinking water and aquatic habitat in the West, pine bark beetles devastating western forests, and a host of other climate change impacts.

Wildlife and natural resources are also critical to the recreation value of America's great outdoors. Outdoor recreation accounts for 8% of all consumer spending, contributes \$730 billion annually to the economy, and supports 6.5 million jobs (1 of every 20 jobs in the U.S.). Much of this economic activity is now threatened by global warming. Southern trout streams could soon become too hot to fish, declining snowfall and increasing winter temperatures are hurting skiing and other winter sports, and shifts in migratory timing and patterns may soon be impacting waterfowl hunting opportunities.

Above all, we have a moral imperative to protect America's treasured wildlife and special places from the impacts of climate change. Twenty to thirty percent of species are at even greater risk of extinction due to global warming under even moderate global warming scenarios.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Defenders of Wildlife is a national, nonprofit membership organization, with more than 1 million members and supporters, dedicated to the protection of all native wild animals and plants in their natural communities. Our programs focus on what scientists consider two of the most serious environmental threats to the planet: the accelerating rate of extinction of species and associated loss of biological diversity, and habitat alteration and destruction. Addressing the overarching threat of climate change, and assisting wildlife to adapt to impacts of climate change already underway, are key to our work to protect wildlife and its habitat.

The America's Great Outdoors initiative has been described as a conservation agenda for the 21<sup>st</sup> century. Global climate change is the defining environmental threat for the 21<sup>st</sup> century and beyond. Changes in ecosystem structure and function resulting from climate change require fundamental rethinking of how and where conservation occurs. Accordingly, the America's Great Outdoors initiative must work to promote conservation of wildlife and its habitats and, in particular, to assist wildlife and natural resource adaptation to climate change. To accomplish this, the America's Great Outdoors initiative should focus on, and further, the protection of large, interconnected natural landscapes.

Climate change is the single greatest threat to wildlife and habitat. Changes in temperature, precipitation, and sea level are literally shuffling the deck of natural ecosystems, significantly increasing the threat of extinction for numerous species. As wildlife seeks to move to more hospitable habitat in response to climate change, such movement becomes increasingly difficult in landscapes already fragmented by roads and other human development. Resilience to the impacts of climate change for wildlife will be enhanced through the conservation of large, interconnected landscapes, providing protected habitat and corridors for wildlife migration. Accordingly, the America's Great Outdoors initiative should give the highest priority to conservation of large, interconnected landscapes that will assist wildlife and natural resources adaptation to climate change.

Unfortunately, the Senate companion measure, S.3663, the Clean Energy Jobs and Oil Company Accountability Act, does not include full funding for the HPF, but includes full funding for the LWCF.

We and other SHPO programs across the nation need Senate champions for including the HPF in S.3663, either within the language of the bill or as an HPF funding amendment when the bill comes to the Senate floor this fall.

Provide more funding and opportunities to support our state 20-year plan on Recruitment, Development and Retention for hunters and anglers (see attached summary).

Land and Water Conservation Fund needs dedicated, equitable funding between the stateside and federal program to ensure acquisition and development of "close to home" recreation opportunities.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Provide funding to purchase and conserve unique landscapes in Nebraska. We and our partners have the staff to implement programs on private land and the ability to manage public lands purchased. This is closely tied with our State Wildlife Action Plan.

Increase federal funding for the National Fish Habitat Action Plan, especially the Reservoir Fisheries Partnership.

Hunting and fishing are important parts of Nebraska's rich heritage. These time-honored outdoor pursuits are important to overall lifestyle, well-being and natural resources of the citizens of Nebraska. Along with hunters and anglers paying for conservation via permits and excise taxes, they contribute \$74 billion to the economy nationwide in 2006 (USFWS 2007). In Nebraska, Fishing and Hunting impacted the economy with nearly \$367 million in 2006 (USFWS 2007). Unfortunately, this tidal wave of funding and economic impact will not continue unless we maintain one of our most important stakeholders, our hunters and anglers.

Total number of hunters and anglers per state have been recorded by the United States Fish and Wildlife Service for many years, in part, to help in the distribution of Federal excise taxes between states. These numbers have fluctuated throughout the years, with record highs in the 1960's, and lows in the mid 1980s. In the past ten years (1997-2007) there has been a loss of 18,579 hunters and 36,272 anglers (USFWS Online Federal License Certification). Although the west-north central region has not seen as great a decline in hunters as other regions, it is still alarming the rate at which our hunters and anglers are leaving the sport.

State funding in Illinois for land acquisition has also decreased significantly with the strain on the state budget just when land prices have dipped. The infusion of federal dollars into land acquisition programs will give local governments the opportunity to move forward on significant land protection efforts now.

There has been a dramatic decline in USDA-Forest Service Cooperative State and Private Funding from \$4million in 2007 to \$2.7million in 2010. This is just one example of the challenges that we all face. If these financial incentives are not there for the private forest owners to assist in good management improvements, then sustainability will be adversely affected. This is vital for future generations.

We need legislation to include incentives for private family forests to be able to participate in carbon markets. Managed forests can increase the carbon storage from its current 12% to as much as 20%. Biomass will become a renewable part of our energy as we move to cleaner forms of renewable energy in the future. Since private forests make up 75% of all forested land in Alabama and 62% of forested land in the US (423 million acres) those legislative policies need to define biomass where private forests are included in this definition.

2. 6 million acres of family forests change hands each year; and 1.4 million acres are actually lost to urbanization or development as a result of families having to sell property or cut timber to pay federal estate taxes. This could be alleviated with legislation such as the Thompson Family Farm Preservation and Conservation Estate Tax Act.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

We are proactive when it comes to education. We realize that if the next generations are not exposed to managed forests and not exposed to America's Great Outdoors with its inherent benefits then this legacy will wither and be only history. We are each called to be good stewards of what we have. Being good stewards of our family forests is part of that sustainable legacy. We need funding and incentives for environmental education to ensure that our children learn to appreciate and invest themselves in our environment's future.

As you are aware private family forests provide many benefits to our society. Jobs (avg. 8 jobs/1000 acres), clean air and clean water (xxx acres supply enough oxygen for xxx people), wood products and their derivatives, a source for renewable energy with less carbon and environmental impact than concrete and steel, recreation and aesthetics. Private forest owners need incentive to allow them to continue to manage and preserve their forests.

These listening sessions are a great move forward in bringing the discussion and awareness of how fragile America's Great Outdoors is. We need to be proactive in our conservation efforts. This can effectively be done in partnership with private family forests, industry and the federal government. Let's get to work to strengthen this partnership.

If this idea succeeded, we'd be going back to the days when Forest Service and BLM field managers were captured by the local county commissioners and state legislators. That's why the forests in my native Oregon got clearcut so badly in the decades after WWII, and it's why cattle were allowed to wreck the riparian fish and wildlife habitat all over the western range. When I worked for BLM, I saw that citizens' groups' ability to sue gave my agency the strength to follow the law and resist political pressure.

After what has happened at Cape Hatteras where the signs state no people allowed the NP needs to be controlled. Killing wildlife and closing the area to humans.

We don't need to limit anymore use of ORV on federal land anymore than they are. If anything there is wilderness that needs to be taken away.

I promise everyone who is against ORV does more damage to the environment than they do. You pee and you poop in water, laugh at this all you want but every time you take a dump or piss in water you just made it toxic for me and my family to enjoy. So let's say we ride once a week and you pee 4 times a day and poop 4 times a week, so you have ruined a water way 32 times on average a week compared to us once a week on a good month. I believe everyone should have to poop outside and bury it 5 feet deep and hold their pee in, cause no matter where you pee you just ruined the environment.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

There is enough wilderness as it is. National Forests are really a better way for everyone. Logging is a good idea, we all enjoy living in homes don't we?? I don't know about your home but mine is made of wood and a lot of it and it requires logging to build homes, crazy huh. Here in the Cache National Forest you can ride in a truck or a jeep, take a ATV a dirt bike or hike. It caters to everyone's needs and desires. And the hiking trails also go where no machine can go in the summer and you can get away from it all and not listen to any motorized vehicles of any sort. Then we can ride sleds there in the winter :) :) NF are the way to go and there should be wilderness took out and NF put in there place so everyone enjoys them. And all the fuzzy little animals you love enjoy the NF to. I know you don't believe me but they really do and they are more scared of you walking then on anything else. I know this cause I hunt all sorts of animals and if you are on a wheeler or vehicle they stand still and wait for you to go by but if your walking and they see you or wind you guess what???? they run farther and faster to get away from humans, it don't matter if you are hunting them or not every person environmentalist ORV user, hunter, hiker, hippie it don't matter they see us as a predator not a safe house.

that is way to extreme and not even realistic. No guns?? forget our 2nd amendment in the Constitution? We have a right to bear arms No ATV's?? If they are used on designated trails ATV use is perfectly fine the way it is. Hike on designated trails only?? by far the most unrealistic comment yet. You must like to be told what to do, me not so much. I will enjoy the outdoors how I see fit, when I am hiking I will NOT stay on the trails and I will go anywhere my heart desires. For all the environmentalists on here who think we are robots get a grip, it's public land and the thought of you even saying we should only walk on designated trails is outrageous.

Only 2/10 of 1 percent (0.2%) of the land surface of Eldorado National Forest is legal for an OHV to set a tire upon. However, a staggering 1/3 of the forest is already locked away from the majority of the public within the Desolation Wilderness and Mokolumne Wilderness. Yet in spite of this, the anti-access groups are still fighting tooth-and-nail to close the Rubicon Trail and the other last remnants of a spectacular sightseeing OHV trail network. Not everyone is a hiker. Some like biking, some like OHVs, some like kayaks and canoes. But these public lands belong to ALL of the public. Wilderness designation is EXCLUSIVE, while a Backcountry designation is INCLUSIVE while providing the exact same natural resource protection. Keep public lands open to ALL of the public!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Your Comment Below4) OHV's, snowmobiles, and jetski's should all be banned from most public lands and waters - they are the usage that is least compatible with other uses, and they have the longest-lasting negative impacts. Just like America in general was sold by Madison Avenue into thinking we all needed giant SUV's for our single passenger daily commute, OHV-users have been sold into thinking that they can't enjoy the woods without a gasoline engine roaring between their legs. If OHV users want to band together to buy themselves a private wooded racetrack with a noise control barrier and onsite mountain dew dispensers, fine, but even then they should still have to clean up their act so they don't send water pollution downstream. where do you get YOUR information from? Some one has fed you some true bull. What makes you believe so hard that OHV's have the most lasting effect in the forest? Where or Whom gave you this bull story? Logging is the most long lasting effect besides development. It takes from 5 years to 20 years for trees to become a "Forest" and marketable again! First of all.....OHV's Do Not leave a long lasting effect in the forest by any means. Any Forest Ranger will even tell you they do not. Trails that are designated for OHV's are used by ATV, OHV, 4X4, hikers, horse back riders, and many others. By this action it reduces the need for multiple trails for different uses. Most OHV People even care for the trail when USFS does not have the manpower or budget to even start to care for a trail. USDA will more than happy to send YOU.....Ron Sutherland..... the information of just how many OHV people take care of trails in ways that even USFS will not. Bridges over streams and creeks, clean up, maintenance, re-planting of trees, and so on.Ron Sutherland.....if want to complain so much for a true reason than at least have FACTS to back it up. Just typing what ever you wish to be negative only makes you out to be a person that no one else wants around. Get a Life dude!OHV's are here to stay because Family Time is more important than ever before.WE.....The People..... have the rights to enjoy our great lands in our Nation, by all means for the category we choose responsibly. OHV's will NOT just Go Away because YOU don't like SUV's. People whom wish to take their families into the forest of this great Nation will become more involved because it Brings Our Family Together..... Unity.By the way..... have you even considered how many Disabled Persons use OHV's because it is their only way to enjoy our great lands with nature?I am one of those..... your comments can become very costly Ron. Think a bit and have facts from all areas first before your fingers type what is on your mind.I love our land..... our forest..... this nation..... I am involved in many areas that concern our forest..... I am an All Terrain Vehicle Rider also..... in our forest..... and a member of Blue Ribbon Coalition ..... sharetrails.orgWe ALL can work at this together..... after all..... it is our land.....One Nation ... Under God.

There would be enough land for all if we would stop closing it off. I am so tired of people who think that their way is the only way and are out to save the world. The planet is cooling, man is to blame, the planet is heating up and man is to blame! In California whole areas are wiped out and people are put out of work to save a little fish! I wish we could work together and compromise but reading some of these posts I do not think it will happen. It's time to go get in my SUV and head home, burn a steak and drink a beer. Maybe shoot some cans in the back yard while I still can.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Unmanaged land allows chaos and politics to rule. Logging is only one small activity in the total activities that occur on public lands however the elimination of logging is used as a basic tool to eliminate all forms of use on public lands..... If you want folks and activities locked out you are an idiot. If you promote wise multiple use then you have something going for you. There are far more acres degrading from neglect than from any other cause. Management can be controlled, chaos simply happens....

My wife and I have travelled over 7500 miles on our ATV's in the last 4 or 5 years...we have travelled on the Wallowa Whitman, the Umatilla, and the Malheur National Forests. Some on roads, some on trails, some just plain cross country. It is with amusement I read the comments about damage, impact, degradation, pollution and destruction of habitat and harassment of wildlife. It would seem that if you tell lies enough they become truth? The photo's used by government agencies are often decades old and are used to "prove" current damage. Arguments are started over topics like ATV entry into wilderness areas..in most cases though illegal it would really cause no impact. There are laws up the butt that cover all forms of abuse, use, trash, travel, trails, roads, cross country, animal harassment, noise, pollution and so on and so on. Where is the enforcement? Non existant because for the most part users do not destroy the world, they may change it but they do not destroy it. USFS says no money to maintain roads....this is only a smokescreen or excuse. USFS has plenty of money for payroll, vehicles (huge fleets by the way) retirement and benefits. Locking the public out of the forests will accomplish a few things though. First of if the public is locked out they will be unable to see how poorly things are managed, Second it will enable the USFS to expend more funds on enforcement officers with more payroll, benefits and retirements to act as zoo keepers on the public. The third item is probably the pacification of the enviro's and politicians that currently run things. The end result is the public will suffer, the resources will degrade and deteriorate at a much faster pace, opportunities for management will be eliminated and the something for nothing folks that espouse this closure and lockout can sleep well at night thinking they have done something holy and good.....while individuals like myself will break the laws, defy the rulings and give the enforcement folks a justification for their existance. Sounds much like the feudal system existing in Europe and Britain a few hundred years ago doesn't it?

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Its interesting reading comments from folks with no true vested interest expressing their view into how my world should be locked up and restricted. Wildlife corridors from Canada to Mexico? Its unusual for most animals to have a range extending more than a handful of miles from where they were born. There are exceptions but they travel anyway. Nature Conservancy? Just big money hiding behind what they call a noble goal. Nature Conservancy entered Wallowa County in Eastern Oregon under the banner of good neighbor and friend.....the reality is that they purchased land in a way to make profits, sell what they do not really want for more profits, and lock folks out of what is left. Nothing wrong with profit, nothing wrong with locking folks out of your private ground but do not do it under the guise of a holy endeavor. Others make value judgements based on their view of their world and their holy grail of innocence and perfection that organizations like Nature Conservancy and the numerous "Friends Of" groups put out. Its only based on bias and dreams and imagination. Get off the freeway, get an ATV or a pair of hiking boots or a pickup and see the real world you are trying to influence. Visualize yourself with no electricity, no wood, no grain, no meat products, NO TAX BASE to support the life of something for nothing. Get to the real world folks..there is a price to pay for everything...Its in our best interest to make sure we get a value received for a value given.

It is ridiculous to think of restricting motorcycles from public lands. Most trails were created by some sort of motorized vehicle, majority of new trails by motorcycles. Exploration is a part of the American heritage and character. Focus your attention on mass transit and older vehicles to decrease greenhouse gases, not these tiny motorcycle engines. One option would be to restrict the size of engines on these trails, as I believe there's no need for big V8's with 38" tires on many trails.

This is not just an issue for OHV users, but for all user's of public lands. Hunters in particular are increasingly restricted as access points to public property that runs through private property is closed. Many long-time landowners that used to allow public access (lumber companies, ranchers) are increasingly selling off to developers as government policies drive them out of business. These developers think nothing of blocking public access, if it gives their "customers" exclusive access to the public's property.

What Off Roding is all about, is the Family experience. The old saying, " it takes one bad apple to spoil the whole bushel" applies to Off Roding. We need more education, rules of riding ect. The number one problem that I have encountered with people against riding off road is NOISE. Dust is their second concern. Since we, as a family group, have been riding, I make sure all our equipment has STOCK mufflers and silencers on the bikes, quads, ect. Speed around others is also a problem. When ever we encounter anyone on the trail, we slow down, NOT SHOWOFF. This keeps the dust and noise to a minimum. We need to police yourself, to a point, and try to keep those that think our trails are race tracks, informed that they are for pleasure riding, not racing. With more Baby Boomers in the retirement mode, we should have a large pool of potential volunteers to pick from, to help implement this plan. "Keep it quiet, keep it on the trail, tread lightly". Remember, help keep the "Public" in Public Land.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

OHV recreation is a viable and important use of public lands. No other form of recreation is as important to my family. Closing off existing riding opportunities does not help the environment. It squeezes more impact into smaller areas.

Some people just cannot understand that some of us are a little more fast paced then others and don't get much thrill out of hiking, x-country skiing etc. I hike for exercise and have more then enough areas to go that don't allow motorized use, I have to drive at least an hour to ride my snowmobile. Plus where I ride my snowmobile I am so high in elevation I rarely see wildlife nor non-motorized users but they still want to kick me out??There is lots of things in this world I do not agree with but I do not think they should be banned, this is America and people have the right to do what they want.

I am copying a statement as it hits the nail on the head. A few bad apples ruin it for everyone. I've gotten in a fight with a fellow off roader because of his recklessness, and he thanked me later for it. It opened his eyes to what impact he was creating for his fellow OHV's . He gets it now and is very concientious where he rides off road. ("It's always so frustrating to read through these comments spouting that OHV enthusiasts are reckless, polluting, land-hungry caveman mentalities trying to take over the world's public land. I get it, you've had a bad experience with some a-holes somewhere down the line and put the other 99% in the same category. Please wake up. Your campaign is more likely to hurt your cause in the long run. You are trying to shut out one of the largest groups of folks that has respect and offers care to the lands you are trying to close access to. All we want is access to the same public lands we and our past generations have had access to and the same for our/your future generations to come. We are not the partying, drag-racing, gang-banging inner-city thugs with toys tearing it up having some drunken' booze-fest in the middle of nowhere. We are the "tread-lightly-so-we-can keep-enjoying-the-peace-and-beauty-of-what-we-have-been-treading-on-for-generations" folks. Now. Go lobby against illegal dumpers and factories destroying our ozone for a change! Fight a REAL threat for once!")

"I have to laugh! I have a 36' long 5th Wheel trailer. I can pull into a campground with full hook-ups and stay there for 2 weeks without plugging in, dumping or "hooking up" anything. In fact, given that I arrive with full water tanks, live off of solar while I'm there, and I dump at home, I'm pretty sure that would use "many, many times as much resources" with his tent than I would in the site next to him!! And I should pay double what a tenter pays??? No thanks!!!"

Nobody is proposing "expanding" off-road racing. Off road racers use exsiting roads on on ever decreasing "public" lands, and private lands. They do not banzai willy nilly accross open desert, and are penalized for venturing off the trail. As to the unfortunate tragedy that happened at the off road event recently, off-roading has one of the best safety records in regards to fan safety in motorsports, and new and exsisting safety measures will be enforced. Should we place a moratorium on all teen aged drivers being able to drive because of an accident while texting that killed a family of 4. It was an accident. " Can't we ALL just get along?"

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

What about the folks in places like Chester, CA? Should our policies turn their lives upside down. This was a case of closing an area to uses that had been in place for many years. This was a "restoration" not preservation. The "preservation at any cost" approach totally disregards the impact on humans. Increase appreciation by closing areas to access. What a crazy concept! Things out here in the West are quite different than back east. There's lots of forests and lots of land. But on the forest management issue, ask anyone who's been affected by wildfires if the overgrowth is an issue. It certainly has been in the Arizona fires of recent years.

Just wanted to say that I demoted because the fees have already been paid for registration etc. on all those "bad" things you listed. Entering any National park, state land or whatever there is a fee and they are generally per vehicle, persons, etc.

We keep finding more and more wildlife venturing into residential areas b/c they have nowhere else to go. The last thing we need to do is mine a beautiful area. We have no right to continue to destroy mother nature and all its beauty

Motorized bikes used to be the popular vehicle of choice in my area. Now it's the bulldozers that took over natural wildlife and really killed it all. Small time recreation is not acceptable but wildlife destruction is more than welcomed? How's that so?

Sharing- As a life long OHV user the only encounters I ever have with hikers and those touting the idea OHVs don't share due to noise and "scaring" others have been ON A ROAD OR TRAIL. Like 99.9% of OHV users I never go cross country yet I've had hostile hikers and cross country skiers accuse me of ruining "their good time" while on a 12' wide, snow covered, ASPHALT ROAD and on a mining trail cut by a Caterpillar tractor. If you want more peace and quiet leave the road you can't. Erosion- the latest buzz word for the anti access groups, it's gravity and water run off people. Dirt going down hill isn't a bad thing, it's nature. Health/ self righteousness- Sure walking is more healthy than riding... WRONG! Motorcyclists use more muscle groups than any other sport. If you want to be self righteous than you'd better be walking to work and not driving your car creating smog... and your not are you? It's not just health that keeps folks from hiking. My family has had 3 generations recreating TOGETHER ranging in age from 5 weeks old to 70+ years old for 40 years you can't do that with a backpack. Where are your kids and elders? If you don't realize how big our public lands are and how much room there is for everyone to do everything I suspect you have been in the city too long and you can't even tolerate your next door neighbor.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The government mindset towards environmentalism is that they can do no wrong because they are trying to protect the environment, this is a fallacy. While I agree that there are parties and companies who abuse the land and should be held accountable for it, I do not agree with writing a blank check to do it. The abuse of this loop hole by the environmental lobby is a greater crime against the American taxpayer by environmentalists than the environmental crimes they are supposedly trying to prevent. As \_\_\_\_\_ stated, follow the money. This law is not only being abused by extreme environmentalists but by the law firms that have sprouted up solely to pursue these types of lawsuits for a paycheck. It also makes for an imbalanced system of justice when a minority group has unlimited legal resources to push their environmental agenda against a popular public activity such as OHV groups that have to raise their own money to "TRY" and retain the lands they have used for years and are now losing because of this law. It is an unbalanced and unfair misuse of taxpayer dollars.

Since April I have been listening to OHV users pound this site for access to federal land. I really think your point was made a long time ago. I challenge each of the OHV crowd to come up with ideas that do not relate to OHVs. The ideas I have submitted to this site are all totally different. Not everything in this world relates to your transportation desires. So let's hear some originality.

As cities expand, recreation use is jammed into a smaller and smaller space. Then it does more damage to the land that is left. Fight to keep the cities corralled. Fight for open space. Don't blame things like this on environmentalists. It's about urban sprawl, which is driven by population growth.

Hey, I'm sure it's nice to live there in the Cache NF. When city folks get a rare vacation, they go to the national forests and find mines, clearcuts and a million miles of dusty roads where they thought there was going to be solitude. Buba, it ain't just your forest. You're probably one of those folks who expect the government to provide you with a job, then you complain about the welfare society. There's not enough wilderness.

here you are again, posting the same drivel. You say "There is more forest land now than there was 100 years ago." Where is it? On Mars? Well, let's see. From satellite photos, it looks like a clearcut. Is that what you are calling forest land?

A better question is "are the Eco-groups using their own lawyers to bill the government at a higher rate than they are paying their lawyers?" And yes, you can google the EAJA and read it for yourself. It is unbelievable, but TRUE.

I was recently chastized by a day hiker who drove his Land Rover to the top of Stoney Pass, Colorado, to go hiking because I was riding an ATV. He ignored the fact that he had pulled his Land Rover to Silverton, Colorado with a diesel Motorhome then drove to the top of Stoney to go hiking but accuse me of destroying the environment. It is time for some logic to get injected into the discussion. I rode all day on 3 gallons of gas, How far does 3 gallons move a motorhome? A family picnic at 12,000' is the best way to teach kids and grandkids about all that is wonderful in the outdoors and it matters not how you got there, Walk or Bike or ATV or Jeep.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

"Ban them! Get rid of them now! They're a recipe for destruction and abuse of our wild and rural lands!" Your life is a recipe for destruction and abuse of our, not your, wild and rural lands. Shall we ban you?

Most wildlife sanctuaries and preserves are woefully understaffed. Those who do work and wish to work for them have little or no idea the type of habitat eACH species requires. I would suggest a course of study and training for those individuals with qualified personnel as their guide to what and how they should conduct their various jobs. One main issue would be to watch out for poachers and hunters and trappers who beleive that every wolf cougar and beaver etc is theirs to do with what they want. If and when they catch someone in the act of violating the law they should immediatly report them to the proper authorities in order that they may be reprimanded with a stiff fine and stiffer jail sentence. If this procedure is followed each time the wilderness areas and preserves will begin to be what they were set out to be - a safe haven for animals to live in and with nature without fear of human detrimental interference. This also applies to Alaska, and idaho. Hillary Bartholomew T

OFF road vehicles are a small factor in the environmental impacts compared to what's really going on! What about all the cities full of millions of cars, buses, all the green house gases... what about airports and oil spills? Don't you think that wild animals are being affected by the millions of homes built every year?I live in the forest (literally) and we are working with the USFS reps to keep trails open where I live and to make sure that we provide the correct information and educate our OHV visitors when they want to come up and recreate.

I would also like to add that irresponsibility comes in all walks of life. How many forest fires have been started by irresponsible hikers/campers that did more damage in one fell swoop then 10 years of off roading? Why are the keep our wilderness clean crowd not coming to the desert and having clean up efforts to clean up after the illegal border crossers? There is much more damage being done there. Much More. I always pack more out than I pack in and I have always taught my children responsibility on and off the trail. Why should my family not have access to public lands? This is the land of the free is it not?

People who drive off road vehicles have no respect for nature or the rights of others. Please ban or restrict their access to public places. WRONG!!!! Talk about generalizations. Vehicular profiling??? I am a long time off road rider as well as my family. My children have always been taught to respect nature, stay on trails and pack out more than we pack in. If anything we are conservationists because we don't want our areas of natural beauty that we enjoy on dirt bikes to become another subdivision, golf course or strip mall. Let's ban all of those in the name of preservation. We have seen irresponsible behavior from many different users of the wilderness from equestrians, hikers, etc. We have had forest fires started by those hikers who cannot seem to figure out how to put it out or it's no ok to just leave it. Let's get some of the wilderness protection crowd out to clean up after the illegals and the illegal highway heading north. Talk about destruction of desert wilderness areas, I have seen cleaner landfills. Prioritize, folks.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I feel the stonewalling and lack of collaboration is not on the part of OHV groups, rather Sierra Club, etc who are unwilling to compromise on ANY issue. They have a our way or the highway attitude. The majority of my friends and most certainly my family who all ride, do so responsibly, safely and pack out way more than we pack in. I see a lot more destruction of our lands by construction, shooters leaving their brass, and illegals heading north. If the Sierra Club, et al, were really concerned about cleaning up the existing wilderness areas they would be cleaning up the illegal highway. I have seen cleaner landfills than those areas. Don't point fingers at OHV's for all of the environmental woes. Let's end urban sprawl, strip malls, new highway construction instead of limiting the ability for many to enjoy our PUBLIC lands. This is the land of the FREE is it not?

The amount of public land open to OHV use has already been reduced by over 30% in the last 25 years. I pay my taxes just like everyone else. I should be able to engage in responsible recreation in designated areas. I don't like it when people try to take away the tiny areas we have left for ohv recreation.

The adjacent dunes that are in the wilderness area are not as large as the ones in the OHV accessible area. On two separate occasions a group of hikers / ecologists attempted to hike in the designated Wilderness Area. Neither attempt brought them even a mile into the 29,000 acre area before turning back under strenuous walking conditions. The last known attempt was cut short. On 04/22/06, Ecologists & students attempted a hike on Earth Day. Photos were later published showing the group walking in dry stream bottoms and desert hardpack areas along the dunes edge... not even in the Sand. They finished their 'walk' on State Hwy78!! We're talking about dune Slip-Face Walls that travel for mile after mile after mile that are over 100 feet tall. Witches-eyes that are the size of a 2 story house, and lee-ward sand that is so soft that OHV tires feel flat. Even if transporting yourself in the dunes WAS possible, you would need to carry no less than 1 gallon of water per 2 miles of travel on a avg 80 degree day. There is no water in the dunes. This means that carrying a whopping 23 pounds of water would bring you no more than 6 miles. For this reason, OHV riding alone can mean your death! I'm glad you think I'm funny, but I'll say it again Jack, you simply cannot get to these places without an OHV. "Since April I have been listening to OHV users pound this site for access to federal land." First off, I don't care what you've been listening to, or what you think of it! (mirroring your comments from another thread) . You might be an old man, but I am not. I already have OHV access to Federal Land, AND I USE IT!! But you can bet your paycheck that I'll be beating my drum about it in a thread on this forum attempting to take that away. "I really think your point was made a long time ago." Apparently it hasn't as we sit here in an idea titled "Ban OHV use on federal lands" "I challenge each of the OHV crowd to come up with ideas that do not relate to OHVs. Not everything in this world relates to your transportation desires." Don't hold your breath waiting for me! I do not care about anything on this forum nor in the AGO Initiative other than OHV related ideas. Now, can we all get off our high horses and make a deal to work together? { <a href="http://ideas.usda.gov/ago/ideas.nsf/0/6916F48ADD8B4B76862577980082041D?opendocument" rel="nofollow" target="\_blank">Link</a> }

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Would the author of this idea please respond to my question in post #18: "Gaylord Yost, Off Road Use is already limited and restricted on Public Lands. Exactly what is the proposition here???"

wrote: "BLM only closes lands where there is resource damage. " This is not true. BLM closures will occur per an approved Recreation Area Management Plan. While closures may occur in a place that has no resource damage, OHV access can be granted to Critical Habitat areas for a 'threatened species'. 24) Jack Duggan wrote: "If the OHV crowd were truly interested in havng appropriate places to ride, they'd get behind this kind of planning and quit whining about "losing" trails that were created without restriction." Several of 'us' are members of OHV Organizations who are "behind this kind of planning" already. But you can bet your paycheck that when some inconsiderate, MY WAY OR THE HIGHWAY user starts up an idea on this forum titled "Limit Off Road Vehicle Use on Federal Lands" and makes vague and unsubstantiated claims like "The recreational use of motor vehicles on federal lands is destructive to the land, destructive to wildlife habitat, noisy, polluting and has reached a stage where it needs to be curtailed and reduced." that those same people will be whining about "losing" trails, regardless of when they were created! Especially if the author of such junk isn't going to answer questions to the 'voting public'. Working Together. No one wants to make a deal, fair enough. But let me tell you what folks. If I can preach to the far reaches of those on my side of the table here, you guys can do the same on your side!! Adding substantiation to such an absurd idea just brings us farther apart.

wrote: "As far as I can determine the biggest threat proposed by ORV is the carbon dioxide emissions and energy consumption from getting to a place to ride." I hear you on that Justus! Heck, I used to be able to ride in my own County. Not anymore. Now, to get my family and OHV's to our recreation area, we drive past 3 closed OHV areas that would suffice just fine, and burn 30 gallons of gasoline to get there (one way!).

OHV is Fun, yes. And I can tell you as a matter of FACT that for my family, it does foster an appreciation for the LAND (I can't say Wilderness, because I go the Desert). Now, the rest of your OPINION about riders being "inconsiderate of neighbors, wildlife, and any damage they might do", well, that's your opinion. It's nothing short of unfortunate that the OHV users around you are acting like this, but with all due respect please don't cast this vague and unsubstantiated image over an entire community of people, myself inclusive!

This has been a big discussion in 'my area'. Hundreds of visitors have seen Rangers allow a big law to be broken while chasing a little law. "Tripping over a dollar to save a dime". EXAMPLE: Rangers have been known to let a group of vehicles by who are violating the Prima Facie Speed Limit (15mph with 50' of people, camps, etc) to write a littering ticket to a guy for having a soda can on the ground in his camp. I for one say, before any new laws are implemented, we need to properly ENFORCE existing laws!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

As an avid OHV user and 'tread lightly' advocate, I strongly agree that OHV groups and riders need to do more to cultivate a responsible environmental ethic among all OHV users. I would think that this is what every OHV user would want. Now, this said, your OP attempts to walk the fence between two parties, but it really comes close to (or maybe does) offend an OHV community causing them to demote the idea on this forum, I only hope that they haven't done so in their heads!!! In general OHV groups do preach the 'Tread Lightly' concepts. One of the largest in your area is the American Sand Association. Check it out. Beyond that, where the rubber hits the dirt, 'my camp' passes along this ethic at every opportunity. In your OP, you wrote: "I've watched as these illegal OHV routes greatly facilitated the colonization and spread of several invasive and noxious weed species, especially cheatgrass and Sahara mustard." Can you provide any science to support this statement? Because I question how you think an OHV in the dry desert is facilitating this process? After riding my quad literally thousands of miles in the California Desert, I can state as a matter of fact that I've never brought it home with invasive and noxious weed species seeds on it. It's not like OHV's in the Calif Desert carry seed born mud and drop it off in other areas. 99% of the year, there is no mud, as it's a desert. If so, I would have invasive and noxious weed species growing in my lawn, where I wash my quad off after every trip. It's nothing less than unfortunate that the Mojave desert tortoise population is declining (and I thank you for not blaming that on OHV as there is science to the contrary), but I will not let you place blame of a fire killing more tortoise on OHV if your link is to an OHV transporting a seed. The whole concept is kind of a stretch to begin with. Other 'elements' transport seed much more efficiently than a machine that is not designed to do so. Wind. Birds Animals Flowing water I am receptive to your idea that OHV groups and riders need to do more to cultivate a responsible environmental ethic among all OHV users. But you lost my vote in your OP. If you would like to revise it to something that is not blaming OHV for "greatly facilitating the colonization and spread of several invasive and noxious weed species", I will change my vote.

"Get out and Walk"?? In the desert, how much water can anyone carry? This will restrict your travel more than anything! If I'm doing my math right, 5 gallons is 38 pounds! You need what, 2 gallons per day when hiking? So, you can walk 1.25 days into any Area. So, if all you can carry is 38 pounds of water, an area 5 days wide is 50% inaccessible by human travel.

"Promote this people!" How? When I don't know anything about it. The OP provide no sources for the stated information and I can't help but question this statement: "It would destroy the worlds largest and most productive salmon fishing grounds in the world and forever polute all the surrounding fresh lakes. " Is this an undisputed fact? It's certainly stated as such.

I like this concept, as I hate those guys that screw things up for the rest of us. However, enforcing this rule would be just about impossible. As it is, a lot of these jerks arn't even getting a ticket when Law Enforcement see's them break a rule/law! Seems they'd rather go for the guy sitting in his camp with a soda can sitting on the ground. Littering tickets are easier to give out!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

"on A lot of the hiking trails in my area (and I've heard similar anecdotes from other regions) are practically destroyed every spring by masses of ATVers (including trails where ATV use is supposed to be restricted)." \_\_\_\_\_, This is a law education / enforcement issue. If you are stating that OPEN ATV trails are being used and receive damage from ATV's, then these OPEN ATV trails should have already been studied with a Biological Opinion and a Management decision for the ATV use effects. This input from you should have been provided by you prior to the Management Plan being written and implemented. If you are stating that ATV's are being used on trails that are CLOSED to ATV, then you either have irresponsible ATV users or lack of signage / education for the ATV Community. This would call for more education and enforcement. While your closing sentence states, "Law enforcement needs to get serious about showing that public trails are NOT the place to do so. ", I vehemently disagree with you. Where ATV's are permitted on select Public Trails, this is in fact, "the place to do so". Sitting on the seat of my OHV, I will agree that Education and Enforcement are important and should in fact be increased. But your approach with this idea is attempting to strip me of my legal rights to ride in an OHV accessible area. DEMOTE.

I strongly disagree that OHV use as practiced fosters any appreciation for wilderness. It seems to me that this is largely a thrill-based experience, and riders are inconsiderate of neighbors, wildlife, and any damage they might do. I live in a semi-rural area where riders tear up the hillsides, where they leave behind soil ground to a fine dust, dead plants, and trash. I have seen the destruction; I have yet to see any appreciation for the land they use up.

The states and the people of those states are the ones responsible for their lands, not the Federal government and the other 49 states. National lands are supposed to be limited to the "erections of forts, magazines, arsenals, dock yards, and necessary buildings." All other uses of land within the United States are to be subject to the State government and the people of said jurisdictions. These institutions are just another statist effort to control our lives. I do not need someone else to tell me how to live my life or raise my children nor tell us what activities are acceptable or not. As long as I am not in direct conflict with rights of someone else, I should be free to do as my conscience leads me. I find such efforts by others to be anti-freedom, the same way I find seat belt, helmet, etc laws to be repugnant. You are probably one of those who think the 16 year old girl shouldn't have been allowed to attempt to sail around the world. Who are you to tell whether someone is qualified to operate an ohv. Nothing about one's age gives any indication of ability. As Benjamin Franklin stated: "Those who would give up essential liberty, to purchase a little temporary safety, deserve neither liberty nor safety." Also Isocrates: "Virtue is not advanced by written laws but by the habits of everyday life; for the majority of men tend to assimilate the manners & morals amid which they have been reared. Furthermore, they held that where there is a multitude of specific laws, it is a sign that the state is badly governed; for it is in the attempt to build up dikes against the spread of crime that men in such a state feel constrained to multiply the laws. Those who are rightly governed, on the other hand, do not need to fill their porticos with written statutes, but only to cherish justice in their souls; for it is not legislation, but by morals, that states are well directed, since men who are badly reared will venture to transgress even laws which are drawn up with minute exactness, whereas those who are well brought up will be willing to respect even a simple code."

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Federally protected wild lands is unconstitutional. The Constitution at this time only allows the federal government to "own" lands for the "erection of forts, magazines, arsenals, dock yards, and needful buildings." Nowhere does it say the federal government is supposed to confiscate lands from the states or the people to "protect" it from them. It is the stewardship of the states and the people of those jurisdictions to accomplish this. If anyone wants the federal government to do this, the Constitution needs to be amended to accommodate this. Stop trampling the Constitution under your progressive/socialist feet to force your ideals upon everyone else. We are supposed to be a country of laws. The Constitution is the Supreme Law of the land and no law passed by any body, executive, legislative or judicial, state or federal, can bypass this. The only way to do this is to run through the amendment process.

The Constitution does not grant the power to the Federal government to purchase lands for preservation or conservation purposes. This is a right left to the state governments. The Federal government only has the right to "own" property for the "erection of forts, magazines, arsenals, dock yards, and other needful buildings." (Article 1 Section 8). The Constitution is continuously trampled under progressive/socialist/statist feet. Some of you need to get your facts straight as well. There is more forest land now than there was 100 years ago. Responsible people and organizations, including for profit corporations, know they have to replenish the resource. According to the US Forestry service, since 1900, there has been an average of 745 million acres of forest land in the United States, with the lowest point being in 1920 at 735 million acres. In the year 2000, it was up to 749 million acres. I think there are too many people out there who have been too willing to accept the indoctrination out there, like the Story of Stuff.

The National Park system is another example of an unconstitutional usurpation of power the Federal government has taken from the States and the People. The Constitution specifies that the Federal government may only "own" lands for specific purposes as listed in Article 1 Section 8: "erection of forts, magazines, arsenals, dock yards, and other needful buildings." Where is it that National Parks are found here in the enumerated list of acceptable situations for the Federal government to own property. Also, by the Constitution, the federal government is only allowed to "own" these properties as specified by the consent of the state legislatures, not by presidential executive order. It is just another opportunity the progressive/liberal politicians and other statist/socialist/communist followers have foisted upon the people to fulfill the steps to move this country from a representative republic to a totalitarian socialist state. In fact, the confiscation of all lands, thus the abolition of private property, is the first "plank" of the communist manifesto as directed by Karl Marx and supported by Vladimir Lenin.

It is my belief that if all users were properly educated then we wouldn't have the hot dogger issues. It seems to me that those that don't seem to give a rat's behind are the ones that are uneducated about trail erosion and such. I have seen people that just want to wheel & tear it up come round full circle once they have been educated. Plus many clubs & coalitions are more than willing to volunteer to maintain what they are allowed to use & even places that their rigs can't go.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Public land should be accessible to the public. It's our property, not politicians in Washington. I believe some careful restrictions should be in place to protect wildlife and endangered areas. But the government should stay out of overly-restricting access for horseback riders, hikers, and OHV riders. Give us back the millions of acres the government has been systematically grabbing over the last two decades...

Seriously, do you think off-road vehicles driving around in the forests have more of an impact on the environment than the millions of cars, buses, trucks, trains, airports, refineries, manufacturing companies, etc. throughout the country!!?? Animals are being pushed into urban areas because URBAN AREAS ARE MOVING INTO THEIR LAND!! It has nothing to do with me driving my motorcycle or truck in the wild. Off-road vehicles are noisy? Maybe but try sitting on the curb next to the freeway next time you have a few minutes and compare that to a few trucks or motorcycles driving past you in the forest...seriously...which one is louder or noisier?

I have been an avid off-road enthusiast for most of my life. I ride motorcycles and four wheel drive trucks all over our national forest system and follow the "tread lightly" way. I leave the area as I found it if not better, and always pack out my own trash and the trash I see around my campsite. We stay on marked trails and help by clearing trees and debris from the trails all the time. For the most part, my experience is that people take good care of the land. Where I go off-roading only serious people manage to get out there and they usually share the same passion and respect for the land as I do. I see more garbage in the mall parking lots than I do off-road, maybe somebody should ban them instead??

Generalizations are so believable. I think that all issues should be so clear as this one. As far as I can determine the biggest threat proposed by ORV is the carbon dioxide emissions and energy consumption from getting to a place to ride.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Come on folks, don't be ridiculous and don't think just wheelchair or electric scooter when it comes to disability! How about a guy who is over 60 who has worked since age 14 who cannot take a canoe onto the canoe route in Kenai National Wildlife Refuge? I did for years but now it has been changed to Wilderness designation. I can't carry the canoe, but I can push it on a little device with two bicycle wheels. This is NOT ALLOWED in wilderness areas though. I would love to take my grandchildren canoeing, looking at swans, fishing for trout and char and camping in this area I had used for more than 30 years. The facts are my bicycle tire tracks cutting a line in the muddy trails full of boot prints would upset the wilderness purists and break the law. This is the kind of access that can be addressed. We don't have to use Mt Denali is to tough for a wheelchair as a reason to support keeping those unable to carry loads or walk long distances out of wilderness areas. There are lots of wilderness areas that can accommodate all citizens. Or, maybe we should have wilderness areas set aside for the handicapped. Areas where there may be a 4 wheeler trail for those unable to walk, a guide/chauffer who can take someone who may be paraplegic or unable to handle an OHV. How about a trail for those who can walk with the aid of a cane or crutches but no access for OHV? If we set down and discuss this issue I'm sure we can come up with access for or areas for the handicapped. What do those of you who so flippantly dismiss the desire for wilderness travel by the handicapped think of special wilderness for the handicapped only?

We believe that the primary challenge for conservation in the 21st Century -- and therefore the focus of America's Great Outdoors -- is how to sustain working landscapes, working communities, and working people. And while no single approach is appropriate in all situations to achieve this mix of objectives, we believe that one of the most important building blocks in any region is strong, inclusive, and locally-driven partnerships -- such as the Blackfoot Challenge, Rocky Mountain Front Advisory Committee, Coalition to Protect the Rocky Mountain Front, Swan Lands Coordinating Committee, and the Southwest Crown of the Continent Project.

Create the right set of incentives and opportunities for federal agencies to be effective partners in community-based and large landscape conservation. While there are many good examples where federal agencies are excellent partners, the nature of the administrative system often makes this a challenge. This is not a suggestion for agencies to abdicate their statutory authority, but a realization that agencies bring valuable resources -- information, expertise, funding, and authority -- to the table. What we need -- in the Crown and throughout the country -- is a way for the agencies to both empower others to share the responsibility for solving problems related to public lands and resources, and to be empowered to engage in more flexible, adaptive means to achieve their mission and mandate.

More broadly, we strongly encourage expanded use of LWCF funds for conservation easements over private, working lands that are integral to important public lands. While we have had great success in the Crown using LWCF funds for this purpose, landowners from other landscapes tell us it is very difficult to access LWCF funds for conservation easements.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I guess I don't understand. Most people chose to live in an area that is surrounded by federal land. There must be efits. Could it be a tranquil setting? No crowds of people? With a gowing population and more pressure for development, some land use rules have to change. If not, eventually won't increased use and development change land use anyway? More land should be preserved. Both as wilderness and as multi use land. Soon the country will be one big suburb.

I had to give this a Demote because of Line 4, sandwiched between numerous other ideas supporting responsible horsemanship on public lands. Line 4 states that: "Use of Federal funds to purchase land that will allow any form of recreation (including hunting) should mandate the inclusion of ALL forms of recreation. The exclusion or prohibition of equestrian, mountain bike, and/or OHV use should occur only through a methodical, transparent and reproducible evaluation process that includes input from all stakeholders." I see a huge difference between a trail ride and OHV use. I can support conscientious use of wild areas by horses, but not by noisy and polluting vehicles which tear up the landscape and habitats.

I have been trying to safe a parcel of land on a manmade lake we live on. It was just 1 Million Dollars but nobody helped. Now a builder bought the land and made it into a horrific subdivision. With lake access for every lot which means lots of bulkheads and no room for "water animals" to survive.

I have just read through many of these comments, and hear the message from those who use motorized means on our nation's trails that it is their "right" as Americans to do so. I suggest that these folks are putting their personal interests first, and are not truly concerned about what remains of our wild lands nor about others who prefer not to encounter ATVs, dirtbikes or snowmobiles when out for a hike. If I head out to hike a trail, it is for a sense of peace and quiet that does not exist in our cities and towns, to escape pollution, and to appreciate first-hand the wonders of nature. Motorized traffic in such a place makes all of the above impossible. Those who would push for an increase in motorized accessibility to trails are being selfish by feeling that they have the right to despoil these areas, to affect the average hiker, and to affect the animals and birds that call these places home. Humans have caused great damage to our enviment in many ways, and it is time that we started putting our planet first.

I have mobility issues, but I still don't want any more OHV/ORV access in our park lands and wild lands than is already there and would actually prefer that most of the existing access be revoked. The erosion, noise, pollution and disruption of wildlife are not worth it!

I have noticed that most UTVs have roll cages, and their ads show drivers skidding around corners on trails. Seems to me they're built and marketed to be driven so recklessly that they can sustain a rollover accident. If I were an ATVer, dirt biker, etc., I sure wouldn't want to be out on trails where UTVs are being driven so intensely that they're rolling over. Keep these monsters on the racing tracks where they are apparently designed to be driven.

I have to agree with this. What's the old saying - One bad apple spoils the whole bunch. That goes for any group including non-OHV groups. I don't know why the OHV group was singled out, shouldn't everyone be included?.

## Discussion Question 2

### *Written & Online Comments*

*(cont.)*

I haven't heard anyone say that OHV's should be allowed on every acre of land. All we are asking for is to keep the trail system that is already in place, and not to close more trails. In some areas where there is overcrowding there does need to be a few more trails to lessen the overcrowding. It seems to me that the selfish ones are the environmentalists. They want the land to be used only by hiking, and sometimes for equestrian use. I look at a mountain range every day that is over 120 miles long. There are 3 OHV trails, and many many more hiking trails. That is fine with me, but there is a big push to close one of the trails that was originally made to access a cabin, and lake at the top. This cabin was built by my great grandmother, and the cabin has been there for over 100 years. Hikers have taken over this road, and declared it as theirs. You tell me who is the selfish ones?

I live in the middle of the Mojave Desert and trust me, (or don't- come visit the desert on foot) most of it can not be visited by hiking, there are millions of acres of BLM, B of R lands, much of them have limitations, no OHV even though there are hundreds of miles of dirt roads for power lines, gas pipe lines old mines etc... Allow OHV use and off road racing on the areas previously disturbed. The fees to put on a race are outrageous! BLM really socks it to ya!

I see a lot of people demoting and a few promoting, but not many taking the time to discuss the balance between spending on recreation versus hospitals, police, etc. My question is designed to elicit some actual input from everyone on where the line is. For instance, because of many of the restrictions that are placed on open lands in my county, our budget is negative. We no longer have a hospital. Response time from sheriffs is in hours not minutes. All firefighters are volunteers, and most are over 40 years old. I am well off enough to move or drive to the next state where the nearest hospital is. However I do see the impact this has on people with lower incomes. Some people claim recreation brings jobs, all I can say is, not here. We have some organizations willing to build more trail in my county, but this does nothing to alleviate the real suffering that exists. I don't see anyone wanting to step up and help us with medical or law enforcement costs. Although I too like to recreate, and see value in providing recreation opportunities, I can't agree that recreation is "basic." To me, and most people, "basic" means provide for emergency health, sanitation, and law enforcement.

I strongly disagree with the "fair market value" comment. Spending time in nature is critical for mental/emotional/spiritual health - it is not a "commodity". Private businesses can offer more services if they want to attract people at higher \$\$ rates. KEEP THE GREED MOTIVE OUT OF OUR PUBLIC LANDS. I find it despicable that some parks charge higher fees for "view" or "waterfall" sites. Talk about catering to the wealthy!! This is disgusting and should end immediately on all public lands.

I think I agree with you, . I personally believe that we have - as a industrialized society - lost our connection to the natural environment. By studying past cultures and the ways they lived as part of the landscape (rather than OFF of the landscape) we can solve many problems, ranging from environmental degradation to population growth. There are mutually beneficial ways that human beings can live on this planet and (tell me if I am wrong, ) it would be more sensible for our policy-makers and our government to be researching such methods.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I think the intention behind the idea is good, but using only a website to track public sentiment is not practical. The digital divide may be shrinking, but it still exists and there are those who may not know or have the time to visit such sites. I am demoting the idea because of that, but urge the AGO team to to expand outreach/collect information in such a manner.

I wonder how many people realize that state agencies use private sector trappers to control animals in public parks. Do you know what would happen if we let the beaver population go unchecked? How about coyotes and wolves? Mabey you like hiking with rouge bears? It is too bad trapping is so close to becoming a lost skill. More people need to take interest.

Just because you don't like big gov telling you how to live your life doesn't mean you are racist. The polite term is tea partier. the other term has sexual connotations and is just plain crude. Some folks assume others are lazy just because their disabilities are not visible. Someday they will be sick and in pain, and look back with regret at their rude insensitive comments (fat and lazy indeed). Some serious illnesses require treatment with steroids, causing severe weight gain. Anytime I see an overweight person, I do not judge, because they may be in that trap. Let's all treat each other as humans. I demote because your idea encourages too much of the intolerant "healthist" attitudes seen here.

I would love to see you come on a ride with our group and tell us how "lazy" we are. You have no idea what you are talking about. you want to make me change my name to something alittle more respectable.

If some of my friends in our Civil War reenactors regiment saw my vote they might "reenact" a firing squad! But let me take a states rights position. I don't levies and excise taxes on top of what is there now, but could current tasex be adjusted , channeled, to accomplish the same purpose?

If you are going to cut the funding for the US Forest Service, than you MUST increase the budget for the National Parks and include former Forest Service locations into the National Park program.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

If you like this idea then you believe that the government should have the right to confiscate all land in the United States for any reason. You enter a discussion like this with great intentions because whatever happens will have no effect on your life. So you can be magnanimous. You can show off to each other what great hearts and forward thinking intellect you consider yourselves to have. You place the value of dirt above the value of human beings. You justify your position saying you're trying to save the planet or the environment or whatever cause celeb floats your boat. What you don't seem to understand is that you have no credibility. Your cities that you live in are cess pools, only less habitable, environmentally speaking. Especially if you compare it to this area. So when you come to me and say save the planet starting with your back yard. I say YOU FIRST, why don't you save your own area first then maybe I would be more receptive to your Pollyanna perspective. What do you think will happen if the Federal government goes for this large of a land grab. What happens to all of the families and business. Who replaces the accumulated wealth lost to this bad idea. Put the map of the proposed area over a comparable map of the area in which you live. Remove all commerce and see if you can still live in your neighborhood. You either hate people or feel that your own lives have greater value than my life does. Your wife and you wouldn't treat your dog this poorly.

I'm concerned about the type of help private landowners would get, but since they already own the land anyway, discussing ways to keep the land wild is a good idea. So I reluctantly promote this idea.

I'm not sure what this topic is advocating. I believe we need to preserve more wilderness and multi-use land. I'm not an environmental extremist. I just can't stand the thought of our last wild areas being sold off for the quick buck. A growing population and pressure for development mean we either lose what we have or we choose to preserve it.

In the brief seconds it takes a hotrodding 4-wheeler to scream over a piece of virgin land, several hundred years of nature and beauty are destroyed. This is exclusive of the fossil fuels burned, the hundreds of thousands of pounds of waste product pumped in the air as exhaust, and the unbearable noise pollution. This kind of destruction should be limited to private land ONLY.

In this area the max size for an ATV trail limits them to ATVs only yet UTVs do less damage to the land and are slightly wider. Even the forest rangers use UTVs but UTVs get ticked if they use the trails. The rules were written before UTVs to keep 4WD jeeps off the trails but the trails are wide enough for UTVs. We have been unable to get anyone to change these outdated rules. Please change the rules to allow UTVs (side by side) on the existing ATV trails.

Inside of our national parks? Privately owned property development has decreased the wildlife habitat but I am unsure where it is being lost in national parks.

Instead of putting people's jobs on the line to fund the parks why don't we have a day use fee to fund the park? OHV parks in the mid west and east coast are mostly privately funded so it can be done. We pay upwards of \$50 per day to enjoy the parks we go to. That only gets you in the gate. The park can also make money on concessions and even merchandise. Not every want needs to be a burden on the already overtaxed taxpayer.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

It all sounds to be just the right thing but I for one do not trust the BLM after their horrendous management of America's Wild Horse and the BLM's management of our public lands. I do not trust this agency. There are too many cattle grazing leases being given out. Who is the watchdog for the BLM? As we learned not to trust the MMS, I think the BLM needs to be investigated and probably reorganized.

It annoys me when everyone thinks that the land is for them to with as they see fit. Everyone is talking about I want it to be this way or this way so that I can do what I enjoy as if it belongs to just people. What about the inhabitants who actually have to live there? Shouldn't their needs come into play too? For them it is not about I should be able to have fun any way I want but what do I need to survive. Let's try expanding our wants and needs beyond people. We share this planet with a lot more than just other people.

IT is always great to read the responses of Anit-Acess crowd. Since they never have logic on their side it always resorts to the same tired old tactics of name calling and trying degrade the person speaking. states his feelings in a logical manner and then Mr wants to degrade him with name calling comments that show just how smart Mr really is. At least Mr Harris is making a point in a manner which adults speak. Grow up Mr, the public has grown wise to tactics of people like you and see through them for what they are... shallow attempts to quite the public.

It is important to stay on the trails and recreate on property that has been designated for OHV use. The problem is unless we can find a place for people to ride they are going to trespass. It is up to us to educate the public on where they can go.

It looks like some group of people that are particularly interested in those vehicles tried to use the forum as a way to push their agenda. Ick. Personally, I think those ideas are much more about their enjoyment of their own vehicles than conservation.

It seems that there is a huge divide between those who like OHV use and those who don't. We need to find a way to work together so we can all enjoy our wild spaces. Education, training, and respect are the keys. ; ;Towards that end, let's create a new class of driver's license for Off-Road Driving. ; ;It could include training in safety, technique and skills, rules of the (off)road, courtesy and respect, and conservation. ;This was a good idea, to bad it was withdrawn.

It's not just about trails, OHVs use gas, and add to the pollution problem and add to global climate change. If they create an electric OHV -- and there are a few small bikes that are electric already then more power to you. Until then I cannot support gas guzzling off road vehicles using public lands while they destroy the enviment

It's one thing to pay for using a developed boatramp or a campground with water, picnic tables, toilets, and trash collection. It's entirely different to pay to park your car at an undeveloped trailhead or scenic pullout. The latter should not be permitted.

It's proven that 4x4 use actually destroys public land. As a patriotic American, we need to discourage this selfish, wasteful behavoir and keep public lands so that our children's children's children can enjoy them.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I've hiked large areas of the forest, and wherever OHV's had passed, the trail was more eroded, and difficult. What is fun for OHV's is that thrilling ride through mud, but for hikers this makes the trail dangerous. I'm sure it is also nice to get out further than you could walk, but I would prefer OHV's use private lands, rather than National Parks. There is something incredibly beautiful about time spent quietly in the wilderness. OHV's change that experience for us, making it full of man made noise and pollution, and taking the clean, quiet majesty away.

I've watched OHV's and dirt bikes churning through the trails of the Sonoran Desert, turning them into deep useless ruts at the fastest speed possible; while their drivers may be enjoying the thrill, they definitely are not experiencing or caring about the features of their natural environment. Their place is on private lands, not on public lands or in the forest, wilderness and National Parks we have set aside to conserve for generations to come. By definition, put a road through it or a vehicle in it, its no longer a wilderness.

You don't need to be against wilderness, though, to save money. You need to be against WAR!

and , thanks for the comments. yes, it was a confusing comment, lumping the 2 together. The only thing ORVs and feral animals (domestics gone wild) is that they both have a propensity for water sources, washes and sensitive habitats and can be destructive. As of now, certain locales have experienced damage from wild horses and burros, pigs, and to some extent wild turkeys and hatchery-raised trout (a few examples). Humans have placed these animals in places that are not suitable for them and they can suffer or compete with native wildlife. The idea of preserves for the wild horses and burros where they can live a healthy life is a good solution. As for ORVs, they need their own space too. I would love to donate for wildlife preserves. ORV sites should be paid for by the users, since the vehicles are destructive, sometimes driven unsafely and create a nuisance to other public land users. Touring at low speeds is the only public land use that should occur.

-If you had the choice to keep riding for the rest of your life but at the cost of making a single species extinct, would you?

-Nobody is trying to force their views on you. They are just stating plain and simple fact. We are losing more and more open space every day, to the tune of 5000 acres a day, and more and more species are becoming threatened or endangered every day. That is just plain and simple FACT not someones opinion. You can bury your head in the sand and pretend nature is doing fine or maybe you do not care one way or the other if nature survives past your lifetime (that would be my guess) but if we do not start preserving what little nature is left all you and your family will be riding your precious ohvs by and through is clear cuts, oil rigs and strip mines. Is that what you want ?

Congress cannot be trusted to fund the parks on a long range planning basis. States should help and volunteer orgs can add funding for special projects. Who gets cut first? Parks and recreation! Western states think they can regain the park land by being obstructionate.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

this will not be cost effective since the type of worker will not have any of the skills of the farm worker of the 30's They will require more supervision and discipline. City youth will be hard to recruit. Select with care.

, I was in death Valley for a week this year in prime fr time and the contrails were everywhere, and a stealth bomber was practicing aerial refueling. I don't see any limits on what the air force does in the skies above Death Valley. They were right above the campground at Furnace Creek all day every day. That's not to say watching a stealth bomber is not interesting. It's just not what I expected to see in a national park and it's definitely not a wilderness experience. As for the contrails, they do seem to be about weather modification. But not the government. Water companies and hydroelectric companies are spending big bucks on cloud seeding, without anyone's permission. Hughes aircraft has a patent on stratospheric seeding from 1991.

, There are 109 million acres of wilderness areas. Over half of that is in Alaska. There are 1.9 billion acres in the r 48. I stand corrected. A lot of states don't have any wilderness areas. The reason California has a relatively large amount of wilderness area is because Death Valley and the Mojave Desert are lacking water for development and the high Sierra is solid barren granite. Next, congress will designate the moon as a wilderness area to show how much they care about the wilderness concept. The last round of designations included the worlds most inhospitable landscapes. Military and other jets are so dominant in the sky over places like Death Valley, there are checkerboards of contrails almost all the time, so, though the land is untrammled by man, the wilderness looks and sounds man made. A lot of southern California wilderness has seriously impaired air quality. I don't understand how roads get included in wilderness areas, but that seems to be the wave of the future. Finite land, booming population. Politics as usual. And nothing really accomplished.

, there's a simple solution to the problem of having too much wilderness around and not having your access restricted by wilderness areas. There are plenty of areas of the country that don't have any wilderness assets. In fact, over 99 percent of this country doesn't meet wilderness criteria. I don't blame you for wanting to stay where you are, avoiding the ugly, soulless development that is rampant all over the place. When you do travel, I bet you can't wait to get home. The beauty must be astonishing. It's not there everywhere anymore. I bet you see smog moving into your area and wonder what the heck is going on out there in the world. Times are changing. If you appreciate the things you moved to your area for, you will have to fight to protect them, not just the access, but the whole quality of life.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

-Okay, now I understand. It is okay for you to criticize me and question my motives on my ideas but I cannot question your motives or criticize your ideas. Ahh, the typical double standard. Not a surprise. Here I will use the same words as you did on one of my ideas "this idea is a wolf in sheep's clothing"! Like that better? Yes here in CT where I live I have seen 2 trails I enjoyed ruined after being opened up to ohv use and a couple more not opened up to ohv use but used by atvs and motorcycles just the same and although not ruined beyond repair certainly damaged by that use. On the ruined trails wildlife all but disappeared, giant ruts and huge puddles that formed after rains and lasted days if not weeks depending on the season making many areas impassable on foot without straying far off the trail. I saw meadows ruined, streams torn up, saplings and berry bushes run down, trash strewn everywhere, broken glass. In fact one area of a trail I used to frequent before it was turned into a multi use trail had so much broken glass I had to pick up my dog and carry him because there was literally no where for him to walk without stepping on the glass. Over the months I saw less and less hikers and eventually I stopped going to all of those trails so rejoice, your community drove away the hikers and the wildlife so now it is all yours. Congratulations. In fact with so much area now opened to ohv use and so much other areas developed on I have less than a half dozen trails to enjoy but who cares about hikers and wildlife as long as the ohv community gets all the access they want right? It is like some surreal, alternate world you ohv enthusiasts live in where your motorbikes, atvs and 4wd do not harm the environment or wildlife but actually help it. Is it possible that ohvs in your world are lighter than here so they cause less damage? Are they less noisy in your universe? Are the drivers more callous and less responsible in CT than anywhere else in the world? Or is it that your community is oblivious to the damage you cause and uncaring when you do find out? I never really gave the ohv community much thought to be truthful and I always thought it was like hikers and backpackers where most were generally good but there are always the few bad apples. That was until I saw with my own eyes the destruction they cause and the disrespect they show others. This forum has also been quite an eye opener in exposing just what you people are all about. I now know without any effort of the doubt that it is indeed the very small minority that is in fact responsible and respectful of nature and others while the overwhelming majority care nothing about preserving nature and wildlife and care only about their own self centered pleasures. I still believe that ohv enthusiasts deserve areas to enjoy but I am quickly becoming more and more convinced that it should be banned altogether considering some of the comments and ideas I have read. -Actually I have had motorbike riders drive me off a trail or to be more exact my dog. He was so frightened in fact that he was shaking and it took me quite awhile to calm him down and that was after I had moved out of the jerks way. Of course I should just wave and try to make small talk though because it was me and my dog that were in the way for being on the trail in the first place right? How inconsiderate of me to be hiking in the woods with my dog on a multi use trail and causing some speeding jerk to actually change his course by an inch or so. Trust me if god had shined on me that day and I had been able to catch up with that butthole I would have been doing something other than waving to him. He showed me and my dog ZERO respect and I would have shown him the same. As far as you being courteous to those people why would you not be nice? What had they done to you? They were just trying to enjoy the outdoors like you so unless you are like that jerk that nearly ran me and my dog down and think that hikers have no place in the forest they gave you no reason not to be nice.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

-Were you opposed to the hiring of Arnold Schwarzenegger by the president to promote exercise back in the 80's? Was that "big brother is watching" as well? Where were your objections to GW allowing wire taps and screening of our emails? Was that not "big brother is watching"? The reason I took offense to remarks is because President Obama, or "O" as liked to call him, has not tried to pass any legislation on what people watch on tv like she tried to say. Republicans, and especially teabaggers, love to make Obama the 2nd coming of Hitler and I think it is ridiculous. The guy is not even a far left liberal to tell you the truth. Obviously she hates our President for reasons she has made up in her own mind and the fear seems racially motivated. Everyone has the right to access to public lands and they should continue to have it as long as it does not destroy habitat or cause harm to wildlife but lies should be pointed out.

R said it for me. The intention is good, yet the results I'm afraid won't be. For example; the Peirson's Milk-Vetch plant has been listed as a Threatened Species, this was done back in 1998. To this day, there is NO recovery plan in place. This plant was used as a "tool" to close an OHV area in CA. If the Fish & Wildlife Service didn't have radicals within, we would have a workable plan to use by now...

RI have read in a few articles that climate change and over hunting has caused as much damage if not more to elk in Yellowstone as wolves. Predators bring a natural balance, climate change and increased hunting throws that balance off.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

-I failed to mention it because it does not exist. While it does mention wolves killing each other nowhere in the article does it state that the MAIN reason is wolves killing each other. Read again and tell me WHERE in that article you read that the main reason is wolves killing themselves? Here is the quote from the article that proves it is YOU that only reads what he wants to read.. "While parvovirus and mange continue to reduce the population, part of this year's decline can be traced to the fact that wolves lost protection in the Northern Rockies under the Endangered Species Act in 2008. Wolves, like all wildlife, are protected inside the park, but when they roam beyond the borders, they fall into the state's wildlife management practices. Idaho and Montana, which border Yellowstone, permitted hunting of wolves this fall. Idaho recently extended its hunt until March. The Yellowstone pack hardest hit by the hunt is nicknamed Cottonwood. Hunters killed four members of the pack, including the breeding female, her mate and her daughter in a Montana wilderness area bordering the park."The article also clearly states the plans to increase hunting to wipe out 1,200 wolves..."The group faults the states' management plans to reduce wolves from 1,650 to 450. State officials state the need to balance the wolves with the habitat and other wildlife." How come you do not mention that? Let me guess, because it proves you wg?Also the article plainly states that hunting and extreme weather (brought on by climate change no doubt) is a large contributor to the decline in elk. Here is the quote to prove you wg ONCE AGAIN..."The winter elk numbers in the park have dropped from 17,000 to 6,800 since the wolves were reintroduced. Hunting and weather factors have also taken a toll, Smith says."No mention of the Buffalo slaughter from you Josh? Gee, I wonder why? Thank you for proving my point Josh on just how much we DO need environmental non profit voices in the government because extremists like yourself either cannot understand or choose not to understand what is going on out there and would rather just use nature for your own self centered enjoyment regardless of the damage it does.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

-I was not talking about you, I was talking about the author of this who obviously did something which is why every idea promoting conservation has been heavily demoted while every idea promoting ohv use or development has been heavily promoted. Since you stated how you feel about protection of wilderness areas how do you feel about the supreme court ruling that says government can seize private property if it can prove it is for economic development? This causes people to "pick up the pieces and in many cases move" as well. I highly doubt that is what our founding fathers wanted either would you not agree? As far as Americas private land rights being the cornerstone to what made the country great tell that to the Indians who we killed and stole the land from. -Sorry to hear about your wife. Most people who oppose ohv use, myself included, are not saying we should ban use altogether but restrict it to areas where there impact will not cause harm to threatened wildlife and plant species. You have a right to enjoy your hobby as much as anyone but you do not have the right to go everywhere and you shouldn't. If you are looking for someone to blame do not blame me for being closed minded. Blame it on the rampant over development that is pushing animal species into smaller and smaller areas and causing many to become threatened or endangered. Do you not want to have your children and grandchildren to have the opportunity to see a bear, wolf, buffalo or eagle in the wild someday? Hopefully with land restrictions not just to ohv users but hikers and backpackers as well they will. I am more than happy to give up some of my access for the greater good, aren't you? I agree our founders are turning in their grave but it is more because of how ignorant, self centered and destructive our society has become than any other reason.

-In 2008 1,600 buffalo were slaughtered outside of Yellowstone NP and plans exist to reduce the wolf population by 1,200. In fact the hunting of wolves is so rampant that Yellowstone has seen their wolf population reduced from 174 to 114, the smallest in over 10 years, because of killings outside the park of females and pups. Of course we all know of Sarah Palins disgusting aerial hunts and who knows how many of those poor animals were brutally gunned down. If you want to read about it you can go to the USA Today web site and find it.

-It takes a lot more than some mo linking this site onto his facebook page or ohv site and getting all his "friends" to come here and promote ideas to destroy forest and wilderness areas to get the president to all of sudden open designated areas to ohv use, oil drilling, mining and logging. Tell me though since you are so hot and bothered to see wilderness designations go away where will you ride your precious ohv when all the forests are destroyed or developed on?

- all I know is Pope built a second home in my county that is worth far more than the home of any logger or farmer that I know. The interior has old growth douglas fir beams, and is completely paneled in wood. He built it during the winter, so mud went in the creek. Then he and his then wife demanded that the county plow the road to their house every snow storm, which caused further degradation of the watershed and damaged the road. He makes way more money than anyone I know in my county...he has privileged access to lawmakers and high level bureaucrats. I think that defines wealthy conservation....

## Discussion Question 2

***(cont.)***

Keep in mind that the biggest spenders on influence buying with government officials are the managers of Big Oil. These men are among the 1/100th percent of Americans who take more than five percent of the national income. That is to say, among the 300,000,000 Americans there are about 30,000 people whose income averages \$25,000,000 per year. One of the Big Oil managers recently retired and took \$400,000,000 from the company. To put that in perspective, the entrepreneur Ted Turner says it is hard to spend more than \$75,000,000 on yourself -- how many 747's do you need? Now, these men are not inventors or founders. They are the survivors of office politics, with the sharp elbows and whatever else it takes to get to the top of the pile and the ethical competence to sell doubt about smoking and cancer or global warming. Our dysfunctional corporate governance allows them to skim the profits from our economy. With the SCOTUS decision that corporate managers can use their positions to sponsor politicians, the managers are increasing their spending on advertising and politics to fight for their increasing share of our wealth. Concern for the other 299,970,000 Americans is not high on their agenda. Think Cheney, Bush, Yoo, Scalia, Thomas, s. Big Oil rules!

you tipped your hand when you referred to "so-called environmentalist, politicians and others" When people use the term "so-called" they are conceding that they don't have any good arguments except to smear those who don't agree with them. You also say that you have worked in noxious weed control for years. Of course, you know that one of the best ways to spread noxious weeds is to construct roads.

Kudos to you! There are extremists in every group, but the key thing that all users have in common is preserving open space. How the land is managed should be done on a local level, not 3,000 miles away. Public Lands are just that, PUBLIC!

Let's define some terms. You cannot "make" an entity donate anything. The proper term for that is robbery, unless of course you are a government, in which case it is called taxation. At least have the courtesy to call it what it is. In January, the largest tax increase in the history of our nation is set to take place. This along with the impending mess created by an unconstitutional health care scheme will likely cause severe economic hardship for everyone. Adding to the potential disaster is beyond unwise.

Lets see communities where you can actually walk somewhere, not having to get in an automobile every time you leave your house ?Set aside a billion dollars or whatever, from highways to be put aside for bike paths, and or sidewalks? Could you imagine a place where you could actually walk to the store, or walk down a tree lined street, without the fear of getting hit? Everytime you walk out your ft door you have to get in an automobile.

I seriously doubt that the same 4x4ers cleaning up a road are destroying the same. We maintain the roads and trails so that people stay on the road. Are there some bad apples? Sure, but I am sure there are bad apples in your circles as well. I have packed out many freeze-dried bags that I am sure came from hikers. I have heard hikers yelling and screaming on the trail which I am sure scare off any animals. My dirt bike is quiet, when hikers approach, I turn my bike off until they pass. I respect the environment, stay on the trail and report those who tear it up by going off-road. However, I wish you would respect me as well and let us keep what roads and trails we have.

## Discussion Question 2

***(cont.)***

Living near the Blue Ridge Parkway in North Carolina, I have experienced what happens when one kind of vehicle (motorcycles) becomes a major nuisance to any other vehicles like cars, family vans, and bicycles on the Parkway. The unregulated noise pollution, exceeding the posted speed limits, and riding bumpers of vehicles obeying speed limits are only a few of the behaviors of motorcyclists which have caused many other vehicle drivers to forego attempting to enjoy the beauty of the parkway. This is a cautionary example of what can happen if off road vehicles would be encouraged on national and state parklands. If motorcyclists' joy of speed and deafening motor noise has had such awful consequences on the Blue Ridge Parkway, I shudder to think what will result if off road vehicles whose owners enjoy speed and loud noises as they tear up the land, terrify animals, and drive off any other type of park use people. The parks will become the private playgrounds of the off road vehicle owners, just as the Blue Ridge Parkway has become the play road of motorcyclists.

Many ranchers, farmers and forest owners have trouble making a profit, yet each OHV user consumes public land resources in amounts incredibly greater than any equestrian or mountain-biker, let alone any hiker. Barring motorized vehicles from off-road use in public lands would encourage OHV users to pay private land owners for access, creating additional income for economically-challenged land owners, and allowing market forces to determine the real costs of managing land for OHVs. The basic models would resemble private game ranches, where users pay for temporary access, or hunt clubs, where OHV clubs would buy distressed property for the use of members only.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Wilderness Areas are Roadless! Ok - they are not! But then they would be able to justify a Wilderness designation if they have roads! First this for clarification: Wilderness areas in the United States - Content Source: Congressional Research Service Prohibited and Permitted Uses In general, the Wilderness Act prohibits commercial activities, motorized access, and roads, structures, and facilities in wilderness areas. Ok! Got it? NO Motorized access! NO ROADS! NO Structures! NO Facilities! Now you know and I know and everyone else should know and I can prove, there are roads, there are structures and there is motorized access in some parts of designated Wilderness Areas! And that is my problem with the areas that should not have the travel restriction or the designation that they do. So what you may be up against for the Coconino National Forest, as I think you already know, the environmental group(s) is going to wave their magic wand and POOF! Whatever roads, structures, and motorized access they don't want there is gone. OH they are still there but they can't be there and the legislature that will pass this wilderness bill will be told they are not there because they can't be there! The other option I see all the time is Cherry Stemming. A road that runs right through a Wilderness Area where (I think) 15 feet on either side of the road is Wilderness. This is the best solution as they usually force the wilderness designation through but you retain a little bit of access. I find it so hard to believe it is a viable solution, if the area is a true Wilderness Area should there be a forty-five foot wide, miles long road right down the middle of it! Maybe it is not a true Wilderness Area after all. I have seen old motorized access (a road being used) through a wilderness that gets property owners to their cabin that is in the wilderness. Yea, yea I know no structures in a Wilderness! But you and I cannot travel on that same road the property owner does as its Wilderness. I am really for TRUE wilderness Areas. But you can see I have problems when that magic wand comes out and part of an area that shouldn't be all of a sudden is! On rare occasions we still get back to the many old miners' cabins I love hidden away out in Death Valley and surrounding areas. We sit around the pot belly stoves, explore the mines, headframes, structures and all the equipment left behind that is part of the history of this magnificent place. But then again it must not really be there as its wilderness now I wonder where I really go then! Best to you and fight for what TRULY DOES NOT BELONG IN A WILDERNESS. But allow it if it does belong. Either that or go a kiss your access good bye!

Maybe I have so much wilderness around me I am oblivious to this. Most everywhere I want to travel I am restricted by Wilderness Areas and they are not going anywhere! Some of these Wilderness Areas take away my freedom not give it to me. I am for TRUE Wilderness Areas, but I see so many parts of some Wilderness Areas that do not meet the criteria for Wilderness status, they should not have been included and don't belong. We face an on slot of Wilderness Bills every year.

Maybe, maybe not. Given the growth in OHV use, I doubt this will be the case. This is why we must manage our public lands with both interests in mind.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I have NO desire to go to YOUR park. There are plenty of places I can go to see strip mining, logging and oil drilling or have my enjoyment ruined by the noise of an ohv. I do not need a lesson from you on what public lands are for either but the overwhelming desire for this country to develop on those lands has created a tremendous loss and destruction to those lands causing a severe imbalance between nature, preservation and development. While this may be fine to someone who does not respect or love nature like yourself that is not fine with me. I have said time and time again on this site that if hikers and backpackers are not better at preserving the environment then they should be banned from areas just like ohv users so get your facts straight before opening your mouth and proving your ignorance. How is my wanting to protect lands and wildlife self centered anyway? I get no money from that and I am willing to accept restrictions and regulations that affect me unlike yourself. If anyone is self centered here it is obviously you. Finally this is not my 1,340th post so I have no idea where you get that number from. I may have a few dozen comments, maybe 300 or so votes and a half dozen ideas or so but nothing near 1,340. That is what happens when you love nature, you actively try to save it, something you obviously know nothing about.

More OHV use has nothing to do with conservation of anything. Thumbs down.

Motor your intrusive, abusive, destructive, polluting caboose on your own property, not on public lands where responsible adults want to enjoy serene and pristine nature, and where wildlife exist. Intrusive, irresponsible, noisy, polluting and destructive activities have no place on public lands, where responsible others enjoy the serenity of God's pristine, soul-reviving wilderness, and wildlife live and have homes. Let the irresponsible boys play with their destructive, noisy and stinking toys on their own properties. Then they won't mind when trees and other plants are torn out by their roots or crushed, and crystal-clear streams and other freshwater sources are fouled and rutted into filthy mud holes. And they won't mind when topsoil erodes and washes away, depriving wildlife of plant forage that once grew there. The real problem is irresponsible selfishness, and self-absorbed promoters of such a depraved ideology can't comprehend that the natural state of pristine wilderness always takes precedence over intrusive, abusive and destructive activities/behaviors. Following their attempts at reasoning, they would be fine with drag racing down residential streets, or open, illegal drug use in public parks, libraries and schools. It's called wilderness for a reason; leave it wild. Keep your abusive, noisy, fouling, adolescent, destructive, irresponsible, self-absorbed intrusions to yourself, and leave beautiful, serene, untrampled wilderness to God's creatures and responsible adults, who know the value of unspoiled wilderness and will fight to protect and preserve it from the likes of selfish off-road abusers and other exploiters, who will despoil all wilderness into an eroded, sterile rut if they have their way. I would agree to distinctly separate areas that the toxic-gas-fume heads could intrude upon or abuse to their hearts' content. Just make sure those places are far removed from wildlife and ecologically sensitive or aesthetic areas. In other words, far away from the ever-threatened, remaining fragmented bits of serene and pristine public wilderness. No one has the right to abuse, noisily intrude upon or destroy publically owned lands and their biodiversity.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Mr. I do not ride OHV's on any government lands, nor did I use facebook to contact friends to vote on this site. I own no land and in fact live in a large city. It bothers me that you use the word mo to describe me, as I have never personally attacked you, or anyone else for that er, on this website, no er their opinion. My big problem with wildlife designations are the way they are formed. The president can at any time and for any reason designate a national monument area. He does not have to ask for opinion or input if he chooses not to. The individuals on any land designated as a monument are forced to pick up the pieces, and often times this amounts to moving away and finding a new home. I believe this is very unfair and completely undermines the type of government our founding fathers wished for all Americans to have. American's private land rights are a cornerstone of what made us a great nation to begin with. What really makes me "hot and bothered" is that any individual would knowingly do this to another person all in the name of "nature" or anything else for that er. It also bothers me that people like you are so unwilling to listen to other opinions and bury your head in the sand any time somebody with a different idea comes along.

National Parks should be totally funded. I am also against loaded guns and off-road vehicles in the parks.

No , that is NOT the case. Congress specified in the Wilderness Act (see { <a href="http://www.wilderness.net)" rel="nofollow" target="\_blank">Link</a> } that if anyone sold their land willingly to the feds, it would automatically be incorporated into the wilderness wherein the inholding occurs, No Congressional action is needed. The Agency in which the wilderness unit occurs CANNOT log, mine, or otherwise degrade that unit. The non-profit above Wilderness Land Trust (www.wildernesslandtrust.org) has purchased over 30,000 acres of inholdings from willing sellers and transferred or sold them to the government and every square inch of that is now protected as part of our National Wilderness System. Everyone needs to help out this process by supporting that non-profit and making sure that Congress always appropriates 100% of the funds called for under the Land and Water Conservation Act (Max is \$900,000,000 only reached twice in the history of that act, not a pretty record).

No one should be able to use public lands and degrade it to the point that it is unfit for the animals and plants native to that land. OHV users aren't the only ones who want to get out into nature. The rest of us pay taxes as well, and deserve to be able to enjoy public lands in their natural state, without noise pollution. Maybe we should set aside specific lands just for OHV use . . . The problem with "giving" the land in AZ, NV, CA and Utah up for OHV use is that those soils are very fragile. One step onto a Utah soil can take a hundred years to go back to it's natural state because of the soil composition and the lack of rain.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

No, you are the problem. But really what problem are you talking about? Blaming the US for the world's pollution and ignoring other countries like China and India who pollute more and have virtually no environmental safeguards in place. Or the problem of an over-politicized and bloated EPA that will not allow truly fuel-efficient cars to be built or imported. Plus a governmental structure that takes so much money from oil companies that it is not in the oil companies or the government's interest to make fuel-efficient cars. Or the problem of letting our own timber rot in the forests or burn in wildfires every summer. This while we are importing so much timber from Canada that most of the mills in the West have closed up and left entire regions of the rural West as destitute as an inner city.

Noise and stink doesn't stay within the designated ORV trails.

First of all, immediately and permanently stop mountain top removal coal mining. It's a moral abomination to the land, the people and the wildlife. Grand vistas or not, such behavior by humans is simply wrong, arrogant, and against any sense of decency, morality, or understanding of the will of the Divine. Disfiguring and poisoning the earth is not OK. We can adapt to living without air conditioning, but we had better not adapt to feeling OK about rape and murder of our Mother Earth. If we do our species deserves to die - and indeed will. We already see the results of our spiritual dying, but soon, we as physical beings will cease to exist.

Second of all, immediately stop all industrial logging in Southeast Alaska. Selective logging for local value-added products is sustainable and to be encouraged. It is far more effective in providing employment and cultural sustenance for residents. The old-growth forests of Southeast Alaska are a treasure of far more value than the incredible scenery, recreation and resources they offer. They are cathedrals of the most magnificent construction and transcendent worth, purely worthy of our awe just for their very Being.

In both cases, the corruption of money in our electoral and governing processes is destroying our democracy, our soul as a nation, and the world itself. We are no longer a nation of, by, and for the people.

Our "Great Outdoors" is NOTHING to the monied powers that actually control every aspect of our government and culture.

People living on Earth for 65 million years changed it little until only a few hundred years ago. We hope to continue many millions of years more. But now technology allows Urban Sprawl to accelerate at an alarming rate. Open wild spaces when built upon and are disappearing. For example see the link explaining that the South Fork of Oak Creek Canyon near Zion N.P. is now inaccessible due to private land development surrounding it:  
<http://canyoneeringusa.com/cusapress/zion/oak.htm>

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Other pristine canyons in the area are yet unprotected. To imagine how built over a nation can appear in only 500 years, compare how natural the east coast appeared when Christopher Columbus arrived to how it is today (areas of nearly continuous city from Washington to New York). We can literally not have enough recreational space for a growing population. Crowds already fill some National Parks requiring quota systems to limit overuse.

We will run out of the kind of wilderness solitude the spirit needs to adventure in, to ponder its wild expanse and be thrilled to pass through; space away from crowds and the spreading development of buildings and pavement that continues covering all remaining unprotected lands. Because it is not yet too late in America's developing life, some open spaces are still available to save. Protecting the Red Rock Wilderness will not be possible once development gets its foot in the door. Not enough is saved for our future dense population.

Unrelated subject but here is my chance: We need a national subsidized program as big as the space program to push development of advanced Hydrogen and Solar energy technology and LED Light technology to depend less on oil and gas. The oil will be gone and is not our future solution.

I am from Montana where great strides have been made in conserving public lands. What I would like to comment about is getting people connected to the outdoors. We have an obesity epidemic in our country, video games, computer time all work to keep our folks indoors and inactive.

Here in my state, I see another problem. Land managers avoid providing appropriate opportunities for outdoor recreation. I am a hiker and a mountain biker, but I see much resistance to promoting these activities. Of course, increased use or new trails and maintenance take time and money, but the managers need to realize that the funding will come if people are allowed and encouraged to "hit the trail".

Our local forest service and city and county folks are very reluctant to promote front country trails for physical activities like hiking, running and biking. Getting people outside, enjoying physical activity and the natural environment will provide huge benefits to participants and society in general. The land managers see use as a headache which increases their work load for maintenance of trails and trailheads.

I have been in other areas where the public trail system is promoted and used. Look at Bend, Oregon or Sedona, Arizona, the health benefits are undisputable, so let's get more trail access and use, get more of the public interested and participating. The more users, the more support we will have.

Please try and keep the back roads and trails of Utah open for all of us who ride ATV's. Most of us are too old to hike very far and ATV's are the only way we can enjoy the back country of this great state.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

If walking and bicycling and other non-motorized modes of transportation are not options for young and old in the cities where they live now, urban residents will be much less likely to spend scarce time and money traveling across the state or nation to engage in those activities at a National Park or Monument. I liken this to habitat restoration for human race and that sort of restoration work is what I want to be engaged in,

The National Park people are doing a lot of great work. I was very impressed with the new hybrid bus system I saw the Grand Canyon this spring (they also had them at Yosemite), but I think that they should ban overnight parking in the close lots so that day-trippers can access the most popular view sites. Parking at the most popular view sites should be held down to ? hour so that the largest number of people can use the lots.

An acute example of mismanaged lands would be Lakes Mead and Mohave. I live in the corner between them have enjoyed visiting the beaches for years. Actually, you can't really visit the beach at Lake Meade anymore, without a boat, but that is another matter. Lake Mohave still has a very high waterline, and several beaches, which the BLM (or somebody else?) has recently improved so it is actually safe to drive down there from US Hwy 93 in Arizona. Except that there is no water available for at least a 30-mile radius in one of the hottest parts of the desert, and no cell phone reception. When people's cars break down, if no one drives past you (or offers help!) you could die out there. Seriously, there is NOTHING out there. Nothing, except people's garbage and human feces. Since there are no toilets, either, people just go wherever they want. Some people bring boats with toilets, and more often than not they dump their waste right into the lake. If a few porta-potties were available at a few key sites, I think most people would use them.

Both Lake Meade and Lake Mohave are befouled by human waste. These lakes are reservoirs for human consumption, but they have become the toilets of the people who recreate in them. I'm not sure if you can (politically or physically) fix this problem, but I refuse to visit certain parts of those lakes that are heavily trafficked by boats, because it is too disgusting to swim in them. Think Boston Harbor in the 1980s. Yuck!!!! You want a tour? Check out Katherine's Landing or any of the main boat launches of lake Meade.

I think it is wonderful that Native Americans are being given fair access to tribal lands within our park system, but I worry that some tribes use sovereignty issues to destroy the environment. For example, filling in of the wetlands has increased in Ledyard Connecticut, since the Pequot Tribe regained control of their Tribal lands; they have been developing like crazy. I think it is great that they have found a way to benefit from our economic system, but they need to respect the environmental laws that protect the wetlands in that area. I guess what I am saying is that no one should be immune to our environmental laws, Native Americans, private property holders or corporations.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Fire is a major issue, not only does it cause death and destruction on-site, the smoke chokes the air downwind of the fire for days, giving me the same allergy attacks that I got when I lived in New England cities (which I came to rural Arizona to avoid). It looked as though the Forest Service had been doing controlled burns, which I think is necessary for the health of our forests, not only in the west but also in the east. Any plan to manage our wild lands needs to take the role of fire into consideration. Controlled burns are the only way to prevent devastating forest fires.

Mineral extraction has to be practiced with the least damage to the local site possible. I am disgusted by the BLM's willingness to allow entire mountains to be removed, devastating the landscape forever, not to mention their casual attitude toward the most dangerous kinds of pollution. The BLM in Alaska decided that dumping poisonous chemicals in a lake, and killing all the fish, etc. that lived in it, was OK as long as the company cleaned it up and restocked it with fish later.

THIS IS NOT OK! And even if it was, guess what, the company never cleans up when it is done. Instead, taxpayers get stuck with the bill, every time. Please start forcing the mines to pay BEFORE they play, at the very least!

- Not enough people, including government officials, understand the essential nature of access to Nature for humans we need it for our mental, spiritual, physical and psychological well being.

- Too many people still think global warming is a hoax, and don't see the direct contribution that natural areas and trees make to cooling.

- We've all become much too sedentary and technology connected; this works against people unplugging and getting outside.

Too much sprawl is still happening. Resource wasteful development needs to be prohibited.

Too many Americans live in housing that is larger than necessary. It would be better for our entire nation to make housing/buildings smaller/more efficient and put more land instead into outdoor areas.

There is way too much turfgrass in public landscapes, wasting water. It should be prohibited unless a resource value can be proven.

Mainstream America has completely lost touch with the ancient wisdom of indigenous peoples to live more harmoniously with Nature.

- There's way too much asphalt and concrete in our world we need softer and greener alternatives, and more public transit, rather than continuing to build new roads/highways.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I have been working with Defenders of Wildlife and, thanks to U.S. District Judge Malloy of Montana, the gray wolf in the Northern Rockies is once again protected. 350 out of nearly 1500 wolves in Montana and Idaho were killed last year. The theory here is the only good wolf is a dead one.

I would love to send you a copy of Steve Nadeau's note to me. He is from the Idaho Fish and Game Department. He and Butch Otter, Idaho's governor, had a contest as to who can shoot a wolf first. They should realize the old west days are long gone. Hunting was acceptable when it was needed for food and supplies but those days are also gone. A controlled hunt to prevent hunger and overcrowding is understandable, but not the killing of animals just for bragging rights. Odd enough, a poll of Idahoans shows 81% of the population would like to see wildlife management changed

As Judge Malloy so brilliantly stated, the only reasoning behind killing off wolves and buffalo is human greed and politics. What it amounts to is the killing of nearly endangered animals because they are an inconvenience, killing what man himself wants to kill and the eating of pasture land which cattle ranchers want for their herds.

If you are doing investigations, can an agency look into the unlawful killings of the only 40 Mexican wolves left in the southwest and the hazing every May of the few remaining original buffalo left in Yellowstone. Buffalo Field Campaign is a wonderful organization and can give you information. Regarding wolves, someone might want to read Judge Malloy's ruling. It puts the whole issue in a nutshell. Also Michigan's Wolf Management Program is informative,

Sorry to be so long winded. This is an issue that has bothered me since I moved to Idaho back in 2006 and saw what was happening here to the wildlife. Thank you so much for caring. Hopefully the Baby Boomer generation's reputation can be salvaged.

The BLM's practices of using helicopters to roundup "excess" horses and take them away from their native lands, is killing horses, and is destroying the vegetation and small animals in the horses terror to escape the low flying machines.

There is talk about taking over the lands and designating some as National parks. Many are worried that then the government will lease out some of these lands for oil drilling or allow other destructive uses for the land. Everyone has a different story. No one knows what it might mean.

Once these animals and this ecology is gone, it's gone forever.

To qualify for (100%) of our gun tax fund (\$300+ million annually) state wildlife agencies must sell the most hunting licenses. At any cost they will recruit hunters to their state, and do so by artificially increasing large populations of game animals by manipulating hunt seasons. The over population of deer is NO accident, and people die as a result.

The antiquated P-R Act implemented by Roosevelt needs repealed, NOT endorsed! 60% of gun owners now do NOT hunt. So WHY do state wildlife agencies get 100% of this tax (and keep lying to you that they fund themselves!

## Discussion Question 2

### *Written & Online Comments*

*(cont.)*

Because of special interest monopolization of wildlife management, Sportsmen are "selling" our wildlife and allowing exploitation of it like never before. Abusive "sports" are growing, sanctioned by themselves and over-stepping state anti-cruelty statutes. ex: Dog fighting is illegal, but THEY can permit live bait dog training, torturing our wildlife just for the fun of it.

New "snuff" hunting videos portray killers with guns wounding animals and laughing over their suffering. 54% of bow-hunters lose animals they hit with arrows. The stats are staggering on what now goes on in the name of "hunting".

The solution isn't about anti-hunting - but there is a scary lack of ethics that now engulf the "heritage" they cry must be upheld. And THEY are fully in charge of this reckless management.

Please tell Obama to REPEAL THE P-R GUN TAX, give some of the \$ to crime victims, and STOP STATE WILDLIFE MGMT FROM QUALIFYING FOR IT BY "GROWING HUNTERS"!

Demand states qualify instead via how many wildlife appreciation programs they implemented, how many sanctuaries they permit, how many wildlife rehabilitators they recruited, how many humane population controls they implemented (vs ignored), how much truly public input they utilized... (instead of flat ignoring 60%+ public votes NOT to have a cull or bear hunt in their communities)

Hunting has caused a 300% trait change in species. It is NOT being done properly because they are in charge, their salaries depend on it - and they need YOUR kids to get a gun and "get out there".

Let's require our children help care for orphaned wild animals at a rehabilitation center. Then if they want to hunt? At least they will have some respect for their prey, as true hunters should. I challenge Sportsmen to walk their own "code of ethics" today, and stop hiding behind "great outdoors conservation" smoke screens.

"Fair Chase"? "One shot-quick kill"? Prove it with regulations that display this code, or we call shenanigans! It is selfish, and our society is fueling a scary self-serving lack of compassion.

Thank you for recognizing America's Great Outdoors. Without air to breathe, water to drink and food to eat, jobs and healthcare are useless. Without far vistas on which to rest our eyes, we turn into myopic ditherers. Without natural beauty, we are poverty-stricken souls. Thank you, thank you, thank you.

GREEN CORRIDORS SO THAT ANIMAL POPULATIONS ARE NOT FORCED INTO AN UNNATURALLY SMALL AREA ARE NECESSARY TO PRESERVE THE HEALTH OF ALL SPECIES. WITHOUT WETLANDS NOT ONLY WILDLIFE BUT MANKIND IS ADVERSELY AFFECTED.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

This can turn into one of the best "jobs" programs since the 30s. We desperately need trained "rangers" in the field to protect what is left of our semi-wild country. These rangers need to be trained/educated not only about the natural environment and the life that lives in it, but also in human nature and how to deal with those who do not obey the law.

This just hasn't happened in decades. Agencies keep cutting real jobs instead of keeping pace with needs.

That also opens up lots of job training opportunities for those who have been there, done that. In the old days, you could find rangers to help you out on our public lands, to answer questions, to give public programs that people actually went to and learned from. But they also protected the public lands from harm by being out there and issuing citations when warranted.

We need to get back to having people "on the ground", enjoying their jobs and serving the public.

You need to look at the overall way resources are dealt with. Some areas need to be untouched, some can be mined, some might serve to contain the destructive ATVs. The country is so variable and I'm not sure the overall picture of how to preserve what we have and provide recreation for the different interests and use the mineral resources wisely with the income going back to the people has ever been considered by those with power.

Presently, the greatest threat to species loss is the appropriation of habitat by humans. The most effective way to counter this is through habitat preservation, and more specifically through the setting aside of large tracts of wildlands, places where the forces of nature are dominant and humans have but a minor influence. I subscribe to a definition put forth some time ago:

"[wilderness] is the ultimate source of health-terrestrial and human." That encompasses all the values encapsulated by the Wilderness Act in a short simple phrase. It recognizes that for wilderness to remain "untrammelled", it must also serve as a Noah's Ark in an age when least 20% of mammals, 30% of amphibians, and 12% of birds, 30% of flowering plants, 20% of reptiles, 40% of freshwater fishes, and 70% of freshwater mussels, and 20% of ferns, and many more, are threatened with extinction. Fortunately we have a mechanism for accomplishing this aim: the National Wilderness Preservation System. However just over 2.5% on the lands in the lower 48 states is protected as wilderness. Much more is of wilderness quality. Your administration needs to work diligently with Congress to place many more lands under Wilderness status. Such designation is also of benefit to humans in terms of non-motorized recreation, watershed protection, wildlife, fisheries, carbon sequestration, and rural economies. I suggest that your Presidential Legacy should involve the designation of at least 50,000,000 new acres of wilderness. And baring the ability of Congress to act quickly enough, you should reach into your administrative tool-kit to protect these lands by regulations and Executive Orders (e.g., National Monuments).

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Mr. President, conservation biologists will tell you that, in order to ensure species long-term survival, these wilderness cores must be connected by means of wildlife corridors. You should order that Federal Agencies adopt policies to establish such corridors immediately, and then your administration should work to have these embodied as the law of the land. Furthermore, since many of our key core wilderness areas are beset with potential destructive private inholdings, you should seek funding to buy out as many of these as possible. This does not have to add to the administrative burden of your Presidency. There already exists a very effective non-profit, The Wilderness Land Trust ([www.wildernesslandtrust.org](http://www.wildernesslandtrust.org)) that pursues this goal. They just need some additional funding to make it happen. In the interest of full disclosure, I proudly serve on the Board of Directors of that organization.

Extensive habitat fragmentation is common with more than 30,000 miles of roads in the ecoregion. Moreover, intensive logging has replaced biodiversity-rich old-growth forests with sterile-tree plantations at a rate of about 50,000-acres per year since the 1970s.

Today's Millennium Kids are different outdoor users than previous generations. As a result, kids lack a sense of place about nature in their communities and parks. One needs to ask why (Good marketing message of the organizations supporting this endeavor) kids know more about the challenges of the Rain Forest than animals, birds and trees that are native to their backyards. They do not have a natural connection to the outdoors and need to be actively connected through positive role models, and supported by groups that provide programs with up-to-date facilities and services.

It's time to get some smart and influential people, including politicians and policymakers, out in the public to promote WORKING FORESTS - realizing at the same time that certain areas should be left to nature. As stated by a tree farmer at the session - foresters and tree farmers love trees and we want to do right by the land.

Off-highway vehicle recreation does not belong on public land. It is destructive of vegetation. It is harmful to wildlife. It is incompatible with many forms of recreation, such as hiking and wildlife watching, which are more suitable and appropriate for wild and semi-wild lands. OHVs no more belong in National Forests, National Parks, National Monuments, Bureau of Land Management Lands than do roller coasters or golf courses. OHVs, with their noise, dust, soil erosion and lawlessness make public land squalid. OHV recreation, if it is to be accommodated, and it should not be, should be restricted to enclosed, soundproof arenas in industrial areas adjacent to freeways.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

This is a terrible idea and here is why.... Thousands of families who make their living in deep rural areas will have their homes 'seized' by the government under the guise of this proposed national park expansion. Don't think that can happen? It did in the 70's. Don't think there is enough park areas that are like Zion and Yosemite? Well, there's not. But that isn't the fault of anyone, it's just the way the earth was formed and we can't 'make' more of those special places regardless of the amount of park growth. There are millions of acres of national forest, BLM and other lands that are accessible to Americans. You are just going to have to drive that little eco friendly car of yours out to see them. Don't have a place to plug it in when you get there? Then don't go and stay close to urban sprawl..or not, I don't care. But when you want to 'save' the lands that belong to families and you haven't even been more than a mile away from your Subaru in the real 'outback' just doesn't make sense at all. We can all 'share' the lands here without imposing ridiculous restrictions and government takeovers of forested lands. Feeling guilty about humans wrecking the earth? Well don't have children and keep the population down...do your part. The fact is, you will never live long enough to see all of the public accessible lands here in America, but you can try.

"Strenuous, perhaps, but very dangerous for children under age 16. Nothing so dangerous (killing or injuring over 40,000 children every year) deserves the "family friendly" label." - S P In 1992, 722 bicyclists were killed in the United States in collisions with motor vehicles<sup>1</sup>, and an estimated 650,000 people were treated in emergency rooms for bicycle-related We now need to ban bicycles... And cars...

There is space for all on our public lands. Education and enforcement of rules to stay on established roads and trails is the answer not banning. Cows and clearcutting do more damage to water resources than any ORV could think of! If you have a problem with irresponsible users of any resource, educate and if they won't respect the land fine and ban them and not all those that do.

Thanks for the laugh! "land that you simply cannot access without an OHV!" If your machine can get there, my boots can too.

I agree with you that all users should be able to share trails. It seems like such a simple thing, and I know of no ATV users that really oppose such an option. However, as you see, some members of the non-motorized community don't want to share. I guess they weren't taught to play well with others when they were kids. I would propose trail sharing to a point. Once there is conflict, the limited number of designated OHV trails, which are currently shared with the non-motorized community, should be closed to non-motorized use. Non-motorized already has vast trail systems and far more cross country areas they are allowed to use that the OHV community is prohibited from. Many users that complain about motorized use on motorized trails do so only to create conflict.

Developed ski areas, particularly downhill, are very destructive and consumptive of our public lands, for the benefit of a few. It is not clear if the OP is referring to developed areas, or backcountry skiing. I'm demoting for now but would change with clarification of the OP.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Pebble Mine threatens Bristol Bay's clean waters, wild salmon, wildlife and traditional subsistence ways of life. Public lands in the Bristol Bay watershed should be closed to large-scale metallic sulfide mining. Protecting habitat, subsistence and recreation resources should be the top priority. The federal government should provide strong oversight of the Pebble Mine permitting process and analysis of cumulative impacts to the Bristol Bay watershed. Relationships between federal and tribal governments should be strengthened. Standards for mineral development in wetlands should be tighter. Clean Water Act standards for large-scale metallic sulfide mining should be more stringent.

Living just east of the San Francisco Bay for over 50 years I am aware of the decline of fish populations, mercury contamination in the smaller fish caught today resulting from past mining activity, and pollution of the bay from agricultural runoffs. Efforts are being made to remediate. The Consumnes River stands out as an example of what can be done - through the work of the Nature Conservancy and many volunteers, this river has remained free-flowing and relatively clean while providing access to many, many birds as residents or migratory visitors and to their human students and admirers. The rest of the Sacramento River watershed needs such intervention on a more massive scale.

There are plenty of designed "Wilderness" areas for you to enjoy peacefully. I am glad you enjoy it. But don't try to take away my right to life, liberty, and the pursuit of happiness. I along with millions of others enjoy riding ATV and enjoying the great outdoors. I also can ride all day and not see another human except my group. BUT, I do see deer, elk, and bear. I have seen more wildlife from the back of my ATV for the last 10 years, than I have in 40 years prior as an outdoorswoman, walking in the forest. If you don't like ATV go to Yellowstone or any other national park, or any designated wilderness area, there are millions of acres. Good luck getting into the center of that wilderness area. That alone tells me we have too many acres designated already.

Again, if you do not like OHV/ATV then partake in the millions of designated wilderness acres. You won't find us there. Who has made the biggest footprint on our beautiful national forests? What about all that fossil fueled asphalt or concrete to build all those roads, you travel on. Wind and time will take thousands of years to cover (not restore) that. But look at the wagon trail ruts left on the Oregon trail, you can hardly find them. The only ones I have seen where on protected farm ground, that the farmer has diligently protected and preserved and that was only a couple hundred years ago. I am all for government policing of OHV recreation. Please donate your tax dollars to any anti-access organization. Or just write a check to the US Treasury and in the memo, write to help police our national OHV areas and to help keep those dirt roads open.

While I promote maintaining and preserving our existing National Parks, good luck getting the unemployed to help. The majority of them are not working because they don't want to. I have offered to help keep ATV trails open but the USFS would not allow it, I am not chainsaw certified, but I have ran a chainsaw for over 30 years. Go figure. There are a lot of volunteers out there, but government and anti access persons keep us out.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I cannot believe the first two commentators. I am lucky to drive my atv 200 miles in one year, at about 50 miles to the gallon. How much more do you expend in commuting, taking the kids to soccer practice, jumping in your car to drive to the super center to buy one plastic bottle of water. ( I drink my from a natural well, from my natural faucet) , or all the other unnecessary miles you travel in a year. Now try to tell me who is causing global warming. Let's get together to help solve these national problems first, then work on the global arena. Remember to be considerate of others.

What I find quite interesting is in the 56 comments above, out of all the OHV haters and bashers (there's a lot of you up there) only 3 or 4 have posted any IDEAS of your own on this website. You just surf around blasting other people's topics and ideas. That's what I call 'TYPICAL', or better yet, 'STEREOTYPICAL'! You can keep your comments, they are meaningless, angry garbage. For those of you who are participating by posting your own ideas, I'll come visit your IDEAS and see if you have anything productive to say.

National, state and many local parks support life-long activities like biking, hiking and paddling. These activities are so important for a healthy, fit America. Parks also preserve our natural and cultural heritage and remind us what makes our nation great. Unfortunately, some state governments have looked to their parks as a way to cut "non-essential" programs from budgets in meager times. Parks have been closed, staff cut, land even sold! Yikes! In the 1940's, recovery brought us hundreds of thousands of acres of accessible parks and left a legacy that helps make our country great. Let's work so that recovery in the 2010's does not leave out our state parks. Having a strong system of local and state parks in every state is essential for maintaining our great America!

I have spent 2/3rds of my life protecting natural resources, as well as you as humans, by fighting fires in the wildlands and forests. My body has paid a little for that endeavor as I have gone through 4 knee surgeries and will have to have at least 1 knee replaced as I approach my retirement. I live in a forest. I love it. I hike as much as I can. I raft and kayak and I ride my quad more as a recreational thing now than as a racer as I was. In the future, it will allow me to go to places I went when I was healthier without having to deal with extra pain and suffering. I believe there are 100s of thousands of folks in my shoes who would love the chance to see things their bodies just can't accommodate on foot any longer. I suppose there are plenty here who simply would say "Too bad for them, they should not have abused their bodies so much..." Well, if I wasn't hiking into fires with 50-60 pounds of gear on my back to fight fires in the wilderness caused by "green" hikers setting their toilet paper on fire so they would 'leave no trace', then maybe I would be in a different place. I guess you could call it environmental bigotry. I saw it growing up in Santa Cruz when they started banning mountain bikes from the trails as incompatible and I see it now with them wanting to ban anything with wheels.

Don't let people define "the only true camping experience." Different people have different needs, yet still should have access to public lands. Making them tent-friendly only is NOT in the best interests of our nation.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

That's great if there will also be a charge & licensing for horses, which also damage trails. If you've ever followed a horse on a trail after a rain you know this is true.

When I saw this headline I thought, 'How great that someone is looking at OHV solutions that don't involve closing trails,' but on reading it, this is not an incentive, but another excuse to close more OHV accessible territory. Why can't you find ways to get along instead of always trying to shut down OHV's? What if I got the government to tell you that you're not allowed to do what you love?

Interesting how some people want to dictate how others live & enjoy the lands that belong to all of us. If you don't like the noise of my dirt bike, then go to a place that's designated for the use you want to participate in. I'm not telling you how to live your life so stop demanding that I live by your rules! There's room enough for everyone & a free society doesn't mean freedom for the chosen ones, but for everyone. You find God in your way & let me find Him in mine.

My OHV group just did a "clean up day" on BLM land. We filled 5 giant dumpsters full of trash. Including garbage from a Sierra Club camp-out. Whens the last time you saw a Sierra Club "clean up day". I've looked in my area and found none. I'd love to participate!

Neither I nor any of the people I ride with have ever expressed a desire to ride in designated wilderness areas. Our concern is that other agencies want to exclude us from ALL public lands. This is wrong. I have also read posts in which people have said that OHV users should go find their own ares to ride in and build and maintain their own roads and trails. We do. Huckleberry Flats OHV area in Oregon is just one example.

Great idea! Public Access to Public Land... who would have thought that a concept so simple would be so difficult to keep. I advocate Training for local recreation program managers as well. SP: The concerned families for ATV safety has a platform that is partly based upon figures from { <a href="http://www.atvsafetynet.org/pdf/atv2010.pdf" rel="nofollow" target="\_blank">Link</a> } a report titled ATV Injuries and Deaths Among Children Decrease. This report states the following in part: "According to data released by the U.S. Consumer Product Safety Commission, child deaths and serious injuries caused by all-terrain vehicles appear to have decreased in 2008. Tragically, however, at least 74 children lost their lives and more than 37,000 were injured seriously enough to require treatment in a hospital emergency department." The deaths as one poster already tallied in this forum reflects less than .04% of OHV users in the same group in 2008. I take issue with the 37,000 kids under the age of 16 who were injured seriously enough to require hospital treatment. In 2008, while on a Off Roding / Camping trip, I took my son to a near-by Emergency Room for stitches. At the end of the visit, the nurse confirmed that his visit would be counted as an OHV related treatment, as we were coming from Glamis, Ca. I took issue with this, as he was in the ER for splitting his chin open while playing in camp after dark with his cousins. It had nothing to do with an Off Road Vehicle!!! Knowing that my son is one of those 37,000, I seriously question the validity of the other 36,999 visits for Hospital Treatment in 2008.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Climate change is already here, and it is going to get worse. We are already seeing new peak temperatures set in the world every summer (ask the folks in Pakistan), as well as the increasingly frequent and violent storms that have been predicted by climate scientists for some time (remember Katrina), as well as increased flooding and drought in different parts of the world. I recently saw an aerial photo of a sizable lake I visited in Kenya in 1992, which is now entirely gone. Simply evaporated in the increasing heat. It has tremendous implications for the future of wildlife in our country, as well. Here in New England, biologists are already beginning to see evidence of changes in timing of species migration, flowering of trees and shrubs, etc. It will likely affect the composition of the tree canopy, resiliency of forests to pests, and viability of farming. Anyone who is fond of spending time in the outdoors should start caring about reducing global carbon pollution right now. If you want to learn more about what you can do to build political support for meaningful change that will protect our wildlife and outdoors, as well as the health of our planet overall, visit [www.350.org](http://www.350.org).

mixed use. Motorized access is more restricted than any other group. Yet if you look at the factual data, we give the most back. If the liberal agenda wants to take away from one, then take away from all and shut the whole area down to ALL recreation

I think hiking off trail should be addressed too..... That clearly has an impact on sensitive ecosystems. Additionally, breathing while in natural areas increases greenhouse gases, not to mention all the energy consumed to build holier than thou hiking products. The sooner people realize the world is not going to crumble to a end if they enjoy it, the better off we will all be. The planet has made it this far folks, come on!

Keep your filthy stinking ATVs out of our National Forest lands.

No more off road vehicles on our National Forest lands! You can't hike? Tough luck. No one said life was fair. There are plenty of open roads even in our National Forests and National Parks for you to get your fill of scenery.

I share these concerns. Trappers often set traps near trails on public lands, and then people out hiking with their dogs may get their dog accidentally trapped. This has happened several times in the rural community where I live. Some trappers also do not check their traps regularly. They may set their traps on a weekend and not return until the following weekend. This is incredibly inhumane regardless of whether a trapped animal was a target or non-target species. As such, I think that there should be a required trap setback distance from all public trails, and a requirement for trappers to frequently check their traps. A trap identification system must be required to make this work, as otherwise any traps found in violation could not be connected to the responsible trapper.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I strongly support and applaud this idea. National Forests cannot afford to maintain more than a small fraction of their existing road networks. The absence of maintenance on most of these forest roads causes them to deteriorate and this creates safety concerns and adverse environmental impacts. We should reinstate the Roadless Area Conservation Rule for economic, public safety, and environmental reasons. The Forest Service has no business authorizing or building new roads when it cannot take care of most of its current road systems.

I strongly support and applaud this idea. The problem of illegal OHV route proliferation is increasingly serious, and current enforcement and education efforts have clearly not been enough. Hunters who poach may lose their rifle. Drug dealers who use a car or boat to transport illegal contraband may lose their car or boat. It is time to take away the OHVs that are used to create illegal new OHV routes. A small fine may not be a sufficient deterrent for some committed scofflaws, but losing an expensive OHV could be. Confiscated OHVs could then either be sold at public auction to raise funds for additional federal rangers and law enforcement, or provided to government agencies for their official uses.

I support this idea, but recommend that it be broadened to consider a coordinated and connected system of federal, state, and private lands. Even with a major expansion of national parks, they alone are not going to be enough in terms of meeting current and future wildlife corridor needs. National wildlife refuges, national forests, BLM lands, state parks, state natural areas, private lands under conservation easements, and other assorted lands must all be considered in planning to maintain habitat connectivity and to provide for wildlife movement corridors. The new Climate Science Centers and Landscape Conservation Cooperatives will hopefully play an important role in this coordinated planning and management effort. It is clear that greater leadership and direction are needed to effectively "connect these dots."

The Justice Department and USDA have clearly dropped the ball in terms of stopping big agribusiness and slaughterhouses from creating de facto monopolies to unfairly squeeze out small family ranchers. I don't always agree with ranchers on issues, but I think that fair competition and anti-trust requirements are absolutely essential. If we don't reverse the current downward trajectory, much of rural America will become ghost towns.

I strongly support and applaud this idea. I've worked with young people on conservation projects who were provided from the Student Conservation Association and Chicago Botanic Garden intern program. They are always bright, enthusiastic, and diligent workers. The only downside is if they are not engaged in productive work, or given trivial or bureaucratic work. This can discourage them from future conservation involvement. So bring on the youth for many beneficial reasons, but make sure that their supervisors give them productive work and a rewarding experience so that they will maintain a life-long conservation interest.

It's time to undo years of damage to the Everglades especially as new housing developments are inching ever closer. The Great Lakes are our largest body of fresh water and have been misused for years. Now they're being threatened by invasives. There are initiatives being made by organizations and surrounding states to repair damage. The federal government needs to get behind this crucial work.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

:An "agriculture professional" is not the same as a "farmer" and "how food is really produced and how natural resources are managed" in industrial 'agriculture' today is not the same thing as "sustainable agriculture" yesterday, today, or tomorrow -- that is the problem with Comment #1.

Government entities should not support organizations that discriminate, such as the Boy Scouts -- Demote.

This appears to sidestep the scientific evaluation of what "minimal impact" is environmentally sustainable in any given habitat -- your description of the Forest Service allowing your volunteers to make their own (unscientific) decisions about how trail work is done in 'your' area is quite worrisome -- if there were a workable means of federal oversight of such volunteer activities based on such science, then this Idea would be worth serious consideration.

For 25 years I have been riding in our National Forests through out California (where I live), Idaho, Oregon, Washington, Nevada, Arizona, Montana, Utah, New Mexico and Texas. I enjoy riding with my children in places off the beaten path...single track in our forests...designated and open trails. I rarely and I mean rarely, see another biker, hiker, equestrian or other dirt biker. There are no homes to bother and no pollution to speak of relative to all other forms of pollution. There is more dust and noise around my home from freeways, garbage trucks, leaf blowers, weed whackers, lawn mowers and boom boxes. There are billions of homes in the world displacing sewer, garbage causing carbon dioxide affecting the planet in such a far greater way than OHV use that it is almost laughable anyone would think OHV use contributes anything at all...comparatively. I had to be crude but humans and animals who breath, fart and excrete bodily "stuff" create more carbon dioxide and pollution in such extreme amounts that point a finger at OHV use defies rationale thinking. Look...billions of homes on the earth have dug foundations...displacing insects, rodents and other animals, not to mention the erosion issues! OHV users use such a minute portion of public land in usually remote places, it is hard to understand the opposition other than the environment is a religion in and of itself!

The disconnection between some of these folks and reality is truly alarming. The preservation of and responsible access to our nations natural lands can and does coexist. From my experience, the vast majority of people who frequent our national forests and other such lands are kind-hearted OHVers and, or sportsmen who truly appreciate the outdoors and our wild places, not individuals who are destroying it. Sure, there are a few "bad apples" who abuse our lands, but punish those individuals and not the vast majority of outdoor enthusiasts. Expand our National Forests and Open Spaces, but allow responsible access including managed OHV use. We mtn bikers, rock climbers, dirt bikers, 4-wheelers, fishermen, equestrians, and other outdoor enthusiasts must unite against these anti-access extremists. Through responsible access, appreciation for wild places is gained and protection is guaranteed.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Land preservation=goodResponsible/balanced access=goodLand closure (wilderness designation)=badIt seems to me that many of you are very well intentioned, but are disconnected a bit. I wonder how many of you have been to any of our National Forests in the west? National forests, Open Spaces, BLM land, etc. do offer environmental and wildlife preservation yet do not effectively close the land to human access. However, a wilderness designation essentially does that. Of course, responsible management of our national forests and other public lands is essential, but they do offer preservation. We need to stop the sprawl and preserve wild places but I believe, in most cases, wilderness designations are not the answer. Expand our National Forests and open spaces but don't lock out all but a very few. Through responsible access, appreciation for wild places is gained and protection is guaranteed.

If the feda don't make money on a timber sale, it is because the tree huggers have imposed many useless regulations on the agency selling the timber (or other resource)

We must ALL come together on the climate change,goverment,non-profits,and the people at large. Can`t anyone realise that as we kill the climate we are forcing our great-great grand children to find an off earth home ? Will the technology be there to find one or do we doom them to a horrible death here ? As a world, we are one but to argue and push each other away for fear and loathing we ALL loose !

The second post is ridiculous. Less than 1% of BLM and national forest land is open to OHV use. Quit trying to take away peoples fun you "people hater" . You are contributing to the erosion of freedoms in our country.

Most of the time out here in the west, BLM, USFS & NPS managed lands share a common legal boundary on the map. They don't, however, share common & best management of the land. The mission of the NPS is strictly one of preservation, and it is in the Dept. of Interior (DOI). While the BLM is also in the DOI, its mission is not strictly for preservation. The USFS is in the Dept. of Agriculture, and its mission is management of the forests for "sustained yield" and "multiple use" purposes "for the greatest good". Coordination between these agencies is little to none. It is time for all federal agencies concerned with the management of public lands to be combined into one department, eliminating many highly paid Washington bureaucrats. Put the money saved to use out where the jobs and resource management are desparately needed!

Where do you all get the idea that any and all clearcutting is bad? Here in Colorado we need MORE timber harvesting of Lodgepole Pine, and properly designed (size & shape) and executed clearcuts are the preferred sylvacultural method. It is the lack of timber harvesting over the last 30-40 years, combined with total fire suppression, which has directly led to the devastating Mountain Pine Beetle epidemic here. The fire hazard created by all these dead trees is staggering. There are many places where people can't recreate anymore because there are so many trees blowing down. Wildlife won't use these areas either. We need timber harvesting and the forest products industry here for jobs, and to maintain a healthy forest!

Off Road Use is already limited and restricted on Public Lands. Exactly what is the proposition here???

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

While it seems that there are good intentions behind your idea, you wrote, "(Wilderness Protection) is important for the enjoyment of future generations". Congress designated Wilderness Areas remain just that until an act of congress re-designates the Area. In the meantime, access is substantially restricted. Hiking is permitted, but like another poster stated, a 50 mile hike half way into a wilderness area is not feasible for most of our society. Something else to consider, is will the ground permit your foot travel for such a distance? A good example here is the North Algodones Wilderness Area in the Southeast corner of California. This 26,000 acre Area was designated by congress as part of the California Desert Protection Act of 1994. As holds true with any designated wilderness area, you are permitted access either by foot or horseback (if you haul in your own feed). Neither current nor future generations of the human species will see any enjoyment from the 26,000 acre North Algodones Wilderness Area! You see, 99% of the area is covered by towering Sand Dunes which are impassable by horse. Hiking brings to mind the expression "taking one step forward, brings you two steps back". As a result, no one has hiked more than a mile into this Area's perimeter since it was designated as wilderness area. It was "protected", and human access has been completely restricted since the Wilderness Area designation hit the ground in April of 1999. (The above statement in no way implies that the author is seeking, petitioning nor advocating unauthorized recreation in a designated wilderness area, nor does it condemn any current standing Wilderness Areas or restrictions thereof. The, author seeks to illustrate the ramifications of such designations and illustrate that it's impossible for "Wilderness Protection" to bring anything to future generations of the human species. )

I would hate to know that someday my kids would not know the experiences that I get from "responsible OHV use". The only reason you find my name in these pages is to support the Preservation of OHV use for future generations!!

ORV's are permitted on many "Public Lands"... so what broken law would justify confiscation? This 'idea' needs to be clarified. If it is, even I (a law abiding off-roader) can agree to it, that is until all Public Lands are closed. At which point, Off Roader's "machines" become worthless and you will see a "I'll ride it where ever I want, as long as I can" mentality. Economic impacts aside, if you take everything away from the ORV community, they will have nothing left to lose.

The DOI recently told BLM to be setting aside areas for other sources of energy like geothermal and solar. This is much to my dimay, as its in the middle of 'my area' on a new map, potentially adding more clousres in my area. That said, the BLM is doing a pretty good job with 'my area'. They do what they are allowed to do by the USFWS, and even then a lawsuit from the Private sector can change what the BLM is doing. Evidence my 49,000 acres of sand dunes closed over an Administrative lawsuit. Now, I belong to an ORG that watches BLM and makes sure they are doing everything that they need to. Filing reports on time, studies, etc to avoid that they get sued by our opposition on a stupid admin lawsuit to close more land. My ORG works very close to the BLM and things are good. If what you say about your area BLM is happening, I would agree with you. But, my area BLM is ok with me.

## Discussion Question 2

### *Written & Online Comments*

*(cont.)*

I recently saw an electric motor scooter on the street, and it was very quiet indeed. Quiet electric OHVs would be an advantage in front-country areas where OHV noise now conflicts with picnicking, camping and fishing. It's especially a problem in confined valleys and around lakes, where the noise of conventional OHVs bounces off rock or water surfaces, spreading widely. The erosion impacts would have to be analyzed case by case, as they are now.

Your comment about the fact that OHV and environmentalism cannot coexist is a joke. Hitler thought Jews could not coexist with Germans. You have the same kind of perspective, control everything and your point of view is the only one that matters. I know my example is extreme and the comparison of killing Jews and riding a dirtbike in the woods seems stupid but I have heard environmentalists talk about how all OHV user should be shot. I have seen that exact statement on bumper stickers. I have never heard an OHV user mention how a hiker should be shot for hiking. Fossil fuel is a fact of life it is the cheapest form of energy at this point and we need to use it responsibly but to say don't use it at all is ridiculous. And this isn't even mentioning the pseudo science used to show that fossil fuel even has an impact on global warming. Try reading up on Solar effects on global warming. On the quieter OHV I agree I even talk to people who are riding that have overly loud vehicles and try and use peer pressure to get them to be more responsible.

I'm curious, where are the calls for electric OHV's, ya know, nice and silent???? No exhaust or gas fumes? Grease in bearings instead of oil which might leak out? I hear you about the noise, I don't like the vehicles that have had their STOCK exhaust system modified.

If we the people had an input as to what is taught then maybe this would work. However environmentalist with flawed information should never be allowed to teach anything.

Roads:1. Increase traffic -- if you build it, they will come2. Break down and wash into streams, with the result that the gravel bottom becomes clogged with silt, reducing habitat for wildlife, for example, frogs and salamanders3. Are a disturbance that facilitates invasion by weeds4. Cost scarce taxpayer money to maintain and to patrol

Our National Parks in their pristine condition are the greatest treasures that this nation has. They need to be protected from degradation in quality and the wildlife in them needs to be protected and enhanced. In particular they need to be protected from overuse overdevelopment noise air pollution and other threats posed by our overpopulated and industrialized society. decrease immigration and encourage smaller families so that overpopulation does not destroy all the progress that has been made in the past century and which may ultimately destroy our parks. THIS IS AN EXTREMELY IMPORTANT ITEM. HOWEVER IF THERE ARE TOO MANY CHILDREN AND GRANDCHILDREN OUR PARKS WILL BE OVERRUN AND DESTROYED AS THEY HAVE BEEN IN OTHER NATIONS. Remember that our overpopulation MUST be addressed if we are to protect what we have and pass it on.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

America is losing at least one million acres a year to development roughly equivalent to the size of Delaware. Coastal lands will be lost at an accelerating rate due to climate change. Unless we protect these areas now our treasured lands could be lost forever. Our national parks are routes to healthier lifestyles and gathering places for local communities.

A centerpiece of the "America's Great Outdoors" Initiative should be affordable access to and thoughtful preservation of our nation's great playgrounds and classrooms our national parks. Fees for national parks are already prohibitive to many people. In fact my 20-year-old daughter just returned from a long-planned for and hard-earned road trip to Alaska volunteering on organic farms studying flora and fauna and camping her way to the Arctic Circle. It was disheartening to hear that she spent no time at a long-dreamed of destination Denali National Park. With great anticipation she arrived there only to find that in addition to the \$20 vehicle/admission fee she had to pay over \$40 for a shuttle bus into the park her cheapest option since visitors' vehicles are barred from entry. While she agreed wholeheartedly with the objective of keeping traffic out of the Park it was akin to extortion to charge Americans \$60 to see the majesty of their own publicly owned lands. On principle she refused to enter. Surely we can provide free or cheaper transportation into this magnificent place and others like it so all may know its grandeur. Park fees continue to rise and those who could most benefit from a free or affordable recreational experience are those least able to afford it. While wealthier families have a host of recreational opportunities available to them poorer citizens and their families should be able to rely on national parks as an affordable destination for day trips and vacations. National parks belong to all of us and no one should be barred from visiting them regardless of income. One suggestion might be to provide a free or subsidized annual national parks pass to families receiving federal or state assistance such as food stamps. While it may seem contrary to the goal of making parks more affordable and thus accessible to poorer Americans accessibility and its oft-accompanied development must be curtailed. Anyone desirous of a truly momentous outdoors experience should be afforded the opportunity; however creating that opportunity should not compromise the very essence of the offered experience. Our national parks are ever approaching an amusement park ambiance with concessions congestion and too much concrete. With greater funding for parks perhaps we could eliminate profitmaking ventures that interfere with a true appreciation of nature and its sublime absence of commerce. We need to adhere to our national parks' mission of preserving our wild spaces. To this end we must limit the footprint we leave on those areas. The most natural way to limit congestion and paving of park lands would be to do as Denali National Park does and make entry into the park communal albeit more affordable than that park's buses. While Americans with Disabilities should be enabled to enjoy our parks paving should be extremely limited so as not to ruin the overarching aesthetic for all.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Enjoying the outdoors increasingly has become a dirty business for Americans. We know because we're out there camping hiking observing wild places wildlife and people. Way too many American kids grow up thinking that "outdoors" means ATV's tearing up sand dunes snowmobiles chasing terrified animals (and each other) motorized "recreational" equipment roaring over lakes that should be paddled or rowed or swum or left alone to just be home to the quieter cleaner millions of creatures that inhabit them. WE KNOW THAT THESE ACTIVITIES ARE NOT EVEN LEGAL IN SOME AREAS IN WHICH THEY ARE PRACTICED. But budgetary cuts have made enforcement impossible; and the educational outreach function that used to be invaluable in rangers is something for which no Federal employee now has the time. Shame on us! So our family hopes that some inappropriate activities will be taken off the table in our parks; that emphasis will be placed on the appreciation of natural values and peaceful activity that's appropriate to these national treasures. And that there will once again be funding sufficient to provide welltrained dedicated rangers to guide teach and inspire.

My family and I enjoy the Great Outdoors. We love visiting our national parks and want to see them protected and maintained in a manner that will allow our future generations to enjoy them. Additional Funds are needed to do this.

Too many Americans especially young Americans have no idea of the beauty and wealth of their natural heritage and are deprived and challenged at best in the out of doors.

Dear Mr. President Thank you for all that your administration has been working for on behalf of the environment including your Executive Decision of July 19 for stewardship of our waters. . . . Too many of our nation's children are deprived of life enriching experiences outside of their urban neighborhoods. Please evaluate and consider new sites to bring into the system that better represent our changing country and >protect remaining natural areas before we use them all up. If we are to stay healthy in body and mind our lives cannot be limited to office parks shopping malls video games and making and spending money.

America's national parks are in deep trouble. For the last 30 years the system has been grossly underfunded the only thing that prevents its collapse is volunteers (like my wife and myself). Delayed maintenance and understaffing combined with overuse are causing the parks to decline they won't survive another century of overuse and abuse.

Dear Mr. President: please follow in the footsteps of your predecessors and beef up the National Park efforts. Also look at how you can help the state parks which are being shortchanged all over the country especially in California. This doesn't have to be financial help but rather putting emphasis on what the people can do themselves. This could be one of your elements asking citizens to help preserve their environment. .

National parks are good investments in our future. Please stop the TC2 Coal fired power plant in Trimble County KY. Many trees are being destroyed because of the transmission lines for the property being taken by EON.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

If National Parks are not tended the weeds of highways strip malls mines and wells will take over what little remains of our pristine heritage. Please protect our National Parks.

Don't cut funding for these much needed resources that are ever increasingly under stress from natural and man made affects. Also keep out industry that would harm these wild places that have taken lifetimes to form...

I don't think we need all the timber harvested and thousands of snowmobiles tearing around the national parks like your republican predecessor was going to let happen. We also don't need a bunch of oil wells drilled in them.

The Bush administration did huge damage to the parks that must be overcome. This will clearly take money...maybe a lot of money. What is clear is that the parks are worth it. Their educational role alone justifies major expenditures.

Since there are so many budget cuts why can't we get people that are incarcerated into helping do projects in our Parks? Seems I just read an article that they (inmates) are in need of new ways to make some money. Put THEM to work too.

But we would like to be there without the threat of animals being killed or displaced and without off road vehicles running rampant.

PROTECT WILD AREAS FROM BIG OIL . . .

I am very concerned about the American wilderness.

I want to include our "wild Mustangs" in this. They are wandering our public lands and being forced out by the BLM and the cattle ranchers. They need to be in a national park where they will be protected from helicopter roundups. Citizens need an opportunity to see their mustangs running free and protected like the other wild animals that reside in our national parks. Madeleine Pickens has some good ideas with lots of backing from us. Please listen to her.

. . . I've been to a number of places: Acadia Arches Mesa Verde Mt St Helens/Mt Rainier Yellowstone Grand Teton Redwood Forest Blue Ridge Mountains & Great Smoky Mountains Natural Bridges Mammoth Cave Cape Cod and Myrtle Beach. I've been in the same places as soldiers were so long ago at places like Valley Forge Cutter Gap and Gettysburg. (And those are just the ones off the top of my head!) I've learned that being in those places puts our own lives in perspective and that is why I urge you to help preserve and protect these special places for future generations.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

. Our family has been to many of the national parks and have enjoyed our each stay. This year my husband and I went to Denali National Park for our 25th anniversary. Glacier National Park is on the "go to" list in the near future. Please know that the American public cherishes these natural wonders in our country and expect them to be well managed without oil timber and mining company pressure and development. These wonderful places must be preserved for our children and grandchildren to enjoy...for them to say "I remember....now you know why we love our National Park System".

Yet they are not funded responsibly and are supported by many nonprofits as they try to make up the gap between funding made available and funding needed. .

I can't begin to tell you how important our National State and City parks are to me. I can't imagine a world without them it would be a place of desolation. I've seen beautiful places in my own state gobbled up by greedy developers who abandon the site as soon as they've squeezed every dime they can out of it or by vandals who destroy with ATVs and graffiti. The wild places give me comfort and inspiration.

It's disappearing being gouged leveled gobbled up in peoplecreep... . .

We desperately need to get kids out of in front of a computer and into a natural environment for their health and well being as studies have shown.

. . I have written to President Obama concerning the public lands where our wild horses roam. I've also written to my representatives. In addition I have sent faxes emails and made numerous phone calls. I find it hard to believe that President Obama wants to make the White House accessible to us because I haven't gotten ONE response from him. I spent so much time and it is as if my pleas have fallen on deaf ears. The president certainly doesn't care about the wild horses as the BLM is permitted to herd them using helicopters in 3 digit temperature weather. As a result many have died. I voted for President Obama but now am disappointed because he seems to be carrying on business as usual. I don't think he cares at all.

. . Our family began camping when our five children were very young. We bought a ten dollar pass which entitled us to all national parks monuments forests etc. and that included free camping! Since we were on a very limited budget this allowed us to enjoy many wonderful vacations touring the country and camping a long the way. As senior citizens my husband and I continue to take relatively inexpensive vacations camping with our grown children and our grandchildren in many of the same places we visited years ago. One problem does exist!!! Many of the places we visit now are quite run down and are understaffed. (there is only so much the S.C.A. can be expected to do!!!). I hope you will realize the importance of protecting all of our national parks monuments forests for all of us now and for future generations.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

. Closest to my mind right now is a little thought of and often maligned expanse of irreplaceable wetlands in Northern New Jersey directly adjacent to New York City called the Meadowlands. This is an important area that provides a natural method for cleaning the polluted waters of the area's many rivers it is also the breeding ground of hundreds of species of rare wildlife particularly birds and is even the home of several newly adapted species specific to the region. Since the advent of the G. W. Bush Administration this area has been under slow yet steady commercial / industrial development. I see it shrinking weekly before my eyes. Something needs to be done or our waters and wildlife will pay a terrible price in an area that is already woefully overdeveloped and is barely ecologically stable in its present condition. This area if properly managed could mean a lot to a vast local population in terms of environmental and biological education and recreation.

. I recently visited one of our National Parks to climb four peaks over 14000 feet in a single day. Much to my chagrin finding a camping spot in our National Forest was challenging as most of the camp grounds were now private property due to mineral rights acquired by who knows what means. To make matters worse when we got to the MT Bross trail there was a sign saying the trail was closed. Upon my inquiry with the National Forest staff the few left they alleged MT Bross along with MT Democrat MT Lincoln and Cameron were all private property above 12000 feet! In other words MT Bross was closed because the owners didn't want me on their 14er. This is a quintessential example of fascism and it must be stopped and reversed! The other camping I did this year showed most National Parks camp grounds closed due to beetle kill or lack of staff and upkeep. Why is it the tax payers are forced to pay trillions for an over bloated DOD that we don't need wars and war crimes we don't need or want while our National Forests the ultimate commons go to hell?

Mr. President I hate to rain on your parade but there is something horribly lacking in our national parks and you have to know what it is! The lack of humanity and caring for our wildlife is enough to make me sick. You are letting the wolves be slaughtered and do not seem to care about the lose of the buffalo either. I made a special trip to Yellowstone to see the wolf pack that was cared for and released with such love and devotion. I'm glad I got to see them at least once BECAUSE THEY ARE ALL DEAD NOW AREN'T THEY??????? I don't know how you and Mr. Salazar can live with that. Just to appease the cattlemen! You are both treating our legacies with contempt and it really irks me. I have not been back to any national park since the wolf killing started and I will not return until it is stopped. ALSO IN ALASKA!!!!!!!!!! What a horrible death you are allowing for these magnificent creatures. I guess you and your family don't have any feelings for wildlife or you could NOT LET THIS KILLING GO ON!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

First I want to thank the President and the Executive office for doing a great job in these trying times. It is clear to me that Education is failing the American people as there are a lot of stupid comments about the war Gulf oil spill Health reform and other subjects. . . \* (A bit off the subject but close to the hearts of many Americans who want to see our wild horses.) Rein in the BLM who has been rounding up and killing wild horses in several midwestern states. They are in violation of the law and are spending millions of taxpayer's dollars to round up and keep these horses in pens. Stories put out by the BLM have been proven to be blatantly false. Pictures from observers shown this to be conclusive. The stories are heartbreaking. It has become clear that the cattlemen are behind this and want the rangeland cleared up so there is more room for their cattle. And the range: belonging to the American people has been rented to them for cents on the dollar. I would also add the methane that the cows produce worldwide if no cows existed would solve the global warming problem. Although this is not possible it's something to think about when expanding the cattlemen's ranges. . .

P.S. I would like to add that there seems to be a trend toward "privatizing" the upkeep of national (and regional parks) which usually results in the imposition of larger fees for users. This is unconscionable.

Sponsor the states to employ the receivers of extended benefits to work for extra money in the parks.

We are using so much land for unnecessary buildings commercial and apartments even homes. Our land is a gift from God. Let us honor and preserve it.

Recently you visited Acadia National Park in Maine a small but precious gem in our National Park System. With this visit fresh in your mind you are reminded how important the Great Outdoors is to the American Spirit. . . .

. . . My children still talk about the camping trips we took in our National Parks... in fact when my son was interviewed for his job (pilot for Delta) he was asked what was his best memory was from his childhood. He replied "The camping trips we took!" . . .

. . . Out parks are one place the the old and young citizens of this country can connect. A place where people wildlife and nature can all come together and connect with life nature all together. Please keep out parks in good condition so we all can enjoy and connect.

I recently spent a week volunteering at Yosemite NP. Typical of so many of our parks Yosemite is showing the effects of crowding and lack of maintenance. The bathrooms are not regularly cleaned and ranger contact programs have been curtailed. . . .

We moved from California to Arizona 5 years ago; great Governor balanced budget then we inherited Brewer who is a disaster!!!! All of the important programs have been cut or eliminated including education and special services along with the parks. . . .

## Discussion Question 2

### **Written & Online Comments**

**(cont.)**

Yesterday a college-age young woman knocked on my door canvassing for funds to protect the Clean Water Act. I offered my sympathy for the work she has to do in light of recent disasters (the BP oil spill) and Congress' decision to renege on decades of environmental protection. THIS young girl cared; why don't so many legislators? .

. I would just like to see more employees taking care to uphold the rules and regulations of guarding our existing parks. One ranger to cover 20 to 40 miles of area is anything but right when people in Yellowstone National Park continually violate precious and delicate thermal features. I know I have been a tour guide in YNP for 15 years. If we cannot manage people from all over the world who do not read signs because they don't want to or they speak another language then we need to set up a monorail system within the parks to keep people from destroying daily the thermal features and the wildlife. .

Take Action for the Prairies Today! Take action today for the PPR!  
<<http://www.ducks.org/eblasts/2010/TreasuredLandscape/images/treasuredRHS.gif>> Fellow Conservationists, Today, many families are losing touch with America's great outdoors. Fields, forests and streams are becoming fragmented by lack of support for conserving these crucial areas. As Ducks Unlimited members, we understand the importance of habitat conservation and have led this charge for decades—and we will continue to do so. Recognizing the influence the outdoors has on our youth and the need for conserving America's natural landscapes, the president and his administration have proposed the America's Great Outdoors Initiative (AGOI). This initiative is designed to promote the outdoors to youth, advance private-land conservation strategies, and use science-based management practices to restore and protect our lands. I am asking that you take a moment to e-mail the Department of the Interior, which is currently accepting ideas from the public on how and where the AGOI can provide the greatest benefits for Americans and the natural landscapes that support their outdoor lifestyles and livelihoods. Through sound scientific research, DU knows that the future of waterfowl and waterfowl hunting depend on more aggressive conservation of the Prairie Pothole Region, also known as the "Duck Factory." Encouraging the AGOI to designate the Prairie Pothole Region as a "Treasured Landscape" will help secure the future of waterfowl populations throughout North America.

Once grassland and wetland habitats are modified their value to the well being of Prairie Pothole Region is compromised and in many cases lost forever. Just ask the folks who live in and around Devils Lake ND..

When declaring September as National Wilderness Month, you stated that "we must ensure that future generations can experience the tranquility and grandeur of America's natural places." However, policies remain in place which threaten the natural beauty, quiet and solitude of worthy wilderness-quality lands throughout the West, especially in Utah's redrock country. The "No More Wilderness" policy and resulting land use management plans for 11 million acres of BLM land in Utah have left 80% of these lands open to oil and gas drilling and designated an astounding 20,000 miles of ORV routes. In some of the plans, every single riparian area has an ORV trail, leading to pollution, erosion, shrinking water availability and lost wildlife habitat.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

When declaring September as National Wilderness Month, you stated that "we must ensure that future generations can experience the tranquility and grandeur of America's natural places." However, policies from the Bush administration remain in place that threaten the pristine natural beauty, quiet, and solitude of worthy wilderness-quality lands throughout the West, especially in Utah's redrock country. The Bush administration's "No More Wilderness" policy and resulting land use management plans for 11 million acres of BLM land in Utah have left 80% of these lands open to oil and gas drilling and designated an astounding 20,000 miles of ORV routes. In some of the plans, every single riparian area has an ORV trail, leading to pollution, erosion, shrinking water availability and lost wildlife habitat. Right speech is always welcome, but specific action (which accomplishes something) would be even more admirable (and more valued by future generations).

After 35 years in Massachusetts, I think I can finally call myself a New Englander, and I love my home here. But I also have a great fascination with the wild lands of the Colorado Plateau, especially the canyon country of southern Utah. I've made nearly annual trips to that country for almost 30 of those years. When declaring September as National Wilderness Month, you stated that "we must ensure that future generations can experience the tranquility and grandeur of America's natural places." I know you must be tired of dealing with the wreckage bequeathed you by preceding administration. However, policies from the Bush administration remain in place which threaten the pristine natural beauty, quiet and solitude of worthy wilderness-quality lands throughout the West, especially in Utah's redrock country.

That needs to be reversed. Southern Utah is an amazing place. Driving through it you can see mesas and buttes of different heights and colors, that stretch over miles. It is easy to imagine what was here and has disappeared due to erosion over the centuries. It is a place where the geologic history is easy to see and marvel at. This area does not need 20,000 miles of ORV roads. They do not need access to every square inch and that is what they want. Too many operators of those types of vehicles have no regard to where they are driving through or over. They care only about their fun. People who will intentionally ride through an area that is off limits just to prove they can't be stopped, have little sense of right and wrong. And they have done that with ORV's in Paria Canyon earlier this year.

It has been incredibly disappointing that policies enacted by the least environmentally-friendly President in history are still in place more than 18 months after a supposedly pro-environment President was elected.

Recreational off-road vehicles do one thing and one thing only---destroy. They destroy the land, the water, the air, and the peace. Tranquility is impossible if they are within two miles.

Why is the Bush No More Wilderness Policy still in place? If Ken Salazar doesn't rescind it, you should ask him to leave. It is hypocritical for you to sign the proclamation you just did regarding wilderness protection and the values to be preserved for future generations knowing that the Secretary of the Interior has done and likely will do nothing about this Bush legacy.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

You declared September as National Wilderness Month stating that "we must ensure that future generations can experience the tranquility and grandeur of America's natural places." Somehow your administration has allowed policies from the Bush administration to remain in place which threaten the pristine natural beauty, quiet and solitude of worthy wilderness-quality lands throughout the West, especially in Utah's redrock country. The Bush administration's "No More Wilderness" policy and resulting land use management plans for 11 million acres of BLM land in Utah have left 80% of these lands open to oil and gas drilling and designated an astounding 20,000 miles of damaging ORV routes. In some of the plans, every single riparian area has an ORV trail, leading to pollution, erosion, shrinking water availability and lost wildlife habitat. Climate change, which is the overriding influence on the health of BLM lands, received only three paragraphs of identical boilerplate language in each of the 1,000-page Environmental Impact Statements instead of any real analysis. I urge you to address these disastrous Bush administration legacies, and support actions that will preserve intact for perpetuity the wildlands of the Southwest, in particular the many magical places in San Juan County, Utah.

I have been able to spend several weeks in the past two years hiking canoeing this area. It is sad that some of the area I able to visit had been over run by motorized vehicles. Many individuals do not pay attention to the markers signifying the start of the roadless areas and simply create new roads.

I wish you could take a kayak ride down the Dirty Devil in Utah, as I have. Then you would, without hesitation, INCLUDE this redrock masterpiece in September's National Wilderness Month. You would put your HEART in your own statement: "we must ensure that future generations can experience the tranquility and grandeur of America's natural places." You would NOT ALLOW policies from the Bush administration to remain in place. To do so, to allow them to stand, is to threaten the pristine natural beauty, quiet and solitude of worthy wilderness-quality lands throughout the West, especially in Utah's redrock country -- where the Dirty Devil runs.

When it comes to wilderness preservation, we have no second chances, particularly in area already damaged by human intrusion. Please take action to preserve the delicate and fragile environments that remain at least partially pristine before it is too late.

Although you declared September as National Wilderness Month, "No More Wilderness" policies from the Bush administration still threaten wilderness-quality lands throughout the West, especially in Utah's redrock country. It's time to dump this policy and start moving forward in protecting our children's heritage.

Thanks for the proclamation for Wilderness Month. Now please let us have some action! The Bush Era policy of "no More Wilderness" as brokered by Gale Norton and our own Governor Mike Leavitt are still in place! Please have Sec Salazar rescind that terrible policy and allow the BLM to consider - and have Congress implement - more wilderness. The resource plans for 11 million acres of BLM land in Utah were rushed through under pressure from development, extractive and motorized lobbyists. As my dad said, please (respectfully) put your money where your mouth is (respectfully).

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

When declaring September as National Wilderness Month, you stated that "we must ensure that future generations can experience the tranquility and grandeur of America's natural places." Zion National Park recognized its own 90% Congressionally (newly) designated Wilderness Zone, by conducting public input on a Soundscape Management Plan and draft EA-- proposing new audibility-based, and loudness, Standards for the Wilderness Zone. These draft Standards don't go far enough, but they are a sufficient start to get some improvements in place from tour aircraft (hopefully a ban), and some beginning effort from the FAA on other aircraft noise sources. Thank you for your Administration's support on that. However, policies from the Bush administration remain in place which threaten the pristine natural beauty, quiet and solitude of worthy wilderness-quality lands throughout the West, especially in Utah's redrock country. Two of these WSA's are right next to Zion National Park.

These lands are irreplaceable, and thus need protection from abuse by those who do not appreciate them. Please protect them.

Only after the last tree has been cut down Only after the last river has been poisoned Only after the last fish has been caught Only then will you find you cannot eat money -- Cree prophecy

Although my home address is in California, I own property in Utah and spend several months in Utah each year. I think it is important to keep much of Utah wilderness so others may enjoy the beauty and the quiet as much as I do. Thank you.

As a longtime backpacker, and a wilderness-lover and advocate, I am thrilled that you've named September National Wilderness Month. When you did this, you stated that "we must ensure that future generations can experience the tranquility and grandeur of America's natural places." However, policies from the Bush administration remain in place which threaten the pristine natural beauty, quiet and solitude of worthy wilderness-quality lands throughout the West, especially in Utah's redrock country, where I often hike. The Bush administration's "No More Wilderness" policy and resulting land use management plans for 11 million acres of BLM land in Utah have left 80% of these lands open to oil and gas drilling and designated an astounding 20,000 miles of ORV routes. In some of the plans, every single riparian area has an ORV trail, leading to pollution, erosion, shrinking water availability and lost wildlife habitat. In addition, I have personally observed the destruction of ancient ruins in some of these back country canyons in repeated trips. Turkey Pen ruin in Utah's Grand Gulch, for one example, on my first trip there in 1983, had an intact ceiling (one of the few left on any ruin) and a large number of turkey feather blanket remnants and pottery shards lying about. The second time I visited, in 1995, the roof was showing signs of destabilization and there were only a few artifacts left. The last time I was there, 2007, the roof had been caved in and there were virtually no artifacts left. The degradation was obviously the result of increasingly easy access to the site made possible by ORV enthusiasts. I've found that the easier a place is to get to, the more damage results because these intruders do not seem to have the respect for the wilderness and its attributes that those who reach it only with difficult hiking have.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I visit this area regularly and have seen the results of this mismanagement directly. We need to protect the last remaining wilderness areas.

Compromising with the Republicans obviously doesn't work. Why not do the right thing for future generations?

Here in Utah the red dust from the red rock country is in our blood. Not only do we cherish the pristine wilderness, but this natural asset bring tourists from all over the world. It can't remain healthy with roads and trails invading the fragile desert and riparian areas. Please help us protect this irreplaceable treasure so you can bring your children and grandchildren to enjoy it as we do.

Dear Mr. President, I am a renewable energy developer working in the Pacific Northwest and Interior West. I am actively developing renewable wind and solar sites in Utah, a state professionally and personally important to me. The protection of sensitive areas in the West from development, yes, energy development is critical. While oil and gas development poses a greater threat than does wind, solar and other renewable energy development, an important balance needs to be achieved between appropriate development and wild land protection. It is critically important to wind energy developers that our industry not be held to different, more rigid standards than the oil and gas industries.

Please commemorate the National Wilderness Month of September by preserving and taking good care of the quality wilderness land in Utah. As in Norway, there are big problems with all the ORVs crisscrossing terrain and serious difficulties in keeping those vehicles on the recommended trails. The big tracks they leave take so many years to dissolve. The ORVs are also disturbing shy animals on the verge of extinction when they drive outside. As a young girl I happened to read some National Geographic Magazines at a neighbour. They opened a new world to me. And I was so impressed by photos from the Grand Canyon and other magnificent spots in the U.S. Please tell the BLM to take proper care of wildlands in Utah, so all of our descendants also will have the chance to see this magical landscape.

I hope you will work to ensure that these beautiful lands are preserved for long into the future.

We need less talk, more positive action!

There are footpaths and cowpaths all over the west that have been falsely labelled as roads for the purpose of ATV and dirt bike use. These should be protected from erosion by including them in wilderness study and quality restrictions for hiking, biking, horse back riding, and river transit. Access for lumbering and mining and drilling can be regulated to reduce impact on open range areas. It is not necessary, here or in the wetlands of the Gulf, to cut straight access across undeveloped land. Please focus on the long range and reverse the destructive policies of the Bush administration.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

During the past 25 years, my wife and I have spent several weeks each year hiking, photographing and in general marvelling at the majesty that is America's Red Rock Wilderness in Southern Utah. The quiet, the strange beauty, the total solitude of this area is a thing to be cherished. However, during the past 10 years we have noticed marked changes in the landscape, the overall quietness and the destruction showing up in the general landscape and the ancient dwellings, pictographs and petroglyphs. Most of this damage can be traced to the Bush era's misguided, anything goes, "No More Wilderness" policy that gave a green light to off road vehicles of all kinds and law enforcement and BLM non-enforcement that made those abuser feel like THEY were the protected ones rather than the land that belongs not only to us, but to future generations. We can't pass on to them a land scarred with OHV tracks, looted or simply ridden-over ancient dwellings, and an attitude that one can go anywhere one wants on a monster, noisy machine. We, indeed, you must take a stand and do what is necessary to protect this land. And, it won't contribute to the deficit, it won't raise (or lower taxes) and if President Clinton's proclamation of Grand Staircase Escalante National Monument is any indication, preserving beautiful lands, protecting them from OHV abuse and excessive energy exploitation, preserving the solitude is a boon for tourism in the area while actually creates jobs. Do the right thing. Stand up for Utah's Red Rock Wilderness.

So many of our public lands, forests, and open spaces have already been ruined by development, drilling, OTV/ATV use, and roads! Enough is enough! Our wilderness, forests, and public lands are under threat from so many angles. They desperately need to be protected. Our parks and forests are supposed to be a place of peace and quiet, for us and for the animals who live there. PLEASE let our public lands stay as beautiful and peaceful as Mother Nature intended!! Their future is in your hands! PLEASE help save the wilderness for ALL future generations!!

I recently spent a week in the Mammoth Lake/Devils Postpile area of the California Sierra - half the trees are dead. I then spent 2 weeks in Yosemite National Park - half the trees are dead. On the way back to Oregon I passed through about 70 miles of the Fremont Nation Forest in south central Oregon - half the trees are dead. Spreading bark beetle infestation due to a warmer climate. It may already be too late,

the land and water is the only thing that we have.. people need to relize that the land wate tress dirt air and so on r the only thing that we have and we are killing it ~!!!! we need to do somehting about it... the best thing to do is to round up all the people that dont care and make theme stay in the city cuzz its sicknig

Where do you get off telling me I cant ride my bike in the woods?

I drove cross country this past week to help a friend move from Boston to LA; we went through some stunning parts of the country I had never seen before and never knew were in danger of extinction or destruction. Knowing now how fragile our ecosystem is puts into perspective how important taking care not to damage it is.

## Discussion Question 2

***(cont.)***

I am 14 years old and when ii was 6 i moved to agoura hills when i moved hear nature was every where but in the past 2 years they have taken down whole mountains to replace with office building please stop

NOW is the time!! we cant wait!!! we must start making drastic changes to insure that our children can enjoy our outdoor spaces for years to come!!

All too often there is a black and white discussion on environmental protections, pitting business and extraction groups against conservationists. In reality, protection of many of these lands, if done properly, aid both groups. An example of this is the positive benefit to anadromous fish species (salmon) from watershed protections. By increasing spawning habitat protection, we can increase the populations of harvestable salmon, and we increase the long term sustainability of that resource. These protections extend to other resources, such as ranchers in the southwest, where protections would have kept the grasslands of Arizona in place, providing a much more healthy grazing space than the current, anthropologically induced deserts of this area.

While the most obvious incidents between resource users and resource protectors comes from restrictions due to T & E species (incidents that do not need to occur, if protections take the time to listen to the users concerns and properly compensate them), the potential for cooperation could easily outweigh these conflicts. We just need the political debate to give way to honest attempts to compromise and find that middle ground.

. It wont stop unless we fight to stop the UNconscientious development and the greed the will surely rid of all wild places if it could. What we have now (Ntnl Parks and Preserves etc) is not enough for the survival of the creatures we reside together with on this planet.

We keep getting new mtn. bike trails shut down in our valley and we are in an outdoor heaven. Let areas like Victor, ID get new trails! We need them, the people want them and the forest service shuts them down.

One specific example is of the continuous and poorly planned parcelling off of the Black Hills, which now contains so much private property that the area is riddled with powerlines, roads, wealthy landowners, and cattle.

Our natural resources are limited and once they're gone, they're gone forever.

USA has beautiful places and gorgeus nature, 20% of the pollution of the word is generated by USA, helping to keep this great outdoors will help to balance this pollutions. I want the next generation to enjoy America's great outdoors too.

Despite growing recreational needs, the Forest Service's abilityto support forest visitors is actually declining. The Angeles Forest spends only about one dollar per visitor on lawenforcement, educational materials, interpretive services, and visitor center management. The Station Fire, the largest in thehistory of the Angeles National Forest, has exacerbated this shortage of recreational opportunities.

## Discussion Question 2

***(cont.)***

I grew up near the San Gabriel mountains; I know what destruction of habitat means in this area. Thank you for considering my comments.

I have lived within sight of them for most of my life, and enjoyed recreating in them many times. These mountains benefit our quality of life and the health of our families by providing us with clean air and water and incredible natural beauty. Our region's youth obesity and diabetes crisis has brought new urgency to connecting our people and communities back to our mountains and rivers.\* Additional resources to help with Station Fire recovery and a public education component NOT associated with the NRA, but rather with a non-gun-proponent, pro-animal group opposed to hunting, to track recovery and educate the public about wildfire.

I lived the first 46 years of my life in Rosemead, with their majesty in view, taking for granted all the wonder, education, and recreation they afforded our community. These mountains benefit our quality of life and the health of our families by providing us with clean air and water and incredible natural beauty. Our region's youth obesity and diabetes crisis has brought new urgency to connecting our people and communities back to our mountains and rivers.

One of the most important things we need to do this decade is to connect people to the environment. The city landscapes tend to disconnect people from the natural environment they depend on for their lives which is why we need national recreation areas that rekindle that connection to place on earth.

The current big concern in this country is the rush to DRILL FOR NATURAL GAS, which is being touted as the REPLACEMENT for our dependence on oil. Enlightened taxpaying citizens are well aware that greed, ego, and corporate interests are looking to make as much \$\$ as possible raping the planet of fossil fuels (i.e., the catastrophe in the GULF). It is already too late to "return" to the respect for Mother Nature our ancestors had. But we can preserve SOMETHING for future generations.

The San Gabriel Mountains soar above my home in Pasadena providing much of our public open space. These mountains benefit our quality of life and the health of our families by providing us with clean air and water and incredible natural beauty. Our region's youth obesity and diabetes crisis has brought new urgency to connecting our people and communities back to our mountains and rivers.

We definitely need conservation efforts to be started for the wolves in Alaska and other states. They are being shot for no reason. The only justification is the stupidity of the people who shoot them, who claim that they are controlling the population of wolves. Why are the wolves endangered? It is definitely because of this stupidity.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Dear Friends of Our Mother Earth: I would just like to add the following. Our children have lost what we were given because most of the creatures of Earth are gone or in such small numbers they are barely detectable. The stars are obscured by electric lights and pollution and so our children must live in a bland world of virtual reality void of youthful exuberance, and a marriage between the physical and the spiritual. We should be ashamed but are not. No guilt or sense of responsibility for what we have destroyed is in our art or our media, only the quest for more and more material acquisition for ourselves as the actualization of the self when it translates into the destruction of all of the elements that comprise the self. It could turn out to be a very tragic and brutish end of what should have been a paradise for mankind in harmony not at war with Nature.

So much of the political wrangling today can be linked to ignorance of American history. By strengthening the general public's understanding of our past we can broaden our public discourse in a more functional way. Our president understand this concept as does the National Trust for Historic Preservation. Our physical record of history in the form of buildings landscapes and artifacts further assists in gaining knowledge and perspective of our American way.

Sparsely-populated regions of our nation such as my State of South Dakota face enormous competition for resources to raise consciousness about the treasures uniquely ours and the role rural sites and structures played in this nation's history. Federal state and private lands that provide Americans with the opportunity to connect with the outdoors and promote conservation and recreation are also intertwined with our most treasured historic and cultural sites and landscapes. Natural and cultural sites and landscapes areas whose constituent resources are closely related to one another are inextricably linked because environment shapes human societies and people in turn affect their environments. These historic and natural sites reflect a wealth of locations resources histories and voices whose interpretations help all Americans celebrate our shared earth and heritage.

Please bring funding for cultural resources back into balance with our natural resources. Americans continue to connect to the land and its historic and cultural resources but the work is not finished.

As the executive director of a public library and a regional museum I can freely attest to the enormous importance of federal support for our efforts. The struggle to find private funds for preservation and interpretation of our collections and historic buildings is frustrating; the results are often far from sufficient. Programs like Save America's Treasures are critical to the future of museums and historic preservation in general. Cutting or eliminating these programs is short-sighted and highly disappointing. Help us complete our work by supporting these key programs.

What has already happened to far too many state historic sites (21 in Pennsylvania alone) is frankly bad enough. Budget "crises" are triggering governors in multiple states to shutter important state and national historic sites with no real clue how to conserve the fragile pieces of our heritage until budgets improve.. Please President Obama while we continue to send tens of billions of dollars overseas as aid military support etc. our own American cultural heritage is sliding away.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

My wife and I are continually amazed at the fine buildings and historic structures (mills barns etc.) that are allowed to fall into ruin due to lack of attention and funding. Americans continue to connect to the land and its historic and cultural resources but the work is not finished. There remain important places and lands that need your help to guarantee permanent protection including Fort Monroe in Hampton VA which will soon be released by the US Army.

Programs such as Save America's Treasures and Preserve America are economic drivers for many communities large and small provided a broad range of jobs from construction through hospitality. We regard these funding programs as an integral part of economic development in such underserved areas as Northwest Mississippi as well as in our larger towns and cities. In the recent past these federally-funded programs have made significant contributions to the state local and federal tax bases. My own home town of Natchez relies heavily on tourism for jobs and without the availability of these Federal programs to restore and maintain our resources both in the built and the natural environment we cannot maintain our current levels of employment.

As a student with the Cooperstown Graduate Program in History Museum Studies funding for public institutions is vital to preserve and protecting our nation's history. There are countless opportunities for the public to learn about the past. Unfortunately there is never enough funding for these initiatives.

I observe in Americans a lack of interest in and appreciation for anything that was around before they were born. But when they get older they regret the loss of buildings towns ways of life they had ignored. I also lived in Beijing before the current "reconstruction" of the city and removal of the last vestiges of an ancient capital. Now those old fascinating parts of Beijing that made it unique are mostly gone. I saw there what I had seen to a lesser degree in US cities in the 1960s - removal of the past at any cost for a "better" future. As many agree today that wholesale disrespect for the past has been a major mistake.

Over the last 100 years Congresses and Presidents of both parties have reserved for the people natural resources in our national parks. Now is the time to reserve our historical heritage for future American generations. Age urban sprawl and economic "progress" threaten to pave over great architectural and historical reminders of our complex past. It is imperative that a "new deal" for historical preservation similar to the National Parks System be funded by private and government resources. Meanwhile I urge you to continue funding for historical preservation through already established programs.

The buildings and their settings together with the natural landscape and the decisions we have made about preservation conservation and development have shaped the cultural landscape of this country. As a retired State Historic Preservation Officer I have seen the results of the lack of parity for over a decade between funding for our historic and cultural resources in our National Parks and other public lands. Please bring funding for cultural resources back into balance with our natural resources. .

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Dear President Obama I come from Kentucky Ohio West Virginia and now live in NY. I came from pioneer stock who lived off the land and preserved it. I am dedicated to preservation of our heritage in all areas whether cities country creeks lakes rivers or mountains. I have hiked in the beauty of countries around the world and in the USA. I am a practicing doctor at a major medical center in NYC. PLEASE increase support of preservation and conservation thereby providing our children and grandchildren the opportunity to connect with the outdoors and promote conservation and recreation. Our cultural and natural sites and our built sites in nature and landscapes are not replacable once destroyed. Witness the mountain top removals in WV by coal mine companies. Without rich natural environment and landscapes we lose our humanism for one another and for our humanism. These historic and natural sites reflect a wealth of locations resources histories and voices whose interpretations help all Americans celebrate our shared earth and heritage. Our historic and cultural resources in our National Parks and other public lands are desperately in need of additional support funding and conservation. Americans connect to the land and its historic and cultural resources and these remain important places and lands that need your help to guarantee permanent protection. We need more National Parks National Monuments National Trails and other permanent protection for the sites and lands that are important in our national heritage. I bicycle every possible chance on the Harlem Valley Rail Trail converted from the former NY Central RR. This opportunity must be extended to many many more. I thank you for your continuing efforts to improve our great country. I am grateful for all the efforts you are putting into getting us back on track in the USA THANK YOU.  
Linda D Lewis M.D. 320 Central Park WEst NYC NY 10025

Expensive destructive non-sustainable highway projects such as the proposed SR 710 in Southern California that destroy our cultural heritage and urban fabric should be rejected by the Obama administration for proven non highway solutions.

Once a historic site has crumbled it is difficult or impossible to reclaim. But if it is preserved and fostered it becomes a tangible link to the people places and stories that make up our nation. I would argue that as so much of our everyday lives happens in "virtual" spaces these real authentic sites become ever more important touchstones.

From the Southern shores of Louisiana and Florida our natural sites reflect a wealth of locations resources histories and voices whose interpretations help all Americans celebrate our shared earth and heritage. Hopefully we've successfully cleaned the marshes- and cleaned the fouled birds take care of American history- Europe has done it and now our young country needs to find the bits worth saving and move on from there. Architecture is important.

My own hometown of Tucumcari NM is the cite of a historical CCC project from the New Deal era and that cite the Munciple park is in danger of being destroyed by neglect because of lack of funds and polical will to restore the cite and secure it.

Funding gaps for historic and cultural resources within our National Parks and public lands is leading to incremental loss of these resources which can never be replaced. Please bring funding for cultural resources back into balance with our natural resources.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Once our parks and historic sites are damaged from misuse and neglect they will not be available for future generations. Please consider what we lose every time a noteworthy building is razed; each time land is stripped of trees and vegetation. It takes generations to reforest and the history that is lost can not be refabricated. Western Europeans preserve their history by valuing their aged structures beautiful gardens and their extended cultural heritages. New is not better. It is just new.

The world I've grown up with is increasingly homogenized filled with strip mall and concrete everywhere. One of my favorite things about America is that you can travel and experience new things even new cultures without needing a passport. More and more people seem to be staying closer to home rather than going away on vacation as well so there may (though I'm not sure) be a rise in heritage tourism--to which these programs are vital.

While in the past there has been a responsibility to respond positive to this funding however and I write most importantly OUR country is BROKE. Flat broke! We have a president whose policies have broken this country to become the highest debt we have ever had with an economy that can not support paying this money back. I implore you to take responsibility to curb your spending and CUT. Bare bones minimum.

Dear Mr. President I own and operate and State Historical Mansion in a small village in Columbiaville Michigan. I need a roof on the building now or the building is at risk of ruins. I have owned the property for 12 years. I am single all the money I make off the building goes back into the building for repairs. Our little town needs this building. It is the history of the Village. I have a great team of volunteers that have donated many hours over the last 12 years. I have looked for grant money with no success. My credit is shot because of my divorce 5 years ago. Credit card debt is part of the problem. If you could give any advice of what doors to knock on for help I can do the knocking. I am not a non-profit that shuts many doors. I take school children in our area through yearly to educate them the History on the building and how the lumbering industry was vital to this area. Then we tell them the things we are changing to go Green. Please if you can help anyway? The property name is The William Peter Mansion Michigan state Historical. Web site is [www.williampetersmansion.com](http://www.williampetersmansion.com) thank-you

Cities without old buildings are like a man without a memory. States without functioning parks send the message to our young people that these open natural spaces don't matter. Every state's economy is impacted when historic sites are not made accessible to the public. These natural and historic treasures can not be neglected or they will perish. We can't allow that to happen.

Our Cultural History is important in a country that is so young we need to save what ever we can please help this mission by giving the money support that it needs.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

\*\*\*\*\* I'm sure you realize that this letter is part of a mass mailing. But I will insert here that I believe that preservation both of natural and historic resources is critical even in these rough times. Indeed perhaps more so as natural areas can sometime be brought back with sufficient work. Not so with historic structures. Once they're gone (or deteriorated beyond repair) they're gone. \*\*\*\*\*

My husband and I are always shocked to learn that residents of what later became national parks were forced out. No human could live in a 'park' any longer. We were shocked because we are a living ecosystem and we are neither 'nature' or 'culture' but a combination of the two. Our greatest assets are our natural resources and our people and what they create. Preserving what has been created and renewing and restoring both these elements should be the keystone of our preservation and historical goals. This becomes a great way to interpret what our ancestors discovered and what they made of their discoveries--for good or ill. It is a part of our history and it's always an exciting story.

There has been a lack of parity for over a decade between funding for our historic and cultural resources in our National Parks and other public lands. As a resident in a city whose culture has been imperiled for the last five years I know how fragile it is and how quickly it can disappear. Please bring funding for cultural resources back into balance with our natural resources.

Once we lose a building natural space or neighborhood we can never go back and "retrieve" it. It is lost forever and our country is the less for its loss.

As an Immigrant from Ireland I am amazed by the beauty of the natural lands here in the US. Unless we preserve part of what we were and where we came from we cannot really know who we are. A nation without knowledge of its heritage is soulless and directionless.

I recently took a trip to Wyoming and toured Yellowstone National Park and rode horses in the Shoshone National Forest in the Absaroka Mountains. The forest is being devastated by the pine beetle. The dude ranch we stayed at is charged a shockingly high price for access to wild lands that is straining their business. But without outfits like theirs many people would never see some of the beautiful wilderness this country has out west! In times when more and more land is gobbled up by malls Walmarts and sports complexes we are quickly losing part of the awesome living heritage this country has. We owe it to our ancestors and future generations to preserve as much wilderness and open space as possible. Please help us save the precious lands and parks for all to enjoy not just for our use but to preserve what's left of America's biodiversity.

Since the foregoing observations were an experts opinions.....that I agree with, I can register my opinion more personally. If parks are 'forgotten', our lack of interest will probably go to the next generation, and we'll have condos in Yellowstone.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I would also like to add that I can see no reason why us taxpayers (yes I am in the 52 % who did pay taxes) pay \$360,000.00 per week for fuel for the Speaker of the House to commute to DC from California. I also cannot see why you would let her upgrade her jet so she would not have to stop for refueling. After all she wants us to downgrade to cars that get better mileage. Why does she not practice what she preaches?

National Parks were only a part of my outdoor experiences as a child 60 years or so ago. They loom much larger in importance today with the great increase in population density and the "homogenization" of society to the degree that one city or town pretty much looks like any other.

When Pres. Teddy R. realized we needed to protect our environment and so many parks were protected, we won. Today we have the greed of OIL attacking our national parks, we don't want drilling in our parks!!! We also need to protect our water. Today in Michigan we have 2 companies extracting water from our water table, and someone in Congress who want to drill for OIL in LAKE MICHIGAN. These things cannot be tolerated. We must put an end to the insanity of destroying the environment of the world. Please help us protect our greatest resources and our lives.

Moreover they should "Buy American" I have found that most of the publications are printed in some Asian country! Not the way to go.

Next, you might consider preserving the animals of the land; the animals who had a right to this land long before human beings decided to usurp her. Animals, like the WOLVES, & the PUMA's & the FLORIDA PANTHERS as well as smaller, less obvious animals that all take a part in our Heritage & Our Natural Beauties of this Land we now call home. STOP THE WAR ON THE WOLVES & OTHER ANIMALS BEFORE THIS COUNTRY DECIDES TO WE'VE MADE A HUGE MISTAKE IN ELECTING YOU.

I think kids must learn the benefits to them of the natural world, even direct consciousness elevating ones. This went by the wayside when emphasis was on making \$ and being a business major. Without values of "greatest generation" the result was our present financial debacle! Arts, philosophy, aesthetics were discouraged in schools. We need a Roosevelt scenario for employing young and old and restoring our parks and wildlands. (D.C.)

We are a nation in SERIOUS need of outdoor recreation, sport and communing with nature. These spaces are essential to preservation of the American way of life! Thank you for considering my comments and in advance for your positive action.

Being fortunate enough to have grown up near Yellowstone and Glacier Parks, I took for granted our careful stewardship of nature's beauty. We mustn't take this for granted!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

First of all, let me say that you and your administration must learn to protect the environment you claimed you cared about before you were elected. Despite that pledge and our corresponding votes, you appointed a Sec. of the Interior in Ken Salazar who has spearheaded the butcher of our nation;'s wolf population, animals who belong here, had been restored at great expense by those of us who care, and who were improving the natural aspects of the environments they inhabited. Right now America's environment is in much worse shape than it was under the reign of the self proclaimed "world's greatest polluter", George Bush. For the first time in over 30 years I am thinking I cannot vote Democratic again if this is the result. I find it incredible that you have sanctioned this type of despicable behavior from your Cabinet officers.

The Asian Carp need to be stopped and they threaten National parks and Shoreline here in Michigan. Please stop them in your home state before the ruin ours!

I also think of how much of our wonderful open space is being eaten up by development and overpopulation. We need to preserve and protect the national parks we have and create more! Lots more.

Let's hope big business doesn't our National Parks Initiative.

Those of us in Utah need your all the help we can muster, including yours, to preserve our precious wild lands that give us clean air, drinking water, open space, beautiful recreation areas and wildlife habitat against the onslaught of off road vehicles and a myriad of other threats.

{As one who grew up in Eastern Ky. in the Appalachian foothills and know the joy of the woods and the animals and then lived 17 years near the San Gabriel Mtns. and played at Lake Arrowhead and Big Bear and now live near Lake Berryessa and within a few hours drive to Lake Tahoe, I cannot tell you how much it means to preserve our forests and wildlife...I have seen and enjoyed a broad spectrum of our Nation's beauty and it hurts me as bad as the Blue Eyed Indian in the commercial years ago as he stood by the highway and watched the kids throw trash out their automobile window as they drove by and a tear rolled down his cheek...It hurts me the same way to watch Corporations and greedy people destroy our wildlife and forests...} Geo. Oliver

From our oldgrowth forests in the north, to the rugged Sierra Nevada, to the vast desert in the south, some of our most precious outdoors destinations are at risk. Development, increased visitation, and budget cuts are impacting some of our most iconic and important places.

The "wetlands restoration" project in the Balona Creek Marsh outside Marina Del Rey (in Los Angeles) turned out to be a project that drained the marsh, leveled it and built housing!!! This was one of the only marsh habitats that I know of in the region and needed better protection!

The following may be a form letter, but it expresses exactly my feelings about wilderness protection. Because of budget cuts, our most valuable treasures are becoming degraded from lack of care. Please give the following serious and thoughtful consideration.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

**MOST IMPORTANT:** California, like the rest of the U.S., lacks a population policy that will take pressure off the natural systems that we need to sustain life, including human life. Degradation of natural ecosystems, such as the ones The Wilderness Society is concerned about, through artificial growth and development actually reduces the carrying capacity of California the number of people California can support into the future at a decent standard of living. Please begin work on a national population policy that will reverse the rapid, ongoing environmental decline in California and the rest of the U.S.

California, a place blessed with staggering beauty and diversity needs your help to preserve its remaining wild lands that give us clean air, drinking water, open space, beautiful recreation areas, and wildlife habitat. Don't let development pave paradise and put up a parking lot. California's enormous population growth puts some of our most precious outdoors destinations at risk. Development, increased visitation, and budget cuts are impacting some of our most iconic and important places.

I would also like to include one of our most overlooked natural resources, the Native Americans. They are as much an endangered species as the spotted owl, and we have much to learn from them about land conservation.

We need to save our wild open places for our emotional and physical health and that of our children. Stewardship for the future.

But in all truth, our ocean, is one ocean. As far as I'm concerned the most pressing issue for the environment, globally is the BP spill. Nothing takes precedent like what's happening right now in the gulf. Animals, ecosystems and one of our largest food sources is in the process of being destroyed and NOTHING is being done about it. We'll look back on this in 5 to 10 years and think 'God, how could we have let this happen...'

When I was growing up in Southern California, the San Gabriel Mountains provided wonderful recreation opportunities for my family and I. We weren't rich but we could take Sunday drives, picnics and walks in these mountains. Now so many people have used these sites (which are near Los Angeles) that restoration is really needed. Please help.

Hi! I've just returned from a trip from Southern CA to Coastal Oregon. Wow! What a scenic trip! I took the PCH (Hwy 1) and Hwy 101 all the way up. I must say Oregon has many, many more rest stops and scenic turnouts than CA, although Northern CA is just as incredibly beautiful. Take the Redwood Forest in Humboldt County for example. It is just spectacular! Because of budget cuts in CA, our parks and scenic roadways are suffering. Anything you can do to help is much appreciated. M Calvert

Developers have destroyed so much of the state where I was born and have lived in for most of my life...where does it stop???

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I moved to Colorado to experience the open spaces of the West yet all I've seen is prime land gobbled up for development (either building or extraction industries). Over the decades what I've experienced is less access to areas where I was free to hike and explore. Private entities purchase land surrounding the BLM, Forest Service or wilderness and deny access to the public lands behind their properties. Our public lands are not their private playground or buffer zone. Please choose wisely when deciding which areas to protect and make sure access to these wonderful areas is provided. Make sure there are provisions disallowing surrounding landowners to cut off or deny access to these areas.

This final point is extremely important as we have seen the ruinous effects left behind by shoddy mining practices and the terrible destruction of ecosystems surrounding oil shale projects. Every man, woman and child need to be a steward of this world and a good place to set an example is in this still-great nation of ours by protecting that which is most precious to our lives. Thank you for your time.

This is more than a landscape issue. This is about protecting a heritage that we share with a diverse and deep ecocommunity. This is about protecting a heritage for our children's children. Much of this landscape is sacred to the indigenous people who have been here from time out of mind. From another point of view, it is now clear that a sustainable economic model is in deep and profound harmony with environmental concerns. It is good business to preserve and respect the environment in which we live, raise children, hunt, worship, and do business. Please hear these requests.

As a Colorado native, born and raised on the Western Slope, where several of these areas are located, I ask you to protect key landscapes on a large scale for the land, for the people.

I live in this beautiful state we are speaking of and my husband performs fire mitigation in our canyon that has been burned sadly enough to see it still and after 13 yrs of living here. We live right next to an open space area and on the edge of Roosevelt National Park, so this is close to our hearts and our lives.

5) I can't overemphasize how important the above 4 points are in our state of Colorado to holding the line on development needs and helping establish a balance of human needs to preserve and reconnect with our natural surroundings. Everywhere we look, the environment is on the defensive and is losing ground - we need to be proactive now for our children's children. Thank you.

Stop Christo OTR project, he is ruining our canyon. He plans to construct a plastic curtain 5 miles long in Big Horn Sheep canyon, in Chaffee County and Fremont county. This is a nesting area for the American Eagles, our National symbol.

I am concerned for the safety of our wild places as the agencies responsible for their care and protection are under smaller budgets and pressure from corporations.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The birthplace of wilderness, New Mexico, is home to some of this country's wildest remaining public lands. From the southern desert grassland Otero Mesa to the wild and scenic Rio Grande, our vast public lands support native wildlife and plant species, significant water resources, and imperiled desert ecosystems. These amazing places are beloved by New Mexicans and many more Americans for their hiking, hunting and fishing, and river running opportunities. Constantly under threat from oil and gas development, many pristine lands and important habitats have been destroyed.

AS WE DESTROY OUR ENVIRONMENT, WE DESTROY OURSELVES

If we are to have a healthy world, we need to protect our wilderness areas. They are a crucial part of our total ecology.

These amazing places are beloved by New Mexicans and many more Americans for their hiking opportunities. But they are constantly under threat from oil and gas development, and many pristine lands and important habitats have been destroyed. I am a 7th generation New Mexican, so my family roots in all of our wilderness areas make this important to my family

Since we are the ones living on the planet now, it is our duty to protect the Earth and all its wilderness areas for all future generations to enjoy and appreciate. Without protected wild areas human beings will lose what makes them human, appreciation for all life and the comfort we all take in natural wild places!

If we left these Corporations rape and pillage the earth, we will have nothing left for future generations to enjoy.

We have known for years what a mistake it is to do bay fill. But, even now Cargill is trying to do more. We have to stop them.

Every economist around said that the stimulus package wasn't big enough and that has been proven with the recovery stalling out recently. We need to punch it up with green jobs, green incentives and a Citizens/Civilian Conservation Corps (similar to Peace Corps or AmeriCorps) to keep our lands maintained and preserved while employing folks who need the jobs.

Due to too much internet children are experiencing Nature Deficit Disorder. There are many of us here in the Bay Area that are eager to implement programs that help reconnect children to nature by using the amazing natural resources we have in our local State and Federal Parks.

The presidents that are remembered most are the ones who begin or end a war, who steadily guide in times of crisis, and who do what has never been done before. Compared to that, your work on the environment will hardly be noticed, but you yourself will know, silently with a smile on your lips, how you saved the world.

## Discussion Question 2

### ***Written & Online Comments***

*(cont.)*

I am all for conservation and sustaining a healthy ecosystem, but more so I am concerned about the various trail user groups being shut out from thousands of acres of trail accessed land all over the country. Many mountain bike advocates have been working with other environmental groups to designate and share trails while preserving the land around those trails. I hope ALL trail users are considered before any legislation is passed designating wilderness. If equestrians can have land access then so should mechanized bicycles. Hikers must also learn to share trails.....this land is your land and this land is my land.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

When a site marries environmental, historic, and cultural resources you'll find the most successful formula for bringing people outdoors to enjoy the places that tell America's stories. Take Saugatuck, Michigan for example. It's a sparsely-developed landscape of spectacular beach, rare freshwater dunes, water, woods and wetlands; habitat to several endangered species; and home to a large number of significant historic and archeological sites. Saugatuck has been a very successful draw for Chicago residents and others for more than 120 years because all of these resources work together for one of the best visitor experiences.

**What works: What are the most effective strategies for conservation, recreation, or reconnecting people to the outdoors?** One of the most effective strategies for reconnecting people to the outdoors is providing federal dollars for local projects. Modeled after its sister program, the Land and Water Conservation Fund (LWCF), the Historic Preservation Fund (HPF) provides dedicated funding to support the programs and activities for historic and cultural sites. Programs like Save America's Treasures and Preserve America along with National Heritage Areas play important roles in promoting heritage tourism which brings people with their dollars out to experience those sites. The programs also attract private dollars to restoration projects and work in partnership with the federal government to promote economic development and create jobs.

**o According to one analysis, between 1999 and 2009 the Save America's Treasures program allocated around \$220 million dollars for the restoration of nearly 900 historic structures. This investment by the SAT program generated in excess of \$330 million from other sources and created 16,000 jobs (a job being one full time equivalent job for one year) at a cost of \$13,780 per job created. (D Rypkema)**

**o We are fortunate to have in our midst the I&M Heritage Corridor, which was the first explicit bringing together of preservation, conservation, recreation, and economic development in the country. There are now almost 50 national heritage areas in the U.S. that owe their existence to the pioneer I&M Canal National Heritage Corridor.**

**Challenges: What obstacles exist to achieve your goals? (for conservation, recreation or reconnecting people to the outdoors)** The obstacles to achieving our goals of reconnecting people to historic sites outdoors are The lack of full, permanent and dedicated funding for the Historic Preservation Fund limit the matching grants for State Historic Preservation Offices; Tribal Historic Preservation Offices; and limit funded preservation activities like planning, survey, and public education for historic preservation. Eliminating funding for SAT that leaves no preservation \$\$ for "bricks and mortar" projects and ends the most successful preservation effort in the country's history.

**o If the I & M Corridor, with its many natural, historic, and cultural resources were given more funding, it could continue to rehab historic resources, and develop more programming to draw even more people to the to this beautiful 96 mile-long historic site.**

**Federal Government Role: How can the federal government be a more effective partner? (in helping achieve conservation, recreation or reconnecting people to the outdoors)** The Federal Government can be a more effective partner by:

- Reinstating FY 2012 federal funding for historic preservation for Save America's Treasures, and Preserve America at FY 2010 levels.
- Increase to at least FY2010 levels National Heritage Areas' funding.
- Provide full, permanent and dedicated funding for the Historic Preservation Fund at \$150 million and the Land and Water Conservation Fund at \$900 million.

**Tools: What additional tools and resources would help your efforts be even more successful?** We believe that increasing the capacity of federal, state and local agencies

## Discussion Question 2

***(cont.)***

to care for and interpret historic and cultural places would go a long way to helping our efforts be more successful.

the natural wildernesses of the world are far more important than any other issue today. Without our wild habitats we would not exist, ignorant people don't understand that removing just one species can cause an ecosystem to collapse. such as the wolves of Yellowstone national park.

. Please support full funding for the Land and Water Conservation Fund, including state-side funding. Thanks!

What Works: Involvement/participation- WE need to get people involved. WE have too many public employees who try to take over and be gate-keepers which make many stay away from public places. I was able to get 100 acres on a Scenic River for a Public Park and kept it for 10 years with a single Ranger. One day Ranger Jane showed up with 2 other ladies and told me that I had NO RIGHT to tell people they could come to the place even though I had signed waivers and had an agreement. They also made up some story about my being a "gay basher." They got rid of the hard-working Ranger and replaced him with 4 others... I do not lead hikes there anymore, I do not do "kids in creeks" there anymore and I seldom visit and pick up the site. I saw the same public employees who try to limit public participation at the AGO meeting along others who think parks belong to Park employees and not the citizens. In trying to deal with our Natchez Trace Park people, there is no concern for the public nor genuine safety issues. As a full time volunteer for public parks, spaces and Green-ways, I tend to feel less than welcome..... My suggestion is to replace most of the paid bureaucrats with motivated volunteer groups and neighborhood coalitions. Challenges? Absolute indifference of Government to dumping and filling and ruining of watersheds by a few connected developers.... When you complain or report incidents - you become the enemy. There is something wrong! It is not that we have too much government, it is that we employ too many who do not care, work as little as possible and work against and not for PUBLIC interests. I say motivate or terminate. Most Public employees work fewer hours for more money and benefits that most other workers..... We have a volunteer network in Nashville Parks and Greenways which should be a model for others. Federal Role? Funding, incentives and motivation... Get friendlier, more committed and dedicated workers who care..... Think about those who have worked to conserve great parks, forests and places- not many were Government Employees. Continue to get more public input outside of the paid to work group.... Tools? SCHOOLS! Conservation incentives- Identify the treasures and publicize more about what WE should and can do... Work with existing conservation organizations and help locals to help themselves... A 20,000 acre tract near me that was bought with Federal money is now like a War zone with insensitive shooters and 4 wheelers. There is something wrong in our society with militant groups intent on violence which tool should be training and behavior modification. We need more public education about Good and Bad practices and more public information about what is sane and rational and to do more about those who abuse the environment and to make it news.

HERITAGE AND TRADITIONS ARE ABOUT THE ONLY THING GOVERNMENT HAS FAILED TO TAKE FROM WE THE PEOPLE.BUT ITS ONLY A MATTER OF TIME IF THEY CAN FIND A WAY TO MAKE MONEY AT IT.THERE ARE MANY THINGS THAT HAVE VANISHED FROM THE EARTH I WOULD HATE TO THINK OF OUR PARKS AND LANDS ,REFUGES AND RIVERS BEING TAKEN.

## Discussion Question 2

### **Written & Online Comments**

**(cont.)**

20 August 2010      The Honorable Kenneth Salazar      United States Secretary of the Interior  
c/o America's Great Outdoors      U.S. Department of the Interior      Fish and Wildlife and Parks  
1849 C Street NW      Washington, DC 20240      Dear Sir,      Thank you for your vision and  
your leadership in helping to make President Obama's America's Great Outdoors initiative a  
personal and national priority. As millions of Americans spend their summer days enjoying the  
great outdoors, including our 392 national park sites across the country, we are reminded of the  
important role they play in preserving our public lands and national heritage. From the great  
southern wildlands like Great Smoky Mountains National Park to places like the Ocmulgee  
National Monument, which memorializes our continent's Native American history, the national  
parks provide some of the best means of connecting Americans, young and old, to America's  
Great Outdoors, and preserving the natural and cultural diversity of our nation. As the AGO  
initiative winds down, with the ending of the summer, and you begin to ponder the incredible  
outpouring of the ideas and hopes of the American people in order to assist the President in  
crafting a 21st century conservation agenda, I would like to offer several thoughts. The ideas  
below emerge from the work of the National Parks Conservation Association's southeastern  
regional program. They are framed within the context of the AGO's four questions.      I)  
Challenges: What obstacles exist to achieve your goals for conservation, recreation, or  
reconnecting people to the outdoors?      Major obstacles to advancing a 21st century approach  
to conservation include the following.      A)      The Need for Full Operational Funding for the  
National Park Service.      Compared to the overall federal budget, the Park Service is very  
small—only one tenth of 1 percent. Providing Parks the funds needed to serve visitors and  
protect resources is a tiny investment in our national heritage, and provides economic benefits  
and jobs in struggling communities nationwide. A recent NPCA-commissioned report, *The U.S.  
National Park System: An Economic Asset at Risk*  
<[http://www.npca.org/park\\_assets/NPCA\\_Economic\\_Significance\\_Report.pdf](http://www.npca.org/park_assets/NPCA_Economic_Significance_Report.pdf)> , found that the  
National Parks generate over four dollars in value to the public for every tax dollar invested by  
the Federal Government.      The President's 2011 budget request for the National Park Service  
is approximately \$2.7 billion—a decrease of \$21.6 million over the current fiscal year 2010  
budget. Within the total budget, nearly \$100 million in park programs are reduced or  
eliminated—including Save America's Treasures and Preserve America grants—and parks are left  
without funding to pay for cost of living adjustments for staff. The operations budget proposal  
does not come close to meeting the \$100 million request by the National Parks Second Century  
Commission, and is insufficient to maintain current park operations and visitor services. As  
recommended by the National Parks Second Century Commission in their final report to Congress  
and the Administration, NPCA is advocating for a multi-year commitment that reduces the  
operations shortfall by at least \$100 million per year, as well as an additional \$500 million to  
meet the construction and maintenance needs of our National Parks. First and foremost, the  
President and Congress must support operations funding for the National Park Service, sufficient  
to meet its' needs.      B)      Lack of a Secure and Fully Funded, Mandatory Land and Water  
Conservation Fund.      The Land and Water Conservation Fund (LWCF) was established in 1965  
by Congress as a bipartisan commitment to invest in our natural areas, working lands and historic  
and cultural heritage, and to increase access to recreational opportunities for all Americans. The  
LWCF has protected land for our national parks, national wildlife refuges, national forests,

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

national historic and scenic trails, and wild and scenic river corridors. In addition, the LWCF state assistance program has helped develop new state parks, trails, and recreation lands in every state in the nation. The LWCF has also helped farmers and ranchers protect working lands with conservation easements and saved some of America's richest wildlife areas for hunting and fishing. In spite of these successes, the LWCF program has been dramatically underfunded. Every year, \$900 million from federal Outer Continental Shelf (OCS) drilling lease proceeds are supposed to be dedicated to the LWCF. But the full funding of \$900 million promised by Congress has been reached only once since 1965. Congress has diverted as much as \$17 billion -- 85 percent -- of the Fund's dedicated revenue for projects unrelated to conservation or recreation. Over the last eight years LWCF funding for federal land protection has dropped over 70 percent, hitting a low of \$130 million in Fiscal Year 2008. In order to preserve America's treasured landscapes and places of national significance, it is essential that the President and Congress fully fund a mandatory LWCF program. Current events in the Gulf of Mexico make keeping this promise more important than ever.

II) What works: What are the most effective strategies for conservation, recreation and connecting people to the outdoors that you have used?

A) National Parks Work! The National Parks embody America's natural and cultural heritage. They preserve the exemplary places and tell the defining stories of the American character and experience. National parks provide some of the best means of connecting citizens, young and old, to America's Great Outdoors, and preserving the natural and cultural diversity of our nation. They are, in essence, the world's greatest outdoor classrooms and provide opportunities for life-long, place-based and service learning. Consequently, National Parks are the heart of America's Great Outdoors and should have a prominent place in the President's initiative.

B) The National Park Service Works! The National Park Service has become legendary for doing amazing things with few resources. To give one example, the Rivers, Trails, and Conservation Assistance Program (RTCA), which receives less than one percent of the National Park Service budget, is making outstanding contributions to community-based conservation efforts around the southeast. The program offers NPS staff assistance to community partners for planning, organizational development, project coordination, facilitation, and public involvement in achieving locally-defined goals for natural resource conservation and outdoor recreation. To highlight one project in Georgia, much of the floodplain along a 50 mile stretch of the Ocmulgee River between the cities of Macon and Hawkinsville is already in public ownership, but is managed under a patchwork of federal, state, and local jurisdictions. Because of this fragmented management, recreational access to the river has traditionally been very limited. RTCA is helping to change that by working with the city of Hawkinsville and Bleckley, Houston, Twiggs, and Pulaski Counties to develop and improve public access points along the river, thereby creating a canoe trail, or Ocmulgee Blueway. When the Blueway project is finished, RTCA's partners will be able to promote river events such as festivals, river races, and run/bike/paddle races that can be combined with other eco-tourism promotions in each county. These developments will support local businesses, such as outfitters, restaurants, hotels, and shops, as well as create new constituencies for environmental stewardship. Ultimately, this project has the potential to link the city of Macon and the Ocmulgee National Monument downstream to the Altamaha River Canoe Trail and the city of Darien on the Georgia coast, over 200 miles away. From Darien it will connect to

***(cont.)***

Our community remains supportive of the National Park Service and the Forest Service with the realization that both are very large landowners in Washington's Western Clallam and Jefferson Counties. Both of these agencies have played, and could play into the future, a significant role with regard to "getting people into America's Great Outdoors." While the goals of this initiative are laudable, the idea that America's Great Outdoors should be an independent tourist/recreation draw is contingent upon people feeling welcome and invited to visit, explore, recreate and enjoy those lands. At the present, our "Great Outdoor" recreation centers are seriously lacking the financial commitment necessary to meet the new level of hype being used to promote them. For years, our community and others have argued for fully staffed facilities where there are no more "rare ranger sightings" associated with educational and recreational offerings by overwhelmed, multi-tasking and multi-hat-wearing front country recreation, interpretative, enforcement, and educational staff. In addition, while the recent investment by Congress into both the NPS and USFS through ARRA addressed some of the maintenance backlog for both agencies, it only took on the projects that were "shovel ready." There continues to be a significant maintenance backlog that is limiting access to and enjoyment of "America's Great Outdoors." It would be worth a note of caution to the Executive Branch that it may be problematic to highlight the need for America to rediscover itself, and its historic connection to its lands, only to have the visiting public find dilapidated buildings, unmanaged trails, outdated visitor centers (such as the one at NPS Hoh Rain Forest). Further, the expecting public may encounter facilities and parks that are understaffed or so heavily relying on volunteers that staffing seems to be a second thought. Also, there are great needs for both the USFS and NPS to engage in recreational planning if we are to see a true realization of the vision associated with this initiative. Over the past decade or longer in our region, we have continually been promised "plan revisions" or "new planning opportunities" to address the concerns and issues being raised about our public lands. Yet, in nearly all such cases, those required recreation plans, day use plans, capital investment plans, forest plans, etc., all get continued out to some tenuous, unattainable date in the future. America has a remarkable heritage that is integrally tied to the utilization of its natural resources and outdoors. This initiative has the potential of rekindling that flame of discovery in the hearts of many of our fellow citizens. The challenge that lies ahead is ensuring that those outdoor resources are prepared for the expected and/or hoped-for visitors. What Works? First and foremost, local collaborative, constructive efforts are probably the best example of what in fact works. In our community, there are conservation efforts focused on salmonid recovery that involve tribal and local governments working in partnership with citizen, state, and federal land owners on specific project enhancement efforts. However, these efforts, unless it is the application period for a specific project grant round, rarely see the continual participation and engagement of all of the federal land managers, particularly the NPS. If the meeting is to regulate, or to explain how the federal agencies could apply for state salmon recovery funding board funds, then we see tend to see the federal agency at the table. If it is to develop a coordinated planning effort, their attendance is less than certain. The USFS in our area, however, has been an active technical supporter of the local collaborative salmonid efforts and deserves recognition for its involvement in these efforts. Unfortunately, some of the agencies own policies and procedures require the agency to create its own local citizen advisory group. Recently, the USFS ONF found itself having to do just that, in spite of two

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

well established salmonid recovery/watershed planning groups, effort to undertake a focused watershed initiative in the Calawah Basin, when many locally felt it would have made better sense to utilize the existing salmonid recovery organizations that have been working, planning and promoting local driven conservation for the past decade. Unfortunately, the USFS administrative process did not allow for the local ranger district to utilize what was in place. Second, citizen buy-in to the idea that the Great Outdoors applies to them - all of them. People need to feel that they are a welcomed group that can partake in activities without worry about being shut out or closed down. This may require land owners like NPS and the USFS to put as much attention on the front end visitors as there seems to be on the wilderness and backcountry users. If all feel welcome and have a positive experience, that will then result in returning, engaged users. Challenges. First, there needs to be a clear realization that adding more land, wilderness or otherwise, to existing USFS and NPS holdings will not result in more people visiting and using that specific park, forest service site, etc. Second, there needs to be a realization that over the past two decades, or so, the discussion of recreation on federal lands has developed some very restrictive "socio-economic classist" views. If we are going to be asking Americans to enjoy their outdoors, we need to realize that this is going to include a large collection of various user groups, enthusiastic, and types. At the present time, there seems to be an agency bias against outdoor recreation that does not fall in the "day hike/outdoor wilderness walk" style of recreation. However, there are a larger number of outdoor enthusiasts that believe their interests in exploring the great outdoors as off road vehicle drivers, hunters, horse riders, etc., should also be incorporated in such new policy efforts. At the present there continues to be clashes between interested user groups and enthusiasts that usually leave a level animosity hanging about the recreation lands. On the opposite end of the spectrum is the hope that some forms of tourism aimed at understanding the underlying ecosystems, species and climate of the region could be developed to attract other users. However, the true investment in such new tourism markets has not been made a priority. In fact, some of the hype assigned to such objectives have been seized upon as a means of dissuading other users that may not meet the "perceived ideal visitor." A balanced, multi-use and user approach needs to be developed as part of this new initiative. Third, the process of engaging in the permits, or being involved in the planning is not an easy one. In many cases, the interested participant has to spend numerous hours attending briefings, meetings, reading through high technical documents, and then have a narrow window to submit formal comments. Such a process can be a significant negative persuader for the general public wanting to be engaged in the future of our Nation's "Great Outdoors." Fourth, the process itself seems to be a hurdle. Many times the lament from the USFS/NPS is that "the NEPA we have on recreation is outdated," "need to revise the existing plan," or, "no plan exists, so we have to wait until we can undertake that plan to address your access issue." Then when efforts are made to determine when a recreation plan, or plan amendment is to be considered, it is usually many, many years off in the future. Federal Government Role Focus. If the goal is to encourage the use of the outdoors and the properties managed by the federal government for recreation purposes, the agencies need to: 1. Make the lands and facilities usable. Limited use and/or closed doors, trails, and campgrounds due to a lack of maintenance funding, or lack of funding for operations, is a significant barrier that has to be addressed. The field staff are doing remarkable things, but they cannot be exp

## Discussion Question 2

***(cont.)***

Department of the Interior, I attended one of the public youth listening sessions held in Albuquerque, NM on the America's Great Outdoors initiative. I was representing Talking Talons Youth Leadership, which is an animal rehabilitation center in Tijeras, NM. We use our non-releasable exotic animals to teach youth about science, the environment, and protecting these animals and their habitats. We have a summer camp where we take the kids on hikes in the East Mountains, fieldtrips to other rehab centers and nature centers, and really spend most of our time outside. We are trying to create a community garden using garden club volunteers in the community because this will teach that a person can be sustainable on their own - we don't always have to get what we need from a grocery store. The land that our center sits on is directly connected to Cibola National Forest area, and we are working with the USFS to create a program that involves the community in Talking Talons as well as the national forest. These are just some things on the horizon... What Works - Our most effective strategies include the use of our non-releasable exotic animals. We use these animals to teach kids about science and the individual animals' stories. The kids get to learn how to hold them, and this is how they build a strong connection to the animals. Because they start to care deeply about the animals, they also start to care about preserving their habitats in the wild once they learn about them. Caring about the conservation of the species and the species' habitats is then a small step from there. Challenges - Since we are a non-profit organization, we rely on state and federal grants to help us serve our community with our programs that connect youth to animals and the outdoors. This is our greatest obstacle; money and getting available grants. Federal Government Role - Really the grand obstacle to all of our programs is available grants to apply for. Maybe if the federal government had more money set aside for this effort, organizations like us could thrive because more grants would be available to us. Thank you for your time, and I hope these comments help you on your way to submitting your report to the President.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Greetings, I recently attended your event in Albuquerque last weekend. I was delighted to see that the administration is doing something like this and is meeting with folks face to face. The crowd was enormous and I was elated to be involved in such a process with my fellow citizens and members of wildlife and conservation organizations. I had some additional thoughts after the listening session that I wanted to share.

**Access and Advertising:** Some of the discussion during our session focused on the disconnect between youth and the outdoors. National Parks and forests are not accessible or even known about by everyone. I grew up in central Massachusetts and never even hiked till i was 18. I visited my first national park (Arches) when I moved from Vermont to Albuquerque. I think there's a real opportunity given the current economic state that you can use to draw families to less expensive camping and wilderness exploration. Instead of spending \$4 grand to go to Disney world let them take a road trip and camp for 20 bucks a night. I never say this in regard to anything else, but where is the advertising? You guys have to compete with video games and the internet, why not sell ads to websites aimed at children and families or encourage journalists who work for family publications to write stories about their adventures.

In the summer of 2007 i traveled to South Dakota. i was aware, of course, of Mt. Rushmore, but I spent 5 days visiting national parks and monuments that I never even knew existed. I poured hundreds of dollars in the local economies. With more a more serious public relations approach I believe that more advertising would lead to greater accessibility and use of these places.

We also spoke a lot about conservation and a few folks with the organization New Mexico wilderness Alliance offered that the parts of america that are wild all "work" in their opinion, it is we that must find ways to deal with them. Also, folks are also upset about oil, gas and coal companies polluting and ruining the heritage of our landscape. When I read stories about mountain top coal removal and this disaster in the gulf I usually cry. We did not get our wilderness protected in the first place without a fight. Humans have a bill of rights which we all cling to as a defense of our civil liberties, why not create a Bill of Rights or a constitution for our special, preserved places???? Certainly, they deserve it and they, unlike us, cannot defend themselves.

During our session, some folks got very excited when speaking about gmos and corporations like Monsanto controlling the dept of agriculture. I will say from what I have seen that I cannot believe I live in a country that allows a corporation to control the seeds that farmers grow and bullies them and renders them bankrupt if they refuse to use their products. Also they contaminate their environment. If the Department of Agriculture wanted me to believe that they wanted to make a difference they would heed the cries of the people they have met in these listening sessions and implement restrictions on the corporations that are compromising our health and our planet. What is the point of working on ideas for conservation and use of our open and wild spaces if they are in the same jeopardy that our entire planet is in? I appreciate your time and believe this is a great step toward a better future, -- One is left with the horrible feeling now that war settles nothing that to win a war is as disastrous as to lose one.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Thank you for the invitation to attend your America's Great Outdoors Initiative Listening Session held in Albuquerque, NM on July 17, 2010. This event was well organized and attended by a diversity of stakeholders from throughout our state; a testament to both your successful outreach and the great interest of the conservation community in New Mexico. While I was able to participate in some of the sessions, I was unfortunately unable to provide a comment during the breakouts. Thank you for the opportunity to comment in writing.

**Observations at the 7/17 Meeting** During the sessions, I observed a strong conservation ethic across a wide spectrum ranging from agriculture, preservation, youth education and empowerment to multiple use. I was also impressed by the agency leadership exhibited by Department of Interior and Department of Agriculture and your interest in developing more effective federal support for local projects and programs worth investing in.

**Comments** I would like to provide comments focused on programs and opportunities that will cultivate and grow the conservation ethic in our communities for current and future generations of Americans . . . in their own backyard! While implementation of sustainable management strategies in our large blocks of public land is important, I believe that federal agencies have an opportunity for a stronger supporting role in cultivating community appreciation of the natural and built environment within the urban and rural areas where our citizens live. Without an understanding of conservation amongst our citizenry and youth, we will lose the opportunity to get them out of the house and to appreciate, experience and support conservation of our wonderful natural areas outside of their community.

**What works** The USDA Forest Service Urban and Community Forestry (UCF) Program provides funding to support a State Urban and Community Forestry Program (offered through State Forestry Organizations and the National Association of State Foresters) in each of the 50 States and 6 Pacific Islands. State UCF Programs cultivate local community forestry efforts in our cities, towns and villages through technical assistance and funding support for: development of management plans, tree inventories, arborist education, etc. In addition to providing resources and expertise, State UCF Programs are in-tune with the needs of municipalities and are successful at developing extensive partnerships and programs that support local communities. Here are just a few of the partnerships that states throughout the country have successfully developed:

- Environmental: EPA, State, regional, and local organizations (SmartGrowth, Green Infrastructure, Air and Water Quality);
- Community health (partnerships with hospitals, healthcare providers, urban greening and connection to human health and activity);
- Non-profit citizen organizations (at the local, regional, and national level);
- Community planners and housing organizations;
- Utility and energy providers;
- Outdoor education organizations

The impetus of success for State UCF Programs relies on creative program implementation and partnerships that leverage a limited level of base program funding support provided by the Federal Government.

**Challenges** While the USDA Forest Service and individual State UCF Programs have built an Urban Forestry Program that provides: research, services to communities, and effective partnerships; there are great challenges to building sustainable municipal programs that result in a true impact on the conservation ethic of our citizenry. States face two critical challenges in implementing our programs:

- The current Federal allocation formula for State UCF Programs is based on a state's population. This results in many states throughout the country receiving on average \$200,000 to implement a statewide program. As a result, the ability to effectively serve mid to

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

small size communities is greatly hampered (ironically, these are the communities that our programs have the most potential to impact when services are provided!). State UCF Programs are effective at developing non-traditional partnerships that elevate the importance of urban forestry and often result in additional funding support for individual communities. The challenge lies in sustaining sufficient funds to deliver a sustainable statewide program that can operate and grow to serve the needs of communities. Federal Government Role The Federal Government has an opportunity to recognize benefits provided by the already established Urban and Community Forestry Program and align its extensive resources and programs to support it. For example, nationally we see many separate efforts at expanding implementation of "green initiatives" through Federal Agencies, such as: HUD, DOT, EPA, Department of Commerce, Department of Energy. Locally, there is extensive synergy at aligning these resources on-the-ground, but the state and local urban forestry stakeholders consistently dedicate significant time and resources to compete for a diversity of federal funding sources that serve a common purpose in the local community building healthy forests that result in healthy people. Rather than promoting competition among federal agencies for a "piece of the green", the Federal Government has an opportunity to align a diversity of agendas and overlapping resources into one synergistic "Community Conservation Initiative". This initiative has the potential to: bolster existing programs, further partnership and leverage of resources, and result in sustained and lasting change in the conservation ethic of our communities. Tools "Aligning our resources to create a lasting impact" Across the country, we often talk about the importance of the 3-legged stool in sustaining local urban forestry programs: the state, the municipality, and the grassroots citizen organization. While many state organizations have these pieces in-place, we struggle to maintain sufficient funding to maximize our impact on the citizens of our states. We challenge Federal agencies to recognize the existing infrastructure and expertise in states throughout the country and seize this opportunity to align your diversity of agencies and resources toward a common goal. If Federal leadership accepts this challenge, the states and our partners are poised to provide input and support so we together can ensure successful implementation of an effective and sustainable "Community Conservation Initiative".

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I attended yesterday's listening session at Occidental College in Los Angeles, which I greatly enjoyed, however, I did not get to voice my concerns and ideas. There were some great thoughts being presented that I considered of importance, so decided to email my comments. I am a long time resident of the Mojave Desert, and I have great concerns on the rush to site renewable energy projects. Our deserts provide extraordinary opportunities for recreation such as camping, hiking, photography, exploring, and much more. While I understand the importance of alternative energy projects, our desert is experiencing a rush to site renewable energy projects somewhat like the gold rush. There are many problems with this rush to put such projects all over our desert. First, I don't believe there have been adequate studies to determine the actual amount of energy we will need in the future. There are other considerations to be made before running forward recklessly. Such sites should be close to the areas of use instead of in far away deserts, eliminating the need for transmission lines and the loss of energy when being transported on these transmission lines. More incentives should be made for rooftop solar, not only on homes but on large buildings and over parking lots in the urban areas of use. This could lead to green jobs in the cities where such jobs are drastically needed. Another place for siting solar and wind projects would be in previously disturbed areas of land and not out in pristine areas of the desert. Conservation of energy used is still an important part of the equation. Another great concern of this rush to site these projects is the technology and integrity of the companies applying for permits to build on public lands. Many of the technologies are not adequately proven and the companies that are rushing to get government money are not necessarily going to be successful, thus destroying our treasured desert resources with no successful outcome. Reading the proposals for these projects you will find much necessary information is not included and all the the negative impacts are not addressed. Also some of these applications do not have accurate figures for the amount of energy they can produce. Rushing to put such projects on our valuable public lands could lead to devastating destruction of these resources. We must slow down and proceed in a very methodical manner. Another concern is funding for our National Parks, monuments, and other public lands. Funding should be adequate for comprehensive management plans and for on the ground implementation. As development eats away at our public lands it becomes more and more urgent that these lands are protected for people, wildlife and the health of our people and the ecosystems. Thank you for this opportunity to express my feelings.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Last Friday I attended the session at the Occidental College in Los Angeles and during our break out group, our facilitator at the Samuelson Pavilion encouraged us to follow up with our challenges and or "what's working" recommendations with an example or story. 1. Challenge Our organization has been providing outdoor education programs over 35 years to youth in the public and private sectors and when trying to reserve "group sites" at some of the National Parks, these sites go very quickly because there are not enough. Group sites are critical when working with large groups of students. An example is Yosemite National Park, we need to solicit assistance from several of our staff on the 15th of each month to arrive in the office by 6:30, set up their computers to recreation.gov (the site that reserves for the National Parks) and at 7:00 a.m. SHARP, everyone needs to select a group site, these sites are taken within five minutes. Please increase the number of group sites available for so we can continue our mission of nurturing and educating these youth groups and providing an environmental stewardship inspiration. 2. Federal Government Role How can we partner with the federal government to make outdoor education programs available to our disadvantaged and at risk youth groups? We have a part-time grant writer and would welcome the opportunity to bridge grants that make these effective programs available to low income schools and organizations. 3. What works We have hundreds of stories and letters acknowledging some of the "life changing" experiences that take place in outdoor education. Here is one of many stories pertinent to environmental stewardship. a. A group of students attended a 5-day backpacking program in Yosemite National Park and at the conclusion of their program they were so inspired by their environmental stewardship calling, they returned to their communities and began a crusade to educate their peers and local residents by providing them with alternative on saving on the cost of electricity, within a short period of time, they reported a total of 200,000 pounds of carbon as a result of a program they have launched called the "pay it forward" project. b. A Salvation Army group of youth based out of Los Angeles and grant funded for a 3-part series of outdoor education combined with leadership, service learning and environmental stewardship taught these "at risk youth" and provided them with the tools necessary from the "Leave No Trace Behind", what they can do to contribute in their communities, reconnect with the outdoors and understand the importance of conservation. This particular group's last program was in the wilderness backpacking in the San Jacinto Mountains. Upon their return, they exchanged all paper and styrofoam eating/drinking utensils and now bring in their own washable eating utensils, maybe a small contribution but monumental to this group of youth. 4. Tools I have attached a list of outdoor education programs we provide and are constantly looking for new areas, Angeles National Forest is another great location. It would be helpful to have detailed trail maps accessible by GPS or downloadable to easily navigate trail groups without getting lost. We welcome any future discussion on how we can help support The America's Great Outdoors Presidential Initiative. Warm regards,

## Discussion Question 2

### *Written & Online Comments*

*(cont.)*

I attended the listening session in Minneapolis yesterday, and I had a few comments to share: What works: I believe that important aspects of reconnecting people to the outdoors are to a) improve access, b) reduce fear, c) enhance connections to natural resources and connections between people in outdoor settings, and d) "make it cool." Some thoughts on these components... Access. I live in Minneapolis, and I love living here. But, I don't think I would be happy to live in many other large US cities. In Minneapolis, there was forethought to design a park system where each residence would be within 6 blocks of a park. Easy access like this, for everyone, will make reconnecting to the outdoors possible for all. Access to the outdoors must be planned for and incorporated on the front end. Fear. In terms of reducing fear... I believe that there we must clarify the true risks and benefits of unstructured, outdoor activities. When I was a child, my friends roamed freely in the outdoor world. We were encouraged to get outside and play. This unstructured play taught us to be creative and make our own fun. It taught us independence and how to think for ourselves. Today, parents are afraid to allow children to roam around outside unsupervised. Parental fear of stranger abduction of their children is pervasive and greatly unfounded. I think it would be beneficial to clarify the true risks of death or injury from various sources. Although the data varies from year to year... in 1999 there were 49 children killed related to stranger abduction, while this is horrible it is hardly a serious risk for most children considering there were ~50,000,000 children in US in 1999. Just for comparison, over 40,000 people are killed in car accidents in the US each year. Maybe it would be safer to let kids play outside in the neighborhood than put them in the car and take them to a "safe" supervised activity. Connections. People are much more likely to maintain their involvement in an activity if they feel connected to the resources and connected to other people who are involved. These connections build up over time... I don't believe they are likely to occur after a single "outdoors program." This relates to the two points above... I believe the easy access... and encouragement of regular, unstructured outdoor activities will create ongoing outdoor activities, rather than "special" one-of-a-kind outdoor programs. Making it cool. People are bombarded with commercial advertising about what clothes, cars, and electronic equipment are cool. Let's get real... it's way cooler to be active, fit, engaged, and focused in an active outdoor activity. And no, it's not just about acquiring the latest piece of outdoor equipment. Just being out there is cool. How can we get that message out??! Challenges: I think one key challenge is to better understand people perspectives on conservation, recreation, and the outdoors. We need to better understand the barriers to, motivations for, and perceived rewards of outdoor recreation and conservation behavior. We also need better analysis of what IS working. Do people who have better access have greater participation? If we break down the barriers to conservation behavior, do more people engage in the behaviors? Federal Government Role: There is a huge role for the government in facilitating the suggestions above. Strategic planning, leadership, funding, and coordination/encouragement of partnerships with state and local governments, corporations and nonprofit organizations. Tools: More support for coordinated research on human interaction with natural systems. --

***(cont.)***

Thanks for conducting a listening session in New Hampshire to receive input about how to best protect America's Great Outdoors. (<http://www.doi.gov/americasgreatoutdoors/Join-the-Conversation.cfm>). I will not be able to attend your event so I am submitting my comments via email. Bigger threats than insects, disease, and fire to my family's forests are state and federal Government Regulations. The state of Massachusetts' Department of Conservation and Recreation has all but eliminated forestry on 60% of public land and they now threaten to limit private landowners' opportunities to sustain their family forests. Job losses as a result of the state's preservationist policies are enormous. I urge the Obama administration to support family forest land owners, jobs, and open space conservation by enabling private landowners to make a living on their sustainably managed land. As the president and 9th generation of my family's Tree Farm business, I oversee the sustainable forest management of thousands of acres in Massachusetts. W. D. Cows, Inc., is the largest private landowner in the state. As the past president of the MA Forest Landowners Associate and the MA State Director for the national Forest Landowners Association, I presume my views are shared by many. Last year I closed my family's long held sawmill because manufacturing lumber in Amherst just doesn't make economic sense anymore. Moving forward we are focusing our efforts on sustainable forest management and log sales. We also are seeking other forest-based economic opportunities to sustain our family business into future generations. To ensure the future of private forests, we could use your help improving our forest-based economic opportunities in areas including solar and wind power, carbon credits, spring water production, conservation restrictions, and markets for logs. Biomass power has become virtually a criminal thought in my state. How is this environmentally preferable and renewable fuel source not being given full encouragement of the Patrick and Obama administrations? We need your help to turn MA and this country around. If you want to protect open space, please do not take rights and opportunities away from private forest landowners. Please encourage our sustainable and economic opportunities and encourage the state of MA to do the same. Thank you.

Hello, I attended the session yesterday. Thank you for holding it and I hope some very good things come out of it. I have an additional comment to offer. One of the questions asked was about the obstacles that exist to achieve our conservation goals. One is that many times the USFS, as the managing land agency for the Boundary Waters Canoe Area Wilderness, does not take a stand to support "wilderness character". This character is something it is measured on, studies and cares about, however when it comes down to the wire it often works to stay out of controversy instead of simply stating officially, "Yes, this project will deplete the wilderness character of the area for which we are responsible." They won't state anything that will be possibly used in court, even if it is true and simply a statement of procedures or something that everyone understands already. This hurts our efforts to bring effective cases before not only the courts but the public as well.

## Discussion Question 2

***(cont.)***

What Works In my community of Western North Carolina, partnerships between land trusts, the state clean water management trust fund, the natural resources trust funds and the National Forests are effective in acquiring conservation easements. Coops of farmers and some state and federally funded local facilities help small local farmers process their products and get them to local and regional markets. The school system in Madison County uses local food in the school lunch program. Challenges Conservation easement transaction costs are very high and not possible for many people who would otherwise be willing to put land in easements. NC Farmland Trust fund has never been adequately funded and \$2M a year does not go very far. Local participation in providing funds for land preservation projects is not possible for poorer mountain county governments. Federal Gov't impediments The system of using volunteers is hopelessly tangled in bureaucracy originally meant to provide some kind of liability protection to agencies. In my own community, an effort to keep a NFS recreation area open more months of the year by having volunteers clean bathrooms, cut grass, and empty garbage complete fell apart because of onerous and unrealistic requirements placed on those who wanted to volunteer. Innovation and grass roots work is key but when all is said and done, all groups are desperate for funding, especially in these hard economic times. Agricultural policy does not take into account impact on small farmers but rather serves corporate farms. Farm subsidies need to be eliminated or completely restructured to provide benefits to small farms and farmers. Food Health and Safety Act as originally written would have put most small farms out of business. Tools Good data and research needs to be done and disseminated to the public and decision makers quickly -- and not so couched in cautious bureaucratic language as to be useless. Example, fish and wildlife initiative to study impact of large wind turbine installations on bird and bat life is disappointingly "cya" in tone. There needs to be some compensation to local governments when a large percentage of the counties land base is publically owned and therefore, tax exempt. Selling off existing public assets is NOT the answer to this problem

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

On behalf of the Los Angeles County Department of Regional Planning, I would like to submit the following comments:

- **What Works** · School field trips to the outdoors for elementary, middle and high school students, and participation in projects that restore the environment or recreation areas serve well to reconnect people to the outdoors.
- **Preserving outdoor areas and providing the means for the public to utilize them through trails, trailheads, parking areas, information kiosks and websites, definitely increase the use of the outdoors for recreation purposes.**
- **Challenges** · **Funding for procurement and maintenance of outdoors spaces are two of the most pressing challenges to increasing conservation, recreation and reconnecting people to the outdoors.**
- **Safety is also a major additional challenge in many urban areas.**
- **Staffing to work on procurement efforts is another challenge; many local governments and land preservation agencies are short on personnel and other resources, and are burdened with innumerable priority projects, lessening the time these groups have to work on procurement.**
- **A lack of monetary resources has forced many school districts and other groups to cut field trips, physical education classes, and other non-academic efforts, reducing the time young people spend outdoors.**
- **Federal Government Role** · The federal government can be a more effective partner in helping to achieve conservation, recreation and connecting people to the outdoors by:
  - **Fully funding the Land and Water Conservation Fund every year**
  - **Remembering that even though Americans may not put environmental issues at the top of their "concerns" list every year, preservation of the environment and outdoor recreation opportunities will always be important to the American public.**
  - **Allowing more control to federal units such as individual national parks and wildlife refuges for determining priorities, allocating resources, and working with local jurisdictions to conserve environmental resources and develop joint recreation resources.**
- **Tools** · Additional tools and resources that would help our efforts be more successful are:
  - **A database of best practices regarding strategies that local and regional jurisdictions have employed to encourage conservation, promote recreation and facilitate reconnecting people with the outdoors.**
  - **A database of grant and other funding opportunities to assist local and regional jurisdictions in the acquisition and maintenance of parklands and recreational facilities, and to hire and train personnel to manage conservation efforts and educate the public about outdoor resources and use opportunities.**

Thank you for the opportunity to participate in this discussion.

## Discussion Question 2

### **Written & Online Comments**

**(cont.)**

Dear Sir/Madam: On July 1 I attended the Listening Session on Americas Great Outdoors and have included an expanded version of the ideas and issues I presented that evening. I hope you find them helpful.

**Eastside Audubon** The mission of Eastside Audubon is to protect, preserve and enhance natural ecosystems and our communities for the benefit of birds, other wildlife and people. Thank you for holding the Listening Session in Seattle. I welcome the opportunity to tell you about our program and contribute to the discussion of conservation of our natural areas and the promotion of greater involvement in the outdoors by American families. I represent Eastside Audubon, a chapter of the National Audubon Society with a service area that includes East King County from Lake Washington to the Cascade Crest and from the Snohomish County line to just south of I-90. Established in 1980 as a Chapter of the National Audubon Society, Eastside Audubon has grown to about 450 members and conducts all its activities using volunteers. Eastside Audubon has three primary means of serving the community: Conservation of birds and preservation and restoration of bird habitats, education of children and adults about birds and conservation issues, and recreational bird watching. The chapter sponsors a variety of bird watching trips and native plant walks, provides classes for adults, works with youth in a variety of settings, monitors land use and development that impact our communities, and conducts bird surveys of sensitive areas. I will respond to each of the four questions discussed in the breakout sessions.

1. Challenges: What obstacles exist to achieve your goals for conservation, recreation, or reconnecting people to the outdoors? A major obstacle is the lack of a national priority to support the consolidation of natural areas at the local level in multi-use urban and suburban parks and neighborhoods. Other priorities such as continual construction of soccer and baseball fields, hardening the environment by paving trails, and brighter lighting of parks seem to take precedence over preserving the natural environment. The introductory film reinforced the belief that nature is far away and the need for people to have to travel to amazing vistas to appreciate the outdoors. There was only token mention of local parks. In addition to protecting our national parks and forests we need to help people appreciate the outdoors where they are.

2. What works? What are the most effective strategies for conservation, recreation, and reconnecting people to the outdoors that you have used. Eastside Audubon has a number of programs that have been effective. For example, over the past five years the chapter has made a major commitment to conservation and bird watching recreation at Marymoor Park in Redmond, WA. We hold a monthly work party of 15-30 people and have been successful in restoring and preserving habitat for birds and other wildlife, and establishing a network of birding trails with high quality interpretive signage. This was done with the volunteer labor of our members, community people including high school and college students who were contributing their community service time, and employees of companies such as Microsoft and the Puget Sound Bird Observatory. We are committed to establishing a legacy of stewardship to pass on to children. Our chapter works closely with teachers in 14 schools in East King County and provides classroom-based educational programs on birds and the environment which include topics such as bird migration, species identification and typical foods birds eat. Each year we provide nature camp scholarships to six children from low-income families, a \$150 grant to a teacher to support environmental education, and a \$500 college scholarship to a high school senior who plans to study science or the environment. Chapter volunteers lead over 75 bird watching field trips per year for people of all skill levels and are committed to getting people out

## Discussion Question 2

***(cont.)***

of their homes and into nature. 3. Federal Government Role: How can the Federal Government be a more effective partner in helping to achieve conservation, recreation, and connecting people to the outdoors? We welcome this new initiative and hope it will get the federal government involved in many kinds of grassroots conservation and recreation activities. Promoting this White House Initiative as a national priority in a manner similar to President Kennedys Presidents Council on Physical Fitness would be a great beginning. We recommend that the federal government provide ongoing and consistent support for citizen science projects such as the Audubon Christmas Bird Count and the Cornell Lab of Ornithologys urban bird count and their joint Project Feederwatch. Also needed is financial support for analysis of the collected data and promulgation of the results. We also recommend that the government establish a massive effort to remove invasive species from natural areas, to plant native species of plants, to clean and repair trails and waterways, and to preserve open land in urban and suburban areas where most of the people live. These programs will also provide jobs to millions of Americans. In addition, we need government leadership to help the country stop burning fossil fuels and to review all legislation for its effect on the carbon load in the atmosphere. 4. Tools: What additional tools and resources would help your efforts be even more successful? Federal, state and county coordination will greatly help local organizations expand the kinds of activities conducted by Eastside Audubon which rfect the overall goals of the White House Initiative. These programs can be expanded to new communities and strengthened in the communities where they are already in place. Support for public-private partnerships is also important. Eastside Audubon has partnered with King County in its work at Marymoor Park, and with local businesses such as REI and Puget Consumers Coop to support education and conservation programs. Other communities have asked us to participate with them, but we are limited by size and budget. America is blessed with natural beauty and it has taken the active participation of citizens in Audubon and many other organizations to advocate for cooperation among the various levels of government to protect what we have. To expand the range of opportunities for families and improve the natural areas we cherish will take not only government but also average citizens who feel a sense of belonging and ownership for their country. Conservation and recreation can co-exist and enhance one another. Local community groups are one important aspect of a program to reconnect people to the outdoors. We hope the federal government will support this kind of community involvement. Thank you,

***(cont.)***

YOU WANT TO CONSERVE OUTDOOR SPACE AND RECONNECT AMERICANS TO THE OUTDOORS? HELP IS NEEDED IMMEDIATELY IN THE CITY OF POUGHKEEPSIE, NY. THE CITY WANTS TO LET THE O'NEILL-DUTTON LLC BUILD AN APARTMENT COMPLEX ON LAND THAT THEY OWN, AND WHICH WAS CONTAMINATED BY THEM IN PRESSURE TREATING LUMBER WHICH HAS NOW BECOME A BROWNFIELD PROJECT RIGHT ON THE BEAUTIFUL HUDSON RIVER. THIS AREA ON THE RIVERFRONT SHOULD BE NOTHING BUT "OPEN SPACE" FOR PEOPLE TO BE ABLE TO USE THE RIVER AND SEE THE BEAUTY OF THE CATSKILL MOUNTAINS. THE INFORMATION YOU ARE HEARING ON THE "WALKWAY OVER THE HUDSON", A LOT OF PROPAGANDA. I, AND THE RESIDENTS OF THE 1 ST WARD IN THE CITY OF POUGHKEEPSIE WHO LIVE IN THE AREA OF THE HUDSON RIVER CAN GIVE YOU THE TRUE STORY! WE HAVE NOTHING IN THIS CITY THAT ANY SELF RESPECTING PERSON WOULD WANT TO STOP IN TO SEE. WE HAVEN'T HAD A RESPECTABLE MAIN STREET IN OUR CITY FOR 38 YEARS, AND STILL HAVE NOTHING TO BE PROUD OF. WE HAD A COMMON COUNCIL MEETING ON 7/28/10 ON THE DEIS ON THE DUTTON PROJECT, AND LUCKILY BECAUSE OF SCENIC HUDSON, AND A FEW OTHER PEOPLE WE WERE ABLE TO FIGHT THE WOLVES OFF. THERE IS TO BE ANOTHER HEARING ON 8/30/10, @ 6:00 PM, SO THAT MORE CITIZENS CAN ATTEND, BUT ALL US RESIDENTS KNOW THAT UNLESS WE GET REAL HELP, THIS PROJECT WILL BE SHOVED DOWN OUR THROATS JUST LIKE EVERYTHING ELSE HAS IN THIS CITY. ITS THE BUCK THAT COUNTS AND THATS WHAT THE CITY SEES AT THE END OF THE RAINBOW, NOT THE BEAUTY OR WHETHER IT IS A PRACTICAL IDEA. HELP, IF YOU REALLY WANT TO SAVE THE GREAT OUTDOORS, THIS IS YOUR CHANCE!!! THERE IS SO MUCH US RESIDENTS CAN TELL YOU, IF YOU WOULD ONLY LISTEN. GIVE ME A CALL, I WOULD LOVE TO GIVE YOU A TOUR OF "OUR CITY" SO YOU CAN JUDGE FOR YOURSELF. TELEPHONE:

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

In the small town of Cuba, NM we have organized a partnership to operate a program of trails, walkways, and physical activity to address health concerns in our community. You may find out more about our program at <http://www.stepintocuba.org>. Here are some challenges and potential solutions that arise from our experience of the last several years.

**MAJOR HIGHWAYS** Our community is bisected by US Highway 550. Our NM Dept. of Transportation seems far more concerned about moving traffic through Cuba quickly, than encouraging pedestrians to do personal business or enjoy recreation on foot. We need speed controls and other traffic calming approaches such as bump-outs, crosswalks, flashing lights, trees, islands, etc. We need a process that allows for adequate public input on this issue. We think that periodic community input sessions and highway design that reflects community desire for more walkable communities should be a priority for state highway departments utilizing Federal funds.

**US FOREST SERVICE AND US BUREAU OF LAND MANAGEMENT TRAILS** We have a working local partnership for developing local trails that interconnect with scenic Federal lands and the Continental Divide National Scenic Trail that surround our community. Our local plans have been difficult to implement because of scarcity of resources for construction and maintenance of trails. We are dismayed that so much of our Federal budget is directed at maintaining outdoor recreational opportunities remote from where people live, and so little is directed to connect population centers - such as Cuba, NM - to nearby opportunities. Again, a meaningful local public input process, and a re-prioritization of resources seems like the answer. The health and quality-of-life "pay-off" from local trails seems huge in comparison to their cost to construct and maintain.

**SMALL CITY PARKS** Our city park is not a green refuge from the "concrete city jungle," but rather a center of outdoor activity. We are developing a year-round fitness trail that will serve as a hub for a network of walkways that will connect to our schools, businesses, services, surrounding Federal lands, and the Continental Divide National Scenic Trail. We are pursuing resources available for developing the park, but they are few and far between. Development of a "national blueprint" for small town parks, including potential resources for development, would be an important tool. A program of municipal park development might be very constructive "economic stimulus" for current times.

**SOCIAL SUPPORT FOR PHYSICAL ACTIVITY** We have a program of social support led by a walking champion. It includes fielding walking referrals from our local clinic, individualized counseling on physical activity plans, organization of walking groups, and worksite healthy activity promotion. These are evidence-based approaches that address our community and Nation's excess weight and diabetes epidemic. They should be among the highest priority of New Mexico's and other state health departments. Unfortunately, they are not, and resources for social support activities such as these are scarce. Health insurance entities rarely cover them as a health benefit, and municipal recreation budgets - such as Cuba's - are inadequate. Rearranging funding priorities to provide for a "pedestrian coordinator/walking champion/physical activity leader" in small communities and neighborhoods, perhaps employed by health departments, seems a potential answer.

**YOUTH OUTDOOR EDUCATION** The No Child Left Inside movement seems an important key to a healthier future for our country. Programs that encourage environmental and outdoor education, self-reliance in wilderness situations, summer youth corps outdoor jobs, and mentoring seem like an important direction. We are advocating for a safe routes to school program that allows for

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

school bus drop-off and pick-up at our city park, with students walking the remaining 1/3 mile to and from the school campus. With the addition of a pedestrian walkway from the park to the schools, we would have a natural venue for school-based outdoor activities. I hope these ideas are useful and can be incorporated into the Americas Great Outdoor Initiative. Once again, please read more about our ideas at <http://www.stepintocuba.org>.

By tracking statistics for those leaving ideas and comments, you have created a contest for people who often do not take this process at all seriously, or who are opposed to the existence of National Parks. Those who oppose the Parks have an additional forum now for their destructive speech; those in pursuit of "Top Innovator" status, as if it were a contest they are winning, treat the process with disrespect by posting irreverent, sometimes cruel and often nonsensical ideas (have you seen the one by a top innovator who wants to ban fat people from the Parks?). Have you considered that many of the comments your "top Innovators" receive are in opposition to their ideas? I and many others who have discussed this in a public meeting in our community at the entrance of the Angeles National Forest who appreciate your consideration in this matter.

I would ask that you NOT set aside any more land for designation as a National Monument or Wilderness areas. I live and work in Siskiyou County California which is a very rural county that has more than 65% of the county managed by the US Forest Service and Bureau of Land Management. The attempt to establish a Monument here would take more of what little private land we have and eventually take it off the tax rolls and hand it over to the federal government, not for management, but for set-aside land that can not be managed. This should not be allowed to happen. In these economic times, we do not need more land that is unproductive, but we need to start wisely using the resources that we have in this country. We should not be importing all of our needs (fiber, energy, steel, wood products, etc.) when we can and should be providing them for ourselves while at the same time producing thousands of jobs with this production. We have some of the most productive land in the world in the Pacific Northwests Forests; and the worlds best land managers, we can managing these lands wisely for the benefit of both forests and our societal growth if given the chance. Creating Monuments and Wilderness areas only locks up this land making us more dependent on other countries to supply our basic needs. Please do not create more Monuments and Wilderness areas. We can encourage Americans to enjoy the outdoors, while educating them on the needs of using our resources responsibly instead of using other countries resources where the management is not done as responsibly.

Although I wholeheartedly support better protection of America's shared outdoor spaces, our entire constitutional democracy is now threatened from within by crazies. Please address that first. Stop letting fear of the crazy people dictate your policies.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I want the next generation to enjoy America's dream for greatness. That's why I am asking you to seize this opportunity to undo the damage you have done by not allowing drilling, exploration and production of the incredible oil and gas reserves. We are allowing the Middle East to unfairly assert its influence on our nation. The only way to stop them is to beat them at the energy game. I am tired of being accused of being an Islamophobe. I am tired of high energy prices. I am tired of depending on other nations who use oil and gas as an iron boot against us. Our energy independence is the only way to insure national security. Exploration and production is done all the time without harming the wilderness. As in the example of the Alaska pipeline, it benefited wildlife with caused an increase in the wildlife population by providing heat in the winter and shade in the summer. To ensure that future generations will always benefit we cannot hold lands captive from energy production! Thank you for your leadership in shaping a bold energy independence strategy for the 21st century.

It is myopic to think of nature solely in terms of human recreation (although that is somewhat preferable to thinking of the earth as a limitless resource that we cannot use up). I'm stunned to see that even the Democratic Party does not have climate change as one of its top agenda items -- yes, we need to protect "America's Great Outdoors" but we need to look beyond this to our constant stream of toxic waste, the pollution that already fills the ocean -- such as the Great Pacific Gyre, a mass likely larger than the state of Texas consisting entirely of human rubbish.... When will the White House face the reality of what is happening to our planet as a whole? How many more catastrophes will it take -- more fires to destroy Russia? More floods to cover 50% of Pakistan instead of only 20%? A further increase in the occurrence of severe storms that wreak havoc on our cities, cause our rivers to overflow and wash away precious soil, destroy the trees in our parks? We are sorely mistaken if we think we can protect one parcel of land (or destroy one parcel of land) without considering the global situation. We've decimated the diversity of species on both land and water -- some 80% of ocean species have disappeared. We're hurting human health, causing cancer, premature puberty, all sorts of chronic diseases through environmental pollution. (No wonder the cost of healthcare is so high. You can't fund both sides of a war and expect to win it.) Toxins in, toxins out. What waste we create remains waste, if not forever, then for a very, very, very long time. Please: show us you understand the connectedness of these issues. Take the need for clean energy seriously; reduce the production of plastics; do whatever it takes.

***(cont.)***

America's Great Outdoors Listening Session Comments      Obstacles to getting outdoors and recreating: · Perceptions of Risk · Costs (money & time) · Equipment · Skill

I think that the biggest hurdles to getting people outside are the perception of risk and the lack of free time and transportation/access to public lands. There seems to be a perception that parks are filled with perverts and drugs/crimes. Parents are reluctant to let children play outside unsupervised, due to the perceived risks and the stigma associated with "letting" your kid get hurt. Perhaps an educational campaign (advertising) could help to break down this perception of the outdoors/parks being scary places. Pools have lifeguards to supervise and provide rescue skills if needed to visitors to the pools; Can parks/public open space provide (volunteer, paid, combination) "parkguards"? Would a system of parkguards that patrol parks and supervise and assist visitors help to get more folks out enjoying the outdoors? Other big hurdles are the cost of equipment needed for many outdoor activities. Trails can be enjoyed via human powered (hiking, bird watching, running, cycling) for low to no costs. These activities are similarly impacting on the environment. Motorized and equestrian uses require additional expensive equipment and skills, and are heavily impacting on the landscape. Most of the nation's population can partake in human powered recreation on trails in the outdoor setting, utilizing a wide variety of types of trails (greenways, rail-to-trail conversions, ADA accessible boardwalks and nature trails, as well as challenging natural surface trails). Trails provide access as well as experience while conserving public lands by concentrating foot (and other) traffic on the trail's surface. Trails that don't provide the access and experience that users' desire will be used less frequently and users will establish their own trails to get the access and experiences they desire. Trails need to be properly designed and maintained to minimize their impacts to natural resources; Trails need to be inventoried and treated as facilities with appropriate budgets for maintenance and construction. Other than breaking down the perception of risk and keeping the monetary costs associated with outdoor recreation low, we need to make accessing public lands easier for all Americans. National Parks and Forests are wonderful places, but are inaccessible to the majority of the nation. Regional, state and local public lands are where the work needs to be done: Trails and facilities need to be built and maintained. Access needs to be improved, by providing safe pedestrian/cycling routes and public transportation alternatives that access the parks/open spaces and fit the typical and atypical American's busy daily schedules. We need to encourage citizens to "make time" for the outdoors: put down the remote and take a hike, picnic dinner with your neighbors or family in the park, skip the gym go for a run in the woods. A nationwide advertising campaign that makes outdoor recreation seem cool, coupled with paper and electronic resources to help Americans locate and access their public lands is needed to get folks motivated and active. Construction of new public lands and greenways can further enhance the natural and man-made landscape by providing connectivity b/w parks and people and other parks. Greenways and rail to trail conversions provide transportation corridors. These can be co-located along natural features (rivers, waterways, ecological communities) and planned/constructed in a manner that symbiotically provides benefits to man and nature. Corridors can provide safe and efficient commuting routes for students and working Americans as well as recreation for weekend/evening users. It is important to balance access and recreation with conservation. Science and research can help inform and enlighten the public as well as land managers about many management concerns. Science provides an objective lens

to investigate problems and formulate solutions that will help provide an optimum balance of high-quality recreation experiences with conservation/environmental goals. Finally, I would like to point out that there are a range of types of parks from National Park Service Units to the local urban open space or playground. America's Great Outdoors come in a variety of flavors and are managed by a plethora of agencies and departments. This initiative is being put forth by DOI, but needs interagency cooperation and public support to be successful. Thanks for hosting the listening sessions; America has great people and great lands that need to be united. I am a researcher at Virginia Tech (cooperating with \_\_\_\_\_ of the USGS); our primary research efforts have been on recreational impacts to public lands. My passion is for science, trails and outdoor recreation. I am very excited to see the Obama administration and Secretary Salazar put effort into reuniting American's with the outdoors. I believe that this is needed and can/will help address several pressing societal issues (health, energy, economy).

I only hope, you continue to use the sage wisdom you have garnered in the past . . . .keeping nature in its protected state, because with all of our self interests, the interest of nature is at risk. Thanks again,

We must be proactive in protecting and conserving our land oceans and wildlife - we hold it in trust for future generations. We must continue to protect our resources as well as expand the current protections. Recent events have emphasized the disastrous consequences from those who take natural resources with only financial profit as their goal. "Only after the last tree has been cut down Only after the last river has been poisoned Only after the last fish has been caught Only then will you find money cannot be eaten." ~ Cree Prophecy No man owns the earth or the sea or the wildlife. We must be the protectors the caretakers . We must cohabit with them with respect and stand for those things which have no voice. Thank you for taking the time to read this.

All I have to do to see what lack of planning to protect our environment does is to look around the city of Hermantown with its unplanned unchecked development. It used to be a beautiful little rural area with many wild spaces and now it has ruined supposedly protected streams and buildings on wetlands which result in pollution and runoff. Don't let this happen to lands which can be saved before it is too late.

Thank you for launching the America's Great Outdoors Initiative. Our land is precious and except for Kilauea (creating lava land in Hawaii) they're not making any more. Thank you for considering my comments. I look forward to your reply.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Secure the borders so Americans can visit their National Parks without fear of violence by illegals who camp there grow and process their illegal drugs there use the Parks as transportation highways for drug and people smuggling. Our fragile National Monuments National Wildlife Refuges National Parks and National Forests along the U.S. southern border are being annihilated - not by natural forces or by unwitting tourists but instead by an overwhelming number of illegal aliens (up to 300000 in Organ Pipe National Monument alone in recent years) who rampage through and destroy these supposedly protected areas. Our beautiful and pristine areas set aside by Congress to preserve for future generations are quickly being turned into National Sacrifice Areas: The Coronado National Forest in Southern Arizona sits along 60 miles of the U.S.-Mexico Border. It has become one of the most popular drug smuggling routes in the Southwest with smugglers moving on foot across the forest typically carrying homemade backpacks filled with 50+ pounds of marijuana. A barbed wire fence demarcates most of the border between Douglas and Nogales Arizona. There are several places however where a gate has been simply been put in the fence to make crossing through it less of a hassle. In one place the fence gives way to nothing more than a cattle guard. The rugged Coronado National Forest has become strewn with literally thousands of trails and footpaths worn into the land by the flow of illegal aliens. Often illegal aliens leave their campfires burning starting forest fires. Over 60000 acres of the Coronado have burned in recent years much of it the result of fires started by illegal aliens according to the Congressional Immigration Reform Caucus. Eight years ago a report by Interior Department Immigration and Naturalization Service and the Environmental Protection Agency said "As a result of the vast amount of smuggling of humans and controlled substances in Southeast Arizona the extremely valuable and sometimes irreplaceable natural and cultural resources ... are in jeopardy." This is not just a few footprints in the sand. Some of the damage is unbelievably extensive and will take up to 200 years to repair. In addition to direct damage to the fragile desert ecosystems tremendous piles of litter and drug-carrying backpacks are discarded along with thousands of abandoned vehicles. Tragic loss of life has occurred. U.S. park rangers have been gunned down (Organ Pipe National Monument); in several areas researchers cannot travel without armed escorts; and as reported in numerous National Parks visitors are warned not to enter unarmed. Drug traffic is a significant component of illegal travel through our border areas and over one hundred incursions have been conducted by the Mexican army onto U.S. soil purportedly to protect foreign drug runners. Our park rangers naturalists and ecologists are not trained to defend our borders against armed incursions nor should they be. A July 2002 Bureau of Land Management report calls for a \$23.5 million first-year expenditure to deal with the incursions. To fully implement the five-year plan the cost was estimated at \$62.9 million. This is a reasonable amount to spend to protect our fragile border National Parks Monuments and National Wildlife Refuge areas against incursions by foreign nationals and to prevent further loss of life. Until the borders are secured absolutely NOTHING can be done to restore the National Parks to the legal inheritors....the American people. Until you Mr. President stop politicizing the sovereignty of this nation and do what is necessary to secure our borders don't waste my time playing with words and suggesting you are even vaguely interested in protecting our National Parks our citizens or these United States. "A nation without borders is not a nation." --President Reagan Thank you for considering my comments.

As a member of several organization and boards relative to the American Civil War and in these Sesquicentennial Years 2009 - 2015 I hope that you would preserve as many sites and historic entities as possible even in these lean economic years. The encroachment of development urban sprawl and roadways continues to impact hallowed ground and devastates view sheds and tranquility where men fought and died on our soil. Additional border properties should be secured as well as actual fighting and maneuvering sites in order to project the peace which has come over the land. I am a member of Camp 20 -- Sons of Union Veterans Roanoke VA; Camp 1326 -- Sons of Confederate Veterans Roanoke VA; Friends of Booker T. Washington National Monument Franklin County VA; and a Board Member of the Jubal Early Preservation Trust Franklin County VA as well as the Roanoke Civil War Roundtable Roanoke VA. I also serve as Chairperson of the Franklin County Sesquicentennial Committee for the commemoration of the American Civil War. Hopefully your organization and our elected officials will do all that you can to preserve our heritage --- in a few years there will be nothing to save.

Please not impose any new restrictions in the National Forest Or any public lands. Being a long time Forest visitor I have witnessed the unnecessary closing of way too many campsites roads & trails since the 1960s. Please do not impose any more use restrictions on our land. The new proposed restrictions are a slap in the face to the hard working American families that have paid for & enjoyed these public lands for generations. With the expanding population of people wanting access to their public lands closing or restricting access just increases the overuse of the few areas that remain open. The American public needs more access not less. The majority of us also do not require any new structures signs parking lots roads or improvements we just want the existing sensible access to our public lands. My family & many others have enjoyed access to these lands since the early 1970s . Please keep it open for the tax paying public.

After reading the list of pre-prepared comments I would have to agree on all of them. To close more public lands to popular means of access so that more people can "reconnect" with nature seems completely backwards to me and hints that there is some other reason to lock up public lands. As a life-long Arizona resident an off-road enthusiast and a person who has traveled the country extensively it looks to me like the back-country in general is in pretty good shape. I've been on day-long motorcycle trail rides without seeing another soul seen lots of healthy wildlife (sometimes in my yard!) and seen open country spreading for miles. I've also volunteered for trail maintenance cleaned up campgrounds and generally leave a place nicer than when I found it. With this kind of stewardship taught in schools instead of extreme "environmentalism" I think we could go a long way towards preserving the country for the benefit of the people who live on it than a select few who simply want everyone else out! In closing I think the "Wildlands Project" is a pipe dream and I can't imagine what good would come of it. Does the U.S. government really think they can lock up half the country?

## Discussion Question 2

### *Written & Online Comments*

*(cont.)*

The answer is not to create more land ?area designations? but rather to do a better job informing the youth of the opportunity to enjoy the existing outdoor areas we have. Instead of creating new ?monument? and ?wilderness? areas that severely LIMIT many peoples use of public land; it would seem better to work to make more ?national park? areas that can be designated for many more different uses. American Great Outdoors Initiative - what a horrible thing to do to our future generations.

Wilderness and Monument are the most restrictive forms of land designation and reduce access. We need to revert some of these lands back to Multiple Use in order to promote access for urban youth and all Americans. If public lands are not made available to all members of the public for all legal uses they are not public lands and we will end up with many groups of citizens left out from using lands for which they pay to maintain yet are not allowed to use as they see fit. Without multiple use access we do not have "public" lands we have land that belongs to the federal government and sadly the federal government has lost sight of the fact that it exists of by and for the people.

Wilderness and Monument are the most restrictive forms of land designation and reduce access. We need to revert some of these lands back to Multiple Use in order to promote access for urban youth and all Americans. I have been enjoying our national forests as a hiker camper hunter fisherman horseback rider and off road explorer my entire life. I have watched the areas accessibility dwindle as it is. The elderly that climbed these lands as young people can no longer explore because ATV's are their only means of transportation and they are rarely allowed anymore. It's time to give back to the people and quit taking it away!

Wilderness and Monument are the most restrictive forms of land designation and reduce access. We need to revert some of these lands back to Multiple Use in order to promote access for urban youth and all Americans. Taking away the rights of the American Public to use public lands will not accomplish any good goals. We have been restricted and regulated out of recreation areas across the country our rights have been violated and our sense of freedom as Americans has been widely affected by such legislation. We seem to headed toward a Socialist State form of Government that is totally the opposite of the principals this great country was founded on. ENOUGH IS ENOUGH! STOP RAPING THE CONSTITUTION! These lands belong to the American people we have a right to use them!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Gentlemen: As a young boy I was privileged to join and participate in Cub Scouts and Boy Scouts (and was active until I joined the USAF). This put me in touch with the great outdoors in many of our 50 states and I was able to hike camp canoe boat fish hunt and otherwise enjoy this beautiful country God has blessed us with. Following my Air Force tour I married and raised three children. To "pay back" some of what I had "taken" from Mother Earth I returned to Scouting as a Scoutmaster and also served in several management positions. As a family unit we spent many weekends and vacations camping in the western states with our Jeep and tent trailer exploring the remains of many "ghost" towns and learning more about Americana than is usually available in most text books. Later we took up dirt bikes (motorcycles) and snowmobiles exploring the back country Alpine Nordic and backcountry skiing mountain climbing and the like. I think it is safe to say that I have a deep appreciation for the outdoors and would support most projects that would promote the accessibility of our public lands to current and future generations of Americans. This is not one of them. Unfortunately many of the places I have been privileged to visit have been designated Wilderness Areas and Off Road Vehicles (ORV) can no longer use the pre-existing trails. That forces the ever increasing numbers of ORV enthusiasts to use the ever decreasing number of "open" trails thus making them more dangerous more crowded and further away from home. Result.....fewer and fewer people get to enjoy the busier and more dangerous trails and more non participating people in the area complain about noise traffic and other negative aspects typical of large groups of people in smaller areas with a view toward obtaining more land closures. A vicious circle. Let's get some proponents of the use of public lands involved and come up with some ideas which when enacted will move us closer to our multitude of objectives.

I am in a wheelchair and I am a Veteran soldier of the US. Don't shut out my wilderness areas to motorized off road vehicles. I want to get into them to see the land I fought to protect. And don't give me another worthless "Handicap Access Path" to a spot where everyone is littering up and where you think I should be happy sitting there looking at all the signs you put up. Wilderness and US Monument areas restrict or wipe out access to everyone but the government workers who have a key to get in. And you probably have never been to one of these areas to know that. If you want to promote city youth and others to get into the wilderness then stop this falacy of "Smart Growth" zoning and "Inclusive Planning" that keeps the cities overcrowded and keeps people out of open space areas. Federal lands need to be opened up again for the Americans that pay for it so we can enjoy them. The lands are not there just so Ranger Bob can be in it everyday driving around or so that the Secretary of the Interior gets a semi-annual photo op.

I live in Southern California and own property in Landers CA located in the Mojave Desert. I am concerned about the abuse of current laws such as the Endangered Species Act and so-called Wilderness closures where the definition of true wilderness is completely ignored and instead large tracts of public lands are manufactured into what some like Senator Fienstien would lead us to believe is really wilderness (untrammled by man). I also do not believe that Wildlands Project serves the majority of Americans because it goes too far in keeping the public from enjoying public lands by vehicle access. Please do not support this bad idea and leave public lands accessible to the public by 4WD motorcycle and bicycle.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I object to spending 2 billion dollars of tax payer funds to set aside wilderness and monument areas. This will significantly decrease local revenue throughout the Western states and cause a severe economic recession to areas reliant on use of public lands. By declaring these areas off limits and only open to people on foot you are in essence "herding" the masses into specific areas that will make outdoor recreation more crowded and in some instances dangerous. Despite the President declaring the need for local involvement to implement his plan he has not sought any local groups help in this matter. This act will have the opposite effect of attracting Americas youth to the great outdoors most kids don't want to hike into anywhere to see the beauty that America has to offer. This is a very poor land management method close the land to reduce management costs. This will kill forestry in America making the US less self sufficient and more reliant on foreign sources. But perhaps this is part of the Presidents Socialism plan to control the masses. This is bad change. Troy Rauh - Redding CA

Living with a National Monument I have come to witness the lack of decisiveness which has led to poor forest management all resulting in less public use of the land.

Mr President. I object to your America Great Outdoors Initiative. In my experience areas designated National wilderness and monument designations limits the areas in which people can actually access. As an avid outdoorsmen (Hunter fisherman ATV'er Dirtbike'er Snowmobiler mountainbiker and hiker I find it most enjoyable to be able to do my sports with as few limits to where I can go as possible. The tougher it is to access an area because of nature the more fun. The tougher it is to access an area because of Government restrictions the more boring and un-enjoyable it is. Also I start paying taxes in 2 years. some of my paychecks already get cut for tax purposes. I want that money going to keep these areas open and easily accessible to the public not to close them off. Thank you for your time. IF you are an aid reading this it's for the President of the greatest nation on this planet. Not you.

Please leave our public lands public. If you have ever tried to hike in the wilderness you would realize that it is over grown and impossible. You can't enjoy something you can't access. The forest service does not have funds to maintain trails and trails are being maintained by user groups. most of the maintenance is being done by motorized users. You talk about getting youth out. Just try getting a young person out for a day of hard work clearing a trail or repairing a trail tread. This just doesn't happen. Please visit your user groups in Idaho and see the work we put into preservation. Leave our country open to multiple use.

Please STOP taking land from the US citizens. Don't forget it is OUR land. There are so many closures happening every year it's ridiculous. The offroad community is being squeezed into smaller and smaller areas and this is making the remaining areas more crowded. Don't make us go to Mexico for freedom. If you want to save the planet buy some rain forest land and keep it rain forest. De-foresting the rain forest is what's going to kill this planet not us driving around in the desert.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

President Obama As a life long Democrat and member of organized labor and I vote for the person best suited to insure my continued employment. With that said and as you understand better than anyone I'm sure many issues are not just D. or R. so I would like to ask your support to continue to allow me and many others the chance to enjoy the great outdoors in our favorite past time including off-road motorcycling and horse back riding. These activities are my families two favorite past times. We as a family have enjoyed countless hours together as well as spent 10's of thousands of dollars to enjoy our hobbies. The initial Wilderness Act envisioned about 20 million acres as suitable. Today we have over 120 million acres of Wilderness where public access is restricted. The majority of the public have been forced onto smaller and smaller areas outside of Wilderness. In order to encourage Americans to enjoy the outdoors we do not need more Wilderness areas we need less! Thank you for your consideration.

While I believe that we do need to preserve the natural beauty of this great nation we should encourage people to enjoy that beauty not restrict them from it unnecessarily. In order to encourage Americans to enjoy the outdoors we do not need more Wilderness areas we need less. If the goal is to reconnect Americans especially youth with the outdoors I believe that it can best be done by providing more places for them to enjoy their favorite forms of outdoor recreation. Off Road Vehicle use is by far the most popular form of recreation followed by Mountain Biking yet the Initiative seeks to create Wilderness and Monument areas closing another 13 million acres to people who enjoy those most popular forms of recreation. Please consider all forms of recreation that are impacted when Wilderness and Monument areas are designated. It truly pains me to see more and more of our Nation's lands being isolated from new generations of Americans. Please reconsider closing additional public land and make more land available for use by our children and subsequent generations.

The initial Wilderness Act envisioned about 20 million acres as suitable. Today we have over 120 million acres of Wilderness where public access is restricted. The majority of the public have been forced onto smaller and smaller areas outside of Wilderness. In order to encourage Americans to enjoy the outdoors we do not need more Wilderness areas we need less.

Let's not forget that these are public lands owned and enjoyed by the public and we should not be "locked" out by over bearing restrictions to use. The average person can only hike 10 miles per day. If you designate millions of acres as wilderness it effectively limits it's use by everyone! You are supposed to protect our public lands FOR the public not FROM the public. Don't let the small but vocal minority bully their way into closing down millions of acres. Thank you

The Presidents is not acting in the interest of the people by making these changes with out consulting the people effected by the changes. Wilderness and Monument are the most restrictive forms of land designation and reduce access. We need to revert some of these lands back to Multiple Use in order to promote access for urban youth and all Americans. The majority of the public will be denied use of these lands due to the Physical limitation that come along with human life. All of the public needs access to these lands.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The push for ever more human-activity-less landscape must stop now. REMOVAL OF APPROPRIATE HUMAN ACTIVITY AND STEWARDSHIP IS NOT SAVING BUT DESTROYING OUR COUNTRYSIDES. THE TRUTH UNDER THE BIG LIE IS THAT WILDERNESS AND SIMILAR A-HISTORICAL RESTRICTIVE DESIGNATIONS ARE CAUSING MASSIVE LOSS OF FOREST HABITAT AND SPECIES VALUES RUINED WATERSHEDS ETC. THROUGH BIOMASS BUILDUP LEADING TO THE INEVITABLE CATASTROPHIC FIRE. People have been part of these lands for thousands of years. since before the forests and the landscape depends on appropriate anthropogenic activity to flourish and survive in abundance. PLEASE WAKE UP TO THE THREAT OF THESE DESIGNATIONS!!!

This bill is ridiculous urban youth aren't going to go visit National Monuments and Wilderness. There's nobody at a National Monument or in the Wilderness that's going to buy drugs or stolen property off them so they have no reason to leave their urban environment.

This will further hurt the economy. Many jobs and business' are directly related to off roaders enjoying Americas lands. Many of these locations are very desolate areas also that have no other uses. Kiss the business' goodbye and put them on the unemployment list. More areas need to be opened to people who enjoy these most poplar ways to enjoy the outdoors.

To whom it may concern: Closures of recreational parks will not only wipeout millions of families who enjoy off road activities but I also belive having places to go on the weekends will keep many many kids from geting involved with unsavory activities. They will be bored and most likely get into trouble. My family has been involved in dirt biking for 30+ years. I cannot tell you how many great times us and millions of other families have had at these venues. Youre being selfish and ignorant because you don't like it or understand it. What if we closed down all your precious golf courses... SAME THING DIFFERENT SPORT. LIVE AND LET LIVE. My children will thank you

Why are we doing this? Over 80% of lands West of Mississippi are open space. This land belongs to the people of the United States of America!! Why would we (the people) want to lock it up? We should let the wildlife run free the animals know where they want to go. We don't need wildlife corridors. Leave the poor wildlife alone including the wild horses. I am appalled and disgusted that is even being discussed.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Dear President Obama I am very sorry to see that your administration is seemingly managing our public lands in such secrecy and not giving the public a voice in how our land is being potentially shut off from our use. I am all for preserving the environment but not by labeling everything as Wilderness land. That designation essentially puts it off limits to many older generation Americans which I am one of. Sorry but mobility issues as I get older limit how much I can hike into the wild lands so if I cannot even use a vehicle road then essentially I can't get there at all. I wish I was 20 yearsold again but I am 60 and I greatly enjoy cruising camping and getting access to the back county and at this point in my life it is in a truck or SUV type vehicle. I am not talking about riding on hiking trails with ATV's I am talking access via any kind of road large enough for a truck/camper. I am in favor of controlling off road vehicle use in a reasonable manner but not by putting everything "off limits" Wilderness designation eliminates all of that access. ...and you are not even offering public debate on these decisions but doing it quietly on the sly! As a honorably discharged Vietnam veteran I did not fight for that kind of "freedom" nor the removal of my generation from our public lands!

I am writing this letter to oppose the land closures with regard to OHV access. We are already having a problem with people using illegal lands to ride. Closing more public lands to OHV's will only worsen the situation. I believe that everyone should have access to portions of public lands to recreate.

I am writing to voice my objection to the America Great Outdoor Initiative. The goal to reconnect Americans especially youth with the outdoors can best be done by providing more places for them to enjoy their favorite forms of outdoor recreation of all types. Off Road Vehicle use is by far the most popular form of recreation followed by Mountain Biking yet the Initiative seeks to create Wilderness and Monument areas closing another 13 million acres to people who enjoy those most popular forms of recreation. OHV and ATV activities are a fantastic way for families to enjoy both the great outdoors as well as quality time together please don't make it any harder to find safe and scenic locations to recreate.

I enjoy sending time in the national forests. I travel by jeep and motorcycle. Your intended legislation will limit access to the forests. Please don't legislate away the public use of public land.

I want to express my strong opposition to the designation of more wilderness. My wife and I are ardent hikers and backpackers and enjoy frequent use of existing wilderness for that purpose. But I'm also an off-road motorcycle rider and mountain bike rider and appreciate the opportunities I have to enjoy non-wilderness areas for those purposes. Far more citizens take advantage of recreational opportunities on non-wilderness lands than on wilderness lands. Designating more wilderness will have the perverse effect of actually preventing the public from enjoying the outdoors. Not everyone wants or is able to strap on a pack and hit the trail. At a minimum the President needs to include the two largest forms of recreation as a priority in his plan to reconnect Americans with the Outdoors: Off Highway Vehicle recreation and mountain biking. More areas need to be opened to people who enjoy these most popular ways to enjoy the outdoors.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I'm tired of losing public access to public lands! Who is going to go use it? There is millions of acres of "wilderness" areas already. And Jon Stossel's 20-20 report already stated we have more acres of forests now than we had 100 years ago. Cut it out. You have better things to do than adding more land for your already budget-cut employees to monitor and patrol. It would actually be better to sell some public land to help with the short falls.

It is becoming increasing clear that one group of users (radical environmentalists) is lobbying to exclude other groups from enjoying public lands. The radicals' desire to monopolize public lands is hypocritical. If human impact is so bad for wild lands then all people including the radical tree huggers should be kept out. In reality people and wild life co-exist from one end of the nation to the other. Recently on the Animal Channel there was a documentary on the Canadian lynx. The cameras followed a mother lynx to her den and showed the kittens living there. Then the camera panned across a valley and showed a snowmobile going by in the far distance. The narrator said that the mother lynx was forced to move her den by the noise from the snowmobile. Yah sure...like the cameras being poked into the den by a crew of environmental types had nothing to do with it. Radical left-wing tree huggers should be recognized for the hypocrites they are and given no credibility.

please do not close off public lands to off road vehicle use. my family and friends go camping together to use these areas to use our off road vehicles and enjoy the beauty of the outdoors as well as our friendship together.there are many many others out doing the same as us. by closing access you would be depriving us of our freedom to our recreation.

This initiative is a horrible idea. The National Monuments and Wilderness areas we currently have are under utilized while the areas open to other forms of transport such as motor vehicles and mountain bikes are over utilized. Washington is clearly out of touch with mainstream outdoor recreationalists.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

To whom it may concern I am writing you concerning land and forestry use involving ORV (Off road vehicles). Are people misinformed and don't fully understand what is at stake and what may be leading to a lost right for ALL of us? Myself I LOVE the smell of fresh crisp clean outside country air and the sight of more trees and less buildings. After all this is where I grew up. But I feel some groups and individuals are going about this land protection thing all wrong. I call it LAND LOCK. Little by little our rights are being ripped from us. The areas for (adults and children) to enjoy ORV (Off-Road vehicle and snowmobile) are far and few between. Some people and groups like to complain about pollution. Let's look at the facts! There are serious doubts about people having an effect on the planet called global warming now and there is data out now actually showing the contrary to this. These small vehicles emit about the same emissions as a lawn mower due to the ORVs limited time of use and the small size of these engines. I do believe that chain saws weed trimmers and lawn mowers emit more pollution than ORVs in general due to our forty hour plus work week. Should restrictions be put on those as well? I feel the need to write about other states as well as my own. The land closure issue seems to be the same scary path that the entire country is on with all of these silly bans because of the people and groups that DON'T fully understand all issues they bring up. Let me to fill you in on some facts about the woods and animals. My brother is a hunter and I have nothing against that. The funny thing is that we see more animals when we are out in the woods enjoying ourselves on our ORVs relieving some stress and showing our young people these beautiful isolated areas of the outdoors when my brother sees fewer animals. The animals know we are not out there to hurt them when we are on our ORV. Animals are smarter than what they get credit for. They can sense when they are being hunted or when there is a hunter nearby. Some breeds actually cry out to warn others. They have strong senses that they use to survive. They don't speak or rationalize like we do. They use their senses to survive therefore their senses are very strong. I have been in situations where I have gotten very close to wild animals even with a motor running under me you can't tell me that they can't sense I was not going to hurt them. Another example this one I have seen many times. As I ride down the trail I see a bunch of birds on the ground eating some seeds that fell from a tree. As I come through some may move a short distance on the tree or a surrounding tree. I then see them go back to the fallen seeds on the ground in my rearview mirror as I pass. I doubt that I've devastated them. I have also been in similar situations with deer. One occurrence comes to mind. I was coming over the top of a hill and as I went over the top there was a deer standing in the trail eating. He didn't care at all about moving from the middle of the trail. Another time I remember was when I was with two other friends on our bikes. We were in Beartown state forest in Massachusetts. We left the parking lot going up a big hill. We stopped and shut off the bikes to talk about which way to go as the trail split off. As soon as we stopped a quail came walking out of the woods and started to walk around my friend's bike. He then started to peck at the rear tire. We just laughed and were wishing we had a video camera as these things happen to us quite often with wildlife. Don't get me wrong I support and think that land preservation is VERY important but I know the facts first hand! We need land protected for us NOT from us. We need to create more designated areas for ORV use. I spend a lot of time out in this great country's wilderness. ORV riders don't drive animals out of an area. A trail through the woods does no damage unlike removing trees and developing the land Putting in a new road for cars to run over animals or building new houses

## Discussion Question 2

### **Written & Online Comments**

**(cont.)**

or malls! The clubs that I belong to help to keep trails free from fallen trees and other blockages for all. Animals use these trails as well. Even in small local areas (such as power lines) people seem to enjoy complaining about ORVs and the sound of a small engine. I have been on the side of the trail and have been surprised several times when an ORV came around a nearby corner and at that point was just able to start to hear it. This applies to ORVs of today's standards with factory exhaust. An ORV is one of the classic sounds of the country or wooded areas just like a chainsaw log splitter lawn mower or a weed trimmer. I say "If you don't like what you hear move to the city and see how many pleasant country sounds you hear." Another effect that people don't think about is the impact on young people. Kids that take up these sports develop respect in learning about wild life and the environment and getting out enjoying our wooded areas with family and friends. They are usually not the type to leave food wrappers and beer bottles behind. When you take land away "or don't have any areas to begin with" guess where kids go. They hang out in the cities and towns more and a good part of them may get in trouble. Of course this is not the major cause of youth trouble but everything adds up these days. Some elected officials actually enjoy these activities themselves. I would be proud to take someone along to show him or her the fun and beauty of these sports. The revenue these sports create is also beneficial as well. States should take a good look at this issue and designate more areas for its people to enjoy these activities that can be separate from hiking or skiing areas. Don't let America continue on a LAND LOCK path. Do your part and help stop this before we all lose out! Thank you for your time!

Closing Land to controlled motorcycle and ATV pleasure riding simply takes away the American way of life that has gone on for 30 years. RV trips with families for the weekend tens of millions of dollars revenue from Motorcycle Dealership business millions of healthy young people enjoying the outdoor life will all be pressured. PLEASE THINK AGAIN

Dear President Obama It appears that your administration is about to embark on a program that will deny citizens of the United States access to a large swath of their public lands.

I support careful stewardship of and preservation of access to public lands for prudent use by hikers mountain bikers equestrians etc. These rules while they achieve the goal of protecting lands may create a generation of Americans that don't know about or appreciate the importance of these areas. Mountain Biking does more where I live to introduce our young people to the beauty and value of our wilderness than any other single activity except perhaps hiking. It teaches the value of volunteering for trail building and maintenance and helps to expand appreciation for our lands and encourages us to "leave no trace". It encourages health and fitness in a nation that is facing crisis levels of obesity and chronically poor fitness.

I've got a great idea....let's close down the entire country to ALL types of outdoor activities (camping offroading fishing hunting mountain biking horse riding etc) and pray to God that the children of the families who love these activities don't become hooked on meth because they now have nothing else constructive to do with their time. Good job Obama. Good job! Why don't we worry about more important problems the country is facing.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

ANY changes to our Wilderness areas need the FULL attention of EVERY AFFECTED USER GROUP! To commit any less is unconstitutional (public lands and "taxation without representation").

To whom it may concern. As an avid user of Public lands for the last 40 years in activities such as hiking mountain bike riding motorcycle riding. rafting fishing walking camping etc.. I want to go on record as being opposed to any proposal to redesignate Public lands without disclosure and public input in the area's where the Public land is located.

To whom it may concern. The \_\_\_ Family contributes green fees to enjoy off roading/mtn biking every year we spend vacation at least 4 times in the desert/mountains some where we can forget the pains of work schooling urban life.. Please don't reduce are choices tiny little areas like in Santa Clara County CA . This area is full of preserve and the wild life is threatning man kind in neighborhoods already.. Sightnings of dangerous Mtn Lions continue on a regular basis. The fish and game plant trout in the local ponds only to be devoured by the Commarrant (non native species) You need to irratticate the problems before shutting down the areas that we enjoy every year.I just returned from the upper desert this week to view it's true beauty while offroading. Please don't allow this initiative to be innacted. Downsize your staff like America has already.. Then rehire when revenue returns.. Registration has doubled for me but I still pay.. But if becomes like the fish problem. I will non op the bikes and cars.

Whatever happend to The Pursuit of Happiness within reason? Teddy Roosevelt definetly did'nt intend Public lands to be closed to the public when he started the Fed Land Act! STOP THIS MADNESS!!!!!!!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Not only does this "closure" need to be stopped but I & many of my friends would like to see radical changes made in the area of public land use. I say this because as a snow-mobiler I see every year the boundaries for snow-mobiling moving in closer & closer; restricting us more & more & this without any direction by Washington. Just this week (and very near the end of snow-mobiling season) I went snowmobiling w/ my sons in one of our most frequented areas and that after a fresh & unexpected snowfall. The Forest Service had just erected many new signs that were not there the week before doing this very thing; restricting snow-mobile access. The reason this happens I can only conclude is that the department in the forest service that controls land use is run by people who are members of radical anti-human groups such as Sierra Club & the Nature Conservancy. To myself & many of my friends & associates this kind of restriction makes no sense at all. The Wilderness areas that are so designated now are hugely over-abundant & almost never used. There are thousands & thousands & thousands of acres of land that are never accessed by snow-shoers or snow-skiers in the winter. And the number of people that access it in the summer is extremely low. If the true desire of this "wilderness designation" was to promote access then the opposite course of action would be the one promoted. It would be legislation that would make accessible more areas to people who do not backpack or snow-shoe. In writing this letter I also need to let you know that I am not a lop-sided close-minded OHV only user. I also love to snow-shoe cross-country ski. And in the summer I love backpacking. But these activities are the only ones tolerated under this type of "designation." Believe me if I observed that there was not enough land for non-motorized activities such as backpacking I would not oppose this "designation." I would promote it. But that is far from the case. Please do the right thing & oppose this closure.

As I review the map that illustrates the President's plan I recognize that many national forest and park lands are included as well as federal and state access routes into those areas. What is most interesting is that all of these access routes have connections to our southern borders. It would appear then that the "biodiversity" that is going to be protected is the illegal immigrant and his/her access into the interior of our country. This is not acceptable. Our nation's borders must remain sovereign and protected. I reject outright this plan.

As the years go by and I get older and less able to get around I find there is always someone trying to stop or make it impossible for the senior citizens to enjoy the natural beauty this country can provide. Making half of America wilderness area results in the elderly unable to enjoy less and less. I am 65 years old and have trouble waling so I and my wife ride quads or ;ATV's to get around to clean up trails take pictures and enjoy what we love so dear. I strongly object the closure of public lands so only the young and healthy can enjoy what is my god given right to enjoy by being born in this country. I can date my family back to 1724 and there was very little that held them back from enjoying the country they adopted and help make so great without a wilderness act to restrict them.

I am against closing any public lands for recreational use of any kind. I ride my dirt bike and support the local businesses. If you close the land those businesses will close and jobs will be lost.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I Believe that locking the wilderness away from people is the worst thing that can be done !!! I enjoyed the wilderness as a youth with the boy scouts and all my friends. it teaches you to love you're land and use it with respect. If its locked down then no one will respect what they don't know. To spend any money to close down nature from the benefits of proper enjoyment is absurd!!! Instead you should take a look at WEST VIRGINIA it has opened maintained trails with a permit fee and largely boosted it economy with out handing out (waisting) tax dollars. If you want to know whats good for any area you have to live there for a while. You can't know whats good in ARAZONA if you live in D.C. or for NEW YORK and live in COLORODO. I live 35 minutes south of D.C. and have watched development destroy all the woods I enjoyed as a youth. I have seen allot of people that call themselves tree hugger that have never spent a week or two in the woods camping and in joying nature instead they have to have a blow drier and cell phone. There idea of camping is a motel room!

I have two children who love the outdoors. We are a family of motorcycle riders and have been forced to go further and further to ride and enjoy the land that our grandfathers were all able to enjoy. For you to close these areas to me & my family is a disgrace to all who enjoy the outdoors. Given there are a few that neglect the outdoors but to take away the rights of everyone because of those few is ridiculous!

I object strenuously to wholesale road/trail closures without legally required public hearings etc. and contrary to the interests of the people most affected.

My principle hobby is riding motorcycles on primitive trails on National Forest and BLM lands near my home in Durango Colorado. This is my chosen way to experience the wilderness. Like 99% of the off-road motorcycle riders I know and ride with I go great lengths to ride responsibly. We do not damage trails. We do not ride trails closed to motorcycles. We maintain our machines to run quietly. And we do more to clear downed timber from our trail systems in the spring than any other use group. Sadly our contributions to trail preservation and maintenance seem to go unnoticed. Motorcycles are being excluded from more and more single track trails. I have seen several occasions where a trail in closed to motorcycles it quickly falls into disuse and disrepair and within a few years is unusable. Certainly there are public lands where user conflict is a serious concern but where I live if motorcycles are not allowed on the trails they will disappear. We have abundant land for motorized recreation in Southern Colorado. We maintain the trails. We ride responsibly. For these reasons I write to oppose the administration's recent proposals for increased Wilderness lands National Monuments and other potential land use changes connected to the Great American Outdoor Initiative that would exclude motorized users from public lands. Let's find a way to enjoy and preserve these lands for all user groups.

Stop stealing the publics land use rights in the false name of conservation.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I am an avid outdoor enthusiast and enjoy a variety of outdoor activities from hiking to mountain biking to motorized OHV use. There is a need and a place for all such activities in order for each of us to enjoy our public lands. I strongly reject the notion that these radical special-interest groups are somehow smarter more noble more worthy or more representative of America. Please do not let them steer us toward ever more restrictive policies - keep our public lands publicly accessible!

Most of the land in the west is open space. Wildlife have plenty of places to live. There is no need to create Wildlife Corridors or designate additional Wilderness Areas. I object to spending my tax dollars locking the majority of the public out of more of their public lands through inappropriate Wilderness and Monument designations. This will discourage the public from enjoying the outdoors.

Sir My major concern is that by taking away designated riding areas (such as Stonyford and Elk Mountain in northern California which have been riding areas for years with no negative impact!) that do not impact the environment in a negative way will lead to more destructive environmental impact by riding enthusiasts riding in sensitive areas. I have no problem with more wilderness areas; only do not go to extremes! There need to be riding areas for motorized vehicles and areas where they do not belong. Let's hope this administration addresses both sides. I love dirt bike riding in the mountains but do not want them in special or sensitive areas. There needs to be a balance please!!! I would appreciate a response to this letter just to know someone has read it.

I have been an off road enthusiast for more than 40 years. I have seen the gradual erosion of access to PUBLIC lands through using the "environmental" or "preservation" excuse. Those who advocate this kind of program are self-centered eliteists who think they are the only people who count and to hell with everyone else. The proposed program is just another in a long line of plans to reserve PUBLIC lands for use by only the anointed elite.

I am sick of this administration shoving their agenda down the throats of the American people. PUBLIC lands should be kept open for the PUBLIC.

As a 3rd generation avid off-road family we responsibly enjoy the use of public lands. As a member of a local Jeep club that sponsors cleans and maintains public trails for free I find any attempts to limit back country motorized access to be misguided and a gross violation of my rights to use our land owned by the people. This land is NOT the property of anti-human special interest groups who provide junk science and lobbying dollars as a basis for imposing their will on the other 99% of the populace. Nor is this land the personal property of overbearing politicians in Washington who view themselves as rulers rather than representatives of the people. Do you really believe that the people want to loose access to their own land? The anti-human lobbyists had had a voice but why have the other 99% have not been invited to voice their side? You do know that the Nature Conservancy will make HUGE profits procuring lands to the government for wildlife corridors?

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I live on the eastern side of the Sierra Nevada mountain range in California. Productive use of this area has been largely shut down by government acquisition management and wilderness designation. Farming mining timber harvesting fishing and hunting were done in this area long before the first European settlers. A few head of cattle some alfalfa hydroelectric power production and diversion of water toward Los Angeles is about the only production left. Networks of roads and trails left by the former utilization have made this a great area for recreation but with continued wilderness designation and no maintenance even these activities are threatened. Please - No more wilderness designations!

A recent article in the AMA (American Motorcyclist Association) magazine has brought my attention to Wilderness and Monument. This is another example of government intrusion into the land and lives of American citizens without representation. As I understand it this sweeping legislation intends to make millions of acres inaccessible to a whole segment of the recreation industry off-road ATV's and motorcycles. Wilderness and Monument represent the most restrictive forms of land designation and reduce access. We need to revert some of these lands back to Multiple Use in order to promote access for all Americans without the Government deciding what's best for us without representation. I have ridden approximately 10 000 miles off-road over the past three years from Utah to the Bay of Fundy NB. I did it lawfully without trace without disturbing public or private property. I have seen the Utopia that some politicians falsely and without any thought process think they are protecting. I have earned the right to do this by paying taxes serving my country in the Vietnam theater and working on submarines for 30 years. Do you have any idea how incredibly offensive it is to suggest that politicians have the right to deny access to millions of acres of public land that me and millions of other Americans have fought for? And to suggest that the Government knows what's best that select politicians don't need congressional debate to legislate and just take it away? I will continue to fight for my right to see America without permission from a politician and continue to fight for free unrestricted access to Wilderness and Monument for all Americans. I respectfully request that you ensure that these areas are kept free unrestricted and available to all Americans.

Where in the Constitution does it say the Fed can own anything ? besides the grounds and property of Washington D.C. and military bases..... Don't over step anymore.... The country belongs to the People and the States not the Fed.....

i worked for over 40 years so i could now enjoy the many places i never had time to see. Why in the world are these place going to be closed off for who or what? Ken when you ran for office i thought here is a man for the people and from my state we have a winner here. What happened to you? Was all that you told us a lie? Don't do this it's wrong for everyone please stop this

I don't believe that the public land in the US should be closed to 90% of the public. If I can't use mechanized travel how can I enjoy the land? Let's just leave it the way that it is.

I enjoy hiking any chance I get and I find that people who travel into the wilderness whether it be by off road vehicle mountain bike or hiking/backpacking enjoy these areas and maintain them. They do NOT destroy them! More people should get out and enjoy the beauty that America has to offer.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I am 62 years old and remember when I was able to go into the woods and enjoy nature without interaction with governing bodies. Now the area I frequented in my youth is closed off and the roads that use to lead there are closed 7 months out of the year. Our local areas are best understood by local people that use the land. We need to spend the 2 billion dollars on the monuments and existing wilderness not create more. I regularly hike in a wilderness area and the log in and out book has not been picked up by a ranger for two years now. Lets fix up what we have and let the people enjoy their land without over regulation. making new monuments and wilderness while the existing falls in around us is not prudent management in my opinion.

This initiative is a travesty. Closing public land to the public stands counter to everything this great country is about. It's the stuff of dictators and kings. It's not surprising considering the current administration but this has been going on since long before the current president ever took office. Closing public land is akin to just taking it. Without access for all it may as well be on Mars. I get so tired of a well funded and vocal minority infringing on the rights of the public at large. It's time to stop. Fences should border only private property not public. If the Sierra Club and groups like them want to close off land they should have to buy it through public offering. They are as greedy and underhanded as any special interest group you can name Thank you for reading this and I hope it can actually do some good for the public rights.

This letter is about my concern on the closing of so many of our public lands. For the past 40 years I have enjoyed our outdoor recreation areas and the past 10 years have been able to explore with my children. Which is priceless! We boat we hike and we offhighway ride. I fear that if we don't become understanding to others needs then all our riding areas will be closed. This will cause a backlash and will lead to violation protests. Being fair is the utmost importance. Please help keep our recreation and offhighway opportunities open to all Americans. Thank You

I am partially disabled and motorcycles and bicycles are the only way i can acces some of our lands. Wilderness diesgnation excludes too may Americans who have a right to access.

I live in busy crowded Los angeles with my husband and two children. We visit california city desert monthly to dirtbike spend time together and enjoy the wilderness. By taking our freedom away to visit public land our family bonding time and children's memories will be lost. Limiting access to private land can only harm the american family and the youth's interest in wilderness. I do not believe the peoples' best interest is at heart here.

Off road vehicle use destroys our public lands at an accelerating rate. I fully support the Wilderness and Monument designations. It is the right thing to do.

The elected officials these days seem to be on a mission to take away our personal liberties. When will it stop? I thought public land was public land. Off roaders of all types do more to preserve the trails than anyone right? Keep your hands off our trails.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

When will we stop trying to keep public lands from the public. By only allowing a "select" group of outdoor enthusiasts to use public land you MR OBAMA are clearly discriminating against all who don't view the word public as you do. Shame on our first black President to only see the use of discrimination when it applies to you and illegal aliens. This kind of act and thinking is exactly why you are a do as I say not as I do President. Wake up and smell the coffee. This wrecks of the "special interest groups" you so often criticize making policy we all have to live with.

As a recreational user of public lands I object to the access restrictions being proposed. Real Americans fought and died for this land that we may all have a right to enjoy our freedom in. Think about that the next time your foot touches this precious American soil. Restricting access to our recreational areas is an insult to the cause of freedom and to be blunt it is just un-American. If you are truly representatives of the people you should be outraged by the political maneuvering being done in the name of conservation to restrict the freedom for this and future generations of Americans. This is a land grab and it's not even politely disguised as anything else. You know it I know it and anyone with a sense of reason knows it. In closing I will remind you that you are in your position by the appointment of the American People and we make these decisions in good faith. If we made an error in judgement by electing you or those whom appointed you be certain that decision will be corrected at the first opportunity. I pray for sound judgement to prevail in this matter. God Bless America

Therefore I urge you to look closely at any/all legislation or other forms of power/land-grabbing very closely so as to avoid further reducing access to so-called public land. If it is indeed public land then the decision as to what to do with it should be left to the public and not a small faction of environmentalists bureaucrats and politicians. I give my support to whomever stands against any further action by this administration and/or the federal government in-general to lock the public out of any additional public land.

I think we should be able to access land with our snowmobiles and ATVs!!! I have been riding in public lands for 25 years and that is what I do for relaxation! If I did not have that in my life I would probably be a very stressed out person. Plus what do you guys think people should do for a past time? Drink and drive and kill people????? We cant afford jets to fly around like you guys! There needs to be more trails in place and that would mean less travel with cars. That would help pollution also. You people need to pull your heads out of your ass!!!!!!!!!!!!

Does the word "public" mean nothing to you? There are billions of acres of lands protected unused and hoarded already. Slowly but surely the small areas for recreation are becoming diminished. It is bad enough we got screwed because you all were getting yours and now WE have to pay. ( and you will still and always get yours) Let the people have some space for recreation. Do you know how much public land is used for recreation? I have been told it is less than 1% including deserts. We should be appalled that you would even think of carving away more. I should be upset that we do not have any more of the other 99% The worst part is this will only probably have an adverse effect on me and my loved ones. You should all be very ashamed of yourselves!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The creation of Wildlife corridors will have a disproportional and severe negative impact on rural communities. Towns such as Disney Oklahoma and Clayton Oklahoma Depend on the money that is spent within their towns by people like myself who travel to these towns to use their Off Road Vehicle. Many towns through out our nation are similar to this and depend on the money spent by people like myself. It appears that organizations such as The Nature Conservancy stand to make huge illicit profits by swapping lands to the government for Wildlife Corridors.

Every year more and more so called "public land" is being closed! It is getting harder and harder to find places for law ""to go and spend time with their family's riding their dirt bikes and quads. With money being as tight as it is it seem that spending "2 BILLION"of my tax dollars (it is "OUR" tax dollars) to close public land is not a wise thing to do. But for some reason you people in goverment think that there is no end to the money you can spend! The more "Public Land" you close the more trampled the land that is open will become. I have noticed this over the years and when the land that is open does get trampled you want to close it because of over use! I have been riding in areas for over 30 years and in the past 15 to 20 years I have watched them slowly get "worse and worse" because of over use! Because of the fact that other areas get closed to orv use and no other places are being open to take the load off of them this is what happens! There are more and more people getting into riding off road every year. But our area's are getting smaller and smaller. It does not take a rocket scientist to see what is coming! Instead of giving kids a place to go and have fun you are just keeping them from doing anything contributing to nothing for them to do causing them to hang in the streets get into trouble and over populate our juvenile detention centers!! Give families back there rights to do FAMILY things!! Make the right choice by keeping our lands that "WE PAY FOR & OWN" open. Some of my best memories are when I was young riding dirt bikes up in the woods and spending time with friends & family.

Our leaders need to include the two largest forms of recreation as a priority in this plan to reconnect Americans with the Outdoors. That would be Off Highway Vehicle recreation and Mountain Biking. Both of which our family friends and neighbors are involved in. Just by taking the sample of residents in our neighborhood who participate in these activities it would seem that a large number of our population enjoys these 2 sources of family recreation. I object to the spending my tax dollars locking the public out of more of their public lands through inappropriate Wilderness and Monument designations for a select minority many of which do not even frequent the "wilderness".

I think our focus should be on good manors and etiquette for people on public land.I enjoy wilderness area's too but this kind of recreation doesn't require huge acreage and most land is not suitable for this use.As you crowd people into a smaller and smaller area it leads to more damage and less cooperation.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Keep public lands open to the public! I object to my tax dollars being used to lock the majority of the public out of more of their public lands through inappropriate Wilderness and Monument designations. The president needs to include the two largest forms of outdoor recreation (Off Highway Vehicle and Mountain Biking) in his plans to reconnect Americans with the Outdoors. As a BSA Scoutmaster I am dedicated to introducing our youth to the great outdoors. Living in the State of Texas makes this a challenge due to the chronic lack of public lands - almost all land in the state is privately held. Please don't make the job of educating our youth in outdoor skills by closing more lands to public use. We must be able to get there before we can enjoy it! Can we protect our public lands without locking them away from the public? YES WE CAN! Say NO to land closures!!!!

Please stop limiting the public's access to public lands. 90% of public land is now closed to the majority of the American public other than those few are physically able to hike the rugged terrain.

Please stop the Wildlands Project. Human being have rights too.

This plan is ridiculous! Closing down land does not encourage "outdoor connection." By far the majority of public land use is that of OHV and mountain bikes. There are places on the map you can only get to with some alternative means of transportation. Don't destroy an entire community for the hope of pleasing a small minority other. In no way do I support this bill.

To Whom it may concern. I think that all access to public property to remain open. Access and continued useage of areas will help control future Wildfire situations. If the areas were closed the future wildfire effects could be catostrophic. Not only to the wildlife but to personal properties. Please allow these areas to remain OPEN andACCESSIBLE for future generations. If it were to be closed new generations will never know what public access is all about. Thank You

As an avid OHV enthusiast and environmentalist I have observed first hand the impact of responsible recreation in our public lands for decades. I would ask that you ACTUALLY VISIT some of the areas being proposed for 'lockout' by any form of recreation due to concerns of human caused harm. You will find that as with most things in life claims of impending doom are greatly exaggerated. Additionally I object to spending over \$2 billion of my tax dollars locking the majority of the public out of more of their public lands through inappropriate Wilderness and Monument designations which are the most restrictive forms of land designation and reduce access. We need to revert some of these lands back to Multiple Use in order to promote access for urban youth and all Americans. I thank you for your consideration on this matter.

I do not think that the government should be creating more wilderness that does not meet the required elements as wilderness. Or to take away any other private property rights. If anything there needs to be more areas or trails opened up for people to use for recreation. Since this administration is pushing for more rights taken away and the congress seems to support such things I will make sure that I vote and get some people to represent the things that I believe in to be in congress.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I strongly disagree with the closer of any public land. I furth disagree with any limiting on recreational use. Thank You

The President proves over and over again that he says one thing and does another. He clearly wishes to stifle American freedoms under the guise of he knows what's best for us. He is schooled in the Saul Alinsky mold of destroying America from within. He is not to be trusted at all! In any case Local Stewardship projects are the key to improving forest health. This has been proven time and time again on both private and agency lands where active stewardship has produced better forest health and increased biodiversity over non managed preserves. The President is interested in local involvement in his plan yet no multiple use groups have been included or invited. The initial plan has clearly been created by a small segment of special interest groups who seek to limit access to our public lands. Wilderness and Monument are the most restrictive forms of land designation and reduce access. We need to revert some of these lands back to Multiple Use in order to promote access for urban youth and all Americans.

This land grab completely ignores all the users of public lands. Our off road motorcycle club works closely with the White River Nat Forest and we urge you to vote no on this public land takeover without input from all user groups.

To whom it may concern I am avid outdoors person between back country hiking to offroad motorcycle riding and making my living teaching responsible offroad driving of 4 wheel drive vehicles. It has come to my attention that the parking lots of the areas for offroad recreational use is full of youth of all ages. The parking lots at the wilderness areas are normally empty if there are cars in the parking areas they are normally older imports. With drivers of the age of 40+. From my experience whom ever is pushing for more Wilderness to help the youth of this country they do not themselves visit Wilderness or offroad recreation areas. If you truly wish to help the youth of this country pull your head out and ask them what they would prefer. To be allowed to enjoy recreation in this country or be locked out of their public lands? It is their tax dollar that will be spent locking them out.

Closing 13 million acres to people who presently enjoy recreating there is not acceptable; I do not consent. Wilderness and Monument are the most restrictive forms of land designation and reduce access. We need to revert some of these lands back to Multiple Use in order to promote access for urban youth and all Americans.

It is an economical mistake to limit any offroad areas currently available as defined by this proposal. There is a lot of renew made in these rural areas. It should be promoted more not less. Stop it already with the "BIG GOVERNMENT ALREADY"

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I am an OHV enthusiast who recreates in the American Southwest and do it responsibly. I am one member of a larger group of men who have ridden together in Arizona New Mexico and Colorado with our off-road motorcycles. We are responsible obeying all laws & restrictions; we all purchase ORV Tags and are happy to do so if it helps keep trails open. We are always courteous of other users on the trails and give the right-of-way to hikers mountain bikers or equestrians but to be perfectly candid we rarely see anyone else on the trails wherever we ride. ?I strongly object to any further closures of "public" lands. I respectfully submit that a better approach is to allow those of us who love the open lands to participate in upkeep and trail maintenance. Most of the people I know that are involved with off-road vehicles; be they motorcycles ATV's mountain bikes or jeeps are more than willing to help maintain trails & roads; they just need to be enabled to do so. We have long admired the well managed off-road use program in Colorado and have worked to try to influence the establishment of a similar trail system in Arizona and have offered repeatedly to help maintain such a trail system. It is sad to see that small self-serving special interest groups have gained so much power and influence that they have closed off the use of so much land; our land; to all but a very small group of people. Please do not allow this trend to continue; please keep our lands open for all Americans to enjoy.

I'm starting to feel a victim to environmental fundamentalism. We are blessed with a lot of land to enjoy but more and more of it keeps getting taken away. This increases density usage which is bad for all concerned. Please keep the public land open for public use.

my family and friends ride dirt bikes for fun and pleasure. we don't drink or do drugs. if you keep taking land from us we are not going to have any where to ride. our kids will not have any where to ride except on closed course tracks were it is to dangerouse to ride for our ability.

Stop the closure of Public Lands and the Wildlands Project!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I have been camping and offroading in the California desert all my life. The desert has been subject to many closures over the years and now areas will be opened up for solar and wind projects. Those areas will no longer be accessible to the public. The Marines are looking at a large expansion into the Johnson Valley OHV area. I understand the need for our military to have training areas but they have options to expand away from the well established OHV area but indications are that they will take most of the OHV area. I have been going to this area with my father since I was a boy and have enjoyed many years their with my son and family. I always thought that public lands should be set aside for the public. These areas will not be developed and my tax dollars will help protect and expand my oppurtunities for public access. The way in which the uses on these public lands has been restricted in some areas makes them off limits to most. If you have an area that has established roads and trails that have been there for 100 years why would it be changed to exclude motorized vehicals. These kind of restriction cost state and local goverments millions in lost revenue. If you take the amount of money spend by the OHV Hunting communities for offroad vehicals camping vehicals and all the things you need for a weekend with the family its large amount of money. I some ares in California are closed or several restricted as prosed some small towns will be wiped out.

Another example of government out of control and overstepping their reason for existence. They are such CONTROL freaks and usually there is an underlying motive for it that hurts the citizens but benefits a few corrupt people. This used to be a great open country but the government has changed it drastically. Please do not aid their path of destruction.

Please stop restricting my access!! I feel it more prudent to educate citizens to take care of our lands. The more you close the more congested the open areas become. This creates over crowding and thus damaging these areas. More open area would insure lighter use and thus less damage. I am sure smaller organisations would love to be in charge of there local areas I just spent a day in the forest for the forest service checking trails for the Memorial Day opening. I urge you to delegate the responsibility of these areas to local organisations.

Please stop the land closures. The land is not in any danger and closing it to all but the special interest groups is just plain wrong and BAD. Do the right thing and leave it alone.

Closing public land access is a crime! How are communities dependent on tourist dollars expected to survive if the public can't visit their public lands. Visitors enjoy accessing land from many locations and for many uses. To block this access is not protecting the environment but hindering due to the lack of management. These areas will be more susceptible to large fires destruction and decay. With management and access public land can flourish and be open for all to enjoy. Allow the PUBLIC on to our PUBLIC lands.

## Discussion Question 2

I like the old motto of the US Forest Service "Land of Many Uses" Wilderness is simply KEEP OUT You are not welcome NO MORE WILDERNESS !!!! A wilderness STOPS access at its border. All roads and many trails are closed. Only a few are allowed to hike or horse in an area. We need MORE not less accessible recreation areas for our growing and aging population. So make lands available for the us to use. Currently the US Forest Service and BLM control Public Lands. They practice conservation "wise use". Both services evaluate and manage: access recreation forest thinning etc. Keep our Public Lands open for more than just a few.

Closure to OHVs ensures increased illegal riding and damage to truly sensitive areas. Multiple Use land including OHV access is desperately needed.

Hello Thank you for reaching out and encouraging comments from the citizens who use the public lands. One challenge that has been very frustrating to my friends and me regards our use of the Ojito Wilderness in New Mexico for hiking picnicking and bringing our kids and dogs. Often we have encountered shooters who make quite a disturbance exercising their legal right to shoot on BLM lands or even within the Wilderness itself. Often they are just on the periphery of the actual Wilderness Area but the sound of high-powered rifles carries a great distance. On one occasion when we were within 100 yards of the Ojito Wilderness we literally had bullets zinging past our heads and we had to take cover. One of our group went down to pay the shooters a visit. It turned out that they were a few guys actually white-collar types with high-powered rifles including one AR-16 and they were firing into a very rocky area. The bullets were ricocheting off the rocks and over the bluff to our location. It almost feels like a war zone at times with 3 or 4 parties of shooters in different directions. It is very often the case that our wilderness experience is greatly deteriorated due to shooters. I would estimate that even if all these shooters were outside on the periphery of the formal wilderness area perhaps half the area of the Ojito Wilderness is subject to the noise pollution of high-powered rifle fire not to mention the hazard of stray bullets. This greatly restricts which areas we choose to visit. I believe that most of these adjacent lands are BLM lands. The federal government could be a more effective partner in helping to support recreation on Wilderness Areas if they would also partner with the appropriate BLM officials and perhaps others to appropriately manage the competing recreational activities like shooting in and near Wilderness Areas. I would suggest that the BLM might establish designated areas where target shooting is permitted at least 2 or 3 miles from official Wilderness rather than the current free-for-all arrangement where shooters can shoot virtually anywhere they like with high-powered rifles and sometimes automatic weapons (legal or not). The Ojito Wilderness like other Wilderness Areas is a place where families come to enjoy the wilderness experience. It should not feel like a war zone. Thank you again for this opportunity to comment on management of our public lands.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I am one of the people who attended last night's function in Seattle- I appreciate the effort this administration is putting out to try to get input. I am just a citizen that enjoys hiking and camping in the outdoors. I have no affiliations to any groups. I was a bit intimidated to talk last night because so many of the comments and suggestions were put forth by extremely knowledgeable and articulate spokespersons from different nonprofits and environmental interest groups. I have a few comments I will put forth now. What works: I have read of groups like Conservation Northwest that work with interests that environmentalists traditional have butted heads with hunters Logging companies and developers they have sat down and been cordial to each other to find ways to satisfy everyone's needs. I think this is the approach we need to use as we reach an era of resource depletion. Challenges: As I mentioned in what works- resource depletion- This will ultimately be the sticky wicket This will be the Government's role to educate the public and industry about the brutal facts of overpopulation and resource depletion and everyone can't have all that they want. There will have to be incentives and education to try to steer this country in the direction of sustainability. Federal Gov. role: My wife and I love to camp and hike and one thing we noticed that is frustrating is the different passes and fees at different outdoors areas. Couldn't the Federal Government oversee a single pass that all the states dipped into? Sometimes you go to a trail head up miles of poorly maintained forest and once there find out you need a pass to park there but you can't buy it there- same with some camping areas- A sign says to buy at the regular place you would buy a hunting or fishing license- but the sign may not be specific in the location and I don't know the businesses in the area. A pass for all the states we would gladly purchase. Tools- I would like to see websites that could give you information on hiking and camping and other outdoor activities that would tie together the disparate agencies involved State Parks BLM Land County Parks State lands etc just have one place to go to find out about outdoor opportunities. Another tool would be a website for volunteer opportunities. One last comment is that I think some of the traditional uses of public lands need to be reexamined. I don't believe that ranchers should be able to leave their stock on public lands-Cattle foul waters and destroy fish breeding habitat and they are unpleasant to encounter when out hiking. If Ranchers don't have enough of their own land they shouldn't be raising livestock. cattle are a big greenhouse gas producer and are not efficient for food production either. Thank you very much for your time and interest

***(cont.)***

I attended the meeting at Franklin High School in Seattle on July 1. It was very interesting to listen to the comments and views from the people present in our group many of whom were leaders of the various organizations they represented. Although I am an ordinary member of some of those organizations I myself do not have any especially profound advice to give. However I would like to make one point which perhaps could be put in most of the categories suggested for comments: what works; the role of the federal government; tools I would like to point out the times that I have seen work done by the WPA (or whatever similar program) during the depression. Impressive buildings like Timberline Lodge on Mount Hood in Oregon. Or the amazing dioramas of ancient life at Mesa Verde in Colorado. I know that our national parks and trails and other units which make up our great outdoors have serious backlogs of funding and I would certainly support funding increases so that what should be done can be done. But the work that I have mentioned that was done by the WPA shows that we need to raise our sights. It is not just a matter of repairing roads and bridges or building accommodation units or whatever else funding is needed for as important as these things are. We should also be doing the extra amazing things that Americans are capable of doing following the lead of the WPA. Especially at this time when so many people are out of work (as at that time) let us find creative talent and people with the skills to bring exciting developments to our great outdoors. I am not an economist but my own inclinations are very much in favor of giving people work now when they need it.

I live not far from Washington and suburban sprawl is steadily encroaching on our battlefields. The mess near the Battle Of Franklin could easily be replicated around here. Please do all you can to preserve them.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

To all parties involved in decision making processes concerning AOI and any other legislation potentially tied to it. This initiative is partly motivated by a need to enhance recreational opportunities on public lands. But increased recreation opportunities will not flow from a whisk of a pen in Washington D.C. Any successful recreation management policy must be accompanied by adequate budget staffing and above all management's priority to achieve critical on-the-ground goals. Federal agencies' allocation of budget staff and management effort should reflect the developing reality that outdoor recreation provides a greater good for more Americans than any other aspect of its multiple-use mandate. The time has come to make managed recreation the BLM and Forest Service's top priority. Prioritize all efforts on clearing the repair/maintenance/improvement backlog in the National Park Service before designating any new National Parks or other similar protective area designations. (The National Park Service alone estimates that it would need an extra \$9.5 billion to clear a backlog of repairs and improvements.) All too often "conservation" means reducing public access and recreational uses. The AGO Initiative should explore ways to enhance a diverse range of recreational uses including motorized and non-motorized recreational uses across federal state and private lands. Federal land managers too often limit or restrict public recreation activities. Federal land managers should focus on recreation friendly management plans that are not restrictive and embrace a wide range of diverse recreational uses including motorized and non-motorized recreation. The administration has prided itself in being open and transparent yet Representative Rob Bishop and Representative Doc Hastings have not yet received a response to their requests for documents. It will benefit the outreach function of this Initiative if the Department of the Interior would respond to H. Res. 1406. The new National Park Service management policy emphasis is on preservation of our National Parks. This limits land managers' options insofar as what recreation opportunities a Park may provide. The initiative should study a supplement to National Park management guidelines to emphasize providing a wide range of recreational uses for the visiting public. Similar supplemental guidance may be appropriate for the U.S. Forest Service and the Bureau of Land Management. The initiative and the public will benefit from a full understanding of the various public and private conservation efforts currently underway. Accurate information is critical for good decision making. Statements that state large areas of our nation's natural landscape have been lost to population growth and development or that a changing climate and new sources of pollution are affecting wildlife and watersheds must be put into an accurate context. The initiative must disclose how much land is being conserved. The initiative should work with the over 1600 privately run land trusts to find out how much land has been protected in recent years. The initiative should disclose how much land is conserved via federal conservation efforts such as the Department of Agriculture's Conservation Reserve Program. In addition it would help to disclose how much federal dollars are being spent on the various conservation efforts. Finally the initiative should disclose the conservation efforts underway via the Land and Resource Management Plans of units of the National Forest System the Bureau of Land Management and National Park Service. Millions of American families enjoy motorized recreation. It often forms a bond between parents and their children as they experience the great outdoors together. The OHV community supports conservation efforts including support of the "travel limited to designated roads trails and areas" paradigm as outlined in the Forest Service travel management regulations and BLM's planning directives. The OHV

## Discussion Question 2

***(cont.)***

community also supports conservation through environmental review and analysis in route designation processes as well as ongoing monitoring and maintenance of the OHV infrastructure. The OHV community supports conservation efforts by contributing substantial funds to implement OHV management and volunteers tens of thousands of man hours in volunteer work projects. Much of this funding is made available to federal land managers via state OHV programs. These programs exist today because years ago motorized recreationists voluntarily “taxed ourselves” via state OHV registration programs. Some of these funds are used to supplement the agencies' law enforcement efforts. ATV and off-highway motorcycle riding encourages and promotes physical fitness. OHVs provide access to the Great Outdoors for Americans of all ages shapes and sizes. Thank you for your wise consideration on all the aspects of managing our public lands.

To whom it may concern Please keep areas open so that young and old folks can go out and enjoy dirt bike riding-4 wheeling-mountiain biking- this will keep young people busy and keep them out of trouble and great exercise for everyone. Please make more places in California for riding as my family has to drive at least 2 hours for recreation they just keep trying to take more and more away from people that enjoy the great outdoors Thanks

Prior to the Station Fire in the mountains around Los Angeles we had the opportunity to go up into the mountains and get away from the city. This is so important to making life in L.A. livable. Now we have lost a lot of the wilderness that we relied on for our spiritual rejuvenation. I urge that you develop wilderness management plans that: 1) Eliminate fires of this size and 2) Help L.A. to recover from this fire more quickly. This might mean better planning and/or more resources. This is such a huge loss to us.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Our public lands belong to all Americans and not just to the members of The Wilderness Society. I was a Professional Forester for 58 years now I am retired. I provided the Public with clean supplies of drinking water healthy air and an opportunity to experience wildlife and nature. I protected the forests from Insects Disease and Fire. And most of all I provided the Public with management that not only reduced Insects Disease and Fire that endangered the Forest Trees I created an Economy that maintained and built improvements for use by the Public. Unmanaged Forests cause not only Dead & Dying Trees but Dead & Dying Trees produce Carbon Dioxide. Managed Forest not only create a healthier climate but create values that create jobs that create an Economy that pays for the care and protection of Forests. Harvesting Dead & Dying Trees by Helicopter during the Winter can make the Forests more healthy but can produce this situation where there the Forests are profitable and create an economy that will produce jobs and profitable budgets. Why are Foresters prevented from practicing the Science of Forestry? I see stumps and downed trees in and about Camp Grounds and Recreational Areas. Why is their value being wasted? There is no evidence that supervised tree removal (Forest Management) causes significant Erosion increases the starting of Fires or destroys Forests. Our region hosts unique public lands of incredible beauty but these lands close to large population centers cannot be classified as wildness due to the presence of human beings. Investing in Forest Management in our region will permanently protect a large and varied natural landscape create economic opportunities for neighboring communities conserve the region's biodiversity and recover its wild species through habitat conservation and restoration. I urge you to implement the following priorities for my region: Conservation means proper use of the values of Forest Products. Proper Use or Conservation at a Large Scale of Large natural areas such as the Berryessa Snow Mountain region provide our best hope for addressing loss of species and open space preserving water quality and adapting to climate change while preserving the wildlife and lands we enjoy today. Protect our Wildlands: Wild places are some of our healthiest and most intact lands if Forest Science is used to manage it. Wilderness Areas were created by Foresters due to their lack of access. Permanently protecting the Berryessa Snow Mountain region and defending against threats to our wildest places should be the highest priority as the administration looks to leave a legacy of protected places for the public to enjoy. National Forests create such areas while Parks and areas where Forest Management are not practiced create lost revenue. Create Economic Opportunities: Protected public lands can provide economic benefits to their surrounding communities. Communities can diversify their economies by expanding forest industries creating Forest Management in forested regions will thereby increase demand for food and lodging services and increase property values by protecting the area's natural amenities. Improving Watersheds and Wildlife Habitat: By investing in Forest Management of the Berryessa Snow Mountain region we will create jobs that are built around proper stewardship of our natural areas. This restoration will enhance wildlife habitat preserve critical water supplies and connect people to the land. Connect people with Nature: The Berryessa Snow Mountain region provides countless opportunities for connecting the communities of the Bay Area and the Central Valley with nature. Existing outreach programs for families and children will only be enhanced by permanent protection of this natural playground where recreation and outdoor education opportunities abound. Thank you for considering my comments.

***(cont.)***

A changing climate pollution and poorly planned development have put a growing strain on our wildlife our waters and our lands and we must act now to conserve the majestic landscapes and diverse wildlife they support. I am thrilled that you have launched this important process and I encourage you to make sure this effort has the guidance tools and resources necessary to make the initiative's lofty goals a reality. Thank you.

As an emeritus member of the American Institute of Biological Sciences (AIBS) I am encouraged by the launching of the America's Great Outdoors Initiative. Protecting our public lands from the always increasing impact of unplanned overdevelopment mineral & fuel extraction the continuing chemical toxification of our bodies & environment & impacts of climate change must include conservation of large connected landscapes to build resilience to consequences of the human overpopulation explosion tsunami. Protection of large watersheds & their wetlands will mitigate impacts of flood & drought from changing weather patterns.

I worked in yellowstone national park in 2008. It was not something I did for the money haha. It was a once in a lifetime experience nevertheless. Everywhere I look I see forests being ripped open and torn down. The places I walked and fished as a child are now the property of rich developers. Please take a moment to consider this growing problem..

Thank you for launching the America's Great Outdoors Initiative. I hope that this will be a real effort and not die off like some of your other promises. There is a tremendous need address critical issues facing ecosystem services wildlife conservation outdoor recreation and clean water. Put your weight behind this issue and do not fade as you did with energy and war related issues.

As a former Alaskan and former Coloradan, I hope you'll lend an ear to me when I ask you to view any actions toward mineral extraction in the Bristol Bay headwaters with great skepticism. Below is a form letter from TU which I generally agree with but does not capture my love for that place as, I'm sure, the San Luis Valley does for you.

The most important aspect of this is to PROTECT the remaining wildlife and habitat, not to create wastelands, dust bowls and dead zones caused by off-roading vehicles, mountain bikes and foolish, dangerous poachers.

Ban jet skis, all-terrain vehicles, snow mobiles and unjustified hunting. Do not apply pesticides and keep everything natural.

We do need to protect our wildlife and wildlands. we can't develop every area for progress.

These public lands and waterways and wildlife must be saved.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

An observation I would like to make at this time is that the Secretary of the Interior, Ken Salazar is consistently cited as acting in contradiction to the goals and ideals of conservation. His priorities would seem to be elsewhere. I believe it would be prudent to thoroughly review and possibly re-evaluate Mr. Salazar's appointment. I will be studying future actions on this and other related issues and considering those actions as your response.

Additionally, we use far too much space for highways and parking areas. We need more passenger train service. That will entail building more tracks that are not owned by the private freight lines, but will save a lot of space. I realize the northeast may need high speed rail, but elsewhere we just need rail service--normal speed would be fine.

Please think about all the space in the world that we have used. We don't need to destroy anymore of it and some animals actually need that environment to survive.

Voters need to be educated to believe global warming is imminent to dispel the conservative lies. They need to understand that a vote for conservatives is a vote for global warming. People who haven't grown up with a closeness or love of the land probably have trouble feeling the reality of global warming. Perhaps some can be reached through their children. There are various organizations and camps for children that most people are delighted to have their children attend. Even encouraging people to recycle should trigger some consciousness of the environment. Of course, if they can be encouraged to vacation in one of the beautiful parks, even local ones, they should get the connection. Advertise.

So many animals are in trouble due to man's interference and so many are either already extinct or facing extinction. It has to stop and we seriously need to protect and save animals. If we continue then what do we leave for future generations?

So many things at risk in our Western states. So many places to save at least for now.

We are the caretakers of this planet and it is our responsibility to protect all creatures from man's evil and cruelty, his abuse and arrogance, his greed, indifference and neglect. Too long, no President has listened - please help those who have no voice!

These lands are so important to conserve not only for future generations of people, but also for future generations of animals. This needs to happen in order to keep the ecosystem flowing. Humans CANNOT takeover anymore land!

I have been to the website and cast my vote, but, noticed there seems to be a concerted effort by the ATV crowd to drown out any voice but theirs. I trust this will not go unnoticed come tally day. We cannot allow these few fanatics to ruin our wild (and preferably quiet) places. In addition, now more than ever, we need a comprehensive approach to safeguarding wildlife and wild places from the harmful impacts of global climate change.

And STOP hunting in our wildlife refuges. Dictionary meaning for REFUGE - a place that is safe for wildlife to live, a refuge for them. Hunting on these lands is not a refuge!!!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

We are especially concerned about the range cattle in our National Forests who overgraze the meadows and muck up the streams. There is currently a lot of pollution in Spring Creek that flows into Sheridan Lake in the Black Hills of South Dakota. Much of this, I fear, is from the cattle.

We NEED "REAL" INNOVATION and dedicated resources TO CONSERVE and PROTECT our land, water, and wildlife. 'for when the wild dis-appears, so shall we soon after' REMEMBER: 'for when the wild dis-appears, so shall we soon after' . . . soon is here!

It must be remembered that Thomas Edison wanted to go strictly DC back in the 19th century. A hundred years of AC has just about killed us. Our trees are sick from the acid rain. Let's get rid of those power poles and begin the job producing work of installing fuel cell sheds in every back yard in the nation!

As a retired Refuge Manager, having devoted a large part of my adult life to protecting wild creatures and wildlife habitat, I know, firsthand, of the pressures exerted by man's overuse and exploitation. We owe it to future generations to leave our wildlands and wildlife populations in as good as, or better, state of health as they were left to us.

Please help protect wildlife by protecting the lands on which they live. Thanks for your help in this important matter.

If we don't protect our land, water and wildlife... we will lose it all. Our lives depend on this.

Your active collaboration with every American is crucial to develop this conservation strategy for the 21st century. And when I say "comprehensive", I mean encouraging every citizen to do his/her part. We are stewards of this world and each person needs to learn about and develop respect for the many living things and living places that surround us.

We want wildlife protected from hunting and trapping, plus the hazing of last wild herd of bison at Yellowstone is totally unacceptable. Please help stop such atrocities.

If we don't act now, all these inestimably precious, irreplaceable national resources and treasures will be irrevocably gone, lost to us and our children; and we will have failed our responsibilities and obligations as custodians of this, the only world we have.

The survival of our wildlife is very important to my family. We have seen the struggle to survive in urban settings when habitat is lost. We need our wildlife to survive to assure quality of life!

Our wild animals need all the protection they can get. After all, all this wilderness was their territory before we knew it existed. As Mahatma Gandhi said, "The greatness of a nation and its moral progress can be judged by the way it treats its animals."

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

We do NOT need ATVs anywhere, in ANY parks, as they have shown repeatedly that their noise, pollution, speed, recklessness, erosion and being motorized and gas-driven has an extremely destructive impact on wilderness and wildlife - we go to these places, to rest, escape, and relieve the stress of noise, pollution, traffic, vehicles and to enjoy the quiet. PLEASE respect the original purpose of these wild places, and protect them from the greed-driven industries who want their products EVERYWHERE, regardless of their cost and destruction to our fragile ecosystems and struggling wildlife and wilderness. If we don't act NOW, they will vanish forever, and future generations will be deprived of an extraordinary experience that we have destroyed by our carelessness and greed.

I am enclosing the prepared statement, because it is so well stated and complete. However, I am very concerned that we, together, take the intelligent action needed to preserve our wild natural spaces and the wildlife dependent on those spaces. It is more than a recreational learning experience for humans, it is a matter of survival. Preserving habitats preserves species and allows for the balance of nature that has worked, is working, and will continue to work, if we allow it to work.

This is an opportunity for the Obama administration to demonstrate that conserving our wilderness and wildlife, keeping our waters and soil unpolluted by toxins is more important than satisfying the greed of developers and business, and catering to ignorant and belligerent citizens who constitute a minority but ruin this country for everyone else. You need to live up to your promise to rule by science not politics. Instead, this administration has catered to the loud and brainless. An example is taking the northern gray wolves off the endangered species list so that many, including "Yellowstone's" Cottonwood pack, were destroyed.

In my rural hometown, poorly planned development by our town council and planning boards is destroying wetlands, aquifers and other water sources, forests, our rural landscape, and our beloved CT River. We've tried hard here in town to stop this onslaught against the environment, but unfortunately the developers own most of the folks in town government. A federal response to this issue, in the form of strong and enforced regulations and laws, would be a big help to towns like mine. I encourage you to make sure this effort has the guidance, tools, and resources necessary to make the initiative's lofty goals a reality.

The outdoors is a heritage that can not be replaced. We are borrowing it from our children.

For the most part, individual species will continue to reproduce if given the habitat elements that they need. As these elements become fragmented a landscape-scale conservation effort will be required to maintain continuous access.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Our wild Mustangs have been under attack by the BLM for years now. They continue to eliminate them shrinking the size of herds that have become too small to sustain. WHY? The BLM should be making sure that those herds are protected but instead they are rounding them up and sending them to be slaughtered. This is not what the public wants to hear about and so this dirty secret continues. Please stop the rounding up of these majestic animals and allow them to roam free on our public lands and quit catering to the ranching community, we all own those lands and those mustangs have every right to roam on them free like they have for years. This subject should be added to the effort to ensure these lands are left as they should be for the mustangs to continue to live on as their ancestors did for hundreds of years. They are the symbol of what this country stands for, Freedom and strength, nothing sends the message like they do!!

As an active user of federal and state lands for camping, hiking, skiing and just plain enjoying, I want to thank you for launching the Initiative. One more thing I do want to add is the tragedy of the cattle grazing in our national forests. They ask camper and hikers to tread lightly, pack it and pack it out. The cattle are destroying beautiful areas all through the forests. As a resident of Montana I am appalled at the devastation they have created. Cow patty's everywhere, trampled grasses and flowers, destroyed stream beds. This issue should be a priority!

We need real innovation and dedicated resources to conserve and protect our land, water, and wildlife, so that future generations will still be able to experience the great natural places in our land. In my lifetime, across the country, I've seen great forests shrink away, felled to make way for housing and commercial developments.

All of these represent most of our critical national resources. Unfortunately they have been handled poorly for many years, consider the backlog of maintenance from which they and our visitation experience, suffer.

I am particularly concerned about the Florida Everglades, which I have observed declining over the past 40 years. It is such a unique and precious resource and yet it has been losing those special characteristics rapidly.

You don't seem to understand the needs of wild animals and their environment. I think part of the problem is that your Interior and wildlife appointees don't either. Therefore, I was glad to hear that you have launched Initiative.

This might be a good start, if the Department of the Interior and Sec Salazar is onboard. The "new sheriff" has been among the missing when it comes to protecting wildlife.

We have pushed nature and its animals to the brink, let's not push them over the edge. We must protect wildlife for our children and those in the future. They are God's creatures.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Where I live, farmland, natural landscapes and wildlife have been replaced by strip malls - half of which have no tenants and many of them close down for lack of business. Last week, we saw a hawk in our backyard. I am pleased to have attracted wildlife to my gardens, but hawks have been displaced from their natural habitat and don't belong in inhabited areas! You have the power to do this. Please keep your word to reduce our dependence on oil, to clean up our national reserves, stop poaching and stop poisoning our land! Big business has no right to put their money ahead of principle - and you shouldn't accept that.

Every living thing prospers from the planet and if the planet isn't taken care of then everything else is affected. We need to protect these lands to ensure wildlife and mankind alike stay healthy and prosper.

Our wild places and the wildlife that inhabits them are our greatest national treasures and they must be protected completely, no matter the cost. Once we lose them they will be gone forever. Let's not let that happen.

As you should be well aware the National Forest has been logged to the point that to view a large tree you'll have better luck looking in side some city limits. To save the forest in Indiana you should have started a coupl of tears ago

Help...our natural inhabitants are fading as fast and they need our help. Lets do what ever can be done to protect the habitat for so many creatures that rely on us to do the right thing...protect, we humans have destroyed too much already!!!!

The number one priority must be the ecosystem (Land, plants and animals--ALL animals!). Protect the resource. The second priority must be for the human visitors' enjoyment. While protecting the resource, give human visitors as much access as possible.

I live in a rural area. and try to implement integrated landscaping not only in my own backyard, but in others who ask me bout landscape design. We almost lost a state treasure this year, our Alamo Lake. People were horrified to hear that the state "misappropriated " monies that were left to the park for it's continual operation. My grandson has already missed out on so many treasures that we used to take for granted

It is past time to take this initiative. We must reverse the damage we have done and protect what we still have of our great outdoors before it is too late. Our great country will no longer be great if we don't take strong steps to preserve what we have been given to admire and enjoy.

I am 80 years old, have no direct descendants, and do not have a dog in this fight. That being said, we have done more than enough to destroy the parts of nature that support us. Nature doesn't care. Microbial life, human life, and no life are all the same to the planet. Doing the right thing FOR US is what's important.

## Discussion Question 2

### *Written & Online Comments*

*(cont.)*

Not part of this letter, as prepared by Defenders; The mining of the soil by agricultural interests needs also to be addressed; in 100 years we have mined a soil that took 10,000 years to build. The plan also needs to address the over grazing that has resulted in species eradication and lack of diversity, and permitted the introduction of invasive species. Invasive species account for the destruction of as much habitat as does development. Thus their control is a critical part of planning.

The rest of the note that follows is a script but I did not feel the need to change it. I do want to stress how crucial your leadership is in environmental concerns. The earth is our school and we are all co-dependent. We cannot live without the land and animals on this earth with us. America needs to seriously change our "We can beat the environment with our technology" attitude. It is from the pioneer days and it is killing us.

We, as human beings, have been horribly destructive where our planet is concerned. We have done nothing that improved it and almost everything we have done has, in one way or another, harmed those very systems that made life for us possible. If we can do one thing right it is to protect that which we haven't yet compromised or destroyed. Are we up to the job?

Few things are as essential to the spiritual/mental/physical well-being of a nation as the land it stands on. City dwellers many never enjoy the "great outdoors" because they have other priorities, another way of life. This is all well and good, however if the land we live on is over exploited, used without wisdom and only for profit, dilapidated of its vitality, then the whole country suffers.

BLM, MMS, USFWS, FS, NPS ARE ALL STAFFED WITH PEOPLE WHO DO NOT PROTECT BIRDS, ANIMALS OR ANY WILDLIFE OR TREES OR LAND. THEY ALL WORK FOR PROFITEERS. WHY HAVE YOU DONT ZERO ABOUT THIS PROBLEM. MONEY AND GREED AND BRIBES FROM PROFITEERS TO FEDERAL AGENCIES ARE RAMPANT. YOU KNOW THAT. YET YOU HAVE DONE NOTHING AND HAVE APPOINTEED VILSAK AND SALAZAR, WHO HAVE ALSO DONE NOT A DAMN THING TO HELP OUR ENVIRONMENT. YOUR ADMINISTRATION HAS BEEN MISSIGN IN THE ENVIRONMETN AREA.

NOW THAT A LONG, EXPENSIVE & DRAWN OUT LEGAL BATTLE HAS RETURNED THE GRAY WOLF TO ITS RIGHTFUL STATUS AS AN ENDANGERED SPECIES (SADLY AFTER HUNDREDS WERE MURDERED), IT IS TIME THE FEDERAL GOVERNMENT & THE DEPT. OF INTERIOR & ESPECIALLY SEC. SALAZAR PROPERLY PROTECT THE WILDLIFE ON THESE PUBLIC LANDS AS WELL! PLEASE REMOVE SEC. SALAZAR AND THE INFLUENCE OF HUNTING & RANCHING SPECIAL INTEREST GROUPS & MAKE SURE DECISIONS MADE IN THIS AREA ARE CORRECT AND UNDER THE SUPERVISION OF QUALIFIED SCIENTIFIC EXPERTS.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

As an independent voter who worked to elect you in North Carolina, I have been deeply disappointed in Ken Salazar - who is far too cosy with influential ranching interests in Montana and Idaho - and has supported their ongoing assault on the grey wolves of Yellowstone, and the last free ranging buffalo in that area. He has no credibility in the environmental community, and has damaged your reputation. Therefore, one of your first actions in the initiative should be to replace him with someone who understands the irreplaceable value of our wildlife, its habitat and the environment, and who will not be beholden to wealthy lobbyists attempting to subvert the will of the taxpaying public.

In surveys women place the environment before the military when it comes to use of our tax dollars. As a woman and a mother and someone who has worked to save public lands in my community and state, I beseech you to take seriously the need to preserve as much habitat as possible. Mining and snowmobiles and cars can be handled at will outside your realm. Please see into the future and do everything you can to keep the wilderness as pristine as possible for us and our children. I suggest you get a book called the "War Against the Greens" it is a real eye opener.

Almost 75 years ago the pioneering conservationist and ecologist Aldo Leopold called for a new "land ethic", arguing that not only land managers but also the American people needed to reconnect with nature and understand the interdependence of all living things. In spite of Leopold's efforts and the contributions of those who followed and fought to protect our soil, water, air and natural resources we find ourselves a decade into the 21st century still struggling against powerful political interests to establish a clear environmental policy with any kind of widespread public support. Our present course is unsustainable and irresponsible. That is why I want to As a wildlife biologist and park naturalist I have spent the last 12 years monitoring threatened and endangered species, restoring habitat and educating the public about conservation issues. I have personally witnessed the transformation that can occur when people make a direct connection to nature and experience the wonder and beauty of our public lands.

I live in a place inundated this week by thousands of families seeking outdoor experiences. The same folks often want convenient shopping and luxury accommodations. And that's how we get a Hilton Head Island - and its overflow into my backyard - of manicured nature. Unfortunately the manicure methods destroy the very nature they claim to highlight. All talk of balance. But the balance we've seen here has clearly damaged the unique estuary where I live, crab, shrimp, oyster, fish, swim and make wildlife pictures. Oyster beds are closed. I fear swimming after heavy rains. You can see my pictures and more at <http://imediasmith.com>. In a few days, my wife, dog and I will embark on a weeklong tour of the West. I fear we will see more compromises - for golf courses that are now bankrupt, for coal mines that ship their bounty overseas, for "clean" natural gas wells that are exempt from paying for the environmental damages they cause, for "irrigation" projects filled with speedboats.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Fist I want to thank you for listening (I hope that you really are) to those of us who do not always feel like we are heard. As much I am dismayed by many policies or lack of foresight in many areas of my countries government I hold precious my right to voice my opinion and hope it will not be an exercise in futility. I urge you to steer and steward our country into the future merging the technical and spiritual growth I feel is required for our longevity. And I feel one of the most logical places to start is our management policies and practices of the Great Outdoors. Our land and the wildlife that inhabit it are under our care and we need to start showing that we do care. My idea of management does not include unmanaged growth, inhumane rounding up of wild horses when there are compassionate and humane alternatives, poisoning of prairie dogs, rampant clear-cutting, allowing huge corporations, (many not owned by US companies or persons) pillaging, destroying and raping mountains and other habitat for minerals and so on. We cannot grow into the future destroying our natural resources along the way and expect the future to be lengthy and bright, can we? No one's money is more important than my future and my families, families future. No ones.

We are so thrilled that we have a "Green-Thinking" Government. Since President T. Roosevelt and the Naturalist Muir, our protected lands and wildlife flourished. The overpopulation and the pollution that goes with it, is threatening these wonders. Delani National Park takes the tourists sightseeing in a little train, so the cars of the visitors don't disturb wildlife and damage air quality. Maybe this process could be implemented in other National Parks also. The Great Smokey Mountains National Park is one of the most polluted outdoors in the country, There is bumper-to-bumper traffic, I think that it is the most visited place in the Nation. If this park would follow the example of Delani, the pollution would be cut down. Also, charging an entry-fee would help to hire more employees and create more guided tours, lectures and other educational efforts. The Everglades National Park was a joy to visit, but lately it has regressed, and there are not as many enjoyable programs as there used to be. The visitors especially enjoyed the tour through Shark Bite that started from the Visitors' Center in Flamingo. All that is gone now, even though it could bring in revenue and delight the public. The little train was taken out years before the hurricane struck.

I am pleased to read about the Initiative. Unfortunately it was launched at about the same time as BP's Gulf oil disaster so the Outdoors Initiative didn't receive the attention it deserves. Our country needs an integrated national strategy to protect our great outdoor parks, refuges, national forests, and public lands -- and the wildlife that depend on them to survive. I am so thankful that our ancestors saw the value of preserving representative sections of land before everything was developed. Continuing to protect our public lands from poorly planned development, mineral extraction, pollution, and the impacts of climate change should be a key priority for the Obama Administration and for all of us who care about preserving our great outdoors. There is a tremendous need to do comprehensive conservation planning to address critical issues facing: Large, connected landscapes, watersheds, and wetlands Wildlife and wild places Clean air & water Outdoor recreation

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

This is a critical time for our society. With economic and employment difficulties, it would be easy to forget the importance of our environment and the creatures that share the earth with us. We need to conserve and protect our land, water, and wildlife. We all share a responsibility to leave the next generation healthier and better connected to the natural world and your active leadership is crucial to develop a conservation strategy for the 21st century. Our parks, refuges, national forests, and public lands are the best of America. Taking a comprehensive approach to conserving our treasured landscapes and protecting our public lands from poorly planned development, mineral extraction, pollution, and the impacts of climate change and animal eradication (wolves, etc) should be a key priority for this Administration. On a national level, we need to address critical issues facing ecosystem services, wildlife conservation, outdoor recreation and clean water. It is important that you have launched this important process and I encourage you to make sure this effort has the guidance, tools, and resources necessary to make the initiative's lofty goals a reality.

I am very thankful that you have launched this important process and I encourage you to make sure this effort has the guidance, tools, and resources necessary to make the initiative's goals a reality.

We must act now to conserve the majestic landscapes and diverse wildlife they support.

Now more than ever we need a comprehensive approach to safeguard wildlife and wild places from the harmful impacts of global climate change. Thank you for considering my comments and listening to the public.

At this point in time it is crucial that we protect our natural resources and preserve our public lands. Please remember that our public lands belong to all of us. I am encouraged that you have launched this important process and I hope you will make sure this effort has the guidance, tools, and resources necessary to make the initiative's lofty goals a reality.

Your active leadership is crucial to conserve and protect our land, water, and wildlife. At the same time, there are multiple pressures facing these lands. To safe guard wildlife and wild places, it is critical to resist these pressures. As lobbyists urge drilling and pipelines, or vehicle access to wild spaces, your leadership will be needed to keep these spaces wild. As we and wildlife face the harmful impacts of global climate change, landscape-scale conservation will be needed more than ever, to create and maintain wildlife corridors and refuges. The protection of watersheds and wetlands will be equally important as demands on our waters increase and climate change causes floods and droughts.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Dear President Obama, Thank you for caring about conservation and the environment. I love wildlife and wild lands and am pleased about you launching the Initiative. We need to protect our land, wildlife and water for all Americans and for future generations. Your active leadership is critical to making this happen. Now more than ever we need a comprehensive approach to safeguarding wildlife and wild places from the harmful impacts of development and global climate change. I very much appreciate your caring about these issues and your participation in helping protect our environmental heritage.

We need real innovation and dedicated resources to conserve and protect our land, water, and wildlife, as well as our Nations Wild and Free Roaming Horses & Burros too. There is a tremendous need to do landscape-scale conservation to address critical issues facing ecosystem services, wildlife, & wild free-roaming horse & burro conservation, outdoor recreation and clean water. In addition, now more than ever we need a comprehensive approach to safeguard wildlife, our wild horses and burros, and wild places from the harmful impacts of global climate change. To assist fish, wildlife, wild horses and burros, natural resources and human communities in adapting to climate change, this initiative must include the conservation of large, connected landscapes to help build resilience to the impacts of climate change and other threats. A changing climate, pollution, and poorly planned development have put a growing strain on our wildlife, our wild horses and burros, our waters and our lands, and we must act now to conserve the majestic landscapes and diverse wildlife they support.

Connected landscapes are crucial in preventing habitat fragmentation, a major threat for some of America's most notable wildlife, including bison, wolves, and grizzly bears. A changing climate, pollution, and especially poorly planned development have put a growing strain on our wildlife, our waters and our lands, and we must act now to conserve the majestic landscapes and diverse wildlife they support.

friends of mine have just returned from 4 weeks in your wonderful National Parks, including Yellowstone, and sent me pictures and descriptions of the beautiful Blue Ridge and other spectacular places. At the same time, the tragedy with the bear attacks was reported in Australia on the main TV news services. Is there not some way you can deal with this without killing a bear which, seen from downaunder, was living naturally and caring for its young. Anyway, on the positive side, I urge the USA, as world leaders, to employ real innovation and dedicated resources to conserve and protect your land, water, and wildlife.

In addition, now more than ever we need a comprehensive approach to safeguard wildlife and wild places (not to mention humans) from the harmful impacts of global climate change. (Just look at what is going on in Russia right now due to heat. In addition look at the floods in Asia.) We take pride in our treasured landscapes and share a responsibility to leave the next generation healthy and better connected to the natural world.

We must also protect our wildlife. Earth Justice should not have to sue the federal government in order to protect wildlife such as wolves, jaguars, and horses wasting time and money.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I personally would rather not see politics playing any kind of role in protecting the land, water and animals. We should do it because it is right. We should do it because we are the caretakers of it all- not the owners. There is so little respect in this country for the land, water, environment, air, animals- each other for that matter. If we respected, there would be no aerial gunning down of wolves. We would not be killing each other and abusing cats and dogs at the alarming rate we do. We would not allow people's homes and farms to be ripped out from under them just because a state wants to run a road through. Nor would we sit blindly by while a city closes businesses and tears down houses in order to build a city center or some such ridiculousness. Don't get me wrong, I want to see this initiative work. I am just fearful it is just another layer of bandages on top of an already huge one. You know who should really be involved in this initiative? Native Americans. There is no one else better for teaching about respecting the land and the mother (Earth).

The very environmental fabric that supports our ecosystem is being seriously depleted. Our open space and wildlife habitat is rapidly disappearing. Along with it our opportunity for outdoor recreation, sustainable wildlife populations and clean watersheds is also vanishing. Your program, Initiative is much needed and appreciated..

In addition to protecting our public lands, we must restore the Gulf of Mexico and the coastal regions that have been damaged and degraded by the BP oil spill. That region must not be forgotten.

Please remember, we were put on this Earth to be God's caretakers for all His creatures. Please help them.

Dear Congressmen,                    These natural 'treasures' cannot be replaced. Just look at the destruction that mining minerals has caused.

The pollution, littering, and poorly planned development have put a growing strain on our wildlife, our waters and our lands, and we must act now to conserve the majestic landscapes and diverse wildlife they support.

Many, many thanks for launching the Initiative! We need this sort of real innovation and dedicated resources to conserve and protect our land, water, and wildlife. Your continuing active leadership is crucial for developing a sound, vigorous, conservation strategy for the 21st century. They set aside our most magnificent, treasured, and historic places. There has never been a more important time for a comprehensive approach to conserving our cherished landscapes. Pressures to "use" them as "resources" -- e.g. -- to exploit them for financial gain -- rise with the economic downturn. Too many of us are too fat, glued to video games and The Mall. What better way to get us to improve our personal lives, by promoting a vital and healthy interest in the NATURAL WORLD? We take pride in these treasured landscapes and share a responsibility to leave the next generation healthier and better connected to the natural world.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

There's so much to fix after the Bush administration. We can't continue to place environmental issues on the back burner. Some of us take pride in our treasured landscapes and share a responsibility to leave the next generation healthier and better connected to the natural world.

They have been built up over the years through the administrations of several presidents. With growth in population and most people living in cities, With many species facing extinction because of climate changes and human activities, Now more than ever we need a comprehensive approach to safeguard wildlife and wild places from the harmful impacts of global climate change.

I am writing to express my gratitude for your launching the Initiative. As a Coloradan who lives in the high mountain country, I absolutely know that we need dedicated resources to conserve and protect our land, water, and wildlife. Prior to this, I have been extremely disappointed in Secretary Salazar's actions (and inaction) on crucial environmental issues. I hope that this marks a change in the Obama administration's actions in this area.

This is a very important step for us to take, and it needs to be taken NOW! We can no longer take our time on putting forth plans to protect our land and wildlife. We are losing, and have already lost too much.

Please also consider that Mountain Top Mining is destroying scenic vistas, entire ecosystems and perhaps even might affect weather patterns in unknown ways. Private and Government owned lands must be stewarded in a way that works to improve our nation not reduce it to rubble.

Too much has been lost because of the inaction of the previous administration to global warming, habitat for big business, and wildlife non-preservation. Another reality that must be addressed is the ever-growing human over- population!

Undoubtedly you will be challenged on the size of the conservation area and the scope of what needs to be done. change is hard. However I encourage you to stand strong in the face of opposition and do the right thing for the environment and the people of the world.

P.S. If you actually read this please note. The school day is too long!!! We should be fostering a love for the outdoors, we should be nurturing our teachers to go over written words. We are headed stressing out our school system and taking the imagination nature could foster from our people.

P.S. I have a GREAT idea! Stop killing all our wildlife i.e. buffalo, wolves and wild horses! And when Ken Salazar says he wants opinions on his actions and gives us a deadline for them, make HIM honor the deadline. He wanted public opinion on the last wild horse roundup but before the time was up he started a roundup which killed 20 horses, 3 of which were foals. How disgusting can this administration get! If this continues, do not expect me to vote Democrat again!

The wildlife needs our protection now more than ever.

## Discussion Question 2

### *Written & Online Comments*

*(cont.)*

I understand that in the tough times our nation faces, the environment isn't always top priority. But our world needs looking after, especially in tough times like this.

It is absolutely necessary for our survival to protect wild areas and curb urban sprawl. Our cities are decaying and should be rebuilt instead of allowing doomed shopping malls and housing developments in the wilderness that not only impacts wetlands, woods and wildlife but contributes to pollution and excessive gasoline consumption. Americans are, by nature, stupid and need to be educated!

For the sake of my children and grandchildren, we must act now while there is still time to save these priceless areas. By doing so we will insure that all future generations will be able to enjoy them.

In response to those people who keep arguing the whole "we have the right since we were given dominion over the animals", you are conveniently forgetting the charge that went along with that "right". We were supposed to be stewards as well; that means no killing, no pain and suffering, and to guard/protect the animals. For example, I have had many animals; in return for their help, it is my responsibility and obligation to keep them safe, healthy, and happy to the best of my ability. Our society has failed this charge and should, in all honor, forfeit this "right". Genesis 1:28 Further, God blessed them and God said to them: "Be fruitful and become many and fill the earth and subdue it, and have in subjection the fish of the sea and the flying creatures of the heavens and every living creature that is moving upon the earth." 29 And God went on to say: "Here I have given to YOU all vegetation bearing seed which is on the surface of the whole earth and every tree on which there is the fruit of a tree bearing seed. To YOU let it serve as food. 30 And to every wild beast of the earth and to every flying creature of the heavens and to everything moving upon the earth in which there is life as a soul I have given all green vegetation for food." And it came to be so. If you read what it says, it says Here I have given to YOU all vegetation bearing seed which is on the surface of the whole earth and every tree on which there is the fruit of a tree bearing seed. To YOU let it serve as food. God was talking about animals and people eating VEGETATION. ANIMALS ARE NOT FOR EATING OR FOR WEARING. ANIMALS ARE FOR CARING AND FOR LOVING THEM. God holds us accountable for how we treat animals. When Adam was created, God surrounded him with animals and call it "very good". If God brings our pets back to life, it wouldn't surprise me. It would be just like Him. It would be totally in keeping with His generous character. The planet, space, stars everything is his (GOD). Be careful what you do to GOD'S creation for he is always watching. And if you want him to remember you care for his animals. And if you believe in god or you do not you have to believe it's simple, you have to eat, drink, sleep, breath these are his rules and we all have to live by them. REMEMBER SOONER OR LATER WE ALL WILL DIE, SO WHAT WE DO, WILL ALWAYS BE REMEMBERED BY HOW WE ACT IN GOD'S WORLD.

THIS IS EVEN MORE IMPORTANT CONSIDERING THE EFFECTS OF GLOBAL WARMING ON OUR ENVIRONMENT!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I toally agree with the above. We can have no drilling, mining, wild 4 wheeling, regular people pollution and corporation pollution to the waterways - need strictly enforced rules. Another consideration is where to 4 wheel & snow mobile. Some people 4 wheel/snowmobile in a responsible way to travel one state to another (in Canada) to enjoy the outdoors..In USA we have no maintained cross country trail with police maintaining law & order. This is needed. Then we have the extreme wreckless people who have no regard to maintain the environment or protect the animals. They need a contained policed area like race tracks have so they cannot tear up the environment. 4 wheeling should be only in designated areas on well kept policed areas. The 4 wheel/snow mobile people should pay for the upkeep of the trails, if you 4 wheel/snowmobile you must be licensed & in good standing with a club who is approved by the environmental agency. People should be licensed thru an environmental agency & be in good standing - & take classes first as in Md. requiring hunters to take classes prior to being licensed to hunt. No Grandfather clauses - even farmres & their kids should go to classes & then licened.. Thank you

Hardwood forests in Virginia are being devistated in order to make more acreage available to Christmas tree growers. I would advocate the aluminum tree as tacky as it is!

Preservation of outdoor space is esstial to the mental health of all residents, especially children. That the furniture of the mind of children should be predominately paved over space is the condition for mass neurosis.

When Adam was created, God surrounded him with animals and call it "very good". If God brings our pets back to life, it wouldn't surprise me. It would be just like Him. It would be totally in keeping with His generous character. The planet, space, stars everything is his (GOD). Be careful what you do to GOD'S creation for he is always watching. And if you want him to remember you care for his animals. And if you believe in god or you do not you have to believe it's simple, you have to eat, drink, sleep, breath these are his rules and we all have to live by them. REMEMBER SOONER OR LATER WE ALL WILL DIE, SO WHAT WE DO, WILL ALWAYS BE REMEMBERED BY HOW WE ACT IN GOD'S WORLD.

Just one more thing. I am sending this with the very faint and fading hope that President Obama will prove us wrong, and begin to come through for those who elected him. It is hard to believe that he has lost the faith of the people who campaigned for him so hard. I never would have believed that he could lose all us faithful and hopeful folks within the first couple years of his service. I promised myself that I would give him two years before i judged him as harshly as nearly all of my friends have. But it is getting harder and harder. why doesn't he wrap himself in the flag and demand that the banks do their patriotic duty and loan money? does he not want a second term? Please, please, we are begging you to NOT let this historic opportunity pass by without fighting for us. He should demand that the business owners put their fear aside and do their patriotic duty and hire workers - take the risk for the good of our country. I seems that he does not even want to try. why didn't his wife and family vacation in the Gulf of Mexico - to send a message? why all the opportunities lost. we are crying. We are hurting. We need him to stand up and champion liberal values. Now!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I also want no roads, no ATVs, no snowmobiles and no cattle.

I saw gasland the documentary this must stop asap.....please for the children and grandchildren stop the Cheney Haliburton way of destroying this country. The Gulf is not clean nor will it be clean for decades.....please tell the truth. The American People want the truth not corporate liars running our country for greed .....they can't eat money.

Please remember that if we do not make protecting our wild lands a priority, they will continue to deteriorate, and we will lose more and more species and ecosystems that we depend on in both known and unforeseen ways.

It's time to realize that all living things are connected by our need for clean air and water, and space to live.

For a while it looked as if the immigrants of america had lost their mind when they went on with the brutal killing of wolves. How low that was. How ignorant. The judge in Idaho gave the immigrants their senses back. From now on no more killing on wolves for the sadistics I hope some ruling in the near future will the immigrant give there senses back for buffalo too.

Too many species are going extinct on this planet. Before long, humans will be the only ones left. How boring will that be not to mention unhealthy for all of us.

Dear Mr.President, The Great Outdoors, Wild Life, Great Water Ways, Lakes and Streams, Purple Mountains Majesty, these are the amazing things God gave us to visit and be awed by. I want my son to be able to enjoy these things as a youngster and be able to teach his children some day the importance of these great and amazing things ! Human greed has slowly put these great things in critical circumstances and I think that is so sad. It makes me tear now as I am typing this ! My Grandma was my girl scout leader when I was young and taught the importance of Nature and animals and to RESPECT them ! Camping, Nature, those are things that help to keep sanity in crazy times! They say City Livers get depressed being around concrete, and skyscrapers ! They say everyone needs nature in their lives or you could seriously go crazy ! We need nature and wildlife and so do future generations ! Sir, PLEASE Do everything in your heart and soul to keep these great things of Nature and Wildlife not only safe but growing and thriving and increasing in sustainability ! Please ! It is so important, without nature I know I would go crazy and be very depressed and so sad that future generations would not know what a forest or animals were ! God Bless America !

New and growing threats overdevelopment pollution and a changing climate demand a smarter sciencebased approach to protecting wild areas wildlife rivers and lakes and cultural and historic sites that connect us to nature to each other and to our shared past. Each generation has the opportunity the responsibility to protect our natural heritage for the next generation. Thank you for all you do for America's wilderness and public lands!

## Discussion Question 2

### *Written & Online Comments*

*(cont.)*

We can not take our outdoor spaces for granted. I live in the Adirondack Park. It is a state park with beautiful mountains lakes rivers ponds and vast acres of forests filled with wildlife. The United States has so much of these wonders with the US Govt.as care takers. These wonders have been around for thousands maybe millions of years. These lands need to be available for generations to come. Miningthe lumbering of forests the needless killing of wildlife such as the wild horse wolves and the American Bison need to be better controlled or even stopped. The govt. needs to explore/fund alternative fuel sources. The BP oil " spill " in the Gulf of Mexico is proof of this yet more plans for offshore drilling and drilling in the Arctic on on the table. Mining for coal and other minerals are destroying rivers mountains and families loose loved ones because of the deaths incurred while mining.

This is so very important for all of us now. Even though some may not acknowledge the fact. And more so for the future. It would be horrible if one day soon it was all gone for ever.

Indiana is blessed with natural areas and a balanced budget though it's timing and method is questionable (selling tollroad). In saying so than why is the Huntington Indiana mountain bike trail of 12 miles and perhaps even the campground will be closed but hunting will be continued?

I have seen tiny parks created out of small spaces on Long Island when I lived there. It was amazing how many people used those tiny spaces all of the time. People NEED to be connected to the outdoors and nature for their physical and emotional well being. This is a perfect time to maintain create and expand the parks systems; as President Roosevelt did creating JOBS that are much needed for many in this country.

SINCE YOU BECAME PRESIDENT MORE WOLVES HAVE BEEN KILLED THEN IN THE ENTIRE 8 YEARS OF BUSH !Yes the states are allowing this but you can take action to put an end to this. And you can easily stop all killing of wolves on all types of federal land period. Also your Sec. of the Interior is destroying the wild horse herds of America. RESTORE PROTECTION AND STOP ROUNDING UP THE WILD HORSES NOW. These are my top priorities plus the list below. Dare to be bold and make hope a reality instead of a hollow slogan.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Conservation needs to embrace a wide variety of areas including not only public lands far from civilization but near cities as well. It needs to include historic and prehistoric as well as "natural" resources. Within this realm wild horses need protection from the agencies charged to protect them the BLM the U.S. Forest Service and Fish and Wildlife etc. The National Academy of Sciences needs to be in the position to advise the Department of Interior as well as the Department of Agriculture in these matters. Unfortunately these departments seem to be only answerable to big business mega international corporations. Family farmers and ranchers are losing their way of life because of this abuse. Americans in general are losing their national heritage. Navajos have radioactive dust in their homes. Condors are being poisoned by lead bullets in the dead animals they feed upon. The Sheldon Antelope Range in northwestern Nevada is planning to remove all wild horses from its boundaries when these animals have been present in that landscape for hundreds of years. against the ravages of human beings both in terms of largescale removal of precious minerals by foreign interests that do little for the people of the United States. To be sure mining has its place but not at the wanton destruction of nature. ATV's should be licensed and riders found creating their own new pathways heavily fined. Wild horses should be considered native wildlife. As someone who watches them constantly I can tell you that they take the path of least resistance when they are seriously on the move they use human's dirt roads. The High Rock Canyon wilderness in northern Nevada is about to be destroyed by the Ruby Pipeline project one that should have avoided wild areas and followed for a bit more money pathways already blazed for such purposes. The Bureau of Land Management is ignoring the greater needs of the American People for the needs of a few. We don't want small islands of wilderness protected for future Americans we want to retain the larger areas we have now! but not by attempting to remove invasive species through poisoning. We do have serious problems with introduced species but attempts in the past has proved futile and only further damages the environment. The Yellowstone project of reintroducing wolves is an excellent example of how to improve wildlife habitat including waterways. Another way is to expand the use of highway overcrossings and undercrossings for wildlife to do away with the island effect for both plant and animal species. Unfortunately my state has done very little in this regard but continuing to make funding available through the Department of Transportation is starting to have an effect. One way to connect people to nature is through more transparency. The Bureau of Land Management is playing a shell game trying to prevent the American People from accessing their activities with both wild horses and family ranchers. I am involved with a wild horse ecotourism project that is doing a great deal to even local people. And yet at the same time the BLM and others Please but provide oversight using the National Academy of Sciences.

We should leave our children something on this Earth besides deadly polluted wastelands. Corporate America doesn't care if humanity joins the ongoing Great Extinction this year or next but I think putative future generations should have some say in this matter. Makes sense doesn't it?

Limit exploitative utilization of National Forests such as harvesting and mining EXPAND and areas Establish NO BUILD NO DEVELOPMENT guidelines for more government lands

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I am an 80 year old Episcopal priest and monk still able to get around and enjoy the environment that God has given us. In the years before WW II My family was able to spend the whole summer early June until Labor Day weekend at a family cabin at Priest Lake Idaho. Gasoline rationing limited the amount of time we could be there during the war years but afterwards we could resume spending periods of time in the beautiful Selkirk Mountains. Presently I live in Massachusetts where from time to time I can visit some of the natural wonders of this part of America. Even when I cannot so easily get to our National Parks and other wonders of nature but I can enjoy seeing pictures of them. But I realize that many of our wilderness regions are being threatened by the inroads of commercialism and industry.

It is extremely critical that every decision made considers the effects on the sustainability of humans on earth. This means our priorities must change from economic growth and a society based on violent competitive and forceful control of resources (war) to economic sustainability with controlled population environmental protections and minimal impact on our natural resources (peace).

Please conserve large landscapes that include our most pristine wildlands working forest and ranch lands private lands and the connections across these large areas. Large natural areas provide our best hope for addressing loss of species and open space preserving water quality and adapting to climate change while preserving the wildlife and lands we enjoy today. Wildlands represent some of our healthiest and most intact lands. Please use all tools available to protect our public lands including recommending new wilderness and national parks designating national monuments and expanding National Wildlife Refuges. Restoring our public lands helps protect clean water supplies and adapt to the effects of climate change. Please prioritize collaborative restoration projects on public lands making restoration a national priority. By restoring our forests we can spur economic growth by providing needed jobs and improve recreation opportunities. Please create new national programs that help connect people especially our youth with nature. Today youth especially people of color are underrepresented on our public lands and it is important that new policies and programs are developed to encourage more youth participation including nature education or recreation programs and a revived civilian conservation corps. No matter where they live all children deserve the opportunity to learn about and experience the wildlands that belong to all Americans. Recreation is a great way for people to experience nature and help develop a strong conservation ethic. Please ensure access is increased for all Americans. Please support fully funding the Land and Water Conservation Fund and other programs that foster conservation on private lands. These efforts would help keep wildlife habitat intact and connect wild areas protect lands around lakes rivers and streams. The fund can also be used to establish new local parks and trails or provide key wildlife linkage areas.

Please bring An end to efforts to Wipe out the wolves by so called government agencies who are striving to drive them to extinction.

We must protect the public lands that exist now and create more of these special places east of the Mississippi River for citizens residing there to visit and enjoy.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

If we can't do this nothing else we do will matter. If wilderness can't thrive under the conditions we have created neither can we.

It is important to preserve these places for future generations!

Outsourcing singlehandedly degrades the care and the land: Turning over the management of national lands to private companies has radically changed the priorities for those lands. The result is damage and lack of upkeep. From protecting and enhancing to profit and loss this simple change has brought a profound disrepair. This single practice has been responsible for degradation of property and slow but steady limiting access though fee increases and elimination of discounts for the elderly and disabled. Disrepair and slovenly care is evident in privately managed parks. The companies hire people who are underpaid and whose goal of free rent and small amount of work is in direct opposition of any ideals to protect and enhance places for which they are responsible. Care and conscientious administration and funding is the basic responsibility with which our government is charged. Commercialization of the management of our parks and forests has nothing to do with preserving these areas for the American people. Further I would urge full funding for repairs upkeep and to make these areas available to the public instead of threatening to close because of lack of funds. Our public lands are being trashed through persistent underfunding and commercialization. One other point I recently revisited Emerald Bay California State Park Cascade Falls in Lake Tahoe California. I was saddened by the devastation from tree removal supposedly in the name of safety. The area has been denuded and looks urban. One of the most beautiful places on earth and ruined by thoughtless tree cutting. Further the so often noise of large maintenance vehicles loud saws and other (cleaning clearing) machinery was like a construction zone instead of a natural area. I realize this is a State park and not national but funding comes also from Federal sources for State lands and continued Federal cutbacks affect State funding.

There are already too many people. Let's save all the wilderness and wildlife we can and concentrate on curbing the human species.

PS Wilderness and time spent in the natural world has been the cornerstone of my adult life. It brings me joy shared friendship inspiration and peace of mind. It is in my humble opinion a necessary antidote to the stress of the modern world and a source of creativity and dreams. Please all that you can to protect our existing wild places plants and animals and oceans. Our future on Earth depends on it. Also more to encourage the younger generation especially the minority ethnic groups is needed. Without there love of the natural world they will not care to preserve it.

Try and do the right thing. So many of us are very disappointed in what has happened the last two years.

## Discussion Question 2

### *Written & Online Comments*

*(cont.)*

I have just returned from Glacier National Park. These precious areas need protection and improvement of habitat water and conservation education and implementation as a priority if they are to continue.

There is no room for compromise Mr. President. Talk of compromising on how much to preserve of the remaining five percent of old growth forests for instance is ludicrous. We want ALL of our remaining natural places preserved; no dispensation may be made for ANY extractive industry. None!

Provide Increased OHV Access and Recreational Opportunities

I'm a physician living in the nearwilderness of Michigan's Upper Peninsula. Even here the forest is regularly threatened by motor vehicle enthusiasts who "need" trails every mile. Industrialists who believe forest is only beautiful when being clearcut and stripmined and right wingers on a jihad to end the concept of public property. Starting in our schools. Stop increasing the cost of access to public lands with endless "user fees"

As I am sure you will agree it is critically important to preserve the places we enjoy now for future generations. Overdevelopment has caused numerous issues (loss of natural habitat wildlife losing homes flooding etc.) and now is the time to stop it.

Please take every step needed to conserve and preserve these natural habitats and the creatures that live within them. Among other problems involved in reducing these areas as we reduce the natural habitats animals have nowhere to go . . . except to populated areas. The earth's future and that of our children and their children rest(s) on your decisions and actions today. Please keep nature natural?

Your children's generation will want to enjoy America's great outdoors. Corporations are shortsighted and their concern is what is in their best financial interests.

The people of the United States deserve their wilderness and it is your responsibility to insure that they have it at a reasonable cost. Hopefully you will listen to the people on this issue better than you have on others. Disappointed for the first time in the President.

As each area of the great outdoors is destroyed by building homes taking away the natural ecology of these places for animals trees plants and water we destroy our planet more and more and thus deprive man of the wonders of our earth.

Its also a PROVEN FACT that when we destroyed our wetlands we screwed up the environment making hurricanes more destructive. We have got to return the wetlands to nature and protect and make more parks and natural reserves Our country is TOO MONEY ORIENTED AND ARE KILLING THE POOR PEOPLE!!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Conservation means more than wetlands and virginal lands that have not been touched. It also means the beauty we have around us. I live in Kansas a state that is considered a wasteland. Far from that however it's beauty is within the peaceful rolling hills once farmland now becoming malls apartment complexes and housing developments while inner city buildings rot. We need to stop this waste. Money needs to go to rebuilding sites and not always into the creation of new sites that take away precious habitat from the states natural wildlife. For a state like ours this is probably most important. Our rains are feast or famine. It's little known but Kansas is one of the great migratory paths of birds. In fact there are two paths. One for Eastern birds and one for western birds. Birdwatching is a great hobby for many who live in this state. Only recently have we begun to look at this as a natural resource. This needs to be preserved in view of how energy plans for the country are developed. I do want to thank you for your leadership in shaping a bold conservation strategy It's great to finally have someone who seems to get it.

The great outdoors is only one part of our rich history. It pains me to see it getting less and less. If we were meant to live in cold steel cities that would have been here before the great outdoors.

I have a 15 month old greatnephew who lives in New York City. I want him to be able to enjoy America's great outdoors as I do.

FULLY FUND the US Forest Service and National Parks Service to maintain road maintenance control burns proper wildlife management (relocation and restoration not unnecessary harrasment/slaughter of bison wolves mustangs etc.) Restrict corporate use of public lands to environmentally safe usages only; grazing is okay OVERgrazing and grazing in areas supporting endangered species is not okay; strip mining oil drilling oil shale (not even worth the effort) and oil pipelines through environmentally critical areas should not even be considered!!

America is a beautiful country. Teddy Roosevelt preserved much of that beauty for all generations Americans to come. But in this current climate of exploitation for profit it has become a struggle to ensure these precious areas will continue to exist. Big money big industry bid energy would gobble up every last acre if they could and are succeeding far too well at present.

The Adirondack Park adjacent to my home serves as a wonderful template for preserving wilderness and a range of buffer areas. Come visit and enjoy what every American should know as their heritage. Watch the Ken Burns series on our National Parks then visit a wilderness area within one and understand the treasure that is America. Please please protect our natural environments our watersheds our clean air our biodiversity. Once tamed our wilderness is lost forever. Protect it from the pressures of industry and housing.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

dear mr president as an old woman retired after 50 years as a fulltime lawyer i wish you to know and understand that the natural resources and wildlife are every bit as important as present day jobs or economy. if we kill them off there will be no future for the next generations. expediency must never take priority over ethics and the long haul. thank you

Yes it blows my mind that we have to keep requesting this great open park system. For heavens' sake what is wanted more unsold housing or more oil wells or more shopping malls. Do we have to keep insisting that money isn't everything? One would suppose those super religious types might have a glimmer! Carry on let's do it right this century. And thanks for listening. CW

Varied development is threatening our wild lands all over the country. We need to continue to protect our wild places for people and wildlife.

This is about species survival our species. If we don't protect the environment habitat critical to the survival of innumerable plant and animal species will disappear. If enough of these species go extinct eventually so will we.

I have three children and someday they will have grandchildren. I've raised them all to enjoy and cherish the natural world and we have spend many happy times hiking and camping. I think that preservation of our wilderness is not just a good idea. It is also vital to ensuring that our future citizens are aware of and can engage with the natural world. Our protection today is for their sakes.

As our population grows and our cities expand the United States is rapidly losing its beautiful unspoiled wilderness. We need to protect these lands so as to ensure that generations to come can enjoy America's great outdoors too. Please work hard to include these priorities in all major legislative and administrative budget programs. Thank you.

Please make wilderness new parks and monuments and restoration of wetlands and wildlife habitat the cornerstone of America's Great Outdoors. New and growing threats of overdevelopment pollution and a changing climate demand a smarter sciencebased approach to protecting wild areas wildlife rivers and lakes and cultural and historic sites that connect us to nature to each other and to our shared past.

Here in western Washington State Mason County especially we need more public access parks on the waterfront. We are surrounded by water. South Puget Sound and Hood Canal have a few limited access parks. But there are several lakes rivers and many smaller creeks with very little or no public access at all. On a hot day it is so frustrating to be surrounded by all this beauty and not be able to enjoy the cool water unless you are rich and OWN the access.

The Special Interests have been having their way for decades now which has brought incredible pressure upon the natural resources open spaces and natural living creatures of this land. It's time for the Pendulum to swing in the other direction! Teddy Roosevelt one of our greatest Presidents knew and understood this. It's time to fight back in the spirit of TR once again. It's time to say NO to the special interests for the sake of our children if nothing else.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I live in Pennsylvania's Appalachia Area. The land is beautiful but slowly being taken over for "economic" reasons. Tourism is really our industry and without our beautiful land we wouldn't have people coming here! Not only that we will have harmed the land for years to come. Once ruined you can't bring it back.

Once these places are gone they will be gone forever.

"You can never be too careful" when it comes to taking care of our planet since all life forms depend upon it. We need to practice good stewardship. Never being too careful it is better to err on the side of caution and protecting our environment. It is spiritually bankrupt to depend on fossil fuels especially oil. The lust for oil has caused more harm than good wasted more resources and human life and we should invest more in alternative energy. I can't vote for any politician that doesn't share these views.

Protect our current wilderness areas but also reinstate the government's ability to declare new areas as wilderness areas without building new roads or fullservice camping which harms the wilderness areas we are trying to protect

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I add here the text of other comments I have submitted but have so far received no acknowledgment. My comments are based on my professional knowledge training and experience that spans over four decades. I have a Ph.D. in chemistry that allowed me to pursue 30 years of biomedical research drug discovery and medicinal chemistry at the National Institutes of Health in Bethesda where I ended my time as a section chief in 1999. I then became Professor and Chair of Chemistry at Northern Arizona University in Flagstaff where I served for eight years. During that time I was also appointed a Full Investigator at the University of Arizona Cancer Center and also appointed as Professor of Medicine at the University of Arizona Medical School. I have published over 200 scientific papers edited four books on drug discovery and medicine been granted several patents and was the cofounding scientist of a startup company. My concern expressed here is about the dependence of the drug discovery process on products of the natural world. Fully half of the medicines in use today arose from plant microorganism or animals. In the case of anticancer therapeutics that number approaches 70% or more. The 1990's saw big pharma turn away from natural product drug discovery efforts in favor of what appeared to be less expensive more productive means of discovery. The tough lesson learned is that our science is not advanced enough for that and a path is being beaten back to the natural world as a source of novel medicines as well as clues on what artificial molecules could be of medical use. While the challenges poised by common infectious diseases metabolic and genetic diseases and cancer are mind numbing we must also bear in mind the growing threat of emerging infectious diseases bacterial resistance to antibiotics and bioterrorism. We will never run out of the need for novel medicinals. However even though we are faced with medical problems as great as any in history we willnilly continue to impoverish the natural cornucopia that has given the best medicine in history. I refer here to the present humaninduced extinction crisis. I hope you have had time to read the writing of Harvard biologist E. O. Wilson as well as such preeminent authorities as Stuart Pimm Michael Soulé John Terborgh to name a few. I trust you are familiar with the findings of the International Union for the Conservation of Nature (IUCN) and related scientific organizations. The message from all these sources is the same. We are destroying the fabric of life on this planet. Humans are causing extinctions at a rate approaching that at the end of the age of dinosaurs (Cretaceous) the one initiated by a massive asteroid impact. And perhaps we are going to compete with the one at the end of the Permian (250 million yrs ago) when life itself nearly disappeared from Earth. We also KNOW that at least 20% of mammals 30% of amphibians and 12% of birds 30% of flowering plants 20% of reptiles 40% of freshwater fishes and 70% of freshwater mussels and 20% of ferns currently are threatened with extinction. And that's just a few examples. The scientific fact is that humans use over 40% of the primary productivity of this planet! That is 40% of the products of photosynthesis every year go to human use directly or indirectly. We are only one species out of millions and we depend on all the others for our food clean water clean air pollination medicines wood and fiber recreation and many more services. I argue here from just the single perspective of a biomedical scientist. As we willnilly extinguish species we also willnilly destroy the future of a host of medicines for the American people and indeed the people of this Earth. Imagine the repercussions if someone had caused the extinction of the Pacific Yew tree before we discovered Taxol which has given breast and ovarian cancer patients hope. Or what if the

## Discussion Question 2

**(cont.)**

Rosy Periwinkle of Madagascar had been doomed to extinction before we discovered the anticancer drugs contained therein. Vinblastine and vincristine have totally revolutionized the treatment of childhood cancer turning a nearly certain death sentence into a almost certain survival to lead a full productive life. Even the lowly and ancient horseshoe crab contributes mightily to our nation's health by making possible the detection of highly toxic bacterial toxins in medicines made for injection. Presently the greatest threat to species loss is the appropriation of habitat by humans. The most effective way to counter this is through habitat preservation and more specifically through the setting aside of large tracts of wildlands places where the forces of nature are dominant and humans have but a minor influence. I subscribe to a definition put forth some time ago: "[wilderness] is the ultimate source of health terrestrial and human." That encompasses all the values encapsulated by the Wilderness Act in a short simple phrase. It recognizes that for wilderness to remain "untrammelled" it must also serve as a Noah's Ark in an age when least 20% of mammals 30% of amphibians and 12% of birds 30% of flowering plants 20% of reptiles 40% of freshwater fishes and 70% of freshwater mussels and 20% of ferns and many more are threatened with extinction. Fortunately we have a mechanism for accomplishing this aim: the National Wilderness Preservation System. However just over 2.5% on the lands in the lower 48 states is protected as wilderness. Much more is of wilderness quality. Your administration needs to work diligently with Congress to place many more lands under Wilderness status. Such designation is also of benefit to humans in terms of nonmotorized recreation watershed protection wildlife fisheries carbon sequestration and rural economies. I suggest that your Presidential Legacy should involve the designation of at least 50000000 new acres of wilderness. And baring the ability of Congress to act quickly enough you should reach into your administrative toolkit to protect these lands by regulations and Executive Orders (e.g. National Monuments). Mr. President conservation biologists will tell you that in order to ensure species longterm survival these wilderness "cores" must be connected by means of wildlife corridors. You should order that Federal Agencies adopt policies to establish such corridors immediately and then your administration should work to have these embodied as the law of the land. Furthermore since many of our key core wilderness areas are beset with potential destructive private "inholdings" you should seek funding to buy out as many of these as possible. This does not have to add to the administrative burden of your Presidency. There already exists a very effective nonprofit The Wilderness Land Trust ([www.wildernesslandtrust.org](http://www.wildernesslandtrust.org)) that pursues this goal. They just need some additional funding to make it happen. In the interest of full disclosure I proudly serve on the Board of Directors of that organization. And I must make a special plea for my home region of Southwest Oregon called KlamathSiskiyou Bioregion. It is in the northernmost part of the California Floristic Province one of the Earth's 25 Biodiversity "Hotspots." These "hotspots" are biogeographic regions with a significant reservoir of biological diversity that are under intense threat from humans. Together they contain about 60% of the Earth's known species. The California Floristic Province is a zone of Mediterraneantype climate and with high levels of plant endemism characteristic of such regions. The KlamathSiskiyou region bridges the coastal mountain ranges of California and Oregon and is home to the most diverse temperate coniferous tree community in the world. Here in the KlamathSiskiyou Ecoregion we are blessed since almost 63% of the landbase is in federal ownership thereby providing a huge

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

opportunity for forward thinking biodiversity preservation actions. This ecoregion has been regarded as an area of global botanical significance by the World Conservation Union (IUCN 1992) a proposed "World Heritage Site" and UNESCO "Biosphere Reserve" a global "center of plant diversity" and a "Global 200" ecoregion by the World Wildlife Fund. The area is however being severely threatened and degraded by both federal and private actions. 1. There exist here low levels of protection (12%) compared to other temperate conifer ecoregions in the United States. 2. Extensive habitat fragmentation is common with more than 30000 miles of roads in the ecoregion. Moreover intensive logging has replaced biodiversityrich oldgrowth forests with sterile tree plantations at a rate of about 50000 acres per year since the 1970s. 3. There are 154 terrestrial species here with state or federal conservation status. This is largely a result of habitat fragmentation and degradation. 4. There have been five extirpations: grizzly bear (*Ursus arctos*) gray wolf (*Canis lupus*) pronghorn (*Antilocapra americana*) California condor (*Gymnogyps californianus*) and big horn sheep (*Ovis canadensis*). 5. Over half of the ecoregion's 877 watersheds show extensive degradation and are in rapid decline. This is caused by road building logging barriers to fish passage livestock grazing fire suppression overallocation of instream flows and water quality problems contribute to poor watershed health 6. Exotic species here are akin to a "biological wildfire. Most notably the endemic Port Orford cedar (*Chamaecyparis lawsoniana*) has been devastated by an exotic rootrot fungus (*Phytophthora lateralis*) that is threatening the functional role of this cedar as a keystone species of riparian areas. 7. Finally there is a decline of endemics and globally imperiled communities. Once these species are gone or once they reach a "living dead" population level and once these ecosystem begin to unwind we will lose more than the imagination could ever fathom. Not only will miracles like Taxol disappear but an all but invisible vital support and subsidy source will greatly decrease the economic and wellbeing status of every American. This is a national security issue of paramount importance to address. Fortunately we have many of the tools already at hand to rescue much of this biological and ecological wonder that supports us as humans. I refer to the Antiquities Act and the Wilderness Act. One of the priorities in my specific region would include the designation of a million acre Siskiyou Crest National Monument. With a single designation you could protect the wondrous biodiversity of this key biogeographic region provide a destination for recreationists of many kinds stimulate local economies and provide a biological corridor for genetic flow and climate change adaptation. A second priority encompasses what we here call the Siskiyou Wild Rivers National Salmon and Botanical Area. This would establish robust cohesive protections for the forests and watersheds of five Wild & Scenic Rivers on public lands. To conserve them commercial logging mining and offroad vehicle use will be restricted. Roadless areas will be protected as Wilderness and nine candidate rivers will be given Wild & Scenic River status. A key piece of this would be protection of southwest Oregon's Rogue River and the neighboring forests. You must nudge Congress in the right direction here for the benefit of America. Enormous opportunities await you administration if you are willing to chart a robust and healthy future for natural world which framed America and led her to be the envy of the world. For us for our children and onto the Seventh Generation I implore you to act on behalf of all the species of this beautiful Earth. We here who care about the future stand ready to inform your administration about the needs of people and nature in our ecoregion.

## Discussion Question 2

### **Written & Online Comments**

**(cont.)**

Give us a chance. Thank you for the opportunity to comment on your American Great Outdoors Initiative.

I voted for our current president because of the lack of accountability of government. I WANT REAL CHANGE. I expect government agencies to act in the best interests of the majority of Americans middle class working citizens. Preserving our wilderness areas/wildlife habitat IS DEFINITELY in the best interests of we the people. It's our heritage. It belongs to the citizens of the United States. It's not to be bought and sold for the profitability of a few select individuals. I abhor the role government agencies have taken in poisoning/decimating wildlife for the benefit of cattlemen and Big Agra (or Big Oil or Big Lumber or Mining). You know what I'm talking about. I detest my tax dollars being spent by government agencies that DO NOT REPRESENT ME MY WILL MY IDEALS MY MORALS OR MY BEST INTERESTS! Cyanide and Compound 1080 and M44s and aerial gunning and leg traps and bullets.....Attitudes trickle down from the top. That's why so many people will NEVER forgive the Bush administration for the damage done to our environment our economy and our integrity as a nation. Get the corporate mindset out of Washington DC NOW! Get rid of the lobbyists! When is it going to change? Why can't the "Environmental Protection Agency" protect anything but corporate profits???? There's some real sarcasm in the name of that agency. We the people have lost all patience. Government by corporations has literally brought this country to its knees anyone can see that. I know the propaganda put out in the mainstream media hoping to keep Americans from focusing on the REAL issues. There's no accountability in media either and there should be. We as a nation can be no better than the worst among us and their worst actions. We must lead by example NO MORE PREEMPTIVE STRIKES! No more war! Protect our environment! Give real government incentives for clean renewable energy technology! Promote TRUE organic farming promote cruelty free natural sustainable farming methods and FAMILY FARMS. SMALL LOCAL FARMS. No instead our government continues to go in the WRONG direction. Promote truthful reporting in the media and punish spin and propaganda. Get Big Chemical Big Pharma Big Agra Big Media Big Defense Big Oil and all the rest of these corporate profit mongers out of the governing equation. As a nation we are on the edge of a precipice. We have run out of time. We cannot be a world power without the ideals of a world power. We must recover them now or forever hold a lower rank!

Besides it will simultaneously create and sustain JOBS!

The beauty of our country is disappearing "progress" has long since become regression as speculative building commercial development pollution etc. eat away at the heart of this land. Without immediate decisive action we will wake up one day in just a few years to discover a concrete country paved and fenced off from sea to shining sea. That's why I am asking you to seize this opportunity to create expand and better protect America's shared outdoor spaces including wilderness monuments wildlife refuges parks forests trails wild

Connect people but NOT ATV's with Nature

## Discussion Question 2

### *Written & Online Comments*

*(cont.)*

As a person who likes to vacation on MARTHA'S VINEYARD.....I think you have begun to see more of the value of conserving our Natural Environment. Nature is God's Gift to Humans helping us to continue having healthy mental conditions. Nature is also a gift to all other animals.....not only for their mental conditions.....but also for food. Without enough protection of our lands as well as our oceans we lose food and habitats not to mention oxygen and a calming environment. Please help us on Cape Cod and the Islands to protect our Lands.....our Ocean and our Sounds (both Vineyard Sound and Nantucket Sound) and our Bays too.....from overdevelopment. We may all suffer for it in the future. There are more wide open ocean spaces that will be of less risk to human life. The Wind Farm in Nantucket Sound may prove to be destructive to that tiny section of water.....and perhaps to all the human life in that area. We have many small aircraft ferries full of people and small recreational boats all over the Sounds. A few years ago I remember reading that an SSA ferry from Woods Hole to MV broke down in Vineyard Sound. It floated at the whim of the winds until rescued.....as any boat that has lost power will do. Imagine that happening in Nantucket Sound.....after the building of 130 wind turbines. Will Coast Guard helicopters be able to get between all the turbines to save human lives??? Will any rescue vehicles be safe from so many huge towers.....in high winds??? (We have high winds with some regularity way out here in the North Atlantic Ocean as we are.) Imagine a nor'easter coming through with 5570 mph winds or higher.....at the same time as an engine break down. Remember the deaths that occurred in NYC about 5 or so years ago when a ferry bumped into the wharf while docking? Quite a few lives were lost. I don't know what that dock was made of.....but turbine bases are cement !!! It can't be good to bump into one of those !!!! I do not mean to be selfish or dramatic about this.....as though we are the only people with these gifts. However we have such a tiny amount of land and water I am truly trying to have people in positions to help understand that we are being squeezed out. Most other states in America have much more in resources than we do.....(except maybe Hawaii.....as you well know !!!.....but even HI does have more land and ocean than we do). I hope you will understand what the Kennedy Family truly understood.....and took steps to protect. Our little bit of the world needs help to save it from a construction and destruction the might ruin us in less than 100 years. PS: I was on MV last Saturday. I didn't "get to see you and your family" on our rounds !!!! {;) I hope Sasha and Malia have had a chance to have a ride past the Bus Stand in Edgartown. There is a great sign there.....addressed to them.....painted by the "Y" kids. I think they should be able to take it home with them. There is probably a nice place on their playground.....or in a playroom.....or somewhere.....where they could put it !!! (They might have fun showing it to their children when they are grown !!!! A Great fun memory !!!!) I was a teacher for almost 40 years.....I trained on the Big Island for Peace Corps (1969).....then I began a Head Start (type) PreSchool in the Fiji Islands. After teaching outside of MA for so many years I am happily back home on the Cape.....and I hope to see it remain the beautiful place it has always been. Please help !!!!! THANK YOU for all you have done since 2008 Election and your Inauguration in January 2009.....to straighten out so many issues and problems. I am quite aware of all the successes in just 2 years. Hope to see you and the family vacation on the Cape sometimes too !!!!!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

We are at the end of a road wrought by more than a century of the most intensive human intrusion into nearly every corner of the Earth. Many ecosystems have been almost entirely destroyed while others have been lost forever. For those nearing that point there is still time as long as our actions are swift committed and meaningful.

Our survival depends on a healthy ecosystem....clean water clean air biodiversity.....the outdoors is so much more than a great place to play!

Thank you for your leadership in attempting to restore sound conservation and environmental policies to our country. Much remains to be done. Specifically it is absolutely vital to make preservation of wilderness establishment of new parks and monuments and restoration of wetlands and wildlife habitat the cornerstone of America's Great Outdoors. New and growing threats specifically overdevelopment pollution and a changing climate demand a focused approach to preserving and protecting the wild areas wildlife rivers and lakes and cultural and historic sites that connect us to nature to each other and to our shared history. I beg you to make these your highest conservation priorities.

I remember the heartbreak I felt when Bush's regime violated much of our public lands and placed immediate profit over longterm social enjoyment of the lands we have for the public. I would like to tell my children that all the lands that have been disregarded and ravaged in the past eight years are now brought back under government protection so that their children and generations to come can enjoy the experience of being in the woods the desert or the mountains and connect with nature once again on the most basic immediate level. Everyone should have that opportunity. Please protect our nations parks and fund the ability to conserve more for generations to come.

I believe that we are not only responsible for ourselves but also responsible for future generations. They are dwindling so rapidly it is heartbreaking. The very things that give America its unique character among nations is being lost.

The nation must preserve its natural environment and serve the sacred trust inherited from previous generations. protect air & water quality everywhere Improve Watersheds and protect Wildlife Habitat Build renewable power generation plants and retire fossil fuel power plants convert all existing coal plants to clean coal plants with carbon sequestration and construct energy storage systems to give the electrical power distribution system a backbone that empowers distributed power generation on a robust scale.

I want the next generation to enjoy America's great outdoors too and you as the leader of our country have the power to make certain that happens. Here in California for example development and conservation are in constant contest against one another. With your help work toward restoring the Eastern Sierras' Mono Lake toward historical water levels and preventing development around can continue. Outdoors. The America we love cannot survive without them:

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I know you get pressure from every side & it's impossible to please 'em all. Thanks for all the good you do!!

Don't cave to corporate pressure to extract more natural resources from public lands. Expand conservation efforts.

In addition I want to preserve wild areas for native plants and animals. We need to protect and preserve these areas. Humans are not the only living being on this planet and it is time we started thinking about all living creatures. We need to stop building instead we should rebuild areas that are dilapidated. We need new cleaner sources of energy instead of depleting our earth of all its natural resources. I know it is expensive to make these changes but the our future the earth's future depends on it.

.I would like to make sure that our national parks are made accessible and affordable for visitation by low income inner city children and adults. Provide Increased Access and Recreational Opportunities

Living in Michigan near the recent 1000000gallon oil spill I'm acutely aware of the preciousness of our surroundings and all of its inhabitants.

I grew up visiting our national parks with my parents people of the "Greatest Generation." I want my grandchildren to have those same opportunities and more. Please take every action needed to protect and enhance the parks and monuments that preserve our heritage and culture. Also STOP the "let it burn" philosophy that became popular within the national forest service. Please don't let forest fires burn up Yellowstone or any other national treasure again in the name of misplaced trust in the "natural processes."

I understand that in this political climate that allocating money for these things may be challenging but timing is very important and we should make this time something that will be recognized as a point at which we really did something to make these opportunities for recreation and protection a reality.

This planet and especially the beautiful areas of it this continent need to be protected conserved and kept free from development. We have and continue to destroy so much of it...

Oil dependency pollution and urban sprawl have contributed to encroachment and resulting destruction of our wilderness areas not to mention funding cuts and the repealing of laws that once helped protect them. Once they're gone they're gone. Encourage the development of green energy sources

I grew up near the natural wonders of the Everglades. I worry now that my daughter might never experience the beauty of the Southern Florida wilderness let alone my grandchildren or greatgrandchildren.

## Discussion Question 2

### *Written & Online Comments*

*(cont.)*

One great concern of mine is the generation of electricity from solar power plants. Solar is just one of the components that will allow this country to lessen our dependence of fossil fuels. My concern is the solar power generating facilities that use water. Water is one of our countries most precious resources. Using our water resources in the generation of solar power will put extreme pressure on our water resources. Please do not allow Federal monies for this purpose. Droughts are still a reality in many parts of the country that have great potential for solar power. Lessening the threats to our wildlands is important. Conserving them is extremely important especially our water resources.

We must conserve and preserve our wilderness. There is so little left. Conservation of our publiclyowned open spaces is a winwin situation. All Americans benefit. The more we lose open space the more we allow industrial concerns to degrade our publiclyowned land the more we lose as a nation.

I want the next generation to enjoy America's great outdoors and not have to clean up after our mess. Increase funding to protect federally protected wildlife from overzealous state governments

If have been to many beautiful parks and wild life area around the country. It was very moving for me to get to see these places. I walked through many of them and I would be very disappointed to see there areas disappear. Just camping in local parks has been a great experience. Listening tp the wild life at night and see them at twilight. I am an early riser so I watch them throught the window of the trailer so I don't disturb them. Having people dig drill and build new homes in these places would be an injustice to future generations Please do everything in your power to stop the cruelty to our land.

I know these are tall issues to address (along with everything else that needs your attention) but our children are worth it and this beautiful spot on this beautiful planet is worth it.

The healthy natural presence of our wild places is the foundation on which the rest of life rests and thrives. We have no greater task before us than protecting it.

I want our future generations to enjoy America's great outdoors too. I raised my daughter from infancy to love and respect all that we call our great outdoors. As a result she is now working on her Masters degree in Outdoor Education so that all of the children's lives that she touches will have a greater appreciation for all that the "great outdoors" encompasses.

Without your leadership in shaping a bold conservation strategy for the 21st century our future generations will not have the opportunity to enjoy and appreciate what many currently take for granted. Thank you in advance for your decision to create a bold conservation strategy for the 21st century.

Perhaps one of the greatest mistakes of our time is putting biomass incinerators on the renewable energy list. The co2 and particulate pollution from incinerators are not acceptable.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Most of the great parks are overcrowded illustrating the need for nature in our lives to repair our souls in this hectic world. These places are sanctuaries that reflect the beauty of our planet and are irreplaceable in this rapidly expanding civilization. We simply need to do a better job of protecting them and creating more for future generations before it is too late. We don't need to mine every mineral log every forest and carve every access road in this brief generation.

The great outdoors is one of the only things we have left to exercise freedom in this great land. The fresh air the exploration a place for children to learn about the world and roam. I have a 2yearold boy and he's going to be out and exercising his mind and body instead of staying inside and playing video games...

for the 21st century even if the militaryindustrial complex is running our country at this time you can do something that will benefit your very own family particularly your two fine girls who deserve a fighting chance in our environment. I never could understand how the real rulers don't seem to care about their own families when it comes to the environment. Is the money and power that important when one jeopardizes their very own?! I realize the executive branch no longer leads the nation but the least you can do is make it as difficult as possible for those who do. Thanks very much for doing something to help the situation!!

And a resident of the Great Lakes region of the U.S. I feel the Great Lakes need special protection from oil drilling industrial pollution and sewage as the major source of fresh water for millions of citizens. and the Great Lakes

We can't afford to allow the erosion of pristine places to continue in the name of development or for profit. We must also protect these fragile habitats from the effects of global warming and our lack of stewardship. To protect other species from extinction is to protect ourselves as well.

If the next generations have only stories of what it "used to be" like to live in this country their emotional bodies will grow cold and die from lack of nourishment. Memories are nice but do not nourish. Maybe that is already taking effect as observed in the attitudes and opinions and careless "care less" attitudes of today's unhappy hate filled egotistical expressions of intolerance. Cement tall buildiings. fast food and unethical practices will produce exactly what it consumes. i hope it is not too late we live here taking for granted that Mother Nature won't crumble .....our memories are very short when it comes to disturbing something we are \$\$\$\$\$\$ to.

Experiencing Nature and protecting it is so important to all of us. Especially as our climate changes we need to take action now.

Preserve pristine nature and prevent contamination through genetically engineered species. Recognize that animals and nature should be treated as the valuable resources that they are Eliminate pesticides herbicides and fungicides

## Discussion Question 2

***(cont.)***

ensuring that ecosystems do not become fragmented "islands." Ensure that wildlife corridors are part of the park system. that are in keeping with the peaceful experience of the landscape that the great majority of park goers are seeking.

On a personal note if we do not take care to ensure the healthy conditions of beautiful planet Earth now we may not get another chance. The recent disastrous oil spill will take its toll on Earth and future generations for many years to come. If we don't reach out to preserve the wild and historical magnificence we have left in America it will slip uncontrollably out of our hands forever.

I think of Teddy Roosevelt often these days. When he was a kid he used to think the Great Seal of the United States was actually a seal one that ate fish. I wonder what he would think of his wild places today the ones he loved so much. Please do everything in your power to save and protect our remaining wilderness areas. It's so disturbing to see what we've done to our wild areas in my lifetime alone I hate to reflect on it. When I was a kid the rains resulted in an amazing explosion of frogs everywhere on a biblical scale. Big ones little ones smooth ones bumpy ones frogs the size of my pinkie nail hopping all over the place like crazy super balls dropped from the sky. It was a sight to behold. Wish my kids could see it but it's gone. Vanished. Just a memory in my mind's eye. Today frogs are disappearing faster than a popsicle in Palm Springs. I used to watch baby horny toads (what silly scientists call the Texas Horned Lizard) frolic by the hundreds at my bare feet; I'd scoop them up by the handful. Now they're endangered. I used to watch pronghorn antelope bound gracefully beside our family car on the freeway at 50 miles per hour now my kids think I'm making this up. The creek and wetlands where I caught pollywogs and powderblue damsel flies is now a cement drainage ditch. There's still a lot to save. But we must act now before it's all gone. I want my children to enjoy America's great outdoors too. Obama carpe diem! Hurry. Seize this moment to create to expand to better protect America's shared outdoor spaces. Wilderness whispers words of wisdom: let it be. Monuments wildlife refuges parks forests trails wild and scenic rivers and historic sites all these must be protected. My \_\_\_\_ should always be able to enjoy our public lands. Please consider these priorities for America's Great Thank you Mr. President. It's a new day in this brave new world. Help us and help Congress shape a bold conservation strategy for the 21st century.

I am thankful for the foresight of past generations that set aside Wilderness State and National park lands for us to enjoy. These are one of the largest assets and treasures in our country. I spend most every weekend hiking snowshoeing and biking in my backyard paradise the Wasatch Mountains of Utah. My favorite vacation is to backpack and reconnect with nature. I feel lucky to live so close to many wild places that can make this a reality. I never tire of exploring the outdoors enjoying wildlife and the remoteness. I notice every year more and more Americans are discovering the outdoors and these paradise settings are getting crowded. Further those lands not protected are often challenged with access issues development and grazing/mining/drilling interests. It is with real concern that I write to you to ask that you help to ensure that future generations will always benefit and enjoy our public lands please consider these priorities for America's Great

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I think it should be at least a felony to introduce a foreign species into any ecology.

It's so depressing to travel across our country and to see the wilderness disappearing under strip malls and mega churches and ubiquitous gated communities. We need to plan smarter plan better! We also need to consider it our responsibility to protect the animals that live in the few remaining open spaces. !!!

Above all make sure to decrease pollution through enforcement of existing regulations which should be protecting our environment thus protecting the public's health and wellbeing. Continue to fight for an increase in renewable energy which will help as well.

My kids are 10 and soon to turn 13 I hope that they get some of the same chances I had to be inspired by the Wildernesses and wildlands of this country that have shaped our heritage. I also believe that all things on this planet are interconnected and our future is dependent on the good health of all species and environments on our planet. We need to do a better job of protecting and even enhancing the health of these environments and through protecting Wilderness monuments wildlife refuges parks forests trails and wild and scenic rivers and historic sites we are on the right track but with the threats facing our world we need to do an even better job. More protection is necessary!

This is IMPORTANT! And now is the time to act because soon it will be too late and our irreplaceable wildlands wildlife wilderness and entire natural heritage will be destroyed and gone forever. Please prove that all of us who voted for leadership and change did not make a dreadful mistake that leader and break with past pollution exploitation and destruction. Take a stand for conservation and preservation.

This is also a great opportunity to create new jobs! Privatizing and / or exploiting our public lands can never be undone so we believe it is extremely important to protect first!

My parents' generation is remembered as The Greatest Generation; my generation will surely be remembered as The Irresponsible Generation. For decades our government has put the interests of the few superrich ahead of the best interests of the US. The horrendous proof is all around us today. Please Mr. President for the sake of your daughters of my daughter of all of America's children help enforce a sense of responsibility and priorities on our legislators. Please stop the efforts to leave a legacy of The Most Reckless Generation.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

In my first college English class we were asked to write an essay on our home town. I thought about that for a while and realized that my true home town the one that nurtured my soul was all the many summer long camping experiences I had in the Sierra Nevada high country of California. I wrote my essay about that "home town" the place from which I gained a love of the Earth and nature and all that lives on this Earth. I now have a bumper sticker that sadly reads "Daddy what were forests like?" I urge you Mr. President to do all that is possible to preserve my "home town" so that no child in this country will ever need to ask the question that is on my bumper sticker.

Once these treasures are gone they're gone for good. Leave what we've had the chance to enjoy to our children grandchildren etc.

As more and more people become disconnected with the land there is less understanding and less concern about the importance of healthy watersheds wetlands forests and the need to protect working lands. It makes it easy for them to dismiss or misconstrue the importance of these lands to their food sources and the rural people who manage and sustain them. Access to wild lands and recreational opportunities in nature at least provides a connection point many will otherwise not experience.

On a more personal and local note I call your attention to Sterling Forest in New York just an hour's drive from New York City. This area had been an outdoor enthusiast's paradise under private management a decade ago but since relegated to the perversely limited vision of the Palisades Park Commission of NY & NJ it has become a wilderness museum "Look but don't touch" with all former activities circumscribed or banned. Please do not let this become the norm for government administration of our wilderness lands.

Being a student at the University of WisconsinPlatteville who is pursuing a degree in civil engineering I have learned through my courses the importance of our natural habitats. As our population grows we are continuously increasing our quantity of residential and agricultural acreage. To make room for this growth natural habitat is taken and developed. If we continue this process our wildlife will be ruined and may become extinct. Also the natural wilderness is key to helping us control our runoff by slowing it down and letting it infiltrate the soil thus recharging our water table. With water resource concerns growing out west we need to take control of our bad habitats and start preserving the natural engineering we see in the wilderness. Push sustainability into the forefront of land development. Thank you so much President Obama for taking the time to consider my email with a clear and accepting mindset. Your leadership is key to shaping a bold conservation strategy for the 21st century and future generations.

I realize that there are major economic worries to be dealt with at this time. However I feel these ideas are very important as well.

We need to stop thinking about ourselves and consider what we will leave the children.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Our government needs to stop selling off public lands and/or leasing them to oil and gas companies. These lands need to be preserved and protected from pollution so that they can be enjoyed not only by people today but for generations to come.

And the American MustangBLM has killed 200 wild horses this year in their cruel and inhumane roundups. Those horses belong to the American people not to the BLM killers. Save the Wild Horses Save the Wild Horses Save the Wild Horses Save the Wild Horses Save the Wild Horses

I know times are tough to find funding but think long term like Teddy Roosevelt.

Perserving our wilderness AND THE CREATURES THAT LIVE IN IT is essential to preserving the beauty that is this nation. You open it to ranchers and oil interests we all know they will trash it ALL....for profit. What kind of legacy is that? Stop the commercial interests NOW before it's too late.

Stop allowing government agency's to wipe out wildlife in the name of big money pleasure hunters.

I have been a long time lover of Yosemite National Park. Ever since I moved to California over 30 years ago it has been one of my favorite places to visit. Yellowstone Bryce and the Grand Canyon may not be what they are today had they not been protected. and Foster programs that educate all ages especially young children so they will grow up seeing and understanding the importance of living in harmony with nature.

We need more money to fully fund National Parks upgrades! I look forward to your reply.

You have the power to keep the beauty of our great outdoors intact for all generations to come. So please create expand and better protect America's shared outdoor spaces including wilderness monuments wildlife refuges parks forests trails wild and scenic rivers and historic sites. Please ponder as priorities the following list bearing in mind that our great outdoors are not only for recreation they are for the mental and physical good health of all. Thank you for being a leader. Please lead now in one of the most important aspects of the century.

Once it is paved over & built upon it is gone.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

As a member of the boomer generation I want to be sure that wilderness the outdoors parks etc. are preserved not only for my own use as I retire but for my children and grandchildren. Camping and hiking are a great joy for our families and our children need to be able to experience areas that are pristine and support wildlife clean water etc. The natural beauty of this country is the heritage we pass on.

My father's family left the coal mines in Pa. to homestead in Wisconsin. My father taught me to love and respect Nature. I have been able to pass that view to my daughter. It is my hope that she may have the same chance if there are any unspoiled wilderness areas left. Hunting and fishing have always been a part of my life so I understand at a personal level the delicate balance of Nature. I have seen in my lifetime the effect of the destruction of wetlands and loss of habitat. I urge you to save what little wilderness is left and not put profit before posterity.

Our own personal "wealth" may be diminishing for ourselves and for those to whom we might want to pass on whatever we have earned; but that doesn't mean that the natural treasures of American must diminish and deteriorate as well.

#### When children families have parks wildernessplaces of peace it has been shown the crime is less....People need places to rest reflect appreciate our world...The bang for the \$Buck is better if we do not have violence in our streets communities & towns... The \$price for parks/wilderness is off set by what we do not have to repair by violence. All children should have a place/chance to play & appreciate beauty. If the only consideration is co\$T.....Consider the value in peace less valalism more beautiful America AND\*\* HEALTHIER ENVIRONMENT(trees etc). As you know the republicians want to cut funds for parks etc...soon after that crime rises (not seeing the connection to value).....Children have no place to run off energy so possible distruction occurs. The republicians have their own "private" parks then want tax paying citizens to have less....This is not The Good America that promotes giving less to children/citizens than what the wealthy have. Cannot put a value on healing powers of Nature to all. I trust you'll do the prudent/just thingtrue meaning of "Conserve" in this case:)cb.

"Shared use" isn't really shared if one use destroys it's value for another. For example who wants to visit a clearcut on their vacation?

In the face of exponentially increasing population the pressure on open lands and undeveloped areas is ever increasing. We have surpassed the ecosystems ability to process our waste and replenish resourses. Absent the wisdom to control population only the preservation of natural resourses can slow the ultimate consequences.

Now you can prove to the world and the Republicans that although you have had to increase the national debt for the next generation you have also insured that you have protected the environment for the them.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I am a 79year old who will not live to see the fruits resulting from your positive action to improve and protect our national parks and monuments. However I desire that my children grandchildren etc. are able to enjoy the wonders of our wilderness areas and national parks just as I did. Please prevent the opportunists from stepping in and diminishing or destroying whatever we already have.

Act now or it will be lost forever

help us all to become better citizens of our beautiful country. ; those quiet places where we can soak up peace away from the clang of our daily life! before all our wildlife disappears in this century! ... Mother Nature is the ultimate healer. \* Please protect our beautiful parks forests and trails from those who run roughshod with mobile/sports vehicles! ...don't whitewash your promises.

I am ashamed of what is happening in our wonderful country. Only you can correct the direction now being pursued. Are you courageous enough to listen to the people who voted you in??? I hope so!!!!

Once it's paved over it's gone forever.

Since the early 90's our family has had a blessing in that the vacations we have taken included many of our national parks and forests. The awe inspired reactions by my family are priceless. Watching everyone stop "dead in their tracks" and stare at moose along side the road in the Grand Tetons. Later in the same day we watched new born bison in a meadow frolic with their siblings in Yellowstone. This isn't scratching the surface of almost two decades experiencing the wonders of our nation. There are some possessions of the American people that have to be protected against greed and exploitation at all costs.

no dirt bikes or snowmobiles which spoil the experience for everyone else for example.

Franklin D. Roosevelt said "The nation that destroys its soil destroys itself".

Our Earth is in ecological crisis! Now is not the time to destroy what's left.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Twice I have had the experience of exploring and being a part of the northern Minnesota Boundary Waters. My experience in the pristine lakes where we could drink the same water on which we were canoeing provided personal and professional growth for me. My heart is heavy with continuing news of the devastation of not only wilderness areas but other more urban lands in this country. And I am saddened to know that conservation is not apparently one of your considered priorities. Our children and grandchildren deserve to have a planet that can still be seen as the little blue dot in the universe...not a dullhued orb.

"Just think how senseless and lifeless a youngster's life will be if they are not able to enjoy the outdoors by being in it conserving it and sharing this with others. Being in the great national parks like Yosemite teaches an individual not only respect for nature but expands their love for it and inspires creative ideas harmony and peace." "Involve our youngsters in conservation by making it an academic standard to fulfill in the curriculum"

My husband and I have spent many wonderful vacations enjoying our national parks and monuments and other wild areas. We are environmental consultants in NJ who treasure the opportunity to study the wildlife and plants of very different areas throughout the US. If we don't preserve unspoiled habitats we will never know what we have lost from our biodiversity heritage as development and resource exploitation devour the land.

In the face of rising population and its everspreading development as well as its desperation for extractive energy sources the importance of conserving natural landscapes for future generations has never been greater. Failure to hold a strong commitment to this value will eventually alter the character of our nation's great outdoors irreparably and with it the character of our citizenry who will have fewer and fewer places to experience the restorative value of the natural world. Even now that experience is foreign to some especially in urban areas. Electronic technology has also begun to diminish our youth's interest in connecting with that natural world which portends a perilous loss to the American psyche. Furthermore in order to not exacerbate the existing polarity between environmentalists and their opponents I urge you to be realistic about the scope of envisioned projects. Some megalandscape multimillionacre complexes envisioned by wellmeaning groups while admirable in idealism will only panic those threatened by these prospects (e.g. ranchers) and will galvanize all sectors of opposition. It is strong enough already. Conservation projects must be viable apropos existing stakeholder interests not decreed as government fiat with winners and losers. This is challenging to say the least; but respectful and patient collaboration is essential to longterm success.

During the Bush takeover of America we suffered tremendously environmentally economically and strategically in the world and at home. PLEASE make a difference and bring America back to where it used to be!!

It is inexcusable the way humans have trashed this planet! I don't want to be known as from the generation that did nothing but make it worse. Please do what you can to protect it from those who are so selfish and greedy that they don't care about the trashed up planet they leave for their grandchildren.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

From ancient times to the present the greatest and most valuable assets humanity relies upon are based in healthy intact natural ecosystems. Food shelter medicinal and spiritual needs are satisfied within these natural environments. The past century has seen unprecedented use and decline of natural resources to the point that future generations may only know it from photographs and stories. I have been blessed to have grown up and thrived through ready access to recreational areas. public lands please consider these priorities in protecting and preserving America's recreation and wilderness lands:

It is imperative that we protect national parks forests preserves monuments and add to that more wilderness areas parks monuments forests and wetlands. The very life (both animal and human) that are protected in these places is threatened unless we take action to both protect what we have and extend it. National Parks need buffer large buffer areas to stop encroaching growth and to protect what is in them animal life forests woodlands watersheds etc. We need these things to and to preserve the life sustaining things that they provide to us as humans water supply clean air sanctuary for our souls. You must fully fund the Land and Water Conservation fund increase funding for all of our national treasures and make additional funding available to state and local governments for the outdoor and open areas they protect such as state forests parks wet lands and woodlands. Thank you for your time

Within my lifetime I have seen the gross degradation of all our natural wonders and the wise stewardship replaced by corporate greed and encroachment: the Grand tetons are now for sale the Grand canyon is endangered by uranium and carcinogens my Adirondacks are supersaturated with neurotoxins heavy metals and destructive exotic invaders...fossil fuels acid rains and \$\$\$\$\$\$\$\$ burying our legacy condemning future generations to a lifeless wasteland and oceans hypoxic. It is more than I care to bear.

P.S. Please don't overpromote our wild areas to those who have not yet learned how to respect them first and play by the rules of the parks. This means not bringing in a myriad of plastic containers and other forms of packaging that will likely end up as garbage or worse...litter. People need to understand why we need to respect these areas and this means behaving appropriately with respect to nature. Additionally...NO noise from any electronic devices is essential too..no booming cars ipods cell phones and obnoxious illegally modified exhaust pipes on motorcycles or cars. If such is how people want to behave in such a setting or any setting for that matter..and cannot take 5 to do a digital detox and hear what the world sounds like naturally and discover the joy in peace... Then perhaps they need to stay out of these precious treasures.

Save our wildlife particularly those at risk; Ask for the current Secretary of the Interior's (Ken Salazar (sp)) resignation. Appoint someone who really cares about saving public lands and wildlife for the public and future generations.

If public lands are used for private businesses they will be lost to our American citizens forever. A very unwise move!

## Discussion Question 2

### **Written & Online Comments**

**(cont.)**

Sir what a legacy for your children grandchildren you would be leaving them to see what wonders GOD has created. How sad if they would not be able to enjoy the wilderness and all its beauty because we didn't expand create and protect the sites and the animals that live in these spaces. Will you not help protect this beauty for all to enjoy now and in the future.

engage public and private corporations to assist in conservation in their regions. Consider tax advantages if necessary. for us and for our children. Really seek out alternative energy sources and develop them for use. No more drilling!! let's not have any more species face extinction because we neglected these important areas. engage children teenagers and young adults with innovative electronic campaigns. Engage adults thru electronic and print media. Make it cool to be outdoors! help the states maintain and fund their outdoor recreational areas. so America keeps the wilderness it already has and can return important overdeveloped areas back to the wild.

As an avid outdoorsman and user of our public lands I want the next generation to enjoy America's great outdoors too. That's why I am asking you to seize this opportunity to create expand and better protect America's shared outdoor spaces including wilderness monuments wildlife refuges parks forests trails wild and scenic rivers and historic sites. The Monongahela National Forest here in WV has just designated several new wilderness areas that will benefit generation to come. However we need this type of vision across the board in all our public lands management. Many roadless areas across our great country are prime for wilderness designation but they languish due to petty political concerns.

I participated in the listening session Poughkeepsie NY and wanted to repeat concerns I voiced there. The job cuts taken by the New York State DEC have resulted in lack of enforcement of environmental conservation law which causes destruction of wetlands and degradation of water quality. Furthermore cumulative impacts of development on a watershed level are not being considered causing additional degradation.

As a nation we are quickly expanding with no end in sight please save these wilderness lands.

Mother Earth does not belong to us. We belong to her. She is in critical condition and "Yes We Can" do something about it. Hopefully before it is too late. My focus is on 'clean water for all living things'. That does not include putting an UNapproved prescription drug considered a toxicant by the FDA in our drinking water. We drink only about 1% of that. Just think where does the rest of it go?

We all know it is our responsibility to care for this planet for future generations. I don't understand why I have to fight so hard for something we should all agree on.

## Discussion Question 2

### *Written & Online Comments*

*(cont.)*

Our future generations deserve the chance to experience our National parks system as my family has had the opportunity to do for many generations. Personally I would like to see Point Lobos on central California's coast and the Pajaro River State Park also on California's central coast as well as the many State Parks at Big Sur California added to the list of National and State parks that should be preserved for the future. I'm sure it's a difficult decision on your part given our Nation's current economic condition on what parks will stay open and which ones will need to be closed due to a lack of State and Federal funding. I hope that funds will be found to keep all of our National and State Parks open.

We need to stop openpit coal minningNOW. And we need to cleanup coal ash mess. I think the best place to keep the coal ash is to put in the yards of big coal Officers and that of the power company. If more room is needed then use the yards of Congressmen of help the coal company.

The wonderful world of nature cannot be replaced if it is exploited by money seeking companies and persons. Responsible and careful development practices must be followed by all so this heritage is preserved.

however restrict access by offroad vehicles to reservations set aside for that purpose outside forest areas where they can tear up the ground all they want without destroying the forests and wildlands and terrorizing wildlife. There is no reason why 510% of the population should be able to dictate policy on managing public lands.

One of my past peak experiences was kayaking down the Ichnetucknee River here in North Central Florida. Until several years ago it was pristine clear water where many herons and otter would come to drink and play. As you floated down the river you could feel as if peole two hundred years ago would have the same scene. Now agricultural runoff and over extraction of water for lawn watering and other nonessential uses has rendered this jewel eutrophied and murky.

perhaps enact the 'Buffalo Commons' park idea in the upper midwest all of it and protect more by designating more wilderness by designating preservation areas by an ecosystem approach by promoting green rails through developed areas every year!

I am a proud natureloving American. I love my beautiful country and We need to capitalize on all of the green energy resources we have in this country keep our natural resources clean and accessible and get off oil and other polluting methods of powering our lives.

and educate them Stop the coal oil and nuclear power industry from further pollution Educate people about how bad coal oil and nuclear energy is Start programs for cleaner energy uses and educate people about "going green"

We want our tax dollars spent here not on war people need jobs but not war jobs.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Protect wildlife from being exterminated by the Bureau of Land Management

Anything less than a large scale would be insufficient to the task at hand. I personally have always loved and respected wildlife and the wilderness and over the course of my time on earth have seen the elimination and destruction of massive amounts of our wilderness. This deeply saddens me to think that future generations may very well never have the opportunity to view what America has always been known for: purple mountains waving fields of grain our "sea to shining sea" is already in jeopardy. The detrimental impact on wildlife is already abundantly clear. If one does not or is unable to connect with nature one cannot truly understand himself or connect with others on a fundamental level. Communing with nature allows one to fully relax and center oneself. It works for me and countless others. Please do not deny us. Walking hiking photography pure enjoyment of the sheer beauty and the awe of places such as the painted desert grand canyon black hills Sunset Crater petrified forest the "forests" here in AZ which are cacti...all amazing and quite honestly if you think about it recreation sites often lead to EXERCISE which will decrease the obesity rate in this country. If you want to decrease the obesity rate why take away free & low cost means for Americans to exercise?

The Native Americans knew that the Earth does not belong to us but we to the Earth and that we have an obligation to hand it down to succeeding generations in good shape. It means we need to be good stewards. We have failed miserably in so many ways (and yes we have some successes).

I think especially important is to prevent our precious public lands from being over run by off road vehicles. I know that we cannot continue this degrading and destructive use of off road vehicles as we are currently doing. I don't want to die knowing that I am passing on a legacy of noise pollution and habitat destruction. That is my greatest concern regarding America's Great Outdoors.

I find that of late I am becoming more and more concerned with the direction the whole world seems to be taking regarding protecting our environment.

Stop abuses of public lands by off road vehicles snowmobiles and helicopters

Address Conservation on a national scale and wild places

If we don't leave it better than we found it my mother is going to be upset with us. And neither you nor I want that to happen.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Stop the invasion into the oceans lakes and rivers by the oil and gas companies. Put a stop to energy created by coal plants Put a stop to the slaughter of Wolves Horses Wild Burros and other endangered species by the BLM and forestry departments. Enough is enough. You whiteeyes have stolen everything of any value and are destroying all of Mother Earth. It is time to CHANGE the direction and starting acting like Stewards of the Land Water and Air instead of abusers.

There is so much banality surrounding us here in the United States. Cheesy television programs sleazy radio talk shows junk food restaurants strip malls etc.; where does one go to find true beauty and affirmation? We cannot let more pristine land be turned into fodder for more of this type of trash. We must protect our beautiful planet so more and more of it does not fall prey to the cancerous spread of this sort of mindlessness. We need wilderness to remind us that nature truly feeds our soul. Once we trash our planet where will we go?

I believe that each generation is responsible for doing whatever they can to improve the world for those who will follow in their footsteps.

Please find a creative way to work with corporations Park services & government to rebuild our seriously deteriorating National & state Parks & to turn back the vast neglect to them by the previous sic administration I implore you!

All of the above are connected as they connect us with our threatened planet and are part of what we need to do to protect it.

TERRACE POND AGE 61 MR. PRESIDENT PLEASE PROTECT THE AREA AROUND THE DELAWARE WATER GAP ON THE PA/NJ BORDER...FROM THE PROPOSED ELECTRIC FEED LINE. IT WILL RUIN THIS BEAUTIFUL HIKING PLACE. WE NEED TO GO MORE INTO SOLAR AN WIND TO PRODUCE ENERGY INSTEAD OF BLOWNG OFF MOUNTAINTOPS. PS OF COURSE THEN ARGUMENTS WILL ARISE AS TO..WHERE..TO PLACE WND TOWERS AND SUN PANELS. it never ends...so it goes....

If we don't take care of Mother she won't take care of us. We are in the midst of seeing what Mother can do when we don't take care of her. Please take a responsible leadership of our Mother.

Continental scale wildlands habitat corridors and connect them to adjacent wildlands

The natural areas that we still have are a part of the biodiversity which is the origin of all the resources and wealth we enjoy as humans. Protecting sites that are not only a resource for all but which also allow us to better recognize the importance of natural environments for our future is not just about leaving areas for future generations to enjoy it may also make the difference between allowing those future generations to have an enjoyable future or leaving them a future littered with hardships.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

There is a precedent for involving youth corps and WPAlike programs to better our public places. Strongly suggest combining above priorities and creating needy jobs.

It is time to understand that time in nature is becoming more and more important to our population. We are all stressed by the pace of our lives and by the noise and assault of electronics. Nature can help us all be more balanced and peaceful and productive citizens. Environmental issues are very important to a great many of our citizens and should be important to all of us as a clean and healthy environment is necessary to provide clean air water food and a healthy quality of life to all of us. It is also necessary for a healthy economy. Please try to educate your self on these facts so that science will be respected and used in your decisions. We cannot continue to ignore science in our decisions about energy water air etc. We need you to get behind environmental legislation. Climate change is upon us and your children and mine must not be left with a degraded and unhealthy planet. Thank you for your consideration of this message. If you would like to spend some time learning about the value of nature and the out doors to all of us. I would be happy to organize a meeting on that subject.

PS. Mr. President... I feel you are as anti American serving as The Commander & Chief of this beautiful country. But YOU are human you have children that I would hope that you would wish to conserve this earth this land this country for them to have a secure safe future in! Please keep in mind that this Earth is ONE giant circle and what happens in one continent will eventually surely effect the other!

You have so much to consider Do you think your children would like to have the chance to see more than the problems in our immediate field of vision or the relaxation that comes from a walk in nature?

I am blessed to live in Oregon a state that is overwhelmingly beautiful. I well know the value to the human spirit of having urban places for renewal like Forest Park and beautiful mountains like Mt. Hood to visit and enjoy. The outdoors needs our protection now more than ever.

Address Conservation on a larger Scale than previous adminstrations have

It is imperative that a bold stand on defending the wildness that America still has be taken by the administration. The vision of John Muir and Teddy Roosevelt preserved our national treasures and in creating the National Park System enriched the lives of millions of Americans. We need our chosen representatives to play a similar part today as our water air and climate are under extreme threat. Right where I live corporations are still clearcutting the thick forests that surround Mt. Hood. It looks like a war zone. It is insane. Cant we protect our forests and the quality of our streams and thus our fish runs? Please do all you can to stop the destruction before its too late and our children are left with a biosystem that has totallly collapsed because business wanted to make a profit.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

In addition I would like to now inform you of the importance of one place in particular. You see I am from the Bronx New York and am a horseman/social work undergrad student at CUNY's Lehman College. I am envisioning to some day become an Equine Psychotherapist. I once spoke to Adolpho Carrion during his terms here as Bronx Borough President at the Home Depot. He encouraged me to pursue my dreams and fight to conserve a plot of land that me some other urban horse people and our horses inhabited for generations upon generations. Unfortunately we were disenfranchised in the name of development however with the proper resources finances and luxury of time to advocate I would've probably been able to maintain a little piece of Bronx History alive. Due to certain situational constraints and an unequal playing field my dream was undone by the political and developing entities whom desired the land. I thank the good lord that I was able to relocate my animals to a family members homestead in upstate New York. But the dream is not dead. I do intend to someday (sooner than later) implement and create an equine facilitated therapy program to the less fortunate inner city urban youth of the 5 boroughs as well as the mentally behaviorally and physically challenged youth and traumatized veterans of our communities. The message I am trying to get across to you is that I am here I am willing and I am waiting for someone of influence to take a stand and conserve places like the special place in the Bronx where generations upon generations of Bronxites were able to connect with each other and nature. Please empathize with me and help me see to it that we facilitate and provide more access and recreational opportunities to the people of the Bronx. Mr. President and respected officials of your administration please do consider me as an ally in the quest for a better tomorrow. Allow me to be your go to guy when it comes to equine facilitated therapy as it is my dream and I wish to share with as many people as possible. I am a prior service member and wish to continue being of service as a civilian. Please send my fellow Bronxites Adolpho Carrion and Justice Sotomayor my warmest regards and let them know that they make me soooooo proud to be a Bronx Latino. Peace and God Bless You All Your Bronx Social Workin Horseman!

Once gone it's gone. Once developed or drilled or mined or clearcut it will never be the same. This may be our last chance to preserve public lands.

I believe that future generations may look back as we do now on the time when doctors did not know to wash their hands before delivering children or performing surgery! It's our responsibility to provide the ecological balance the Permits their 'looking back' at all.

I would also like you to help take back Americas "public" lands from the tiny fraction of the population that has held sway over policies regarding: Livestock grazing and the damage it does. Predator control by the Federal Government to benefit livestock interests and hunting interests. Especially the killing of wolves and using spreading poisons on our public lands that targets predators and kills many other animals. Sack Sec. Salazar and replace him with someone who does not represent this tiny special interest group that see our public land as their personal grave train.

I want my grandchildren to be able to enjoy the great outdoors as much as our family does. We need more parks and our wilderness preserved. Please .

## Discussion Question 2

### *Written & Online Comments*

*(cont.)*

All my life I've enjoyed the outdoors. Provide more funding for our National Parks

Our wilderness is priceless: we can't afford to lose it.

Our California redwoods are irreplaceable and provide recreation and solace to me and many other people. We must do what we can to protect these areas for use by people and to preserve them for use by wildlife.

The survival of our species and wellbeing of our species depends on biodiversity adequate and clean water supply healthy and abundant natural resources and a balanced approach to development.

I spend my vacations in the national parks and find great satisfaction in doing so but I have noticed that many parks need more funding to maintain the quality of the environments there both for visitors and for wildlife.

Maintain responsible access to wilderness Please protect our health and the health of wildlife and the environment by protecting and preserving our remaining wilderness rivers and streams from corporate and industrial abuse intrusion and pollution.

We are not the last generation that will have to fight these battles. If we give an inch and industry takes a mile what will be left for the next generations of conservationists? We do not need to destroy our natural heritage for today's economy and for the greed of some low fruit pickers. Create some more green jobs (really lots of them like hundreds of thousands yes really a lot!) and stop our participation in tar sands development while you're at it.

Our environment was ignored or mishandled badly during the eight years of the Bush administration so there is a lot to do to make it right. Please do all you can. It is vital.

Although this letter was written for us who are concerned please be assured that I believe now and have always believed in the protection expansion and creation of America's outdoor spaces.

PLEASE PROTECT OUR NATIVE WILDLIFE!!! I want my children & Grandchildren to be able to see our native wildlife in their natural Habitats NOT in a MUSEUM FOR EXTINCT SPECIES. We NEED to protect their environments! AND MORE Importantly Protect OUR ENVIRONMENT & PROTECT OUR SPECIES...THE HUMAN RACE!!!

One of the important areas to me that needs protection are the Appalachian Mountains. Beautiful panoramic views and clear fresh springs are what I grew up visiting. Blowing away half a mountain for a Walmart and mountain top removal that destroys those views and contaminates those streams are mere examples of the destruction of this most beautiful natural space.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

As Teddy Roosevelt once did please continue to honor his legacy by adding more land for national parks that Americans can enjoy animals can continue to have enough of a habitat & to add to the beauty & health of our country.

Bring back the CCC. Bring back the New Deal. Bring back FDR. The country is dying while you sit on your hands.

Address conservation at the ecosystem level. It does not make sense to preserve a single species without protecting the wildlife habitat in which that species lives. Killing predators such as wolves and bears is destructive since it allows prey species such as deer to grow out of control and denude vegetation. Therefore the entire ecosystem must be protected. That means we must stop encroachments such as mining fossil fuel extraction roads that break up habitat and construction of housing. In particular we must ensure that the lands surrounding watersheds must be kept free of development so that we continue to have clean water to drink. For the reasons stated above it is important that we fully fund the Land and Water Conservation Fund

Build more fish friendly reservoirs that give us water and protect natural runs

The recent oil spill (gusher) in the Gulf of Mexico certainly shows how quickly our environment can be degraded and how many lives can be affected.

Don't drill for oil work on other technologies. Oil is a MESS!

Each generation has the opportunity the responsibility to protect our natural heritage for the next generation. What would we have if our forefathers had not preserved wilderness for us to enjoy?

I have fond memories of visiting both the Grand Canyon and Yellowstone Nat'l Park as well as hiking in the Blue Ridge and Smokey Mountains please protect these beautiful places (to name just a few) for generations to come. Thank you.

I am concerned about the future we are leaving for all of our grandchildren yours and mine particularly the environment the depletion of natural resources and the loss of beautiful natural places still left in the country. If we continue taking and using what every we want or feel we need now to satisfy our every whim there will be very little left for future generations. We need strong leadership in the country to change our ways and convince us to pay a price now so future generations will not have to pay a much bigger one in the future.

Let's keep big business out of our National Treasure from..."sea to shining sea".

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Please Mr. President please save our beautiful country from sprawl greedy landowners and destruction.

I am doing my part three times a week by working beaver dams to ensure fish passage and that trails don't flood. In response to complaints that the beavers were flooding trails the forest service three years ago decided to kill the beavers. Seniors like myself stepped up to volunteer to help. After three years we have a partnership with the FS. In December for the late Coho run the work is pretty cold but the rich habitat created by beavers and the educational value makes our efforts worth it. Please step up and do your part for a healthy ecosystem too. Thank you for your leadership.

Provide education on the environment for the youth of America

I am hoping that you will allow your administration to fulfill the promise of your campaign and to work for the people the land and the wildlife of our country.

I most definitely want the next generation to enjoy America's great outdoors and I am worried that this possibility is decreasing due to greed and lack of understanding or conscious awareness that a conscious commitment is vital to maintain our lands and the future of our American life. Personally I don't think anyone who is not American should ever own any American property for one thing.. Money is not the issue here saving our country from being possessed without thought to the welfare of future generations should be valued and what we do own that has been designated wilderness needs to be maintained and this concept needs to be honored and valued and the contract that started the refuge park etc.should be HONORED. Protecting America's shared outdoor spaces including wilderness monuments wildlife refuges parks forests trails wild and scenic rivers and historic sites is absolutely necessary to maintaining our heritage; why are we even considering disturbing any lands for commercial purposes which are protected.

There is too little wildlands left to allow any more to be destroyed. Provide wildlife corridors and protect them

Improving watersheds is especially important. Remember when NYC invested in its watershed instead of investing in a new water treatment plant? The healthier watershed made a new treatment plant unnecessary. We need to be investing in our wildlife habitats as a solution to current issues and for future generations as well.

Save the great outdoors for my four grandchildren and all the grandchildren in the U.S.

I am hoping a bold move to protect our great outdoors will be part of your legacy.

## Discussion Question 2

### *Written & Online Comments*

*(cont.)*

I grew up traveling to and camping in America's beautiful National Park system. I want to be able to share that with my daughter. For this to happen we need to act to protect and expand the system.

Too many people are so divorced from nature that they think that if it is only a tree or a bunch of grass it isn't worth anything to have worth it must be "developed". It would be a better world if we learned to appreciate and respect the world of nature from childhood onward. The only way we can do this is to show respect for the natural environment. But please: when it comes to access and recreation leave out the ATV's.

conserve species diversity in our native flora and fauna

We have a moral obligation to protect the environment for our children and future generations to enjoy.

That way after we are gone all those places will still be there for the enjoyment of everyone in the future. Our history will never die.

\*\*Protect our species cancel the killing of wolves. Wildlife are under stress all over the US because of bad agricultural practices and logging.

I am 84 years old and I have seen many beautiful places in this country despoiled by so-called "progress." Because of this I have joined the Wilderness Society in an effort to preserve some of the special wild places that are still left.

I believe we Americans are stewards of our country and its vast outdoors and I want the next generation to enjoy America's great outdoors too.

We have unconscionably failed to address the threat of global warming. This makes it all the more urgent that we do more to protect our wilderness areas. I therefore support the Wilderness Society in making the following request:

With a growing population the US needs more shared outdoor spaces for people to find peace away from the crowded cities.

Protect & maintain what WE already have; do not allow the desecration of land or water.

I live in central NY and I'm also concerned about the health of our lakes. I sail the Great Lakes and camp in the Adirondacks enjoying those lakes. Fresh clean unpolluted water is one of our most valuable resources. Our lakes need to be cleaned up and protected.

Also fire Tim Geithner & make Ron Paul Treasury Secretary!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Please protect public lands from rape & pillage by resource extractors.

Fully Fund the National Park Service Reduce pollution by converting our energy to renewable sources

We must protect and preserve our habitat this is the only home we have and its resources as well as its beauty are integral to our continued existence.

These natural spaces are the last line of defense for our naturebased life support systems against the chemicalinfused waste and pollution generating reality of modern human civilizations.

An increasing number of natural disasters is already causing tremendous losses. Please help to regain some of our national wonders for the next generations.

Our parks belong to all of us and also future generations of Americans and need to be protected. And you also need to protect wilderness areas from too many off road vehicles. Whenever I visit areas where off road vehicles are allowed the trails are in terrible shape and the overuse of such vehicles leads to erosion and loss of habitat.

We need to save our wilderness!

Future generations rely on us to ensure that they will be abler to enjoy America's great outdoors too. from unregulated industry Stop the illadvised hunting of threatened species such as wolves and bears

Protect upstate New York from HydroFracking Gas Drilling

It's not been that many years ago that I could walk outside my door listen to all the birds watch the deer and just enjoy all the wildlife around me. My parents would take us to State parks some National parks and just for rides around the country on a Sunday afternoon. Today I see no deer and I have to go farther and farther to see any wildlife whatsoever. Houses have been built factories some already empty & out of business have taken over the landscape I once enjoyed. I fear that the generations behind me wil not have the pleasure of enjoying any of the outdoor activities that I did as a child. Big Business has taken over Greed has shown it's ugly head. Our parks forests and even the wildnerness would be gone if it was left up to Corporate America. A large part of it already is. We MUST protect our precious lands and all the creatures that inhabit them. We must protect the lakes rivers and even streams that feed into them. Where will they be for the next generation? Where will they be in 20 years? They are disappearing at an alarming rate.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

The native Americans thought seven generations ahead in trying to minimize the consequences on the earth their actions might have. We must do more than they did; our technology and its long term effects demand we do more.

We have a moral and spiritual obligation to be good stewards of this planet.

Protect more wilderness and establish more national parks Protect and restore Wildlife Habitat and Wetlands with special interest in the areas damaged by BP's reckless oil disaster Keep our forests healthy and permanently ban all permits for extraction of natural resources from within our protected forests Push this country towards negative population growth because overpopulation is the root cause of all problems created by humans

Limit the use of offroad vehicles in sensitive areas

Stop creating logging roads into forests interrupting forest and wildlife habitat Stop selling off old growth trees for timber Assure healthy diversity of tree species in our forests Let the citizens of America know how we can help in keeping our outdoor spaces alive clean and functioning as they should

Protect and expand our wilderness in designated areas while continuing to protect and expand wilderness areas. Stop wild horse roundups until the BLM can devise a more effective plan for herd management.

As the president I realize that you have many issues to attend to' however this is one area that is vital to the survival of our world as we know it. Please take action for our natural wild places.

Protecting our wild places will help the next generation fight obesity. The great outdoors provides Americans a place to exercise.

FLOODING EVERYWHERE BECAUSE YOU REMOVED ALL THE TREES AND GRASSES AND NATURAL FLORA TO PUT IN ASPHALT ROADS AND MORE PESTICIDED HOUSES WITH LAWNS!!!! TEACH BIRTHCONTROL AND SAVE SOME SPACE FOR OXYGENATING TREES!!!! want the next generation to enjoy America's great outdoors too. That's why I am asking you to seize this opportunity to create expand

Thank you for all efforts to conserve and restore our natural resources. An important area too often overlooked are the oceans and rivers. Can the oceans be considered wilderness? Thoughtfully monitored and biodiversity and health fostered? Educational opportunities are essential; I am trying to do my part as a private citizen.

I voted for a change from the previous administration of corporate greed. Please be courageous and stand on solid environmental principles.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

and i think we need to do something before its to late. cos this world is a beautyfull place and we only have one world and if we cant take care of it it just shows how lazy we are as people and how uncareing we are as people. so lets make a change. :).

Protection of American' great outdoors is a heritage we own to future generations. T

Preserving the beauty and health of our planet for generations to come is the single most important thing we can achieve . Take care of the environment and help the wild animal population worldwide.Thank you for your leadership in shaping a bold conservation strategy for the 21st century.

In addition we need to find ways to protect forests from insect infestations that threaten them and all species dependent on these forests. On a recent trip to Alaska I found that the pine bark beetle is begining to cause problems there and there are new invasive species threatening the Eastern forests too.This problem needs to be addressed now.

with all the environmental degration now going on preserving national parks wild areas and pristine water sheds is critical!

Please don't cut the funding for our Conservation programs.

These kinds of investments can also contribute to a better financial recovery and future for this country. Work with private industry and strengthen those private industries around the different conservation areas and parks that depend on those facilities to keep their employees and possibly even grow. Thank you for your leadership in shaping a bold conservation strategy

As I become older I realize even more the importance of the natural environment. It is a way to connect with nature that is spiritually physically and mentally healing. If we don't protect it it will be lost and we as human being will be the biggest losers.

And it's not just humans that need the wilderness preserved. We humans are so selfish and greedy we forget that there are other forms of life on "our" planet that need places to live.

In a world which is rapidly being alienated from nature it is imperative that our outdoors be preserved...protected. Unless we see ourselves as part of the natural world rather than dominating it we will become physically socially psychologically and spiritually diminished.

I took my twin 13 year old nephews to Yellowstone and Grant Teton N.Ps this sumer. Their sense of wonder was amazing. They are now hoping that to visit Colorado's outdoor wonders next year. We must protect wild places permanantly.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

We have laid waste to this tragic country for too long. We have squandered its natural resources disrespected the land and now the people and it's time to start living up to the morals that we profess.

The US was the first country in the world to understand the unifying power of PUBLIC landland that belongs to all its people. Getting out into the great parks we created has been one of the most effective engines of assimilation because these wonders belong to all Americans equally. That's why I ask you to seize this opportunity to create expand and better protect America's shared outdoor spaces including wilderness monuments wildlife refuges parks forests trails wild and scenic rivers and historic sites. Not to mention that they are great tourism engines and buffers against pollution and balm for necessary urban density! Don't let the legacy of your leadership be the diminution of this great legacy! Keep public lands in public hands don't put profit above the public interest. Shape a bold conservation strategy for the 21st century and leave us with more and better protected parks and wilderness for the future.

Stop mining activities near the Grand Canyon!

Your family weekends to different parts of our beautiful country helps to emphasize the variety of treasures of nature ...wildlife scenic rivers and mountains...the list is endless. We are so fortunate! Please continue to do your best to preserve these treasures for our children and future generations.

Places saved now can be used in the future for resource development when ... well IF and only if the can learn how to do it right. Land used up now is gone from its natural state forever!

I am 58 years old. For as long as I can remember I have visited National Parks wildlife habitats hiked in the woods and enjoyed this beautiful land. As a child my parents saw the importance of exposing me to all our land had to offer. I am from the Gulf Coast area and can appreciate more now than ever how critical it is to address all of the concerns to protect our great outdoors.

To ensure that every plant animal & human can survive & thrive we must protect our wild places and natural habitats.

So far I have been very disappointed in your conservation efforts.

There are many beautiful outdoor places in America so I won't name any specifically. But there must be a policy to maintain these splendid examples of nature in all its glory. The cities and other developments where we live and do business are unnatural habitats created by humans. Most of the land in these areas are covered by blacktop or buildings preventing the earth from breathing in these locations. Our parks and natural woodlands are what nature created and we must preserve as many of them as possible to keep nature in balance.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I am not talking about Agenda 21 or the United Nation's plans to change our country forever. I am talking about protecting these wild and beautiful places as Americans as our heritage as something that needs to be preserved and held precious for all.

I have been very fortunate to enjoy our protected wilderness lands most of my adult life. This has had a profound effect on my positive philosophy and worldview. I have also had the opportunity to share our wilderness areas with my (now adult) children during the time my wife and I were raising them. We still get together for hikes and river trips. As our population grows and the demand for natural resources grows with it we need protection for as much of our remaining wilderness lands as possible.

I feel privileged to be able to enjoy our beautiful natural American landscapes even here in the crowded Northeast. From our local National Seashores to the great forests of the Catskills Adirondacks Vermont and New Hampshire I've found solace from the stresses of urban life in our natural preserves. But our preserves are always under threat from development pollution and misuse. with rocksolid legislation

As population increases and urban sprawl increasingly encroaches on our open spaces it becomes increasingly difficult to find natural areas to commune with nature and periodically to remove oneself from the fast paced society we are now living in.

I live near a large lake that is beautiful. However it is full of carcinogens. This doesn't have to happen. Instead of people being able to fish (and eat the fish) or swim in the lake all they can do safely is look at it. This causes a loss to the local economy.

Once these things are gone they can never be recaptured or restored during the life of this planet. There is no mitigation by developers that can replace or substitute what it took millions of years to create. Only by conservation and protection will there be a viable planet for future generations.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

If for no other reason it should be understood that environmental protection ensures or at least helps ensure our national security. If and when the earth is degraded enough that such resources are imminently important to our health and future survival whether in terms of larger environmental viability or resource availability or for food production our dependence on sustained and protected natural resources will be clear. It should be clear now. We can no longer afford if indeed we ever could to think only of the now and not consider future generations. There is no excuse and no possible sense in doing anything less than realizing and understanding the vital part that such protection plays. The despair and social unrest that would result in not doing so would be beyond anything we have seen. The best current examples are all around us in the aftermaths of storms and other disasters such as Katrina Haiti Pakistan. Without intact natural resource areas there is no fallback of hope for clean air water and all of the many other needs including hope for survival. These areas are not a luxury. They are of vital necessity and vital national security. Energy production comes not only in obvious forms. In fact by far our greatest energy resources are NOT as obvious and lie in such resources that the United States is blessed with. Please consider this carefully and make a case there is ample evidence for the impact of doing anything less than conservation of these areas on our national security.

Without a President's strong commitment the unique beauty of our lands will be destroyed in the name of profit for big oil big gas condomoniums shopping centers anything that will turn a profit. We need our nature preserved especially with the increasing population growth.

It is not too late to preserve what's left.

The life of our planet is more important than the economy.

I am concerned about the future of our wilderness areas.

Besides being an inspiration and source of beauty our parks forests rivers and wetlands provide real benefits to people both physical and mental. They clean our air and water allow for biodiversity to continue and flourish are sources for medicines as yet undiscovered and more. Once they are gone there is no way to retrieve them. We cannot allow them to be destroyed.

I think the condition of this beautiful earth for which we have given responsibility and blessing overshadows all issues of my lifetime.

Your constituents placed you in office for change for the better.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

One we believe as taxpayers this is an appropriate path. But we should not have to drive 25 miles to get to an outdoor space. (And I am not talking about the golf course or the baseball fields or soccer fields we are not allowed to use anyway). But real space in every town or city. Nor does a sidewalk make a nature trail. What do people travel to see the beautiful shoreline the state parks the architecture. We don't say lets go look at the miles of urban/suburban mall sprawl. The "Ugly America"! We look for the unique characteristics areas offer. What is it the richest Americans seem to create they have nice big beautiful homes with beautiful grounds or surroundings or travel to beautiful places buy ranches in Montana .....or behind walled communities with amenities. I despise what developers have done across America squeezing people onto plots 15' front and back yards. And most seem to continue to do everything the same old ways even though we know more. Towns and city's need may many more open spaces. But citizens are not people the corporations get far more ear time than we do. Example: My family came from a town called Brunswick Ga. we think we may retire there however it has not always been a successful downtown Its been taken over by the political powers and it has been turned into an area just for the government offices schools recreational park with the historic homes hanging on. Now an old hotel went down some boat slips built and even condos were going up they would have a great view across from the marine which has brought a ton of people into the town. Anyhow there is this open area a blocks worth that the people like but a local judge wants to build a correctional facility right there. Now 70 percent of the people oppose this but the judge wants it so now it is in court 23 years later. Neighborhoods are built with people and not all of them can afford the beautiful "amenities" some developments offer. We need many many many more public places.

If we lose our wilderness areas we probably won't be able to survive on this planet. We need them. And so do future generations.

When I was growing up I went to a nature camp for several summers. It was my first real experience of being in and learning about the outdoors and it made a huge impression on me. I fell in love with nature and came to recognize how powerful and important our connections with the natural world are. Over the years many of my favorite great outdoor places have changed and not for the better. Many of the big trees in the forests are gone and with them much of the wildlife that we all love to see. The beaches I grew up with formerly teeming with life are now largely barren and have been for quite some time. People have been losing touch with the natural world that sustains us physically and nourishes us spiritually.

We do our children a great disservice if we fail to protect our natural places for their benefit and enjoyment in years to come.

Preservation of nature for future generations and for the survival of our species is my primary concern when casting political votes. I know there is political pressure and lobbies attempting to thwart preservation efforts that appear at odds with corporate interests/money.

We don't need NEW roads...we can't take care of the ones we have...we need forest.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Once the land is destroyed built on developed and ruined it's too late.

IF WE DON'T PRESERVE OUR WILDERNESS OUR CHILDREN AND GRANDCHILDREN WON'T KNOW THE MEANING OF THE WORD.

Once they are gone there is no turning back.

These days the natural environment is under the greatest threat from humans that it has ever experienced. As a huge population with vast technology at our whim we have continually nibbled away at more and more of our natural heritage so that the cumulative loss is sizable. Furthermore after a decade of a far Rightwing Republican Congress with a far Right wing president for eight years the environment and the laws and agencies that were to protect it has been massively eroded.

I was raised to appreciate and care for all wildlife. As a birder I have visited many of our national and state parks & wildlife refuges during the past 35 years. Flying over the northwestern U.S. often over the years I have seen more and more habitat destruction vast stretches of oil & gas facilities and large areas of denuded forests in the Oregon & Northern California Cascades where lumber companies did not replant any trees. Our nation's waterways have become very polluted. Years ago the numbers of bird species were plentiful to see during spring and fall migrations. Now when I bird along the C&O Canal I see far fewer numbers and some species have become so rare that I miss them altogether.

Our wilderness lands and parks should be the enduring legacy passed from each generation to the next. Such lands have been decreasing with each generation the land plundered for the primary enrichment of the few leaving ruined landscapes and ecosystems for all of us for many generations to come.

I am very concerned that the next Congress will not be as environmentally friendly as this one....so there's not much time to get things going.

Please don't let them take our wild places away before I get to see them all.

## Discussion Question 2

### *Written & Online Comments*

*(cont.)*

I have spent most of my life in the outdoors in the Olympics the Cascades and Mt. Rainier here in Washington State summer after summer. Over and over when forced to return to "civilization" I've noticed I had to fight depression due to the shock of returning to the filth and degradation we live in and accept as normal here "down below" and then gradually over the winter I too began accepting trash derelicts bad tasting water air so thick buildings disappeared dust incessant noise violence as "normal." However the contrast between "out there" and "back here" gradually became more and more blurred as the years went by while watching air pollution slowly day by day approach the west flank of the Cascades pile up against the Mts then one day send streaks of brown/gray across the Cascades into Eastern Washington. It got so bad some summers I could not see from my fire lookout if there were any smokes to report just this slowly roiling brown/bluish air. At Mt. Rainier we began having contests to see which of us would collect the most used disposable diapers from trails and roads etc. ( I even found one in a water source! ) I have no idea of the amount of trash I personally hauled out of the back country when on trail patrol. We all felt in our gut a simmering rage and utter helplessness to stem the pollution flood even as we too began accepting it as normal. And then Earth Day. Year after year after year. Hope! We no longer felt "weird" for our efforts to clean/protect the outdoors as our efforts gradually became applauded to the point we began seeing small efforts to clean and green our cities transportation systems etc. And now from the Obama Administration this new program Americas Great Outdoors. The simple conclusion for me as President Obama has put it so eloquently is hope. Let's move forward on protection restoration and acquisition of new wilderness areas. My quoted poem moves from rage & helplessness to that hope.

Cathedral Slipping through the dappled forest Quietly with deer foot step A Seeker comes to worship there In grand cathedral of the trees Douglas Fir with solemn visage Wrinkled from their centuries lived Grandpa trees enormous grave Provide a living sanctuary Sunbars for the candle light Music from birds insects streams Incense from the fragrant forest vanilla leaves and nettles ferns red wood cedars hooded priests Line of seedlings on a nurse log Altar servers dressed in green The Message given in the silence Directly to the Seeker's heart In anguish praying there that the dreadful wreck we've made of this The planet home entrusted us Be forgiven healed in time as We didn't know at first And then we did not care avarice would cause our Earth despair While greed for MORE o'erwhelms us all plants and animals die off extinct Our weather turns bizarre against us Nature plans our punishment Sick at heart he cries for shame "O Great Spirit take me as A sacrifice to heal this land My blood and bones be taken up Multiplied like loaves and broken by your kindly hand to dust Blessed and used by Spirit Wisdom Sown in healing 'round the world" Long moments pass there while he weeps anguished whimpers screams of rage spittle flying eyes aflame then it's over and a broken sobbing Seeker Tear blinded stumbles on away the huge old trees with wisdom faces nod and murmur to themselves as the Hand of God encircles him

Losing the wilderness will mean losing a part of our soul and the spirit of America.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Protecting the wilderness America has left is about more than recreation spiritual renewal and creative inspiration although all of these are important. It is about the future of life on Planet Earth including human life. Species extinction is increasing rapidly as is the spread of diseases and pests around the planet. Our wilderness areas are the last refuges of many potential solutions to humancaused problems as well as incubator sites for environmental restoration. They are where healing of the planet can start. The question is not so much whether the next generation will be able to enjoy America's great outdoors but will they have a liveable planet?

If the great outdoors are not protected now they will be lost for future generations.

It is a Planet not an Empire and the term Mother Earth is not just words. The Earth is our mother and if we do not take better care of her all will suffer as is happening now with both Flora and Fauna being tremendously exploited with little or no thought of the consequences.

I just don't get where Obama is coming from: Siding 80=9% with the GOP or their nasty representatives in and out of Congress. I believe your hypebut was I a sucker. Now we get to watch you Bushclone the rest of government that you promised you would preserve for American citizens. How do you sleep at night? I find it difficult to thank you for your failed leadership in shaping a bold conservation strategy I hope you are going to resurrect your campaign promises before 2012.

What will your legacy be to our children our grandchildren and our nation?

What's the point in any effort if we have no earth to survive on.

We can best keep enjoying the great outdoors by not decreasing what protection there is and increasing regulations designed to protect the great outdoors and it inhabitants. We can also continuation to enjoy the great outdoors by cleaning up the pollution in government. There is a rotten spell that has been emanating from government for some time now from all three branches of what is supposed to be a representative democracy but the only ones getting representation are the corporations...need I say more.

I am an elementary teacher who is alarmed at the lack of experiences children have beyond the walls of their bedrooms and computer screens. I have children ask me "What is nature?" Of course they know after a few weeks inside and outside of my classroom. wilderness monuments wildlife refuges parks forests trails wild PS Michelle has the right idea with her White House Garden. Kudos to her!

Once it is gone it is too late to save it.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

It's so easy to take our lovely country for granted. Because of our behavior countries that have little impact are suffering at our expense. PLEASE fight the corporations!!!!!!

I want my kids and my grandchildren to be able to enjoy the beauty of nature when I'm long gone. I don't want them to grow up in a world that doesn't appreciate the great outdoors and only cares about material things. I wish for them to see nature and actually enjoy it and want to be there. I know so many people who don't care about the environment and it's because they don't realize how important it is. I want all people to realize the importance of nature and to be able to enjoy it. It really matters.

Reverse the deterioration of our National Parks by overuse

Priorities for me are that we do not compromise existing wilderness by allowing mining logging road building which would harm the water the forests the natural beauty of these areas. That the department of interior cannot sell public lands to the highest bidder. That science and nature are used to determine how to best protect areas that are open to development for business as well as citizens to create a win-win. That we enforce clean air and water regulations. Businesses that pollute are held responsible.

I teach too many students who have never been exposed to nature and an appreciation of all life forms. The first reaction of many of them is to step on a bug shoot a deer or use a street as a trashcan. We need to not only preserve our wilderness areas but to add programs accessible to all citizens especially the young ones that will teach responsibility and an understanding of the web of life.

This is not just about the next generation being able to enjoy the great outdoors. Whenever we take away protected land it usually is a stopgap measure with no long range provable positive solution in mind. However when we destroy the land the impact is long range with an irreplaceable loss. Please do not engage in stopgap measures. As the Native Americans say one must see the effect of your actions on seven future generations. We are so untrained in this thinking and you have the power to shift that.

It is of paramount importance to protect our wild spaces. As our population continues to grow these areas are necessary to provide spiritual relief to our every day grind

We are quickly using up the earth's resources. Now is the time to become conscious of the real facts to begin conserving preserving and restoring all that nature has given us.

## Discussion Question 2

### *Written & Online Comments*

*(cont.)*

Beauty especially natural beauty is being pushed aside in our fastgrowing and sometimes outofcontrol world. The sanity and awe that come from being in nature are what have sustained me and my children through times of stress and adversity. It is a comfort that is ours by right and citizenship. It is also our right and responsibility to maintain and conserve the diversity that will surely provide life for our descendants into the future. I am doing my part by becoming a woodland steward and supporting conservation causes. I know I can do more.

I know you think LONGterm and of future generations as a parent and a responsible citizen although so many people don't have the luxury of thinking for the future. Sustainability is not just a catch word it is a necessity for all life. I want the next generation to enjoy America's great outdoors and REAP the benefits of the watersheds bigeochemical cycling pollutant filtration and nutrient sources of the future.

This is the most important issue for me. The loss of the middle class is important but without a connection to Nature we will be lost as a species.

As a mother a person who appreciates the grandeur of nature a student of nature who realizes all the critical services nature provides to us which we eradicate at our peril and a citizen who votes and assesses voting records I want the next generation to be able to enjoy and benefit from America's great outdoors too.

Improve Watersheds This great country has always protected its wildlife and their habitats with the Endangered Species Act. Now however it seems that no one in our Congress Senate or leaders of our states care about what has always been one of our greatest assets. Do we want our children grandchildren and future generations to look at these wonderful animals in history book pictures because we have slowly destroyed them by the greed of the American people. These animals have no one to protect them except us. God created them for man to take care of they are a vital part of our heritage please insure that they are a vital part of our future. Thank you for getting protections for our wildlife and their habitats.

I am fortunate enough to live with the redwoods in Northern California which were nearly wiped out by lumbermen before protective laws were passed. It is up to our elected officials to advocate for the preservation of our national treasures. We are counting on you.

If nothing is done to save this your children and grandchildern will never know the joy and beauty that was originally created by our Great Father in Heaven.

We need to protect future environment including wildlife and all elements of ecosystems for future generation. Please stress to the public that we must overcome with vigor the selfishness and selfcenteredness that seems to wish to use up resources and kill the golden goose that is our planet that provides our water and air and that sustains our life. We have obligations.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

We need to protect our public lands for future generations!!!!!!

I am aware that in this time the main goal is to make corporations happy but we must think of our future and the future of our kids. It would be a sad day when there is nothing for them left to see besides trash and buildings.

We cannot continue to destroy/degrade wild America. The repercussions are too awful. We are supposed to be stewards of this planet. We need to do a much better job.

With all the carbon dioxide in the air our country is in need of as much oxygen as we can produce. Green plants and trees give off oxygen. That is why I want you to protect and conserve America's land parks and forests. Clean water is a top priority for America. We need to protect our scenic rivers lakes and creeks. Americans take oxygen and clean water for granted. These two commodities will not last forever if we do not conserve them.

Having space outside connects people to the land and supports care for the future of our planet. If we do not have space outside we lose the ability to care about it and our future on a livable planet.

The key points are well covered in the letter above but I would like to add my personal feelings to this. In the past few years I have spent time to go internally and discover my true core values. Many people do this maybe before they are in their 50's but they do the self examining to find these. In the truly hard uncertain times of this era I know Nature is my core. To be unable on a daily basis to enjoy the fluttering butterflies the song birds busy taking care to find their next meal a box turtle slowly crossing the flowering wildflowers the beautiful sky at night would be unnatural to me. I am one of the lucky individuals who has the opportunity to live in an area that is being protected. While not a National Park the NJ Pinelands is a National Reserve. Protecting all of our land should be our priority. The land does not belong to anyone we merely babysit it for the next generations. On my watch I'd like to believe we will continue to do just that save it for all to come. Enjoying the wonders of this great Earth is OUR right. Please continue to go to all lengths to save every possible inch of America.

I am asking you to preserve the Great Outdoors in the face of indiscriminate development urban sprawl increasing population and fewer and fewer open space for people to experience for a sense of peace and to reconnect with our natural world.

We need to work together to undo the past administrations bad policies and protect these lands instead of giving them up to special interests and dirty fuel industries.

fire salazar! Then do the right thing and stop corporate/congressional greed and save the planet....you do have children don't you? Do you want to leave them an unlivable poisoned planet??? Take action now or consign your descendants to a horrible future and a terrible present!

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Knowing that there is some wilderness left and that there exist wildlife refuges give me spiritual solace even though I live in the urban environment of the city of Philadelphia. Nature has sustained me in my often difficult life on this earth as a refugee immigrant from World War II. I deeply worry about the protection and survival of the American flora and fauna against corporate greed.

I am concerned with the WILD HORSES AND BURROS being roundup and often killed by getting in to the hands of the wrong people from the BLM we need to protect our western states from Uranium digging. WE must protect our vast forest land and wildlife. The past 2 yrs. have been nothing but killing wolves horses dying from roundups and for what? to bring in the big oil companies to destroy our lands meant for our wild life. Is our greed for money so important to rid our country of any historical location? This country has to slow down we have destroyed what God has provided. Our government has done a lot of harm to our great outdoors.

Limit access by offroad vehicles which ultimately degrade the land

Too many of our youngsters do not have the opportunity to be in the outdoors in the beautiful places all over our land. They do not get to have the experiences of how nature works and balances itself. Suburbs and tenements and concrete pavements not only take away any beauty but also increase our environmental pollution.

We have polluted our waterways and land in the interests of massive food production so it is more important now more than ever to help protect what remains of our wilderness and waterways from further toxification. It is so disheartening to fly across the country and no longer see blue waterways below. Please help save our land.

I'm an American and I've seen enough housing developments strip malls and strip mines in this country. We need LESS development and MORE of the natural outdoors preserved!

I grew up spending most of my summers in the Adirondacks or St. Lawrence river and can't imagine my Grandniece and nephew not having that opportunity. PLEASE not only save and protect our wild spaces even more importantly help America be a benchmark for saving our Planet (as a habitable space for people and wildlife). To me that is one of the key things the world needs to wake up to before it is too late. Make us the leaders not the followers in this effort I beg you...

I enjoy the great outdoors a lot myself and always clean it up so that there is something for the next generation; therefore I expect the government to help ensure that there is a great outdoors too.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

To be more specific how about starting with protecting what is ALREADY supposed to be protected but isn't? Like the WILD HORSES and their ancestral land given to them by court order and law but wildly disregarded and blatantly ignored by BLM who rounds up these magnificent creatures with OUR TAX DOLLARS! In addition these millions of acres that are supposed to be protected need to be managed responsibly and that includes getting CATTLE and SHEEP OFF THE PUBLIC LANDS! These lands belong to the American people and if we continue to let cattle ranching mining and other destructive activities on these lands then our grandchildren will inherit deserts devoid of wildlife and soul. I'd like to see species protected on a much larger scale such as WOLVES which we have treated horribly! These animals should have sanctuaries where people can visit but not harm or destroy the land. We need to become stewards of the land with a mentality that we ought to take care of it for many future generations and not merely to profit from it in the short term. For the 21st century I trust that you will take our public comments seriously and into consideration.

One of the largest failings of our conservation "system" is the lack of connection between various reserved area. Without these connections populations become isolated and much more fragile than a larger combined population would be. The Adirondack Park is a prime example of what is needed.

As our population continues to explode creating and continuing wildlife refuges and protecting new wild places were never more important.

As a child my parents took our family to many of the National Parks in almost every state and I have many fond memories of the beautiful mountains rivers canyons oceans forests etc as well as the wildlife. It disturbs me to see mining, logging drilling and otherwise destroying the integrity of the environment that belongs to all of us.

WE STILL HAVE SPECIAL LANDS THAT NEEDS PROTECTED FOR US AS WELL AS FUTURE GENERATIONS FROM MINING DEVELOPMENT AND INDUSTRIAL USE.

I've live most of my life in southern California. I'm now living in central Florida. I've enjoyed the incredible beauty of our country's southwest and now am getting to know appreciate and love the southeast. I've also had the opportunity of enjoy other areas of America's great outdoors. The very health and wellbeing of our nation and its people depends on maintaining the integrity of these areas. Our great outdoor spaces and wilderness areas must be protected.

Nature doesn't have a chance without purposeful conservation. We can't afford to destroy more please conserve and restore

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I have just come home from a vacation in southeast Alaska and Glacier Bay. I am overwhelmed at the expansive beauty of this place and the abundant wildlife on land and in the sea. I had the opportunity to speak with many who grew up in this area or have been visiting here for many years. They have seen the changes here from overfishing ignorant trophy hunters and clearcut logging and none of these changes are good. I am not naive to the needs of growth but we are just beginning to understand the urgency of conservation.

Corporations have WAY TOO MUCH POWER especially as concerns our environment!  
Corporations are NOT PEOPLE! MONEY IS NOT SPEECH!

I have been backpacking in the western US wild areas for over 40 years and have begun to share this experience now with my children. I am concerned that there is less wild land now than even a few decades ago and feel strongly that we need to take steps to preserve what little is left.

For those of us who live in a watershed environment like we do in Michigan the water becomes vital. What we put in obviously we take out. One simple example is that of salmon. Over the 25 years of living here we have gone from being able to fish for salmon from Lake Michigan to not being able to eat it. Our efforts are beginning to pay off for Lake Erie I hope that we are wise enough to continue to clean things up.

Our country is blessed with a wealth of beautiful natural areas that should be preserved. Too often these types of concerns fall to the wayside when issues involving power and money take precedence. But these are the things that are not replaceable. They are treasures and should be treated as such.

And more importantly I also know that there is a careful balance in nature to the benefit of all and everything. When we upset that balance for man's convenience we are inviting disaster for man animal plant and indeed our planet.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

My husband and I both work in land conservation in North Carolina. While we've seen tremendous strides in public lands acquisition funding and management we are all too aware of the largescale threats of population growth and global warming. The first inevitably places more and more pressure on our natural resources through inappropriate land use. The second places more insidious stress on all of our natural lands since global warming is likely to cause more erratic weather increased catastrophic fire sea level rise including saltwater inundation of freshwater resources and increased exotic invasion in natural areas made more vulnerable by environmental stress. Setting aside MORE and LARGER natural areas is not the only solution; we obviously have to reduce the source of global warming limit population growth through education and engage in wise land use planning. However acquiring and protecting large blocks of forest will help reduce global warming acting as a carbon sink and a source of oxygen. Acquiring natural areas with high diversity clusters of rare species and relatively little evidence of disturbance will ensure that these areas act as reservoirs to minimize species and natural community losses. And acquiring extensive areas along rivers and streams (of at least 300 feet in width) will ensure that aquatic resources are protected for our drinking supply as buffer against flooding and for the rich diversity of species which rely on riparian resources.

I am a teacher and mother who values above all else the need to pass on to our children a clean environment rather than one damaged beyond repair by humankind. The most important challenges now facing us as a society a country and as human beings are (a) the need to develop sustainable methods of producing energy (b) the need to protect and preserve the outdoor spaces and wilderness areas we have left are.

As someone who has found the wonderful and much needed respite in getting into a wilderness setting to recharge and relax I cannot encourage you enough to protect what seems to be rapidly disappearing. Wealthy "owners" of lake shores here in Minnesota seem to believe they can do and build anything they want destroying the God given blessings I believe need indeed must be preserved. Why do a few always think they have all the rights that ought to be shared with all? And when those "powerful" folk buy legislators even governors with their wealth so no rules or regulations get passed we have destroyed what may never be reclaimable!

I look at the mountain top mining and see how easily we destroy beautiful places in the name of progress. I fear how readily we kowtow to corporate demands and claims of saving the economy by destroying nature.

As a parent I am especially concerned about the legacy I leave for my children.

Mr. President we need to protect our environment and wildlife. If the Gulf is not a lesson this nothing will ever be. To more in that direction we need to fire Ken Salazar and replace him with an environmentalist. Unless that is done we are spinning our wheels. Thank you.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

I am a Cubmaster for my sons' Cub Scout Pack 58 in Fairmount GA and we frequently go on hikes and camp around our area of NW GA. It is very important to me that my boys and the boys of my pack have the opportunity to experience the wilderness. However if we don't continue to take care of our wilderness areas they will disappear to development. We encourage our children to do their part by cleaning up trash and leaving things better than when we found it. It is very important that this is a priority on a national level also.

Our shared outdoor spaces provide the opportunity for human interaction with the natural world and as a result of this interaction improvement in our collective physical and emotional health. Understanding the advancing threats placed upon many of these natural areas we would wisely protect what we have now. In order to do this our nation's people need to know what they have even if they do not live close to these resources and do not have first hand knowledge of these resources. The way in which they will have this knowledge is to visit natural areas and enjoy the splendor that is there. For this reason I ask your administration to take the lead in this America's Great Outdoors project!

...Dear President Obama. PLEASE TAKE TIME NOW TO HEAR OUR HOPES AND CONCERNS FOR OUR AMERICA'S FREE AND OPEN SPACES. SOMETHING MUST BE DONE PLANS FORMULATED TO PROTECT THE NATURAL BEAUTY OF OUR COUNTRY. I ASK YOU TO TAKE TIME AND TAKE NOTE PLACING CONCERNS ON THE HIGHEST LEVEL AS THE LEADER OF OUR COUNTRY I KNOW YOU SEE THE NEED.

My husband and I are retired and have been lucky enough to travel across this country enjoying some of the wild and historic places as we go. The young people of this country deserve to have the same opportunity now and in the future but what will be left for them?

THE MAJOR DIFFERENCE BETWEEN WHAT I WANT TO DO WITH AMERICA'S RESOURCES AND WHAT OTHERS LOBBY FOR IS THAT WITH MY METHOD THE LAND AND WATER REMAIN NATURAL WITH NOTHING DESTROYED OR CHANGED THAT CAN NOT BE UNDONE. WITH OTHER METHODS THE PRESENT GENERATIONS USES OUR RESOURCES AND LEAVES LITTLE OR NOTHING FOR THE FUTURE. PLUS ONCE USED UP AND PERHAPS DESTROYED IT CAN NOT BE UNDONE. WE WILL ALL DIE EVENTUALLY AND TAKE NOTHING WITH US SO HOW WE USE THIS EARTH IS WHAT WE LEAVE FOR THE NEXT GENERATION. LET'S STOP BEING SELFISH RIGHT NOW.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Wilderness areas in this country have been under siege by corporate interests usually energy recreational vehicle enthusiasts or ranching and any other organization that might find interests in public wilderness areas. Our wilderness areas need to be protected to preserve them as wilderness. We need a movement much like at the birth of our national parks as many of the same forms of environmental destruction threatened those lands so many amazing habitats are being destroyed like the hilltops of Appalachia. This kind of land preservation offers benefits more widely and in a more sustainable way than developing or extracting from the land which is a net loss to the public. Preserving wilderness improves watersheds and wildlife habitat critical in a time in human history where species are vanishing at an alarming rate due to human habitats and when over 6 billion people on need fresh water on a planet where less than 1% of the water is drinkable and 50% of that is accessible. In addition now more than ever we need places where we can have experiences in raw nature to help counter and balance our immersion in technology. Finally providing increased access and recreational opportunities to the public is the highest and best form of land use we can pursue. More than the deficit which comes and goes wilderness is a true gift we can give to future generations.

I also have a very specific request: the elimination of mountaintop removal mining. Companies have had free reign for decades to destroy mountains in the Appalachians mountains with names trails homes and histories and have wreaked environmental havoc in the country's oldest and most diverse ecosystems; indeed one of the most diverse in the world. It is not an exaggeration to say that they rape the land and then leave it broken. It is a practice that should be stopped not one that should simply be regulated or diminished. Many of our most beautiful spaces have been permanently lost.

I can't believe what a bunch of ignoramuses you guys are when it comes to the environment. You just don't get it. Shooting wolves from helicopters. Allowing the BLM to poison animals because of some outdated unscientific erroneous policies. Giving into red states on environmental policies getting NOTHING in return and allowing pristine drinking water and air to be polluted and cause disease and death in the surrounding populations. Grow a spine

Inter alia I absolutely deprecate the intrusion of ORVs into wilderness areas.

## Discussion Question 2

### ***Written & Online Comments***

***(cont.)***

Our Great Outdoors need to be protected by empowering the local land managers with the authority to enforce the land usage laws already in place. We DO NOT need any more wilderness or land areas closed to the public. What we need is for our public lands to be more accessible by the public including motorized travel and better access for the handicapped. Address Public Awareness of responsible OHV usage Protect access to all public lands including OHV trail systems by increasing land use education and etiquette and by increasing motorized access to public lands including motorized access Fully Fund all motorized and offroad trail opportunities Fully fund our local USFS districts to enforce the laws and regulations already in place to protect our public lands. Fully Fund land use education programs Please DO NOT lock us out of our Public Lands but instead create a way for our lands to be better accessed and protected by better land management.

The great wilderness is sadly gone. The open spaces that remain however are still of immense environmental and social value. These spaces must be preserved and enhanced for us today and for future generations.

Please consider that people aren't the only beings on our planet and the rest of the natural world needs to be protected from our heavy footprint.

Regulate Toxins in our Waters More Stringently The EPA and agencies in the Department of the Interior should be monitoring and regulating pollution and toxic dumping and land use issues. Their concern should be in protecting the environment not in helping corporations abuse our land and waterways. I want the children of my children's children to enjoy our beautiful country. Please follow through!

We have already desecrated so much of America and the resources the land has given us. Enough is enough. Global Warming is here steps MUST be taken to not only preserve what we have but to rebuild restock our resources. The future IS with our generation. Please know and realize how very very important this is.....

We have been altering our environment in radical ways for too long.

## Discussion Question 2
