# www.utahta.wikispaces.net

The screenshot shows the homepage of the Utah Technical Architecture Wiki. At the top, there is a navigation bar with the Utah.gov logo, "UTAH.GOV SERVICES", and "AGENCIES". A search bar is on the right. Below this is the DTS (Department of Technology Services) logo and a "home" button. The main content area features a large blue banner with the text "Utah Technical Architecture Wiki" and a silhouette of a person at a computer. Below the banner, there is a "Welcome to the Utah Technical Architecture wiki" section, followed by a paragraph explaining the site's purpose and a link to the "What's New" page. To the right of this text is a Twitter follow button. Below the welcome message are sections for "Outcome", "Mission", "Vision", and "Goals", each with a brief description. The "Goals" section contains a bulleted list of objectives. At the bottom of the main content area is a "Utah Department of Technology Services Calendar" for October 2009, showing a grid with dates and a specific event on October 1st.

## Utah Technical Architecture Wiki

### Welcome to the Utah Technical Architecture wiki

This site is home to technical standards and architectures supported by the [Utah Department of Technology Services](#).  
If you're looking for recently approved standards, visit the [What's New](#) page.

**Outcome**  
Establish the evolving technical blueprint and accompanying standards and guidelines to manage the integration and interoperability of the old with the new across Department of Technology Services (DTS) and agency resources.

**Mission**  
Develop and use the Technical Architecture to improve government efficiency and effectiveness.

**Vision**  
The Technical Architecture is the cornerstone for the design, development, and implementation of information resources across State government.

**Goals**

- Improve utilization of government information resources to focus on core agency missions and service delivery to Utah citizens.
- Enhance cost savings and cost avoidance through use of Technical Architecture on a statewide basis.
- Increase cross agency and intergovernmental collaboration.
- Develop and maintain the TA.
- Review, reconcile, and approve architectures for agency core Lines of Business (LOB) and common IT services.
- Establish an effective lifecycle management relationship with the DTS Project Management Office (PMO) and implementation groups within DTS.

★  The INSIGHT Project  Protected page ▾ discussion (38) history notify me

## National Intelligence Estimate On Infectious And Chronic Disease

### About The Project

The [National Intelligence Council \(NIC\)](#)  is drafting a National Intelligence Estimate (NIE) about the implications of infectious and chronic disease on United States (US) national interests, and has accepted this contribution from a graduate class of 26 student analysts in Strategic Intelligence at Mercyhurst College. The articles and discussion on this wiki will be considered as contributions for the update of the January 2000 NIE, "[The Global Infectious Disease Threat And Its Implications For The United States.](#)" 

The [Mercyhurst INSIGHT \(Identifying National Security Implications of Global Health Trends\) Team](#) conducted this research from 04 December 2006 to 20 February 2007. This project differs from its predecessor in focusing on the strategic consequences of infectious diseases for nations and regions over the next 10-15 years, instead of just the disease trends themselves. Specifically:

- **KEY ESTIMATIVE QUESTION:** What are the most important and most likely impacts on, and threats to, US national interests (including but not limited to political, military, economic and social interests) resulting from infectious and chronic human disease originating outside the US over the next 10-15 years?
