Notes and Brief Reports

Old-Age Benefits in Current-Payment Status, by Sex of Beneficiary and State, End of 1955

At the end of 1955, nearly 4½ million persons were receiving old-age benefits. Women made up more than a fourth of these beneficiaries, twice the proportion in the years 1940-49. The liberalized insured-status provision of the 1950 amendments resulted in an increasing proportion of female old-age beneficiaries, and the provision of the 1956 amendments that lowered the retirement age for women from 65 to 62 will bring a further increase.

The accompanying table shows the number and average monthly amount of old-age benefits in current-payment status at the end of 1955, by sex of beneficiary and State of residence. The table also shows, for each State as well as for the Nation, female oldage beneficiaries as a percent of all old-age beneficiaries at the end of 1952 and 1955—the only 2 years for which these data are available.

From 1952 to 1955 the proportion of old-age beneficiaries who were women increased from 22 percent to 27 percent. Gains ranging from 1 to 16 percentage points were registered in that period in all the States except Nevada. For beneficiaries living in Nevada, Alaska, or a foreign country, however, the percentage dropped from 1 to 3 points. At the end of 1955, the number of female old-age beneficiaries measured as a percentage of all old-age beneficiaries was highest in the District of Columbia (43 percent) and New Hampshire (39 percent) and was lowest in Nevada (8 percent) and foreign countries (10 percent).

The average old-age benefit in current-payment status has risen from \$22.60 at the end of 1940—the first

year monthly benefits were paid—to \$61.90 at the end of 1955. Average benefits paid to men exceeded those paid to women by 25-30 percent during the years 1940-49 and by 30-35

percent in recent years. At the end of 1955 the average old-age benefit was larger for men than for women in all States except North Dakota. The percentage by which the average for men exceeded that for women was highest in Alaska (118 percent), New Hampshire (54 percent), and Ohio

Estimated number and average monthly amount 1 of old-age benefits in current-payment status as of December 31, 1955, and percentage distribution by sex of beneficiary for 1952 and 1955, by State

[Distribution by sex based on 1-percent sample of female old-age beneficiaries; figures in italics may be unreliable because of the large probable sampling error]

¹ For persons receiving both an old-age benefit and a widow's, widower's, or parent's secondary benefit, the amount of the reduced secondary benefit is combined with the amount of the old-age benefit.

¹ For additional data for 1952, showing the number and average monthly benefits, see table 39, Appendix I, Analysis of the Social Security System—Hearings Before a Subcommittee of the Committee on Ways and Means, House of Representatives, Eighty-third Congress, First Session, 1954.

and Michigan (45 percent); it was lowest in Wyoming (6 percent), Nevada (7 percent), and Arkansas (11 percent). For men, average old-age benefits were highest in Connecticut (\$74.51), Michigan (\$72.06), and Illinois (\$71.26) and lowest in Puerto Rico (\$42.03), Mississippi (\$50.68), and Arkansas (\$51.69). For women, average benefits were highest in Wyoming (\$56.74), Nevada (\$56.41), and Connecticut (\$55.07) and lowest in Alaska (\$31.43), Puerto Rico (\$36.57), and South Dakota (\$42.35).

Expenditures for Hospital Care, 1953-55*

The civilian population of the United States is purchasing hospital care at a rate of about \$6 billion annually or about \$37.50 per capita. Hospital care is obtained in three ways-through the payment of taxes at all levels of government, through prepayment by the purchase of health insurance, and through direct payments at the time of receiving care. Articles and tables appearing in various issues of the Bulletin present separately the public and the private components of the Nation's hospital bill. They do not, however, show the combined expenditures, nor do they show the extent of expenditures for the various types of hospitals so that the extent of public financing of nervous, mental, and tuberculosis institutions and of private financing of general hospital care is not evident. The following paragraphs describe the extent to which each form of financing of the three major types of hospital care was used for 1953-55.

During the calendar year 1955 public and private expenditures for hospital care in the United States amounted to \$6 billion—almost \$1 billion more than in 1953. When the net costs of purchasing insurance against hospital care 1 are added, the amount spent for hospital care

¹ Excludes the net cost of voluntary hospitalization insurance—\$284,3 million (1953), \$324,4 million (1954), and \$339,4 million (1955). Also excludes (because they cannot be identified) vendor payments for hospital care under the public assistance, vocational rehabilitation, and workmen's compensation pro-

data; includes the following expenditures for Veterans Administration hospitals—\$667.6 million (1953), \$708.0 million (1954), and \$750.1 million (1955), \$1 nehudes payments of \$3.7 million (1953), \$5.7 mil-lion (1954), and \$6.3 million (1955) for hospital care

equaled \$5.3 billion in 1953, \$5.8 billion in 1954, and \$6.3 billion in 1955 (table 1). Vendor payments for hospital care under the programs of public assistance, vocational rehabilitation, and workmen's compensation would make these totals slightly higher. The amounts spent for hospital care under these three programs cannot, however, be identified.

In each of the 3 years 1953-55, about 44 percent of the Nation's hospital bill was met through tax funds. Payments from State and local tax revenues met about 30 percent of the total, and Federal outlays accounted for about 14 percent. The percentage of the total hospital bill that was met by voluntary hospitalization insurance benefits rose from 26 percent in 1953 to 28 percent in 1955.

Care in publicly controlled institutions-whether it was financed from taxes or privately financed—accounted for about half the total expenditures each year. Privately controlled institutions-for the most part general hospitals-received the other half of the aggregate, amounting to nearly \$3 billion in 1955.
