## Notes and Brief Reports

## Family Benefits in Cur-rent-Payment Status, June 30, 1953

The number of families receiving monthily benefits under old-age and survivors insurance increased by nearly three-fourths of a million in the year ended June 30,1953 ; at the end of the fiscal year, monthly benefits were being paid to at least one person in 4 million families (tabie 1). Retired-worker families made up 74 percent of the total; they numbered almost 3 million-about 600,000 more than a year earlier. The number of survivor families totaled slightly more than 1 million, an increase of 125,000 for the year.

Average family benefits at the end of June 1953 showed substantial increases from the corresponding averages a year earlier because of the higher benefit rates provided by the 1952 amendments and the large number of awards of "new-start formula" benefits during the year--based on earnings after 1950 and the new benefit formula. Payments to all retired workers with no dependents receiving benefits averaged $\$ 52.10$ for men and $\$ 40.10$ for women, increases of 21 percent and 22 percent, respectively. The average for a retired worker and his zged wife was $\$ 83.60$ - 19 percent more than a year earlier.

Families with benefits computed under the new-start formula had considerably higher average benefits than those whose benefits were computed by use of the conversion table (table 2). For beneficiary families that consist only of the retired worker and that are receiving benefits determined under the new-start formula, the average benefits were $\$ 70.00$ for men and $\$ 50.90$ for women; for families composed of a retired worker and his aged wife, both of whom were receiving benefits, the average was $\$ 104.30$. At the end of June 1953, all retired-worker families receiving benefits computed under the
(Continued on page 29)

${ }^{1}$ Averages for general assistance not computed because of difference among States in policy or practice regarding use of general assistance funds to pay medical bills for recipients of the special types of public assistance. Figures in italies represent payments made without Federal participation. States not shown made no vendor payments during the month or did not report such payments. ${ }^{2}$ Averages based on cases receiving money payments, vendor payments for medical care, or both.
a A verages based ou number of cases receiving payments. See tables 10-13 for average money payments for States not making vendor payments.
${ }^{4}$ For aid to the permanently and totally disabled represents data for the 40 States with programs in operation.
${ }_{5}$ For Illinois includes premiums paid into pooled fund for medical care for October 1953 but excludes vendor payments made in October 1953 for medical services provided before the pooled fund plan began in August.
${ }^{6}$ Less than 1 cent.
7 No program for aid to the permanently and totally disabled.
${ }^{6}$ A verage payment not computed on base of less than 50 recivients.

## FAMILY BENEFITS (Continued from page 20)

new-start formula comprised about 18 percent of the total-double the proportion 6 months earlier; the proportion will continue to increase, since this formula is used for about 70 percent of the current old-age benefit awards.

For survivor families the average benefits ranged from $\$ 40.80$ for agedwidow families to $\$ 108.80$ for families consisting of a widowed mother and two children. The average benefit for families in which only one child was receiving benefits was $\$ 41.80$, and for families consisting of a widowed mother and one child it was $\$ 88.30$.
The distribution of all retired workers receiving benefits as of June 30, 1953, by amount of old-age benefit and by benefit-computation method is shown in table 3. The proportion of old-age beneficiaries receiving the $\$ 25$ minimum was almost 19 percent, 1 percent less than the proportion 6
months earlier. For men, the proportion receiving the minimum was about 14 percent, and for women it was 33 percent. Only 3 percent of the
old-age benefits computed under the new-start formula were at the $\$ 25$ minimum, while 21 percent were at the $\$ 85$ maximum.

Table 3.--Estimated percentage distribution of old-age benefits in currentpayment status on June 30, 1953, by benefit-computation method, ${ }^{1}$ amount of monthly benefit, and sex of beneficiary
