greater in the stationary population. The actual and stationary populations are relatively closer in 1954 than in 1900 because the birth rate has dropped since 1900 and immigration (most immigrants are young) was greatly reduced after World War I. The difficult question is: For how long, and how much, will the population increase? Between 1930 and 1940 it was generally believed that birth rates would stay where they had fallen or go even lower and that the population would soon cease to increase. Actually, birth rates increased from their low level in the thirties, and since 1940 the population has increased rapidly. This trend may continue for a long time. Technological advances may permit a much larger population without a reduction in living standards. Eventually, however, it would seem that the rapid growth must slow down, and then the age distribution of the population will approach that of a stationary population.

Mortality will probably continue to decline and lead ultimately to a population that is even older than the stationary population of 1954 mortality. It is difficult to predict how much mortality will decline. It is dangerous to set any limits to what science can do, but surely the decrease in mortality must stop somewhere. At the young ages mortality has been reduced to the point where accidents are the leading cause of death, and thus any further substantial reductions at young ages will require a reduction in the accidental death rate. The important question for old-age and survivors insurance is what will happen at the older ages. The answer depends on what can be done about diseases of the cardiovascular-renal system and cancer. A decrease in mortality would not necessarily increase the cost of old-age and survivors insurance, however, although it would produce ultimately a relatively older population. There would be some saving in the cost of survivor benefits, but that would not be sufficient to matter. If longer life is accompanied by longer working life, the number of aged beneficiaries might remain relatively the same.

State-Chartered Credit Unions in 1955*

Before 1920, 10 States had enacted credit union laws. During the next 20 years, an additional 33 State credit union laws were passed, and at the end of 1955 there were credit union laws in the District of Columbia, Puerto Rico, and all States except Delaware, Nevada, South Dakota, and Wyoming (table 1).

This summary report on operations of the State-chartered credit unions in 1955 was prepared from data furnished in response to questionnaires calling for composite data, which were sent to all State agencies concerned with the administration of credit union laws. Data for Indiana, Kentucky, and New Hampshire are as of June 30; those for Missouri are as of September 30; and the data for all other States are as of December 31.

State-chartered credit unions experienced substantial growth during 1955 (table 2). The number of active units increased 7.2 percent, from 7,814 to 8,373, between the end of 1954 and the end of 1955, and the number of reporting units increased from 7,713 to 8,244. Membership in the reporting credit unions totaled 4.1 million at the end of 1955, an increase of 364,760 or nearly 10 percent. At the end of 1955, loans outstanding to members exceeded \$1 billion for the first time. The total of \$1,073 million was 23 percent greater than that a year earlier.

Paid-in share capital of the reporting credit unions amounted to \$1,245 million at the end of 1955-an increase of \$199 million or 19 percent from the total at the end of 1954. The credit union laws of 30 States and Puerto Rico permit the acceptance of members' deposits in addition to the purchase of shares. At the end of 1954, members' deposits in these credit unions totaled \$58.5 million: at the end of 1955, they amounted to \$67.1 million. Members' savings in all State-chartered credit unionspaid-in share capital and depositstotaled \$1,312 million.

* Prepared in the Division of Programs and Reports, Bureau of Federal Credit Unions. State-chartered credit unions reported reserves totaling nearly \$69 million at the end of 1955. The increase for the year was \$11 million, or 19 percent, compared with an increase of \$9 million or 18 percent during 1954. At the end of 1955, total reserves equaled 6.4 percent of loans outstanding and 5.5 percent of paidin share capital. The corresponding ratios at the end of 1954 were 6.6 percent and 5.5 percent, respectively.

Total assets amounting to \$1.477 million at the end of 1955 were reported-an average of \$179,140 per credit union. In December 1954, assets totaled \$1,237 million, and the average assets per credit union were \$160.401. The rate of increase in total assets was the same during both years -19 percent. Reported net earnings totaled \$58 million at the end of 1955 and \$48 million at the end of 1954. For both years, net earnings represented the same proportions of paidin share capital and of total assets-4.6 percent and 3.9 percent, respectively.

The ranking of the States in terms of credit union development has changed little in recent years. At the end of 1955, Illinois had the largest

¹ Data not available.

Social Security

number of operating units, the largest amount of loans outstanding, the greatest assets, and the largest number of members. Two States (California and Illinois) reported \$100 million or more outstanding in loans. Five States reported \$100 million or more in total assets held by the State credit unions-Illinois, \$219 million; Massachusetts, \$134 million; Wisconsin, \$121 million; California, \$120 million; and Michigan, \$116 million. The Michigan units had the largest average assets (\$297,000), and Massachusetts was second, with \$282,000. These five States had 48 percent of the assets of all State-chartered credit unions at the end of 1955.

Real Estate Loans

Only the reports from Illinois and New Jersey stated that real estate loans were not permitted by the credit union law. Twenty-eight States reported that such loans were permitted, but 12 of them supplied no data on real estate loans. Reports from 14 States indicated that the credit union law was silent on the subject; of these, nine contained no data on real estate loans, and five reports (from Colorado, Oregon, Tennessee, Vermont, and West Virginia) contained either complete or partial data. Only 12 States reported both on loans of this type outstanding at the end of 1955 and on real estate loans granted during the year. The returns are not sufficiently complete to warrant any firm conclusions as to the aggregate amount of real estate loans held by State-chartered credit unions or the trend in this type of loan activity. These 12 States also made complete reports on such loans for 1954.

Data for 1955 are shown in table 3. Real estate loans accounted for 28.4 percent of total loans outstanding at the year's end and for 7.7 percent of the loans granted during 1955. The corresponding ratios for 1954 were 30 percent and 8.8 percent, respectively. Total loans outstanding, as re-

¹ States reporting on real estate loans. Data are for calendar years unless otherwise noted. ² Includes estimate for States not reporting.

ported by these 12 States, were 22.6 percent higher at the end of 1955 than at the end of 1954, and the amount of real estate loans outstanding was 16.0 percent higher; the total for all loans made during 1955 was 24.2 percent more than that in 1954, and real estate loans amounted to only 8.2 percent more. For each of the 12 States, the amount of all loans outstanding at the end of 1955 and the total lent during the year were higher than in the preceding year. In real estate loans, however, one of these States (Maine) had a smaller amount outstanding, and four States (Colorado, Iowa, Maine, and Michigan) granted a smaller amount.

Federal and State Credit Unions

The Federal Credit Union Act became law June 26, 1934. At the end ³ Data not available. ⁴ Year ended September 30. ⁵ Year ended June 30.

of 1955, Federal credit unions were operating in Alaska, the Canal Zone, the District of Columbia. Hawaii. Puerto Rico, the Virgin Islands, and in each of the 48 States. In those jurisdictions that have local credit union laws, a group desiring to organize a credit union may choose to operate under the Federal Credit Union Act or the local law. The Federal credit union law was patterned after the State laws that existed at the time of its passage, and it is similar in most respects to the presentday State laws.

During 1955 the number of reporting Federal credit unions increased 8.0 percent, compared with a 6.9percent increase in State-chartered units; total assets of Federal credit unions increased 22.7 percent, compared with 19.4 percent in the State units; and total membership increased 12.0 percent in Federal credit unions and 9.7 percent in the State credit unions. State-chartered credit unions, however, showed a greater rate of increase in number of units in 24 States, in total assets in 15 States, and in membership in 19 States. A summary of selected data for Federal and State credit unions as of the end of 1955 is shown in table 4.
