## **About this Document**

The Data Element Catalog represents a comprehensive summary of the data elements required by each clinical quality measure (CQM) selected by the Centers for Medicare & Medicaid Services for certain quality measure programs and that EHR technology would need to capture in order to satisfy the certification criteria adopted by the Office of the National Coordinator for Health Information Technology (ONC) in its 2014 Edition EHR certification criteria.

The following supplemental data elements will be required by CMS for CQM submission: Tax ID Number (TIN), National Provider ID (NPI) (EP measures only), CMS Certification Number (CCN) (hospital measures only), Medicare Health Insurance Claim (HIC), Date of Birth (DOB), Race, Ethnicity, Payer, and Sex.

The following data elements are organized by clinical quality measure. To review a compressed version of this catalog, or for to download the file as a spreadsheet, see <http://www.nlm.nih.gov/healthit/dec/>
