Chapter 01 1 Federal Wildland Fire Management Policy Overview 2 3 Scope 4 5 The Interagency Standards for Fire and Fire Aviation Operations states, 6 references, or supplements policy for Bureau of Land Management, Forest 7 Service, U.S Fish and Wildlife Service and National Park Service fire and fire 8 aviation program management. Original source policy is stated or referenced 9 throughout this handbook. This handbook attempts to quote verbatim, rather 10 than to paraphrase policy that is stated elsewhere. It also attempts to limit 11 duplication of source policy when a reference will suffice. Interagency 12 Standards for Fire and Fire Aviation Operations is intended to comply with, 13 and support the Review and Update of the 1995 Federal Wildland Fire 14 Management Policy (January 2001) and the Guidance for Implementation of 15 Federal Wildland Fire Management Policy (February 13, 2009) and other 16 existing federal policy. 17 18 Purpose 19 20 The Interagency Standards for Fire and Fire Aviation Operations provides fire 21 and fire aviation program management direction for Bureau of Land 22 23 Management, Forest Service, U.S. Fish and Wildlife Service and National Park 24 Service managers. Employees engaged in fire management activities will continue to comply with all agency-specific health and safety policy. Other 25 references, such as the National Wildfire Coordinating Group (NWCG) Incident 26 Response Pocket Guide (PMS 461, NFES 1077) and the NWCG Fireline 27 Handbook (PMS 410-1, NFES 0065), provide operational guidance. 28 29 Review and Update of the 1995 Federal Wildland Fire Management Policy 30 (January 2001) 31 32 The Review and Update of the 1995 Federal Wildland Fire Management Policy 33 (January 2001) is comprised of the following guiding principles and discrete 34 policies. As a whole these principles and policy statements guide the 35 philosophy, direction and implementation of fire management planning, 36 activities and projects on federal lands. 37 38 Guiding Principles of the Federal Wildland Fire Management Policy 39 1. Firefighter and public safety is the first priority in every fire management 40 activity. 41 2. The role of wildland fire as an essential ecological process and natural 42 change agent will be incorporated into the planning process. Federal 43 agency land and resource management plans set the objectives for the use 44

⁴⁵ and desired future condition of the various public lands.

Release Date: January 2011

	<u>Сн</u>	APTER 01 FEDERAL WILDLAND FIRE MANAGEMENT POLICY OVERVIEW
1	3.	Fire Management Plans (FMPs), programs and activities support Land and
2		Resource Management Plans and their implementation.
3	4.	Sound risk management is a foundation for all fire management activities.
4		Risks and uncertainties relating to fire management activities must be
5		understood, analyzed, communicated and managed as they relate to the cost
6		of either doing or not doing an activity. Net gains to the public benefit will be an important component of decisions.
7 8	5.	Fire management programs and activities are economically viable, based
8 9	5.	upon values to be protected, costs and land and resource management
10		objectives. Federal agency administrators are adjusting and re-organizing
11		programs to reduce costs and increase efficiencies. As part of this process,
12		investments in fire management activities must be evaluated against other
13		agency programs in order to effectively accomplish the overall mission, set
14	_	short and long term priorities, and clarify management accountability.
15	6.	FMPs and activities are based upon the best available science. Knowledge
16		and experience are developed among all wildland fire management
17 18		agencies. An active fire research program combined with interagency collaboration provides the means to make these tools available to all fire
18		managers.
20	7.	FMPs and activities incorporate public health and environmental quality
21		considerations.
22	8.	Federal, state, tribal, local, interagency and international coordination and
23		cooperation are essential. Increasing costs and smaller work forces require
24		that public agencies pool their human resources to successfully deal with
25		the ever-increasing and more complex fire management tasks. Full
26		collaboration among federal agencies and between the federal agencies and international, state, tribal, and local governments and private entities results
27 28		in a mobile fire management work force available for the full range of
28 29		public needs.
30	9.	Standardization of policies and procedures among federal agencies is an
31		ongoing objective. Consistency of plans and operations provides the
32		fundamental platform upon which federal agencies can cooperate, integrate
33		fire activities across agency boundaries and provide leadership for
34		cooperation with state, tribal, and local fire management organizations.
35		Paulan and Undate of the 1005 Federal Wildland Fine Management Delian
36 37		<i>Review and Update of the 1995 Federal Wildland Fire Management Policy</i> (<i>January 2001</i>)
38		(<i>Sumury</i> 2001)
39	Ele	ments of the Federal Wildland Fire Management Policy
40	1.	Safety
41		Firefighter and public safety is the first priority. All FMPs and activities
42	•	must reflect this commitment.
43	2.	Fire Management and Ecosystem Sustainability
44		The full range of fire management activities will be used to help achieve ecosystem sustainability, including interrelated ecological, economic, and
45 46		social components.

46 social components.

Release Date: January 2011

1 3. Response to Wildland Fire

- 2 Fire, as a critical natural process, will be integrated into land and resource
- 3 management plans and activities on a landscape scale across agency
- 4 boundaries. Response to wildland fires is based on ecological, social, and
- 5 legal consequences of the fire. The circumstances under which a fire
- ⁶ occurs, the likely consequences on firefighter and public safety and welfare,
- 7 the natural and cultural resources and the values to be protected dictate the
- 8 appropriate response to fire.

9 4. Use of Wildland Fire

- 10 Wildland fire will be used to protect, maintain and enhance resources and,
- as nearly as possible, be allowed to function in its natural ecological role.
- 12 Use of fire will be based on approved FMPs and will follow specific
- 13 prescriptions contained in operational plans.

14 5. Rehabilitation and Restoration

- Rehabilitation and restoration efforts will be undertaken to protect and sustain ecosystems, public health, safety, and to help communities protect
- 17 infrastructure.

18 6. Protection Priorities

- ¹⁹ The protection of human life is the single overriding suppression priority.
- 20 Setting priorities among protecting public communities and community
- 21 infrastructure, other property and improvements and natural and cultural
- resources will be done based on the values to be protected, public health
- and safety and the costs of protection. Once people have been committed to
- 24 an incident, these human resources become the highest value to be

25 protected.

26 7. Wildland Urban Interface

27 The operational roles of the federal agencies as partners in the wildland urban interface are wildland firefighting, hazard reduction, cooperative 28 prevention, education, and technical assistance. Structural fire suppression 29 is the responsibility of tribal, state, or local governments. Federal agencies 30 may assist with exterior structural fire protection activities under formal fire 31 protection agreements that specify the mutual responsibilities of the 32 partners, including funding. (Some federal agencies have full structural 33 protection authority for their facilities on lands they administer and may 34 35 also enter into formal agreements to assist state and local governments with structural protection.) 36 8. Planning 37 Every area with burnable vegetation must have an approved FMP. FMPs 38 are strategic plans that define a program to manage wildland and prescribed 39 fires based on the area's approved land management plan (LMP). FMPs 40

- 41 must provide for firefighter and public safety; include fire management
- 42 strategies, tactics, and alternatives; address values to be protected, and
- 43 public health issues; and be consistent with resource management
- 44 objectives, activities of the area and environmental laws and regulations.
- 45
- 46

Release Date: January 2011

CHAPTER 01

- 1 9. Science
- 2 FMPs and fire programs will be based on a foundation of the best available
- 3 science. Research will support ongoing efforts to increase our scientific
- 4 knowledge of biological, physical, and sociological factors. Information
- 5 needed to support fire management will be developed through an integrated
- 6 interagency fire science program. Scientific results must be made available
- 7 to managers in a timely manner and must be used in the development of
- 8 LMPs, FMPs and implementation plans.

9 10. Preparedness

- 10 Agencies will ensure their capability to provide safe, cost-effective fire
- management programs in support of land and resource management plans
- 12 through appropriate planning, staffing, training, equipment, and
- 13 management oversight.

14 11. Suppression

- 15 Fires are suppressed at minimum cost, considering firefighter and public
- safety, benefits and all values to be protected consistent with resource
- 17 objectives.

18 12. Prevention

Agencies will work together with their partners, other affected groups, and
individuals to prevent unauthorized ignition of wildland fires.

21 13. Standardization

- Agencies will use compatible planning processes, funding mechanisms,
- training and qualification requirements, operational procedures, values-to-
- ²⁴ be protected methodologies, and public education programs for all fire
- 25 management activities.

26 14. Interagency Cooperation and Coordination

- 27 Fire management planning, preparedness, prevention, suppression,
- restoration and rehabilitation, monitoring, research and education will be
- conducted on an interagency basis with the involvement of cooperators andpartners.

31 15. Communication and Education

- 32 Agencies will enhance knowledge and understanding of wildland fire
- 33 management policies and practices through internal and external
- 34 communication and education programs. These programs will be
- continuously improved through the timely and effective exchange of
- ³⁶ information among all affected agencies and organizations.

37 16. Agency Administrator and Employee Roles

- 38 Agency administrators will ensure their employees are trained, certified,
- 39 and made available to participate in the wildland fire program locally,
- 40 regionally, and nationally as the situation demands. Employees with
- 41 operational, administrative, or other skills will support the wildland fire
- 42 programs as necessary. Agency administrators are responsible and will be
- ⁴³ held accountable for making employees available.

44 17. Evaluation

- 45 Agencies will develop and implement a systematic method of evaluation to
- determine effectiveness of projects through implementation of the 2001
 - 01-4

Release Date: January 2011

1 Federal Wildland Fire Management Policy. The evaluation will assure accountability, facilitate resolution in areas of conflict and identify resource 2 shortages and agency priorities. 3 4 Review and Update of the 1995 Federal Wildland Fire Management Policy 5 6 (January 2001) Guidance for Implementation of Federal Wildland Fire Management Policy 8 (February 13, 2009) 9 10 On February 13, 2009, the Fire Executive Council (FEC) approved guidance for 11 12 the implementation of federal wildland fire management policy. This guidance provides for consistent implementation of the Review and Update of the 1995 13 Federal Wildland Fire Management Policy (January 2001), as directed by the 14 Wildland Fire Leadership Council. 15 16 Guidance for Implementation of Federal Wildland Fire Management Policy 17 (February 13, 2009), page 3. 18 19 The following guidelines should be used to provide consistent implementation 20 of federal wildland fire policy: 21 Wildland fire management agencies will use common standards for all 22 1. 23 aspects of their fire management programs to facilitate effective 24 collaboration among cooperating agencies. 2. Agencies and bureaus will review, update and develop agreements that 25 clarify the jurisdictional inter-relationships and define the roles and 26 responsibilities among local, state, tribal, and federal fire protection entities. 27 Responses to wildland fire will be coordinated across levels of government 3. 28 regardless of the jurisdiction at the ignition source. 29 4. Fire Management Plans will be intergovernmental in scope and developed 30 on a landscape scale. 31 Wildland fire is a general term describing any non-structure fire that occurs 5. 32 in the wildland. Wildland fires are categorized into two distinct types: 33 34 a. Wildfires - Unplanned ignitions or prescribed fires that are declared wildfires. 35 Prescribed Fires - Planned ignitions. b. 36 A wildland fire may be concurrently managed for one or more objectives 37 6. and objectives can change as the fire spreads across the landscape. 38 Objectives are affected by changes in fuels, weather, topography; varying 39 social understanding and tolerance; and involvement of other governmental 40 jurisdictions having different missions and objectives. 41 Management response to a wildland fire on federal land is based on 7. 42 objectives established in the applicable Land/Resource Management Plan, 43 and/or the Fire Management Plan. 44

Fire Operations Doctrine

1 2

3 Purpose of Fire Operations Doctrine

- 4 Fire operations doctrine states the fundamental principles on the subject of fire
- ⁵ operations. This doctrine establishes a particular way of thinking about fire
- 6 operations. It provides a philosophy for leading firefighters in fire operations, a
- 7 mandate for professionalism and a common language. Fire operations doctrine
- 8 does not consist of procedures to be applied to specific situations so much as it

⁹ sets forth general guidance that requires judgment in application.

10

11 The Nature of Fire Operations

- 12 Fire is a complex, dynamic and often unpredictable phenomenon. Fire
- 13 operations require mobilizing a complex organization that includes
- 14 management, command, support, and firefighting personnel, as well as aircraft,
- 15 vehicles, machinery, and communications equipment. While the magnitude and
- 16 complexity of the fire itself and of the human response to it will vary, the fact
- 17 that fire operations are inherently dangerous will never change. A firefighter
- 18 utilizing the best available science, equipment and training and working within
- 19 the scope of agency doctrine and policy, can still suffer serious injury or death.

20

21 Wildland Fire Operations Risk Management

- 22 The primary means by which we prevent accidents in wildland fire operations is
- 23 through aggressive risk management. Our safety philosophy acknowledges that
- ²⁴ while the ideal level of risk may be zero, a hazard free work environment is not
- ²⁵ a reasonable or achievable goal in fire operations. Through organized,
- ²⁶ comprehensive and systematic risk management, we will determine the
- 27 acceptable level of risk that allows us to provide for safety yet still achieve fire
- 28 operations objectives. Risk management is intended to minimize the number of
- 29 injuries or fatalities experienced by wildland firefighters.
- 30

31 Fire Preparedness

- 32 Fire preparedness is the state of being ready to provide an appropriate response
- 33 to wildland fires based on identified objectives. Preparedness is the result of
- 34 activities that are planned and implemented prior to fire ignitions. Preparedness
- ³⁵ requires identifying necessary firefighting capabilities and implementing
- 36 coordinated programs to develop those capabilities. Preparedness requires a
- 37 continuous process of developing and maintaining firefighting infrastructure,
- ³⁸ predicting fire activity, identifying values to be protected, hiring, training,
- 39 equipping, pre-positioning and deploying firefighters and equipment, evaluating
- ⁴⁰ performance, correcting deficiencies, and improving operations. All
- 41 preparedness activities should be focused on developing fire operations
- 42 capabilities and on performing successful fire operations.

43

44 Fire Operations Command Philosophy

- 45 It is essential that our philosophy of command support the way we conduct fire
- ⁴⁶ operations. First and foremost, in order to generate effective decision making in

Release Date: January 2011

CHAPTER 01

- 1 fire operations, and to cope with the unpredictable nature of fire, commanders'
- ² intent must be lucid and unambiguous, and lines of authority must be clearly
- 3 articulated and understood. Subordinate commanders must make decisions on
- ⁴ their own initiative based on their understanding of their commander's intent. A
- ⁵ competent subordinate commander who is at the point of decision may
- ⁶ understand a situation more clearly than a senior commander some distance
- 7 removed. In this case, the subordinate commander must have the freedom to
- 8 take decisive action directed toward the accomplishment of operational
- 9 objectives. However, this does not imply that unity of effort does not exist, or
- 10 that actions are not coordinated. Unity of effort requires coordination and
- 11 cooperation among all forces toward a commonly understood objective.
- 12 Unified, coordinated action, whether between adjacent single resources on the
- 13 fireline or between the highest command level and the most subordinate
- 14 firefighter, is critical to successful fire operations.
- 15

16 Fire Leadership

17 Leadership is the art of influencing people in order to achieve a result. The most

- 18 essential element for success in the wildland fire service is good leadership.
- 19 Good leaders provide purpose, direction and motivation for wildland firefighters
- 20 working to accomplish difficult tasks under dangerous, stressful circumstances.
- 21 Leaders often face difficult problems to which there are no simple, clear-cut, by-
- 22 the-book solutions. In these situations, leaders must use their knowledge, skill,
- 23 experience, education, values and judgment to make decisions and to take or
- 24 direct action in short, to provide leadership. All firefighters, regardless of
- 25 position, must provide leadership.
- 26

27 Fire Suppression

- 28 The purpose of fire suppression is to put the fire out in a safe, effective and
- 29 efficient manner. Fires are easier and less expensive to suppress when they are
- 30 small. When the management goal is full suppression, aggressive initial attack
- 31 is the single most important method to ensure the safety of firefighters and the
- ³² public and to limit suppression costs. Aggressive initial attack provides the
- 33 Incident Commander maximum flexibility in suppression operations.
- 34 Successful initial attack relies on speed and appropriate force. All aspects of fire
- ³⁵ suppression benefit from this philosophy. Planning, organizing and
- ³⁶ implementing fire suppression operations should always meet the objective of
- 37 directly, quickly and economically contributing to the suppression effort. Every
- 38 firefighter, whether in a management, command, support, or direct suppression
- ³⁹ role, should be committed to maximizing the speed and efficiency with which
- ⁴⁰ the most capable firefighters can engage in suppression action. When the
- 41 management goal is other than full suppression, or when conditions dictate a
- 42 limited suppression response, decisiveness is still essential and an aggressive
- 43 approach toward accomplishment of objectives is still critical.
- 44
- 45
- 46

01-8

Release Date: January 2011

1 Principles of Suppression Operations

- 2 The primary means by which we implement command decisions and maintain
- ³ unity of action is through the use of common principles of suppression
- 4 operations. These principles guide our fundamental fire suppression practices,
- 5 behaviors and customs, and are mutually understood at every level of command.
- 6 They include Risk Management, Standard Firefighting Orders and Watch Out
- 7 Situations, LCES and the Downhill Line Construction Checklist. These
- 8 principles are fundamental to how we perform fire suppression operations and
- 9 are intended to improve decision making and firefighter safety. They are not
- 10 absolute rules. They require judgment in application.

11

12 Principles of Fire Suppression Action

- 13 The principles of fire suppression action provide a framework for developing
- 14 fire suppression strategy and for conducting fire suppression operations. Again,
- 15 these are not absolute or immutable rules. These five principles provide a
- 16 consistent set of considerations with which to evaluate decisions, plans, and
- 17 actions in different situations.

18 1. Objective

- ¹⁹ The principle of the objective is to direct every fire suppression operation
- 20 toward a clearly defined, decisive, and obtainable objective. The purpose of
- fire suppression operations is to achieve the suppression objectives that
- support the overall management goals for the fire.

23 2. Speed and Focus

- 24 Speed is rapidity of action. Focus is the convergence of appropriate
- resources at the desired position to initiate action. The principle of speed
- 26 and focus maintains that rapidly deploying and concentrating firefighting
- resources, in a calculated fashion, at the decisive time and place increases
- the likelihood of successful suppression actions.

29 3. Positioning

- The principle of positioning maintains that rapid, flexible, and opportunistic movement increases the effectiveness of fire suppression resources.
- Positioning ranges from single resource offensive or defensive reactions to
- dynamic fire conditions, to pre-positioning of multiple resources based on
- predicted activity and values at risk. Positioning should always be
- undertaken with speed and focus in mind and with sufficient time for
- ³⁶ positioning to occur before operations begin.

37 4. Simplicity

- ³⁸ The principle of simplicity is that clear, uncomplicated plans and concise
- 39 orders maximize effectiveness and minimize confusion. Simplicity
- 40 contributes to successful actions.

41 5. Safety

- The principle of safety maintains that ensuring the safety of firefighters and
- 43 other persons affected by fire operations is fundamental to successful
- 44 suppression action. Safety not only contributes to successful actions, it is
- 45 indispensable to them.
- 46

Release Date: January 2011

CHAPTER 01 FEDERAL WILDLAND FIRE MANAGEMENT POLICY OVERVIEW

1 Cost Effective Fire Operations

- 2
- 3 Maximizing the cost effectiveness of any fire operation is the responsibility of
- ⁴ all involved; including those that authorize, direct or implement those
- 5 operations. Cost effectiveness is the most economical use of the suppression
- ⁶ resources necessary to accomplish mission objectives. Accomplishing fire
- 7 operations objectives safely and efficiently will not be sacrificed for the sole
- ⁸ purpose of "cost savings." Care will be taken to ensure that suppression
- 9 expenditures are commensurate with values to be protected, while understanding
- 10 that other factors may influence spending decisions, including the social,
- 11 political, economic, and biophysical environments.

Release Date: January 2011
