> Dollars in Millions FY 2012 Estimate 75.599 FY 2011 Estimate 164.886 FY 2010 Actual 133.767

Purpose and Scope

The Office of the Secretary of Defense request for \$75.599 in FY 2012 is in support of such funding initiatives as the Mentor Protégé Program, Enterprise Portals Program, Long Range Planning, Joint Capability Technology Demonstration, Combatant Commanders' Exercise Engagement and Training Transformation Program, US Mission to NATO and Wounded III and Injured Programs. Funding requested is for the modernization of office automation and Information Technology (IT) infrastructure requirements and procurement of mission essential new and replacement equipment for these components.

The Department of Defense (DoD) High Performance Computing (HPC) Modernization Program supports the needs of the warfighter for technological superiority and military dominance on the battlefield by providing advanced computational services to U.S. weapons system scientists and engineers. By exploiting continuous advances in high performance computing technology, the defense research, development, test and evaluation (RDT&E) community is able to resolve critical scientific and engineering problems quickly and with more precision. The results of these efforts feed directly into the acquisition process by improving weapons system designs through an increased fundamental understanding of materials, aerodynamics, chemistry, fuels, acoustics, signal image recognition, electromagnetics, and other areas of basic and applied research as well as enabling advanced test and evaluation environments that allow synthetic scene generation, automatic control systems and virtual test environments. As such, HPC has been identified as a key enabling technology essential to achieving the objectives of the DoD's science and technology (S&T) and test and evaluation (T&E) programs. The program deploys supercomputers to provide world-class HPC capability to a nation-wide user community.

REMARKS: DoD requires high performance computing (HPC) to keep its forces and military systems on the leading technological edge. This program provides for the commercial off the shelf HPC hardware upgrades that provide world-class HPC capability to a nation-wide user community as well as investments that address real-time and other unique local requirements.

Funding supports eBusiness Center capabilities to provide leadership and direction to the business initiatives across the Department's acquisition community. The capabilities will support a broad range of activities including the improvement of the efficiency of the acquisition process, alignment of the acquisition process for DoD, and transformation of the acquisition business process through change management. This will meet the requirement to integrate cross-cutting enterprise-wide business processes using the best available technology in order to reduce staffing requirements and add value to business processes. The Center will act as a control on the appropriate use of resources for technology applications and act as a catalyst for change in portfolio management. The Center will also assist functional directorates during the transition to production of successful cross-cutting projects. The Center will also assist functional projects.

Efficiencies Realized:

This program provides AT&L mission-specific collaborative capabilities allowing AT&L and the Acquisition Community to share processes and ideas. Improves productivity and capabilities of IT development efforts across the Department, reducing time to value and increasing the capabilities of the solutions developed. Enhances user experience with additional flexibility and positions AT&L to embark on service oriented architecture projects with reduced risk and better alignment to mission requirements. Lowers costs by reducing manual processing and exceptions through business process-driven applications and workflows focusing resources and enabling better time management and increased Department-wide visibility.

Description:

The Procurement funds are intended to supplement (fund procurement needs) the projects funded in the JCTD Program. Overseas Contingency Operations challenge the Department of Defense (DoD) to devote resources to countering the asymmetric threats and to exploiting the advantages of technology superiority in new, transformational ways. A new balance must be struck between direct support for joint Combatant Commanders (CoComs) fighting on the front line in Overseas Contingencies and longer term planned Service investment strategies. The procurement funds are used to support initial acquisition of equipment for rapid transition of operational "joint unique" capabilities that have not yet completed transition into a program of record.

Defense Efficiency – Report, Studies, Boards and Commissions and economic assumptions. As part of the Department of Defense reform agenda, FY 2012 and out-year accounts reflects a reduction in the number and cost of reports, studies, DoD Boards and DoD Commissions below the aggregate level reported in FY 2010 as well as economic assumptions. The FY 2012 account has been reduced by \$0.002 million from the previous President's Budget submission.

Specifically, JCTD Procurement funding supports selected joint capability technologies that are being integrated into programs that have passed Milestone B and are conducting engineering and manufacturing development to meet validated joint needs. The aim is to achieve efficiencies by aligning resources to fully

The Mentor-Protégé Pilot Program, through the use of Mentor Protégé Agreements, provides large firms (mentors) incentives to provide technical and business assistance to Small Disadvantaged Businesses, women-owned small businesses, firms that employ severely disabled persons, service-disabled veteran-owned small businesses, and HUBZone firms. The incentives provided to mentors are either a direct cost reimbursement or a credit against subcontracting goals for costs incurred. Additionally, Mentor-Protégé agreements often involve the use of minority serving institutions (including Historically Black Colleges and Universities, Tribal Colleges and Universities, Hispanic Serving Institutions, and other minority institutions) to provide developmental assistance to the protégé. In short, this program facilitates investment in the diversity and sustainment of the Department of Defense's Small Business industrial base which leads to a more competitive supplier base, more efficient procurement, and job creation.

Justification:

The Mentor Protégé Pilot Program (MPP) was established under Section 831 of the National Defense Authorization Act for Fiscal Year 1991 (Public Law 101-510). The program assists eligible small business concerns in enhancing their capabilities to perform as subcontractors and viable suppliers under DoD contracts and other federal government and commercial contracts. This creates jobs in critical DoD industries and reinforces the competition base of DoD suppliers, leading to greater affordability and efficiency in current and future Defense acquisitions. This benefit is of particular importance for the Department. The ability of DoD to maintain its mission readiness rests on the reliability of its supply chain; small business is the strongest link within the supply chain. Any reduction to this program will reduce the number of reliable small business supporting the defense industrial base

The Office of the Director/Cost Analysis and Program Evaluation (CAPE) uses high-end computer servers and workstations, networks, in-house developed software, and other DoD developed simulation models and applications to perform its mission and its daily business functions. These computers and networks integrated together provide OD/CAPE analysts with the following functionalities: Internet, NIPRNET, and SIPRNET accessing; e-mailing; electronic filing of data, word-processing, and electronic collection and processing of Program Objective Memorandum (POM), Future Years Defense Plan (FYDP), and Defense Cost and Resource Center (DCARC) data. In addition, these sophisticated computer tools allow the OD/CAPE analysts to conduct research, studies, technical analyses, and collaborative studies within CAPE and with other DoD agencies, and provide analysts with the flexibility of running simulation models as many times as deemed necessary to obtain valid analyses.

Justification:

The requested budget provides for a 3-year life-cycle replacement of PA&E computers, networks, and software. Thirty-three percent of the hardware and software are replaced on an annual basis. Using the first-in-first-out inventory strategy, the oldest equipment is replaced every year. The 3-year life-cycle replacement strategy ensures that the computers and networks are maintainable, reliable, and usable as effective and efficient tools for the CAPE staff. **Efficiencies:** As part of the Department of Defense reform agenda, the reductions in FY12-16 better align resources to the most critical priorities and reduce

Provides for collaborative environments required for processing, analyzing, and distributing critical intelligence information between the U.S., NATO allies, and coalition forces in support of Overseas Contingency Operations (OCO). Supports expansion of U.S. and NATO-allied multinational and bi-lateral intelligence information sharing capabilities via expanded terrestrial and satellite communications; information technology systems; integrated wide area and meshed networking; deployable command and control containers/elements; and information applications exploitation as it relates to the U.S./NATO/coalition activities within the USEUCOM Intelligence Fusion Center, the NATO Special Operations Coordination Center, US Battlefield Information Collection and Exploitation System(s) and US JOIC world-wide architectures.

Justification:

Provides work stations, computing clusters, data servers, security accreditation, and network connections for co-located strategic, operational and forward deployed elements.

Description:

The Next Generation Resource Management System will modernize and integrate top level DoD systems that produce the Department's annual President's Budget and Future Years Defense Program. It will provide capabilities and deliverables currently performed by the Comptroller Information System, Program Budget Decision / Resource Management Decision Wizard, Program Resource Collection Process, Global War on Terrorism Resource Information Database, Supplemental Resource Collection Process, and Budget Exhibit Generator and Standard Data Collection System that are used to fulfill the core missions of the Office of the Under Secretary of Defense (Comptroller) (OUSD(C)) and Office of the Director of Cost Assessment and Program Evaluation.

Justification:

Multiple OSD program/budget systems used today manage similar financial information, yet each uses its own scheme for representing information. Cross-system data representations and redundancies create data exchange and reconciliation challenges. RDTE funds in this budget support development of a critically needed state-of-the-art information technology system to modernize and replace multiple, antiquated legacy systems and processes used to formulate, justify, present and defend the entire Department of Defense Budget for OUSD(C) to meet Title 10 and Title 31 mission and reporting requirements. Funding will support infrastructure requirements such as server buys, and modernization.

As part of the Department of Defense reform agenda, the reductions in FY12-14 better align resources to the most critical priorities and reduce growth as directed by the Secretary. Additionally, these efficiencies reflect the Secretary's guidance on IT consolidation and streamlined use of resources \$2.000 of funding in FY12, \$1.000 in FY13, and \$2.000 in FY14 was provided to OSD. Due to Economic Assumption reductions funds were decreased by \$.002 in FY15 and FY16

Description:

U.S. Joint Forces Command (USJFCOM), Joint Training Enterprise includes the Joint Force Trainer (JFT), Joint National Training Capability (JNTC), U.S. Forces Korea (USFK), Joint Deployment Training Center (JDTC), Joint Knowledge Development and Distribution Capability (JKDDC), Irregular Warfare (IW), and Joint Innovative Training Methods and Tools (JITMT). The JFT supports the Combatant Commanders (COCOMs) with their Unified Command Plan 2004 responsibilities to certify their designated Joint Task Forces (JTF) are trained and ready for deployment. Procurement funding provides the training infrastructure and support that integrates into the existing joint training environment. Procurement for the JNTC supports the pillars which enable Training Transformation to include the infrastructure and equipment to support the Joint Training and Experimentation Network (JTEN). The JDTC procurement provides training support for the Global Command and Control System, Joint (GCCS-J), the Joint Operation Planning and Execution Systems (JOPES), Common Operational Picture (COP), Joint Capability Requirements Management (JCRM), Joint Force Requirements Management (JFRM), and provides the Command, Control, Computers and Communications (C4) systems of record and infrastructure to support that mission. JKDDC provides the enabling capabilities to support career-long joint learning continuum, joint professional military education and tailored

| Exhibit P-40, Budget Item Justification Sheet | Date: February 2011 |

common training standards to Service members for tasks that are jointly executed, resulting in trained, capable, and interoperable joint forces. IW training supports the DoD by providing capabilities and training facilities that fully immerse the lower-level units in a live, virtual, and constructive training environment that replicates as closely as possible the conditions of today's and tomorrow's battlefield. The training audience must also be linked to joint enablers such as Intelligence, Surveillance and Reconnaissance (ISR) and joint fires from many different locations across the Joint Force. JITMT will provide training capabilities that leverage massive-multiplayer gaming technologies, story-driven simulation technologies, immersive visualization technologies, training objective driven simulation technologies, embedded training technologies, and light simulation/federations to enhance joint training of Combatant Commanders, Services, and Agency staffs.

Justification:

Efficiency Impact; eliminates 4 of the 15 Joint Force Trainer functions: joint intelligence training/standards; joint forces intelligence school; field assessment of joint fires training; and training on selected joint fires issues. Reduces the remaining Joint Force Trainer functions by 38 percent, and reduces Special Operations Command Joint Force Command (SOCJFCOM) by 30 percent. Eliminates the Joint Task Force Headquarters Readiness (JTF HQ) function. Joint National Training Capability Procurement efficiency reduction (\$18M) eliminates procurement of Joint Opposing Forces supporting equipment and associated systems that support Service live training events. The Irregular Warfare (IW) procurement reduction (\$2.5M) eliminate procurements that support Irregular Warfare Joint Training activities.

"Blue Force" training will be impacted in the following areas: current advanced threat airborne Electronic Counter Measures, enhanced information operations threats, joint ISR environment, operations in a communications denied environment, current surface to air threats, Joint Suppression of Enemy Air Defenses (JSEAD), and Improvised Explosive Device (IED) defeat.

JNTC FY2012/13 funding enables distributed Joint training to a minimum number of global warfighter training events per year. These funds provide for the replacement of the legacy JTEN network, which operates with an obsolete communications technology with a state-of-the art Next Generation JTEN network (current industry / DoD standard technology) that will greatly increase network capacity, make the management of multiple, large simultaneous exercises possible and provide facility coalition network connectivity, as well as, unclassified network services equipment for lifecycle replacement. The funds also provide interconnectivity with other Service, COCOM and Coalition training networks.

| Exhibit P-40, Budget Item Justification Sheet | Date: February 2011 |
|---|--|
| Appropriation / Budget Activity / Serial No: Procurement, Defense Wide / 0300/ BA-01 /45 | P-1 Item Nomenclature: Major Equipment, OSD Combatant Commanders' Exercise Engagement and Training Transformation Program |

USFK FY2012/13 funding provides equipment to deliver Joint Modeling and Simulation (M&S) training environment required to replicate the complexity of current USFK operations. Specifically USFK funding develops the DoD enterprise architecture for integrating Service and agency M&S efforts to provide a training capability within the Korea peninsula that supports Secretary of Defense guidance on USFK transformation. This allows the US to meet international obligations and achieves Republic of Korea/US training interoperability requirements.

JDTC FY2012/13 procurement funds support installation of GCCS-J network communications hardware to support the infrastructure required to host the JOPES, Situational Awareness, and Global Force Management applications training efforts. This directly supports DoD joint deployment, command and control, and simulation awareness training of COCOMs, Services, and agency staffs. Equipment includes GCCS-J servers, projectors, batteries, racks, monitors, network encryptions, and client workstations to support classroom training of JOPES, Joint Capabilities Requirements Manager, and Common Operational Picture applications. This equipment also enables remote reach-back training in support of Mobile Training Teams. Acquisition includes Life Cycle Replacement of equipment and Tactical Local Area Network Encryption (TACLANEs) for Wide Area Network (WAN) connectivity. In FY 2011, procurement funds will support the technical refresh and future GCCS-J version requirements for the JDTC mission.

JKDDC FY2012/13 procurement funds support infrastructure sustainment and expansion of the Joint Individual Training Toolkit, which is a set of web enabled individual and small group training products and services. The products and services are provided in response to JKDDC stakeholder (COCOMs, Services, and Combat Support Agencies) prioritized training requirements.

Description: A functional transfer of the DoD Transition Assistance Program (TAP) from the Office of Military Community and Family Policy to the Office of Wounded Warrior Care and Transition Policy occurred in March 2009. DoD TAP requirements were definitized and documented. Hence, these program changes reflect senior leadership's strategic vision for the Department's TAP to meet the intent of 10 USC § 1142, Pre-separation Counseling, with increased emphasis on delivery of services to the Reserve Components.

Justification: The Department approved a technical correction to transfer DW, O&M and RDTE to DW, Procurement to procure scanning equipment for the DoD to reduce manual entry errors associated with Service member's Verification of Military Training and DD Form 214 residing in the DoD Transition Assistance Program database pending implementation of electronic data interchange capability, anticipated to occur not later than end of FY 2011. Funds the Wounded Warrior portion of the DMDC initiative to establish DoD self-service logon and authentication services within the e-Benefits portal used by the Service member/veteran for secure, self service access across the DOD and VA.

Program increase \$3,986 in FY 2012 supports senior leadership strategic vision to meet the intent of 10 USC § 1142, Pre-Separation Counseling under the Transition Assistance Program.

| Exhibit P-40, Budget Item Justification | Date: February 2011 |
|---|---|
| | P-1 Line Item Nomenclature: DMDC Support to Wounded III and Injured Programs |

Funds transfer to support the procurement of scanning equipment for the DoD to reduce manual entry errors associated with Service member's Verification of Military Training and DD Form 214 pending implementation of electronic data interchange capability. This action does not change the purpose for which the funds were originally appropriated, nor does it generate additional requirements. This action brings the Department into compliance with 10 USC § 1142.

Description:

Provides the U.S. component of the Battlefield Information Collection and Exploitation Systems (BICES) multi-national collaborative environment and intelligence service required for processing, analyzing, and distributing/sharing critical intelligence between and among the U.S., NATO, allied, and coalition forces. Establishes and procures a cloud-based architecture similar to the U.S. Army Distributed Common Ground/Surface Systems (DCGS) and the Under Secretary of Defense Intelligence (USDI) Defense Intelligence Information Enterprise (DI2E) framework on the U.S. BICES network to enable an enduring U.S and Coalition interoperable intelligence sharing application across the full spectrum of operations throughout the DoD. Supports expansion of U.S., multilateral, and bilateral intelligence information sharing capabilities via expanded terrestrial and satellite communications, information technology systems, integrated wide area and meshed networking, deployable containers/elements, and advanced JIOC/DCGS-A analytical applications for all US COCOMs, their JIOCs and their allied and coalition partners to include the USEUCOM Intelligence Fusion Center. Directly procures the NATO Special Operations Headquarters, and U.S./Coalition Special Operations Forces hardware and software needed to support the worldwide Global Pursuit mission. Procures work stations, enterprise hardware and software, security accreditation, and network connections supporting strategic, operational and forward-deployed war fighting forces in multiple theaters.

Description:

Provides hardware and software for collaborative video teleconferencing environments required for rapid coordination and exchange of critical intelligence information between the U.S., NATO allies, and coalition forces in support of the Afghanistan Overseas Contingency Operations (OCO). Procures work stations, computing clusters, data servers, security accreditation, and network connections to implement strategic, operational and forward deployed intelligence sharing cross domain solutions. Provides funding to correct U.S. intelligence shortfalls and eliminate intelligence sharing barriers identified by the Under Secretary of Defense Intelligence (USDI) Intelligence Information Sharing and Collaboration Integrated Project Team (ISC IPT) sponsored in-theater Task Force 714 and Foreign Disclosure Release Assessment reviews. Encompasses biometric access and supports the Commander, International Security Assistance Forces (COMISAF) requirement for extending releasable intelligence information into the unclassified environment. Fields solutions to satisfy U.S. Battlefield Information Collection and Exploitations Systems (US BICES) and Combined ENTerprise Regional Information Exchange System (CENTRIXS) – International Security Assistance Force (ISAF) intelligence information sharing requirements. Procures work stations and software to implement UnityNet Unclassified Network capability for COMISAF. Procures a Radiant Mercury (RM) Guard unit, an Intelligence Support Server Environment (ISSE) Version 3.6 multi-int Guard, a Coalition ENTerprise Automated User Repository (CENTAUR) cross domain guard, and a Multi-Domain Dissemination System (MDDS) guard to meet ISAF J2 intelligence sharing guidance.
