This project will construct a new elementary school to replace the existing elementary school. The project will include general purpose classrooms, gymnasium, information center, computer lab, cafeteria/food service/kitchen, supply areas, specialist rooms, music room, art room, learning impaired room, teacher work rooms, counseling areas, storage, administrative offices, and other required areas for a fully functioning facility. Project includes related infrastructure such as parking areas, mechanical rooms, delivery areas, and playgrounds. Site improvements include signage, fencing, paving, landscaping, covered walkways, exterior lighting and utilities. The project development will require the demolition of existing buildings and supporting facilities at McBride Elementary School. The plan is to build the new school adjacent to the old, on the existing school's site, without interrupting school operations.

| 1. Component DoDEA | FY 2012 MILITARY | 12 MILITARY CONSTRUCTION PROGRAM | | | | | | |
|--|---------------------------|-------------------------------------|--|----------------------------------|--|--|--|--|
| 3. Installation and Location Fort Benning, Georgia | | School | | | | | | |
| 5. Program Element | 6. Category Code 73046 | 7. Project Number 8.Project AM00023 | | ct Cost (\$000) 37,205 | | | | |

10. DESCRIPTION OF PROPOSED CONSTRUCTION (continued):

Facilities will be designed in accordance with DoDEA Education Facilities Specifications, Americans with Disabilities Act (ADA) Accessibility Guidelines/Architectural Barriers Act (ABA), National Fire Protection Association (NFPA) Life Safety Code, Standards of Seismic Safety for Federally Owned Buildings, and energy and water conservation standards. Sustainable design will be integrated into the design in accordance with Leadership in Energy and Environmental Design (LEED) for Schools Silver criteria.

11. REQUIREMENT:

PROJECT: Replace the existing elementary school with a new elementary school.

<u>REQUIREMENT</u>: The new school is required to provide adequate academic facilities for students in grades Pre-K through 5.

<u>CURRENT SITUATION</u>: The existing facilities are in poor condition. Many of the buildings being replaced are greater than 45 years old. Existing classroom and education spaces are undersized and have inadequate infrastructure that fails to meet the standards of the DoDEA Education Facilities Specifications. Aging utility infrastructure systems result in excessive maintenance costs. Most infrastructure components, such as HVAC, electrical and plumbing, have exceeded their useful life. There are numerous NFPA Life Safety and ADA code deficiencies, no fire suppression systems, and poor indoor air quality. The facilities do not meet construction standards for energy efficiency. Numerous maintenance and repair problems have developed and are becoming non-repairable. The existing facilities do not meet many of the AT/FP requirements.

<u>IMPACT IF NOT PROVIDED</u>: The continued use of deficient, inadequate, and undersized facilities that do not accommodate the current student population will continue to impair the overall education program for students. If new facilities are not provided, the substandard environment will continue to hamper the educational process. Yearly maintenance and utility costs will continue to run high and the school will continue to struggle performing their mission in a limited capacity due to the inadequate and undersized facilities.

ADDITIONAL:

This project has been coordinated with the installation physical security plans and all AT/FP measures are included.

The use of temporary classroom facilities will be included in the event the construction schedule is delayed as a result of unforeseen circumstances and to accommodate the phased demolition of buildings.

Sustainable principles will be integrated in the design, development and construction of the project in accordance with Executive Order 13123 and other applicable laws and executive orders. Energy conservation and environmentally safe measures will be incorporated in this project wherever feasible, practical or required by regulation. Energy and natural resource conservation measures will be maximized in the design to the extent possible.

All known alternatives were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed.

<u>JOINT USE CERTIFICATION</u>: This facility can be used by other components on an "as available" basis; however, the scope of the project is based on DoDEA requirements.

This project will construct a new elementary school, replacing and consolidating two existing elementary schools. The project will include general purpose classrooms, gymnasium, information center, computer lab, supply areas, specialist rooms, music room, art room, learning impaired rooms, teacher work rooms, counseling areas, storage, administrative offices, and other required areas for a fully functioning facility. This project includes related infrastructure such as parking areas, parent loop, bus loop, mechanical rooms, delivery areas, and playgrounds. Site improvements include signage, fencing, paving, landscaping, exterior lighting, storm water collection, utilities, and covered walkways. The project development will require the demolition of the existing buildings and supporting facilities at Pierce and Kingsolver Elementary Schools following construction of the new school. The plan is to build the new consolidated school adjacent to the old Kingsolver Elementary School, on the existing school's site, without interrupting school operations.

10. DESCRIPTION OF PROPOSED CONSTRUCTION (continued):

Facilities will be designed in accordance with DoDEA Education Facilities Specifications, Americans with Disabilities Act (ADA) Accessibility Guidelines/Architectural Barriers Act (ABA), National Fire Protection Association (NFPA) Life Safety Code, Standards of Seismic Safety for Federally Owned Buildings, and energy and water conservation standards. Sustainable design will be integrated into the design in accordance with Leadership in Energy and Environmental Design (LEED) for Schools, Silver criteria.

11. REQUIREMENT:

PROJECT: Replace two existing elementary schools with one consolidated elementary school.

<u>REQUIREMENT</u>: The new school is required to provide adequate academic facilities for students in grades Pre-K through 5.

<u>CURRENT SITUATION</u>: The existing facilities are in a failing condition per the DoD condition standards. Many of the buildings being replaced are greater than 50 years old. Existing classroom and education spaces are undersized and have inadequate infrastructure that fails to meet the standards of the DoDEA Education Facilities Specifications. Aging utility infrastructure systems result in excessive maintenance costs. Most infrastructure components, such as HVAC, electrical and plumbing, have exceeded their useful life. There are numerous NFPA Life Safety and ADA code deficiencies, no fire suppression systems, and poor indoor air quality. The facilities do not meet construction standards for energy efficiency. Numerous maintenance and repair problems have developed and are becoming non-repairable. The existing facilities do not meet many of the Antiterrorism/Force Protection (AT/FP) requirements.

<u>IMPACT IF NOT PROVIDED</u>: The continued use of deficient, inadequate, and undersized facilities will continue to impair the overall educational program for students. If new facilities are not provided, the substandard environment will continue to hamper education. Yearly maintenance and utility costs will continue to rise and the school will struggle to perform their mission due to the inadequate and undersized facilities.

ADDITIONAL:

This project has been coordinated with the installation physical security plans and all AT/FP measures are included.

The use of temporary classroom facilities will be included in the event the construction schedule is delayed as a result of unforeseen circumstances and to accommodate the phased demolition of buildings.

Sustainable principles will be integrated in the design, development and construction of the project in accordance with Executive Order 13123 and other applicable laws and executive orders. Energy conservation and environmentally safe measures will be incorporated in this project wherever feasible, practical or required by regulation. Energy and natural resource conservation measures will be maximized in the design to the extent possible.

All known alternatives were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed.

<u>JOINT USE CERTIFICATION</u>: This facility can be used by other components on an "as available" basis; however, the scope of the project is based on DoDEA requirements.

This project will construct a new middle school to replace the existing middle school. The project will include general purpose classrooms, gymnasium, information center, computer lab, science labs, supply areas, specialist rooms, music room, art room, learning impaired room, teacher work rooms, counseling areas, storage and administrative offices, and other required areas for a fully functioning facility. Cafeteria, food service and information center areas were sized for the future Middle School population as well as the future Elementary School population. The current Middle School facility is used for the Elementary School food service program and will be demolished to make room for the Middle School replacement.

| | 730787 | | AM00027 | | 34,040 |

10. DESCRIPTION OF PROPOSED CONSTRUCTION (continued):

The project includes related infrastructure such as parking areas, mechanical rooms, delivery areas, and playgrounds. Site improvements include signage, fencing, paving, landscaping, covered walkways, exterior lighting and utilities. The project development will require the demolition of existing buildings and supporting facilities at Hanscom Middle School.

Phased building demolition will be required to accommodate new construction without interrupting school operations. The project will provide temporary swing space facilities during construction and deconstruct this temporary space after completion.

Facilities will be designed in accordance with DoDEA Education Facilities Specifications, Americans with Disabilities Act (ADA) Accessibility Guidelines/Architectural Barriers Act (ABA), National Fire Protection Association (NFPA) Life Safety Code, Standards of Seismic Safety for Federally Owned Buildings, and energy and water conservation standards. Sustainable design will be integrated into the design in accordance with Leadership in Energy and Environmental Design (LEED) for Schools Silver criteria.

11. REQUIREMENT:

<u>PROJECT</u>: Replace the existing middle school by constructing a new middle school.

<u>REQUIREMENT</u>: The new school is required to provide adequate academic facilities for students in grades 4 through 8.

CURRENT SITUATION: The existing facilities are in a failing condition. Many of the buildings being replaced are 30 to 50 years old. Existing classroom and education spaces are dispersed across the school grounds. Inefficiencies due to travel times to these dispersed locations can be observed as students travel between classrooms, the dining facility and other activities. It is especially evident during inclement weather. Additionally, undersized classrooms, inadequate facilities, and poorly configured buildings further reduce efficiency and fail to meet the standards of the DoDEA Education Facilities Specifications. Water infiltration has interrupted school operations and resulted in the need for roof repairs and floor replacements. Aging utility infrastructure systems result in excessive maintenance costs. Most infrastructure has suffered due to a lack of required repair and maintenance and exceeded its useful life. There are numerous NFPA Life Safety and ADA code violations and no fire suppression systems. Bathrooms and plumbing are in severe need of renovation. The facilities do not meet standards for energy efficiency. Numerous maintenance and repair problems have developed and are becoming non-repairable. The existing facilities do not meet AT/FP requirements.

IMPACT IF NOT PROVIDED: Continued use of unsafe, inadequate, and undersized facilities impairs the educational program. There will also be an increase in enrollment at Hanscom AFB with the completion of the base housing construction and renovation scheduled for completion in August 2011. If new facilities are not provided, the school will be undersized and provide a substandard environment that will continue to hamper the educational process. The condition of the school is impacting the quality of education for the students. Yearly maintenance and utility costs will continue to run high and the school will continue to struggle performing their mission in a limited capacity due to the inadequate and undersized facilities.

ADDITIONAL:

This project has been coordinated with the installation physical security plans and all AT/FP measures are included.

| | 730787 | | AM00027 | | 34,040 | |
| | | | | | | |

11. REQUIREMENT (continued):

The use of temporary classroom facilities will be included in the event the construction schedule is delayed as a result of unforeseen circumstances and to accommodate the phased demolition of buildings.

Sustainable principles will be integrated in the design, development and construction of the project in accordance with Executive Order 13123 and other applicable laws and executive orders. Energy conservation and environmentally safe measures will be incorporated in this project wherever feasible, practical or required by regulation. Energy and natural resource conservation measures will be maximized in the design to the extent possible. To decrease energy consumption consideration and evaluation will be given to: the use of natural redirected daylight through optimized building orientation and the use of window walls and clerestory windows; earth ducted cooling, floor slab cooling, solar heat collectors for hot water in locker rooms; night time air flushing for cooling ventilation and the incorporation of renewable energy sources. Water usage reduction strategies that will be considered are incorporating water and wastewater reduction technologies, such as low/no flow fixtures, and the use of rain water collection cisterns for non-potable toilets. Other sustainable principals that will be evaluated include: light pollution reduction, and the use of, recycled content and VOC low-emitting materials in construction materials and furniture.

All known alternatives were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed.

<u>JOINT USE CERTIFICATION</u>: This facility can be used by other components on an "as available" basis; however, the scope of the project is based on DoDEA requirements.

Construct a new facility to house the North Carolina District Superintendent's Office (DSO) located at Fort Bragg, NC. The DSO will be designed to provide offices for the superintendent and DSO staff, provide waiting/reception for visitors and family members, provide conference spaces for school board and other meetings, provide training for district personnel, public restrooms, and centralize information systems. This project includes related infrastructure such as parking areas, mechanical rooms, and delivery areas. The project also includes site improvements such as signage, fencing, paving, landscaping, covered walkways, exterior lighting and utilities.

10. DESCRIPTION OF PROPOSED CONSTRUCTION(continued):

Facilities will be designed in accordance with DoDEA Education Facilities Specifications, Americans with Disabilities Act (ADA) Accessibility Guidelines/Architectural Barriers Act (ABA), National Fire Protection Association (NFPA) Life Safety Code, Standards of Seismic Safety for Federally Owned Buildings, and energy and water conservation standards. Sustainable design will be integrated into the design in accordance with Leadership in Energy and Environmental Design (LEED) for Schools Silver criteria.

11. **REQUIREMENT**:

PROJECT: Construct a new District Superintendent's Office (DSO) at Fort Bragg, North Carolina.

REQUIREMENT: Currently, all North Carolina DSO functions are housed in a portion of Irwin Intermediate School (IS), Fort Bragg, N.C and adjacent portable facilities. The Irwin IS is scheduled to be replaced by a FY09 MILCON project that will construct a new Irwin IS and demolish the current school. All DSO functions currently located at Irwin IS must be moved prior to the demolition and return of this property to Fort Bragg. The location of the new DSO facility will be sited on the northwestern corner of the current Butner Elementary School campus near the corner of Normandy Drive and Bastogne Road, Fort Bragg, NC. This site is centrally located near Fort Bragg schools and housing areas; which will provide convenience to military families. There is no demolition included in this project; all current DSO facilities are to be demolished by the FY09 MILCON project to replace Irwin IS. Security, fire protection, and building management systems, adequate staff and visitor parking, exterior and security lighting will be provided.

<u>CURRENT SITUATION</u>: The facility that currently houses the NC DSO is scheduled to be vacated and all functions of the Irwin IS relocated to a new school to be built on Fort Bragg, N.C. The new school will not include offices for the North Carolina DSO. In addition to this, due to lack of space in the current facility many DSO functions are housed in inadequate portable facilities located adjacent to the school that will be replaced by the new DSO.

<u>IMPACT IF NOT PROVIDED</u>: Construction of a new DSO is the only method of obtaining the space needed to accommodate the District Superintendent's Office personnel and adequately serve military dependents at Fort Bragg, NC, Camp Lejeune, NC, and New River MCAS, NC.

ADDITIONAL:

This project has been coordinated with the installation physical security plans and all AT/FP measures are included.

The use of temporary classroom facilities will be included in the event the construction schedule is delayed as a result of unforeseen circumstances and to accommodate the phased demolition of buildings.

Sustainable principles will be integrated in the design, development and construction of the project in accordance with Executive Order 13123 and other applicable laws and executive orders. Energy conservation and environmentally safe measures will be incorporated in this project wherever feasible, practical or required by regulation. Energy and natural resource conservation measures will be maximized in the design to the extent possible.

All known alternatives were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed.

<u>JOINT USE CERTIFICATION</u>: This facility can be used by other components on an "as available" basis; however, the scope of the project is based on DoDEA requirements.

This project will construct a new elementary school to replace the existing elementary school. The project will include general purpose classrooms, information center, computer lab, supply areas, specialist rooms, art room, learning impaired room, teacher work rooms, counseling areas, storage, administrative offices, and other required areas for a fully functioning facility. This project includes related infrastructure such as parking areas, mechanical rooms, delivery areas, covered walkways, playgrounds, signage, fencing, paving, landscaping, exterior lighting and utilities. The new school will connect to the existing and recently constructed Gymnasium/Music Room addition which is currently in good condition. The existing facilities will be demolished. The current site is large enough to accommodate the new school with minimal impact on existing school operations during construction.

10. DESCRIPTION OF PROPOSED CONSTRUCTION(continued):

Facilities will be designed in accordance with DoDEA Education Facilities Specifications, Americans with Disabilities Act (ADA) Accessibility Guidelines/Architectural Barriers Act (ABA), National Fire Protection Association (NFPA) Life Safety Code, Standards of Seismic Safety for Federally Owned Buildings, and energy and water conservation standards. Sustainable design will be integrated into the design in accordance with Leadership in Energy and Environmental Design (LEED) for Schools Silver criteria.

11. REQUIREMENT:

<u>PROJECT</u>: Replace the existing elementary school by constructing a new elementary school while maintaining the existing Gym/ Music building.

<u>REQUIREMENT</u>: The new school is required to provide adequate academic facilities for students in grades Pre-K through 5.

<u>CURRENT SITUATION</u>: The existing facilities are in failing condition. The buildings being replaced are close to 50 years old. Additionally, undersized classrooms, inadequate facilities, and poorly configured buildings further reduce efficiency and fail to meet the standards of the DoDEA Education Facilities Specifications. Aging utility infrastructure systems result in excessive maintenance costs. Most infrastructure has suffered due to a lack of required repair and maintenance and has exceeded it useful life. There are numerous NFPA Life Safety and ADA code violations and no fire suppression systems. Bathrooms and plumbing are in severe need of replacement. The facilities do not meet construction standards for energy efficiency. Numerous maintenance and repair problems have developed and are becoming non-repairable. The existing facilities do not meet AT/FP requirements.

<u>IMPACT IF NOT PROVIDED</u>: The continued use of inadequate and undersized facilities will continue to impair the overall educational program for students. If new facilities are not provided, the substandard environment will continue to hamper education. Yearly maintenance and utility costs will continue to rise.

ADDITIONAL:

This project has been coordinated with the installation physical security plans and all AT/FP measures are included. The use of temporary classroom facilities will be included in the event the construction schedule is delayed as a result of unforeseen circumstances and to accommodate the phased demolition of buildings.

Sustainable principles will be integrated in the design, development and construction of the project in accordance with Executive Order 13123 and other applicable laws and executive orders. Energy conservation and environmentally safe measures will be incorporated in this project wherever feasible, practical or required by regulation. Energy and natural resource conservation measures will be maximized in the design to the extent possible. To decrease energy consumption consideration and evaluation will be given to: the use of natural redirected daylight through optimized building orientation and the use of window walls and clerestory windows; earth ducted cooling, floor slab cooling; green roofs, night time air flushing for cooling ventilation and the incorporation of renewable energy sources. Water usage reduction strategies that will be considered are incorporating water and wastewater reduction technologies, such as low/no flow fixtures, and the use of rain water collection cisterns for non-potable toilets. Other sustainable principals that will be evaluated include: light pollution reduction, and the use of, recycled content and VOC low-emitting materials in construction materials and furniture.

All known alternatives were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed.

<u>JOINT USE CERTIFICATION</u>: This facility can be used by other components on an "as available" basis; however, the scope of the project is based on DoDEA requirements.

Construct a new 5,800 square foot building addition to the existing Dahlgren Elementary/Middle School (ES/MS). The addition shall provide a full service kitchen that will serve meals to 150 students attending the school. The addition will also include an adjacent dedicated lunchroom for eating prepared meals. Also included in the addition is a space to accommodate a technology server room that will be used to contain the local area network (LAN) system cable cabinets and computer service area, as well as two restrooms. Project includes related infrastructure such as parking areas, mechanical rooms, delivery areas, and playgrounds.

Facilities will be designed in accordance with DoDEA Education Facilities Specifications, Americans with Disabilities Act (ADA) Accessibility Guidelines/Architectural Barriers Act (ABA), National Fire Protection Association (NFPA) Life Safety Code, Standards of Seismic Safety for Federally Owned Buildings, and energy and water conservation standards. Sustainable design will be integrated into the design in accordance with Leadership in Energy and Environmental Design (LEED) for Schools Silver criteria.

11. REQUIREMENT:

<u>PROJECT</u>: Construct a new kitchen addition with an associated eating area. The project will also renovate 475 square feet of an existing space in the school in order to provide a new computer technology server room.

REQUIREMENT: A full service kitchen facility with modern kitchen equipment is needed to serve 150 students at Dahlgren ES/MS in grades Pre-K thru 8th. There is also a need to have a computer technology room that will allow IT personnel to have proper climate controlled facilities for LAN cabinets, IT hardware, and computer repair.

<u>CURRENT SITUATION</u>: The existing Dahlgren ES/MS currently does not have a kitchen to prepare meals for the students. Children are required to bring their own lunches or walk home during the school day to eat lunch. This results in longer lunch periods and daily monitoring of the movement of children in and out of the school and takes away from instructional time in the classroom. There is no designated eating area. Students that remain at school eat in classrooms or other general areas. There is inadequate space for LAN equipment, cabinets, hardware, and computer repairs. Use of small closets and inadequate spaces for these IT equipment items results in poor LAN connectivity in the school as well as not allowing enough room for access and maintenance of the equipment. Current spaces are not cooled properly to allow the LAN equipment and cabling cabinets to function without connectivity problems.

<u>IMPACT IF NOT PROVIDED</u>: Without the construction of a new building addition to house a new kitchen and eating facility, children will continue to bring their own lunch to school or return home during the school day. Longer lunch periods will continue in order to compensate for departure and return of students, and instructional time will continue to be reduced. Without the renovation of existing space into an appropriate computer technology/server room that is properly cooled by a dedicated A/C system, the school will continue to have poor LAN connectivity and equipment will deteriorate at an accelerated rate due to the operating environment.

<u> Additional:</u>

This project has been coordinated with the installation physical security plans and all AT/FP measures are included.

The use of temporary classroom facilities will be included in the event the construction schedule is delayed as a result of unforeseen circumstances and to accommodate the phased demolition of buildings.

Sustainable principles will be integrated in the design, development and construction of the project in accordance with Executive Order 13123 and other applicable laws and executive orders. Energy conservation and environmentally safe measures will be incorporated in this project wherever feasible, practical or required by regulation. Energy and natural resource conservation measures will be maximized in the design to the extent possible.

All known alternatives were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed.

<u>JOINT USE CERTIFICATION</u>: This facility can be used by other components on an "as available" basis; however, the scope of the project is based on DoDEA requirements.

Renovate the existing elementary school and construct an expansion to the elementary school including kindergartens, general purpose classrooms, gymnasium, multipurpose room, cafeteria and kitchen, information center, computer labs, supply area, faculty work rooms, counseling areas, specialists' rooms, learning impaired rooms, storage, administrative and support offices. This project will include bus loading and unloading areas, child drop-off areas, parking for staff and visitors, mechanical rooms, delivery areas and recreation, kickball, and playground areas. Supporting facilities will include site development, signage, fencing, paving, exterior lighting, utilities, covered walkways and landscaping. Project will include demolition of Buildings 430, 431, 432, 433, 434, 435, 436, 437, and 459. Temporary classrooms facilities are required.

| | 730787 | | EU00033 | | 41,876 | |

10. DESCRIPTION OF PROPOSED CONSTRUCTION(continued):

Facilities will be designed in accordance with DoDEA Education Facilities Specifications, Americans with Disabilities Act (ADA) Accessibility Guidelines, National Fire Protection Association (NFPA) Life Safety Code, Standards of Seismic Safety for Federally Owned Buildings, and energy and water conservation standards. Sustainable design will be integrated into the design in accordance with Leadership in Energy and Environmental Design (LEED) Silver for Schools criteria.

11. REQUIREMENT:

<u>PROJECT</u>: Replace Bitburg Elementary School (ES) with renovation of the Spangdahlem facility and construction of a new elementary school addition.

<u>REQUIREMENT</u>: An expanded and renovated elementary school is required to provide adequate facilities for students in the Spangdahlem/Bitburg area. The elementary school will be constructed/renovated to accommodate students in Kindergarten through 5th grade.

CURRENT SITUATION: The Bitburg housing area will be closed. All housing and support facilities are being moved to Spangdahlem AB. The Bitburg ES is substandard. The projected student load will increase from approximately 500 to 877 for the Spangdahlem area upon closure and reassignment of personnel from Bitburg AB to Spangdahlem AB. The Bitburg ES facilities are undersized and inadequate. The poorly configured buildings further reduce efficiency and fail to meet the standards of the DoDEA Education Facilities Specifications. Aging utility infrastructure systems result in excessive maintenance costs. Most infrastructure has exceeded its useful life. There are numerous NFPA Life Safety and ADA code deficiencies and no fire suppression system. Bathrooms and plumbing are in severe need of renovation. In-door air quality is a growing concern due to moisture and mold. The facilities do not meet construction standards for force protection and energy efficiency. Numerous maintenance and repair problems have developed and are becoming non-repairable. The existing facilities do not meet many of the AT/FP requirements.

IMPACT IF NOT PROVIDED: Bitburg AB is closing. The USAFE closure of Bitburg Air Base will be delayed if this new school is not constructed. On Bitburg, the continued use of unsafe, inadequate, and undersized facilities that do not accommodate the current student population will continue to impair the overall educational program for students. If new facilities are not provided, the substandard environment will continue to hamper the educational process. The condition of the school is impacting the quality of education for the students. Yearly maintenance and utility costs will continue to run high and the school will continue to struggle performing their mission in a limited capacity due to the inadequate and undersized facilities.

ADDITIONAL: This project has been coordinated with the installation physical security plans and all AT/FP measures are included. The use of temporary classroom facilities will be included in the event the construction schedule is delayed as a result of unforeseen circumstances and to accommodate the phased demolition of buildings. Sustainable principles will be integrated in the design, development and construction of the project in accordance with Executive Order 13123 and other applicable laws and executive orders. Energy conservation and environmentally safe measures will be incorporated in this project wherever feasible, practical or required by regulation. Energy and natural resource conservation measures will be maximized in the design to the extent possible. Consideration and evaluation will be given to the use of natural redirected daylight through use of window walls, clerestory windows and skylights, green roofs, rain water collection cisterns for flushing of toilets, waterless urinals, night time air flushing for cooling ventilation, earth ducted cooling, floor slab cooling, geothermal

This project will construct a new middle school and a high school including general purpose classrooms, gymnasiums, multipurpose rooms, cafeteria and kitchen, information centers, computer labs, science labs, supply areas, faculty work rooms, counseling areas, specialists' rooms, learning impaired rooms, storage, administrative and support offices. This project will include bus loading and unloading areas, student drop-off areas, parking for staff and visitors, mechanical rooms, delivery areas and recreation areas, outdoor playgrounds, multipurpose soccer/football fields, athletic sports facilities, basketball courts and tennis courts. Temporary facilities may be required. Supporting facilities will include site development, signage, fencing, paving, exterior lighting, utilities, covered walkways and landscaping.

10. DESCRIPTION OF PROPOSED CONSTRUCTION(continued):

Facilities will be designed in accordance with DoDEA Education Facilities Specifications, Americans with Disabilities Act (ADA) Accessibility Guidelines, National Fire Protection Association (NFPA) Life Safety Code, Standards of Seismic Safety for Federally Owned Buildings, and energy and water conservation standards. Sustainable design will be integrated into the design in accordance with Leadership in Energy and Environmental Design (LEED) Silver for Schools criteria.

11. REQUIREMENT:

<u>PROJECT</u>: Replace the existing Bitburg middle school and high school with construction of a middle school and high school at a new site on Spangdahlem AB. The middle school and the high school will be constructed immediately adjacent to each other. The construction of the two schools will be concurrent.

<u>REQUIREMENT</u>: The new schools are required to provide adequate academic facilities for students in grades 6 through 12.

CURRENT SITUATION: The Bitburg housing area will be closed. All housing and support facilities are being moved to Spangdahlem AB. Spangdahlem has no high school. The existing Spangdahlem MS site is too small for a consolidated MS. The installation has provided a new site large enough for both the MS and HS. The projected student load will be approximately 333 students for the Middle School, and 300 students for the High School. The existing MS facilities will be turned over to the installation for community use. On Bitburg the MS and HS facilities are in failing condition. Many of the buildings being replaced are 30 to 50 years old. Additionally, undersized classrooms, inadequate facilities, and poorly configured buildings further reduce efficiency and fail to meet the standards of the DoDEA Education Facilities Specifications. Aging infrastructure results in excessive maintenance costs. There are numerous NFPA Life Safety and ADA code deficiencies. Bathrooms and plumbing are in severe need of renovation. In-door air quality is a growing concern due to moisture and mold. The facilities do not meet construction standards for force protection and energy efficiency. Numerous maintenance and repair problems have developed and are becoming non-repairable. The existing facilities do not meet many of the AT/FP requirements.

IMPACT IF NOT PROVIDED: Bitburg AB is closing. The USAFE closure of Bitburg Air Base will be delayed if these new schools are not constructed. On Bitburg the continued use of inadequate and undersized facilities will continue to impair the overall educational program. If new facilities are not provided, the substandard environment will continue to hamper the educational process. The condition of the school is impacting the quality of education for the students.

ADDITIONAL: This project has been coordinated with the installation physical security plans and all AT/FP measures are included. The use of temporary classroom facilities will be included in the event the construction schedule is delayed as a result of unforeseen circumstances and to accommodate the phased demolition of buildings. Sustainable principles will be integrated in the design, development and construction of the project in accordance with Executive Order 13123 and other applicable laws and executive orders. Energy conservation and environmentally safe measures will be incorporated in this project wherever feasible, practical or required by regulation. Energy and natural resource conservation measures will be maximized in the design to the extent possible. Consideration and evaluation will be given to the use of natural redirected daylight through use of window walls, clerestory windows and skylights, green roofs, rain water collection cisterns for flushing of toilets, waterless urinals, solar heat collectors for hot water in locker rooms, night time air flushing for cooling ventilation, earth ducted cooling, floor slab cooling, geothermal heating/cooling, displacement ventilation via integrated floor outlets and use of locally available co-generated heating. All known alternatives were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed.

<u>JOINT USE CERTIFICATION</u>: This facility can be used by other components on an "as available" basis; however, the scope of the project is based on DoDEA requirements.

This project will construct a gymnasium with spectator seating, student locker rooms, coach's offices, weight room, laundry area, storage areas and general purpose classrooms. Project includes related infrastructure such as mechanical rooms and delivery areas. Site improvements include signage, fencing, paving, landscaping, covered walkways, exterior lighting and utilities. Phased building demolition will be required to accommodate new construction without interrupting school operations. Temporary facilities may be required. Facilities will be designed in accordance with DoDEA Education Facilities Specifications, Americans with Disabilities Act (ADA) Accessibility Guidelines, National Fire Protection Association (NFPA) Life Safety Code, Standards of Seismic Safety for Federally Owned Buildings, and energy and water conservation standards. Sustainable design will be integrated into the design in accordance with Leadership in Energy and Environmental Design (LEED) Silver for Schools criteria.

11. REQUIREMENT:

<u>PROJECT</u>: This project will construct an addition to the existing middle/high school.

REQUIREMENT: The addition is required to provide adequate facilities for students in grades 7 through 12.

<u>CURRENT SITUATION</u>: Ansbach Middle/High School does not have sufficient classrooms for the projected enrollment of 484. At peak enrollment the existing classrooms will be insufficient and/or be overcrowded. In addition, the existing gymnasium is undersized and inadequate to meet the school's physical education and sports curriculum and cannot accommodate spectator seating. Due to structural conditions, the existing gymnasium cannot be expanded. Presently, the students must coordinate and schedule their athletic activities with the local Army community, which is located on the other side of an active airfield. Undersized classrooms and inadequate facilities in conjunction with poorly configured buildings further reduce efficiency and fail to meet the standards of the DoDEA Education Facilities Specifications.

<u>IMPACT IF NOT PROVIDED</u>: The use of inadequate and undersized facilities that do not accommodate the student population will impair the overall educational program for students. Overcrowded classrooms will exist.

ADDITIONAL: This project has been coordinated with the installation physical security plans and all AT/FP measures are included. The use of temporary classroom facilities will be included in the event the construction schedule is delayed as a result of unforeseen circumstances and to accommodate the phased demolition of buildings. Sustainable principles will be integrated in the design, development and construction of the project in accordance with Executive Order 13123 and other applicable laws and executive orders. Energy conservation and environmentally safe measures will be incorporated in this project wherever feasible, practical or required by regulation. Energy and natural resource conservation measures will be maximized in the design to the extent possible. Consideration and evaluation will be given to the use of natural redirected daylight through use of window walls, clerestory windows and skylights, green roofs, rain water collection cisterns for flushing of toilets, waterless urinals, solar heat collectors for hot water in locker rooms, night time air flushing for cooling ventilation, earth ducted cooling, floor slab cooling, geothermal heating/cooling, displacement ventilation via integrated floor outlets and use of locally available co-generated heating. All known alternatives were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed.

<u>JOINT USE CERTIFICATION</u>: This facility can be used by other components on an "as available" basis; however, the scope of the project is based on DoDEA requirements.

This project will combine two existing elementary schools, Wetzel Elementary and Smith Elementary, into one school located in the Wetzel housing area. The project will include kindergarten classrooms, general purpose classrooms, gymnasium, multipurpose room, cafeteria and kitchen, information centers, computer lab, supply area, faculty work rooms, counseling areas, specialists' rooms, learning impaired rooms, storage and administrative offices. Project includes related infrastructure such as parking areas, mechanical rooms, delivery areas, and playgrounds. Site improvements include signage, fencing, paving, landscaping, covered walkways, exterior lighting and utilities. Temporary facilities may be required. Demolish Buildings 8880, 8882, and 8885. Facilities will be designed in accordance with DoDEA Education Facilities Specifications, Americans with Disabilities Act (ADA) Accessibility Guidelines, National Fire Protection Association (NFPA) Life Safety Code, Standards of Seismic Safety for Federally Owned Buildings, and energy and water conservation standards. Sustainable design will be integrated into the design in accordance with Leadership in Energy and Environmental Design (LEED) Silver for Schools criteria.

11. REQUIREMENT:

<u>PROJECT</u>: This project will replace the existing Wetzel and Smith Elementary Schools with one elementary school.

<u>REQUIREMENT</u>: The new school is required to provide adequate academic facilities for students in grades Pre-K through 5.

CURRENT SITUATION: The existing facilities are rated in a failing condition. The two schools to be combined, Wetzel and Smith are in two separate housing areas, with Smith in a land-locked site with no room for expansion. Additionally, undersized classrooms, inadequate facilities, and poorly configured buildings further reduce efficiency and fail to meet the standards of the DoDEA Education Facilities Specifications. Aging infrastructure results in excessive maintenance costs. Most infrastructure has exceeded its useful life. There are numerous NFPA Life Safety and ADA code deficiencies and no fire suppression systems. Toilets and plumbing are in severe need of renovation. In-door air quality is a growing concern due to moisture and mold. The facilities do not meet construction standards for AT/FP and energy efficiency. Numerous maintenance and repair problems have developed and are becoming non-repairable.

<u>IMPACT IF NOT PROVIDED</u>: The use of inadequate and undersized facilities will continue to impair the overall educational program. Yearly maintenance and utility costs will continue to rise. School infrastructure/systems will begin to fail.

ADDITIONAL: This project has been coordinated with the installation physical security plans and all AT/FP measures are included. The use of temporary classroom facilities will be included in the event the construction schedule is delayed as a result of unforeseen circumstances and to accommodate the phased demolition of buildings. Sustainable principles will be integrated in the design, development and construction of the project in accordance with Executive Order 13123 and other applicable laws and executive orders. Energy conservation and environmentally safe measures will be incorporated in this project wherever feasible, practical or required by regulation. Energy and natural resource conservation measures will be maximized in the design to the extent possible. Consideration and evaluation will be given to the use of natural redirected daylight through use of window walls, clerestory windows and skylights, green roofs, rain water collection cisterns for flushing of toilets, waterless urinals, solar heat collectors for hot water in locker rooms, night time air flushing for cooling ventilation, earth ducted cooling, floor slab cooling, geothermal heating/cooling, displacement ventilation via integrated floor outlets and use of locally available co-generated heating. All known alternatives were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed.

<u>JOINT USE CERTIFICATION</u>: This facility can be used by other components on an "as available" basis; however, the scope of the project is based on DoDEA requirements.

This project will construct an addition consisting of six Science Classrooms and a Band/Music Room, toilets, stairs, and connecting corridors to the existing middle school. Project includes related infrastructure such as mechanical rooms. Site improvements include signage, paving, landscaping, covered walkways, exterior lighting and utilities. Temporary facilities may be required.

10. DESCRIPTION OF PROPOSED CONSTRUCTION(continued):

Facilities will be designed in accordance with DoDEA Education Facilities Specifications, Americans with Disabilities Act (ADA) Accessibility Guidelines, National Fire Protection Association (NFPA) Life Safety Code, Standards of Seismic Safety for Federally Owned Buildings, and energy and water conservation standards. Sustainable design will be integrated into the design in accordance with Leadership in Energy and Environmental Design (LEED) Silver for Schools criteria.

11. REQUIREMENT:

<u>PROJECT</u>: This project is to construct an addition to the existing Middle School.

<u>REQUIREMENT</u>: This addition/renovation is required to provide adequate space for educational activities to support students in grades 6 through 8.

<u>CURRENT SITUATION</u>: School is undersized for the current population and projected student loads. The Middle School (MS) currently is borrowing two classrooms from the adjacent Elementary School. The student enrollment of the MS is projected to increase by 131 students for SY2012/2013 due to ongoing transformation actions by the Army. The school has an inadequate number of science labs required for the current student enrollment and an inadequate music room.

<u>IMPACT IF NOT PROVIDED</u>: The school may have to consider lease and use of temporary modular classrooms at an additional annual cost for maintenance and purchase/lease. The students, dependents of often deployed service members, will continue to use inadequate and insufficient facilities. Currently, there is insufficient space, equipment, and functional layout to support their current curriculum requirements.

ADDITIONAL INFO: This project has been coordinated with the installation physical security plans and all AT/FP measures are included. The use of temporary classroom facilities will be included in the event the construction schedule is delayed as a result of unforeseen circumstances and to accommodate the phased demolition of buildings. Sustainable principles will be integrated in the design, development and construction of the project in accordance with Executive Order 13123 and other applicable laws and executive orders. Energy conservation and environmentally safe measures will be incorporated in this project wherever feasible, practical or required by regulation. Energy and natural resource conservation measures will be maximized in the design to the extent possible. Consideration and evaluation will be given to the use of natural redirected daylight through use of window walls, clerestory windows and skylights, green roofs, rain water collection cisterns for flushing of toilets, waterless urinals, solar heat collectors for hot water in locker rooms, night time air flushing for cooling ventilation, earth ducted cooling, floor slab cooling, geothermal heating/cooling, displacement ventilation via integrated floor outlets and use of locally available co-generated heating. All known alternatives were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed.

<u>JOINT USE CERTIFICATION</u>: This facility can be used by other components on an "as available" basis; however, the scope of the project is based on DoDEA requirements.

Construct a new high school including general purpose classrooms, gymnasium, multipurpose room, cafeteria and kitchen, information center, computer labs, science labs, Junior Reserve Officers' Training Corps (JROTC), supply areas, faculty work rooms, counseling areas, specialists' rooms, learning impaired rooms, storage, administrative and support offices. This project will include bus loading and unloading areas, student drop-off area, parking for staff and visitors, mechanical rooms, delivery areas and recreation, soccer/football and athletic sports facilities, and basketball and tennis courts. Temporary facilities may be required. Supporting facilities will include site development, signage, fencing, paving, exterior lighting, utilities, covered walkways and landscaping. Facilities will be designed in accordance with DoDEA Education Facilities Specifications, Americans with Disabilities Act (ADA) Accessibility Guidelines, National Fire Protection Association (NFPA) Life Safety Code, Standards of Seismic Safety for Federally Owned Buildings, and energy and water conservation standards. Sustainable design will be integrated into the design in accordance with Leadership in Energy and Environmental Design (LEED) Silver for Schools criteria.

11. REQUIREMENT:

<u>PROJECT</u>: Replace the existing high school with construction of a high school at a new site in Villaggio Housing in Vicenza. Additionally, the high school will be constructed adjacent to, and will be physically connected to the recently completed middle school.

<u>REQUIREMENT</u>: A new high school is required to provide adequate facilities to accommodate the educational needs for students in the USAG Vicenza area in grades 9 through 12.

<u>CURRENT SITUATION</u>: The existing school, constructed in 1958, has serious NFPA, AT/FP, ADA, fire suppression and seismic deficiencies. This facility is in failing condition. Fourteen of the eighteen evaluated building systems require immediate replacement. Aging utility infrastructure systems result in excessive maintenance costs. Most infrastructure has exceeded its useful life. Existing classrooms, common areas and cafeteria are inadequate and undersized, failing to meet the standards of the DoDEA Education Facilities Specifications. The existing permanent facility has over 35% of its area within the AT/FP installation perimeter standoff distance and is located adjacent to a major host nation highway. This highway has occasionally been the site of host nation protests regarding US military issues. In-door air quality is a growing concern due to moisture and mold. The facilities do not meet standards for energy efficiency. Numerous maintenance and repair problems have developed and are becoming non-repairable.

IMPACT IF NOT PROVIDED: The continued use of inadequate and undersized facilities will continue to impair the overall educational program for students. The substandard environment will continue to hamper the educational process. Yearly maintenance and utility costs will continue to increase and the school will continue to struggle performing their mission in a limited capacity due to the inadequate and undersized facilities. The lack of adequate setback from the installation perimeter and a major Host Nation Highway will continue to be a serious AT/FP concern.

ADDITIONAL: This project has been coordinated with the installation physical security plans and all AT/FP measures are included. The use of temporary classroom facilities will be included in the event the construction schedule is delayed as a result of unforeseen circumstances and to accommodate the phased demolition of buildings. Sustainable principles will be integrated in the design, development and construction of the project in accordance with Executive Order 13123 and other applicable laws and executive orders. Energy conservation and environmentally safe measures will be incorporated in this project wherever feasible, practical or required by regulation. Energy and natural resource conservation measures will be maximized in the design to the extent possible. Consideration and evaluation will be given to the use of natural redirected daylight through use of window walls, clerestory windows and skylights, green roofs, rain water collection cisterns for flushing of toilets, waterless urinals, solar heat collectors for hot water in locker rooms, night time air flushing for cooling ventilation, earth ducted cooling, floor slab cooling, geothermal heating/cooling, displacement ventilation via integrated floor outlets and use of locally available co-generated heating. All known alternatives were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed.

<u>JOINT USE CERTIFICATION</u>: This facility can be used by other components on an "as available" basis; however, the scope of the project is based on DoDEA requirements.

Construct a new one story classroom building to serve students in grades Pre-School (Sure Start), Pre-School Disabilities (PSCD), and Kindergarten, consisting of six (6) Kindergarten classrooms with shared toilets, kitchens, two (2) Pre-School classrooms with shared toilet, kitchen and patios, and one PSCD classroom with office, toilet, laundry, storage rooms and patios. In accordance with DoDEA Education Facilities Specifications, project shall include utilities, landscaping, exterior lighting, fencing, new playground equipment and covered walkways between drop-off areas and all school facilities. Existing classroom building T-4355 will be demolished and site prepared to receive the new playground equipment displaced by the new classroom.

| 5. Program Element | 6. Category Code 730787 | 7. Projec | PA00019 | 8.Projec | ct Cost (\$000) 12,236 |

10. DESCRIPTION OF PROPOSED CONSTRUCTION (continued):

The new building must meet all U.S. life safety, force protection, energy conservation standards and be completely accessible. Cabinets, counters, classroom sinks, storage closets, tack boards, whiteboards, coat racks/cubby units, heating and air conditioning, closed circuit TV system, cable TV system, intercom/public address system, clock-bell system, telephone system, and a local area network system will be part of the project. The cost of the Sustainable Design and Development (SDD) initiatives is projected at 8% of the hard construction cost. The single largest component of the SDD cost is the photovoltaic system, which is just over 0.4% of hard construction cost. The balance of the SDD cost is for the various items identified on the Leadership in Energy and Environmental Design (LEED) Scorecard, which includes the high-performance classroom criteria such as day-lighting, views, thermal comfort and indoor air quality.

Facilities will be designed in accordance with DoDEA Education Facilities Specifications, Americans with Disabilities Act (ADA) Accessibility Guidelines/Architectural Barriers Act (ABA), National Fire Protection Association (NFPA) Life Safety Code, Standards of Seismic Safety for Federally Owned Buildings, and energy and water conservation standards. Sustainable design will be integrated into the design in accordance with Leadership in Energy and Environmental Design (LEED) for Schools Silver criteria.

11. REQUIREMENT:

<u>PROJECT</u>: This project will replace the temporary classroom building with a new permanent one to accommodate Kindergarten and preschool age students with special needs in the Sure Start and PreSchool Children with Disabilities (PSCD) programs. The Project will construct new playgrounds and covered walkways to connect the new addition to surrounding buildings.

<u>REQUIREMENT</u>: The new classroom building is required to provide adequate academic facilities for students in grades Pre-K and Kindergarten.

CURRENT SITUATION: Joan K. Mendel Elementary School serves the majority of grade K-5 students living at Yokota Air Base and the surrounding areas. The enrollment at this school is projected to remain fairly constant in the foreseeable future. The school is currently sized appropriately for the current grade K-5 enrollment of 505 students, but the Kindergarten, Sure Start and PSCD classrooms are dispersed by two separate buildings (4307 and T-4355). Bldg 4307 does not conform to current DoDEA Ed Specs for Pre-school facilities and lack kitchens and separate toilet rooms for boys and girls. Bldg. 4355 is a metal temporary building built in 2003 to alleviate the overcrowding which resulted from the implementation of the Full Day Kindergarten (FDKG) program for DoDEA. The overcrowding trouble was exacerbated by the grade 1-3 Reduced Pupil to Teacher Ratio (RPTR) and DoDEA Technology Programs which were implemented in DoDEA schools. The temp building must be replaced by a permanent facility in accordance with DoD criteria. This project will provide adequate educational facilities to meet current Department of Defense Education Activity (DoDEA) criteria for 500 elementary school students in Grades K-5 and for 60 Preschool aged students with special education needs assigned to Yokota Air Base.

<u>IMPACT IF NOT PROVIDED:</u> If this project is not provided, the temporary building at Mendel ES will continue to be used despite the DoDEA initiative to replace all temporary buildings. Bldg. 4307 will continue to be used for preschool students with special needs.

ADDITIONAL:

This project will be coordinated with the installation physical security plan and all required AT/FP measures will be included. The need for temporary classroom facilities is a possibility if the construction schedule is delayed as a result of unforeseen circumstances. Sustainable principles will be integrated into the design, development and construction of the project in accordance with Executive Order 13123 and other applicable laws and executive

| orders. Energy conservation and environmentally safe measures will be incorporated in this project wherever | | | | | |

11. REQUIREMENT (continued):

feasible, practical or required by regulation. A preliminary analysis of reasonable options for satisfying this requirement indicates that only one option will meet mission needs. Therefore, a complete economic analysis was not performed. A certificate of exemption has been prepared.

The use of temporary classroom facilities will be included in the event the construction schedule is delayed as a result of unforeseen circumstances and to accommodate the phased demolition of buildings.

All known alternatives were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed.

<u>JOINT USE CERTIFICATION</u>: This facility can be used by other components on an "as available" basis; however, the scope of the project is based on DoDEA requirements.

Construct a new structural steel and reinforced concrete, consolidated 325 student capacity high school containing a single story gymnasium/multipurpose cafeteria/food service/music facility and a three (3) story classroom wing over the existing soccer field at Yokota High School. Classroom wing includes general purpose classrooms, art, science, computer labs, information center, media, special education, teacher's workroom, administration offices and Junior Reserve Officer Training Corps (JROTC) facilities. The gymnasium shall include auxiliary gym, telescoping bleachers and a foldable partition. Cafeteria shall include serving lines, a food service area with built-in cafeteria equipment and a stage. The new building must meet all U.S. life safety, force protection, energy conservation standards and be completely accessible. Cabinets, counters, classroom sinks, storage closets, tack boards, whiteboards, coat racks/cubby units, heating and air conditioning, ventilation, plumbing, closed circuit TV system, cable TV system, intercom/public address system, clock-bell system, telephone system, and a local area network system will be part of the project.

10. DESCRIPTION OF PROPOSED CONSTRUCTION (continued):

Exterior site improvements will include utilities, new service roads, parking lots, landscaping, site fixtures, electronic marquee, sidewalks and covered walkways to connect main buildings and protect students from the elements. Existing buildings 4117 (gymnasium/music Room), 4189 and Building 4118 (main classroom building) will be demolished to make room for the new consolidated facility. A new multi-purpose field north of the campus will also be included to replace the existing soccer field. Temporary facilities will be included if needed for construction phasing or unforeseen conditions. The cost of the Sustainable Design and Development (SDD) initiatives is projected at 8% of the hard construction cost. The single largest component of the SDD cost is the photovoltaic system, which is just over 0.4% of hard construction cost. The balance of the SDD cost is for the various items identified on the Leadership in Energy and Environmental Design (LEED) Scorecard, which includes the high-performance classroom criteria such as day-lighting, views, thermal comfort and indoor air quality. UFC 4-010-01 DoD ATFP Standards for Buildings require Progressive Collapse Avoidance structural design for new buildings stories or more.

Facilities will be designed in accordance with DoDEA Education Facilities Specifications, Americans with Disabilities Act (ADA) Accessibility Guidelines/Architectural Barriers Act (ABA), National Fire Protection Association (NFPA) Life Safety Code, Standards of Seismic Safety for Federally Owned Buildings, and energy and water conservation standards. Sustainable design will be integrated into the design in accordance with Leadership in Energy and Environmental Design (LEED) for Schools Silver criteria.

11. REQUIREMENT:

<u>PROJECT</u>: This project will provide a new consolidated high school building to replace three deteriorated and dysfunctional facilities and support facilities at Yokota High School, Yokota Air Base, Japan.

CURRENT SITUATION: Yokota High School is over 25 years old and does not meet DoDEA Education Facilities Specifications. Existing Building 4117 (Gymnasium/Music Rm), Building 4118 (Classroom Bldg/Media Center/JROTC) and Building 4189 (Cafeteria/School Supply) were built in the early 1970's and are approaching their life expectancy. All systems to include structural, mechanical and electrical are in need of costly replacements which are expected to exceed the replacement costs of these buildings. Bldg. 4117 is undersized for Music with regard to current Education Specifications, has limited capacity for assembly and is in disrepair due to aging systems. This building currently has steam lines installed under the building slab which are constantly rupturing, requiring costly emergency repairs and disruption to school programs. Bldg. 4118 is designed with a cluster arrangement of classrooms surrounding a central core area which was popular in the early 1970's, but is now dysfunctional in relation to proven education standards. Most classrooms in this building are shaped as polygons which results in inefficient use of space and concern about fire protection due to several interconnecting rooms serving as the primary means of egress. Bldg. 4189 is not suitable as a Cafeteria/Multi-Purpose Room and is severely deteriorated. DoDEA Ed Specs combine Gymnasiums and Cafeterias to create large multi-purpose rooms which are not possible with the current facilities. Combining the Gymnasium and Cafeteria with Music, as proposed for this project will also improve the function of these facilities by providing a large multi-purpose room for assemblies and special events and a common stage for performances. The Art classroom is currently located in the Cafeteria building (Bldg. 4189) and is undersized and dysfunctional. The art space was originally designed as a dark room for an obsolete photography program.

IMPACT IF NOT PROVIDED: All facilities at Yokota High School will continue to degrade. Sustainment costs will continue to rise each year with increasing costs attributed to emergency repair work and catastrophic failure of systems and components. School programs may be compromised due to emergencies such as ruptured steam lines. The school will continue to operate in a deficient arrangement due to the obsolete configuration of Building 4118 and the separation of cafeteria and gymnasium. Popular programs such as Art and Music will be housed in undersized and outdated facilities. DoDEA will not be able to adequately fulfill its mission and responsibility to

provide a safe, secure, and well managed environment that focus on student achievement for US station personnel dependents at Yokota Air Base.

<u>ADDITIONAL</u>: This project will be coordinated with the installation physical security plan and all required AT/FP measures will be included. The continued use of temporary classroom facilities will be included in the event the construction schedule is delayed as a result of unforeseen circumstances. Sustainable principles will be integrated into the design, development and construction of the project in accordance with Executive Order 13123 and other applicable laws and executive orders. Energy conservation and environmentally safe measures will be incorporated in this project wherever feasible, practical or required by regulation. A preliminary analysis of reasonable options for accomplishing this project was done. It indicates there is only one option that will meet operational requirements. Because of this, a full economic analysis was not performed. A certificate of exception has been prepared.

<u>JOINT USE CERTIFICATION:</u> This project can be used by other components on an "as available" basis; however, the scope of the project is based on DoDEA requirements.

10. DESCRIPTION OF PROPOSED CONSTRUCTION (continued):

The project development will require the demolition of buildings 691, 693 and 698. Phased building demolition will be required to accommodate new construction without interrupting school operations and will require temporary classrooms facilities. Facilities will be designed in accordance with DoDEA Education Facilities Specifications, Americans with Disabilities Act (ADA) Accessibility Guidelines, National Fire Protection Association (NFPA) Life Safety Code, Standards of Seismic Safety for Federally Owned Buildings, and energy and water conservation standards. Sustainable design will be integrated into the design in accordance with Leadership in Energy and Environmental Design (LEED) Silver for Schools criteria.

11. **REQUIREMENT**:

<u>PROJECT</u>: Replace the existing high school by constructing a new high school.

<u>REQUIREMENT</u>: The new school is required to provide adequate academic facilities for students in grades 6 through 12.

<u>CURRENT SITUATION</u>: The existing facilities are in failing condition. Many of the buildings being replaced are 30 to 50 years old. Separated facilities leads to inefficiencies due to travel times as students travel between classrooms, the dining facility and other activities. Additionally, undersized classrooms, and inadequate facilities further reduce efficiency and fail to meet the standards of the DoDEA Education Facilities Specifications. Aging infrastructure results in excessive maintenance costs. Most infrastructure has exceeded its useful life. There are numerous NFPA Life Safety and ADA code deficiencies and no fire suppression systems. Bathrooms and plumbing are in severe need of renovation. In-door air quality is a growing concern due to moisture and mold. The facilities do not meet construction standards for force protection and energy efficiency. Numerous maintenance and repair problems have developed and are becoming non-repairable. The existing facilities do not meet many of the AT/FP requirements.

<u>IMPACT IF NOT PROVIDED</u>: The use of failing, inadequate and undersized facilities that do not accommodate the current student population will continue to impair the overall educational program for students. Annual maintenance and utility costs will continue to rise and there will be increased risk of building system failures.

ADDITIONAL: This project has been coordinated with the installation physical security plans and all AT/FP measures are included. The use of temporary classroom facilities will be included in the event the construction schedule is delayed as a result of unforeseen circumstances and to accommodate the phased demolition of buildings. Sustainable principles will be integrated in the design, development and construction of the project in accordance with Executive Order 13123 and other applicable laws and executive orders. Energy conservation and environmentally safe measures will be incorporated in this project wherever feasible, practical or required by regulation. Energy and natural resource conservation measures will be maximized in the design to the extent possible. Consideration and evaluation will be given to the use of natural redirected daylight through use of window walls, clerestory windows and skylights, green roofs, rain water collection cisterns for flushing of toilets, waterless urinals, solar heat collectors for hot water in locker rooms, night time air flushing for cooling ventilation, earth ducted cooling, floor slab cooling, geothermal heating/cooling, displacement ventilation via integrated floor outlets and use of locally available co-generated heating. All known alternatives were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed.

<u>JOINT USE CERTIFICATION</u>: This facility can be used by other components on an "as available" basis; however, the scope of the project is based on DoDEA requirements.

A. Estimated Design Data:

1. Status:

| (a) | Date Design Started | Apr 2011 |
|-----|--|--------------|
| (b) | Parametric Cost Estimate Used to Develop Costs | Yes |
| (c) | Percent Complete as of January 1, 2011 | 0% |
| (d) | Date 35 Percent Complete | Nov 2011 |
| (e) | Date Design Complete | May 2012 |
| (f) | Type of Design Contract | Design/Build |

2. Basis:

(a) Standard or Definitive Design
No
(b) Date Design was Most Recently Used
N/A

3. Total Cost (c) = (a) + (b) or (d) + (e)

(a) Production of Plans and Specifications

(b) All other Design Costs

 (c) Total
 2,226

 (d) Contract
 1,855

 (e) In-house
 371

 4. Contract Award
 Jan 2012

 5. Construction Start
 Jun 2012

 6. Construction Complete
 Aug 2014

Fiscal Year

| Equipment | Procuring | Appropriated | Cost |
|---|----------------------|--------------|----------------|
| Nomenclature Nomenclature | <u>Appropriation</u> | Or Requested | <u>(\$000)</u> |
| Furnishings/Equipment | O&M | 2014 | 300 |
| Active Network Hardward for Local Area Network and Voice over IP Phone Systems (Passive cable installation priced and ind as part of construction) | plant | 2014 | 400 |
