Appendix A. TEDS Minimum Dataset	23

HIGHLIGHTS

This report presents summary results from the Treatment Episode Data Set (TEDS) for 2002. The report provides information on the demographic and substance abuse characteristics of the 1.9 million annual admissions to treatment for abuse of alcohol and drugs in facilities that report to individual State administrative data systems.

This Summary Report is issued in advance of the full TEDS Report for 1992-2002. It includes demographic data and all items from the TEDS Minimum Data Set. The Annual Report also will include data from the Supplemental Data Set, State data, and State rates.

TEDS is an admission-based system, and TEDS admissions do not represent individuals. Thus, for

example, an individual admitted to treatment twice within a calendar year would be counted as two admissions.

TEDS does not include all admissions to substance abuse treatment. It includes admissions to facilities that are licensed or certified by the State substance abuse agency to provide substance abuse treatment (or are administratively tracked for other reasons). In general, facilities reporting TEDS data are those that receive State alcohol and/or drug agency funds (including Federal Block Grant funds) for the provision of alcohol and/or drug treatment services.

Major Substances of Abuse

- Five substances accounted for 95 percent of all TEDS admissions in 2002: alcohol (43 percent), opiates (18 percent; primarily heroin), marijuana/hashish (15 percent), cocaine (13 percent), and stimulants (7 percent; primarily methamphetamine) [Table 1b].

Alcohol

- Alcohol as a primary substance accounted for just over two-fifths (43 percent) of all TEDS admissions in 2002, down from three-fifths (59 percent) in 1992. However, 45 percent of primary alcohol admissions reported secondary drug abuse as well [Tables 1a and 1b].
- About three-quarters of admissions for abuse of alcohol alone and for abuse of alcohol with secondary drug abuse were male (76 percent and 74 percent, respectively) [Table 2a].

- Almost three-quarters (71 percent) of alcohol-only admissions were White, followed by Blacks and Hispanics (13 percent and 11 percent, respectively). Among admissions for alcohol with secondary drug abuse, 59 percent were White, followed by 26 percent who were Black and 10 percent who were Hispanic [Table 2a].

- For alcohol-only admissions, the average age at admission was 39 years, compared with 34 years among admissions for primary alcohol with secondary drug abuse [Table 2a].

Heroin

- TEDS admissions for primary heroin abuse increased from 11 percent of all admissions in 1992 to 15 percent in 2002, exceeding the proportion of admissions for primary cocaine abuse for the fourth consecutive year [Table 1b].

- About two-thirds (69 percent) of primary heroin admissions were male [Table 2a].
- Nearly half (48 percent) of primary heroin admissions were White, followed by 25 percent who were Hispanic and 24 percent who were Black [Table 2a].
- For primary heroin admissions, the average age at admission was 36 years [Table 2a].
- Sixty-two percent of primary heroin admissions reported injection as the route of administration; 33 percent reported inhalation, and 3 percent reported smoking [Table 3].

Other Opiates

- TEDS admissions for primary abuse of opiates other than heroin increased from less than 1 percent of all admissions in 1992 to 2 percent in 2002 [Table 1b].
- Just over half (54 percent) of primary non-heroin opiate admissions were male [Table 2a].
- Most primary non-heroin opiate admissions (88 percent) were White [Table 2a].
- For primary non-heroin opiate admissions, the average age at admission was 35 years [Table 2a].
- Three-quarters (75 percent) of primary non-heroin opiate admissions reported oral as the route of administration; 13 percent reported injection, and 9 percent reported inhalation [Table 3].

Cocaine/Crack

- The proportion of admissions for primary cocaine abuse declined from 18 percent in 1992 to 13 percent in 2002 [Table 1b].
- Smoked cocaine (crack) represented 73 percent of all primary cocaine admissions in 2002 [Tables 1a and 1b].

- Fifty-nine percent of primary smoked cocaine admissions were male, compared with 67 percent of non-smoked cocaine admissions [Table 2a].
- Among primary smoked cocaine admissions, 57 percent were Black, 34 percent were White, and 7 percent were Hispanic. Whites predominated (47 percent) among primary non-smoked cocaine admissions, followed by Blacks (33 percent) and Hispanics (17 percent) [Table 2a].
- For primary smoked cocaine admissions, the average age at admission was 37 years, compared with 34 years for non-smoked cocaine admissions [Table 2a].
- Among primary non-smoked cocaine admissions, 73 percent reported inhalation as the route of administration; 14 percent reported injection, and 10 percent reported oral [Table 3].

Marijuana/Hashish

- The proportion of admissions for primary marijuana abuse increased from 6 percent in 1992 to 15 percent in 2002 [Table 1b].
- About three-quarters (76 percent) of primary marijuana admissions were male [Table 2a].
- Over half (55 percent) of primary marijuana admissions were White, followed by 28 percent who were Black and 12 percent who were Hispanic [Table 2a].
- For primary marijuana admissions, the average age at admission was 23 years [Table 2a].

Methamphetamine/Amphetamine and Other Stimulants

- The proportion of admissions for abuse of methamphetamine/amphetamine and other stimulants increased from 1 percent to 7 percent between 1992 and 2002 [Table 1b].

- Over half (55 percent) of primary methamphetamine/amphetamine admissions were male [Table 2a].
- Three-quarters (74 percent) of primary methamphetamine/amphetamine admissions were White, followed by 15 percent who were Hispanic and 3 percent each who were Black and Asian/Pacific Islander [Table 2a].
- For primary methamphetamine/amphetamine admissions, the average age at admission was 31 years [Table 2a].
- Fifty-one percent of primary methamphetamine/amphetamine admissions reported smoking as the route of administration; 23 percent reported injection, and 17 percent reported inhalation [Table 3].

Race/Ethnicity

Among all racial/ethnic groups except Puerto Ricans, primary alcohol use (alone or in combination with other drugs) was the most frequently reported substance at treatment admission. However, the proportion reporting use of the other four most common substances varied considerably by racial/ethnic group.

- Among Whites, alcohol (48 percent) was followed by marijuana (14 percent), heroin (12 percent), methamphetamine/amphetamine (8 percent), and smoked cocaine (5 percent) [Table 2b].
- Among Blacks, alcohol (34 percent) was followed by smoked cocaine (23 percent), marijuana (18 percent), heroin (15 percent), and methamphetamine/amphetamine (less than 1 percent) [Table 2b].
- Among persons of Mexican origin, alcohol (41 percent) was followed by heroin (19 percent), marijuana (16 percent), methamphetamine/amphetamine (15 percent), and smoked cocaine (4 percent) [Table 2b].
- Among persons of Puerto Rican origin, heroin (49 percent) was the most frequently reported substance at admission. This was followed by alcohol (28 percent), marijuana (10 percent), smoked and non-smoked cocaine (5 percent each), and methamphetamine/amphetamine (less than 1 percent) [Table 2b].
- Among persons of Cuban origin, alcohol (40 percent) was followed by marijuana (17 percent), heroin (14 percent), smoked cocaine (12 percent), non-smoked cocaine (10 percent), and methamphetamine/amphetamine (2 percent) [Table 2b].
- Among Alaska Natives, alcohol (63 percent) was followed by heroin (18 percent), marijuana (8 percent), and methamphetamine/amphetamine and smoked cocaine (3 percent each) [Table 2b].
- Among American Indians, alcohol (63 percent) was followed by marijuana (14 percent), methamphetamine/amphetamine (9 percent), heroin (5 percent), and smoked cocaine (3 percent) [Table 2b].
- Among Asian/Pacific Islanders, alcohol (33 percent) was followed by methamphetamine/amphetamine (25 percent), marijuana (20 percent), heroin (8 percent), and smoked cocaine (7 percent) [Table 2b].

n/c State does not collect these data. In Connecticut, *Smoked cocaine* admissions are included in *Cocaine - Other route*. In Tennessee, *Heroin* admissions are included in *Other opiates*.

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS) - 3.1.04.

APPENDIX A

TEDS MINIMUM DATA SET

Missing values are coded as:

Unknown—The State collects this data item, but the record does not reflect an acceptable value.

Not collected—The State does not collect this data item for submission to TEDS.

Invalid—The value submitted for this data item was an invalid entry.

Client or codependent/collateral

A “client” is a person who meets all of the following criteria:

- 1) Has an alcohol or drug related problem
- 2) Has completed the screening and intake process
- 3) Has been formally admitted for treatment or recovery service in an alcohol or drug treatment unit
- 4) Has his or her own client record

A person is not a client if he or she has completed only a screening or intake process or has been placed on a waiting list.

A “codependent/collateral” is a person who has no alcohol or drug abuse problem, but satisfies all of the following conditions:

- 1) Is seeking services because of problems arising from his or her relationship with an alcohol or drug user
- 2) Has been formally admitted for service to a treatment unit
- 3) Has his or her own client record or has a record within a primary client record

GUIDELINES: Reporting of codependent/collateral data in TEDS is optional. If a substance abuse client with an existing record in TEDS becomes a codependent, a new client record should be submitted indicating that the client is an “admission” as a codependent. The reverse is also true for a person who is a codependent first and then becomes a substance abuse client.

Transaction type

Identifies whether a record is for an admission or a transfer/change in service.

A— Admission

T— Transfer/change in service

GUIDELINES: For purposes of reporting to TEDS, a treatment episode is defined as that period of service between the beginning of treatment for a drug or alcohol problem and the termination of services for the prescribed treatment plan. The episode includes one admission (when services begin), and one discharge (when services end). Within a treatment episode, a client may transfer to a different service, facility, program, or location. In some data systems, such transfers may generate “admissions” records. When it is feasible for the State to identify transfers, they should not be reported as admissions, but as transfers. When admissions and transfers cannot be differentiated in a State data system, such changes in service should be reported to TEDS as admissions.

Date of admission

The day when the client receives his or her first direct treatment or recovery service.

Type of service at admission

Describes the type of service the client receives.

Detoxification—24-hour service, hospital inpatient—24-hour per day medical acute care services in hospital setting for detoxification for persons with severe medical complications associated with withdrawal

Detoxification—24-hour service, free-standing residential—24-hour per day services in non-hospital setting providing for safe withdrawal and transition to ongoing treatment

Rehabilitation/residential—Hospital (other than detoxification)—24-hour per day medical care in a hospital facility in conjunction with treatment services for alcohol and other drug abuse and dependency

Rehabilitation/residential—Short-term (30 days or fewer)—Typically, 30 days or less of non-acute care in a setting with treatment services for alcohol and other drug abuse and dependency

Rehabilitation/residential—Long-term (more than 30 days)—Typically, more than 30 days of non-acute care in a setting with treatment services for alcohol and other drug abuse and dependency; this may include transitional living arrangements such as halfway houses

Ambulatory—Intensive outpatient—As a minimum, the client must receive treatment lasting two or more hours per day for three or more days per week

Ambulatory—Non-intensive outpatient—Ambulatory treatment services including individual, family, and/or group services; these may include pharmacological therapies

Ambulatory—Detoxification—Outpatient treatment services providing for safe withdrawal in an ambulatory setting (pharmacological or non-pharmacological)

Age

Identifies client's age at admission. Derived from client's date of birth and date of admission.

0—Indicates a newborn with a substance dependency problem

1-96—Indicates the age at admission

Sex

Identifies client's sex.

Male

Female

Race

Specifies the client's race.

Alaska Native (Aleut, Eskimo, Indian)—Origins in any of the original people of Alaska

American Indian (other than Alaska Native)—Origins in any of the original people of North America and South America (including Central America) and who maintain cultural identification through tribal affiliation or community attachment

Asian or Pacific Islander—Origins in any of the original people of the Far East, the Indian subcontinent, Southeast Asia, or the Pacific Islands

Black or African American—Origins in any of the black racial groups of Africa

White—Origins in any of the original people of Europe, North Africa, or the Middle East

Other—A default category for use in instances in which the client is not classified above or whose origin group, because of area custom, is regarded as a racial class distinct from the above categories.

Ethnicity

Identifies client's specific Hispanic origin

Puerto Rican—Of Puerto Rican origin, regardless of race

Mexican—Of Mexican origin, regardless of race

Cuban—Of Cuban origin, regardless of race

Other Specific Hispanic—Of known Central or South American or any other Spanish cultural origin (including Spain), regardless of race, other than Puerto Rican, Mexican, or Cuban, regardless of race

Hispanic—specific origin not specified—Of Hispanic origin, but specific origin not known or not specified

Not of Hispanic origin

GUIDELINES: If a State does not collect specific Hispanic detail, code *Ethnicity* for Hispanics as *Hispanic—specific origin not specified*.

Number of prior treatment episodes

Indicates the number of previous treatment episodes the client has received in any drug or alcohol program. Changes in service for the same episode (transfers) should *not* be counted as separate prior episodes.

0 previous episodes

1 previous episode

2 previous episodes

3 previous episodes

4 previous episodes

5 or more previous episodes

GUIDELINES: It is preferred that the number of prior treatments be a self-reporting field collected at the time of client intake. However, this data item may be derived from the State data system, if the system has that capability, and episodes can be counted for at least several years.

Principal source of referral

Describes the person or agency referring the client to the alcohol or drug abuse treatment program.

Individual (includes self-referral)—Includes the client, a family member, friend, or any other individual who would not be included in any of the following categories; includes self-referral due to pending DWI/DUI

Alcohol/drug abuse care provider—Any program, clinic, or other health care provider whose principal objective is treating clients with substance abuse problems, or a program whose activities are related to alcohol or other drug abuse prevention, education, or treatment

Other health care provider—A physician, psychiatrist, or other licensed health care professional; or general hospital, psychiatric hospital, mental health program, or nursing home

School (educational)—A school principal, counselor, or teacher; or a student assistance program (SAP), the school system, or an educational agency

Employer/EAP—A supervisor or an employee counselor

Other community referral—Community or religious organization or any Federal, State, or local agency that provides aid in the areas of poverty relief, unemployment, shelter, or social welfare. Self-help groups such as Alcoholics Anonymous (AA), Al-Anon, and Narcotics Anonymous (NA) are also included in this category. Defense attorneys are included in this category.

Court/criminal justice referral/DUI/DWI—Any police official, judge, prosecutor, probation officer, or other person affiliated with a Federal, State, or county judicial system. Includes referral by a court for DWI/DUI, clients referred in lieu of or for deferred prosecution, or during pretrial release, or before or after official adjudication. Includes clients on pre-parole, pre-release, work or home furlough, or TASC. Client need not be officially designated as “on parole.” Includes clients referred through civil commitment. Client referrals in this category are further defined in the Supplemental Data Set item *Detailed criminal justice referral*.

Education

Specifies the highest school grade the client has completed.

0—Less than one grade completed

1-25—Years of school (highest grade) completed

GUIDELINES: States that use specific categories for some code numbers should map their codes to a logical “number of years of school completed.” For General Equivalency Degree, use *12*. For Bachelor’s Degree, use *16*.

Employment status

Identifies the client’s employment status at the time of admission or transfer.

Full time—Working 35 hours or more each week; includes members of the uniformed services

Part time—Working fewer than 35 hours each week

Unemployed—Looking for work during the past 30 days, or on layoff from a job

Not in labor force—Not looking for work during the past 30 days or a student, homemaker, disabled, retired, or an inmate of an institution. Clients in this category are further defined in the Supplemental Data Set item *Detailed Not in Labor Force*.

GUIDELINES: Seasonal workers are coded in this category based on their employment status at time of admission.

Substance problem (primary, secondary, and tertiary)

These fields identify the client’s primary, secondary, and tertiary substance problems.

None

Alcohol

Cocaine/crack

Marijuana/hashish—This includes THC and other *cannabis sativa* preparations

Heroin

Nonprescription methadone

Other opiates and synthetics—Includes codeine, Dilaudid, morphine, Demerol, opium, oxycodone, and any other drug with morphine-like effects

PCP—Phencyclidine

Other hallucinogens—Includes hallucinogens, LSD, DMT, STP, mescaline, psilocybin, peyote, etc.

Methamphetamine

Other amphetamines—Includes amphetamines, Benzedrine, Dexedrine, Preludin, Ritalin, and any other amines and related drugs

Other stimulants—Includes all other stimulants

Benzodiazepine—Includes diazepam, flurazepam, chlordiazepoxide, clorazepate, lorazepam, alprazolam, oxazepam, temazepam, prazepam, triazolam, clonazepam, halazepam, and other unspecified benzodiazepines

Other tranquilizers—Includes non-benzodiazepine tranquilizers

Barbiturates—Includes phenobarbital, Seconal, Nembutal, etc.

Other sedatives or hypnotics—Includes non-barbiturate sedatives/hypnotics, chloral hydrate, Placidyl, Doriden, etc.

Inhalants—Includes ether, glue, chloroform, nitrous oxide, gasoline, paint thinner, etc.

Over-the-counter medications—Includes aspirin, cough syrup, Sominex, and any other legally obtained nonprescription medication

Other

Usual route of administration (of primary, secondary, and tertiary substances)

These fields identify the usual route of administration of the respective substances.

Oral

Smoking

Inhalation

Injection (IV or intramuscular)

Other

Frequency of use (of primary, secondary, and tertiary substances)

These fields identify the frequency of use of the respective substances.

No use in the past month

1-3 times in the past month

1-2 times in the past week

3-6 times in the past week

Daily

Age of first use (of primary, secondary, and tertiary substances)

For drugs other than alcohol, these fields identify the age at which the client first used the respective substance. For alcohol, these fields record the age of first intoxication.

0—Indicates a newborn with a substance dependency problem

1-96—Indicates the age at first use

Planned use of methadone

Identifies whether the use of methadone is planned as part of the treatment.

Yes

No
