

COMSAT Programs Approved for Purposes of 22 CFR 123.27 - Updated 9/28/12

Only Commercial Communications Satellites owned and operated by an entity or entities exclusively within the countries that comprise NATO and Major Non-NATO Allies are eligible for entry onto this list. COMSATS can be added to this list by General Correspondence (GC) request to DDTC from the satellite manufacturer only. The request must contain the below information and a description of the satellite functionality (e.g., provides voice, internet, and video communications to Central and South America). If TBA information is identified, this information must be updated as it becomes available via simple letter request to DDTC Space & Missile Technology Division providing the updated information for a particular satellite already on the list. Entries will automatically be removed from this list 2 years after scheduled projected launch date unless updated information is provided. (GC request will receive a DDTC response, update requests will not.)
