

FILING MANUAL

APRIL 1950

CG-219

TREASURY DEPARTMENT UNITED STATES COAST GUARD

energenpenpenaanse van de steren een de stere

and the second second second second second

17 April 1950

INTRODUCTION

This manual is adapted from the Navy filing system and is designed to meet the needs of all units. It supersedes the "Rules for Handling Mail and Files," which publication is canceled. The latter shall be destroyed; however, units required to store inactive records filed in accordance with its system should retain copies thereof for reference purposes.

The manual provides a classification plan for the arrangement of subjects found in general correspondence files. It reflects the functions of the Coast Guard and permits the establishment of a simplified filing system. Its provisions properly applied can be adapted to any activity and a standard filing system for the Coast Guard will result.

The application of the files system outlined herein by all Coast Guard units is mandatory.

No attempt should be made to install this system without first becoming familiar with the instructions and index as well as with the subject and name title groups. Parenthetical notes are provided, as necessary, to explain the use of a "subject." The lists of subordinate subjects in parentheses are examples only and are not to be considered inclusive.

Additions and deletions to this manual will be issued as consecutively numbered amendments.

Commanding officers will designate one copy as the official unit copy and will insure that it is maintained and corrected to date. Additional copies furnished will be distributed at the discretion of the commanding officer.

Martin Office

Vice Admiral, U. S. Coast Guard Commandant.

Dist. (SDL No. 42.)

A: abcd (5); efi (3); remainder (1). B: c (14); f (11); l (10); g (7); ehi (5); jk (3); d (2); bm (1). C: ad (3); remainder (1). D: all (1).

PART II. SUBJECT GROUPS.

PART 111. NAME TITLE GROUPS.

PART IV. ALPHABETICAL INDEX.

INSTRUCTIONS

SECTION 1. SUBJECT AND NAME TITLE GROUPS

1–1 Subject Groups

- 1-1-1 Major Subjects—there are ten major subject groups, each identified by a single letter of the alphabet:
 - **A** ADMINISTRATION—includes those administrative and management subjects used in establishing, organizing, and operating the Coast Guard.
 - **F** AIRCRAFT DESIGN, CONSTRUC-TION, AND SPECIALIZED MA-TERIAL—includes aeronautical subjects in connection with the design and construction of aircraft, including specialized materials.
 - **H** NAVIGATION AND NATURAL AND PHYSICAL SCIENCES—includes navigational subjects, natural and physical sciences, and related matter.
 - J GENERAL MATERIAL—includes those material items not included in other groups in the manual, such as aircraft, ships, and ordnance. The material items in the "J" group are common to most activities in the Coast Guard. Activities having a need for types of material by classes may use the "JJ" symbol with the appriate class number taken from the "Index of General Stores Section, Catalog of Naval Material."
 - L LOGISTICS AND FISCAL MAT-TERS—includes the various budget and accounting subjects, the supply system, disbursing, and logistics processes as applied to material.
 - **M** MEDICINE, SURGERY, AND DENTISTRY—includes treatment, equipment and supplies, and related subjects.
 - N SHORE ESTABLISHMENT DESIGN, CONSTRUCTION, AND RELATED MATERIAL—includes grounds, highways, railways, buildings and other structures, plants, and distribution systems.

- **P** *PERSONNEL*—includes the various subjects relating to personnel administration. This group includes both civilian and military personnel subjects.
- S SHIPS DESIGN, CONSTRUCTION, AND SPECIALIZED MATERIAL includes subjects in connection with the design and construction of ships, including specialized materials.
- X ORDNANCE DESIGN, CON-STRUCTION, AND SPECIALIZED MATERIAL—includes subjects in connection with the design and construction of all ordnance items, including specialized materials.
- 1-1-2 *Primary Subjects*—Major subjects are divided into primary subjects by adding an Arabic numeral to the single letter.

Example: A1 Plans, projects, and developments

1-1-3 Secondary Subjects—Primary subjects are divided into secondary subjects by adding a dash (—) and another Arabic numeral to the primary subjects.

Example: A1–1 Programs

- 1–2 Name Title Groups
- 1-2-1 General—name title groups consist of names and titles as distinguished from subjects. The name title groups include classes of materials, classes and types of vessels and aircraft, shore establishments, foreign governments, U. S. Government departments and agencies, commercial firms and enterprises, and classifications of civilian and military personnel.
- 1-2-2 Selection—the selection of letter symbols parallels the Navy file system. Navy symbols for name titles are used for items applicable to the Coast Guard. Symbols selected for purely Coast Guard items do not conflict with Navy symbols.

1-2-3 *Identification*—a name title is identified by two capital letters of the alphabet. The first letter represents the group and the second letter indicates a primary subdivision.

> Examples: OT.....MERCHANT MARINE OFFICERS ("O" for officers; "T" for Merchant Marine) GD.....COAST GUARD DISTRICTS ("G" for Coast Guard; "D" for Districts)

A common symbol for the entire group is indicated by repeating the group letter.

Examples: OO_____OFFICER PERSONNEL GG_____U. S. COAST GUARD The official symbols for types of aircraft, vessels and guided missiles are not file symbols, but for convenience they are included and are authorized for use as file symbols. These symbols in many instances consist of more than two letters of the alphabet.

Examples: WPC.....PATROL CRAFT, LARGE WAVP.....SEAPLANE TENDERS, SMALL

- 1-2-4 Secondary Breakdown the secondary breakdowns of name titles are indicated by an Arabic numeral added to the double letters.
 - Example: "EE5 DEPARTMENT OF JUSTICE," under "EE E X E C U T I V E BRANCH."

SECTION 2. FILE SYMBOLS

2–1 Structure of File Symbols

2-1-1 File Symbols—formed as follows:

A major sul	bject	A ADMINIS	-
		TRATION	
Primary sul	division	. A6 Communi	-
		cations	
Secondary	subdivi-	A6–6 Files and	ł
sion.		Records	

2-1-2 Name Titles—formed as follows: A name title___ GH COAST GUARD H E A D Q U A R -TERS Primary sub- GH3 Office of Engidivision neering

Secondary	GH3-4 Naval	Engi-
subdivision	neering Div.	

2–2 Subdivision of File Symbols

File symbols which appear in this manual may be further subdivided by combination of file symbols or arbitrary assignment of Arabic numerals to meet individual requirements of activities. Such subdivisions should be made in a logical and systematic manner. The following types of subdivisions by the method indicated are appropriate:

Subjects	Subdivide by
Boards, committees, firms, in-	
dividuals, government or-	
ganizations	Name
Contracts, purchase orders,	
etc	Number
Cities, towns, Area Com-	
mands, warfare operations_	Location
Programs, reports, claims, de-	
cisions	Subject
Appropriations, budget esti-	
mates	Date (fis-
	cal year)

2–3 Subdivision of Name Titles

Since specific symbols are not provided for all names, activities desiring to subdivide name titles may do so by adding a slant and assigning an arbitrary symbol or adding the name or initials and arranging alphabetically.

883751 - 50 - 2

a management of the second second

For example the Atomic Energy Commission may be indicated in one of the following ways:

 $\mathrm{EH}/1$

EH/AEC

EH/Atomic Energy Commission The types of shore establishments may be subdivided by geographical location.

Examples:

"GB/Boston" for "Coast Guard Base, Boston, Mass."

"GA3/Salem" for "Coast Guard Air Station, Salem, Mass."

Vessel symbols may be found in the "Register of Vessels of the U.S. Coast Guard" (CG-197). Vessel identification numbers should be used with the symbols without the slant (e.g. WPG 31 and not WPG/31). If the name of the vessel is. used, it should be preceded by the slant (e. g. WPG/BIBB). Activities may use the personnel name title symbols (LL, MM, OO) to segregate personnel sub-All correspondence on civilian jects. personnel subjects may be brought together by using the "LL" symbol to precede the subject symbol, as LL/P18-1. If desired, the subject may be subdivided by the personnel name title symbol, as P18-1/LL.

2-4 Combination of File Symbols

A combination of file symbols, either subject or name title in any order, separated by a slant (/) represents a further subdivision of the first symbol indicated. Such combination will be used only to indicate the subdivision of a file number and not to indicate cross-references.

Examples: Subject and name title: A3/CG or CG/A3 Organization of Coast Guard Two subjects: J6/L8-5 or L8-5/J6 Sale of Automobiles Two name titles: 00/QR or QR/00 Naval Reserve Officers File symbols are not joined with serial num-

bers or originator's codes.

A third symbol may be added after another slant (/) where the volume of material in a file warrants further subdivision. It is recommended, however, that not more than two symbols be used in combination.

2-5 Arbitrary Symbols

Since arbitrary symbols are not preceded by a letter of the alphabet they are readily distinguished from the file symbols appearing in the manual. Arbitrary symbols may be used by an activity for its own convenience and should mean nothing to another activity. Arbitrary symbols, however, must follow a standard file symbol separated therefrom by a slant (/). Arbitrary symbols may be added to any file symbols or combination of file symbols. Subdivision of file symbols may be indicated by the assignment of an Arabic numeral, a name, or an abbreviation, in lieu of combination of file symbols.

Examples:	
$\mathbf{A6}^{\mathbf{}}$	Communications
A6-6	Files and Records
A6-6/1	Records Disposal
A6-6/1-1	Disposal Schedules
$\mathbf{A4}$	Operations & Status of
	Vessel
A4-3	Ship and aircraft move-
	ments
A4-3/1	Operation orders
A4 - 3/1 - 1	Movement orders

2-6 Combination and Arbitrary Subdivision Filing requirements should govern the system to be used in combining file symbols and assigning arbitrary numerals. For example, the average activity will find "J22-2 Office Supplies" sufficient. Specialized supply activities will need additional subdivisions which are made by either adding arbitrary numerals or combining the basic symbol with other file symbols as follows:

Example No. 1:

Office Supplies
Utilization of Sup-
\mathbf{plies}
Control systems
Surplus Supplies
Reallocation

J22-2/2-2	Reimbursement
J22-2/3	Obsolete Supplies
J22-2/3-1	Transfer or Dis-
	\mathbf{posal}
Example No. 2:	-
J22-2	Office Supplies
J22-2/L8-5	Disposition of Sup-
	plies
J22-2/L8-5/1	Destruction of
	Supplies
J22-2/L8-5/2	Loss of Supplies
J22-2/L8-6	Custody of Sup-
	plies
J22-2/L8-6/1	Inventory of
	Supplies

In making such subdivision, care must be taken to avoid overlapping of subjects. If the basis of subdivision is not consistent there will be confusion as to which symbol should be used. In the following "wrong" example, for instance, would a letter on Federal Income Taxes be filed L14/1 or L14/2? In either of the "right" arrangements there would be no question-L14/1-1 in both cases.

Examples:

Wrong

L14 L14/1 L14/2 L14/3	Taxes Federal Income State
	Right
$ \begin{array}{c} L14\\ L14/1\\ L14/1-1\\ L14/1-2\\ L14/2\\ L14/2-1\\ L14/2-1\\ L14/2-2\end{array} $	Taxes Federal Income Tobacco State Income Tobacco

Right

L14	Taxes
L14/1	Income
L14/1-1	Federal
L14/1-2	State
L14/2	Tobacco
L14/2-1	Federal
L14/2-2	State

SECTION 3. INSTALLING OF FILES

3-1 General

Small activities can adapt this manual to their needs by maintaining a minimum number of folders and arranging material within these folders according to file symbols assigned. Files may then be expanded by establishing additional file folders as required without the necessity of changing the file symbols originally assigned to the correspondence. Large central files and specialized activities can adapt this manual to their needs by establishing file folders for major, primary, and secondary subjects as required and by subdividing such subjects where needed. While additions of new subjects to the manual will be made only by Headquarters, arbitrary subdivisions may be made by individual activities as needs dictate, as provided in Sections 2-5 and 2-6. Lists of such arbitrary subdivisions may be added to the manual in proper places or additional pages may be added.

3–2 Methods

- 3-2-1 Base Folder Method-Establish a "base folder" for each of the ten major subjects "A", "F", "S", etc. Assign the proper file symbol to all correspondence and arrange the correspondence within the "base folders" according to file number assigned. As these "base folders" expand, prepare additional folders for the particular subject or subjects causing the expansion. In this manner the number of file folders is kept to a minimum and standard file symbols are used. As files expand it is not necessary to change the original file numbers when establishing additional file folders. This system is recommended for small activities requiring files for correspondence of a general nature.
- 3-2-2 Inclusive Folder Method—Establish file folders for subjects within a given group,

i. e., "A1 to A6," "S1 to S15," etc. Assign the proper file symbol to all correspondence and arrange the correspondence within the folder in the proper place according to file symbol assigned. Files may then be expanded as follows:

"A1 to A6" becomes voluminous. Determine the subject causing the expansion, establish an additional folder, and relabel affected folders. For example if "A1" requires a separate folder, remove all "A1" material from the inclusive folder, place in a new folder labeled "A1", and relabel original folder "A2 to A6." If "A3" is causing the expansion, remove all "A1 to A3" material from the inclusive folder, place in a new folder labeled "A1 to A3," and relabel original folder "A4 to A6."

This system is recommended for large central files containing correspondence of a general nature, the requirements of which are not definitely known at the time of establishing the files. The number of folders required is reduced to a minimum, and a place is provided for correspondence on any subject. Standard file symbols are used; therefore, files can readily be expanded.

3-2-3 Subject/Subdivision Method—Establish file folders for subjects, arbitrarily subdivided as required. For example, the files of a Recruiting Station may require only one folder for all subjects in "A" group or one folder for "P19". In other files a great amount of detail may be required and many additional file folders will need be established. (See Section 2-5 and 2-6.) If the requirements for a particular subject are not known, the "base folder" method for determining the requirements is suggested. This system is recommended only for specialized activities. 3-2-4 Arbitrary Application Method—Certain specialized types of material, other than correspondence, such as blueprints, catalogs, photographs, and publications, may be set up as separate files without the assignment of a file symbol for each record, when the volume of such material warrants. For example, a Test Station may file all test reports on a given project under any arbitrary symbol, arranged to meet the needs of the particular Test Station, Photographic Laboratories, Public Information Offices and other activities, where necessary, may code, catalog, and file photographs as required. Blueprints may be indexed, cataloged, and filed according to print number.

3-3 Arrangement of Material or Folders

The arrangement of material or folders in a file drawer is determined by the file symbols appearing thereon. The file folders should be arranged in the same order in which the symbols appear in the manual. To eliminate confusion as to the arrangement of combined symbols where arbitrary numeral or other file symbols have been added and to standardize their arrangement, it is necessary that the order of each be established. The arrangements outlined below should be followed:

> (a) A major subject symbol to which a slant has been added precedes the primary subject symbols appearing in the manual. For example, A/1 and A/2 precede A1.

> (b) A primary subject symbol to which a slant has been added precedes the same symbol when followed by a dash. For example, A1/1 and A1/2 precede A1-1.

(c) When one symbol is subdivided by more than one of the methods authorized (see Section 2) the following order is established:

(1) Arbitrary numerals precede subject file symbols. For example, A1/9 precedes A1/A6.

(2) Subject file symbols precede name title file symbols or initials. For example, A1/S11 precedes A1/FS.

(3) Name title file symbols precede names or abbreviations. For example, A6/FS precedesA6/A1 Navs.

SECTION 4. HOW TO CLASSIFY

4-1 General

"Classifying," as used herein, is the mental process of determining the correct subject under which a record should be filed and any subordinate subjects which should be cross-referenced. It does not refer to security classifications such as Confidential or Secret. *Classifying is the most important filing operation* since it determines where papers are to be filed so that they may be found quickly. To classify a document properly, it is necessary to read and analyze it carefully. The following factors should be considered:

(a) The most important, definite, or concrete subject mentioned.

(b) The purpose or general significance of the document.

(c) The manner in which similar documents are asked for.

(d) The file symbol under which previous documents of a similar nature are filed.

4–2 Suggested Applications of Specific Subjects

- 4-2-1 Abstract Subjects—If additional subdivisions are needed under an abstract subject such as "Scientific Research and Development," it is appropriate to subdivide it by concrete subjects such as "J2-5 Plastics" (e. g., A11/J2-5). In other instances better subdivision may be made by using well-known designations, such as research project numbers.
- 4-2-2 Concrete Subject—While the subject groups reflect the functions of Coast Guard, some overlapping and duplication exist in the "Administrative—function-material" groups. For example, A4-3 represents the administrative details in connection with ship and aircraft movements, even though such movements constitute drills, exercises, or practices. A5 represents the administrative details

concerning drills, exercises, and practices. A16 represents the technical and administrative details concerning actual or simulated warfare operations. *Material* groups are to be used for both administrative and technical details concerning material.

For example:

An operation order for a mixed fo	
conduct certain exercises	A4–3
Arranging for, and reporting on,	
depth charge exercises	A5-4
Arranging for, and reporting on	
bomb exercises	A5-5
A report on design and perform-	
ance of depth charges	$\mathbf{X8}$
Recommendation for further ex-	
ercises	A5
Recommendation for conducting	
actual or simulated warfare op-	
erations involving combined	
forces	A16–9

- 4-2-3 Material Groups—It is suggested that activities having a need for types of material by classes use the "JJ" symbol with the appropriate class number taken from the "Index of Naval Stores, Catalog of Naval Materials" or, as pertains to merchant vessels, the "Equipment Lists for Merchant Vessels."
- 4-3 Coding

Coding is the simple process of writing the file symbols on the papers to be filed. File symbols under which a paper will be filed should be written by the classifier in the upper right corner of the paper. Crossreference symbols, if any, should be listed under the file symbol of papers to be filed. The classifier should not be misled by a file symbol which might appear on an incoming letter or the subject line thereon as either may be inappropriate for his own use. When a previously assigned file symbol is found inappropriate, the classifier should line out the inappropriate symbol and write an appropriate symbol in the upper right corner of the paper to be filed. Appropriate changes in symbols should also be noted on cross-references (if any), parts, accessories, attachments, and components of material items should be filed with the material item to which they belong, unless the activity concerned has sufficient volume of material to warrant further subdivision.

4-4 Cross-Referencing

A cross-reference is a record filed under a name or another subject to indicate where the basic record to which it refers is filed. The cross-reference may be in the form of a cross-reference sheet (form CG-10128) or an extra copy of a letter. A copy of a letter used as a cross-reference should show any changes made to the basic letter or a notation should be made thereon referring to the corrected letter in the files. Crossreferences serve a useful purpose in locating material but should be resorted to infrequently. It is neither necessary nor desirable that every folder where a paper might be located contain a cross-reference to it. Ordinarily endorsements should be crossreferenced only when subjects not covered by the basic correspondence are introduced. Cross-references should not be indicated on outgoing copies of correspondence.

4-5 Unclassifiable Communications

Inasmuch as new subjects such as developments, materials, and operations are constantly appearing in correspondence, and because of the impossibility of predicting such subject "A27 UNCLASSIFIABLE COMMUNICATIONS" is provided for handling correspondence in connection therewith. When correspondence is believed unclassifiable under a subject in the manual, it will be filed temporarily under "A27." A copy or brief of the correspondence in question will be forwarded to the Commandant for decision as to the proper classification and for the addition of a suitable subject in the next change to the manual. "A27" may be subdivided by the addition of arbitrary symbols in the manner prescribed for other groups. For example, a new subject may be subdivided as follows:

Example: A27/New Subject

Then, when the new subject is included in the manual, it is only necessary to change the label on the file folder and put the folder in the proper place in the file arrangement. 5–1 General

File drawers should be labeled to describe their contents. Each folder should be clearly labeled. Folders and drawer should not be allowed to become too full. Files should be "broken" periodically, usually to correspond with disposal instructions, to facilitate transfer and destruction (see Section 5–9, "Facilitating the Disposition of Records").

5-2 Organizing File Activities

The method of establishing and controlling files should be uniform within each unit. Coordination of records at each unit will prevent duplication of effort, will prevent the accumulation of incomplete files, will conserve space and materials, and will result in better and more efficient files operations. A definite plan should be decided upon by the commanding officer as to which system would best suit the needs of his activity. In either of the following systems all records should be under the central control of one official.

- 5-2-1 Centralized Files System—a strictly centralized file includes all the official files of an activity housed in one location and under the cognizance of one official. A central file has greatest advantage when several offices have need for the same record, and such offices are placed near the file or adequate messenger service is available. Classified files are usually centralized for security purposes rather than for the other factors mentioned.
- 5-2-2 Decentralized Files—because of reference requirement many activities require decentralized files. In decentralized files, records are located in the office having primary need for them.
- 5–3 Preparing Material for Filing File only one copy of each paper in a folder. Route sheets should not be filed with correspondence unless they contain essential

information. The initialing or signing of correspondence, instead of the route sheets, provides a record as to who has seen or handled the communication. Chronologically arranged reading or day files should not be filed with official records. They may, however, for convenience of reference, be maintained separately. A serial number file and reading file should not be maintained where one would serve both purposes.

5-4 Placing Papers in Folders

Papers to be filed should have no pins or clips attached. Papers belonging together should be securely stapled in the upper lefthand corner. Before placing a paper in a folder, the file symbol on the paper and on the folder label should be checked to see that they agree. Unnumbered papers within a folder should be filed in chronological order, with the latest date to the front. Serially numbered papers within a folder should be filed in number sequence. Where practicable, papers should be filed loose instead of bound. If it is considered desirable to bind papers to folders, standard fasteners should be used rather than staples. To preserve the neatness of papers and to prevent them from being torn, care should be taken that their edges do not protrude beyond the edges of the folder.

5–5 Sorting

The sorting operation is the process of arranging the papers to be filed in the order in which they will be placed in the folders as determined by the file symbols and dates on the papers. Sorting should be done continuously so that the papers will always be in order and can be located readily.

5–6 Case Filing

In many instances, the simplest method of filing and the one most useful for reference purposes is that of placing together related papers on a particular person, place, or

thing. Examples of this "case" method of filing are:

(a) Personnel files in which all papers concerning a specific person are kept together under the name of that person.(b) Contract files in which all papers concerning a specific contract are kept together by contract number or by name of the contractor.

A form of "case" filing may be adapted to the general subject folders by fastening together within such folders papers related to each other so that a complete story of a transaction is kept together.

5–7 Classified Matter

The security of classified matter should be maintained in accordance with Regulations, U. S. Coast Guard and the "United States Navy Security Manual for Classified Matter" (OpNav-32-P-1100).

5-8 Charging Out Records

A charge-out record (CG form-2807) should be maintained for all material removed from a file. Where material is filed loose, the usual practice is to bind the material to a backing board when it is charged out and then to remove it when refiled. All charge-outs should be checked periodically in a follow-up procedure. These procedures are necessary to insure control of the records and to prevent their misplacement. Files personnel should be kept informed as to the location of all records charged out of the files so that they may be found when needed. Care must be taken that records are not released to unauthorized persons.

5-9 Facilitating The Disposition of Records All records accumulated and filed by an activity are the property of the United States Government and cannot be disposed of except as provided for by law and Coast Guard regulations. Responsibility for records disposal rests with the Commandant. The detailed instructions for such disposal are contained in the General Administration Circular and General Administration Memorandum series in accordance with procedure established by the Commandant. Files personnel should be familiar with the disposal instructions issued for their particular activity. Disposal of inactive records is made easier if files are "broken" periodically, usually to correspond with retention periods set forth in instructions or on a calendar or fiscal year basis. Detailed instruction regarding the management and disposition of records may be obtained from Headquarters.
