

NEWS RELEASE

# MIDWEST INFORMATION OFFICE Chicago, Ill.

#### For release: Wednesday, October 26, 2011

Technical information:	(312) 353-1880	BLSInfoChicago@bls.gov	• www.bls.gov/ro5
Media contact:	(312) 353-1138		

### OCCUPATIONAL EMPLOYMENT AND WAGES IN IOWA CITY, MAY 2010

Workers in the Iowa City Metropolitan Statistical Area had an average (mean) hourly wage of \$20.11 in May 2010, roughly 6 percent below the nationwide average of \$21.35, according to the U.S. Bureau of Labor Statistics. Regional Commissioner Charlene Peiffer noted that, after testing for statistical significance, wages in the local area were significantly higher than their respective national averages in 1 of the 22 major occupational groups: building and grounds cleaning and maintenance. Fifteen groups had significantly lower wages than their respective national averages, including legal, business and finanacial operations, and sales and related.

When compared to the nationwide distribution, local employment was more highly concentrated in 5 of the 22 occupational groups, including healthcare practitioners and technical; food preparation and serving related; and life, physical, and social science. Conversely, nine groups had employment shares significantly below their national representation, including production, protective service, and construction and extraction. (See table A and box note at end of release.)

	Percent of t	Percent of total employment		Average hourly wage		
Major occupational group	United	Iowa City		United	Iowa City	
	States			States		
Total, all occupations	100.0%	100.0%		\$21.35	\$20.11	
Management	4.7	4.0	*	50.69	41.14	*
Business and financial operations	4.8	4.8		32.54	24.89	*
Computer and mathematical	2.6	2.4	*	37.13	29.90	*
Architecture and engineering	1.8	0.9	*	36.32	29.91	*
Life, physical, and social science	0.8	2.4	*	31.92	25.42	*
Community and social service	1.5	1.3		20.76	19.37	*
Legal	0.8	0.4	*	46.60	26.20	*
Education, training, and library	6.7	7.3		24.25	37.64

Production	6.5	5.3	*	16.24	15.51	*
Transportation and material moving	6.7	8.1		15.70	16.56	

## Table A. Occupational employment and wages by major occupational group, United States and the Iowa City Metropolitan Statistical Area, and measures of statistical significance, May 2010

\* The percent share of employment or mean hourly wage for this area is significantly different from the national average of all areas at the 90-percent confidence level.

One occupational group—healthcare practitioners and technical—was chosen to illustrate the diversity of data available for any of the 22 major occupational categories. Iowa City had 6,540 jobs in healthcare practitioners and technical, accounting for 8.0 percent of local area employment, significantly higher than the 5.8-percent share nationally. The average hourly wage for this occupational group locally was \$30.52, measurably below the national wage of \$34.27.

With employment of 370, pharmacy technicians was the largest occupation within the healthcare practitioners and technical group, followed by pharmacists (300) and medical and clinical laboratory technicians (240). Among the higher paying jobs were family and general practitioners with mean hourly wages of \$109.49. Pharmacists earned \$46.33 per hour. At the lower end of the wage scale were opticians, dispensing (\$11.75) and pharmacy technicians (\$15.17). (Detailed occupational data for healthcare practitioners and technical are presented in table 1; for a complete listing of detailed occupations available go to www.bls.gov/oes/current/oes\_26980.htm.)

Location quotients allow us to explore the occupational make-up of a metropolitan area by comparing the composition of jobs in an area relative to the national average. (See table 1.) For example, a location quotient of 2.0 indicates that an occupation accounts for twice the share of employment in the area than it does nationally. In the Iowa City Metropolitan Statistical Area, above average concentrations of employment were found in many of the occupations within the healthcare practitioners and technical group. For instance, medical and clinical laboratory technicians were employed at 2.4 times the national rate in Iowa City, and pharmacists, at 1.7 times the U.S. average. On the other hand, emergency medical technicians and paramedics had a location quotient of 0.9 in Iowa City, indicating that this particular occupation's local and national employment shares were similar.

These statistics are from the Occupational Employment Statistics (OES) survey, a federal-state cooperative program between BLS and State Workforce Agencies, in this case, Iowa Workforce Development. The OES survey provides estimates of employment and hourly and annual wages for wage and salary workers in 22 major occupational groups and nearly 800 non-military detailed occupations for the nation, states, metropolitan statistical areas, metropolitan divisions, and nonmetropolitan areas.

OES wage and employment data for the 22 major occupational groups in the Iowa City Metropolitan Statistical Area were compared to their respective national averages based on statistical significance testing. Only those occupations with wages or employment shares above or below the national wage or share after testing for significance at the 90-percent confidence level meet the criteria.

NOTE: A value that is statistically different from another does not necessarily mean that the difference has economic or practical significance. Statistical significance is concerned with the ability to make confident statements about a universe based on a sample. It is entirely possible that a large difference between two values is not significantly different statistically, while a small difference is, since both the size and heterogeneity of the sample affect the relative error of the data being tested.

#### **Technical Note**

The Occupational Employment Statistics (OES) survey is a semiannual mail survey measuring occupational employment and wage rates for wage and salary workers in nonfarm establishments in the United States. Guam, Puerto Rico, and the Virgin Islands also are surveyed, but their data are not included in this release. OES estimates are constructed from a sample of about 1.2 million establishments. Forms are mailed to approximately 200,000 establishments in May and November of each year for a 3-year period. The nationwide response rate for the May 2010 survey was 78.2 percent based on establishments and 74.4 percent based on employment. May 2010 estimates are based on responses from six semiannual panels collected over a 3-year period: May 2010, November 2009, May 2009, November 2008, May 2008, and November 2007. The sample in the Iowa City Metropolitan Statistical Area included 1,056 establishments with a response rate of 76 percent. For more information about OES concepts and methodology, go to www.bls.gov/news.release/ocwage.tn.htm.

The May 2010 OES estimates mark the first set of estimates based in part on data collected using the 2010 Standard Occupational Classification (SOC) system. Nearly all the occupations in this release are 2010 SOC occupations; however, some are not. The May 2012 OES data will reflect the full set of detailed occupations in the 2010 SOC. For a list of all occupations, including 2010 SOC occupations, and how data collected on two structures were combined, see the OES Frequently Asked Questions online at www.bls.gov/oes/oes\_ques.htm#Ques41.

#### Area definitions

The substate area data published in this release reflect the standards and definitions established by the U.S. Office of Management and Budget.

The Iowa City, Iowa Metropolitan Statistical Area includes Johnson and Washington Counties.

#### **Additional information**

OES data are available on our regional web page at www.bls.gov/ro5/home.htm. If you have additional questions, contact the Chicago Economic Analysis and Information Unit at (312) 353-1880. Information in this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200; TDD message referral phone number: 1-800-877-8339.

### Table 1. Employment and wage data from the Occupational Employment Statistics survey, by occupation, lowa City Metropolitan Statistical Area, May 2010

	Employ	ment	Mean Wages	
Occupation	Level <sup>[1]</sup>	Location quotient <sup>[2]</sup>	Hourly	Annual
Healthcare practitioners and technical occupations	6,540	1.4	\$30.52	\$63,470
Chiropractors	30	1.9	33.11	68,870
Pharmacists	300	1.7	46.33	96,360
Family and general practitioners	30	0.5	109.49	227,740
Physicians and surgeons, all other	220	1.1	87.58	182,160
Physician assistants	50	0.9	44.93	93,460
Occupational therapists	50	0.8	32.54	67,680
Physical therapists	150	1.2	31.80	66,150
Speech-language pathologists	60	0.9	29.55	61,470
Medical and clinical laboratory technicians	240	2.4	17.91	37,260
Dental hygienists	80	0.7	28.38	59,020
Diagnostic medical sonographers	40	1.1	28.50	59,280
Emergency medical technicians and paramedics	140	0.9	16.17	33,620
Pharmacy technicians	370	1.7	15.17	31,560
Licensed practical and licensed vocational nurses	230	0.5	19.84	41,270
Medical records and health information technicians	180	1.6	[3]	[3]
Opticians, dispensing	100	2.4	11.75	24,440
Health technologists and technicians, all other	110	1.9	25.23	52,470

[1] Estimates for detailed occupations do not sum to the totals because the totals include occupations not shown separately. Estimates do not include self-employed workers.

[2] The location quotient is the ratio of the area concentration of occupational employment to the national average concentration. A location quotient greater than one indicates the occupation has a higher share of employment than average, and a location quotient less than one indicates the occupation is less prevalent in the area than average.

[3] Estimate not released.
