

Vaccination is the Best Protection Against the Flu

Each office visit is an opportunity to check your patients' seasonal influenza (flu) and pneumonia immunization status and to start protecting your patients as soon as your 2012-2013 seasonal flu vaccine arrives. Ninety percent of flu-related deaths and more than half of flu-related hospitalizations occur in people age 65 and older. Seniors also have an increased risk of getting pneumonia, a complication of the flu. Remind your patients that seasonal flu vaccinations and a pneumococcal vaccination are recommended for optimal protection.

Medicare provides coverage for one seasonal influenza virus vaccine per influenza season for all Medicare beneficiaries. Medicare generally provides coverage of pneumococcal vaccination and its administration once in a lifetime for all Medicare beneficiaries. Medicare may provide coverage of additional pneumococcal vaccinations based on risk or uncertainty of beneficiary pneumococcal vaccination status. Medicare provides coverage for these vaccines and their administration with no co-pay or deductible. And don't forget to immunize yourself and your staff. *Know what to do about the flu.*

Remember – Influenza vaccine plus its administration is a covered Part B benefit. Influenza vaccine is NOT a Part D covered drug. CMS will provide information and a link to the 2012-2013 Influenza Vaccine prices when they are available.

For more information on coverage and billing of the flu vaccine and its administration, please visit the [CMS Medicare Learning Network® Preventive Services Educational Products](#) and [CMS Immunizations](#) web pages. And, while some providers may offer the flu vaccine, others can help their patients locate a vaccine provider within their local community. [HealthMap Vaccine Finder](#) is a free, online service where users can search for locations offering flu vaccines.
