Definitions for Commercial Ovens Column Headers

Column Header	Definition
ENERGY STAR Partner	An organization that signed a Partnership Agreement with EPA to manufacture or private label ENERGY STAR qualified products.
Brand	An identifier assigned by the manufacturer or private labeler to a product or family/series of products for sales and marketing purposes.
Model Name	An identifier assigned by the manufacturer or private labeler to a product or family/series of products for sales and marketing purposes.
Model Number	A distinguishing identifier, usually alphanumeric, assigned to a product by the manufacturer or private labeler.
Additional Model Information	An identifier assigned by the manufacturer or private labeler to a product or family/series of products for sales and marketing purposes. This column includes alternative means to identify the model/model family (e.g., additional model names, additional model numbers, retailer SKUs, product descriptions).
Product Type	Designates the type of commercial oven model, according to the following options for Version 1.1: 1) Electric convection oven 2) Gas convection oven
Size	Designates the size of the commercial oven model, according to the following options for Version 1.1: 1) Full-size convection oven (a convection oven that is able to accept a minimum of five standard full-size sheet pans measuring 18 x 26 x 1-inch) 2) Half-size convection oven (a convection oven that is able to accept a minimum of five sheet pans measuring 18 x 13 x 1-inch). The Version 1.1 specification covers full-size and half-size electric ovens, and full-size only for gas ovens.
Input Rate (kw or Btu/h)	For ovens with variable Btu/h or kW input, each available input shall be tested individually and meet the cooking energy efficiency and idle energy rate requirements of the specification.
Idle Energy Rate (kW or Btu/h)	For ovens with variable Btu/h or kW input, each available input shall be tested individually and meet the cooking energy efficiency and idle energy rate requirements of the specification.
Cooking Energy Efficiency (%)	The ratio of energy absorbed by the food product to the total energy supplied to the oven during cooking.

Column Header	Definition
Door Type	The door type (e.g., solid, glass) of the commercial oven model that was tested to ASTM F1496-99 (Reapproved 2005), Standard Test Method for Performance of Convection Ovens.
Additional Door Type(s)	The additional door types (e.g., solid, glass) that qualify as part of the model family. For model families, variations of one model offered within a single product line based on the same engineering design with differences limited to door options. (For qualification of a product family, the most energy consuming model within the product family shall serve as the representative model.)
Date Available on Market	The date that the model is available for purchase.
Date Qualified	The date on which the product was confirmed to meet the ENERGY STAR specification.

Key Efficiency Criteria

Qualified models meet all ENERGY STAR requirements as listed in the Version 1.1 ENERGY STAR Program Requirements for Commercial Ovens effective May 16, 2009.

Energy Efficiency Requirements for Gas Convection Ovens	
Full Size	
Cooking Energy Efficiency*	≥ 44%
Idle Energy Rate	≤ 13,000 Btu/h
Energy Efficiency Requirements for Electric Convection Ovens	
Half Size	
Cooking Energy Efficiency*	≥ 70%
Idle Energy Rate	≤ 1.0 kW
Full Size	
Cooking Energy Efficiency*	≥ 70%
Idle Energy Rate	≤ 1.6 kW

Note:

*Based on the ASTM F1496 heavy-load (potato) cooking test.
