FOOTNOTES:

¹ In Alaska, enrollment generally increased from month 1 to month 3 of each quarter and then decreased somewhat in month 1 of the next quarter. This recurring pattern of monthly enrollment within a quarter seems unlikely. The state's data should not be used for analysis of month-to-month enrollment, although it appears to be reliable at a more general level.

² California introduced a very large 1115 waiver program (FPACT) in December, 1999, that only covered family planning benefits for working age women.

³ During 1999, Delaware changed how it was reporting children and adults into eligibility groups. As a result, any analysis of monthly enrollment patterns by eligibility group for children and adults would be difficult.

⁴ In Georgia, enrollment generally decreased from month 1 to month 3 of each quarter and then increased somewhat in month 1 of the next quarter. This recurring pattern of monthly enrollment within a quarter seems unlikely. The state's data should not be used for analysis of month-to-month enrollment, although it appears to be reliable at a more general level.

⁵ In November and December, 1999, Maryland enrolled approximately 60,000 individuals whose Medicaid benefits had been improperly terminated in 1997 (during the implementation of welfare reform). For administrative convenience, the state decided to report these individuals into the medically needy disabled eligibility group. These individuals should have been reported into the AFDC or other eligibility groups (14, 15, 44 or 45). This error was eventually corrected in MSIS data, but not in time for these tables.

⁶ Beginning in October, 1999, South Carolina reported SSI disabled persons age 65 and over as "disabled." Prior to this, they were reported as SSI aged.

⁷ In Washington, enrollment generally declined from month 1 to month 3 of each quarter and then increased somewhat in month 1 of the next quarter. This recurring pattern of monthly enrollment within a quarter seems unlikely. The state's data should not be used for analysis of month-to-month enrollment, although it appears to be reliable at a more general level.
