

THE WHITE HOUSE FALL GARDEN TOURS

OCTOBER 13 & 14, 2012 OCTOBER 19 & 20, 2012

THE WHITE HOUSE WASHINGTON

Welcome to the White House!

Since First Lady Patricia Nixon first opened the grounds for seasonal tours, guests from across our country and around the world have visited the South Lawn. The President and I are proud to continue this tradition, and welcome you to our Nation's backyard.

Today, you will pass the majestic magnolia trees that were planted by President Andrew Jackson, and see the leaves turning on the linden trees, black gum trees and oak trees that line these storied grounds. In the Jacqueline Kennedy Garden and the Rose Garden, chrysanthemums and roses surround the White House in the shades of autumn. You will also see firsthand the abundance of the Kitchen Garden – fall is the main harvest season, and this year our family, our guests, and visitors at a local food bank will enjoy the fall squashes, peppers, and sweet potatoes grown in our garden.

The President and I hope you enjoy exploring the South Lawn, and experiencing the breathtaking array of warm fall colors on display at the White House. We wish you all the best and hope you will visit again soon.

Sincerely,

michelle Obama

President Barack Obama makes a statement about the economy from the Rose Garden in the White House in Washington, Friday, Aug. 7, 2009.

he White House Grounds are the oldest continually maintained landscape in the United States. Although located in the heart of the city, standing in the gardens one feels removed from the fast paced life of the nation's capital. Twice a year, these secluded grounds are open to the public for Spring and Fall Garden Tours.

The first resident of the White House, John Adams, requested that a garden be planted before his arrival in 1800. Unfortunately, he was defeated shortly thereafter by Thomas Jefferson and never enjoyed produce from the White House Grounds. While in office, Jefferson made plans for planting trees and established winding pathways surrounded by rhododendron and other American shrubbery.

In the 1820s, John Quincy Adams formally established a White House gardening program. It is said that he liked to dig in the flowerbeds early in the morning, and claimed to have planted over a thousand plants during his tenure. His successor, Andrew Jackson, continued to develop the gardening program, adding an orangery in which to grow fruit during the winter. The southern Magnolia, planted next to the South Portico by Andrew Jackson, bursts into bloom every June.

The White House lawns provided only limited privacy in the 19th century. The North Grounds were open every day for tourists and individuals with appointments to walk directly up to the house. Abraham Lincoln gave several speeches from the

window over the north door, with thousands of listeners crowded below. The South Grounds were kept slightly more private, but the public were invited to attend weekly concerts there by the President's Own Marine Band. President Lincoln would often recline on a sofa in the Blue Room and listen to these concerts through the windows, according to his portrait artist.

Over the years, the White House landscape has been enhanced by a series of landscape architects to seem idealistically natural. These collaborative efforts have created a setting that gives the impression of much more of a rural landscape than the urban reality. The trees are pruned to preserve their design and new trees are encouraged to grow into specific shapes and forms. The ground itself has been molded into a series of hills that give the impression of a sprawling rural landscape, while providing security.

One of the next great presidential gardeners after Andrew Jackson was Millard Fillmore, who oversaw a substantial redesigning of the grounds. Ulysses Grant continued this trend, allowing a substantial landscaping project that included the addition of large round fountains on both the North and South Lawns, which today are surrounded by colorful seasonal plantings.

Rutherford B. Hayes started the Easter Monday tradition of children rolling eggs on the South Lawn in 1878 after Congress cancelled the event on Capitol Hill. The slope was not as steep, but the event still proved a success and has continued into the twenty-first century, now drawing over 30,000 guests each year.

Bo, the Obama family dog, stands in the Rose Garden of the White House, March 31, 2010.

With the help of landscape architect Frederick Law Olmsted, Jr. Franklin Roosevelt oversaw the most recent major landscaping project on the South Lawn. Berms and trees were added on the east and west boundaries of the lawn for security, while existing trees were removed along the south fence to open up a view of the Washington Monument. This work produced today's grand sweep of the lawn.

Along the edges of the South Lawn are numerous evidences of family use and enjoyment. Off the south end of the Oval Office is a putting green,

private pool and even a playground. The Children's Garden, created by Lady Bird Johnson, features a fish pond and paving stones with castings of handprints and footprints of grandchildren alive when their grandfathers were president over the past forty fours. Adjacent to the Children's garden is the tennis/ basketball court. At the southwest corner of the lawn is the White House Kitchen Garden, planted by Mrs. Obama in March of 2009.

Marine One lifts off from the South Lawn of White House, July 16, 2010.

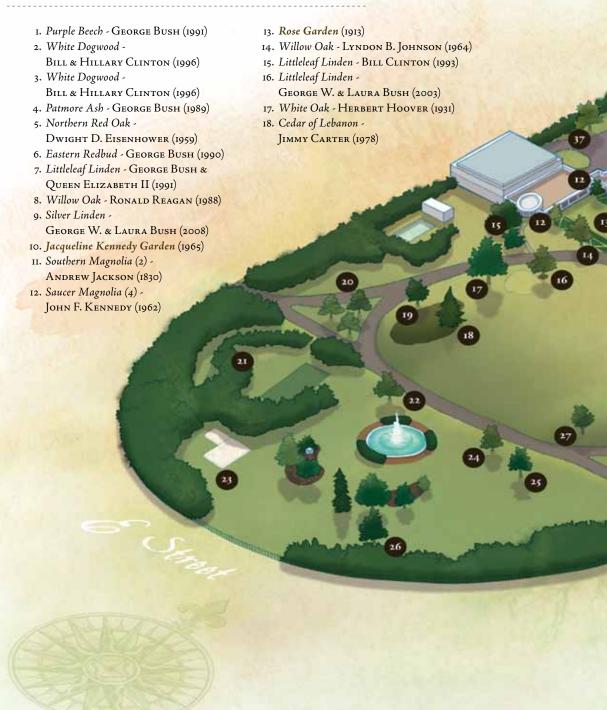

MARINE ONE

N 1957, DWIGHT EISENHOWER BECAME THE 👤 first President to use a helicopter as a means of official transport. His military aides evaluated and approved the South Lawn as a landing site and Marine One has regularly flown in and out of the White House's backyard ever since.

PRESIDENTIAL TREES

√ INCE THE 1870S, MOST PRESIDENTS HAVE PLANTED A COMMEMORATIVE tree while they were in office. Their variations in species and generation represent the historical flow of the President's House. The White House gardens are constantly growing and adapting, just like the seat of government they encompass.

THE WHITE HOUSE KITCHEN GARDEN

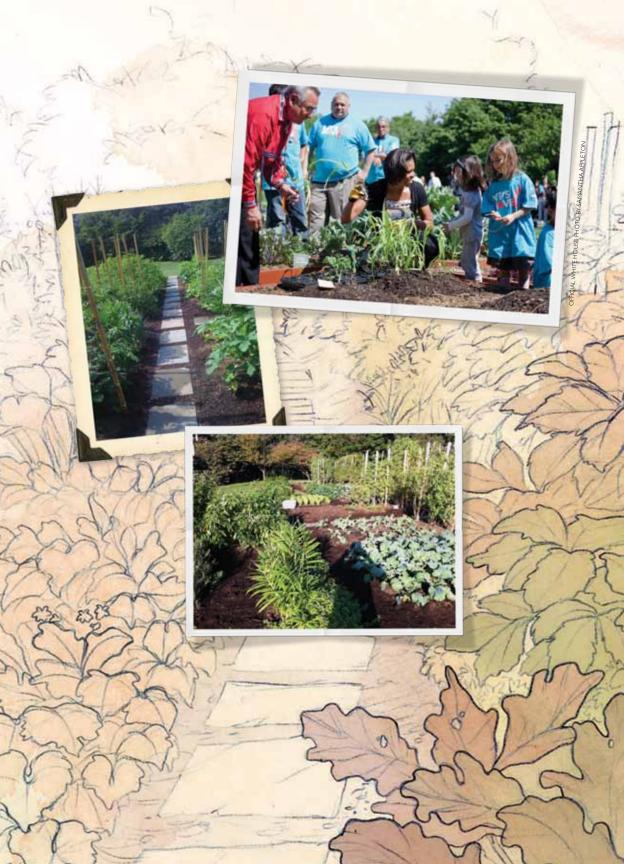

n March 20, 2009, the First Lady and two dozen local students broke ground on the White House Kitchen Garden on the South Lawn of the White House. In its raised beds the four-season herb, fruit and vegetable garden features over fifty varieties of seeds including many heirloom seeds. In its first nine months, the Kitchen Garden yielded over a thousand pounds of produce. The food that is grown and harvested in the Kitchen Garden has many uses including providing food for the First Family and official Presidential functions such as State dinners. A third of the garden's harvest is donated to Miriam's Kitchen, a local charitable organization that provides services to address the causes and consequences of homelessness.

A particular bed in the garden is named for the third President of the United States, Thomas Jefferson. The plants in this area are from seeds that have been passed down from those Jefferson planted at his home Monticello. Recent seeds from his garden that have been planted in the Kitchen Garden are lettuce, Brussels sprouts, beets, kale, and artichokes.

HISTORY OF THE GARDENS AND GROUNDS:

- John Adams, as the first President to occupy the White House, orders a vegetable garden. The garden was never created, because he left office in March 1801 only four months after moving into the White House.
- John Quincy Adams develops the first flower garden (southeast of the East Terrace). In 1827, he wrote of two acres covered with at least one thousand "forest and fruit-trees, shrubs, hedges, esculent [edible] vegetables, kitchen and medicinal herbs, hot-house plants, flowers, and weeds."
- Andrew Jackson creates the White House orangery (hothouse for citrus fruit trees, roses, and camellias) in an east side structure never attached to the East Terrace. He also adds more trees to the grounds, including the "Jackson magnolia" to the west of the South Portico. The orangery was demolished in 1857 for the expansion of the Treasury Department.
- Between this year and 1880 many trees are planted under Rutherford B. Hayes, who begins the tradition of commemorative trees.
- The conservatory, which was built in 1857, is removed during the Theodore Roosevelt renovation of the White House, exposing again the Jeffersonian West Terrace to which is attached a new office building (later called the "West Wing"). Edith Roosevelt plants a "colonial garden" beside the terrace. A tennis court is constructed south of the West Wing.
 - I9I3 Ellen Wilson replaces the colonial garden on the west with a formal rose garden and a new East Garden is created.
 - John F. Kennedy has the Rose Garden redesigned to serve presidential functions and places management of the White House Grounds under the National Park Service.
- 1964 Lady Bird Johnson has the East Garden redesigned and named in honor of Jacqueline Kennedy.
- Lady Bird Johnson adds the Children's Garden, an intimate area adjoining the tennis court on the South Grounds.
- 1972 Garden Tours start.
- IQ75 Gerald Ford has an outdoor pool and cabana built south of the West Wing.
- First Lady Michelle Obama plants the White House Kitchen Garden on the west side of the lower South Lawn.
