Encl: (1) Hazardous Waste Labeling Instructions
(2) Hazardous Material Disposal Procedures

1. Purpose. To publish responsibilities for disposal of hazardous material and hazardous waste regulated by references (a), (b) and (c) and to establish uniform disposal procedures as outlined in enclosures (1) and (2).

2. Policy. It is the policy of the Commanding General that compliance with hazardous material and hazardous waste disposal regulations will be accomplished through a centralized program committed to maximizing re-utilization and recycling so as to minimize impact on the environment. Final disposal (i.e., burial, incineration, etc.) and long term storage (i.e. for over 90 days) of hazardous waste are prohibited aboard Camp Lejeune and Marine Corps Air Station (Helicopter), New River, except with the specific written permission of the Commanding General, Marine Corps Base.

3. Background

a. On 19 November 1980, comprehensive federal legislation (reference (a)), which was implemented by reference (b), placed stringent legal requirements on the management of hazardous material and hazardous waste. Civilian and military personnel failing to follow established procedures may be subject to both civil and criminal penalties. Violations of these procedures may consist of acts of commission, such as mishandling hazardous material as well as acts of omission, such as failing to report to proper authorities observed mishandling of hazardous material or other violations of reference (a). Strict adherence to the procedures contained in this Order is necessary to avoid imposition of civil and/or criminal penalties.

b. Subpart D of Part 261 of reference (b) lists specific items which generally must be disposed of as hazardous waste. Enclosure (1) identifies types of waste commonly generated aboard military installations which are listed in Subpart D of reference (b).

c. Department of Defense (DOD) and Marine Corps policy related to the subject program is outlined in references (d) and (e). Reference (f) provides installation policy and guidelines for hazardous substance spill prevention, containment, reporting and cleanup. Reference (g) identifies the types of solid waste which can be disposed of in the base refuse collection and disposal system. Reference (h) outlines DOD and Marine Corps policy on the collection and dissemination of health and safety information related to the procurement, receipt, storage, handling, issue, transportation, use and disposal of hazardous materials. Reference (i) provides information relative to local fire prevention and protection requirements applicable to hazardous material storage and handling. Reference (j) established procedures for hazardous waste management applicable to Commands located at Marine Corps Air Station (Helicopter) (MCAS(H)), New River.

4. Responsibilities

a. Organizational Commanders will:

(1) Implement procedures and guidelines established by this Order for hazardous material and waste disposal and related handling, labeling, packaging, storage and transportation.

SUBJ: DISPOSAL OF OLD CHEMICALS

ENCL: (1) Mr. Huneycutt's Memo of 27 June 1985

1. Enclosure (1) outlines what we have done to dispose of some expired chemicals left by the Research Laboratory. We are facing a storage problem since DPDO will not take custody of them. The safety storage spaces the chemicals occupied before they were packaged are either too small or full with chemicals for our gas chromatograph. The packaged chemicals are presently taking space in our non-chemical stockroom. We are presently ordering supplies sufficient to carry us to the new fiscal year. When these supplies start arriving we will be in a real bind for space.
2. The chemicals were packaged by PP&P and are therefore secure and are not going to readily react with each other. However, they should be segregated by properties and we simply do not have the space. The fire inspections and safety inspections have not made any comments.
3. Is there any further steps we can take to get rid of these chemicals? Your assistance would be appreciated.

SUBJ: DISPOSAL OF OLD CHEMICALS

1. We have approximately 46 packaged and certified boxes of old out-dated chemicals stored in the storeroom. They were packaged from 13 Feb 85 to 13 April 85 by PP and P and certified, but I have been unable to turn them over to Mr. George Edgerds at the Hazardous Waste Building. In late April, I called Mr. Edgerds and requested an appointment so I could turn them in. He stated that he had no room and would get back with me. In late May I again requested an appointment and was again turned down. On 26 June 85, I called Mr. Edgerds and requested an appointment so he would take possession of the documents and still keep the above packages stored in our storeroom. He stated "that would be alright but I am busy and get back with me later." On 27 June 85, I called Mr. Edgerds again and requested an appointment; he stated, "I am busy and don't know when I can get around to you."
2. At the moment we have no safe, adequate facilities to store these boxes due to the fact that oxidizers and corrosives are stored in the same room.
3. I have had excellent assistance from Captain A. Owens and PP and P; they both responded in a timely and helpful manner. But Mr. Edgerds continues to put me off with no definite time frame for turn in.
4. I would like to request your assistance in the matter and if I can be of further assistance please don't hesitate to contact me.

DISPOSAL OF OLD CHEMICALS

DATE: (1) Mr. Krawcheck's date of 11 June 1968

1. The chemical (1) outlined above was found to dispose of some existing chemicals left by the research laboratory. We are using a storage container (one 500) and will take custody of them. The chemical storage container should be emptied before they are placed in the 500. The chemicals are currently stored in a 500 in the chemical storage room. We are presently ordering supplies sufficient to carry us to the next fiscal year. When these supplies are received, we will be in a real bind for space.

2. The chemicals were packed by F&M and are transferred to storage and are not being readily used with each other, however, they should be segregated by procedure and at all times should have the space. The fire inspections and safety inspections have not made any comment.

3. It is felt any further action would be to get rid of these chemicals. Your assistance would be appreciated.

Encl: (1) Hazardous Waste Labeling Instructions
(2) Hazardous Material Disposal Procedures

1. Purpose. To publish responsibilities for disposal of hazardous material and hazardous waste regulated by references (a), (b) and (c) and to establish uniform disposal procedures as outlined in enclosures (1) and (2).

2. Policy. It is the policy of the Commanding General that compliance with hazardous material and hazardous waste disposal regulations will be accomplished through a centralized program committed to maximizing re-utilization and recycling so as to minimize impact on the environment. Final disposal (i.e., burial, incineration, etc.) and long term storage (i.e. for over 90 days) of hazardous waste are prohibited aboard Camp Lejeune and Marine Corps Air Station (Helicopter), New River, except with the specific written permission of the Commanding General, Marine Corps Base.

3. Background

a. On 19 November 1980, comprehensive federal legislation (reference (a)), which was implemented by reference (b), placed stringent legal requirements on the management of hazardous material and hazardous waste. Civilian and military personnel failing to follow established procedures may be subject to both civil and criminal penalties. Violations of these procedures may consist of acts of commission, such as mishandling hazardous material as well as acts of omission, such as failing to report to proper authorities observed mishandling of hazardous material or other violations of reference (a). Strict adherence to the procedures contained in this Order is necessary to avoid imposition of civil and/or criminal penalties.

b. Subpart D of Part 261 of reference (b) lists specific items which generally must be disposed of as hazardous waste. Enclosure (1) identifies types of waste commonly generated aboard military installations which are listed in Subpart D of reference (b).

c. Department of Defense (DOD) and Marine Corps policy related to the subject program is outlined in references (d) and (e). Reference (f) provides installation policy and guidelines for hazardous substance spill prevention, containment, reporting and cleanup. Reference (g) identifies the types of solid waste which can be disposed of in the base refuse collection and disposal system. Reference (h) outlines DOD and Marine Corps policy on the collection and dissemination of health and safety information related to the procurement, receipt, storage, handling, issue, transportation, use and disposal of hazardous materials. Reference (i) provides information relative to local fire prevention and protection requirements applicable to hazardous material storage and handling. Reference (j) established procedures for hazardous waste management applicable to Commands located at Marine Corps Air Station (Helicopter) (MCAS(H)), New River.

4. Responsibilities

a. Organizational Commanders will:

(1) Implement procedures and guidelines established by this Order for hazardous material and waste disposal and related handling, labeling, packaging, storage and transportation.

(2) Maintain copies of this Order and reference (f) at work sites where hazardous material and waste are routinely handled, stored or generated and ensure that personnel are familiar with the contents thereof.

Subject: NOTICE OF VIOLATION
NPDES Compliance Bioassay Inspection Report
Camp Lejeune Marine Corps Base
NPDES Permit No. NC0063029
Hadnot Point Wastewater Treatment Facility
Onslow County

Dear Sir:

Please find attached a copy of the completed form entitled "NPDES Compliance Inspection Report". The report summarizes the findings of a recent inspection which was conducted on November 6, 1989, to determine compliance with permit requirements.

As a part of the inspection, effluent samples were collected from the facility, to determine if the treated wastewater contained toxic constituents which may affect aquatic life in the receiving stream. Analytical results indicate that the amount of residual chlorine was excessive and appears to have caused mortality in the test organisms. Effluent samples were collected before and after chlorination. The post-chlorinated effluent sample failed tests for both Ceriodaphnia dubia and fathead minnows, where the pre-chlorinated effluent sample passed both tests using the same test organisms. The chlorine residual measured 1.17 mg/l at the time of the test. Acute toxicity has been reported to occur in concentrations ranging from 17 micrograms per liter to 45 micrograms per liter of chlorine.

A similar test was conducted at the facility during December 1987. At that time, the residual chlorine was measured between 2.0 mg/l and 3.0 mg/l. The results of the test also indicated that the effluent exhibited acute toxicity, most probably due to high residual chlorine.

Page Two

On the date of inspection, the effluent was found to exhibit acute toxicity to aquatic test organisms. In accordance with Title 15 of the North Carolina Administrative Code 2B .0208, the concentration of toxic substances, either alone or in combination with other wastes shall not render waters injurious to aquatic life.

It is requested that Camp LeJeune Marine Corps Base provide this division with a written plan containing a schedule of dates for which the facility is able to achieve compliance by reduction or elimination of residual chlorine in the effluent. It is suggested that the base may want to consider additional testing to confirm our recent findings. It is requested that the toxicity reduction plan be submitted on or before March 15, 1990.

If you have any questions concerning this report, please contact Mr. Mike Williams or me at the Wilmington Regional Office, telephone number (919) 256-4161.

Sincerely,

A. Preston Howard, Jr., P.E.

Section D: Summary of Findings/Comments

THE EFFLUENT FROM THE FACILITY WAS SAMPLED ON THE DATE OF THE INVESTIGATION FOR TOXICITY. RESULTS OF THE SAMPLES COLLECTED INDICATE THAT THE EFFLUENT CONTAINED TOXIC CONSTITUENTS. THE RESIDUAL CHLORINE LEVEL WAS EXCESSIVE AND BELIEVED TO HAVE CAUSED THE MORTALITY TO THE TEST ORGANISMS EMPLOYED. PRE AND POST CHORINATED SAMPLES CONFIRMED THAT CHLORINE IS THE LIKELY CAUSE. THE RESIDUAL MEASURED 1.17 MG/L AT THE TIME OF THE TEST. PRE-CHLORINE EFFLUENT SAMPLES PASSED THE TEST WHILE POST-CHLORINE EFLUENT SAMPLES FAILED.
