**SAMPLING OF RAW WATER WELLS FOR VOLATILE ORGANIC
CONTAMINATES (VOC's)**

1. Aboard Marine Corps Base, Camp Lejeune, 15 raw water wells have been secured since late 1984 due to detection of VOC's. Several of the wells were tested under the Navy Assessment and Control of Installation Pollutants (NACIP) Program, and the others were tested by the Quality Control Laboratory. To assist in the effort to reclaim the secured wells, retesting is requested for the following wells:

- WT-23
- WT-25
- WT-26
- WT-27
- WT-28
- WT-29
- WT-30
- WT-31
- WT-32
- WT-33
- WT-34
- WT-35

2. Presently, structures and equipment with a value of approximately \$1,275,000 are not being utilized because of detectable VOC's. The raw water sample results are necessary to determine future well construction needs and reclamation of pumps, motors and other equipment if wells are not reactivated. Action such as repair of fuel lines and flushing have been completed to help eliminate continuing VOC contaminations.

3. Point of contact for assistance is Mack Fraxelis, Utilities Systems General Foreman, at extension 3980.
