same subject

Dear Mr. Chairman,

The undersigned officer understands that the committee has been occupied
with other events and the desire to finish the current appropriations cycle and
the U.S. Cole inquiry. I have brought before your staff since July, references
(a) - (d), the details of a high incidence of environmental contamination
and related health problems to a large transient population at Camp
Lejeune (CLW) over perhaps five decades.

The detected contaminant levels of volatile organic compounds in the base
water supply system some fifteen years ago exceeded today's allowable
limits by 300%. Some 16,500 pregnant women and their in utero
children were exposed to these contaminants during an arbitrarily
defined window of time: 1968-1985.

The Agency for Toxic Substances and Disease Registry, a subordinate
element of the U.S. Public Health Service/Department of Health and Human
Services, through a contract with the National Geospatial Research

Concerning this environmental disaster at a locale, which over the years, became a virtual hazardous waste site situated over hundreds of acres atop a vulnerable aquifer system.

It is my understanding that a major television news network has been doing pre-broadcast investigations during the past few months and will be ready to release their public story on the CLWC affair shortly. There is also interest in the Marine Corps Supply Center, Albany Georgia should that be of interest to Senator Cleland.

There exists a consortium of nationwide environmental law firms that are coordinating a litigation plan on the part of injured plaintiffs and an accompanying program of advertisement in newspapers nationwide that will make the incident known to a larger segment of the population, perhaps find more NORC participants, and presumably obtain additional clients.

This information about the incident exposure, the delay in notification for some three decades and the passive attitude and reluctant cooperation of the Department of the Navy and the Marine Corps will not, in my view, resonate favorably with the American general public. The DoN's action plan to date has been defend, deny, and delay. For the NORC survey to be ended for the lack of funding would be a delaying tactic that would come to rest on the doorstep of Navy Pentagon.

Since the attack on the U.S.S. Cole the Navy Public Affairs has been using the "Extended Navy Family" approach. Those of us former residents of Camp Lejeune that have been hung out to dry for the last three decades seem more to be the black sheep of the "family" than valued naval family members even though we have long since retired or been discharged. Read Korea/Viet Nam.

The Senate Armed Services Committee has an opportunity now to help mitigate this problem. Abla Eben, former Foreign Minister of Israel, once said of Yasser Arafat "never missed an opportunity to miss an opportunity". The window of opportunity is closing.
