

5JSC/Chair/12
17 November 2006

TO: MARBI
and
Joint Steering Committee for Revision of AACR (JSC)

FROM: Deirdre Kiorgaard, Chair, Joint Steering Committee for Revision of AACR

SUBJECT: RDA and MARC21

This report is a first step in a continuing process of working with the MARC community throughout the development of RDA. It is intended as an “early alert” to MARC format developers of areas that the JSC considers would benefit from discussion with the MARC community. Neither the issues raised in the report nor the mapping of MARC 21 to RDA provided should be construed as final or comprehensive.

No constituency responses to this document are required.

RDA and MARC 21

Introduction

RDA (Resource Description and Access) is being developed as a new content standard for resource description and access as a successor to AACR2; MARC 21 is a communications and exchange format which provides the structure for encoding the content of bibliographic and authority data. It is acknowledged that RDA descriptions can be encoded using other schemas such as MODS or Dublin Core, and that the MARC 21 structure supports the encoding of descriptions created according to a wide range of content standards. RDA (AACR) and MARC 21, however, have become intrinsically linked as evidenced by the “MARC displays” and MARC input templates that are prevalent in today’s library systems.

The purpose of this report is to inform MARBI of the areas where a change or potential change to MARC 21 may be needed if the format is to be able to accommodate descriptions created using RDA.

It should be noted that RDA content is under development and review by the Joint Steering Committee for Revision of AACR (JSC) and its constituencies. This paper is intended as an “early alert” to MARC format developers of areas that the JSC considers will require attention from that community. Neither the issues listed below nor the mapping of MARC 21 to RDA provided should be construed as final or comprehensive.

This report is envisaged as a first step in a continuing process of working with the MARC community throughout the development of RDA.

Key features of RDA

With FRBR¹ and FRAD² as its underlying conceptual models, RDA is being developed to provide a better fit with object-oriented (or entity-relationship) database structures and to take advantage of the efficiencies and flexibility that such structures offer with respect to data capture, storage, retrieval, and display.

Another key feature in the design of RDA is that it establishes a clear line of separation between the recording and presentation of data. The major focus of RDA will be on providing guidelines and instructions for recording data to reflect attributes and relationships associated with the entities defined in the FRBR and FRAD models. The aim is to provide a set of instructions for recording data that can be applied independently of any particular structure or syntax for data storage or display. There will be an appendix on “Presentation of Descriptive Data” which will cover how the

¹ Functional Requirements for Bibliographic Records : Final Report, IFLA Study Group on the Functional Requirements for Bibliographic Records. (Consultants: Tom Delsey, Elizabeth Dulabahn, Elaine Svenonius, Barbara Tillett). München : K.G. Saur, 1998. Available online: www.ifla.org/VII/s13/frbr/frbr.pdf or as html: www.ifla.org/VII/s13/frbr/frbr.htm

² Functional Requirements for Authority Data : a Conceptual Model, IFLA Working Group on Functional Requirements and Numbering of Authority Records (FRANAR) [Draft, September 2006. Older version, June 15, 2005 available on IFLANET: www.ifla.org/VII/d4/FRANAR-Conceptual-M-Draft-e.pdf]

specific data elements can be mapped to the areas and elements defined in the ISBDs to produce a display that follows the established ISBD order of elements and prescribed punctuation. In addition, the appendix will provide guidelines on presenting descriptive data elements in the MARC 21 format.

RDA and MARC 21

This paper is comprised of two parts:

- A. Issues and/or RDA elements that have implications for MARC 21
- B. Mapping of MARC 21 to RDA

The documents used for the analysis are:

5JSC/RDA/Part I (9 Dec. 2005)

MARC 21 Format for Bibliographic Data (1999 edition, last updated Oct. 2005)

MARC 21 Format for Authority Data (1999 edition, last updated Oct. 2005)

A. Issues and/or RDA elements that have implications for MARC 21

i) *General Material Designation/MARC 21 field 245, subfield \$h*

One widely recognized and long-standing problem in AACR2 has been the use of the GMD to represent content and carrier.

Two initiatives have contributed to the current thinking on how to handle content/carrier data. The GMD/SMD Working Group was set up by the JSC in June 2005 to review issues related to content and carrier and to identify content and carrier terms. In addition, a joint initiative was started in 2006 to develop an RDA/ONIX framework for categorizing resources in all media to support the needs of both libraries and the publishing industry and to facilitate the transfer and use of data across the two communities. This framework is still in development.

Drawing on the RDA/ONIX Framework and the terms proposed by the GMD/SMD Working Group, three new data elements, *Media type* (section 3.2), *Carrier type* (section 3.3) and *Content type* (section 4.2), are being proposed for RDA to assist users in fulfilling FRBR's "select" user task. Comments on this approach were considered by the JSC at its October 2006 meeting and revisions will be incorporated for review by the JSC constituencies in the first part of 2007.

Once agreement has been reached on the media, carrier, and content type elements, MARBI will need to decide how to encode the RDA categorization of content and carrier. The similarity of the RDA elements to MARC 21 Leader and fixed fields may stimulate an analysis and assessment of the MARC 21 coded data.

ii) *MARC 21 (bibliographic) Leader/18 (Descriptive cataloging form); MARC 21 (authority) 008/10 (Descriptive cataloging rules; Description conventions code list)*

New values will be needed for “RDA”.

General observations

NOTE: Although RDA could be implemented within the MARC 21 structure if the two changes listed under i) and ii) above are accommodated, the JSC notes the following issues for MARBI’s consideration:

iii) *Terminology* – MARC 21 uses AACR terminology. The JSC is updating the terminology for RDA. MARBI may wish to consider whether alignment of MARC 21 and RDA terminology is desirable.

iv) *Punctuation* – RDA has been designed to establish a clear separation between the presentation and recording of data. Guidelines for presenting RDA content in MARC and ISBD displays (including punctuation) will be given in an appendix. MARBI may wish to reconsider the relationship between content designation and punctuation in MARC.

v) *Interdependence* – There is some interdependence between RDA and MARC 21 that would be useful for the two communities to discuss:

- The JSC is currently conducting a review of the appendices, including the one on Initial articles, and new articles have been proposed for inclusion. Any changes which result will be referred to LC’s Network Development and MARC Standards Office for inclusion in *Initial Definite and Indefinite Articles*.
- RDA refers to the use of standard lists to designate roles, such as the *MARC Code List for Relators, Sources, Description Conventions* and the Rare Book and Manuscript Section (RBMS) list of relator terms.

MARBI may wish to consider whether these lists best fit within the scope of MARC 21, or of RDA as a content standard.

Observations on specific elements/issues

vi) *RDA section 1.6 Transcription* – RDA section 1.6 instructs one to transcribe an element as it appears following guidelines for capitalization, numerals, etc. Options have been added to provide some flexibility in this area by allowing elements to be transcribed according to in-house manuals/published style manuals or by accepting the element as it appears when it has been scanned, etc., from a digital source. MARBI may wish to consider whether there is a need to distinguish between different approaches to recording data.

vii) *RDA sections 2.7 Publication, 2.8 Distribution, 2.9 Manufacture, and 2.10 Production* – RDA has defined separate elements for publication, distribution, manufacture and production; each element has separate sub-elements of “name”, “place”, and “date”. MARC 21 field 260 currently uses the same subfields for publication and distribution data. MARBI may wish to consider whether there is a need to distinguish these elements through MARC 21 coding.

viii) *RDA sections 3.4–3.18 Carrier description elements* – RDA has defined a number of aspects of the technical description as separate elements, with a greater level of granularity than is supported in MARC 21 field 300. Additional content designation could be considered to encode this information.

ix) *RDA section 2.13 Resource identifier* – Final decisions have not yet been made on how to treat standard identifiers and other resource identifiers. However, RDA may broaden the range of standard identifiers for which it gives instructions beyond those currently provided for in specific MARC 21 fields or in the indicator values in field 024.

x) RDA has elements that are recorded using terms for an English language context, e.g., publisher unknown. It may be useful to identify such elements through MARC 21 encoding. This could facilitate the reuse of records internationally by enabling terms recorded for one language context to be replaced by terms for a different language context.

xi) RDA’s approach to recording relationships between resources is under review. There may be a need to specify new MARC content designation to encode relationships not formerly defined in AACR.

B. Mapping of MARC 21 to RDA

The following table maps the data elements contained in MARC 21 to the corresponding elements in Part A of RDA. The table is a “work in progress” because final decisions are pending on many areas of RDA. A reverse mapping (i.e., RDA elements to MARC 21) has yet to be undertaken. Further issues are likely to arise following completion of the RDA to MARC 21 mapping.

Scope

The table excludes the Leader and fixed fields. Indicators have been omitted unless there is a corresponding RDA element. Control subfields have also been excluded.

“Out of scope” indicates that the element is not within the scope of RDA as a descriptive content standard.

“Not in RDA” indicates that the element is potentially within the scope of RDA but has no corresponding RDA element. These elements are potential candidates for inclusion in RDA and will be considered for inclusion by the JSC.

Many MARC 21 fields do not map cleanly to the RDA elements. In general a partial mapping has been given wherever possible.

Mapping of MARC data elements to RDA data elements
