In response to your questions for Film Laboratories:

1. Our laboratory does undertake film preservation and restoration. We do this work primarily for the labs and studios. We do a small amount of restoration for the general public who wish to transfer from film to tape. Our process is necessary in order for standard film labs to print or transfer.
2. Our laboratory specializes in stretching shrunken film to printing tolerance and film rejuvenation. Employees are trained by our standards which are based on experience.
3. We specialize in stretching 35MM, 16MM, & 8MM film. We also have a rejuvenation process which removes scratches on 16MM, 35MM and 70MM film.
4. We use special design equipment unique to the restoration field.
5. We guarantee to stretch film to normal tolerance or there is no charge. On rejuvenation, we use a grading system depending on the destination country.
6. If we were guaranteed more work, we would build additional equipment.

Sincerely,

Stanley Cohen
President
