FOR FISCAL YEAR 2000**

THURSDAY, MARCH 4, 1999

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, DC.

The subcommittee met at 9:33 a.m., in room SD-192, Dirksen Senate Office Building, Christopher S. Bond (chairman) presiding.
Present: Senators Bond, Stevens, and Mikulski.

FEDERAL EMERGENCY MANAGEMENT AGENCY

STATEMENT OF JAMES L. WITT, DIRECTOR

ACCOMPANIED BY:

**MIKE WALKER, DEPUTY DIRECTOR
GARY JOHNSON, CHIEF FINANCIAL OFFICER
CARRYE BROWN, ADMINISTRATOR, U.S. FIRE ADMINISTRATION**

OPENING STATEMENT OF SENATOR CHRISTOPHER S. BOND

Senator BOND. Good morning. The subcommittee will come to order. Today we begin the deliberation of the fiscal year 2000 budget for the VA, HUD, and Independent Agencies Subcommittee. This morning we will hear testimony on the Federal Emergency Management Agency's request. We welcome Director James Lee Witt; FEMA's new Deputy Director and former Acting Secretary of the Army, Mike Walker; and Gary Johnson, FEMA's Chief Financial Officer.

The good news this morning is that we have not had many large-scale disaster events this year. Unlike last year when FEMA personnel were spread across the country responding to El Nino-related weather events, this year has been relatively quiet. Disaster cost projections to date fall below the 5-year historical average and we do not anticipate the need for a supplemental for the disaster relief fund, reversing a long-term trend. As of the end of January, FEMA had \$2.3 billion in unobligated disaster relief funds.

The bad news is that once again we face a very tough battle in the Appropriations Committee. The budget caps put in place by the 1997 Balanced Budget Act are extremely tight. Spending available for discretionary programs overall is \$30 billion below the current year level. Unfortunately, the President's budget busted those caps by about \$18 billion by assuming offsets from tobacco revenues,

Superfund taxes, and other gimmicks which frankly have little or no chance of flying whatsoever. This makes our job harder because it raises expectations that we simply will not be able to fulfill.

Within the VA-HUD Subcommittee, we have identified several areas of shortfall in the President's request. The largest such shortfall is within the VA medical care appropriation request which would be frozen at current levels, despite the fact that VA has identified many new requirements, such as treating patients with hepatitis C. VA estimates are that this problem alone will cost at least \$500 million next year. Once again we will be forced to make some very difficult trade-offs in order to accommodate the dire needs.

I congratulate you, Director Witt, at your success in the internal budget process at OMB. It is always nice to see who is a winner in that internal battle, and your star must be at the peak. While the VA-HUD Subcommittee portfolio would decline \$1.7 billion overall under the President's budget request, OMB has smiled upon you and FEMA's budget would increase \$84 million, or 10 percent over the current year, for a total of \$923 million. Do not count on that coming through the full process necessarily.

FEMA proposes several new programs, such as a new \$12 million repetitive loss initiative aimed at eliminating those properties with significant repeat claims posing the biggest drain on the flood insurance fund, and a new flood map modernization fund to update and digitize FEMA flood maps. These programs, accompanied by some new requirements on policyholders currently under consideration, would help put the flood insurance program on a more sound footing. And I agree that is an urgent need. Nevertheless, I have grave reservations about a FEMA proposal for a mortgage fee to finance those requirements.

There are also significant program enhancements proposed in the budget, such as the \$25 million increase for the emergency food and shelter program, the \$13 million increase to augment various activities at the U.S. Fire Administration, the \$13 million increase for anti-terrorism activities, which my ranking member and I have supported very strongly in the past, and additional funding for State preparedness activities. I also recognize and express my appreciation that FEMA's budget includes full funding of \$5.9 million for the dam safety program, an increase of \$2 million over the current level.

Let me be quite clear. These are all critical activities which we support. However, the constraints imposed by the budget caps will make these demands quite difficult to fund fully. We will have many questions on each of these funding proposals as we seek to ascertain the priorities.

In addition to FEMA's request for \$923 million in discretionary appropriations, FEMA proposes \$2.48 billion in off-budget disaster relief contingency funds. It is, frankly, very disappointing to me that once again the administration has chosen not to budget for these anticipated requirements under the budget caps. We know we will have disasters next year, and we know that the funding requirement will be several billion dollars. That is no mystery. We should budget for those requirements up front.

Among the items not approved by OMB in FEMA's original budget proposal was a new mitigation grant program for universities which totaled \$175 million in your proposal. OMB approved instead a \$1 million study of such a program. I have already heard from a very important constituent in Missouri, Washington University in St. Louis, about their support for such an initiative. While clearly it is in the Nation's interest to protect our significant investment in university research, it would be tremendously difficult for us to find the funds for such a massive new spending program.

There are many other areas we have a particular interest in this morning. At the top of the list is the Y2K computer problem that my ranking member will be addressing. It is my understanding that the National Association of Counties completed a survey in December which found that roughly half of the 500 counties which participated in the survey do not have a county-wide plan for addressing Y2K conversion issues. Almost two-thirds had not yet completed the assessment phase of their Y2K work. That is not encouraging, and that shows a potential problem.

FEMA's role, relative to Y2K, is consequence management, and the agency received over \$7 million through OMB from the Y2K contingency funds. We look forward to hearing what FEMA is doing to prepare for and minimize Y2K-related emergencies, particularly in the emergency services sector.

We also look forward to hearing what FEMA is doing to improve the level of preparedness at the State and local level for acts of terrorism. FEMA is one of many agencies involved in this effort, perhaps too many. Unfortunately, my concern is there does not appear to be a strategic approach to this critical issue and that the roles of FEMA, DOD, and the Department of Justice remain confusing.

We do not have a good handle on what remains to be done to ensure the readiness not just of the major metropolitan areas, but the country at large. In testimony before the House Government Reform and Oversight Committee last year, GAO raised many concerns about the Nation's domestic preparedness program for terrorism and it is urgent these issues be addressed.

We also remain concerned about the disaster relief program. You and I have talked over the years about escalating costs of disaster relief and the need to tighten up this program. Since 1989 we have spent \$25 billion on FEMA disaster relief and there remains more than \$2.6 billion in anticipated costs associated with open disasters.

Mr. Witt, I commend you for a number of the initiatives you have implemented to improve the program, such as reengineering the public assistance program and the concerted effort to close out old disasters, which has returned hundreds of millions of dollars to the Disaster Relief Fund. This effort, spearheaded by Mr. Johnson, is in large part our reason for not needing to provide additional supplemental appropriations for FEMA in fiscal year 1999, and we acknowledge your good work in this area.

We also recognize that you have proposed criteria for declaring disasters. I appreciate your effort here, particularly in the face of strong resistance in various quarters. Unfortunately, I am concerned that the criteria are no more stringent than the factors currently used to consider whether a disaster should be declared and

do not take into consideration a State's economic health or the ability to raise public revenues to cover the cost of a disaster.

Much remains to be done to eliminate the loopholes and streamline the program, both through the regulatory process and through legislation. We understand you plan to go forward with a requirement that public facilities be insured at least to 80 percent of their replacement value. I would urge you to move expeditiously with that rulemaking which should result in savings to the Disaster Relief Fund.

You may recall that in last year's Senate committee report, we asked for a report, now due within a few weeks, of FEMA's effort to propose through regulation administrative changes to reduce disaster relief costs. We hope we can see that report shortly.

With respect to the Stafford Act legislation, FEMA just yesterday submitted another legislative proposal to OMB which includes several important proposals such as authority to reduce the Federal share of public assistance for projects which have incurred multiple losses. And I appreciate your diligence in again proposing legislative improvements.

However, the package does not contain many of the proposals that were in the July 1997 set of proposed amendments and we need to understand why. Also, we urge you to work aggressively with the committees of jurisdiction to move legislation that would tighten up the Stafford Act, further streamline the program, and reduce disaster relief expenditures.

With respect to mitigation activities, there are a number of concerns we have and some questions, concerns about the way the 404 hazard mitigation grant program is working, whether adequate cost-benefit procedures are being utilized, and whether these dollars are being put to the best uses. We have asked GAO to provide testimony for the record today, which I have reviewed and which will be inserted in the record following my opening statement, without objection, and ask that FEMA consider and respond to the issues raised by GAO.

Last year we expressed concern about the need for improved interagency coordination on disaster preparedness, response, recovery, and mitigation activities. We continue to have strong concerns in this area. It is my understanding that despite language in the appropriations bill for the past several years requiring the close involvement of FEMA and other agencies in the distribution of emergency HUD CDBG monies for unmet needs, HUD has refused to follow the law's requirements. I am mystified as to how the initial round of funds from the fiscal year 1998 supplemental were distributed.

This afternoon the full committee will mark up an emergency supplemental bill, and while there will not be any funds for FEMA disaster relief, I have asked to transfer to a new account at FEMA from HUD's emergency CDBG funds unobligated balances totaling over \$313 million. That is in direct response to our concerns with how HUD has handled these funds. Given your track record, Mr. Witt, it is my expectation that FEMA will move out with funds in an expeditious manner after careful consideration of needs, priorities, and appropriate mitigation strategies. We expect FEMA to follow closely the detailed legislative requirements we will include

for allocation of the funds and to keep us apprised on a regular basis.

While I am very much concerned about expanding FEMA's roles and responsibilities, particularly without an explicit authorization, there is significant demand to address so-called unmet needs following recent disaster events. I strongly believe that, along with Stafford Act proposals currently on the table, the authorizers should look at this issue. Early this week I sent a letter to the chairman of the EPW Committee and the subcommittee chairman, Senators Chafee and Inhofe, asking them to consider this issue along with other cost-saving and streamlining reforms.

In report language last year, we asked FEMA to convene an interagency group to assess areas of duplication and overlap, propose the streamlining of activities, and define clearly areas of responsibility among agencies. This report is due within a few weeks, and we look forward to getting a preview of that effort.

Other areas of interest include FEMA's plan to implement the recent Blue Ribbon Panel recommendations to improve the U.S. Fire Administration and FEMA's efforts to consolidate further the non-disaster grants that go to States and whether there is adequate accountability in exchange for the increased flexibility provided to States.

It is now a pleasure to turn to my ranking member, Senator Mikulski, for any statement she may have.

EMERGENCY SUPPLEMENTAL

Senator MIKULSKI. Thank you, Mr. Chairman. Before I give my opening statement, I note that the chairman of the full Appropriations Committee is here. I would be happy to yield to him because I know he has other duties, if he wishes to give a statement.

I also would like to thank the chairman of the Appropriations Committee as we move into the supplemental as we met our supplemental emergency needs. This year the VA-HUD Subcommittee was not raided. As you know, we have often been viewed as the ATM machine for emergency supplementals. This year that dangerous trend I think from a fiscal standpoint has reversed. I really thank you for doing that.

If you wish to make a statement, recognizing your other obligations, I would be happy to yield to you.

STATEMENT OF SENATOR TED STEVENS

Senator STEVENS. Well, you are very kind. I thank you, Senator Mikulski. As a matter of fact, we have three subcommittees meeting at the same time, and I have got another hearing of my own. So, I do appreciate the opportunity to be here to greet James Lee Witt and his colleagues.

First, let me thank you for the prompt action on setting up the task force for our western Alaska fish disaster. I have heard from many of the Eskimo families out there. They would not have survived the winter had you not moved as expeditiously as you did.

We have one issue in Alaska that I wanted to call your attention to. The Corps of Engineers built the Moose Creek Dam upstream from North Pole, Alaska. It is not quite the North Pole, but it is pretty far north. It has resulted in downstream flooding of about

50 homes, and it has been rezoned now so there will be no new homes. What is needed is some modification of these homes to prevent the additional flooding. I would like to see if you would work with us on that.

DISASTER INSURANCE

But that leads me into another thing, Mr. Witt. I was fortunate enough to ride with a friend on his boat through the inland waterway, and as we went down from Virginia on down to the Carolinas and Georgia, through that wonderful country, we just saw repeated areas which had been hit by either floods or hurricanes.

The interesting thing about that for someone who is not from the area is the vision of the fickleness of these disasters. Portions were destroyed and others not touched. It is just like some of the fires up our way, as the swath of fire comes through and destroys areas and others are left untouched.

I really admire this new initiative of yours, talking about the flood plain. I would hope that perhaps we could expand that to cover areas where we have had multiple disasters. I am thinking we should ask the people in the authorizing committee on HUD to see whether we should have Federal insurance for homes that are in areas that have been repeatedly subject to fire or flood or hurricane, and if we do, whether or not we should not require some specific types of protections.

I noted along the inland waterway how many of the newer homes have been lifted up, some as high as 10, 12, 14 feet. Well, that just means those homes that were not hit last time are going to get it for sure the next time because they do not have that protection.

It just seems to me we ought to further your initiative on preventive medicine in this area of disasters where we are spending so much of the taxpayers' money repeatedly in the same areas. I think this committee would be very much inclined to work with you and to work with the authorizing committees to give you even more authority. But somehow or other, between your agency and HUD, we ought to move out. As the chairman said, we have not had too many of these disasters this year. Maybe this is the year to move out and try to spend some money to prevent future disasters of the type that we have faced in the last few years.

That is particularly so in the flooded areas. One fellow told me his place had been hit by floods three times, and he just rebuilt it at taxpayers' expense really in effect. So, I think we have to find a way to deal with this on a preventive basis.

I really congratulate you for taking the initiative on that. What I would like to do is just broaden the horizon a little bit and take it beyond just the flood plain. I would be happy to talk to you about that another time.

Thank you very much for your courtesy.

Senator BOND. Thank you, Mr. Chairman. I had mentioned to Mr. Witt there were media articles on repeated disasters striking particularly along the Outer Banks. If they are secondary homes, I have a real question why we as taxpayers need to continue to rebuild them when they are built in areas which are subject to hurricanes, flooding, and other natural disasters. We worked in the flood insurance reform to get people out and make them take certain

protective steps and have actuarially sound insurance. Frankly, you have put your finger on another very serious problem.

Senator STEVENS. Well, I spent part of my time in California, and I remember fires when I was a boy in the Santa Monica Canyon and slides and those homes were all rebuilt. I guess they have been rebuilt 8 or 10 times since then. I really think we have to have greater protection for the taxpayers. Most of those are, in fact, recreation homes that we are talking about, second homes. But there has to be some way to be fair about it and at the same time start preventing future losses to the taxpayers.

Thank you very much.

Y2K HEARING

Senator MIKULSKI. Before the chairman goes, if I just might say Senator Bond and I will be talking about Y2K and counter-terrorism here. One of the things we were discussing is perhaps the need for a joint hearing between Defense, VA-HUD with FEMA, HHS, and CJS, and we would like to discuss this with you.

Senator STEVENS. You are talking about the full committee.

Senator MIKULSKI. Let us do the full committee.

Senator STEVENS. Anytime you say.

Senator MIKULSKI. Because we have got a lot of money going out there and some wisely focused and some, quite frankly, like the Keystone Cops.

Senator STEVENS. I will be happy to do that anytime and be sure we get the other chairmen and ranking members from those subcommittees involved.

Senator MIKULSKI. Well, Senator Gregg has been deeply involved.

Senator STEVENS. Good. We will plan it. Thank you very much.
Senator BOND. Senator Mikulski.

STATEMENT OF SENATOR BARBARA MIKULSKI

Senator MIKULSKI. Thank you very much, Mr. Chairman.

Once again, I am happy to join with you at really our first hearing of VA-HUD for fiscal year 2000. It is hard to believe that we are actually going to do a fiscal year for the new century and the new millennium. So, this really has to be I think a well-focused appropriations that looks not only at the immediate needs of our constituencies, but also the long-range needs of the Nation, which is why it is so important we do this.

In a post-impeachment environment, everybody is talking about the new-found comity and bipartisanship, and we have been doing that for a long time together, and I look forward to our continued relationship to move the bill. Though you and I would disagree with President Clinton's agenda and President Clinton's budgetary arithmetic, I do think we do agree on so many things in this bill, and I believe even now with the issues that you have raised in your opening statement, I find myself so much in alignment with the questions that you have raised. So, I look forward to working with you.

Mr. Witt, I want to thank you and the entire FEMA staff for their continued dedicated response to the various disasters within our Nation. FEMA has been absolutely upgraded, and I think we

all know that if a Governor calls or disaster hits, that FEMA will be a 911, ready to be able to respond.

We really admire that and want to continue both the funding sources as well as the culture of FEMA that you have established, but we now also want to institutionalize this so it is not based on one person's response or one person's directive. We believe in this appropriation, we have a great opportunity.

DISASTER PREVENTION

First, let me comment on the disaster aspects. I come from a background, as you know, of social work, of community organization, organizing people for self-help. I have a great passion for the field of public health, and what they say in public health is the best action is always prevention. In the field of public health, they do an audit of what people are most likely to have happen, what diseases will most attack children or the elderly, and they develop an immunization strategy. And this is what I am looking for in the pre-disaster mitigation effort, which is essentially almost like using the tools of epidemiology, where are the problems, what is the concrete, specific data, and then where do we need to immunize ourselves so we are not hit by a tragedy.

So, therefore, in looking at the pre-disaster mitigation, we do not want to create a big program. We do not want it to be pork barrel. We do not want a new kind of local entitlement program where we are either FEMA's CDBG or FEMA revenue sharing by proxy. I think we are clear on that.

What we are looking forward to do is how we can, in an organized, systematic way, identify those communities that are most at risk in terms of loss of life and loss of property to be able to deal with that.

I understand from a preliminary look at data there are 76,000 buildings that have repetitive losses, more than two loss claims in 10 years and they have cost the Federal Government \$2.8 billion.

We look forward to hearing your action plan based on that prevention model that does not create again a whole new fiscal black hole where suddenly—and Senator Bond will know this --there will be what we will call Project Impact creep so that something 100 miles away from a flood plain suddenly somebody at a local level is trying to put into it. So, we look forward to that.

We also look forward to the issue that will not get a lot of attention but the necessary mapping of flood plains because that again is an important tool to do the prevention strategy. We know our colleague in State, Justice, Commerce is going to be looking at the same issue for NOAA and coastal plains, but you would have rivers and other aspects. So, we look forward to supporting you on that.

Also in terms of the emergency shelter grants, we want to again work with you because we know that the emergency shelter grants, particularly working through faith-based groups like Catholic Charities or nonprofits, that we have really gotten out and met compelling human need.

In the appropriations markup this afternoon, I support Senator Bond's effort to see that you have the emergency CDBG. It is going to raise a lot of hackles, but we have got to be able to respond. I do not want a Maine in Maryland.

Y2K AND COUNTER-TERRORISM EFFORTS

This takes me then to the new issues. First, I am very concerned about the issue of Y2K and also about the issue around counter-terrorism. I will elaborate on those in my questions, but I think we have got to be right and clear on our response on Y2K as a building block to be ready for counter-terrorism response. I understand from my State-Justice hearing that Justice is responsible for crisis management. You are responsible for consequence management, but the consequence management could be the same. Therefore, we will be looking forward to hearing this.

We want to compliment Senators Bennett and Dodd for their work on the Y2K, but now that we have done the analysis, I do not want to see States being in paralysis over Y2K. Sometimes we analyze, then we get paralyzed, and I do not want that. So, I am going to be asking you questions on Y2K because, quite frankly, I am very concerned about power outages, the failure of people to have access to money, food, medicine, and then panic occurring resulting in civil unrest.

The other is I am concerned about pre-panic because the talk shows could take over and hype it. We are already seeing the concern about food, bottled water. Some people are buying gold. Our colleague, Senator Frist, talked about an elderly citizen who got so jazzed by a radio show, he took \$30,000 out so that he could have it at home in the anticipation of New Years Eve only to be robbed. When I talk about our prevention strategy, part of it is preventing a breakdown of services to people, not only your services, but the basic services. But we also need to have our strategies so that we do not have panic and pre-panic.

Then that, of course, will take us to the terrorism response. We will get into questions.

REPORT ON THE NATIONAL FIRE ACADEMY

Then I want to just comment quickly about the Fire Academy. I read that report. First of all, I would like to compliment you on your leadership in commissioning that report. That Fire Academy is located in Maryland. It was really Senator Mathias, my predecessor, who was an appropriator, who helped do that.

Now, I want that Fire Academy to be a world class Fire Academy that meets not only the needs of our Nation, but they want to come from around the world to learn best practices for really being able to respond. And those fire fighters are first responders.

When I read that report that you had to have a report to tell them how to talk with each other, it bothered me. And then the fact that they had no relationship to the fire fighting community really escalated my concern. And last, but not at all least, they had no consciousness or awareness about these new threats to the security and stability of our country. I found it deeply and profoundly troubling. I would like to pursue that with you and hear your action plan so that we can get it right.

So, that is kind of my framework of kind of how to proceed with you. Thank you again for your hard work. Obviously, you have got a plan here that wants to be a step ahead of the problem, whether

it is helping the first responders be ready to respond or preventing the loss of life and property.

Mr. Chairman, I am ready to go to questions, and thank you very much.

Senator BOND. Thank you very much, Senator Mikulski. I thank you for your kind words about our being in agreement on so many issues. I assure you it is because I have learned many of these issues and the questions from you. That is why I appreciate so much your service and leadership on this committee.

Well, Mr. Witt, you have now got a pretty good idea of our concerns. Maybe it is appropriate we turn to you and hear what you have to say. So, thank you for joining us.

STATEMENT OF JAMES L. WITT

Mr. WITT. Thank you and good morning, Mr. Chairman, and good morning, Senator Mikulski.

I really do appreciate the opportunity to be here today at this subcommittee hearing to present our budget proposal for fiscal year 2000. I really, truly want to thank your staff for the work that they have done with us and the support that they and you have given us. It truly has made a difference for us.

We are proud of our work. We are proud of the FEMA employees and what they have done, and they continue to work very hard and are very dedicated.

My statement this morning is going to be very brief so that we can get to the questions.

We have made improvements not only in the delivery of disaster services, but improvements in the management and accountability of FEMA's programs. This has made a huge difference for us and the States and local emergency management. I am particularly pleased to note that our Inspector General has completed the review of FEMA's financial statements, and has rendered an unqualified opinion on all of our financial statements, which we are very proud of. Much of the credit goes to Gary Johnson and his staff for what they have done. I thank them for that and they have done a great job and have worked very hard on these statements.

Gary Johnson is here with me today, as you stated, Mr. Chairman, and our Deputy, Mike Walker, my partner in FEMA. Also, I want you to meet the Fire Chief from Farmington Hills, Michigan, Rich Marinucci, who will be working with us for the next several months. Rich, do you want to raise your hand? He is going to be working with us on the implementation plan based on the Blue Ribbon Panel report. Rich is very well respected across all fire services, and we are honored to have him helping us with this. He will be working with Carrye Brown, the U.S. Fire Administrator, and myself to have the very best fire service programs that we can have.

Mr. Chairman, this budget is not a "disaster budget," we hope. Instead it focuses on prevention for the future. As we go into the year 2000 and the 21st century, I think that is important to stress smarter government and more community responsibility. I think this budget is the blueprint for the future, including the effective and efficient use of new technologies. The three fundamental principles driving this budget are that prevention works, that we can

work even smarter and more efficiently, and that the communities need to be empowered to take personal responsibility. Instead of just responding to disasters we can do more in the area of prevention, and that is what we want to do.

PREPARED STATEMENT

So, Mr. Chairman, we will be happy to answer your questions. [The statement follows:]

PREPARED STATEMENT OF JAMES L. WITT

Good Morning Mr. Chairman, Good Morning Senator Mikulski. I appreciate the opportunity to appear before the Subcommittee today to present our budget proposal for fiscal year 2000.

I want to thank the Members of the Subcommittee for their support of FEMA's programs and for all the time that the Members and staff have provided in reviewing our programs.

We are very proud of our work at FEMA—not only in our successful delivery of disaster services but also in the improved management and accountability that we have brought to FEMA's programs. I am particularly pleased to note that our Inspector General has just completed his review of FEMA's Financial Statements and rendered an unqualified opinion.

Much of the credit for putting our financial house in order goes to Gary Johnson, my Chief Financial Officer, who is with me today. I'm also pleased to be accompanied by the rest of my senior staff from FEMA.

One member of my staff who this Subcommittee hasn't met before is my new Deputy, Mike Walker. You may know Mike from his work as a Deputy Secretary of the Army and prior to that for his work in the Senate on Appropriations. We are very pleased to have Mike as a part of our team.

Also joining us for the next several months is Chief Rich Marinucci from Farmington Hills, Michigan. Rich will be working with Carrye Brown, Administrator of the U.S. Fire Administration, to implement some of the changes recommended by our Blue Ribbon Panel.

This is a strong and dedicated group and I am happy to have them working with me. It is a team that, with the support of the Administration and the Congress, has made America and Americans much safer. So much of what we have done in changing the face of emergency management could not have been accomplished without the help of Congress. In our visit today, I would like to share with the members of this subcommittee examples of how Congress has enabled FEMA to improve our programs and the manner in which we serve the public. I will also highlight ways in which we are asking for continued support from Congress to do more. I will be talking about just how far we have come, where I believe we need to be going, and how I propose that we get there.

What I am placing before you today is not a disaster budget, but a prevention budget. The keys to saving lives and reducing the cost of disasters are prevention, smart government and community responsibility. We have to be willing to go after long-term savings that result in safer communities for years to come.

I would not only like to demonstrate some of the successes that we have realized, but more importantly I would like to discuss our blueprint for the future. This blueprint, like all good building plans, has been shaped by the lessons we have learned and will be implemented using the most effective and efficient techniques and technologies available to us. The three pillars upon which we are building are the lessons that: prevention works; that we can work even smarter and more efficiently; and that communities need to be empowered to take personal responsibility.

The fiscal year 2000 budget is built upon those three pillars. I would like to highlight some examples of how we have laid the foundation for these three principles already and I'd like to discuss how together with your help and this fiscal year 2000 budget, we will take FEMA and emergency management in this country to the next level. Instead of responding to disasters, we must prevent them instead of waiting to react, we must prepare NOW for the next flood, hurricane, fire or earthquake. We are shifting to proactive prevention.

In this budget we are asking that the Administration and Congress invest new resources in our mission to buyout repetitive flood loss properties—as a matter of prevention; to invest in mapping modernization—that will help FEMA, the States, and local communities work smarter and more efficiently; and once again to invest in pre-disaster mitigation—which is an investment in prevention that supports per-

sonal responsibility empowered at the community level. These are investments that will save hundreds of lives and billions of dollars worth of property and personal belongings, as well as help us to further reduce disaster costs.

FEMA's progress during this Administration has been built on the pillar of prevention. I'd like to share with you a few examples demonstrating that prevention works. Alabama experienced severe flooding in March 1990 when 6,000 people lost their homes and Statewide damage estimates totaled more than \$100 million. In June 1994, Alabama was hit by Tropical Storm Alberto and again devastating floods left a trail of flooding destruction along the Pea and Choctawhatchee Rivers. Small towns along these waterways like Elba and Geneva were hit particularly hard.

Following the 1994 floods, Geneva officials began an aggressive campaign to convince homeowners in the most flood prone area of their community to relocate outside of the floodplain area. The community applied for and received funding from FEMA to acquire 54 homes.

At this time last year a heavy storm from the Gulf of Mexico moved inland across the United States. Torrential rains swept through the region and caused serious flooding in several Alabama counties. Of the 54 homes identified for purchase through the FEMA grant, 30 had actually been acquired by March 1998. FEMA's benefit-cost analysis determined that for an upfront investment of \$672,000 to acquire the properties, over \$1.4 million in damages and losses were avoided, that's \$2 saved for each \$1 invested—that is the hallmark of mitigation.

All of the acquired structures lay deep in the floodplain, and would have been flooded had they remained in the flood-risk zone. If these buildings had been merely replaced after the 1994 flood, many would have been severely damaged or destroyed in 1998.

The program that funded this property acquisition was our Hazard Mitigation Grant Program. This is a program that delivers the bulk of mitigation assistance to communities following disasters so that they may better survive the next storm. We may not have had the resources to do this without the Volkmer Amendment of 1994 that increased the resources available for this purpose. Unfortunately, funding for this program is generated following a Presidential disaster declaration—after something bad has already happened to a community.

I want to expand a program that we already have to address the problem of properties suffering repetitive flood losses. For fiscal year 2000, we are requesting that an additional \$12 million be appropriated to the Flood Mitigation Fund which Congress established through the Flood Insurance Reform Act of 1994 to accelerate the process of removing repetitive loss homes from our flood insurance rolls. This appropriation would give us a total of \$32 million to make a real impact on this recurring problem. Mike Armstrong, our Associate Director for Mitigation, and Jo Ann Howard, our Insurance Administrator, are working hard to make this happen.

As many of you know, the National Flood Insurance Program (NFIP) collects fees and policy premiums from homeowners with properties in floodplains and some homeowners with properties outside flood plains who want flood insurance protection. Each year the insurance fund pays out more than \$700 million to policyholders who have suffered losses due to flooding. Of this \$700 million paid out annually, \$200 million of the payouts are to policyholders who have already suffered at least one other loss during the past 10 years. By targeting the repetitive loss properties first, we can save the insurance fund these unnecessary annual losses and, more importantly, we can move the individuals who are suffering the most out of harm's way.

Up to \$20 million collected in fees from policyholders in 2000 will be used to buy out or elevate properties or take other sound mitigation measures, in every State in the nation. In fiscal year 1999, I asked that we concentrate as much of the \$20 million as possible to buy out or elevate properties that have suffered multiple losses. We plan to continue to target the \$20 million to repetitive loss properties in fiscal year 2000. But, this \$20 million is not enough to really get at the heart of the problem.

We estimate that there are over 35,000 properties with more than one loss. Of this amount, about 8,000 have suffered four or more losses over the past ten years or at least two losses that totaled more than the value of the entire house. To start making a significant impact on the repetitive loss properties, we are requesting an appropriation to use in concert with the \$20 million generated from the flood fund.

To eliminate the 8,000 properties with four or more losses or two losses totaling more than the value of the house, it would cost nearly \$300 million. Our fiscal year 2000 budget request includes \$12 million that would allow us to get at the 270 worst properties. Buying out the 270 properties would save over \$2.6 million in the first year and a projected savings exceeding \$27 million over the next 15 years. That's a \$12 million investment resulting in a \$27 million savings!

In order to further protect against flood risks, we need to continue to ensure that our nation's dams are safe. The National Inventory of Dams classifies nearly one-third of the nation's 75,000 dams as either "High Hazard" or "Significant Hazard." This classification does not mean that nearly one-third of the dams are likely to give way in the near future. It does mean, however, that a problem with any one of these dams will result in loss of life or at the very least, cause a significant economic impact on the surrounding community. To help guard against problems at our nation's dams, our fiscal year 2000 request fully funds the dam safety program to the authorized level.

Finally, in the area of prevention, our budget also includes a \$1 million request for a pilot program designed to help make our colleges and universities more disaster resistant. With so many billions worth of Federal funding going to higher education institutions for research, it is very important that we help these schools mitigate against future disasters in order to protect the Federal government's investment.

The second pillar of our blueprint for the future supports our effort to get people out of harm's way by implementing methods to work smarter and more efficiently. One important way of doing this is through better flood maps.

We are proposing this year an aggressive map modernization effort—bringing our flood maps up to date and digitizing them so they will be both more accurate and easily available to communities. We are asking for a \$5 million appropriation in start up funds until we can generate a steady stream of funding for the program.

That steady stream of funding, and our proposal to put a \$15 fee on all mortgage transactions to produce that funding, are issues I suspect we might discuss a little bit today. I welcome that discussion because these maps are important to ensure that the future growth and development in our country is done based on the best information available.

As many of you know, FEMA's flood maps are used for several different purposes. Some of the main users are mortgage lenders who use them when a house is purchased to determine whether or not the property is within a flood plain. If a property is likely to be flooded sometime in the future, the lenders require the homebuyers to purchase flood insurance. In addition to lenders, flood plain managers, States, communities, surveyors and insurance companies use the maps for different purposes.

Currently, we spend about \$50 million annually from the flood insurance fund to pay to update the flood maps. Unfortunately, at this funding level, we have fallen behind in producing new maps. Most of the \$50 million is actually spent amending the old maps rather than creating entirely new maps. Nearly our entire map inventory is on paper or plastic panels. We would like to be able to digitize our maps so that they are easier to update and transport. The Technical Mapping Advisory Panel, a group of map experts from government and the private sector, recently endorsed our map modernization plan in its annual report.

Figuring out how to pay for updated maps and who should pay for them are difficult questions. To update all of our maps, we estimate that it will cost nearly \$900 million and take more than seven years to complete. The \$50 million currently spent on updating maps comes from insurance premiums and fees collected from homeowners who purchase flood insurance. This does not seem fair for the policyholders as many people and businesses benefit from up-to-date maps, while only flood insurance policy holders are paying for them.

Because last year's subcommittee report asked us to identify a creative way to find funding for updating maps, we came up with the idea of assessing a \$15 fee on every federally backed mortgage transaction. Proceeds from the fee will go into a Map Modernization fund that will allow us to start updating and modernizing our map inventory. By charging the fee on mortgage transactions, we will not be putting an additional burden on the flood insurance policy holders.

Also, and I want to emphasize this very strongly, I want these maps to become the community's maps, not just FEMA's maps. I have been working closely with our Associate Director for Mitigation, Mike Armstrong, to get funding out to communities to do this mapping themselves. It is time that communities contribute resources to produce better maps instead of spending money to fight the maps at the end of the process.

Although the \$15 fee will have some opposition, nearly everyone agrees that we need to update the maps. We look forward to working with you to identify the best solution.

Aside from my desire for us to have better maps, the Agency has already made great strides in the area of working smarter and more efficiently. These efforts have already been demonstrated through several efforts to streamline the delivery of disaster assistance and by incorporating better business practices.

Our program for assisting communities whose public infrastructure has been damaged during a disaster has been streamlined as a result of the recent business process re-engineering effort. Working with our customers in State and local emergency management we have simplified the method for getting aid to communities for the repair of their public roads, bridges, and other critical infrastructure so that they can begin to recover soon after a disaster strikes. Again, we appreciate the support of the Appropriations Committees and support of the Stafford Act authorizing committees.

The final step in the grant delivery process would be further streamlined if FEMA were permitted by law to settle with applicants on the basis of estimates, as is accepted industry practice. This would speed closeout of disasters, improve project management and significantly economize the use of Federal and State resources. We will be pursuing this change in legislation this year.

For the first time ever, in 1999 we published an administrative rule in the Federal Register that identifies criteria that must be considered when evaluating whether an incident should be declared a disaster. The criteria is tied to the CPI so that it adjusts annually. By implementing this rule, we are helping ensure that disaster declarations are consistently applied in every State.

When I testified before this Subcommittee last year, I told you that we were going to emphasize closing out the books on older disasters as quickly as possible. By the end of fiscal year 1998, the Territorial Closeout Teams that were established under the leadership of our CFO, Gary Johnson, have reduced the number of open disasters by 44 percent and reduced remaining costs by \$1.7 billion. Our close-out efforts resulted in recoveries of \$675 million in fiscal year 1998—funds that help us avoid having to replenish the Fund as quickly as we would have.

In addition to new close-out procedures that will help recover disaster funds, we are attempting to simplify the manner in which funds are delivered to our State partners. When I was a State Emergency Manager, FEMA used to send funds to me under about thirteen different accounts. Each account had a different matching level and specific reporting requirements. It was an administrative nightmare. During my first five years at FEMA, we have been able to reduce the number of funding streams to seven. This year's budget request includes a proposal to consolidate the seven remaining funding streams that go to state and local emergency managers into a single funding stream.

From my experience in emergency management at the State level, I know that this consolidation will help reduce administrative red tape for states and for FEMA. It is going to allow States to take more responsibility for putting resources against the risks that they assess to be the greatest threats.

When I first came to FEMA in 1993, the agency's financial house was in disarray. OMB had designated our financial system as high risk, and the agency was in no position to produce the financial statements required by the Chief Financial Officers Act. In fact, the agency had never reconciled over \$20 billion spent in the Disaster Relief Fund. We immediately set out to install an integrated financial system that would aid in reconciling the agency's books. We then established an intensive, three year effort to improve our financial reporting so that we could prepare, and audit financial statements for all the agency's activities. I am pleased to report to you today that we have met that schedule. For the first time, FEMA has prepared comprehensive financial statements for all of its programs, including the Disaster Relief Fund. And I am very proud to report that the Inspector General has rendered an unqualified opinion on those statements. Achieving this goal is not only important for our reporting to OMB and Congress, but it is critical for enabling the program managers to make sound decisions—based on solid financial data.

The final pillar of our blueprint for the next century is that communities need to be involved in promoting personal responsibility. This can best be illustrated by Project Impact.

Three years ago I came here asking for your help in starting pre-disaster mitigation—the work we could do with communities before disaster strikes. Today, we have 118 communities across all 50 states participating in Project Impact. This would not have been possible without the support of our Appropriation Committees.

Many Members who were on this Subcommittee before have heard me say that Project Impact is not a traditional government program. Instead of the Federal Government giving large amounts of money to local communities, the small amount of money and technical assistance given to communities is used to leverage additional community and private sector involvement and support in many different forms. When community members take steps to mitigate the impacts of future disasters at the grass roots level, great success stories come about.

I am especially pleased to report that the initial grants that the Federal Government has given to the 118 Project Impact communities resulted in the leveraging

of nearly 700 corporate partners which have contributed volunteers, in-kind donations and funding to help their communities mitigate the impacts of future disasters.

In addition to corporate partners, Project Impact communities rely upon individuals who live in the community to get involved. I wish all of you could have joined us at the Summit we had in December that brought Project Impact participants together from places like Tillamook, Oregon, Deerfield Beach, Florida, West Virginia and California. All of these people had shown leadership in their communities in addressing the risks they face.

All of the Project Impact participants know that we can prevent disaster damage if we act now. After Hurricane Georges, a lot of people have asked me why that storm did not devastate the U.S. Virgin Islands and the Gulf States the way other storms have in the past. The answer is mitigation. The Virgin Islands adopted tougher codes and built back stronger and smarter. This last hurricane showed the wisdom of that work. That is exactly what Project Impact wants to do.

One of my favorite examples of local citizens taking ownership of the pre-disaster mitigation process occurred in Tucker County, West Virginia. Tucker County was a community that had flooded repeatedly over the years. Each time the town flooded, the residents had to work together to piece their lives back together.

After this pattern of disaster/recovery/disaster occurred several times, a local resident, Mrs. Katie Little, decided she was going to try to do something to make the situation better. Mrs. Little and a group of her friends started selling pies and cakes in order to raise enough money to build the Concerned Citizens Coalition to help minimize the flooding in her community of Tucker County, West Virginia. From their bake sales they raised over \$50,000 which was used to leverage \$2 million from the State of West Virginia. This money, along with support from other Project Impact business partners in the community, allowed Tucker County, West Virginia to make their community more resistant to future flooding disasters by clearing debris and stabilizing eroding riverbanks.

We are hearing stories like these in community after community as Project Impact continues to expand. Fully funded at the \$30 million level, we will be able to expand the program to at least 50 more communities.

The last few budget items that I would like to highlight, incorporate elements of all three pillars prevention, smarter government, and community based responsibility.

FEMA's fiscal year 2000 budget requests almost \$31 million to support counter-terrorism initiatives. This includes training for fire departments and State and local emergency managers who are likely to be the first responders in the event of a terrorist incident. These are the people we work with every day and they are going to be called upon in these situations.

Although several agencies are involved in the government's anti-terrorism efforts, the agencies involved are coordinating closely together to ensure that our efforts are effective and efficient. Attorney General Janet Reno and I have visited personally about the responsibilities of our respective agencies on several occasions. This coordination is going to help our State and local partners to access the Federal resources that can help them respond in their communities.

In fiscal year 1998, I commissioned a Blue Ribbon Panel of representatives from our nations fire service community to review the programs and facilities of the United States Fire Administration (USFA). The Panel provided me with a report that outlined recommendations for improving the operations of the USFA.

FEMA's fiscal year 2000 budget request includes an increase of about \$12 million to pay for some of the recommendations in the initial report. If approved, the funding would improve the USFA's data collection system so that the national fire problem can be better defined and addressed. The funding would allow the USFA to better focus its public education materials and firefighter training courses to meet the needs of the fire community, local citizens and all professions involved in fire prevention. Each of these activities give local fire departments better tools to respond to a local incident, whether it is a fire, a flood, or an EMS call.

To implement the recommendations, we are pleased to have Chief Rich Marinucci of the Farmington Hills Michigan Fire Department and past president of the International Association of Fire Chiefs. He graciously accepted this challenge. Rich will be reviewing the recommendations made, meeting with members of the Panel and other constituents and working with our staff at the Fire Administration to improve operations.

I also want to call your attention to a major funding increase for the Emergency Food and Shelter Program. We at FEMA are very fortunate to have been a part of this program for fifteen years. This program is a great way to work with local com-

munities, especially the non-profit community that does the essential work with the working poor and elderly and the people in the roughest circumstances.

The increase of \$25 million brings the program up to \$125 million. Our partners in this program the Salvation Army, Catholic Charities USA, the American Red Cross, the National Council of Churches, the Council of Jewish Federations and the United Way of America—have joined with us to be careful stewards of these funds. And it is really important to remember that the millions of extra meals and nights of shelter that come from this program are all delivered with an administrative expense share of just under 3 percent. That is a really good deal, not only for the federal government but also for the people who desperately need these services.

Finally, I want to touch on the work we have been doing in relation to the Y2K problem. By the end of this month we will have hosted a meeting in each of our 10 regional office cities bringing in State and local officials to give them information, but mostly to listen and to hear where they think their needs are and to suggest what they should be looking at.

Many of my staff with me today, including Mike Walker, Lacy Suiter and Kay Goss have been on the road with representatives of other Federal agencies, as well as with John Koskinen's task force, to take a reading on where the State and local emergency officials are and to arrange a plan for maintaining this channel of communication over the next nine months.

We are taking this problem very seriously but we are also serious about striking the right balance in approaching a complicated issue. We will continue to keep this Committee informed on our work in this area.

The ability to implement this blueprint for the next century and to continue this bold experiment of creating the finest emergency management system in the world we need to retain and attract good quality people.

The fiscal year 2000 budget requests an increase of over \$14 million for salaries and expenses. Protecting our employees at FEMA is very important to me because I know what I've asked of the staff at FEMA and I know how they have responded. "People helping people" is not just a phrase but the way my staff approaches every day at work. They work smart and they work hard. I am very proud of them.

Just moments ago, I described several ways in which the FEMA staff has worked to make the agency run more efficiently. The most remarkable thing to me is how they are able to accomplish so many improvements in the way day-to-day business is conducted while also being asked to absorb so many new responsibilities.

For example, during the past two fiscal years, FEMA has received additional funding for anti-terrorism initiatives. However, each time funds were appropriated for anti-terrorism programs, corresponding S&E funding was not provided. Instead, staff had to absorb the anti-terrorism initiatives while also continuing to perform the agency's other functions at a high level. Similarly, although Project Impact funding was provided, we had to detail staff from other places in the agency to support the initiative.

Finally, increased S&E funds will allow us to actually implement the reforms we want to see in the U.S. Fire Administration. The S&E increase will support more positions at the Fire Academy in Emmittsburg and will help USFA to discharge its increased responsibilities due to the threat of terrorism.

I know how often the request for more S&E funds comes before you. I know how often I have asked!

But I have asked because I have a tired and stretched work force that is always asked to do more; from frequent disasters around the country to new initiatives—whether it's a church arson program, pre-disaster mitigation or helping States and communities face the consequences of terrorism. I am especially grateful to the Administration for recognizing this and supporting this request for increased S&E funding for FEMA.

I want to conclude by telling you that this budget is important to me and to FEMA, and it is especially important to the future of our communities across the nation.

I have been privileged to work for the President, to be his representative in bringing some hope and help to towns and cities and counties and states that have been hit by disasters. But I have gone back to the same places too many times over the last six years. I have seen the same problems that could have been prevented with an "ounce of prevention."

The last few years of terrible weather events—floods and hurricanes and El Nino and other natural events like the Northridge earthquake—are telling us that we have to take action to reduce their impact in the future.

It seems that sifting through debris and looking for resources to rebuild are the constant parts of our current approach to disaster response and recovery. Unfortu-

nately, that approach is short-changing ourselves, our families, our businesses, our communities, and the future for our children.

We can and should be proud of how much we have accomplished in our work after disasters, but we really need to look forward. As I mentioned earlier, this is a budget that takes emergency management to this next level of proactive prevention. Through mitigation, improved mapping and additional training opportunities, FEMA will help prepare states, local communities and citizens to save lives, cut property and business losses, protect our environment, and make our communities safer and stronger for our children and their children. I hope you can provide us the support we need to look to that promising future. Together, FEMA and Congress are creating and will continue to create a true legacy of natural disaster protection.

Thank you for the opportunity to appear before this Subcommittee and I am happy to answer any questions you may have.

[General Accounting Office, March 4, 1999]

DISASTER ASSISTANCE—INFORMATION ON THE COST-EFFECTIVENESS OF HAZARD MITIGATION PROJECTS

(By Stanley J. Czerwinski)

Mr. Chairman and Members of the Subcommittee: This statement for the record provides our preliminary views on how the Federal Emergency Management Agency (FEMA) ensures the cost-effectiveness of projects funded under the Hazard Mitigation Grant Program. We are conducting this work at the request of this Subcommittee and the Chairman of the Subcommittee on Oversight, Investigations, and Emergency Management, House Committee on Transportation and Infrastructure.

For a number of years, the Congress has been concerned about the increasing costs of federal disaster assistance. One of FEMA's primary approaches for reducing these costs is to promote mitigation measures that will reduce future damage within communities—potentially decreasing future federal disaster expenditures. However, there are concerns that FEMA's mitigation funding is not targeted to cost-effective measures, as mandated by the Robert T. Stafford Disaster Relief and Emergency Assistance Act. Our statement is based on previous and ongoing work and provides (1) an overview of the increases in disaster assistance costs and FEMA's mitigation programs and (2) our preliminary views on the approaches FEMA uses to ensure that funding under the Hazard Mitigation Grant Program is targeted to cost-effective mitigation measures.

In summary:

- Federal disaster assistance costs billions of dollars annually. For disasters that occurred between 1989 and 1993, average annual obligations in FEMA's disaster relief fund totaled \$1.6 billion, in 1998 dollars, while average annual obligations over the past 5 years (1994 through 1998) have increased to \$2.5 billion annually in 1998 dollars (even with the exclusion of one of FEMA's costliest disasters—California's Northridge earthquake). The growth in disaster assistance costs in the 1990s has been attributed to a number of factors, including a sequence of unusually large and costly disasters; an increase in the number of presidential disaster declarations; and a gradual expansion in eligibility for assistance. To reduce these costs, FEMA is using, among other things, hazard mitigation efforts. These efforts promote community involvement in mitigation measures by providing grants and training to state and local governments. FEMA's efforts include providing federal flood insurance, converting flood-prone properties to open space, mitigating damage to public facilities, reducing earthquake risks, and helping mitigate the loss of life and damage from fires.
- Our ongoing review of FEMA's efforts to ensure the cost-effective use of federal dollars for hazard mitigation has focused on the Hazard Mitigation Grant Program—one of FEMA's primary sources of funding for implementing hazard mitigation measures within communities. FEMA uses benefit-cost analysis¹—an approach recommended by the Office of Management and Budget—as its primary approach for ensuring that mitigation measures within the Hazard Mitigation Grant Program are cost-effective. However, FEMA also excludes certain types of Hazard Mitigation Grant Program projects from benefit-cost analysis—including projects that fund the removal of certain structures from floodways, research for new building codes, and planning efforts. FEMA officials stress a need for flexibility in assessing these projects, citing the difficulties of quanti-

¹ Benefit-cost analysis is used to determine how the anticipated dollar savings gained through implementing a project compare with its cost. In order to be considered cost-effective, a project must return more money over its life than it cost.

fyng the benefits of some projects and the time needed to gather data to conduct a benefit-cost analysis. However, these exemptions limit the agency's ability to demonstrate that the funded mitigation measures are cost-effective. Additionally, according to our review of selected benefit-cost analyses in two FEMA regions, officials conducting these analyses were generally knowledgeable and had been trained in how to conduct the analyses. However, they did not always use the best available information in analyzing projects designed to mitigate future damage from flooding events. For example, the officials did not always use flood damage information available from past insurance claims.

BACKGROUND

Following a disaster, at the request of a state governor, the President may issue a major disaster declaration for the affected areas, thus triggering a range of assistance from federal agencies. The costs of this disaster assistance have grown notably between the late 1970s and 1990s. Between 1979 and 1988, FEMA's obligations in its disaster relief fund exceeded \$500 million only in 1 year. In comparison, since 1989, the obligations in the fund have exceeded \$1 billion every year except for 1991. The increase in costs is also seen in the number of large, costly disasters. Prior to 1989, only Hurricane Agnes cost the fund in excess of \$500 million, while 10 disasters have cost over \$500 million since 1989. While FEMA has implemented a number of approaches to reduce the costs of disaster assistance—such as consolidating multiple disaster response and recovery functions at individual disaster sites to reduce administrative costs—the agency has made disaster mitigation a primary goal in its efforts to reduce the long-term costs of disasters.

FEMA's September 1997 strategic plan, entitled "Partnership for a Safer Future," states that the agency is concentrating its activities on reducing disaster costs through mitigation because "no other approach is as effective over the long term." Mitigation activities are undertaken to reduce the losses from disasters or prevent such losses from occurring. The agency's hazard mitigation efforts include grants and training for state and local governments; funding for mitigating damage to public facilities; the purchase and conversion of flood-prone properties to open space; federal flood insurance; the development of land-use plans and zoning ordinances to discourage building in hazardous areas; and programs targeted at reducing the loss of life and property from earthquakes and fires.

However, as we noted in previous testimony,² quantifying the effects of mitigation efforts can be difficult. Specifically, determining the extent to which cost-effective mitigation projects will result in federal dollar savings is uncertain because the savings depend on the actual incidence of future disasters and the extent to which the federal government would bear the resulting losses.

The Stafford Act requires that hazard mitigation measures under the Hazard Mitigation Grant Program be cost-effective and that they substantially reduce the risk of future damage, hardship, loss, or suffering. According to Office of Management and Budget (OMB) guidelines, contained in OMB Circular A-94, the use of benefit-cost analysis is the recommended approach for determining cost-effectiveness. FEMA's guidance for determining the cost-effectiveness of hazard mitigation projects³ states that "a key criterion for mitigation projects to be eligible for funding is that they must be cost-effective" and that "benefit-cost analysis is used for all cost-effectiveness determinations."

Benefit-cost analysis is used to assess whether the expected costs of investing in a hazard mitigation project are justified because the project will help avoid damages expected from future disasters (the benefits). FEMA generally conducts the benefit-cost analysis for the projects that states submit for approval.⁴ By conducting a benefit-cost analysis, the analyst determines a benefit-cost ratio—the ratio of the expected benefits divided by the expected costs. If the expected benefits are greater than the expected costs, the ratio is greater than 1.0 and the project is considered cost-effective. If the expected benefits are less than the expected costs, the ratio is less than 1.0 and the project is considered not cost-effective. FEMA's guidance describes four main elements of a benefit-cost analysis:

—an estimate of damages and losses before mitigation,

²*Disaster Assistance: Information on Federal Disaster Mitigation Efforts* (GAO/T-RCED-98-67, Jan. 28, 1998).

³*How to Determine cost-Effectiveness of hazard Mitigation Projects, A New Process for Expediting Application Reviews*, Interim Edition, Dec. 1996.

⁴Three states (Florida, North Dakota, and Ohio) typically conduct the benefit-cost analysis for projects from their communities and submit a sheet summarizing the analysis for FEMA's review. These states have been given additional responsibilities as participants in a pilot program called the "managing state concept."

- an estimate of damages and losses after mitigation,
- an estimate of the frequency and severity of the hazard causing the damages (such as the risk of flooding), and
- economic factors used in the analysis (a project's expected life span, for example).

After all of these elements are considered, along with a project's expected costs, a project's cost-effectiveness can be determined. However, other factors outside of the benefit-cost analysis can also influence whether a project is accepted for funding, such as the project's potential impact on environmental conditions.

GROWTH IN FEDERAL DISASTER ASSISTANCE COSTS

Federal disaster assistance costs have increased in the 1990s for several reasons, including several unusually large and costly disasters, increasing population and development in hazard-prone areas, increases in the federal share of disaster assistance costs in larger disasters, an upward trend in the annual number of presidential disaster declarations, and an increase in the types of facilities eligible for disaster assistance. Total obligations from FEMA's Disaster Relief Fund for the 10-year period prior to 1989 were \$4 billion; since 1989, they have totaled \$25 billion.⁵

Factors Underlying Increasing Costs

The large disaster assistance costs in the 1990s have been attributed to a number of factors. Since 1989, the United States has experienced a series of unusually large and costly disasters, including Hurricane Hugo, Hurricane Andrew, the 1993 Midwest floods, and the Northridge earthquake. Hurricane Georges was added to this list in 1998—FEMA is projecting that it might be the agency's second costliest disaster ever. The close occurrence of such costly disasters in the United States is unprecedented. Furthermore, increases in population and development, especially in hazard-prone areas, increase the potential losses associated with these disasters. For example, FEMA expects that by 2010 the number of people living in the most hurricane-prone counties (36 million in 1995) will double.

For several of these large disasters, the federal government has increased its share of the disaster relief costs to provide additional assistance to the states. For example, while the federal share of funding is at least 75 percent for assistance to repair or replace disaster-damaged public and nonprofit facilities, the President used his authority to raise the federal share to 90 percent for the Northridge earthquake and to 100 percent for Hurricane Andrew.

There has also been an upward trend in the annual number of presidential disaster declarations. From fiscal years 1989 through 1993, the average number of major disaster declarations was 38 per year, while from fiscal years 1994 through 1998, the average number increased to 49.

Additionally, over the years, the Congress has generally increased eligibility by expanding the categories of assistance and/or specified persons or organizations eligible to receive assistance. For example, a 1988 law expanded the categories of private nonprofit organizations that are eligible for FEMA's public assistance program.

According to a report by the Senate Bipartisan Task Force on Funding Disaster Relief,⁶ federal budgeting procedures for disaster assistance may also have influenced the amounts appropriated for disaster assistance. This is because disaster relief appropriations have often been designated as "emergency" spending, thus excluding them from the strict budget disciplines that apply to other spending. Some views in the report suggested that the assistance provided is more generous than would be the case if it had to compete with other spending priorities.

FEMA'S HAZARD MITIGATION EFFORTS

To reduce disaster assistance costs, one of FEMA's primary approaches has been to emphasize hazard mitigation through various incentives. Mitigation consists of taking measures to prevent future losses or to reduce the losses that might otherwise occur from disasters. For example, floodplain management and building standards required by the National Flood Insurance Program might reduce future costs from flooding. FEMA estimates that the building standards that apply to floodplain structures annually prevent more than \$500 million in flood losses.

⁵ Since these figures are expressed in nominal dollars, they do not reflect the effects of inflation over the time periods cited.

⁶ *Federal Disaster Assistance*, Document No. 104-4, U.S. Senate (Washington, D.C.: U.S. Government Printing Office, 1995).

A Number of Programs Provide for Hazard Mitigation Assistance

FEMA funds or otherwise promotes hazard mitigation through a number of programs. As part of its National Flood Insurance Program, FEMA attempts to reduce future flood losses by providing federally backed flood insurance to communities that adopt and enforce floodplain management ordinances that help mitigate the effects of flooding upon new or existing construction. This program also funds a flood mitigation assistance program through the National Flood Mitigation Fund. In 1998, FEMA distributed over \$14 million to states and communities to plan and implement measures to reduce future flood damage in homes and other properties that had experienced repeated losses from flooding. Eligible projects under this program include elevating structures, flood-proofing properties, and buying out and converting flood-prone properties to open spaces.

FEMA also provides grants to states to prevent or reduce the risks of earthquakes by using mitigation measures such as the seismic retrofitting of buildings. The agency also conducts training, public education, and research programs in subjects related to fire protection technologies. The agency's efforts support the nation's fire service and emergency medical service communities through such services as the national fire incident reporting system, which collects and analyzes data in order to help mitigate the loss of life and damage from fires.

In 1997, FEMA began Project Impact—an initiative based on the premise that consistently building safer and stronger buildings, strengthening existing infrastructures, enforcing building codes, and making proper preparations prior to a disaster would save lives, reduce property damage, and accelerate economic recovery. The initiative intended to build “disaster-resistant communities” through public-private partnerships, and it included a national awareness campaign, the designation of pilot communities showcasing the benefits of disaster mitigation, and an outreach effort to community and business leaders. Project Impact received an appropriation of \$25 million in the fiscal year 1999 budget.

Under section 406 of the Stafford Act, communities recovering from disasters can use federal funds to mitigate future damage to public facilities that have been damaged. For example, as a damaged building is rebuilt, seismic retrofitting is added to help reduce damages from future earthquakes. Mitigation measures funded under the section 404 program—the Hazard Mitigation Grant Program—differ from the 406 program in that they can be targeted to either damaged or undamaged facilities. For example, putting storm shutters on the windows of structures is expected to help mitigate wind and rain damage from future hurricanes. Our statement focuses on the measures funded under the Hazard Mitigation Grant Program.

Hazard Mitigation Grant Program

Under the Hazard Mitigation Grant Program, up to 15 percent of the total funds spent on a disaster may be spent specifically on hazard mitigation measures. Subject to certain dollar limits, the act generally allows the funding of up to 75 percent of the cost of hazard mitigation measures within communities that have been affected by a disaster⁷ (the states or local governments pay the remaining portion of the costs). In fiscal year 1998, FEMA approved and obligated over \$415 million in Hazard Mitigation Grant Program grants. These grants can be used to protect either public or private property, including the acquisition and relocation of structures from hazard-prone areas. The Stafford Act establishes that the federal contribution is based on measures that “the President has determined are cost-effective and which substantially reduce the risk of future damage, hardship, loss, or suffering in any area affected by a major disaster.” The program funds a range of projects, including purchasing properties in flood-prone areas, adding shutters to windows to prevent future damage from hurricane winds and rains, or rebuilding culverts in drainage ditches to prevent future flooding damage.

Historically, hazard mitigation has been considered primarily a responsibility of local and state governments as well as private citizens, since these entities often control the decisions affecting hazard mitigation. For example, building code enforcement and land-use planning are generally under local jurisdictions. As a result, FEMA works with state and local governments to instill a community-based approach to implementing disaster mitigation efforts. Section 409 of the Stafford Act plays a role in developing this approach because it helps to establish the requirement for a comprehensive state hazard mitigation plan that includes an evaluation

⁷In an October 10, 1997 regulation, FEMA announced that for disasters declared after April 6, 1997, eligibility for program funding would be statewide rather than limited to the communities affected by the disaster. FEMA was attempting to give the states enhanced flexibility in using the funding for priority projects across the states and to expedite closing out the funding from older disasters.

of a state's vulnerability to natural hazards. Additionally, as a condition of receiving a Hazard Mitigation Grant Program grant, the state must prepare an administrative plan that establishes its procedures and priorities for identifying and selecting mitigation projects. FEMA, however, has final approval authority for funding these projects. FEMA guidance states that an "ideal" plan would include a statewide mitigation strategy and identify potential hazard mitigation projects that are consistent with the plan.

We talked with FEMA staff responsible for approving these plans and reviewed plans from several states. In general, we found that state administrative plans exhibited a broad range of approaches for identifying and selecting mitigation projects. Additionally, a 1996 study⁸ found that many of the 39 state plans reviewed were "merely intended to qualify the state for post-disaster mitigation grants under section 404 of the Act." FEMA officials generally agreed with this conclusion. However, several officials noted that the agency has recently initiated changes to improve the states' planning efforts.

FEMA DOES NOT ALWAYS USE BENEFIT-COST ANALYSIS TO DETERMINE COST-EFFECTIVENESS AND AT TIMES DOES NOT USE BEST AVAILABLE DATA

Our preliminary review found that FEMA's guidance recommends the use of benefit-cost analysis as the primary approach for determining a project's cost-effectiveness. However, the agency excludes certain categories of Hazard Mitigation Grant Program projects from this analysis. These categories include projects that fund the removal of certain structures from floodways, tornado-related measures, research for new building codes, and planning efforts. While FEMA has explained the rationales for these exemptions, certain factors, such as the lack of an analytical basis for an exemption on the acquisition of certain floodplain properties, are limiting the agency's ability to demonstrate that these mitigation measures are in fact cost-effective.

Certain Types of Projects Exempted From Benefit-Cost Analysis

The Stafford Act requires that Hazard Mitigation Grant Program projects be cost-effective. FEMA's guidance establishes that benefit-cost analysis is the preferred method for making this determination. However, since September 1996, FEMA has exempted the following four categories of Hazard Mitigation Grant Program projects from the use of benefit-cost analysis:

- projects involving the purchases of substantially damaged structures in 100-year floodplains;
- up to 5 percent of the Hazard Mitigation Grant Program funding for a variety of hazard mitigation measures, such as disaster warning systems or the application of new, unproven mitigation techniques;
- hazard mitigation planning projects for older disasters; and
- an additional 5 percent of the Hazard Mitigation Grant Program funding for tornado-related projects.

FEMA's general rationale for the exemptions varies, although the agency's policy guidance establishes that two of the exemptions were made because some mitigation projects were often difficult to evaluate against "traditional quantitative program cost-effectiveness and eligibility criteria." FEMA officials have explained that the benefits of some projects are difficult to quantify against known project costs and that the time involved in gathering the data on some mitigation projects can be excessive. For example, it is difficult to determine the benefits of establishing an educational program that uses fliers to inform the public about the risks of living in a floodplain because it is hard to predict the resulting changes in public behavior that might result from the fliers. However, without any measurement and subsequent comparison of a project's expected benefits with its expected costs, it is unclear what criteria the agency is using to determine cost-effectiveness.

Exemption of Projects Involving the Purchase of Substantially Damaged Structures

Through policy guidance established in September 1996, FEMA exempted projects that involved purchasing structures located in floodways and floodplains—if the cost of restoring the damaged structures equaled or exceeded 50 percent of the structures' market value and the structures were located in a 100-year floodplain. This particular exemption has come under criticism by FEMA's Inspector General. In a March 1998 report,⁹ the Inspector General questioned the exemption's lack of analytical data supporting the contention that acquisition projects involving substan-

⁸Edward J. Kaiser and R. Matthew Goebel, *Analysis of Content and Quality of State Hazard Mitigation Plans Under Section 409 of the Stafford Act*, June 1996.

⁹*Improvements Are Needed in the Hazard Mitigation Buyout Program*, FEMA OIG, Inspection Report I-01-98, March 1998.

tially damaged properties in the 100-year floodplain were cost-effective. While FEMA officials have begun to retroactively analyze some of the acquisition projects exempted under this policy, the agency is currently unable to provide the analytical data that would support exempting all substantially damaged structures in a 100-year floodplain. FEMA officials explained that they need to conduct a detailed and rigorous analysis of acquisition projects to support the policy. Without this analytical basis, it is difficult for FEMA to demonstrate that the exempted acquisition projects it is funding are cost-effective.

Exemption of Up to 5 Percent of the Hazard Mitigation Grant Program Funding for Various Projects

In September 1996, FEMA established another policy that exempted projects from benefit-cost analysis. Known as the “5 percent Hazard Mitigation Grant Program initiatives,” this policy allowed the states to use up to 5 percent of their Hazard Mitigation Grant Program project funding for a variety of hazard mitigation measures. According to FEMA’s policy memo for this exemption, the evaluation of funding for certain mitigation measures, such as hazard warning systems or research for new building codes, required a large amount of time at the state and federal levels, although it was generally recognized that such measures reduced the potential losses from a future disaster. The policy was intended to provide the states with discretion in deciding which mitigation measures they wanted funded, as well as the responsibility for providing the rationale for the cost-effectiveness of the projects selected. FEMA officials explained that the intent of the policy was to spur creativity and avoid the time and expense involved with conducting a benefit-cost analysis.

To be eligible, a project type had to be identified in the state’s hazard mitigation plan and reduce or prevent future property damage, injury, or the loss of life. Instead of conducting a benefit-cost analysis, the states were instructed to include a narrative that identified the mitigation benefits and the reasonable expectation that future property damage, injury, or the loss of life would be reduced or prevented. In fact, FEMA’s guidance instructs project applicants to use 5-percent funding if the project was “previously denied because of difficulty in measuring cost-effectiveness.” While FEMA’s guidance instructs the states to identify a project’s benefits, it does not specifically suggest any comparison of the benefits with the project’s costs or competing alternative projects. Without any measurement and subsequent comparison of a project’s expected benefits with its expected costs, the criteria the agency is using to determine cost-effectiveness are unclear. Additionally, by using such a broad determination of a project’s cost-effectiveness, it appears that almost any project could be determined as cost-effective.

Exemption of Hazard Mitigation Planning Projects for Older Disasters

About 1 year later, in October 1997, FEMA announced its third policy decision, when it exempted hazard mitigation planning projects associated with older disasters from benefit-cost analysis. FEMA decided that in the interest of expediting the closeout of disasters that occurred on or before June 10, 1993, the agency would make remaining program funds from these disasters available for hazard mitigation planning purposes.¹⁰ States were invited to submit Hazard Mitigation Grant Program applications for funding that would help them develop multi-hazard mitigation plans. The policy memo stated that “funds provided for planning purposes shall be considered a cost-effective measure.”

Exemption of Up To 5 Percent of the Hazard Mitigation Grant Program Funding for Tornado-Related Projects

In August 1998, FEMA announced the fourth policy exempting certain projects from benefit-cost analysis. FEMA extended its 5-percent set-aside funding by another 5 percent to fund tornado-related projects. The agency noted an increase in tornado activity that it associated with the 1997–98 El Nino weather pattern and suggested that the need for additional funding for warning systems could not be accommodated through existing programs. In essence, the agency increased the 5-percent set-aside policy to a 10-percent set-aside policy, although the additional 5 percent of Hazard Mitigation Grant Program funding was limited to states that had received a presidential disaster declaration for tornadoes. In addition to including a narrative that identified the project’s mitigation benefits and the expectation that future damage or loss of life or injury would be reduced or prevented, the states were required to develop a comprehensive plan for warning their citizens, including

¹⁰ When the Hazard Mitigation Grant Program was established, it provided federal matching grants on a cost-share basis of up to 50 percent of a project. Thus, FEMA refers to these mitigation projects as “50/50 planning” projects. With the 1993 amendments to the Stafford Act, the federal cost share was changed from up to 50 percent to up to 75 percent.

a public education component. The policy applied to all disasters with unobligated funds that were declared before fiscal year 1998, as well as all fiscal year 1998 and future declarations in which tornadoes or high winds played a role. The policy remains in effect until FEMA adopts proposed regulatory changes stating that warning systems will only be funded from the original 5-percent set-aside. FEMA officials expect that the regulatory changes will be made final in mid-March 1999.

Estimating the Number and Dollar Figure of Hazard Mitigation Grant Program Grants Exempted From Benefit-Cost Analysis

We are working with FEMA to quantify the number and dollar amount of all of the Hazard Mitigation Grant Program measures exempted from benefit-cost analysis. However, for a number of reasons, FEMA is unable to readily provide us with this information for all of the exempted projects. For example, it is hindered in providing this information because there is no data field in the Hazard Mitigation Grant Program database that would allow the agency to specifically identify the projects that fall under the exemption for acquiring property that has been substantially damaged. Additionally, agency officials have expressed reservations about the accuracy of the data. For these reasons, our preliminary numbers are limited to the 55 hazard mitigation project files we examined for four states (Arkansas, Florida, Louisiana, and Texas) in FEMA regions 4 and 6.

These 55 projects represented approximately \$20 million in hazard mitigation grant funding, with Florida accounting for 36 projects, or \$17.2 million of the amounts reviewed, while the other states accounted for the remaining 19 projects, or approximately \$2.8 million in funding. Of the 55, 14 (25 percent), or over \$8 million (42 percent) of the funding, were exempted from benefit-cost analysis. One-half of the exempted projects were property acquisitions, while the remaining exempted projects included funding for emergency satellite communications, all-weather radios, emergency alert systems, and a public awareness campaign. The 41 remaining projects subjected to benefit-cost analysis included wind retrofits (shutter projects), drainage improvements, seismic retrofits of buildings, and the installation of gas shut-off valves in structures.

Some Benefit-Cost Analyses Conducted on Acquisition Projects Do Not Use the Best Available Data

In the four states we reviewed, the officials conducting the benefit-cost analysis were generally knowledgeable about the process and had received training on how to use FEMA's computerized modules. However, we also found that the officials did not always use the best available data for estimating the benefits of projects involving the acquisition of property located in floodplains. These data help determine the extent of the expected benefits attributed to a project and significantly influence the accuracy and final outcome of the benefit-cost analysis.

For example, in determining flood hazard data—which establishes the probability and severity of a flood event—FEMA's guidance suggests using the flood insurance rate maps available through the National Flood Insurance Program.¹¹ These maps establish the number of times a flood is expected to occur in a given area (the frequency of future flooding) and the level of the flooding (its severity). The quality of this information can significantly influence the benefit-cost analysis' outcome because overestimating the frequency or severity of a flood can inflate the estimated benefits attributed to an acquisition project. We found little evidence that information from flood rate maps was used in the benefit-cost analyses we reviewed. Therefore, we are in the process of reviewing several of the analyses to determine how the use of information from the flood rate maps would have affected the analyses' outcomes.

We also found that the officials conducting the benefit-cost analysis may not always use the best available data on damage claims from past flooding. The quality of this information has a significant influence on the outcome of the benefit-cost analysis because overestimating the extent of the damage from a previous flood event can inflate the estimated benefits attributed to an acquisition project. FEMA officials told us that information on flood claims available from the National Flood Insurance Program was not always used, suggesting that they simply used information supplied by project applicants. We also found that the officials conducting the analysis do not always validate the damage claims information submitted by the applicants. As a result, the benefit-cost analysis may rely on testimonial evidence from the applicant—the individual most likely to benefit from the acquisition project. We are now working with FEMA to determine if the agency can easily provide damage

¹¹The flood hazard data needed is actually found in flood insurance reports which accompany the flood insurance rate maps.

claims information from the National Flood Insurance Program to the officials conducting the benefit-cost analysis.

We provided a draft of this statement to FEMA to verify its factual content and modified the statement where appropriate. Our review was initiated in December 1998, and it is continuing in accordance with generally accepted government audit standards.

BUDGET PRIORITIES

Senator BOND. All right. Well, thank you, Mr. Witt.

FEMA has requested \$83 million in increased expenditures, a 10-percent increase. An increase has also been requested for additional staff, the emergency food and shelter program, a new repetitive loss initiative, fire program enhancements, and the list goes on.

Given the fact that the budgetary caps will likely prevent us from funding all these increases, would you give me your highest priorities: one, two, three? What areas are the most needy in terms of increases?

Mr. WITT. Well, of course, the Y2K effort is so important and also the anti-terrorism program is very important.

Senator BOND. You picked that up I think from our discussion. [Laughter.]

Mr. WITT. They are priorities for us too, Mr. Chairman.

The Pre-disaster Mitigation Fund, and the flood map modernization fund are absolutely critical. We are requesting increases for the Fire Prevention and Training activity, and the Emergency Food and Shelter program which does so much good, and the National Flood Mitigation fund. And the Salaries and Expenses are a priority, and I think the budget reflects that.

Senator BOND. Well, I appreciate that listing, but would you give us for the record your one, two, three priorities, recognizing, of course, that by the time this new fiscal year begins, we will be in the middle of the Y2K problem and the advance planning stage will be over. I would like to have them listed in terms of the additions. What's one, what's two, what's three?

Mr. WITT. Salaries and Expenses are number one. There is no doubt about that. The Pre-disaster Mitigation Fund and the National Flood Mitigation Fund have to be considered as well. Of course, you said three, but the fire prevention and training is absolutely one of the top priorities too. So, those are the four that reflect my priorities.

DISASTER 5-YEAR HISTORICAL AVERAGE

Senator BOND. May I ask why FEMA is once again requesting \$2.5 billion off budget? Is it not true that the 5-year historical average, which used to be \$1.6 billion, now even excluding Northridge

it is \$2.6 billion. Is that not a pretty good estimate even though we do not know the specific disasters?

Mr. WITT. We have found that the average is running pretty close to that. Of course, it depends on the events of a particular year. We wished that we did not have them, but you are absolutely correct. This year could be a very active year—we hope not—in hurricanes and flooding.

Senator BOND. The weather man I listen to on television this morning said with La Nina, it is going to be a super hurricane season. It should not be a surprise if we have some disasters.

Mr. WITT. True. Dr. Gray's projections, I believe, include 19 named storms this year.

UNMET DISASTER NEEDS

Senator BOND. You know in the past several years, as I mentioned earlier, we have appropriated hundreds of millions of dollars to HUD for so-called unmet needs, and even though there is no authorized HUD program, we tried to address the need for standards with appropriation language, ensuring that HUD works with FEMA in allocating the funds.

Could you tell me how HUD has consulted with FEMA in allocating the fiscal year 1998 supplemental needs and whether this consultation has been effective and whether it allowed the prioritization of needs for the most effective allocation? How would you have done it differently if you had been in complete charge of that?

Mr. WITT. Those funds are very, very important in that unmet need area, and I think you have seen this many, many times, particularly when we have done the long-term recovery reports showing those unmet needs.

What we have tried to do is to work with the States and local communities to gather the accurate information in unmet needs in each disaster, then forward that information to HUD so they can use it to make their decisions on how to meet those unmet needs, based on the priorities that we felt needed to be addressed first.

Senator BOND. Did HUD actually follow your recommendations? Were the HUD expenditures expenditures recommended by FEMA? You and I know the answer to that, do we not? [Laughter.]

You can submit for the record any analysis showing where HUD actually funded needs that FEMA identified.

Mr. WITT. Thank you, Mr. Chairman.

Senator BOND. I am from Missouri, and you better show me because I have a high degree of skepticism on that one.

Let me turn now to the ranking member for some questions, and we will go back and forth as long as we can enjoy it.

MORTGAGE TRANSACTION FEE

Senator MIKULSKI. Thank you very much, Mr. Chairman.

Before I get into really the meat of Project Impact and Y2K and all of those things, I want to raise an issue that I think could get prickly as we move along, and that is on page 5 of your written testimony, you talk about a \$15 fee on all mortgage transactions to produce the funding for the maps.

Well, I woke up on Sunday morning to read the Baltimore Sun, and the headline in the real estate section said this: A new tax on homeowners in FEMA's budget. I tell you the cream in my coffee curdled when I read that—[Laughter—] because I knew every real estate agent was reading it, et cetera.

Now, Mr. Witt, I think we do have to find a way to fund this. The chairman and I have not had a chance to talk about this, but I would just like to put a bright light around it to talk about the \$15 mortgage transaction.

Did you want to say something?

Mr. WITT. Senator Mikulski, when we made a proposal to OMB on how we could fund the map modernization program—

Senator MIKULSKI. Well, I think you need to go back to OMB—

Mr. WITT. I agree, we should look at all options.

Senator MIKULSKI [continuing]. And say that you have to come up with other solutions.

Mr. WITT. I think the point of it is—and the chairman and I talked about this in our meeting—that we need to show the significance and the importance of this mapping program, and we have to address this problem. The chairman advised me and several others advised me that this proposal probably will not fly, and I understand that. But we have to address this problem, and this is a starting point to talk about how we can do that.

Senator MIKULSKI. Well, there are those who do view it as a tax, and I do not think you want this thing to go to the Finance Committee or the Ways and Means Committee.

Mr. WITT. We do not want a tax.

FLOOD MAPPING

Senator MIKULSKI. But I would like to just give a comment here. I do not want to spend all my time on the maps. We put money into NASA for both Mission to Planet Earth and something called LANDSAT. My question later on will be, but not now—I am going to get to some other things—is what is it that NASA can tell you and could they help you do the maps in a way that would lower cost, et cetera? They have pictures that go back years and years and years of this planet. We are funding Mission to Planet Earth. They love to show me those lovely little satellite pictures that are red, green and blue, and if it is blue, it is this, and if it is green, it is that, and so on. And I love looking at it, but I wonder if it could be transferable in that way.

Mr. WITT. Yes, ma'am. Dan Golden and I have talked several times. My staff has met with the NASA staff. We are working on signing an MOU with NASA now to use the satellite technology as much as possible to update maps.

Senator MIKULSKI. Well, I think that is good, and when we meet with Dr. Goldin, we can actually thank him for his cooperation. We do not say that is the only step to your mapping.

Mr. WITT. Oh, no, but it is one way.

Senator MIKULSKI. Yes, because essentially with LANDSAT, we have got so many pictures over so many years that have been catalogued in such a confusing way that we now have a data mortuary. I would like to see if we could not pull it out and maybe find their DNA and get it back into business. [Laughter.]

CONSEQUENCE MANAGEMENT

Now, let us go to Y2K. Mr. Director, could you tell us, number one, what is consequence management? Do you have responsibility for consequence management, and what are your plans in terms of consequence management? Because Tip O'Neill once said all politics is local, but all response and preparedness and prevention is also local. Could you share where you are?

Mr. WITT. Sure. Consequence management is the responsibility to plan, train and equip State and local governments to deal with public health and safety in response to incidents. What we are doing now for Y2K is another portion of consequence management. As you said earlier, the Y2K initiative and the anti-terrorism program do have a connection to our all-hazard planning.

The 10 regional meetings that we have scheduled working with the other Federal agencies and our counterparts in the regions—we have had four of these meetings with the State directors of emergency management, with State fire marshals, and several other local officials—have gone extremely well, and have provided us a world of information.

Mike Walker, our Deputy Director, has had the lead on the Y2K and has been to every single one of these meetings and will be at the other six meetings and the follow-up meetings that we are planning to have with each of the States and local governments. So, Mike, do you want to expand on it just a little bit?

Senator MIKULSKI. Mr. Walker, first of all, welcome. We have known you in other roles.

Mr. WALKER. Thank you.

STATE PREPAREDNESS FOR Y2K

Senator MIKULSKI. But my question to you, sir, is are we ready in the 50 States, and is FEMA helping the 50 States get ready or is it very uneven?

Mr. WALKER. Well, FEMA is working very closely with all 50 States on Y2K, as we do on all hazards. As we have these 10 regional meetings around the country, not only are all 50 State emergency managers coming, but a number of local emergency managers are coming also.

Quite frankly, I want to take this opportunity to also commend the work of the Senate special committee. They did an excellent job. They have indicated an assessment of the Y2K issue that we agree with—Y2K will not pose major disruptions, awareness is growing and progress is being made. We do have concerns which we share in the small business sector and in many small towns and small counties. The biggest difficulty that we have is drilling the message down to the smallest community where awareness is only now beginning. James Lee has made it very clear that that is going to be our highest priority to work with the States to foster awareness and the need to fix any problems before the end of the year.

Senator MIKULSKI. Every State has a Governor and essentially the Governor is the commander-in-chief of that State. Have you asked every State to have a Y2K designee?

Mr. WALKER. Yes, and they do. Every State has a Y2K coordinator who is separate from the emergency manager.

Senator MIKULSKI. Have you furnished to the States essentially a Y2K readiness checklist? Because again rural States have different needs, et cetera.

Mr. WALKER. Oh, absolutely, we have. We provided a guide to State and local emergency managers and we are in the process of putting together some other materials which will be available right down to the very smallest unit of government.

It is a complex problem. There are 200,000 water districts in this country and 87,000 units of local government, and it is hard to get the message out. Congress can be of great benefit too through your newsletters and in putting the word out to local folks.

Senator MIKULSKI. But is not the point of accountability a Governor who would then assemble the local jurisdictions and so on?

Mr. WALKER. That is correct.

Senator MIKULSKI. Do you anticipate a breakdown in services and the need to be concerned about any civil disturbances?

Mr. WALKER. No. Based on current assessments, the sky is not falling. We are telling people in our regional meetings there is no need to hoard. There is no need to take money out of banks. There is no need to head for the hills.

This is much more than a technology problem. It is a leadership issue. It is a matter of taking responsibility, and there is still time to do that in these communities.

Senator MIKULSKI. Well, I think when we say there is nothing to worry about, then I think that there is a sense of complacency. Later on next week I will be asking these same questions of my own Governor Glendening when he comes to present this.

Now, let me tell you why I am so hot on Y2K. Because it is an anticipated event and can be planned for in an organized, systematic way. This then says if we do not have it together for Y2K, we certainly do not have it together for counter-terrorism.

Senator BOND. Senator, may I just interject just two quick Y2K questions?

Senator MIKULSKI. Why do you not go right ahead?

Senator BOND. No. I will come back to that.

Senator MIKULSKI. I think we are on the same wavelength.

Senator BOND. Will FEMA have all of its own mission-critical systems corrected and tested by March 1 of this year?

Mr. WALKER. March 31.

Mr. WITT. March 31, yes.

DISASTER RELIEF FOR Y2K

Senator BOND. What will be the Federal policy with respect to disaster declarations stemming from any possible Y2K related emergencies? In what circumstances would disaster relief be granted if there is some kind of failure as a result of the Y2K problem?

Mr. WITT. That was the very same question I asked Mr. Suiter, the Associate Director for Response and Recovery. They drafted a one-page guidance on what it would take to trigger a Federal declaration which we shared with your staff, and we will be continuing to finalize that to make clear that we have it down to a very, very tight compliance in order to make a declaration like that.

Senator BOND. I think it is clear—and we have had staff discussions—if somebody says, oh, well, we have got a disaster because

our computers came up 00 and they thought it was 1900, that is not a disaster. That is not an unforeseen disaster.

Mr. WITT. No, it is not.

Senator BOND. I think the message ought to get out that if somebody says, oh, my gosh, my computers do not work, that is not grounds for bringing in the Federal resources. We do not plan to pay for failure to plan for a completely predictable and understandable contingency that everybody ought to know is going to arise.

Mr. WITT. I think that is important too, Mr. Chairman, because I think Mike Walker and Lacy Suiter have shared the information directly with the participants in the regional meetings, that if you have a problem with your computer system, we are not going to give disaster declarations to fix computer problems because we do not want communities waiting to get their computers fixed or systems fixed under a Federal declaration.

Senator BOND. Your warnings about flood insurance in the media have been very good. You might consider even making Y2K warnings.

Let me return to Senator Mikulski to go back and take on the next questions.

INFORMING THE PUBLIC ABOUT Y2K

Senator MIKULSKI. Just a couple of other points again about Y2K. I gather we could go all morning just on that. But I must really impress upon you, sir, and ask you to impress upon the interagency groups and also your locals that you are working with, people are starting to get scared, but there is also public information being given out.

In my last utility bill from the Baltimore Gas and Electric Company, they said they anticipate that they will be ready to deliver electrical services in Maryland, and that presumes everything else is working. They then did say if you are concerned, have at your home what you would have for an ice storm. As you recall, a couple years ago we had very severe ice storms and parts of our States had ice storms even in recent weeks. Our cousins in Virginia went almost a whole week in certain parts of it. So, they gave you guiding principles and a checklist of what to do. It was just like any utility communication. It was a bit boring, but it was very factual and you had that. But it was also reassuring because if you were hearing this ozone type stuff on the talk show, you knew what to do.

The second is I got a mailing from the Washington Cathedral, and it was not about a prayer breakfast or a women's religious weekend. It was about them convening a regional workshop on the nonprofit response to Y2K and if you were a citizen, what you needed to do to get ready for it. People are getting ready on their own, which I thought was great Washington Cathedral was going to do that, but that is the Cathedral.

So, we cannot be processing ourselves to death here. We have to get out the public information, make sure that we have our infrastructure lined up with our Governors, and really have this. Otherwise, this is going to get away. And it is really going to get away from you. So, we have a wonderfully responsible private sector, the utilities; the nonprofit sector, like the Washington Cathedral. And

then we have the talk shows that the aliens are going to land or in every dam in America the locks will fail and so on. So, we have doomsday, Armageddon, and I do not want the American people to be caught because we were processing and having regional meetings and the coordinators felt very good and felt everything was under control because the infrastructure might work, but there might be panic whether the infrastructure works or not. It is the pre-panic that we need to start to manage now. I am not saying the panic is here, but it will be here unless there is some type of organized effort about that.

THE NATIONAL FIRE ACADEMY

Then we can go to terrorism, if I could. Actually I am going to have the chairman ask his questions on terrorism and I will come back because anything we respond to goes to our first responders. Our first responders are the fire fighters, volunteer and professional, and I happen to believe the volunteers train very hard to be professional. And then we have the emergency technicians that are usually part of fire fighting units as well as then moving into ER rooms and so on.

This thing with the Fire Academy really bothered me. It bothered me tremendously about the report. I would like to compliment you on your leadership in terms of pulling that out.

Could you tell us what your intentions are to make the Fire Academy fit for duty? We welcome your new personnel.

Mr. Chairman, I just want to show you. They have to revisit their mission statements. The Fire Academy needs to be an active partner and proactive in disaster relief and terrorism. There is this whole other question which is that the Fire Academy is not involved with the professional organizations around the country. This is not good news. This is not good news.

So, do you want to tell us how you will address these management and other defects?

Mr. WITT. Senator Mikulski, the concerns that are reflected in the report are shared by Administrator Brown, the fire services, and myself. That is why I asked the national fire associations to appoint a person to convene a panel to look at what we are doing in fire services on a national level, look at our programs, look at our delivery of the programs, look at how we are managing these programs, look at what we needed to change to make sure that we have the best fire service possible, the best trained fire fighters in America, the newest technologies, the latest research; everything that is going to save lives and protect property. That is what we asked them to do. And they came up with a very good report.

Now it is our responsibility to take that report and those comments, and implement a plan over the next 2 years to put in place, as you said earlier, the very best academy that we can have for this Nation. And that is what we want to do. I think we can do that. That is what Rich is going to be working on, and I am very excited about this. The fire services are excited about it. As we go through this, we will be happy to report to you what we are doing and how we are doing it.

In August we will be meeting with all the national fire associations, and I have suggested we have the meeting at Emmitsburg

at the Fire Academy where we will have opportunity to interact with Administrator Brown and the fire staff up there. Hopefully, Rich will have an implementation plan to share with them and go through it at that time.

Senator MIKULSKI. In the executive summary, it says the Fire Academy's fire program must be first and foremost adequately funded. We cannot fund something that is hemorrhaging the way this is.

Second, beyond money, however, lies the crisis of faith and confidence which money will not fix, which goes to the leadership issues.

Now, a 2-year program, meaning a step-by-step program from a fiscal standpoint, is very good, but Mr. Witt, is there a sense of urgency not only within headquarters, but out at the Fire Academy about really moving on some of the leadership and communication issues that are not about money but it is about getting your act together and getting it pretty quick?

Mr. WITT. Absolutely.

URGENCY FOR ADDRESSING FIRE ACADEMY ISSUES

Senator MIKULSKI. In other words, I want a response to the report as quick as the fire fighters in Baltimore respond to a 911 call.

Mr. WITT. What we will try to do for you is to share with you a report that we are working on now that says what we can do right now without funds to make a difference.

Senator MIKULSKI. Is there a sense of urgency?

Mr. WITT. I think so. There is an urgency that we need to start now to be ready to go into the 21st century.

Senator MIKULSKI. Do you have a sense of urgency?

Mr. WITT. Yes, I do.

Senator MIKULSKI. Does the leadership at the Fire Academy have a sense of urgency?

Mr. WITT. Yes, they do.

Senator MIKULSKI. And this is not about spring hazing. Were they as mortified by this as they should be?

Mr. WITT. They were very concerned and they are very encouraged by this because it really focuses on what we need to do for the future. So, I think they are very excited about the possibility that we truly can be the best up there. So, they are very encouraged by this.

But there is a sense of urgency that we need to be better and we can do better and we are going to do better.

Senator MIKULSKI. Let me turn it back to you, Mr. Chairman.

ALLOCATION OF ANTI-TERRORISM FUNDS

Senator BOND. Thank you, Senator Mikulski.

On the general theme of anti-terrorism, you are requesting \$30.8 million for anti-terrorism, which is an increase of \$13 million. \$8 million would go to States. Much of the rest would go to FEMA personnel in regions and headquarters.

Can you give me an idea how you would allocate the funds and why the increase is needed?

Mr. WITT. Sure. Gary, do you want to—

Mr. JOHNSON. Mr. Chairman, are you interested in allocating the salary and expense dollars or all of the dollars in that program?

Senator BOND. What are you going to do with the money? What mission is going to be accomplished if we give you \$30.8 million? I do not need to know who is being hired to do what, but what is going to be the outcome? What do we get for it?

You can follow up in detail for the record, but I just want to know what is \$30.8 million going to get us?

Mr. WALKER. The primary thing, Mr. Chairman, is \$21 million of that goes right into the hands of the States and then the State fire people. So, \$21 million, as opposed to \$12 million last year, is going out there for planning and exercises on the State level.

Mr. WITT. And I think it is important to note that in last year's budget, FEMA had a small role and less responsibility in comparison to what we have now and how the program has been set up with the Department of Justice and Janet Reno. I think now the program is more targeted than it was last year. I think setting up the office in Justice gives a one-stop shop that people can call. They did not know who to call before. They did not know where to go. We had too many players in it without a true focus. By working very closely with John Hamre at DOD and Janet Reno, we do have a focus on it now. We do have a good plan now, and I think it is going to truly make a difference.

INTERAGENCY COORDINATION ON TERRORISM

Senator BOND. You anticipated my next question because the GAO report of April 23, 1998 said the United States is spending billions of dollars annually to combat terrorism without assurance that Federal funds are focused on the right programs or in the right amounts. Then in October, GAO said there had been inadequate coordination and focus for training, equipment, and response, and the GAO says, "Some local officials viewed the growing number of WMD consequence management training programs, including the domestic preparedness program, the Department of Justice, FEMA, EMI courses, National Fire Academy courses, the National Guard's National Interagency Counter-Drug Institute course as evidence of a fragmented and possibly wasteful Federal approach towards combatting terrorism."

I know you say there has been a coordination office set up in DOJ. What is actually happening? How are we getting a handle on these? Because we are going to be dealing with this at the full committee appropriations level, as Senator Stevens has said.

Mr. WITT. I met and talked about this with Janet Reno, John Hamre, and Mike Walker, when Mike was at DOD. I was concerned because I did not think we were getting down to the grass-roots, first-responder level and truly getting these people trained and truly getting them the types of equipment they would need to detect a chemical/biological agent if there was an event. I expressed my concerns. I was very vocal about this.

State and local emergency management and the fire services are going to be on that front line. They have got to be able to respond immediately. They will not have 12 or 15 hours to respond.

I was not bashful about this. I said "we do not need to reinvent the wheel." We have got the wheel. We need to put a tight ring

around that wheel. Janet Reno agreed with me, and that is what we have been trying to do and I think we have. She has worked closely with us to make this happen.

While I feel better about it, I am not as comfortable as I would like to be. I think by working the training process with the States and the fire services at the State and local level, I will gain a higher comfort level. We are targeting cities with populations of 100,000 or above.

COORDINATION WITH STATE AND LOCAL GOVERNMENTS ON TERRORISM

Senator BOND. Well, I tell you, pardon my skepticism, but creating another office is not necessarily reassuring to me that we have solved the problem.

Have you got people out of each other's hair? Have you got agencies that are trying to reinvent the wheel that have not been in the wheel business before? Because it is obvious to me that FEMA works with local communities. The National Guard is in every community already. You will have to show me a lot to convince me that between what FEMA does and the National Guard does, there is not a heck of a lot of room where we need to have more Federal employees, no matter how brilliant and how informed they are, trying to work with local communities. Have you gotten the other people out of the field where you and, say, the National Guard have primary expertise?

Mr. WITT. I think the coordination with State and local governments is much better than it was, would you agree, Mike?

Mr. WALKER. Director Witt has made it clear, Mr. Chairman, that if the Congress—and the Congress has not yet approved the NDPO, the National Domestic Preparedness Office, in the Department of Justice—if the Congress does approve the office, from FEMA's standpoint as part of the partnership, we will insist that the focus be on State and local government and first responders. That is going to be what we do in our daily work with the NDPO.

Senator BOND. Well, I think that is important. Frankly, there is legislation that we passed that sends the Department of Defense out to 120 cities. I suppose I voted for it. I do not recall it. [Laughter.]

But when you look at it, you think, does that make a lot of sense?

Mr. WALKER. Mr. Chairman, I managed that program when I was at DOD. So far, 30,000 first responders have been trained. There are 5 million first responders in this country. We have only begun to scratch the surface. That is why it is important that we look at how to deal with the rest of the Nation and keep that focus on the State and local level responders who are going to be there on the front line.

Senator BOND. Is the DOD the right agency to be training, or should FEMA be using its existing relationships, the other emergency responders, the National Guard? In the first couple of years as Governor, I spent more time with the National Guard than I did with my family because I was viewed as the master of disaster because we had everything from projected prison riots to floods to tornadoes, and when it comes to responding, the Guard is the one that

is going to be there, along with the emergency personnel and local law enforcement officials.

Mr. WALKER. You are exactly right. DOD did not ask for the mission. We tried to give it away as soon as we got it. The law required DOD to have it for 3 years. It is a domestic mission. It is not an international mission. This is the last year for DOD and it will transfer to the new NDPO in the next fiscal year.

Senator BOND. Thank you.

Senator Mikulski.

TRAINING FOR FIRST RESPONDERS

Senator MIKULSKI. In our hearing at the State, Justice, Commerce—and Senator Gregg has held four hearings on terrorism—he was very complimentary of the coordination and of the cooperation of Director Freeh of the FBI and our Attorney General. They have good coordination with our Secretary of State and other national technical means agencies for gathering information.

But I share the same concerns that Senator Bond has, that we now are building up a lot of money and we have a lot of coordinators of the coordinators. I am not talking about the interagency group where very senior and dedicated people are trying to work through this, but as we move down those coordinators of the coordinators, even between the White House and here, it is who is Mr. Turf and who is Mr. Big Guy. We cannot fool around like this.

The other thing is I think that there is a lack of clarity between what is DOD and the role of the Guard or, yes, yes, the military and. And then the second is our coordination with HHS and the Centers for Disease Control. I will not go through all of this because it does go to, I think, a full hearing with my colleagues on the other subcommittees that have probed into this. But Senator Frist, even on the authorizing Committee of Health, Education, and Labor is going to hold a hearing on bioterrorism. Everybody is holding a hearing.

Now, why are we holding hearings? Because I think deep down inside of the U.S. Senate we do not know what the plan is and we do not know if everybody has got their act together. So, we are all trying to take bites of this to make sure that on our watch we have fulfilled our responsibility. But I think if we have concern, then there is a reason to be concerned.

Now, I do not want to give countenance so somebody says, oh, they do not have their act together, be ready to go. I believe the infrastructure we have in place and brave people will. But I really do think we really do need a presentation of this and a real sense of clarity because I have yellow flashing lights about the others.

In Maryland, they are using Baltimore as a test site. DOD is in there with their 120 cities. But quite frankly, Washington, DC, is a very high risk area, and guess what counties will be first hit? Montgomery and Prince Georges with both the panic or whatever the nature of, say, a chemical or whatever it could be. Now, they have got training grants from the Department of Justice, but you see, somebody says, oh, well, it is Baltimore. It is a big city. Well, yes, it is. Well, it is my hometown. I want us to be like prime time.

As I said, I will be discussing this with Governor Glendening. The Maryland plan does have a medical strike force. In other

words, there are elements here that give me consolation, but I am really concerned.

This takes me to one other thing about being concerned. You are all training the first responders, and yet I have a report here from the Fire Academy that says it is out to lunch on training first responders. Who is training the first responders? Is it the Fire Academy?

Mr. WITT. The Fire Academy is doing a lot of anti-terrorism training, but also the State fire training academies are as well and the State offices of emergency services are too.

ROLE OF FIRE ACADEMY IN ANTI-TERRORISM TRAINING

Senator MIKULSKI. Who is training the State fire training academies?

Mr. WITT. They are coming to Emmitsburg and taking training.

Senator MIKULSKI. But, sir, in your own Blue Ribbon report it said that Emmitsburg did not have any sense of being proactive or even reactive on training terrorism.

Mr. WITT. Yes.

Senator MIKULSKI. I am going by the report.

Mr. WITT. I understand that. The academy has worked very closely with DOD and Justice in developing those training programs that they are using now as well.

Senator MIKULSKI. Why would the report say they do not know how to do it?

Mr. WITT. I do not know why that report said that, but they are. They have done a lot of work in developing those training programs. There needs to be more of the in-depth training at the academy, there is no doubt.

Senator MIKULSKI. I am just going to this, and this is why I have a worry about the whole thing. Recommendation number 21: The U.S. Fire Academy needs to be an active partner and have a proactive role in the national disaster and terrorism response. Then you tell me they are training them and then there is this recommendation. So, can you see why I do not get it?

Mr. WITT. Sure, I do.

Senator MIKULSKI. So, how can I get it?

Mr. WITT. Carrye, would you like to—

Ms. BROWN. I would like to respond.

Senator MIKULSKI. Would you identify yourself and use the microphone?

Senator BOND. Would you come up to the microphone and identify yourself for the record please?

Ms. BROWN. I am Fire Administrator Carrye Brown, and part of my responsibility, along with Dr. Onieal and the rest of my senior staff, is the National Fire Academy, as well as our other fire related, technology based programs.

But before this whole issue came up, we had a stakeholders meeting to look at the role of the Fire Academy in anti-terrorism. That was way back in 1996. So, before this became a hot issue on Capitol Hill, we had experts from Israel, from Ireland. We had our top level experts here in the United States. And they set out a plan for the National Fire Academy to develop curricula based on anti-terrorism issues. And we started with very little money, seed

money, because as you know, we have been level-funded over the last 4 years, to develop the curricula that DOJ has taken and sent out around the country. So, we were ahead of this.

So, in other words, I respectfully disagree with that conclusion that was reached in the Blue Ribbon Panel report. My outstanding staff at both sides of the house, both the Academy and our technology based side of the house, got ahead of the issue, and we were ready to develop the curricula for anti-terrorism before we got additional seed anti-terrorism money.

Senator MIKULSKI. Madam Administrator, as you know, this is not about hazing you or finger-pointing.

Ms. BROWN. I know.

Senator MIKULSKI. I am going by the reports. That is what we have.

Now, my question to you, presuming the curriculum has been developed, is the curriculum being implemented?

Ms. BROWN. It is being implemented. In fact, we have helped to train about 34,000 trainers. We have leveraged that by giving curriculum to DOJ, and they have utilized it as well and helped to print materials and send it out to others. What we did was train the trainers so that they, in turn, could go back to the States and train others.

We have used, too, something that Director Witt said, our existing training systems. We did not try to replicate anything that was already out there. We have the State training systems and they are excellent in all 50 States. So, that is how we did a great deal of it, but we also trained more than 34,000 on campus.

Senator MIKULSKI. Thank you.

Ms. BROWN. You are welcome.

Mr. WALKER. Senator Mikulski, if I could add, when I was at the Department of Defense, I unfortunately found myself in Oklahoma City after the Murrah Federal Building bombing, and when I talked to the local fire department there, I found out that just the year or so before the incident that they had been at Emmitsburg for training, and they credited that training for how well they responded. The fire department of Oklahoma City under enormous pressure, and in a difficult situation, did a magnificent job. I was not at FEMA then, but they said that the training they received at Emmitsburg helped them do that.

Senator MIKULSKI. Well, I appreciate that, but you can understand our questions based on the material which then goes to the full hearing. Based on the response of the Administrator, I think we need a response to the Blue Ribbon commission about, number one, where it is agreed upon and the highest priorities and then to be able to move.

Rather than go into all the questions on terrorism, I think we need to go to the full committee, Mr. Chairman. I have taken a lot of time here.

COST SAVINGS IN THE DISASTER PROGRAM

Senator BOND. Well, I think it is very important. I am getting ready to, I think, submit most of the remainder of my questions for the record.

But I want to discuss some of the things that we have mentioned before about getting a handle on the disaster relief program. I have congratulated you on the things you have done to improve the program like the disaster close-out teams. There is still much to do, such as defining the circumstances that allow State insurance commissioners to declare the insurance is or is not reasonable.

What actions do you plan for publishing the final rule requiring 80 percent coverage of replacement value? What about the State insurance commissioners? What additional actions do you see to reduce costs in the disaster relief program? And what are the cost savings that you have achieved as a result of actions you have taken to date?

Mr. WITT. Mr. Chairman, in every single State where we have done the mitigation it has been shown, even in repeated floods and other disasters, that prevention has saved money. For example, Hurricane Georges went through the Virgin Islands, however, there was very minimal damage because of the mitigation work that we had done following Hurricane Marilyn. Then when Georges hit Puerto Rico, it showed very clearly that Puerto Rico had not done as much mitigation or prevention.

The insurance component is important. We hope in April to be ready to come forward with a published rule after working with the States and the insurance commissioners and the Public Risk Managers Association. We have a meeting coming up with those State insurance commissioners.

[CLERK'S NOTE.—In subsequent conversations regarding the public buildings insurance rule, FEMA officials indicated that that publication of a draft rule is now scheduled for June due to a desire for additional meetings with stakeholders.]

I feel pretty strongly that we will be able to come forward with that rule. It is a difficult issue to deal with, but we are tackling this and I think it should be addressed.

Reengineering the public assistance program is one improvement that is now being implemented that is going to allow us to save administrative costs and save disaster costs because we are going to be able to respond and close out disasters much faster. The close-out teams that you referred to and that you all helped us put in place—and we appreciate that—are going to be able to consolidate from the three teams down to two teams by the end of this year because they have accomplished so much.

Senator BOND. You have made that much progress in closing out.

Mr. WITT. Yes, sir. That in itself has really made a huge difference.

I think each thing that we are doing, even the flood mapping modernization plan, will help save disaster costs. Even if we can start addressing the repetitive flood losses, that will not only save funds in the Flood Insurance Program, but it is going to save disaster dollars. Even though claims are paid from the flood insurance program, there is still a need for the temporary housing program as part of the disaster response. So, all of those things will help save us money in the disaster program.

Senator BOND. Did you say when the 80 percent replacement value would be published? Is that the one in April?

Mr. WITT. We are hoping to publish in April.

DISASTER CRITERIA

Senator BOND. The disaster criteria. FEMA proposed the rule describing the factors and we need these criteria to be established and on the record. The Stafford Act says that Federal assistance is to be provided following an event which overwhelms State and local capability to respond, but it has not been formally defined.

I am concerned the proposed rule does not go far enough. For example, the \$1 per capita threshold has been in use for the past several years. No adjustment for inflation. It does not reflect a State's economic health or ability to raise public revenues. Why not?

Mr. WITT. Well, I think it is a step in the right direction to work with the States in coming to a single disaster declaration criteria with an annual adjustment on the \$1 per capita based on CPI and also putting in a minimum of \$1 million. \$1 per capita for even the State of Arkansas, which is 2½ million people or almost 3 million, would require at least a \$3 million disaster in order to qualify. For California, over a \$30 million disaster would have to happen before we could even look at declaring a Federal disaster.

And by adjusting the per capita threshold each year, plus the cost share adjustments that we are making moves us in the right direction and with the support of the States. I think it is a good step.

Senator BOND. Do you think there will be fewer disaster declarations as a result of that? Will it cut down on the number?

Mr. WITT. Very possibly, yes, sir.

Senator BOND. How does FEMA determine the amount of insurance coverage that should have been in force as required by law and regulation at the time of disaster? I do not believe that you currently have such information, and how will you get it before issuing a final rule?

Mr. WITT. We are working on that now, and we will be happy to provide it to you, Mr. Chairman, as soon as we get it compiled.

STAFFORD ACT AMENDMENTS

Senator BOND. Very briefly, on the proposed Stafford Act legislation, I gather that has been reported out of OMB now. I am advised by staff I was incorrect.

Mr. WITT. Yes.

Senator BOND. Can you give us a preview just of the key items, how much money they would save, and why you dropped out some of the red hot and ready items in the July 1997 package, such as the requirements that private nonprofits first seek SBA loans?

Mr. WITT. Basically what we are trying to do with the insurance on public buildings covers the private nonprofits, as well as public structures, which I think will help make a difference.

The amendments that we are going forward with hopefully will be incorporated into those introduced by the House and Senate as well. I do not have the legislation with me.

Senator BOND. What kind of cost savings do you expect?

Mr. WITT. I do not have the total, Senator.

Senator BOND. Well, let me give you a little heads up. Last year, to be quite honest about it, we moved forward with some things that would spend some more money in hazard mitigation and do

some things that were very good. When I asked my colleagues who were supporting the legislation where the savings were, they said, well, we are spending more money. And I said, as you and I would say in Arkansas and Missouri, that dog will not hunt.

For me to remove my objection to any reforms in this area, I want to see savings, and I will be happy and join with you in supporting a bill that makes demonstrable savings. Just spending more money is not going to get it. So, we look forward to working together. I know we have got a lot of people who are interested in it, but my bottom line is how much savings are you going to show us.

Mr. WITT. It is ours as well, Mr. Chairman. I think with your support and the committee's support that we have come a long way. It is not saying that we do not have further to go.

Senator BOND. Yes.

Mr. WITT. But we are working very hard on it.

Senator BOND. I am just telling you what I am looking for.

Senator Mikulski, I turn to you for the wrap-up and the exit question or questions, as described by some of our friends in the talk show business.

PROFESSIONAL EMERGENCY MANAGERS

Senator MIKULSKI. Thank you, Mr. Chairman. Just a comment and then a question.

In 1988 when I became the chair of the subcommittee, the Cold War was drawing to a close. I wanted to bring down the fire wall between our response to the American people and a civil defense function because it had been so eaten up. Now it is so ironic that the two are melding because we are now threatened by weapons of mass destruction, perhaps nuclear, but more likely other types of disruption and security threat.

That takes me to not putting walls back, but I think one of the things that I strive with in working with you, sir, was I believe that emergency management is a profession. It is a profession like being in the military. It is like being a physician and so on.

One of the concerns that I had in looking at States was some had professional administrators like you in Arkansas and others were, quite frankly, patronage driven. There was always Louie who had helped in the campaign. Let us give him something. Now we are not going to go back to putting up a wall, but I never wanted to see local administrators patronage driven and really to honor the whole concept that this is a profession.

Could you tell us, as my concluding question, because it is part of the institutionalization of our reforms, what you want to do to professionalize this and, therefore, it can be acknowledged both in service and in benefits, et cetera?

Mr. WITT. Senator Mikulski and Mr. Chairman, since 1993 we have worked with State and local emergency responders to become more professional in what we do, and to be able to respond to do a better job. We have assessed their capabilities and have identified the weaknesses. We have tried to address those, but now is the time to move forward for the future. We have sat down with NEMA.

Senator MIKULSKI. Can you say what NEMA is?

Mr. WITT. NEMA is the National Emergency Management Association.

I can say that NEMA and the local emergency management associations are far better now than they were 6 years ago.

Senator MIKULSKI. Absolutely.

Mr. WITT. And they have worked very hard. I am very proud of them, but we need to go a step further. We need to professionalize emergency management similar to fire services.

The National Emergency Management Association's executive board, the State directors, and I sat down. We talked about what we needed to do in the future. We agreed that we need national standards for emergency management at the State and local level.

We are working now to implement national standards for State and local emergency managers based on the National Fire Protection Association standard 1600. So, I think it is going in the right direction. We are working with them now and have already drafted standards to implement. This will help to professionalize this area.

We have worked with universities. We have several universities that now are offering college credit courses in the emergency management profession leading to a college degree. So, I think we are almost there, but we have one more component to be addressed.

Senator MIKULSKI. Well, we look forward to the advice of the professional association because they gave us a lot of guidance, as did the national organizations of fire fighters during our reform process. So, we look forward to this. We want to have professionals. We do not want to have bureaucracies. We like the idea of training at a collegiate level. We also think these are tremendous opportunities through a community college level, particularly as people are re-training and recycling themselves.

Mr. WITT. I agree.

Senator MIKULSKI. Thank you very much. I look forward to working with you on a prevention budget.

Mr. WITT. Thank you.

ADDITIONAL COMMITTEE QUESTIONS

Senator BOND. Thank you very much, Senator Mikulski. Thank you, Director Witt. We do have a number of questions we have asked you about, and we will be submitting more for the record. We appreciate working with you and look forward to meeting the challenge ahead of us.

Mr. WITT. Thank you, Mr. Chairman.

[The following questions were not asked at the hearing, but were submitted to the Agency for response subsequent to the hearing:]

QUESTIONS SUBMITTED BY SENATOR BOND

PRIORITIES

Question. FEMA has requested \$83 million in increased expenditures over fiscal year 1999, a 10 percent increase. Increases have been requested for additional staff, the emergency food and shelter program, a new repetitive loss initiative, fire program enhancements, and the list goes on. Given that the budgetary caps likely will prevent us from funding all of these increases, please provide a specific ranking of priorities.

Answer. The increases requested in 2000 related to salaries and expenses reflect my first priority. It is absolutely necessary that FEMA have an adequate and well trained workforce, capable of delivering all of our programs in the most efficient and

effective manner possible. The establishment of the Pre-Disaster Mitigation Fund and the request targeting repetitive loss structures under the Flood Mitigation Fund are both investments in the future of this nation that will save money and help prevent our citizens from becoming disaster victims. Therefore, I would place them among our top budget priorities. Finally, the enhancement for Fire Prevention and Training will allow FEMA to address many of the recommendations made by the Blue Ribbon panel, which was convened to review our fire programs.

HUD "UNMET NEEDS" FUNDS

Question. FEMA asked each State with a declared disaster last year to submit a list of its unmet needs in an effort to work with HUD to allocate emergency CDBG funds. The list totals \$2.3 billion. How would you characterize the lists sent in to FEMA—are they “wish lists” for the everything the State wants that may be connected to a disaster, or have they been analyzed and prioritized, and have cost-benefit studies been conducted? If FEMA were provided with funding for “unmet needs” how will FEMA’s process differ from how HUD allocated funds.

Answer. It is our experience that most States do prioritize the unmet needs lists that they forward to FEMA. Often the lists are the product of the State’s own unmet needs task force or hazard mitigation team that reviews requests from residents and local communities and distributes available State and Federal assistance. Because the unmet needs lists include early proposals, it is unlikely that the State has conducted benefit-cost analyses on them. Generally, detailed analyses such as these are done for the top priority projects once the State is certain how much funding is available.

If FEMA had the responsibility for allocating unmet needs funding, our actions would build upon the processes used in supplying data to HUD. Our first priority would be to work closely with our customers at the State level to devise an equitable distribution. We would actively seek the input of State emergency management and community development agency officials regarding how to prioritize the needs reported. FEMA has well established relationships with its State partners and has a high degree of trust in their ability to identify key disaster needs.

DISASTER CRITERIA

Question. In January FEMA proposed a rule describing the factors it considers when evaluating a governor’s request for a major disaster declaration. Criteria are needed to depoliticize the declaration process, and to clarify what constitutes a federal disaster. Under the Stafford Act, federal assistance is to be provided following an event which overwhelms state and local capability to respond. But this has never been formally defined prior to this rulemaking.

I’m concerned the proposed rule does not go far enough. For example, the \$1 per capita threshold has been in use for the past several years, with no adjustment for inflation, and does not reflect a state’s economic health or ability to raise public revenues. Why?

There are problems in other areas, such as how FEMA will determine insurance coverage that “should have been in force as required by law and regulation at the time of the disaster.” FEMA currently does not have such information. How will FEMA determine insurance coverage that should have been in place? Will FEMA consider these and other concerns before issuing a final rule?

Answer. The National Emergency Management Association and the National Governor’s Association have strongly objected to implementation of any criteria in regulation that would limit the flexibility of the President or the governors in meeting disaster needs. The evaluation factors that FEMA proposes would ensure that requests for disaster assistance are evaluated fairly and consistently while preserving Presidential discretion, and allow consideration of the unique circumstances of each request.

In preparing the proposed rule, FEMA held extensive discussions with its State partners and local government organizations to determine the best means of identifying State capability, and ensuring that proposed declaration criteria encourage insurance and hazard mitigation. We found that there was no agreement on a simple and equitable method to measure State capability. In the interest of clarity, simplicity and practicality, we chose to continue the use of a per capita indicator as a means of gauging the relative means of a State’s ability to handle a disaster—but would adjust this indicator annually based on the Consumer Price Index. Even this simple shift in approach met with resistance—a number of large population States objected to the use of the \$1 per capita indicator, while some small population states objected to the minimum \$1 million threshold proposed under the Public Assistance Program.

With respect to insurance, FEMA proposes to consider the amount of insurance that should have been in force at the time of the disaster. Under the Stafford Act we already have an insurance provision that requires the applicant to obtain and maintain insurance for public buildings unless the Insurance Commissioner determines that the insurance is not reasonably available. FEMA requires flood insurance on all buildings in identified flood hazard areas as a condition of receiving disaster assistance. Under Section 406 of the Stafford Act, FEMA actually reduces the disaster assistance by the amount of flood insurance that could have been purchased, if the damaged facility is located in a special flood hazard area that has been identified for more than one year. FEMA tracks insurance purchase requirements and could determine, for any given disaster, which applicants were required to purchase insurance. Under a separate initiative FEMA is now in the process of preparing a proposed rule that would strengthen and clarify these insurance purchase requirements.

Question. FEMA recently submitted to the Congress legislation amending the Stafford Act.

What are the key items in that legislative proposal that deal specifically with improving the disaster relief program?

Answer. Pre-Disaster Mitigation.—Our legislative proposal creates a new Section 203 in the Stafford Act that authorizes the Director to establish a program for States, local governments, and other entities for carrying out pre-disaster mitigation activities that exhibit long-term, cost-effective benefits and substantially reduce the risk of future damage from major disasters. This provision would give an explicit statutory authorization and mandate for FEMA's pre-disaster mitigation program.

Hazard Mitigation Contributions.—We ask that the Congress amend section 404(a) of the Stafford Act by changing maximum post-disaster hazard mitigation contributions from 15 percent to 20 percent of aggregate amount of grants, applicable to all major disasters declared after the date of enactment of the new legislation. This provision would provide increased funding and emphasis on programs to reduce future damages from natural disasters when the window of opportunity, usually following a disaster event, is open.

Insurance.—Our proposal would authorize the President to require by regulation that States, communities or other applicants protect property through adequate mitigation measures if the State's insurance commissioner certifies that insurance is not reasonably available. Under current law an applicant need not take any further action to insure or mitigate the property against future damage if the State insurance commissioner certifies that insurance is not reasonably available. When insurance is unavailable, risks are frequently quite high. This provision would authorize the President to require further action to reduce future potential damage to the affected property.

Management Costs.—The legislation would define management costs and direct the President to establish management cost reimbursement rates, subject to periodic review for grantees and subgrantees receiving assistance under the Stafford Act. The purpose of this provision is to simplify payment of management costs to States and local governments, and to reduce the potential for duplication of payments for administrative and other indirect costs under the current system.

Repair, Restoration, or Replacement of Public Facilities.—We also proposed to amend and reorganize Section 406, which provides authority to the President to make contributions to a State, local government, or person for the repair, restoration, or replacement of public facilities or private nonprofit facilities. The legislation would amend Section 206 to authorize reduction in the current minimum Federal share of disaster assistance for facilities that had previously received significant disaster assistance on multiple occasions. This provision would have particular applicability to facilities, such as roads, for which insurance is not generally available.

The amendment would principally support FEMA's reengineering of the Public Assistance Program by allowing FEMA to provide assistance based on estimates of repair costs. The President could determine actual cost to be eligible for assistance notwithstanding the prior estimate where the actual cost is above 120 percent or below 80 percent of the estimated cost.

Consolidation of Housing and Individual and Family Grant (IFG) Programs.—We further propose to combine the Housing and Individual and Family Grant (IFG) Programs. As amended, this section would establish the type of assistance available for housing, repairs, and construction, and would cap total assistance per individual or household under the combined program at \$25,000 per major disaster. In general, applicants would apply insurance proceeds or apply for an SBA disaster loan before applying for assistance under this provision. It would authorize the President to assist some individuals by repairing their homes or allowing them to rent alternate housing accommodations without applying for an SBA loan, and by providing finan-

cial assistance for medical, dental, funeral, personal property, and transportation expenses.

Consolidating the two programs would result in improved services for victims of disasters. By working with only one program instead of two, eligible victims would receive faster processing and face fewer administrative burdens during their time of crisis.

Question. How much money would be saved annually in the disaster relief fund if this legislation were enacted?

Answer. CBO estimated the Stafford Act amendments in H.R. 707 would result in a \$2 billion increase in outlays between 1999 and 2004. Of this estimate, CBO projects that “most of the estimated increase in outlays—\$1.3 billion of the five-year total—would result from provisions that would accelerate spending from FEMA’s disaster relief fund, but would not change total spending over the long term.”

Additionally, it is important to note that CBO’s estimates do not take into account the savings to be achieved through pre-disaster and post disaster mitigation efforts. It has been estimated that for every \$1 spent on mitigation, \$2 are saved.

We have not yet completed our analysis of annual savings in the Disaster Relief Fund from this legislation. We are working to refine the projected savings. When completed, we will forward this information to the Subcommittee.

Question. Why does the legislation not include all of the proposals submitted in the July, 1997 package of amendments, such as the requirement that private non-profits first seek SBA loans? Does FEMA continue to support the July 1997 proposal, or has the agency reversed its position on any of these items?

Answer. We decided early in the drafting stage to propose a streamlined version containing those features that we considered essential to mitigate damages and reduce the costs of disaster assistance. We eliminated certain provisions such as the requirement that private nonprofits first seek SBA loans because these provisions had failed to find significant sponsorship or other support in the last Congress. We were concerned that the opposition generated by these provisions might unnecessarily delay, if not prevent, passage of these amendments. We continue to support our July, 1997 proposal and have not reversed our position on any of the items in that proposal. We have merely modified our proposal for the pragmatic reasons stated above.

Y2K ISSUES

Question. According to a November FEMA survey of state emergency management agencies, states are generally not aware of the status of emergency preparedness and progress towards compliance at the local level. According to the FEMA survey, “the issue cited most often as a problem was the limited to total lack of specific Y2K funding and availability of technical resources and staffing necessary to assess, test, and validate systems and fixes.” The survey also found that most states have no plans to assist or provide funding for local authorities to resolve Y2K issues.

What are the resource requirements for ensuring the emergency services sector is prepared?

Answer. FEMA does not have a role in repairing the billions of bytes of publicly and privately held computer code infected by the Y2K computer problem. However, FEMA can respond to the physical consequences of Y2K disruptions if they constitute a threat to lives, property, public health and safety pursuant to a Presidential “Emergency Declaration.” More importantly, with respect to the Y2K phenomenon, FEMA has embarked on an extensive “outreach” initiative that has direct and indirect benefits to State and local emergency management and emergency service agencies. The FEMA Y2K effort includes the development of contingency and consequence management planning guidance, training for State and local emergency managers, exercise support, consumer preparedness materials, senior leadership seminars, regional workshops, Emergency Education Network broadcasts, and a clearinghouse to exchange information and best practices.

Question. Will any funds be made available from the remaining emergency funds, and if so, when?

Answer. FEMA is finalizing budget requests for the remainder of fiscal year (FY) 1999 and 2000 to complete ongoing Y2K contingency planning activities and to have in place the operational capability at the Federal and State levels to monitor and, if necessary, respond to emergencies during the year 2000 rollover period. The budget requests will be submitted to the Office of Management and Budget before the end of May.

Question. Is there adequate time remaining to identify and resolve Y2K problems at the local level?

Answer. Given the wide disparity of readiness in emergency services systems at the county and municipal level, FEMA is increasing its outreach activities to these local organizations. Through our regional offices, FEMA is working with State and local emergency management and constituent organizations, as well as others, to broaden and accelerate Y2K emergency preparedness at the local level. Even though every system will not necessarily be fixed before January 1, 2000, it is not too late to begin fixes and develop contingency and consequence management planning.

ANTI-TERRORISM

Question. FEMA is requesting \$30.8 million for anti-terrorism activities, an increase of \$13 million over the current year. GAO has raised concerns in reports and testimony in the last year about the federal government's counterterrorism efforts. GAO cited the need to develop risk assessments to target resources effectively and set priorities. (See GAO/T-NSIAD-98-164). How has this concern been addressed? Please discuss how other concerns and recommendations cited in this report have been addressed, as they relate to FEMA's role in counterterrorism. Can you give us your assessment of the level of readiness at the state and local level for a possible terrorist attack? The Missouri National Guard has one of the 10 full Rapid Assessment and Initial Detection (RAID) teams. How does the National Guard tie into the planning, training, and exercise activities for possible terrorism attacks?

Answer. Regarding risk assessments, Section 1404 of Public Law 105-261 provides that

"The Attorney General, in consultation with the Director of the Federal Bureau of Investigation and representatives of appropriate Federal, State, and local agencies, shall develop and test methodologies for assessing the threat and risk of terrorist employment of weapons of mass destruction against cities and other local areas. The results of the tests may be used to determine the training and equipment requirements under the program developed under section 1402 [the Nunn-Lugar-Domenici Domestic Preparedness Program]. The methodologies required by this subsection shall be developed using cities or local areas selected by the Attorney General, acting in consultation with the Director of the Federal Bureau of Investigation and appropriate representatives of Federal, State, and local agencies."

The other concerns cited in GAO's testimony are the need to improve coordination, develop overall priorities and strategy, and measure results. FEMA is supporting the Attorney General's National Domestic Preparedness Office (NDPO). In accordance with Presidential Decision Directive 62, FEMA also participates in the National Security Council's Weapons of Mass Destruction Preparedness, Consequence Management, and Protection Group (WMDP) and certain subgroups. Through the NDPO, FEMA expects to work with other departments and agencies to develop an interagency strategy that builds on the Attorney General's Five-Year Counterterrorism and Technology Crime Plan and includes performance measures. At the same time, FEMA will continue working to refine and enhance the Capability Assessment for Readiness (CAR).

Readiness at the State and local levels varies from one jurisdiction to another, and it varies in terms of particular components of readiness: plans, training, equipment, exercises and evaluation. In the pilot State CAR report, States indicated that plans and equipment for weapons of mass destruction terrorism were areas in need of improvement. FEMA's request calls for additional funding for State and local planning; the Department of Justice is providing additional funding for State and local equipment.

As a State asset, the National Guard ties into terrorism preparedness activities as a State's Governor sees fit. Certainly the National Guard is a resource not to be overlooked. It provides valuable support in all kinds of disasters—for example, in the areas of transportation and security. On a national level, the National Guard Bureau is completing a study mandated by Congress last year to determine how it can support terrorism preparedness within the existing framework of Federal, State, and local department and agency authorities and responsibilities. First responders have stressed that expansion of National Guard activities in terrorism preparedness should complement—rather than duplicate—existing systems for emergency preparedness and response, and that attention to National Guard resource requests not detract from resource needs of local responders. FEMA recognizes this as a legitimate concern, and the draft National Guard study indicates awareness of this concern. FEMA training courses are available to the National Guard; more than one-third of the curriculum for RAID teams consists of National Fire Academy courses.

FLOOD MAP MODERNIZATION INITIATIVE

Question. In his fiscal year 2000 budget, President Clinton requested authority to assess a \$15 transaction fee on all new mortgages and refinancings. Revenue from this transaction fee, totaling nearly \$312 million over 5 years, will be used to update and improve the floodplain mapping system developed by FEMA. Among other things, these floodplain maps help FEMA determine which properties are eligible to participate in the National Flood Insurance Program. These floodplain maps have been found to be inaccurate around the edges. Why has FEMA allowed these maps to deteriorate to such a point where in some cases the maps indicate that properties are within a floodplain when in fact they are outside of the floodplain, and vice versa? FEMA has identified a \$900 million requirement to update and modernize its flood maps. Why do we have such a large backlog of outdated maps in this program? Why are new funds needed to improve these maps, instead of a reallocation of FEMA's current funding to update the system?

This proposed \$15 transaction fee will apply to all new mortgage originations and refinancings, regardless of whether the property is in a floodplain or not. What is FEMA's rationale to impose a tax on home ownership on properties that are not in the floodplain? How will such homeowners benefit from improved floodplain maps?

Can you explain the rationale for this fee and describe how you have consulted with the mortgage banking industry? If the fee is not enacted, what other ideas do you have to address this very large requirement? What are the ramifications of not addressing this need?

FEMA's proposal would generate about \$58 million next year for flood mapping activities. Under your proposal, how many years would it take to completely address the need to update and modernize the maps?

Why is there such a large backlog, and why are new funds needed?

Answer. The deterioration in the map inventory results from resource levels that have been inadequate to keep the map inventory up-to-date. The maps require updating as a result of man-made or natural changes and/or because newer data and/or improved study methods have become available. Also, many maps show flood-prone areas that were analyzed using only approximate methods of analysis which are not adequate for sound floodplain management. At present, FEMA is authorized to spend for mapping only the money generated by the Federal Policy Fee and through the sale of map products and services. FEMA could reconsider some of its current activities, and reduce services provided to rechannel additional funding to map modernization efforts. However, even with authority to do so, reallocating some of FEMA's current funding for map modernization would result in significant cuts in other service areas.

Question. What is FEMA's rationale for assessing a fee on properties that are not in the floodplain? How will homeowners of such property benefit from improved floodplain maps?

Answer. There is already a mortgage transaction fee that applies to all properties, whether or not they are located in the floodplain. Each mortgage transaction requires a flood map determination by the lender. Currently, a fee of about \$25 is charged to the borrower for this determination. The fee goes to the lender and/or the contractor employed by the lender to provide the determination based on FEMA's maps; despite this, the NFIP gets no portion of this revenue. It is expected that the cost of the flood map determination reviews will decrease as a result of map modernization because digital flood maps will decrease the business costs of performing the reviews. Consequently, the overall increase in the cost of a mortgage from the proposed flood map mortgage transaction fee should be less than \$15.

A mortgage transaction fee is equitable because it is tied to real property. Each of the approximately 11 million mortgages transacted each year and every building permit issued by a community requires the use of the maps. The maps are used during the mortgage transaction process by lenders, flood map determination firms, property owners, insurance companies and agents, and real estate professionals. All homeowners will benefit from improved floodplain maps because new homes will be elevated above the flood elevation or built to avoid the hazards altogether. More accurate flood maps will also mean that there will be fewer instances where Letters of Map Amendment, which require property surveys at the expense of the property owner, are required to remove properties that are inadvertently shown in flood hazard areas.

Question. Has FEMA consulted with the mortgage banking industry?

Answer. The mortgage banking industry, through its representation on the Council, supports map modernization. We have had some interaction with the industry regarding the fee and will continue to work with the banking industry.

Question. If the fee is not enacted, what other ideas does FEMA have to address this requirement?

Answer. FEMA has considered the following funding options for map modernization:

Increase Federal Policy Fee.—One option is to increase the \$30 Federal Policy Fee. High fees required to recover the whole cost would be a disincentive to new policyholders and would leave the burden of flood mapping primarily on policyholders. However, the use of fees to cover some of the long-term maintenance costs may be appropriate.

Increase Fees on Sales of Map Products and Data.—Prices for products and data sets could be increased to cover some of the costs of the mapping program. Currently, the prices cover only the direct cost of map printing and distribution. Some increase in price appears to have justification and might be acceptable to customers. However, even a large price increase would only result in minimal additional revenue, and would be unpredictable as a principal source of funding for this initiative. Also, significantly increasing prices for map products, such as digital files, would likely result in few customers purchasing them from FEMA at the higher price and then duplicating and selling the information to multiple other users at a lower price to recoup their costs.

Increase Flood Insurance Rates.—Another option would increase the cost of flood insurance to cover the incremental cost of map modernization. However, this option leaves the burden of paying for flood maps on only a small portion of the beneficiaries (approximately 4 million policyholders), and any increase will discourage the purchase of new policies.

Annual Discretionary Appropriations.—Annual appropriations could be requested each year to cover the map modernization costs from 2000 through 2006. Long-term maintenance costs in 2007 and beyond would be covered by fee increases.

Long-Term Borrowing from NFIF.—The up-front costs of the program could be financed by borrowing from the NFIF. The debt would be repaid with interest through reduced losses and fees paid by program participants. However, fees of some type would be needed to pay back the debt plus interest.

Non-Federal Cost Sharing.—State and local governments could provide some portion of the costs based upon the value of floodplain mapping to other State and local government activities. It would be difficult to obtain significant funding from the relatively few States and communities with adequate resources. Further, it would be a significant challenge to coordinate the funding levels appropriate for each entity. In addition, the States would view this as an unfunded mandate. This option would provide only a portion of the required funds.

Question. What are the ramifications of not addressing this need?

Answer. Many of the proposed new mapping products and processes will gradually be implemented even if full funding for map modernization is not made available. However, the effect of these new products and processes will take longer to be realized, meaning it will take much longer than the planned 7-year period to upgrade the 100,000-map panel inventory for nearly 19,000 communities.

The failure to conduct the needed flood data updates and convert the mapping inventory to a digital format would severely limit the potential of a modernized mapping program to dramatically reduce the loss of property. We project that the map modernization will result in approximately \$26 billion less property damage to new residential and non-residential structures over a 50-year period than will result under the current rate of remapping. If implementation of the plan is delayed one year, we estimate that the long-term benefits to be achieved will be reduced by approximately \$1.5 billion; a significant portion of these lost benefits will likely result in increased Disaster Relief funding. Each year of delay in implementing the plan will add approximately \$19 million to the total cost for the plan.

Question. Under the proposal, how many years would it take to address completely the need to update and modernize the maps?

Answer. As planned, map modernization will take 7 years. However, the proposed mortgage transaction fee represents only approximately one-half of what is needed for map modernization. Thus, with the proposed fee but no other increased funding, map modernization will take 14 to 16 years.

REPETITIVE LOSS PROPOSAL

Question. FEMA proposes \$12 million to buyout, relocate, or elevate properties that have had multiple claims to the Flood Insurance Fund, in thousands of cases exceeding the home's value. While this may be a prudent policy, it should be accompanied by administrative reforms to this program which seek more accountability on the part of policyholders.

Can you describe what plans you have to make administrative changes to the program, and the specific time frame, and whether you believe that the repetitive loss program should go forward only with such administrative changes?

Answer. FEMA, along with Members of Congress, is concerned about the cost to the taxpayers for natural disasters. We are especially concerned about the individuals who suffer repetitive losses in these disasters. To address these concerns, FEMA is interested in implementing improvements to the National Flood Insurance Program (NFIP) to protect residents of communities, not penalize them.

FEMA is in the process now of looking at the NFIP's statutory and regulatory authority to facilitate a repetitive loss initiative using a common-sense approach, which will help homeowners and business owners reduce their flood risks, and reduce the costs to taxpayers, while improving the stability of the NFIP by eliminating reoccurring losses. FEMA looks forward to working closely with the Congress in considering the proposals for this initiative.

FEMA will be targeting those properties that have suffered 4 or more losses and those that have 2 or more losses where cumulative payments exceed the property value. FEMA will provide a list of the target properties to each State. We will work with State and local governments to develop grant applications that address the flood problems facing those high-risk structures. Grants will be provided through States to communities for elevation, acquisition, or relocation projects.

FEMA intends to administer the program in partnership with the State through the Flood Mitigation Assistance (FMA) program, using a 75/25 cost-share. In this way, FEMA will build upon the experience gained in working with communities in previous mitigation projects. Hazard Mitigation Grant Program (HMGP) funds for flood disasters may also be used to mitigate repetitive loss properties. The \$12 million appropriation will be exclusively targeted at high repetitive loss properties. Most of the high repetitive loss properties are older structures, built prior to the implementation of the NFIP, and their insurance rates are lower than actuarial rates would be. FEMA is working to enable individuals to protect themselves by providing alternatives through voluntary buy-outs and elevation or floodproofing of their homes.

If an insured property owner refuses FEMA's offer to take action to make the structure less flood prone, FEMA believes it is reasonable public policy to then only provide insurance at a full-risk premium. The Agency is preparing to be able to carry out this policy in fiscal year 2000.

FEMA believes that this administrative change should be part of the overall repetitive loss strategy. However, since the vast majority of property owners targeted in these first mitigation efforts are expected to want to take mitigation action, the repetitive loss program should go forward with or without such an initial change.

Question. How many projects would FEMA be able to target with these funds? How much money is needed to address all of the high-risk, repetitive loss properties?

Answer. FEMA has estimated that the average cost to mitigate a structure (combining and averaging costs for acquisition and elevation) is \$57,500. At a cost share of 75/25, the Federal share would be \$43,125 per structure. This would allow us to mitigate approximately 270 of the highest risk repetitive loss structures.

FEMA estimates that mitigating these structures would result in an annual reduction of insurance payments of \$9,600 per structure, for an overall annual savings of \$2.6 million per year for the \$12 million initial investment. This one time appropriation would pay for itself within about seven years, by significantly reducing insurance claims on high repetitive loss properties.

An estimated \$360 million would be required to mitigate losses to the 8,300 buildings that FEMA has targeted in addition to current programs.

Question. What requirements will there be for participants in the program?

Answer. FEMA believes that those who choose to locate in hazardous areas should bear the risk involved with that decision. Most repetitive loss property owners are paying flood insurance premiums at less than full-risk rates as is allowed for Pre-FIRM properties. Thus, our strategy would be to renew the flood insurance only at full-risk premiums if a property owner declines an offer of mitigation assistance. In addition, the statutory authorities that limit disaster assistance where flood insurance has not been maintained should be fully utilized.

Question. Will funds be used solely for repetitive loss properties which are insured under the NFIP, or will the additional 41,000 non-insured properties which are repeatedly flooded also be targeted?

Answer. The \$12 million appropriation will be primarily targeted at insured high repetitive loss properties. The properties that at one time were insured repetitive loss properties, but that are no longer insured, have dropped insurance for a variety of reasons, not the least of which may be that mitigation actions have already re-

solved the problems. FEMA believes that the requested funds should be primarily targeted at currently insured problem properties as a priority.

Those properties that are still at risk, but not insured, remain eligible for assistance through other mitigation programs including the Stafford Act Hazard Mitigation Grant Program (HMGP).

Question. FEMA estimates that \$200 million is lost, on average each year, in the NFIP owing to repetitive loss properties. What is the average annual cost estimate in the disaster relief fund associated with repetitive loss properties (both insured and uninsured)?

Answer. At this time, we do not know what the disaster relief costs are associated with repetitive loss properties. Insurance claims payments (and not disaster assistance or SBA loans) cover the costs related to insured repetitive loss properties. There are costs to the Disaster Relief Fund associated with response services and recovery assistance, however, they are difficult to isolate.

Some of the disaster-related considerations are as follows:

- Rental assistance may be required to temporarily house occupants of some buildings while they are being repaired. The average rental assistance provided by FEMA is under \$3,000.
- There may be some costs associated with unmet needs, paid for by FEMA and SBA grants, particularly for those who did not purchase insurance coverage for the value of their home contents.
- Costs for Public Assistance to repair the infrastructure that services buildings in repetitively flooded areas are incurred.
- Emergency response services are required for frequently impacted properties.
- Also, in the aftermath of an event, specialized recovery services produce added expenses (including possible additional costs associated with increased demand on building departments for permitting; cleanup of environmental contaminants and household wastes; etc.).

It should be noted, however, that many of the repetitive losses do not occur during declared disasters. For these losses, no disaster assistance would be provided, however they continue to produce added costs for local communities and property owners.

Question. Is FEMA targeting repetitive loss properties within existing mitigation programs and initiatives? Please explain.

Answer. Existing mitigation programs and initiatives are inter-related with the Agency's repetitive loss strategy. For example:

- In September 1998, FEMA issued a policy memorandum challenging States to address repetitive loss buildings by focusing HMGP funding to activities that serve to mitigate damages to these structures.
- In fiscal year 1999, the Flood Mitigation Assistance program guidance requires States to evaluate projects in order of priority depending on how well they address repetitive loss. The first priority is reducing the number of NFIP-insured structures with 4 or more losses; the second is to reduce the number of insured structures with 2 or more losses where cumulative payments have exceeded the property value; the third priority is to reduce the number of insured structures that have sustained substantial damage; and the fourth is to pursue other FMA eligible activities.
- Project Impact communities are also focusing their attention on the issue of repetitive loss, and many have implemented programs to reduce their flood risk.

PROJECT IMPACT

Question. FEMA claims that the federal investment in the initial 7 pilot Project Impact communities has leveraged \$24 million in non-federal resources. Please provide a specific, detailed analysis of how you arrived at this figure.

Answer. FEMA solicited information from each of the pilot communities in order to determine what non-FEMA funds were leveraged against the initial FEMA investment. This information included total contributions received by each pilot community, to include "in-kind" contributions, and what benefits were received from the leveraged contributions. The communities were also asked to submit information on how the leveraged funds were utilized.

Examples of some of the pilot community contribution highlights received are provided, as follows:

The City of Oakland, CA, has received in-kind contributions from over 50 corporations, utilities, private non-profit partners and local and State government partners.

The City of Pascagoula, MS, has committed more than \$200,000 in fiscal year 1999 for drainage improvements, to include a \$96,000 citywide project to clean and reshape drainage channels to improve flows.

Lowes, State Farm, and Wal-Mart donated over 100 smoke detectors that were installed in the homes of elderly and low income families by ROTC cadets and Boy Scouts during "Spring Break" in 1998.

Allegany County, MD, is matching funds with the Natural Resources Conservation Service to restore stream channels.

The State of Maryland is funding implementation of new Allegany County building codes.

The New Hanover County, NC, School Board passed a bond issue of \$2,753,000 to accomplish retrofitting of individual school buildings pursuant to a mitigation engineering study.

The City of Seattle leveraged numerous non-Federal partners including: Seafirst and Washington Mutual Banks which reduced charges and profits and marketed loan packages for mitigation; Puget Sound Energy which provided technical assistance products to contractors and homeowners; and, the University of Washington which provided technical assistance products to contractors and homeowners.

The State of North Carolina selected New Hanover/Wilmington as a "pilot community" in the State's Local Hazard Mitigation Planning Initiative and provided \$73,000 to assist the development of a multi-hazard mitigation plan.

Solutia, Inc. is donating "Keep Safe" windows valued at an estimated \$25,000 for a school in New Hanover County, NC. It is also donating storm resistant windows for the Deerfield Beach, FL, Chamber of Commerce, valued at \$25,000.

Fannie Mae and FEMA have established a partnership to offer special loans for residential homeowners that will be dedicated solely to protecting America's homes from hurricanes, floods, earthquakes and other natural disasters. The loan program will fund construction projects such as replacing roofing with fire-resistant materials, waterproofing the exterior walls of a home, and reinforcing the foundation of a home.

The State of Florida designated Deerfield Beach/Broward County as a Florida Showcase Community. This is an initiative for the development of disaster resistant, sustainable communities, similar to and supportive of Project Impact. At least \$240,000 has been pledged by the State.

A more detailed report is being prepared pursuant to a request of our Inspector General.

Question. What are the lessons learned to date in this program? Have program deficiencies been identified and corrected?

Answer. The single biggest lesson we learned is that for a community to become disaster resistant it must include as broad a community base as possible, and find ways to keep it a dynamic issue for its citizens. However, to help facilitate a community-based initiative, there has been a cultural shift for the FEMA organization. Our staff have had to rethink the Federal role relative to an initiative that is not a traditional grant program. We need to continue to expand our skill base to cover new challenges such as community facilitation, encouraging peer mentoring between communities, and motivating all sectors of society to accept responsibility for becoming disaster resistant. We need to refine the administrative mechanisms for coordinating Federal participation with locally driven decisions which may include non-traditional applications like revolving funds for retrofitting structures. And we need to do even more to integrate our efforts with other community-based initiatives at the Federal and state level, which would complement Project Impact. We are addressing all of these areas, but they are issues which require institutional change and additional staff resources.

Question. What are the outyear plans for this program? How many Project Impact communities should there be in each state?

Answer. FEMA plans to leverage Federal resources in already-named communities, encourage more established communities to mentor newer ones, and help improve State capability to promote disaster resistant communities.

Also, FEMA will work to incorporate risk reduction into the purview of many disciplines. For instance, urban planners do not typically factor natural hazards risk reduction strategies into community development. School boards do not call for curriculum on becoming disaster resistant as part of environmental studies programs. Civic organizations do not think of mitigation activities as community service. The economic development community does not factor overcoming vulnerability to natural disaster as part of their growth strategies. We see considerable effort in partnerships and education activities as a vital component to maintaining momentum and expanding participation.

Rather than a fixed number, the amount of Project Impact communities in each State will be driven by risks, local initiative, and the need for Federal support for pre-disaster mitigation.

Question. How will you assess the effectiveness in the long-term of the Project Impact grants?

Answer. FEMA has found that mitigation is most effective when designed and implemented at the local level. Unfortunately, in the past the greatest incentive for a community to implement mitigation has typically been after a disaster. Therefore, the Project Impact initiative was designed not only to help communities address current natural hazard risks but to encourage the community to incorporate natural hazard loss reduction as a continuing part of the community culture so that it becomes a sustainable activity. To assess the effectiveness of this strategy, FEMA is implementing an evaluation process that will establish a baseline on the number of structures and infrastructure at risk as well as the current level of mitigation activity in the community at the time it begins the Project Impact process. For five years the community's progress will then be evaluated annually to determine the reduction in the number of structures and the extent to which infrastructure is at risk, increases in mitigation education and training activities in communities, and activities to foster proactive business and/or government actions. The data collected will be used to formulate changes as well as to demonstrate the success of strategy implementation.

Question. How does Project Impact relate to the Institute for Business and Home Safety's Showcase Community Program? Why doesn't FEMA adopt the IBHS's eligibility criteria and program structure that guides the Showcase Community Program?

Answer. We have worked with the Institute for Business and Home Safety both at the community level and at the National level. IBHS is involved directly in some of the Project Impact communities. Director Witt has held several meetings with IBHS staff to explore areas of cooperation. At the last meeting he requested IBHS solicit support from the insurance industry to provide policy incentives for those persons mitigating their structures and to solicit financial support for public education measures.

With respect to the eligibility criteria, we are happy to report that IBHS has adopted many of the Project Impact principles and features within their Showcase community program.

Question. Do projects funded under the Project Impact initiative undergo any type of analysis to determine if they are cost-effective? If so, please describe the approach. If not, how does the agency know that this funding is targeted to the projects that provide the greatest amount of future cost savings?

Answer. The Project Impact grant is intended not only to address immediate community mitigation needs but also as a means for leveraging funding and resources from other partners, and an incentive for becoming proactive about emergency management. Therefore, community Project Impact leaders have been given some discretion on how the funds will be used. Specifically, this discretion allows the grant to be used for training, education, and initiative administration activities, as well as mitigation actions which lend themselves to cost-benefit analysis. When successfully implemented, all of these activities can increase capability and the general public's knowledge of mitigation. A well-informed community can lead to important zoning and/or bond issues that provide tremendous loss reduction benefits.

Nonetheless, evaluation methods have been developed. For more traditional projects such as structural retrofits and buy-outs a cost-effective analysis will be done. In addition, Project Impact communities will be evaluated each year for the number of these types of projects implemented through their Project Impact effort. For the more non-traditional projects as described above, data pertaining to these elements will be collected annually to evaluate the effectiveness of these options in the overall Project Impact effort.

HAZARD MITIGATION GRANT PROGRAM

Question. Under the HMGP program, 15 percent of the total disaster relief assistance spent on a disaster is made available for a state's mitigation programs. GAO has found that about 20–25 percent of HMGP grants that it looked at are not subject to benefit-cost analysis, so we cannot be confident that funds are going to those projects which will provide the most protection against future disaster losses. Can you explain the rationale for exempting such a large percentage of projects for benefit-cost analysis?

Answer. The 20–25 percent figure mentioned in the question came from recent Congressional testimony submitted by GAO. The report gives a correct explanation of FEMA policy in this area, although the sample taken is not necessarily representative of the entire HMGP process.

Benefit-cost analysis, while useful in many situations, cannot always be applied easily to many projects. The nature and types of hazards, the fact that the return on investment will not be entirely realized until the next disaster, and the necessity of avoiding piecemeal approaches in applying mitigation approaches all justify variance from a singular usage of benefit-cost analysis.

Question. GAO mentions in its testimony that FEMA exempted four categories of mitigation projects within the Hazard Mitigation Grant Program from benefit-cost analysis. How does the Agency determine cost-effectiveness without using benefit-cost analysis? Is any qualitative effort made to compare project costs with benefits?

Answer. The four categories mentioned in the GAO report refer to the following: (1) tornado warning systems; (2) mitigation planning; (3) FEMA's "5 percent" initiative; and (4) substantially damaged structures in a regulatory floodway or floodplain. To address the Stafford Act cost effectiveness requirement, projects in the first three categories must be supported by narrative analysis included with an HMGP application. The fourth category of projects is expected to yield a high level of benefits because the criteria for such projects ensure they protect structures at extremely high risk. A more detailed discussion of each category is provided:

Tornado Warning Systems.—Rigorous economic analysis of warning systems is problematic for two reasons. First, it is notoriously difficult to determine the probability of tornadoes—even the best estimates have considerable statistical uncertainty. Second, it is also hard to predict whether people will take action when they are warned, and how effective their actions will be in preventing injuries or damage.

Given that warning systems reach large geographic areas and give large numbers of people the time and opportunity to protect themselves, a reasonable argument is made that these are among the most cost-effective measures FEMA funds. The Agency requires warning systems to be part of an overall risk reduction plan, thereby enhancing their effectiveness. Risk reduction plans must have public education components, designated shelters, and strategies for encouraging the construction of safe rooms in new buildings.

Mitigation Planning.—Planning is relatively inexpensive, and has broad, long-term positive results. It is somewhat analogous to building codes, in that if mitigation planning influences the way people behave, e.g., how buildings are constructed or where people go in a tornado, there is a general improvement in life and property safety. Here again, benefits are very difficult to quantify. Yet the best use of mitigation funds in other areas is compromised without effective planning. Local governments are particularly effective in applying these dollars in a way which maximizes the effectiveness of the 404 grant. When the relatively low costs of such projects are balanced against this, it is valid to conclude that the intent of cost effectiveness requirements is met.

The "5 percent Initiative."—The "5 percent Initiative" relates to a FEMA policy providing States with discretionary use of up to 5 percent of the HMGP funds available after disasters. The underlying premise for this policy is that since State and local authorities are in the best position to understand local mitigation needs, some leeway in project selection is desirable. Projects typically funded under this exemption include warning systems, planning, public education and mitigation technologies still under development. Very often, the issue of cost effectiveness prevents such projects from being seriously considered because analysis is problematic.

Substantially Damaged Structures in a Regulatory Floodway or Floodplain.—FEMA requires that participating communities in the National Flood Insurance Program enforce a substantial damage provision. This provision requires individual owners to elevate or relocate structures substantially damaged (more than 50 percent of pre-event value) during disaster events. This has proven to be the most cost-effective way of minimizing or eliminating flood damage. FEMA's policy regarding the acquisition of substantially damaged structures is based on 30 years of experience in the National Flood Insurance Program that mitigating structures meeting the two criteria proves cost effective. In fact, the Agency is undertaking a management audit of the policy and expects to have results within two months, which we will share with GAO and the committee.

Question. Based on GAO's testimony, FEMA is limited in its ability to demonstrate that funding under its Hazard Mitigation Grant Program is targeted to cost-effective projects because the agency categorically excludes certain types of projects from benefit-cost analysis, including certain property acquisitions. The committee's fiscal year 1999 report (Senate Report 105-216) directed FEMA to ensure that all property acquisition projects it funded met stringent benefit-cost requirements. During fiscal year 1998, FEMA obligated \$415 million under HMGP and a sizable amount might have been obligated without going through a benefit cost analysis. First, how much of the \$415 million was obligated for property acquisitions? Second, how much of the \$415 million was obligated for relocating properties?

Third, how much of the \$415 million was obligated for elevating properties? Fourth, how much of the \$415 million was obligated for "50/50 planning" projects and for what planning purposes were funds obligated?

Answer. FEMA made significant progress in obligating HMGP funds in fiscal year 1998. Of the \$415 million obligated in fiscal year 1998, acquisition projects accounted for nearly \$81 million, relocations accounted for \$3.2 million, elevations accounted for nearly \$11.5 million, and "50/50 planning" projects accounted for approximately \$1.6 million. The planning projects were for local flood mitigation, watershed management, and local multi-hazard mitigation plans, and State mitigation plan updates. The "50/50 planning" projects were part of a limited opportunity for States to utilize funding from disasters prior to June 1993 that had a 50/50 cost-share towards planning efforts.

Question. GAO has also raised concerns with respect to the states hazard mitigation plans, required by Section 409 of the Stafford Act. GAO found that state administrative plans often lack specific information such as the identification of individual mitigation projects. Are you concerned that this requirement is treated as a "boilerplate" exercise? Shouldn't 409 plans be a serious guidepost for an effective, prioritized allocation of HMGP dollars?

Answer. In the last year, FEMA has targeted the issue of effective State mitigation (409) planning as a top priority, creating a new Planning Branch in the FEMA organization and developing new guidance for States. As a result of this effort, State 409 plans are becoming increasingly sophisticated as they realize the value of developing a framework featuring strategies for selecting post-disaster mitigation projects and initiatives in the pre-disaster timeframe. FEMA's Mitigation Directorate has produced guidance documents, courses, and workshops that provide strategies and tools to assist States in establishing mitigation policies and priorities that make 409 planning an ongoing activity, rather than waiting until after a disaster declaration.

With improved 409 planning, the post-disaster identification and prioritization of specific mitigation projects will take place more rapidly. This also results in projects that have been more carefully and thoughtfully selected and designed. While there is clearly room for States to improve their planning activities, the best State 409 plans are bringing about an effective, prioritized allocation of HMGP dollars.

Question. FEMA has made disaster mitigation a primary goal in its efforts to reduce the long-term costs of disasters. In previous testimony to this committee, FEMA noted that, "every dollar we spend in the area of pre-disaster mitigation can save \$2 in future taxpayer dollars", and that savings were "well documented". Would you provide this committee with copies of studies or other evidence or analysis that supports this statement?

Answer. This figure, originally cited in 1995 to describe the benefits FEMA expected to accrue from the flood prone property buyouts after the 1993 Midwest floods, was an average of the expected savings FEMA estimated for projects approved under the Hazard Mitigation Grant Program (HMGP). A study conducted by Iowa's Emergency Management Division demonstrated significant benefits associated with mitigation measures taken after the 1993 floods in Iowa. Specifically, the study reported, "55 projects have been funded for a total investment of \$47,372,324.94. The long term benefit of this investment in avoided future damages is anticipated to be \$101,440,205.42 (page 2 of The Benefit of Hazard Mitigation Projects in Iowa)."

Since all HMGP projects must be cost-effective, an analysis of the expected savings versus the cost of a potential project is completed for all projects approved. Generally, this analysis estimates the expected savings in the form of reduced damages over the life of the project, given the frequency and severity of the hazard at that location. FEMA has greatly improved its capability to conduct such reviews in the last few years through the development of benefit-cost analysis software and training.

FEMA recently updated that analysis to include more recent project approvals. This analysis shows an overall ratio of 2.54. This simply means that the expected savings from a \$1 HMGP investment are \$2.54 over the life of an "average" mitigation project. This reflects a sampling of 1,334 HMGP projects approved between February 1990 and September 1998. We still recommend use of the more conservative estimate of 2 to 1, however, to characterize the expected savings.

We are finalizing the report that reflects this analysis, and will make it available as soon as it is completed.

Question. In response to this committee's previous request for quantifying the extent to which mitigation reduces future disaster relief costs, you responded that you planned to "initiate a study of the cost effectiveness of a broad spectrum of mitigation measures (such as the implementation of new building codes and acquisition/relocation projects) before the end of fiscal year 1998". What is the status of that

study and what other evaluations are ongoing or planned to determine the cost savings achieved through disaster mitigation efforts, such as the Hazard Mitigation Grant Program and Project Impact?

Answer. FEMA has undertaken several studies and actions designed to capture or demonstrate the cost-effectiveness of mitigation measures. They include the following:

NAS Study of the Costs of Disasters: FEMA funded a multi-year effort with the National Academy of Sciences (NAS) to categorize the direct and indirect costs of natural disasters in order to provide a better accounting of the losses that could be avoided through mitigation actions. This study is nearly complete, and should be available soon.

FEMA has completed two volumes on the “Costs and Benefits of Natural Hazards Mitigation,” which outline the benefits of a wide variety of mitigation measures in different geographic regions, and under different circumstances. A third volume is currently under development as well, and should be available this summer.

The Mitigation Directorate recently completed a study of mitigation efforts in four communities in Alabama and Georgia, and two other studies are underway. The Alabama/Georgia study shows the economic results of mitigation projects in the communities, using rigorous economic and engineering analysis. In all four communities, the results were positive—the projects generated more long-term economic benefits than they cost initially. While this does not represent a nationally representative sample, it does provide strong evidence of the cost-effectiveness of mitigation measures in reducing flood risks.

We continue our efforts to examine the Hazard Mitigation Grant Program (HMGP) project database to learn the extent to which mitigation projects produce savings. As noted in the answer above, this has demonstrated a benefit cost ratio of 2.54 to 1.

We are conducting an in-depth review of how the substantial damage cost-effectiveness policy is applied. The former study is intended to be a general look at the economic benefits of funding a variety of mitigation projects nationwide. The study is about half-complete, but the initial results are very positive. The substantial damage policy study is discussed in the question below.

Question. In responding to questions for the fiscal year 1999 VA/HUD Appropriations hearing before the House (p. 103), FEMA cited an example of elimination of flood risk for high-risk properties. According to the example, FEMA conducted a survey that identified about 560 homes along Minnesota’s Red River that, “had significant or substantial damage (the damage was categorized as greater than 40 percent).” FEMA funded 555 of them for acquisition under HMGP at a total FEMA cost of about \$17.2 million. What were the benefit-cost results for these properties? Answer. The purpose of the survey mentioned above was to identify properties at high risk for future flooding that might be good candidates for the State’s property acquisition program. Under FEMA policy, a detailed benefit-cost analysis was not conducted on these properties because they were substantially damaged. Currently, we are completing a study of 370 of these properties to verify the benefit-cost ratios for acquiring them. *Question.* (13g): FEMA is in the process of conducting studies to establish a valid basis for property acquisitions—possibly the most costly of the four exemptions discussed in GAO’s testimony. A year has passed and millions of dollars have been obligated since concerns were raised about the lack of analytical data supporting the decision for this exemption. When will that evidence be provided, and why has the exemption continued for the last year, without having the proof that these projects are indeed cost-effective measures? How are you assuring that these projects are cost effective?

Answer. FEMA has started the study, which is expected to take another two months to complete. The study, which is designed to test the presumption that structures meeting the criteria will be cost-effective, has the following elements:

—It will initially focus on six communities in three States.

—Hundreds of structures acquired in the six communities will be subjected to rigorous benefit-cost analysis.

—The study will be carefully controlled so that results will be useful in estimating benefits nationwide for sites similar to those in the study

FEMA believes this policy is sound because it targets structures at the highest risk and that would be required to be elevated or relocated under NFIP standards. Each structure included must meet specific criteria that indicate it is at high risk and would be cost effective to purchase.

It is very significant and important to note that acquisition of substantially damaged structures not only removes a building from a hazardous area, but it reduces the expenses associated with disaster relief efforts. Such projects also provide an en-

vironmental and social dividend in communities through the creation of open space and unobstructed floodplain areas.

FIRE PROGRAM IMPROVEMENTS

Question. FEMA is requesting \$45 million for fire prevention and training, an increase of \$13 million over current spending levels. This is largely in response to a recent Blue Ribbon Panel Review of the fire program. The panel identified significant problems in terms of leadership, resource management, and communication. Does FEMA plan to implement each of the panel's recommendations? Please provide a description of FEMA's plans for each recommendation. Will the funding FEMA has requested be sufficient to meet the panel's recommendations? What are the highest priorities?

Answer. The development of USFA's fiscal year 2000 budget request began in fiscal year 1998, prior to the establishment of the Blue Ribbon Panel. The Blue Ribbon Panel was established to review the USFA programs and provide recommendations on improvement, and rendered its report on October 1, 1998, after submission of the initial fiscal year 2000 budget request.

In response to the 34 recommendations made in the Blue Ribbon Panel Report, several changes have already been made. Many of the requested budget enhancements for the USFA for fiscal year 2000 are similar to recommendations made by the Blue Ribbon Panel. Although the budget request does not address every increase the Panel recommended, the following requested increases reflect several of USFA's main program areas (the numbers in parentheses represent the corresponding recommendation number from the Blue Ribbon Panel report):

- Data Collection.*—\$1,881,668, and 2 positions to expand and increase fire incident reporting through NFIRS, focusing on data accuracy and timeliness (recommendation 7);
- Public Education and Awareness.*—\$1,631,666 and 2 positions to expand and increase outreach efforts with special emphasis on community hazard assessment and mitigation strategies in support of Project Impact and groups at greatest risk from fire (#11 and 12);
- Research and Development.*—\$1,631,666 and 2 positions to conduct research that addresses the Nation's fire problem to support a basis for training and public education efforts (#8, 9 and 10);
- Training.*—\$4,204,000 and 5 positions to expand and increase delivery of all training programs at all levels and increase development of training materials and curriculum (#14 and 15);
- \$1,272,000 and 3 positions to update course materials and provide additional deliveries in Counter-Terrorism (#21); and,
- \$3,859,000 for capital improvements and to renovate and expand a building to house the simulation lab and the Integrated Emergency Management Course classrooms. The capital improvements include such things as roof replacement, road repair, equipment and furniture replacement, space utilization renovations on the NETC campus in support of student and user needs. The increase also will support funding for travel (training related, pilot deliveries, site visits, committee meetings, etc.), employee training and other staff expenses such as a portion of the utility expense and supplies.

FEMA has already made several other changes to implement the report's recommendations. While some of these changes have been quickly implemented, others are in the process of being implemented. These include (the numbers in parentheses represent the corresponding recommendation number from the Blue Ribbon Panel report):

- Chief Marinucci, who has over 21 years of fire protection service, 8 years of which were gained as an elected official of the International Association of Fire Chiefs, and most recently as President of the International Association of Fire Chiefs, has been appointed as a senior advisor to the Agency. He will develop a plan to be implemented by FEMA to provide the appropriate leadership, management structure, program and training activities, and funding and staff resources to put USFA on a more pro-active course to address the new and challenging issues facing the fire protection community in the 21st Century.
- Chief Marinucci will be involved in a USFA and NFA management review, the development of a plan for the future of USFA's major programs, and USFA funding and resource management plans and plans to assure closer integration of fire issues into FEMA's ongoing strategic planning process. (recommendations 1, 3, 4 and 5)
- Increasing the U.S. Fire Administrator's advocacy role, such as participation in Presidentially declared disasters (#32);

- Recommissioning America Burning (#34);
- Calling an annual meeting with the fire service organizations; the first of which is to occur on August 2nd and 3rd in Emmitsburg, Maryland (#29); and,
- Signing a Memorandum of Understanding on Project Impact with the major fire service leaders.

CONSOLIDATED GRANTS PROPOSAL

Question. FEMA proposes \$142 million for a new consolidated emergency management grant program for states. This represents an increase of about \$12 million over current spending for such activities, \$8 million of which is devoted to anti-terrorism activities. The consolidation is intended to streamline administrative procedures and provide greater flexibility to states in the use of these funds. It would allow states to target funds to their highest priority areas based on where the greatest risks are. FEMA has already consolidated several state grant programs, and several years ago launched a performance partnership grant. What's new here? How does this relate to the performance partnership concept? What is the status of performance partnerships?

Performance partnerships are intended to provide flexibility to the states, in exchange for increased accountability. Has FEMA developed performance measures for the states that clearly demonstrate accountability?

Please describe how FEMA has integrated risk information into the Performance Partnership process and how FEMA has assisted state and local governments in conducting hazard identification and risk assessment?

An internal task force recently was formed to determine how this new program will work. Why is FEMA creating this Task Force only now—wasn't this recommended in a 1994 OIG audit report? When will the task force make recommendations?

Answer. The Emergency Management Performance Grants (EMPG) will replace the current cooperative agreement (CA) mechanism through which our non-disaster funds to State emergency management agencies are provided. In 2000, FEMA will continue the existing Performance Partnership Agreements (PPAs). The EMPG, when fully implemented in 2001, will be a performance partnership grant based on State readiness and capabilities. It will continue to provide greater flexibility to States and allow them to target funds (with the exception of Terrorism) to their highest priority areas. Under the PPA/CA, States have had limited flexibility with the funds they received because each funding source retained unique requirements. Also, the past structure of FEMA's budget for these funds precluded flexibility because of the need to retain inherent reporting requirements.

The PPA approach has been successful; it has produced a new way of conducting business between FEMA and our State partners. It marked the end of paternalism in the FEMA/State relationships. While it did not result in an overnight partnership of mutually agreed upon priorities and strategies for achieving objectives, it has moved the relationships a long way toward that goal. Under the PPA/CA, States could combine hazard-specific programs in order to develop multi-hazard strategies. Because some mitigation techniques can result in increased risk of other hazards, hazard mitigation has benefited significantly from these multi-hazard strategies.

Under the EMPG, this concept is developed further to allow States to combine funds, strategically plan, and measure performance. (Funds provided through the EMPG that are derived from Terrorism must be spent on terrorism-related activities.) As we implement the EMPG, we expect there will be far more recognition and accommodation of the unique approaches States are taking to strategic planning. Enhanced accountability will result as State organizations are allowed the flexibility to incorporate their own approaches and criteria into performance agreements. FEMA will hold the States accountable for meeting performance goals set jointly.

The increased flexibility provided to the States through the EMPG is intended to enhance the professionalism of State and local emergency managers and build a decentralized capability for State and local preparedness and response. States will be evaluated annually, and FEMA will develop remedial or corrective actions to address critical weaknesses. In exchange for flexibility, FEMA will require accountability from the State and will achieve this by:

Partnering with the States:

- The task force is working with State representatives to develop program goals and objectives that will serve as the basis for program guidance to ensure the EMPG best meets the needs of FEMA and the States.

Negotiating with the States:

- As part of our partnership with the States, each EMPG will be individually negotiated to determine funding priorities and performance measures.

- State-developed workplans will have to achieve FEMA, as well as State, objectives.
- Workplans will have to describe goals and objectives, results and benefits expected, and quantifiable projections of the program and accomplishments to be achieved and the performance measures to be used.

Requiring quarterly reporting:

- FEMA will require quarterly financial and performance progress reports.
- Technical assistance and monitoring will be provided throughout the year to ensure success of the EMPG.
- States will be required to submit final financial and performance reports that link back to the workplans and performance measures that were negotiated.

A 1994 OIG audit report was issued on FEMA's Comprehensive Cooperative Agreements (CCAs), the predecessor to the PPA. Among the recommendations in that report were:

- Assess hazards and risks;
- Develop integrated emergency management objectives and performance standards;
- Increase States' flexibility by consolidating emergency management programs;
- Move from a hazard-specific to a functional program structure; and
- Assess States' capabilities to respond to disasters by conducting and evaluating exercises and monitoring actual disaster response.

A task force was formed to implement changes to the CCA for 1995. Subsequently, in 1996, the CCA was eliminated and replaced with the PPA/CA. Many of the OIG's recommendations were incorporated into the PPA/CA process, including consolidation of certain programs; decentralization of non-disaster programs to Regions; and devolvement of day-to-day grant management to States. FEMA Regions have spent a substantial amount of time working with States to develop performance measures, which are incorporated into the PPAs. FEMA has also been developing systems for risk assessment and capability assessment.

A recently issued follow-up to the initial OIG report (I-01-99, March 23, 1999) supports our efforts to further consolidate PPA/CA funding streams and recommends the Chief Financial Officer continue to explore such consolidation. In addition, the report recommends that FEMA, in coordination with States, develop performance measures that work towards the Federal goal of improving State emergency management programs and that clearly demonstrate accountability by showing how FEMA funding has improved the States' emergency management capability. We believe the EMPG process will do this.

The EMPG Task Force will continue the process begun four years ago. The Task Force is working with State representatives to work through the issues related to implementing the consolidated grant, such as formulating guidance and developing baselines for performance measurement and methodologies for assessing overall State capability and mitigation needs. Recommendations for a framework to address accountability issues should be completed by early Summer.

NATIONAL FLOOD INSURANCE PROGRAM

Question. The National Flood Insurance Program's outstanding borrowing has decreased from \$917 million in June of 1997 to \$722 million in December 1998. What is driving the decrease in the program's borrowing and do you expect this trend to continue? What is your plan for repaying the current borrowing?

Answer. Since levels of flooding are the critical determinant in repaying the current borrowing, it is not possible to determine with certainty when the repayment will be complete. Through simulation modeling, FEMA has made some estimates of the probability of repaying current borrowing over the next five year period. Based on premium income alone, FEMA has a 16 to 27 percent probability of completely repaying the amount borrowed from the Treasury at some point within the next five fiscal years.

FEMA has submitted a report to Congress that outlines various alternative strategies for repaying the borrowing. It includes a direct appropriation as one possible option that Congress might consider. Based on premium income and an appropriation or forgiveness of \$400 million out of the current \$800 million in outstanding debt, FEMA has a 41 to 50 percent probability of complete repayment at some point within the next five fiscal years.

FUNDING FOR PUERTO RICO

Question. According to a recent news article in the San Juan Star (2/19/99), FEMA will be awarding Puerto Rico \$190 million to build homes. Is this true?

Under what authority is FEMA awarding funds for the building of homes? Please explain what the "New Safe Home Program" is.

Answer. We understand the Government of Puerto Rico is in the process of developing a grant application for approximately \$190 million in federal funding under FEMA's Hazard Mitigation Grant Program (HMGP). This project has not yet been formally submitted to FEMA. FEMA will be assisting Puerto Rico over the next several months to develop a grant project suitable for funding under the HMGP.

Based on our understanding, the "New Safe Home" program that Puerto Rico plans to propose is intended to provide funding to ensure that residents whose homes were destroyed during Hurricane Georges are re-housed in safe, disaster-resistant housing. The proposal is likely to request HMGP funding to go toward the mitigation elements of this larger re-development project. "New Safe Home" houses will be located outside of flood hazard areas and will be designed to withstand both wind and seismic loads. They will also be built in full compliance with the 1997 UBC building code recently adopted by the Government of Puerto Rico.

QUESTIONS SUBMITTED BY SENATOR BURNS

Question. We know that FEMA has been using the National Imaging and Mapping Agency (NIMA) to provide data from national systems for emergency response and assessment. In your newly proposed effort to do detailed mapping of flood risk areas, have you investigated using any mapping tools developed by NIMA or the National Reconnaissance Office to assist in converting your data to a useful mapping format?

Answer. FEMA closely cooperates with NIMA. The laser terrain standard that has been drafted and is currently going through final review was coordinated with NIMA. Data developed under this performance based standard will meet the draft Digital Terrain Elevation Data (DTED) standard used by NIMA, and will be easily converted from Digital Elevation Model (DEM) format to DTED format using standard Geographic Information System (GIS) programs and tools. We are also keeping NIMA informed of our technology applications and are assured by our NIMA partners that they are keeping us abreast of their technology improvements.

STATE AND LOCAL ASSISTANCE (SLA) FUNDS

Question. This program was designed to be a 50/50 match between the federal government and the states. There have been serious shortfalls in SLA funding and this problem only seems to be getting worse. What is your proposal in order to keep your promise and provide adequate funding, at the 50 percent level, for local emergency management agencies? Montana is doing what it can to fund the shortfall, but we're having a tough time.

Answer. State and Local Assistance (SLA) has been one of several programs delivered under the auspices of FEMA's Performance Partnership Agreements (PPAs) that provide financial assistance to State and local governments. SLA has been provided in the past both with 100 percent Federal funding, and with a 50 percent Federal/50 percent State cost share. In accordance with Congressional direction in the Conference Report on the 1996 appropriation and the House Report on the 1997 appropriation, FEMA notified States that 1999 would be the last year 100 percent Federal funds would be provided through the SLA program.

In 2000, funds previously provided to State emergency management agencies under the PPA/CA will be provided through an Emergency Management Performance Grant (EMPG). Rather than receiving several separate annual funding allocations as is presently the case under the PPA/CA, each State will receive one aggregated allocation under the EMPG. The annual allocation will be derived from the programs contributing dollars to the grant. A composite cost share for the grant will be calculated based on the cost share policies of the programs contributing funding as well. The total EMPG request of \$142 million assumes funds equal to the 1999 SLA-50 and SLA-100 levels (\$105 million). Moreover, an additional \$10 million is requested for the EMPG that is attributed to the former SLA funding stream.

Question. What are your specific plans for improvements for Bioterrorism/Biowarfare precautions and response? Is additional funding needed in this area?

Answer. FEMA is working with the Federal Response Plan (FRP) agencies to develop Time Phased Force Packages for different weapons of mass destruction (WMD) scenarios, one of which is the use of a biological agent. Time Phased Force Packages identify what resources are needed for a given scenario and in what order and timeframe they need to be deployed for maximum effectiveness.

FEMA does not offer courses specific to bioterrorism. Some terrorism-related courses developed by FEMA's National Fire Academy and Emergency Management

Institute (EMI) do include information on biological agents and associated precautions. As these courses are revised and new ones are developed, FEMA will include where appropriate information on new technologies and techniques—for example, in the area of chemical and biological agent detection. This also holds true for the first responder Job Aid for terrorism response that FEMA's National Fire Academy plans to issue this year. Training provided by the EMI addresses various terrorism preparedness and general emergency management issues applicable to all types of disasters including bioterrorism. If the U.S. were unfortunate enough to suffer a bioterrorism event, it could result in a public health emergency of major proportions. Standard EMI emergency planning courses, for example, would be very pertinent in helping local officials know how to plan for such an event.

FEMA stands by its request for fiscal year 2000. Before identifying any gaps that FEMA can and should fill in this area in the outyears, FEMA will consider work being done by the U.S. Army Soldier and Biological Chemical Command in its Biological Warfare Improved Response Process (in which FEMA participates), by the Department of Health and Human Services in its initiatives for chemical and biological terrorism preparedness, and by the Department of Justice in its conduct of a congressionally mandated needs assessment.

QUESTIONS SUBMITTED BY SENATOR STEVENS

Question. Thank you for convening the interagency task force to address the fish disaster in Western Alaska. It led to the relief package that is helping Eskimos and others survive the winter.

The Corps of Engineers built the Moose Creek dam upstream from North Pole, Alaska. It resulted in downstream flooding of about 50 homes. The Fairbanks North Star Borough is rezoning the area to prohibit new construction, but the remaining homeowners are literally down the creek without a paddle. The local government believes modification of some of the homes will prevent future flooding, and is seeking funding to begin the work. Would you be willing to take a look at this issue and let me know if there are any programs at FEMA that could help us correct this problem, so we can prevent future flooding?

Answer. FEMA will be pleased to look into how Mitigation programs, particularly the Hazard Mitigation Grant and Flood Mitigation Assistance Programs, may be used to help address this flooding problem. In addition, we will work with the State of Alaska and the local government to see if there are other sources of available funding to help resolve this problem.

As you know, FEMA has been actively involved in dealing with this problem for many years. The Chena Lakes Flood Control Project consists of the Moose Creek Dam and floodway on the Chena River, a levee system along the Tanana River, and an interior drainage network between the Chena and Tanana Rivers. The project was built to protect people and property in and around Fairbanks from the flooding of the Chena and Tanana Rivers. The purpose of the Flood Control Project is to restrict flows on the Chena River through Fairbanks to 12,000 cubic feet per second. This is accomplished by closing the gates at the Chena River and impounding floodwaters behind the embankment that was constructed between the Chena and Tanana Rivers. When the impounded water exceeds the elevation of the floodway sill at the Tanana River, water flows over the sill into the Tanana River. During extended periods of impoundment behind the embankment, water enters the porous medium below the embankment and flows through the ground, thereby increasing the ground-water elevation downslope of the embankment. The elevated ground-water level sometimes causes flooding in basements and crawl spaces and has disrupted well and septic tanks.

Since 1992, investigations have been underway to find a feasible solution to mitigate the groundwater flooding problem resulting from impounding water behind the embankment for extended periods. All major structural solutions investigated have been found to be cost-prohibitive. The suggested solution proposed in a February, 1997, FEMA Report entitled, "Evaluation of Ground-Water Flooding Problems and Mitigation Alternatives for the North Pole Area of Alaska," is a combination of the following non-structural and site specific mitigation measures:

- Implementation of land-use regulations such as were recently adopted by the Fairbanks North Star Borough, to restrict building and construction practices that increase the flood problem;
- Extension of flood insurance for ground-water flooding to all residents in the affected area;
- Development of a Geographic Information System (GIS) to determine structures at risk and to assist community officials in future land-use planning; and

—Implementation of site-specific mitigation measures. Site specific mitigation measures to affected structures could include floodproofing; relocation to higher ground; demolition and replacement; and creating open space (such as parkland.)

Question. The University of Alaska has informed me of a proposal in your fiscal year 2000 budget request called Disaster Resistant Universities, and the need for a federal matching fund to protect the nation's research investment. Can you describe this program, and your idea for a federal fund for universities?

Answer. By proposing a Disaster Resistant Universities initiative, FEMA is responding to the concerns expressed by several university Presidents that their institutions are at risk of serious damage from natural disasters. We believe this initiative will protect the nation's investment in university research and education, preserve the economic engine of communities when they most desperately need it—after disasters—and reduce future Federal disaster assistance costs.

We will take the core ideas of Project Impact—public/private partnerships, local control, and investments focused on “the bottom line”—and apply them to universities. In forming the program, we are also creating a partnership among the White House Office of Science and Technology Policy, Federal research agencies and the Department of Education. Their involvement, as well as the input of the Congress, is critical to ensuring that the investments we protect reflect the nation's research and education priorities.

Currently, FEMA is investing in two initial efforts that are critical to making this project a reality. The first is a study by several professors at the University of California, Berkeley on the economic connections among universities, their surrounding region, State and nation, and how disasters at universities affect these areas. Secondly, a team of university leaders from various States, including Alaska, Missouri, West Virginia, Florida, and New York, will contribute to the development of methods that all universities can use to successfully assess and lessen their risks using a combination of public and private resources. The work of these university leaders over the next six months will result in a precisely defined Disaster Resistant Universities program.

The idea for a federal matching fund to do the mitigation work on campuses was first proposed by universities last year. We believe that the appropriation of such funds will achieve long-term savings, particularly at universities, where the human and economic costs of disaster recovery are very high as compared to the costs of pre-disaster mitigation. Because the purpose of this fund is to protect the large Federal investment in research and education, the cost of this research investment protection fund could be tied to the amount the federal government spends annually on research at universities. A figure that has been discussed—\$75 million—represents only one half of one percent of this yearly investment. Federal resources alone cannot solve the problem, but should be used to leverage the support of other university stakeholders. Thus I have made it clear that universities would have to match any grant from this fund with State or private money. This should not be difficult; Project Impact has shown us that Federal resources in this area will generate mitigation investments well beyond “match” requirements.

There are several criteria envisioned for participation in the DRU program. A university would be eligible if they conduct substantial Federal research, if their students receive large amounts of financial aid, and if the campus lies in an area likely to see a natural disaster. Additionally, universities receiving funds would have to demonstrate a commitment to mitigation in partnership with the private sector, have conducted risk analyses, and have completed disaster response plans. The specific criteria for awards from this fund will be determined in consultation with the Congress and Federal research agencies in order to ensure that Federal technical and financial support is distributed broadly, in terms of geography, need, and type of institution.

While the Federal and State governments and private sector have the greatest stake in preserving their investments in higher education, the creation of a Disaster Resistant Universities program is ultimately the responsibility of the universities at risk of natural disasters. To make this program a success, leaders of these institutions will have to assess the hazards facing their campuses, work with their neighbors to mitigate those hazards, inform the Congress of the value of such a program, and, most importantly, forge public-private partnerships with corporations and community groups.

Question. There are many sectors of society that are worthy recipients of federal funds for this purpose. Why should we protect universities over elementary schools, hospitals, or city halls?

Answer. There are many institutions, including those you mentioned, in need of assistance. In fact, in 118 communities throughout the country, FEMA's Project Im-

pact is helping schools, hospitals, and city halls, as well as homes, farms and churches, become disaster resistant.

This proposal responds specifically to the universities' request for Federal leadership because of their critical role in society, the taxpayer's tremendous investment in them, and the high cost of repairing campus facilities after a disaster. Universities are important not only because they educate our future leaders, but also because their research leads to innovations and industries which drive our economy and enhance our quality of life. Additionally, universities are frequently the largest employer and most significant cultural and recreational resource in their regions.

There is substantial Federal commitment to universities; this year it will be over \$65 billion for research and financial aid. If we look at just three universities for which natural disasters are a significant concern, the University of Alaska, West Virginia University, and Washington University in St. Louis, we see that last year the Federal research and financial aid investments totaled over \$330 million. When natural disasters hit universities, they are very costly to rebuild. For example, in the last five years, FEMA has spent hundreds of millions of dollars at Cal State Northridge, Colorado State University, University of North Dakota and Syracuse University, among others. In proposing this initiative, we hope to reduce these human and economic costs at institutions that are critical to the communities that surround them.

QUESTIONS SUBMITTED BY SENATOR MIKULSKI

ANTI-TERRORISM INITIATIVES/WEAPONS OF MASS DESTRUCTION

Question. How effective is the government's inter-agency effort working in planning to prevent and respond to terrorist attacks? What is your assessment of the working relationship between the agencies? Is there a "one stop shop" that state and local governments can go to for answers regarding preparedness training and resources for Weapons of Mass Destruction attack?

Answer. FEMA is the lead agency for Federal consequence management response. The interagency Federal response planning community has established a strong, productive, and lasting working relationship. The community has worked diligently to ensure the appropriate consequence management response plans and related guidance documents are published. For example, the Terrorism Incident Annex to the Federal Response Plan (FRP), numerous special events plans like the Operational Supplement to the FRP for the North Atlantic Treaty Organization's 50th Anniversary Summit, and the Time Phased Force Packages (under development) are documents that have been worked through the FRP community. FRP-related working groups such as the Catastrophic Disaster Response Group, the Emergency Support Functions Leaders Group, and the ad hoc Interagency Steering Group for the development of the Time Phased Force Packages, as well as the Contingency Planning and Exercises Subgroup established under authority of Presidential Decision Directive 62, all have been directly involved in development and coordination of these documents.

Similar levels of cooperation have existed among departments and agencies involved in terrorism preparedness programs. In the Interagency Work Group on Domestic and International Counterterrorism Exercises, the Contingency Planning and Exercises Subgroup, and the Multi-Agency Task Force on Nunn-Lugar-Domenici Exercises, FEMA and the other consequence management agencies work together with the Federal Bureau of Investigation and the U.S. Army Soldiers and Biological Chemical Command (SBCCOM) to design, plan, conduct, and evaluate a wide variety of emergency response exercises. FEMA also has actively supported training efforts of the Departments of Defense and Justice.

The National Domestic Preparedness Office, proposed by the Attorney General, is poised to become a "one stop shop" for State and local governments to obtain information on preparedness programs and resources relating to terrorism involving weapons of mass destruction.

Question. What is the status of FEMA's work in training local communities? How many cities/localities have received training? Who is being trained—first responders, local trainers? What type of training has been provided?

Answer. FEMA has worked closely with the Departments of Defense and Justice in their training efforts. In addition, FEMA offers a limited program of its own terrorism-related training such as the Emergency Management Institute's (EMI) Integrated Emergency Management Course (IEMC): Consequences of Terrorism, Emergency Response to a Terrorist or Criminal Event, and Senior Officials' Workshop on

Terrorism and the National Fire Academy's Emergency Response to Terrorism curriculum.

To date over 32,000 fire and emergency response personnel—trainers and end users—have received the National Fire Academy's (NFA) Emergency Response to Terrorism training through FEMA and State channels; the same material has been offered through the Department of Justice's training program. Additional NFA Emergency Response to Terrorism courses in incident management and in tactical considerations for company officers, emergency medical services personnel, and hazardous materials responders are being made available this year.

The IEMC: Consequences of Terrorism course has been delivered 16 times since it was created in 1997: five times for specific communities and 11 times for audiences comprised of emergency officials from a cross section of communities. The training audiences for EMI's terrorism-related training includes a broad range of emergency responder and other public officials who have emergency management responsibilities. The Senior Officials' Workshop on Terrorism, for example, which EMI developed in conjunction with the Department of Defense and an interagency team, is specifically intended to train mayors and their cabinets regarding special considerations for planning to deal with terrorist events involving weapons of mass destruction.

FEMA terrorism-related courses are primarily classroom-based training, although the culminating event of the IEMC: Consequences of Terrorism course is a major tabletop exercise, and the other courses include exercises and some hands-on activities. FEMA has a distance learning capability through its satellite-based Emergency Education Network (EENET), and makes some of its terrorism-related course materials available on the internet.

Question. What type of follow-up does FEMA do with localities after they have been trained? Is any work done to ensure that the plan is one that is operational and not just a paper plan stuck in an office cabinet?

Answer. FEMA's National Fire Academy is in the process of obtaining long-term feedback from students (and their supervisors) who have taken the Emergency Response to Terrorism: Incident Management course. The National Fire Academy also receives feedback on its courses through its Training Resource and Data Exchange (TRADE) network.

FEMA is requesting additional funding in fiscal year 2000 for its exercise-based courses. Courses such as the Integrated Emergency Management Course (IEMC) with a terrorism scenario allow key officials from a community to come together, simulate response using the community's plans, and identify gaps in their plans and procedures. FEMA is working with the Department of Justice to make this course available at its Ft. McClellan facility. Communities that participate in FEMA's IEMC are required to submit a report after one year indicating how they have applied the lessons they learned as a result of their participation in this training event.

FEMA is providing funding to States for State and local terrorism consequence management planning and for exercises to test those plans. Exercises allow emergency responders at all levels of government, as well as the private and volunteer sectors, to test policies, plans, and procedures. In recent years, FEMA, other Federal departments and agencies, and State and local governments have participated in a wide variety of terrorism-related exercises including ILL WIND, ELLIPSE ALPHA/GAUGED STRENGTH, KEYSTONE 2-98, ROCK 'N' ROLL, and WESTWIND 99.

Question. What is your assessment of local governments' and first responders' preparedness to respond to terrorist attacks? What was the latest assessment of local and state capabilities to respond to a terrorist attack? What types of criteria were used to measure preparedness?

Answer. The level of preparedness varies across the country, and it varies among the aspects of preparedness (planning, training, equipment, exercises/evaluation). Certain local jurisdictions' terrorism preparedness has benefited from increased Federal attention such as that provided by the Department of Defense's Nunn-Lugar-Domenici Domestic Preparedness Program, the Department of Justice's training and equipment initiatives, the Department of Health and Human Services' Metropolitan Medical Response System initiative, and the interagency and intergovernmental planning involved in preparing for certain special events. Others are able to apply lessons learned from other technological hazard programs, such as FEMA's Chemical Stockpile Emergency Preparedness Program (CSEPP) and the Radiological Emergency Preparedness (REP) program. However, if the pilot State Capability Assessment for Readiness (CAR) report can be used as an indicator of local capability, planning and equipment for weapons of mass destruction terrorism are areas in need of improvement. After-action reports from some of the tabletop exercises con-

ducted under the Nunn-Lugar-Domenici Domestic Preparedness Program provide support for this conclusion.

FEMA's latest capability assessment was the pilot State CAR report of December 1997. The CAR asked States to assess:

- Equipment for nuclear, biological, and chemical (NBC) terrorism (e.g., development of HAZMAT teams with sufficient equipment to respond to an NBC incident, availability of pharmaceuticals);
- NBC terrorism plans (e.g., coordination with Federal agencies, coordination with private sector hospitals);
- NBC terrorism training (e.g., training HAZMAT and EMS responders to recognize NBC incidents and respond safely).

FEMA is revising the CAR instrument to provide more detailed information.

Question. What is your assessment of the "unmet needs" at the local level in terms of preparedness? What is FEMA's role in helping localities and states meet those unmet needs?

Answer. Since the level of preparedness varies around the country, so do "unmet needs." Assessments indicate that, in general, planning and equipment are two areas in need of improvement. In addition, FEMA is working with States to ensure that local jurisdictions not included in Defense and Justice initiatives are able to obtain terrorism-related training.

While the Department of Justice is providing substantial funding for equipment, FEMA's role under Presidential Decision Directive 39 is to ensure that State—and by extension, local—plans and capabilities for terrorism consequence management are adequate and tested. To that end, FEMA is providing funds to the States for State and local planning and exercises. As noted above, FEMA is also working with States—State fire training centers and State (emergency management) training officers—and providing grants to ensure that terrorism-related training is available to emergency managers and responders in the "balance of the nation."

Question. Are there any knowledge or equipment gaps for responding to terrorist attacks at the state and local level that haven't been filled? If so, which agencies are working to fill them? What is FEMA's role?

Answer. There are an estimated 1.3 million paid and volunteer fire service members in the United States. To date, over 32,000 individuals have taken the National Fire Academy's Emergency Response to Terrorism training through FEMA and State channels, and approximately 15,000 individuals have received Nunn-Lugar-Domenici Domestic Preparedness Program training. Even allowing for other training efforts, this leaves a substantial gap. FEMA is supporting the training efforts of the Departments of Defense and Justice, in addition to FEMA's own training efforts. FEMA's focus in training is to make training available to States and local jurisdictions not addressed by the Defense and Justice initiatives. Further, FEMA is working with the Attorney General's National Domestic Preparedness Office to improve dissemination of information.

According to the State Capability Assessment for Readiness (CAR) report, planning and equipment for response to weapons of mass destruction (WMD) terrorism are areas in need of improvement. FEMA is providing funds to States for State and local planning (and for exercises to test those plans), while the Department of Justice is providing funding for responder equipment. FEMA has contributed to the National Domestic Preparedness Office's development of a Standardized Equipment List.

Question. How effective is the training that FEMA is providing if localities and states don't have the equipment they need?

Answer. Response to a suspected incident of nuclear, biological, or chemical terrorist incident may require specialized equipment. Proper and skilled use of equipment does require hands-on training with that equipment.

Much of the training FEMA provides is designed for officials at the policy and executive levels, and for planners. Corresponding equipment requirements for these individuals are minimal. Yet training for these individuals may be effective if it helps senior officials and emergency planners understand the potential scope and consequences of a terrorist incident involving weapons of mass destruction (WMD) and identify gaps in plans and procedures. Thorough emergency planning that includes the risk of terrorism is prudent practice. This planning does not require specialized equipment, although the actual response may.

Even for responders, training may be effective if it teaches a first responder to recognize when he or she does not have the means to deal with an incident safely, or when exotic equipment and "victim" decontamination are unnecessary or even counterproductive.

Question. How far will the budget requested by FEMA for fiscal year 2000 allow FEMA to go in providing training to the 157 largest cities and localities?

Answer. None of the request is intended for training the 157 largest cities and localities. Programs at the Departments of Defense and Justice provide for training of these localities. FEMA will provide assistance to States for training; by working with and through States, FEMA intends to help training reach the “balance of the nation”—communities not otherwise served by the Defense and Justice training programs.

Question. What is being done to capitalize on the unique capabilities of agencies such as the CDC to assist with response planning and preparedness training? How involved is CDC with FEMA’s training to states and localities to ensure that local public health officials can identify biological and chemical agents? Is attention being given to the need to prepare for agents (microbes and bacteria) that may be developing immunity to the current standard ways of treating them?

Under the Federal Response Plan structure, the Department of Health and Human Services (HHS) is the primary agency for Emergency Support Function (ESF) 8, Health and Medical. Within HHS, the Office of Emergency Preparedness is the “executive agent” for discharging HHS’ responsibilities as primary agency under ESF 8 and coordinates extensively with other organizations of the U.S. Public Health Service, including CDC. FEMA relies on this coordination within ESF 8 to ensure that CDC contributions are incorporated in Federal response planning.

Terrorism-related training at the Emergency Management Institute has been developed in an interagency environment and in conjunction with various Federal departments and agencies. HHS, of which CDC is a component, has been a key player in such training development, as have the Environmental Protection Agency, the Department of Energy, the Department of Justice, and the Department of Defense.

Under Public Law 105-277, CDC was appropriated sums for a variety of initiatives to, among other things, enhance technical capabilities to identify certain biological agents, better identify potential biological and chemical terrorism agents, develop rapid toxic screening, strengthen State and local epidemiological and surveillance capacity, provide for regional laboratories for detecting and measuring biological and chemical agents, and establish a pharmaceutical and vaccine stockpile for civilian populations.

Question. What public and media relations efforts will be implemented in the event of an incident to mitigate widespread panic?

Answer. Widespread panic in any incident will only be mitigated if the public has confidence in the government’s response. The effort must reflect that government, at all levels, is working together to quickly respond to the incident. To achieve this, the revised Terrorism Annex to the Federal Response Plan outlines the establishment of a Joint Information Center (JIC) that will ensure a coordinated flow of information to the news media and public.

The JIC will: Include Public Information Officers from all key agencies and departments; Provide media relations counsel for operational leadership; Organize and conduct news briefings as often as needed; Maintain list of pre-designated subject matter expert spokespersons; Gather information from all levels of government; Develop critical updates and fact sheets; Distribute information via not only print and electronic news media but also Internet web sites, e-mail, and the Emergency Alert System (EAS).

It is also important for first responders to communicate as quickly and accurately as possible with the public. In some incidents, this will begin prior to the arrival of Federal assets and the establishment of the JIC. The Rapid Response Information System (RRIS) and special toll-free hotlines make critical information quickly available to first responders.

Emergency public information aspects of WMD incidents continue to be tested in field and tabletop exercises. Exercises provide an important opportunity to build critical interagency cooperation and ensure first responders understand their emergency public information role.

UNITED STATES FIRE ADMINISTRATION (EMITTSBURG, MARYLAND)

Question. How do you think we arrived at the problems outlined in the Blue Ribbon Panel Review?

Answer. The USFA was required to implement level funding budgets since 1994, which limited USFA’s ability to accomplish all goals as quickly as possible.

FEMA submitted an enhanced fiscal year 2000 budget that is directly linked to our Government Performance and Results Act (GPRA) goals and objectives. Our enhanced fiscal year 2000 budget will provide for our efforts to more aggressively and effectively launch an organized and coordinated attack on the unacceptable incidents of fire and fire related deaths, injuries and property damage. The USFA budget for fiscal year 2000 was submitted as part of the President’s budget at about the

same time the Blue Ribbon Panel was commissioned to conduct their study. It is not a mere coincidence that the USFA budget request for fiscal year 2000, which began in fiscal year 1998, and the Blue Ribbon Panel Report rendered on October 1, 1998, both address the need for additional staff and funding resources.

In addition, we experienced a complete change in individuals in the three most senior management positions that resulted in certain management difficulties which we are working to address.

Question. What expectations do you have for the work to be done by the new Senior Advisor tasked to address improving the Fire Administration? Are there certain criteria in place that will be used to judge whether his work has been effective?

Answer. As Senior Advisor, Chief Marinucci has been asked to develop a leadership and business plan for improving USFA's operations and implementing the Blue Ribbon Panel report. The plan must provide the appropriate leadership, management, and program structure to put USFA on a more pro-active course to address the new and challenging issues facing the fire protection community in the 21st Century.

Question. Are you committed to implementing the recommendations made in the Blue Ribbon panel report?

Answer. Yes. By implementing many of the recommendations in the report and requesting funds in the fiscal year 2000 budget which would allow implementation of many more (see the answer to question 14 above for information about specific recommendations), FEMA has quickly demonstrated a commitment to the spirit and purpose of the Blue Ribbon panel.

Question. Do you plan to implement the recommendation to increase the role of the USFA in FEMA? If so, how?

Answer. Yes. FEMA agrees strongly that the U.S. Fire Administration must be a key player within FEMA and plan to continue to involve the USFA as a partner with other Agency organizations. A most recent example was the signing of a Memorandum of Understanding with over twenty fire organizations to work with us on Project Impact activities. Implementation of the recommendations that result from Chief Marinucci's management review and the successful implementation of USFA's performance standards will certainly go a long way toward strengthening and enhancing the USFA's role within FEMA.

Question. Do you support the recommendation to expand the residential capacity of the National Fire Academy by 110 rooms for students? Do you support a capital construction project on site? If you do support a capital construction project on site, how do you plan to find the resources?

Answer. The issue of the additional 110 rooms, plus all supporting facilities, for NFA resident program students has been addressed in two recent reports to Congress. There are a limited number of classrooms and limited funds for student stipend reimbursements and contract instructor services. There are considerations that are more restrictive to NFA than the lack of dormitory space. The U.S. Fire Administration does not have the necessary resources to support this multi-faceted construction project on site at this point in time. FEMA would need additional resources to accomplish such a project.

Question. Do you plan to change the reporting relationships among the USFA leadership that the panel found to be problematic? If so, how?

Answer. We have created a new position at the USFA, Chief Operating Officer (COO), to oversee the day to day operations of the Fire Administration. As a Senior Executive Service career appointment, the COO will serve as the primary advisor to FEMA's Director and the USFA Administrator on overall operations and management of the USFA.

The COO will report directly to the Director of FEMA, thus freeing the U.S. Fire Administrator to become a full time advocate for the fire services as recommended by the Blue Ribbon Panel report.

Question. What are your plans to implement the recommendations to improve the research and development efforts by making effective use of the capabilities in the National Institute of Standards and Technology (NIST), Consumer Product Safety Commission and other public and private sector organizations?

Answer. USFA initiated a new public effort to involve stakeholders from across the Nation that have indicated interest in USFA's research plans. NIST, CPSC, and other public and private partners participated in the initial meeting.

Senior managers of NIST and USFA have discussed fire research and a basic agreement has been reached to continue national level meetings such as that described above. These open meetings will be hosted jointly by USFA and NIST. The outcome of these meetings will be a National Fire Research Agenda that will identify research needs across numerous areas of interest.

In the original legislation establishing USFA, Congress noted that USFA is in a unique position as the point of contact for individuals in the fire safety community to voice opinion about the needs of the fire safety community and fire safety of the American citizen. USFA continues to serve in this capacity. As the Federal fire focus, USFA utilizes NIST as one of its primary sources for conducting research sponsored by USFA. USFA believes that with the modest enhancement proposed in its fiscal year 2000 budget request, its fire research program will be revitalized. Much of this revitalization will be directed through the research facilities of NIST, CPSC and other public and private sector organizations.

Question. Do you plan to implement the recommendation to develop relationships with minority owned corporations to co-develop fire prevention campaigns designed specifically for at-risk groups? If so, how?

Answer. USFA has worked with and plans to continue to work with minority firms to develop public fire safety educational materials directed toward at-risk target audiences.

Groups with which cooperative efforts have addressed the at-risk populations include:

- International Association of Black Professional Fire Fighters
- Women in the Fire Service
- Telemundo Hispanic Television Stations
- Homung Community Representatives
- Congress of National Black Churches.

In addition, USFA has worked with other groups addressing at risk audiences:

- American Red Cross
- National Volunteer Fire Council
- Safe Kids
- Sesame Street
- Coalition for a Safer America: Advertising Council, American Association of School Administrators, American Trauma Society, Avrett Free & Ginsburg, Congressional Fire Services Institute, Fleishman—Hillard, General Federation of Women's Clubs, International Association of Black Professional Fire Fighters, International Association of Fire Chiefs, International Association of Fire Fighters, National Association of Elementary School Principals, National Consumers League, The National Parent Teacher Association, Consumer Product Safety Commission

USFA considers these partnerships as a means to address at-risk groups. When considering such partnerships, evaluation is made with regard to the knowledge and abilities of the potential partner within the proposed activity. When potential partners are identified or when partnerships are proposed, USFA seeks to maximize its limited funds through joint funding of the proposed project between all partners. USFA considers and evaluates all proposals to address fire related at-risk groups.

INSTITUTIONALIZING REFORMS

Question. What steps have you taken to institutionalize the steps necessary to focus the agency on readiness, response and recovery?

What steps has FEMA taken to institutionalize this focus for states and localities—to ensure they are “fit for duty?”

How often does FEMA do an assessment of local preparedness to respond to natural disasters?

What steps is FEMA taking to respond to the unmet needs states and localities have in being “fit for duty?”

Answer. The current State Capability Assessment for Readiness (CAR) process institutionalizes the emergency management assessment at the State level. It also serves as a model for development of local emergency management assessment instruments and processes. The CAR process was jointly developed in fiscal year 1996 by FEMA working in partnership with the National Emergency Management Association (NEMA), an organization of State emergency managers. The CAR assessment process, which determines “fitness for duty” is structured around thirteen (13) functional areas. These 13 functional areas are: Laws and Authorities; Hazard Identification and Risk Assessment; Hazard Management; Resource Management; Planning; Direction, Control and Coordination; Communications and Warning; Operations and Procedures; Logistics and Facilities; Training; Exercises; Public Education and Information; and Finance and Administration.

All 56 States, Territories and Insular Areas completed a CAR assessment during fiscal year 1997. A Report to the United States Senate Committee on Appropriations was developed and submitted to the President and Congress in December 1997, based on the results of the assessment process. The States were very supportive of

the CAR assessment process. They used the results to identify deficiencies in programs and activities, and modify strategic plans and budgets in order to address their needs and the needs of their localities. The results were also used in FEMA's Preparedness Partnerships and Agreement/Cooperative Agreement process.

Following issuance of the report, FEMA conducted Customer Feedback Workshops in early 1998 throughout the nation with State and regional counterparts in attendance. These workshops were designed to determine if the CAR was beneficial to States and to identify needed enhancements to improve the process and assessment instrument for the next scheduled assessment in the year 2000.

NEMA has requested the involvement of FEMA in the development of a local template assessment instrument and process similar to the current CAR. States will have the option to modify/customize the template for use in their localities. Some States, for example Michigan, North Carolina, and Florida have already begun using the CAR to assess the local governments' emergency management preparedness capabilities. The number of States conducting local assessments is expected to increase dramatically over the next review cycle with the issuance of the local template.

Finally, the CAR assessment instrument and process will incorporate the emergency management standards that are currently being developed under the auspices of the National Fire Protection Association (NFPA). The CAR is also being designed to serve as the assessment process supporting this standards and accreditation process.

Question. What is the status of the Stafford Act reforms that are designed to reduce disaster relief costs?

Answer. FEMA is now in the process of preparing a report to Congress that outlines the following actions that we are taking to reduce disaster relief costs:

The Office of Financial Management has been working to reduce disaster costs in three areas: (1) closing out old disasters; (2) implementing better monitoring of disaster expenditures; and, (3) standardizing Agency policy on reimbursing State management costs.

The Response and Recovery Directorate is proposing to reduce disaster costs through a number of initiatives: (1) publishing evaluation factors for major disasters that would adjust the financial indicator annually for inflation; (2) raising the \$64 threshold now used to recommend cost-share adjustments up to current dollars and adjusting that indicator annually for inflation; (3) realizing administrative savings through the new Public Assistance process; and, (4) clarifying and strengthening the insurance purchase requirements under the Public Assistance Program.

Question. In response to questions for last years hearing record, the agency noted that it had developed a series of 26 Essential Elements of Information (EEIs) that is planned to use to judge the severity, magnitude, impact and procedures for conducting a Preliminary Damage Assessment. What is the status of FEMA's work in reviewing the EEIs with other Federal departments and agencies that support FEMA under the Emergency Response Plan?

Answer. FEMA established an interagency work group to review and validate the existing Essential Elements of Information. Based upon this review, 25 EEIs were retained and minor changes noted. The revised EEIs will be published in the updated Federal Response Plan. In addition, the work group is developing baseline Information Collection Plans for several disaster scenarios. The baseline plan for a major hurricane is complete and work has been initiated on an earthquake information collection plan.

Question. What criteria has FEMA institutionalized to determine: what role FEMA will play in responding to a disaster; the extent of FEMA's involvement; what FEMA will pay for; and, whether FEMA will focus on rehabilitation, restoration or re-engineering?

Answer. In the past six years FEMA has undertaken a number of initiatives to institutionalize improvements in disaster response. Following are a few of the most significant accomplishments:

Strengthening and improving the Federal Response Plan so that the Federal government has a single well-recognized and effective means of responding to disasters and emergencies under the Stafford Act.

Creating a national Urban Search and Rescue capability that consists of 27 teams throughout the nation, and that can be activated immediately in response to disasters anywhere in the United States.

Improving our regulations, policies and guidance that clarify FEMA's role, the role of other Federal agencies, and the roles of State and local governments in responding to a disaster. This has been particularly effective in the Public Assistance Program, where a "Policy Compendium" clearly outlines what FEMA considers eligible

costs. This guidance is available both in booklet form and under FEMA's web site on the internet.

Developing and implementing a "New Public Assistance" program in concert with our State and local partners that simplifies and streamlines delivery of the program, and that keeps the end customer—the applicant—uppermost in our minds.

Improving our centralized teleregistration and processing capability so that we can provide assistance to individuals through a toll-free number that is activated immediately upon the declaration of a disaster. This centralized capability can provide assistance within just a matter of days, and includes a helpline to answer applicant questions and needs throughout the process.

PROJECT IMPACT/PRE-DISASTER MITIGATION

Question. What has been accomplished with Project Impact funds?

Answer. Project Impact funds have enabled community-based mitigation to become a reality in an exciting way—it has reached people nation-wide. With Project Impact funds, we have been able to add Federal leadership, support and investment in a national momentum toward creating disaster-resistant communities. Previous grant programs reached selected audiences for targeted purposes. Project Impact motivates communities to change the way they deal with disasters. It encourages communities to use the seed money provided as a tool to leverage additional funding from public and private partners. As a result of Project Impact, interest in and awareness of the need for pre-disaster mitigation has sparked an interest in communities which has resulted in 118 communities to date and over 600 community business partners.

Question. How many localities have received Project Impact grants?

Answer. As of March 31, 1999, eighty-seven (87) localities have received Project Impact grant funding. Fifty-seven (57) fiscal year 1997 and fiscal year 1998 localities/communities received Project Impact grants totaling approximately \$24,500,000 and thirty (30) fiscal year 1999 localities/communities received approximately \$8,400,000.

The communities will be able to draw down on these obligated dollars as their projects come to fruition. In addition, all of the Project Impact communities are utilizing "in-kind" and cash contributions of non-Federal partners before and after drawing on Federal funds.

Question. How much of the funding has actually been disbursed to the localities?

Answer. As localities/communities gear up for Project Impact (pre-disaster mitigation), they are initially using the leveraging of funds from businesses and other federal partners to accomplish many of their current projects.

Approximately \$32,900,000 was available for spending by the localities/communities on or before March 31, 1999, it is up to the locality/community to request the dollars needed for continuing operations. The funding mechanism is set-up so that communities can draw-down funds as needed (similar to writing a check on a bank account).

Our theory of providing seed money seems to be working. Thus far, communities are using leveraged dollars to accomplish their goals and projects.

Question. How much in non-Federal resources have been leveraged?

Answer. The 7 pilot communities have leveraged \$5,757,000 in FEMA invested grants into estimated partner contributions of \$26,000,000. This works out to a 452 percent return of the original investment. Of the 26 fiscal year 1998 communities which have signed Memorandums of Agreement (MOAs), 18 communities have reported leveraging \$9,000,000 in FEMA invested grants into estimated partner contributions of \$24,340,000. This works out to a 270 percent return of the original investment.

Question. How has FEMA measured the leveraging?

Answer. FEMA solicited leveraging information from each of the communities with signed MOAs, to determine what non-FEMA funds were leveraged against the initial FEMA investment. This information included total contributions received by each community, to include "in-kind" contributions, and benefits received from the leveraged contributions.

Question. What does FEMA do to ensure that local governments and businesses are involved and fulfill their commitments? Does FEMA have an outreach effort it conducts to get non-Project Impact local governments and businesses involved with pre-disaster mitigation efforts?

Answer. Community partnerships are vital to developing and implementing the initiative. Project Impact emphasizes community partnerships that include leaders from businesses, volunteer organizations, educational entities, and government. The local government is asked by FEMA to take the lead in convening and presiding

over planning meetings. FEMA encourages the local government to include the Chamber of Commerce as well as specific business representatives. FEMA also provides the names of other businesses that have participated elsewhere in the State or Region.

One of the criteria suggested to the States for their selection of a Project Impact community is to look toward those with good public-private partnership activities in place. This is necessary because Project Impact is self-directed by the community. It takes broad participation of community stakeholders to create consensus on actions that they need to take to make the community more disaster resistant. To date, Project Impact communities have partnered with over 600 public and private organizations.

Question. What is FEMA doing to streamline and speed up the environmental and historic preservation impact reviews done by FEMA at the regional level?

Answer. A variety of steps have been taken to improve and speed National Environmental Policy Act (NEPA) compliance reviews. Over the past several years FEMA has:

- hired Environmental Officers for each Region to speed determinations;
- offered a newly developed NEPA course in all 10 FEMA regions, and included State staff to better familiarize them with requirements of relevant statutes and improve their skills in conducting such reviews. This has greatly increased capability to process projects at the Federal and State levels;
- published an expanded list of NEPA categorical exclusions. Use of these new exclusions has significantly reduced the time required for environmental review for approximately 50 percent of the projects submitted by States for HMGP funding; and
- introduced the new “Managing State” concept for the management of Hazard Mitigation Grant Program funds, which includes additional education activities for State staff so that they can identify and assemble most of the environmental and historic review documentation necessary to fund a project.

Question. What is FEMA doing to study the cost-effectiveness of Project Impact? Is an analysis being done to study the reduced disaster cost incurred in Project Impact communities after they have completed mitigation projects?

Answer. FEMA will be studying the cost-effectiveness of Project Impact by: (1) applying cost-benefit analysis to structural projects; (2) annual data collection and evaluation of effectiveness of training, education, planning and administrative activities which do not lend themselves to traditional cost-benefit analyses; and (3) before and after comparisons of conditions and expenditures in the pre- and post-disaster environments in Project Impact communities.

In the past the greatest incentive for a community to implement mitigation has typically been after a disaster. In order to change this trend and increase mitigation activity as a proactive rather than reactive solution, the Project Impact initiative was designed not only to help communities address current mitigation project needs but to encourage the community to incorporate natural hazard loss reduction as a continuing part of the community culture and activity. Therefore, the Project Impact grant is intended not only as a means to address immediate community mitigation needs but also as a way of leveraging funding and resources from other partners, and an incentive for becoming proactive about emergency management. As a result, community Project Impact leaders have been given some discretion on how the funds will be used. Specifically, this discretion allows the grant to be used for training, education, and initiative-related administration activities that do not readily lend themselves to a traditional cost-benefit analysis. However, when successfully implemented these activities can increase capability and the general public’s knowledge of mitigation. A well-informed community can lead to important zoning and/or bond issues that provide tremendous loss reduction benefits.

To assess the effectiveness of this strategy, FEMA is also implementing an evaluation process that will establish a baseline on the number of structures and infrastructure at risk as well as the current level of mitigation activity in the community at the time it begins the Project Impact process. Then each year for the next five years the community’s progress will be evaluated to determine the reduction in the number of structures and the extent to which infrastructure is at risk, increases in mitigation education and training activities in communities, and activities to foster proactive business and/or government actions. The data collected will be used to make necessary policy changes as well as to demonstrate the success of strategy implementation.

EMERGENCY FOOD AND SHELTER PROGRAM

Question. What is your assessment of the EFSP program's effectiveness of meeting compelling human needs? What criteria are used to determine the effectiveness of the program?

Answer. FEMA's assessment of the effectiveness of the program is based on the number of meals and nights of shelter provided each year. These numbers equate to millions of people who were hungry or having to sleep on the streets, being fed and sheltered indoors. It has also helped hundreds of thousands of the working poor with rent, mortgage and utility payments to prevent evictions, which could lead to homelessness. Providing individuals and families, young and old, with these basic necessities of life substantiates the effectiveness of the program.

Periodically, surveys of EFS Local Boards and funded agencies are conducted to get their insights on the program's effectiveness. Data from the most recent survey is being compiled. Preliminary information indicates that while the EFS Program has been effective in helping to meet the food and shelter needs of many, the need is still there. Agencies report an increase in the number of working families seeking mass shelter, food and other emergency assistance.

Question. What standards/criteria are used to determine local needs?

Answer. The standards/criteria used to determine what the local needs are is made at the local level by a Local Board. Each jurisdiction, (city/county) that is eligible to receive EFSP funding must constitute a Local Board. The Local Board, whose members consist of a homeless or previously homeless person and representatives from charitable, voluntary and local government organizations from within the community. The Local Board decides how the EFSP funds will be divided to meet the unmet needs and what community organizations can best provide the services to meet those needs.

Question. How involved are local governments in determining which local agencies will receive local EFSP funding?

Answer. Each Local Board is required to have a representative from the local government. The local government representatives, in partnership with the other board members, determine which agencies to fund. The purpose of the Local Board is to ensure coordination of government and community resources that already exist. The EFSP funds are used to supplement and expand all ongoing services.

Question. Has FEMA done an assessment of unmet local needs in terms of providing the types of services eligible for EFSP funding?

Answer. Yes. The EFSP program does periodic assessments/surveys of Local Boards and funded agencies to determine what the local needs are, the effectiveness of the EFS Program funds in meeting those needs, and what the unmet needs are. Information is being compiled on the most recent survey that was conducted during November 1998. Preliminary results indicate that the most significant unmet need is in the area of rent, mortgage and/or utility assistance due to an increase in the number of working families seeking assistance.

This has resulted in an increase in the number of families seeking overnight accommodations in mass shelters.

Question. Do EFSP funds leverage any local or private funds?

Answer. Yes. Numerous resources are leveraged at the local level in the EFS Program. Indeed, there are many in-kind resources leveraged in addition to facilities, utilities, staffing provided by the agencies, such as administrative costs, private donations from foundations, philanthropic organizations and other private donations. Some communities also leverage other funding to provide additional resources for expenditures not funded through this program. They include medical assistance, security deposits, and more than one month's rent, mortgage or utility payments. Many local grocers and restaurants also donate food and supplies, while hotels and motels donate overnight accommodations free or at a greatly reduced cost.

Question. Does FEMA work with other agencies that provide funding for similar services to coordinate delivery efforts at the local level?

Answer. Yes, it is imperative that the EFSP coordinate with other agencies since the program is supplemental in nature. The EFSP program supplements the ongoing efforts of agencies to provide shelter, food and supportive services. The coordination with other federal, state and local agencies are a must in order to ensure the efficiency and effectiveness of the assistance to be provided. For instance, the US Department of Agriculture provides canned goods and other staples of food to food banks and pantries, while funds from the EFSP are used to purchase fresh vegetables. The EFSP program provides one month's rental payment and local funds are used to pay the security deposit.

Question. Have you given any thought to the potential for problems associated with Y2K (such as civil unrest or utilities malfunctioning)?

Answer. Based on the President's Council for Year 2000 Conversion First Quarterly Summary of Assessment Information, it is anticipated that there will be no major catastrophic impacts on public safety or health, or on key economic and infrastructure functions in the U.S. during the transition from 1999 to the year 2000. However, there may be numerous localized impacts of limited duration occurring simultaneously across the country. The Y2K conversion presents the emergency management community with a unique challenge. It is primarily a technological problem with well-known solutions. Based on current assessments, Y2K need not result in major disruptions. The all-hazards practices and techniques emergency managers routinely use for other disasters and emergencies should well serve our nation in planning for the potential consequences of Y2K conversion.

The Federal Response Plan (FRP) will serve as the foundation for coordinating any Federal response to the consequences of Y2K disruptions. The FRP describes the structure by which the Federal Government mobilizes emergency resources and delivers disaster assistance. It is a proven framework for responding to hurricanes, floods, earthquakes, and other disasters and emergencies that overwhelm State and local governments.

With respect to civil unrest, each State has primary responsibility for law enforcement, using State and local resources, including the National Guard. As such, the FRP makes no provision for direct Federal support of law enforcement functions in a disaster or emergency. In the event that State and local police forces are unable to adequately respond to a civil disturbance or other serious law enforcement emergency, a Governor may request Federal military assistance through the Attorney General. Procedures for coordinating such law enforcement responses are set forth in the Department of Defense Civil Disturbance Plan (Garden Plot).

With respect to utilities malfunctioning, the Department of Energy believes that the electric grid is robust and stable and that any electric service problems that may occur will be localized and quickly addressed. In addition, it is expected that interruptions of the telecommunications infrastructure (major interchange carriers and primary local exchange carriers) will be minimal to nominal. In other utility areas, large and medium systems are expected to be compliant; smaller systems may be more problematic.

Question. Does FEMA have a readiness, response and recovery plan to deal with any of the potential chaos that may occur in relation to Y2K? Is FEMA working with other Federal agencies, state and local governments to develop these types of plans?

Answer. Readiness.—FEMA has published, as part of its State and local outreach activities, guidance entitled "Contingency and Consequence Management Planning for Year 2000 Conversion: A Guide for State and Local Emergency Managers." This Guide is meant to assist States and local emergency management organizations in preparing Y2K contingency and consequence management plans. It provides information for identifying potential problems, conducting risk assessments, keeping the emergency management organization operations, informing and assisting the public, and developing and implementing Y2K consequence management plans. It is being as widely disseminated as possible to the emergency management community in hard copy and electronic format and has been posted on FEMA's website. Emergency Operations Plans, supplemented by the material suggested in this Guide, should form an effective basis for Y2K contingency planning and consequence management for States and local governments. Training to supplement the Guide will be available for State and local emergency managers.

Response and Recovery.—FEMA is developing a special Y2K Operational Supplement to the Federal Response Plan as a prudent planning measure. The supplement will augment the current planning approach in the Federal Response Plan and address any unique circumstances associated with the unprecedented nature of the Y2K phenomenon. It will assess the Y2K risk and possible impacts; set forth planning assumptions; describe Federal monitoring operations and early warning systems; establish an expanded information and reporting function to ensure expeditious collection, analysis, and dissemination of situation assessments; and identify any additional resource requirements.

MODERNIZING FEMA'S FLOOD HAZARD MAPPING PROGRAM

Question. How long will it take FEMA to update its maps without any additional resources provided for the effort?

Answer. Without additional resources, the existing backlog of outdated maps will never be eliminated. It is estimated that 19 percent of the current inventory already has outdated flood data, and approximately 4 percent of the 100,000-map panel inventory deteriorates each year. Because of finite funding, FEMA is able to update only 2 to 3 percent of the inventory a year.

Additionally, the majority of the inventory is in a manual format. The modernization plan calls for a 5-year catch-up period during which 6 percent of the panels will be updated to reflect current flood data each year. Approximately 16 percent of the panels with adequate flood data but needing map maintenance and conversion to a digital format will be updated each year for 5 years. After the backlog of outdated maps is eliminated and the inventory is converted to digital format, adequate funding (about twice present levels) must be provided to avoid accumulating another backlog.

Question. How much does it cost the government to go with outdated maps?

Answer. It is estimated that the potential flood damages avoided over a 50-year period as a result of FEMA's map modernization plan will be approximately \$26 billion more than would result at the current rate of mapping. If new floodplain mapping was stopped altogether, we project there would be an estimated \$45 billion more in damage than would occur under the modernization plan. A significant portion of reduced losses will result in decreased Disaster Relief Funding.

Question. Who pays for the maps now and who benefits from the maps?

Answer. The NFIP mapping program is presently funded from two sources:

Federal Policy Fee.—A Federal Policy Fee of \$30 is charged to each of the approximately 4 million flood insurance policies sold. This funding source accounts for 90 percent of the funding for the mapping program. The Federal Policy Fee also pays for other activities, including floodplain management and flood mitigation assistance, as well as administrative expenses for the program; and,

Fee Charge System.—Fees are charged for reviewing and processing map revision requests, and for printing and distributing the maps and engineering back-up data. The Fee Charge System accounts for approximately 10 percent of the funding for the mapping program.

Although only a minority of taxpayers currently pay for the flood mapping program, all taxpayers benefit. The general public benefits through reduced disaster relief costs and reduced loss of life and property when floods occur. With the accurate identification of existing flood hazards, new construction can be designed to avoid the floodplain altogether or, at the least, minimize the potential flood loss by implementing the minimum Federal floodplain management requirements. This benefits all homeowners, business owners, the insurance industry, and other groups. Additionally, existing residences and businesses situated in the floodplain can be retrofitted or their contents relocated to minimize flood losses.

Question. What is the status of FEMA's discussions with the housing industry and advocacy groups regarding the proposed mortgage transaction fee?

Answer. The Coalition on Permitting Efficiency attended the recent (March 1–2, 1999) meeting of the Technical Mapping Advisory Council—a congressionally mandated advisory group representing various map user constituencies. This meeting provided FEMA with the opportunity to consult the Coalition, which represents 24 different associations and industries, including the National Association of Realtors, the National Association of Homebuilders, and the National League of Cities. In addition, FEMA has recently had conversations with the National Flood Determination Association.

Question. What is the status of FEMA's Request for Proposals for new companies to update maps (TEC Contracts)?

Answer. Solicitation EMW-1999-RP-0022, "Engineering Review and Revision of Flood Insurance Maps" was printed in the February 23, 1999 issue of the Commerce Business Daily (CBD) and was posted in CBDnet on February 19, 1999. All information required by this solicitation was due to the Contracting Officer no later than 4:00 p.m. local time in Room 350, FEMA, 500 C Street, SW, Washington, D.C. 20472, on March 31, 1999. FEMA is currently reviewing the qualifications of the offerors and anticipates announcing a selection by September 1, 1999.

Question. What criteria will be used to evaluate companies applying for the TEC contracts?

Answer. Selection will be in conformance with the provisions of Public Law 92-582 and based on the following criteria and evaluation points, in descending order of importance (Total points = 180):

(1) Specialized, nationwide experience of firm and key personnel in hydrology, hydraulics, flood risk assessment and floodplain mapping for riverine environs (Max. pts. 25).

(2) Demonstrated experience using Geographic Information Systems, with emphasis on spatial data production, analysis, and creation of soft and hard copy flood hazard and related products that are in accordance with relevant (i.e. FGDC, FEMA) standards: (a) Experience and/or innovation in the area of automated hydrology, hydraulics and floodplain delineation (0–5pts.). (b) Experience in and/or capability to produce digital and print-on-demand map products complete with metadata (0–5pts.). (c) Experience in effectively communicating and supporting local governments and private citizens in issues related to spatial data information and technologies used in hazard identification and risk assessment (0–5pts.). (d) Experience in successfully evaluating spatial data (base cartography, imagery, etc.) from a variety of sources for quality, completeness and accuracy and integrating them into a systematic process (system) to accomplish tasks related to this rating factor (0–5 pts.). (Max. pts. 20).

(3) Demonstrated capacity to accomplish the work in the required time and ability to direct, manage, and control the entire project. (Max. pts. 20).

(4) Past performance on contracts of comparable size with government agencies and private industry in terms of: (a) cost control (0–5pts.), (b) quality of work (0–5 pts.), (c) compliance with performance schedules (0–5 pts.). Submittals must include references' names, affiliations, and phone numbers (Max. pts. 15).

(5) Experience of firm and key personnel in the coordination of, public relations/outreach involving, and facilitation of, technical issues with local officials, private citizens, Federal and State entities, and private industry (Max. pts. 15).

(6) Experience of firm and key personnel demonstrating the capability to maintain adequate product quality control of contracts of comparable size (Max. pts. 10).

(7) Specialized experience of firm and key personnel in flood risk assessment and floodplain mapping of coastal environs, including analysis and mapping of coastal and Great Lakes erosion zones (Max. pts. 10).

(8) Demonstrated ability to deliver timely and effective guidance and technical assistance to both public and private sectors involved in various stages of maintenance and production of flood hazard mapping (Max. pts. 10).

(9) Demonstrated ability to provide state-of-the-art technical guidance and advice to transform existing methodologies and processes, and to keep pace with future technological advancements (Max. pts. 10).

(10) Experience and knowledge in the development and maintenance of Internet sites, including the distribution of spatial and text data via File Transfer Protocol (FTP) and the World Wide Web (Max. pts. 10).

(11) Demonstrated experience in developing and applying new hydrologic, hydraulic, and general engineering approaches to unique or specialized flood risk situations (Max. pts. 10).

(12) Experience and/or capability in current remote sensing technologies (i.e. LIDAR, IFSAR, GPS) used to develop high-resolution digital elevation models (Max. pts. 5).

(13) Experience of firm and key personnel in manual cartographic production (Max. pts. 5).

(14) Demonstrated capability in the identification and assessment of hazards and risks associated with erosion, hurricanes, alluvial fans, earthquakes, tsunamis, wind, and unsafe dams (Max. pts. 5).

(15) Experience of firm as a technical review contractor for Local, State, and Federal or other Architect-Engineering firms (Max. pts. 5).

(16) Experience and capability to design, build, maintain, and operate library reporting and storage systems for both manually and digitally produced spatial text data, and the experience and capability to retrieve the data from these systems in both hard copy and electronic format (Max. pts. 5).

Question. Does the Director believe that new and innovative approaches and technologies are needed in the current map modernization process?

Answer. The Director supports the new and innovative approaches and technologies that are a part of the modernization plan. We have already begun implementing a number of these new approaches. For instance, we have re-engineered the flood study process to include more up-front coordination with the community, state, and other Federal agencies. This up-front coordination will involve working with the community to identify all flood hazard data it has available, to learn of any flood-related concerns and flooding problems, and to identify areas of anticipated development. In addition, FEMA will adopt a more aggressive public outreach strategy to better inform the public of the risks of flood hazards and explain why the maps change and why they are important.

Another example of an innovative approach that we are currently implementing is the Cooperating Technical Communities (CTCs) program, which increases community involvement. Specifically, the mapping modernization plan will proactively pur-

sue strong Federal-state-regional-local partnerships through a variety of cooperative programs. In recent years, many states, communities, and other local entities, at their own expense, have invested considerable resources in identifying and updating flood hazard information. The intent of the CTC program is to facilitate and capitalize on these state and local efforts and coordinate them with FEMA's flood mapping efforts rather than having them simply occur on an ad-hoc basis. This will result in strengthened mapping and floodplain management programs and, thus, should reduce flood losses and disaster assistance.

Another new approach supported by the Director involves partnerships between FEMA and other Federal agencies. For instance, FEMA is establishing a partnership with USGS for assistance in developing and maintaining base maps. FEMA is also working with other Federal agencies that develop mapping, elevation data, and flood studies. For instance, FEMA is establishing a partnership with NGS for assistance in establishing and disseminating geodetic data. FEMA is also establishing a partnership with the U.S. Fish and Wildlife Service for improved mapping of Coastal Barrier Resources System areas. In addition, FEMA's new digital map products will be compatible with Federal Geographic Data Committee standards and will support implementation of the National Clearinghouse for Spatial Data and the National Spatial Data Infrastructure. Finally, FEMA will work with NASA, the USACE, and the NRCS to use state-of-the-art data collection and hazard identification methodologies.

Finally, the Director believes technological advances will make a significant contribution to the flood mapping program. Currently, we are evaluating LIDAR (Light Detection and Ranging) and IFSAR (Interferometric Synthetic Aperture Radar) to determine the costs and accuracy of these remote-sensing technologies. They hold the potential for cost effectively performing flood modeling and mapping.

We are also exploring the use of automated GIS-based hydrologic and hydraulic models integrated with digital watershed models and digital elevation models, which may or may not be built from LIDAR/IFSAR and Global Positioning System elevation data. GIS-based hydrologic and hydraulic analyses create "living" models that are easy to revise as conditions change. They are also a powerful tool for communities to quickly evaluate the impacts of various watershed and floodplain developments.

Digital maps will allow us to distribute the maps via CD-ROM and on the Internet. They will also enable print-on-demand technologies.

QUESTIONS SUBMITTED BY SENATOR LAUTENBERG

Question. I understand from churches, charities, and local governments that, because their resources are limited, they are having to turn people away who are hungry and homeless. As you know, much of the funding for these programs comes directly from the federal Emergency Food and Shelter Program (EFSP). How do you respond to this?

Answer. Many churches, charities and local governments (including the groups mentioned above) which have had to turn people away are recipients of this supplemental program. The Emergency Food and Shelter (EFS) National Board Program provides supplemental funding to over 10,000 nonprofit and local government agencies who provide emergency financial and food assistance to people in need. The preliminary results of a recent survey of EFS funded agencies indicates an increase in the number of working families, elderly and unaccompanied children that are requesting food, rent and/or utility assistance. This increase has resulted in the depletion of EFS program funds much earlier than in past years. As a result, individuals and families are receiving reduced assistance and in some cases, turned away due to lack of resources. Agencies are encouraged to coordinate their resources and refer clients to other organizations that have resources. It is also hoped that the request for additional funding for the EFS Program will help to decrease the number of people turned away for food or shelter.

Question. The Administration has included an additional \$25 million for EFSP in its fiscal year 2000 budget. Do you have a sense of what this money could purchase at the local level? Is this in your opinion, a good investment?

Answer. The increase of \$25 million in the EFS Program budget will enable agencies to provide approximately 6,653,968 additional meals, 964,309 additional nights of shelter, and pay 89,427 additional rents and utility bills to assist with keeping people sheltered in their homes.

Whenever we can help the most vulnerable citizens in our country, in my opinion, it is a good investment. The saving of lives and helping people to gain a sense of well-being by providing the basic necessities in life is a good and sound investment.

While the EFS program has been successful in its goal of providing supplemental emergency funding expeditiously and efficiently to local agencies, the need for emergency food and shelter is still evident.

Question. Approximately what percentage of the administering agencies under EFSP are religiously affiliated?

Answer. During the past two fiscal years, approximately 30 percent of the funded agencies classified themselves as religiously affiliated. These organizations included, but are not limited to Catholic Charities, Churches and Ministerial organizations, Jewish Federations, The Salvation Army, and St. Vincent de Paul Societies.

Question. I understand that of all the programs that you administer, the EFSP is one of the best. Is this correct?

Answer. While I am proud of the hard and caring work that all FEMA employees provide to people during some of the most difficult times in their lives, the EFS program does stand out as one of FEMA's exemplary programs. This can be attributed to the partnerships that have been forged at both the national and local levels with charitable and voluntary organizations, homeless and hunger advocates and local governments in the administration of the program.

Question. Can you describe who you are helping with the EFSP program?

Answer. The EFS program helps families and individuals, both working and unemployed, who are hungry, homeless or who may be facing homelessness. This includes the elderly, children, veterans, Native Americans, the disabled, and persons with mental illness.

Question. What are the administrative costs of the EFSP program? I understand it is less than 4 percent. Is this correct?

Answer. While the authorization for the EFS program allows for a 5 percent administrative allowance, only 3.5 percent has been appropriated since the McKinney act authorization in 1985. This amount is divided among the organizations responsible for the implementation of the program at the national, state, local, and agency levels. Each recipient of these administrative allowances are judicious in their use of the funds, with many choosing to put their allowance back into the program to be used for direct services. Over the past several years, less than 3 percent has been used for administrative costs.

QUESTION SUBMITTED BY SENATOR BYRD

Question. West Virginia University has indicated an interest in the Disaster Resistant Universities initiative in the fiscal year 2000 budget request for the Federal Emergency Management Agency. West Virginia University facilities, both directly and indirectly, through its extension programs throughout the state, have been impacted in the past by natural disasters. How do you believe that the Disaster Resistant Universities program can help West Virginia University and the people of West Virginia. Please elaborate for the record.

Answer. As you know, West Virginia University (WVU) contributes greatly to the lives of West Virginians. Because of the vital role its' regional campuses, extension offices, agricultural, aquacultural, and health science facilities play in all 55 counties of West Virginia, WVU represents the best in American land grant universities. A fully functioning WVU is critical to the economy, education, and quality of life for the entire State.

Unfortunately, WVU has not always been fully functioning at the times West Virginia has needed it most—after a disaster—because the university is vulnerable to the same natural events, including floods, snow and wind, that afflict the rest of the state. In the past five years alone, WVU county extension offices were forced to close for a total of ten weeks due to natural disasters. While these closures occur at times of greatest need, they can also adversely affect WVU's research activities that contribute to West Virginia industries, such as coal mining, agriculture, and chemical production, among others.

The Disaster Resistant Universities initiative proposed in FEMA's fiscal year 2000 budget request could help WVU protect itself, and the dozens of communities surrounding its facilities and dependent upon it, against natural disasters. This program will make available to WVU the expertise of universities around the country that have experienced disasters or have exhaustively planned for them. The DRU program will also enable WVU and other research universities to work with Federal research agencies to protect the taxpayer's substantial investment in research in these institutions.

Additionally, by encouraging universities to work with FEMA, state governments, local communities and the private sector (using the Project Impact model), this program will give universities like WVU the tools to better serve the people of their

state immediately following a disaster. WVU will better plan its emergency response, and be better able to provide healthcare, engineering advice, and other services to West Virginians.

The actual mitigation work at West Virginia's campuses and extension facilities could be funded through a national matching fund that has been proposed by universities. It has been demonstrated that the appropriation of such funds will achieve long-term savings, particularly at universities, where the human and economic costs of disaster recovery are very high as compared to the costs of pre-disaster mitigation. While this program would use Federal money due to the national interest in protecting research and education, it is important to note that Federal resources alone cannot solve the problem, but should be used to leverage the support of other university stakeholders.

The Disaster Resistant Universities initiative requested in FEMA's budget will enable university leaders to form public-private partnerships to assess and reduce the vulnerability of WVU and the state as a whole. Should a fund be established, it would provide resources to universities on a matching basis to mitigate their potential disaster losses. By protecting one of West Virginia's most vital resources, its primary public university, this program will prevent the next major flood, snow storm, or tornado from becoming a disaster.

SUBCOMMITTEE RECESS

Senator BOND. The hearing is recessed. Thank you.

[Whereupon, at 11:04 a.m., Tuesday, March 4, the subcommittee was recessed, to reconvene subject to the call of the Chair.]

**DEPARTMENTS OF VETERANS AFFAIRS AND
HOUSING AND URBAN DEVELOPMENT AND
INDEPENDENT AGENCIES APPROPRIATIONS
FOR FISCAL YEAR 2000**

THURSDAY, MARCH 11, 1999

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, DC.

The subcommittee met at 9:35 a.m., in room SD-138, Dirksen Senate Office Building, Hon. Christopher S. Bond (chairman) presiding.

Present: Senators Bond, Kyl, and Mikulski.

CORPORATION FOR NATIONAL AND COMMUNITY SERVICE
STATEMENT OF HON. HARRIS WOFFORD, CHIEF EXECUTIVE OFFICER
ACCOMPANIED BY:

**WENDY ZENKER, CHIEF OPERATING OFFICER
HON. LUISE S. JORDAN, INSPECTOR GENERAL
KAREN MOLNAR, KPMG AUDITOR**

STATEMENT OF SENATOR CHRISTOPHER S. BOND

Senator BOND. Good morning. The Subcommittee on VA, HUD and Independent Agencies will come to order. This is the subcommittee's second hearing on the fiscal year 2000 budget. This morning our subcommittee will hear testimony on the President's fiscal year 2000 budget request for the Corporation for National and Community Service and the Department of Treasury's Community Development Financial Institutions or CDFI Fund.

We will first hear from the Corporation's chief executive officer, Senator Harris Wofford, who will be followed by the Honorable Luise Jordan, the Corporation's Inspector General. The subcommittee will then hear from Ms. Ellen Lazar, director of the CDFI Fund.

The Appropriations Committee and the VA Subcommittee will face another year of very difficult budget decisions as I have indicated previously. Under the budget caps imposed under the 1997 Balanced Budget Act, the Federal Government will have \$29 billion less to spend for discretionary activities in fiscal year 2000 than what was available last fiscal year.

Unfortunately the President's budget busted these caps by about \$18 billion by assuming offsets from tobacco revenues, Superfund taxes and other gimmicks which simply will not fly. This makes

our job quite a bit harder because it raises expectations that we simply will not be able to accommodate reasonably within the VA/ HUD subcommittee because of shortfalls in the President's request.

The largest such shortfall is within the VA medical care appropriation request, which would be frozen at current levels. For example, the administration request for VA does not account for the new costs of treating patients with Hepatitis C. The VA estimates this problem alone will cost at least \$500 million next year.

Further, the subcommittee will be faced with the annual need to fund Section 8 housing assistance contract renewals which aid low-income families including the elderly and disabled. Once again we will be forced to make some difficult trade-offs in order to accommodate such dire needs.

Moreover, despite the overall decrease in the VA/ HUD account under the President's budget, the President has requested a significant spending increase for the Corporation. Specifically, \$545.5 million has been requested, an increase of \$110 million over the fiscal year 99 appropriation.

Within the President's budget request the Corporation would expand the AmeriCorps Service of 53,000 to 69,000 by the year 2000, reaching a goal of 100,000 in fiscal year 2002. In addition, the President is proposing to expand AmeriCorps to high school students, expand service-learning programs for school-age youth and increase opportunities for seniors to serve.

The Corporation certainly has a number of admirable, important goals such as improving child literacy. That is an area where I am a strong advocate. Nevertheless, there are many significant issues concerning the implementation of the program.

First, it will be extremely difficult to fund an increase in spending for this agency when this subcommittee will be faced with funding demands for priorities such as veterans' medical care and the renewal of HUD Section 8 housing assistance contracts.

Second, providing an increase in funds to an agency that has been fraught with significant management problems is very troubling. I have repeatedly expressed concerns about the Corporation's management. Yet it continues to be a problem every year.

I had hoped to hear the OIG's audit of the Corporation's financial statements at this hearing. KPMG, under contract to the OIG, has been conducting an extensive, costly and time-consuming audit of the Corporation's fiscal year 1998 financial statement. Unfortunately, the completion of the audit has been delayed, primarily due to the flaws in the Corporation's balances related to grants. I am very disappointed that the Corporation's books cannot yet be audited. This has been a priority concern of the subcommittee since the inception of the Corporation.

We added a significant amount of money—I believe it was \$3 million—last year to gain a handle on these problems. It remains a priority. We do know, however, that KPMG's work will reveal material weaknesses in at least eight areas of the Corporation's financial operations. Actually that is two more than the number of material weaknesses that was reported last year. Many of these problems are the same as those that have been reported on since the first audits of the Corporation were conducted.

I also am concerned about a recent audit finding of surplus funds in the National Service Trust account. Based on an extensive analysis of actual usage of education awards, the Corporation had \$357 million in trust investment to fund the education award liabilities, which is estimated to be \$161 million, which means that there may be \$196 million in projected surplus funds in the trust account.

Frankly, this raises questions about the Corporation's book-keeping and ability to forecast accurately its true funding needs. I would like to hear more about this surplus from the auditors of the Corporation and I would like the Corporation and the auditors to explain why such a large surplus exists and whether these surplus funds represent excess amounts of what is actually needed to meet all the Corporation's education award liability.

In addition to ensuring auditable or clean books, the Corporation must also correct its management problems. Having auditable financial statements is just one of the first steps of management reform. I believe that the problems I have just cited prove that point.

Last year we agreed to provide additional funds to help the Corporation achieve better financial management. We had hoped and continue to hope that these funds will, indeed, be put to the best use in addressing the Corporation's management problems. Unfortunately, the Corporation has already fallen behind the time frame directed under last year's appropriations.

Because of these shortfalls, I must say I am disappointed with the Corporation's progress to the commitment to that mandate. Nevertheless, I expect the Corporation to comply with all the legislative mandates and to do so in a timely manner.

The Corporation's slogan is getting things done. I credit the Corporation for assembling a positive action plan to address its management and administrative problems. However, it is just a plan and many of its corrective actions have not been implemented.

In fact, some of its planned time frames have already slipped and it will likely be another 6 to 9 months before any real results will be achieved in the plan. Therefore, it will be a while until the Corporation is able to demonstrate if it has adequately addressed its problems. I am still waiting to see if the Corporation can, quote, get things done, close quotes.

I cannot emphasize enough that we have to be able to tell our colleagues in the Senate and the American taxpayers that we know how the money is being spent and it is being spent in compliance with the applicable laws and regulations.

Until the Corporation has demonstrated the ability effectively and efficiently to manage its existing resources and programs, it will be very difficult for me to support any expansion of funding for the Corporation.

Now it is my pleasure to turn to my ranking member, Senator Mikulski for her statements and comments.

STATEMENT OF SENATOR BARBARA MIKULSKI

Senator MIKULSKI. Thank you very much, Mr. Chairman. And I want to welcome the National Service CEO, Senator Harris Wofford, and the IG, Luise Jordan, for our first panel, as well as the chief operating officer.

As you know, I was one of the prime movers of this program because I think volunteer programs highlight what is best about America. Volunteerism is the backbone of your communities, from preserving the safety net for seniors to helping get behind our kids and our teachers. The whole idea behind national service was to link our values with our public policy. And when the legislation was passed, we knew it was going to be in many ways breaking new ground, using at the same time existing values.

Now the legislation is up for reauthorization, and not only for our annual appropriation, but the legislation is up for reauthorization. And I believe just like we have to show fiscal accountability, Mr. Chairman, we have to say what did this program do and was it worth it?

So what I want to focus on in my questions was to go back to the original intent of national service and then ask about very specific questions now on the impact of the program. The whole idea of National Service was to link our values with public policy. It was also to say "Yes" to the young people who were saying "No" to drugs and alcohol and other evils in our society.

And we also wanted to provide an opportunity structure, by providing a way for many of them to reduce their biggest debt or their first mortgage, their student loan or to accrue money to be able to go on to higher education. But this program was founded on the concept that for every right, there is a responsibility. For every opportunity, there is an obligation and, therefore, to be involved in the community.

The other was to make sure that both the volunteers became—be rekindled with the concept of habits of the heart, but also to spark other volunteer efforts in the community. The point is that National Service was not designed to be a social welfare program, nor a giveaway program, but to really recruit people to serve in their communities and be able to have a voucher—this is the National Service part—to go onto their communities.

Now, I never really liked the way this program was launched. I knew that it was rocky in terms of its administrative structures because it was new, because it had to take on some of the old ACTION programs, and essentially it was launched in many ways like a rock concert. It was a lot of show biz, a lot of fanfare, a lot of volunteers were just parachuted into communities. And I am not so sure that the core concept of good, solid training before they go to the community, real projects focused on five areas like public safety and education and so on for them to do or closely adhere to. This is not about the volunteers. It was about this.

Often when this program has been in trouble what we heard were anecdotes, and we would have pep rallies and wonderful young people showing up with baseball caps who wanted to give me T-shirts. We are not in a post-T-shirt environment.

And what we need to know is really what has gone on, because I think it has been difficult to separate out the fiscal accounting problems and then the show biz. Somewhere in the middle is hard, solid information about how many volunteers have we recruited, how many have stayed in the program, what have they done once they left the program, did they use the program to further their higher education? Have they formed alumni associations like what

the Peace Corps has done, where they continue—the Peace Corps is a state of mind as well as a service that had been given, where they go on and continue to serve in their community for a lifetime. That is what I want to know about, is the volunteers.

The next thing I want to know about is what happened in communities. Sure, you can run in and tutor. But did it have the same adhesive quality as me reading Dr. Suess to a 4-year-old? That is a nice photo op for me, but I do not know if it is a learning opportunity for a child. And it is great if we tutor, but the question is at the end of the day, backing up hard working teachers or have we advanced education, have we advanced public safety, have we recruited and been able to deliver immunization and have our volunteers, because of what they do, generated more volunteers in local communities?

So those are the kinds of results. Because if I do not have fiscal accountability and real results, it is going to be very hard to both get the program funded at the level the President wants and also to be able to do the reauthorization.

With the end of this century and looking forward to the millennium, I hope this could be one of the programs that really take the values of the old century into the next century, but at the same time use the excellent knowledge that we have about maximizing volunteer resources, sound fiscal accountability, so that—so that we really do have an opportunity structure.

I look forward to hearing this testimony and want to thank the administration of the National Service for their cooperation with this committee. But I think this is kind of a crucial year for National Service. We are either going to go on or we are going to sputter out. The two significant issues that will determine about whether we go on and have a momentum that I hope the program has, is sound fiscal accountability and a clear direction of where we have been. And a direction of where we are going with the idealistic young people who sign up, that we do not let them down, we do not let communities down and we do not let taxpayers down.

In many instances I look forward to the quantitative and other data that will help me continue to be the strong advocate that I am for this program. Thank you.

[The statement follows:]

PREPARED STATEMENT OF SENATOR BARBARA A. MIKULSKI

Good morning Mr. Chairman and thank you. I want to welcome National Service CEO Harris Wofford and Inspector General Luise Jordan for our first panel. I am proud to be called the godmother of National Service. I think volunteer programs highlight what is best about America. Volunteerism is the backbone of our communities, from preserving the safety net for seniors to keeping our communities clean and getting our kids ready to learn.

And I also want to welcome CDFI Director and Maryland native Ellen Lazar for our second panel.

NATIONAL SERVICE/OVERVIEW

The whole idea behind the National Service program was to link our values with our public policy. We wanted to say yes to the young people who say no to drugs and alcohol and many of the other ills in society.

We wanted to provide them with an opportunity structure by providing a way to reduce what for many people is a first mortgage—their student debt. The specter of high student debt prevents many young people from pursuing a college education.

Second, we wanted to link responsibility to the opportunity, essentially to reinforce the old civic virtues that needed to be rekindled. The program is designed to give members an experience that is meaningful for them and the communities where they work.

The point is that National Service was not designed to be a means tested program. It was meant to provide a broad base of young people from a variety of social classes and backgrounds an opportunity to serve their country through sweat equity work in their communities.

FINANCIAL MANAGEMENT

Since its inception the organization has been plagued with issues that have caused me concern, and I know a great deal of concern for other Members. The issues have centered around sound financial management, and ensuring accountability that directed everyone to focus on accomplishing the mission which I stated earlier.

Mr. Chairman, this is a serious concern of mine. Management issues revolving around the financial accountability and the audibility of records have persisted even through changes in personnel. I understand that progress has been made, and I commend the work of Chief Operating Officer Wendy Zinker, but there is still some serious work to be done.

This morning, I know you will direct many questions to the corporation regarding financial management and accountability. I will be interested to hear the responses.

MISSION FOCUS

This morning I want to focus on mission. I want to know what exactly we have gotten for our money. I want to know if we have gotten the “equity” part of the sweat equity that was intended.

Stories about the changed lives of members and their new perspectives on life are important. But this morning, I want to talk specific, quantifiable facts.

I want to discuss how effective the Corporation has been at:

- recruiting members—how many have completed their service, how many have used their education awards; generating additional volunteers in communities
- how many have been generated and what have they done in their communities;
- producing tangible benefits in local communities—how is the Corporation measuring for results and impact what members have done.

Again, Mr. Chairman, I am proud to be considered the godmother of National Service. For years I have championed the importance of helping promote the habits of the heart.

Many of us were energized by the Presidents Summit on Service two years ago in Philadelphia that focused on promoting volunteerism. And I believe that the Corporation has a critical role to play in this effort. But we can’t be content with feel good stories about kids in tee shirts.

We must stand sentry to ensure that Corporation members are reading to young children and helping increase literacy, planting trees and cleaning gullies—helping the environment, organizing local volunteer groups and spreading the habits of the heart.

This will be my focus this morning. The Corporation’s ability to generate bi-partisan support will depend largely on the extent to which it can demonstrate meaningful tangible results in local communities.

CDFI

CDFI has a as its mission providing an opportunity structure that helps those who practice self help.

In a perfect world, we may not need a CDFI. But we don’t live in a perfect world. We live in a world with distressed communities that are under served by the main-line private financial institutions.

In many of these communities there are willing people who want to improve their lot in life, but they lack the capital or expertise needed.

This is where CDFI helps to fill the void. I look forward to hearing from Ms. Lazar this morning on the progress CDFI has made in addressing management concerns raised over the last several years.

But as with the Corporation, I want to stay mission focused. I want to ensure that CDFI doesn’t just move money out of the door, but helps move people up and out of poverty and despair. There needs to be a system in place to evaluate grant recipients’ progress in meeting their goals.

There also needs to be a system to measure how effective CDFI is in helping grant recipients improve their communities and empower local residents.

Mr. Chairman, I look forward to the dialogue with you and this morning's witnesses.

Senator BOND. Thank you very much, Senator Mikulski, for that very strong statement, and I certainly endorse the comments you made.

Senator Wofford, it is always a pleasure to welcome you. You have submitted a 29-page statement. I assure you we will make it a part of the record and I assure you that we are better off reading it than having it read to us.

So we would like to give you up to 10 minutes to make a summary of your report and comment perhaps, if you wish, on any of the points that Senator Mikulski and I have written.

Thank you, Senator.

STATEMENT OF HARRIS WOFFORD

Mr. WOFFORD. I will certainly not go beyond 10 minutes, Mr. Chairman.

Thank you for letting Wendy Zenker, our chief operating officer, accompany me here. And thank you, Mr. Chairman and Senator Mikulski, for giving that quite appropriate double-barrel challenge to us, and we want to meet that challenge to the best of our ability today in response to your questions.

Many of the points are in that 28-page testimony. First, it responds to a number of your concerns, Mr. Chairman, and second, it contains some hard data that will be of interest to Senator Mikulski.

Now, Mr. Chairman, this morning I am presenting the administration's budget request and, to the extent we have time this morning, I want to discuss the success of National Service and report to you on our efforts to improve financial management. But I am going to focus my oral testimony on the financial management issues.

My written statement contains extensive information about the accomplishments of National Service and I welcome questions. And I particularly intend, Senator Mikulski, to take your precise questions, and present a report to you that is in the very categories that you have just put to us.

And I think you will be pleased with some of the evaluations we are reporting on this morning.

FINANCIAL STATEMENTS

Mr. Chairman, our top priority continues to be—has to be—achieving a clean opinion on the audit of a full set of financial statements and going on to remove the material weaknesses. We have made real progress.

As the chart indicates, we have gone from financial statements not auditable in 1994 to 1996, to a qualified opinion on our fiscal year 1997 balance-sheet-only audit, to the current full-scope audit of our fiscal year 1998 financial statements. Those three steps represent a lot of work, dedication and progress.

AUDITABILITY

Fiscal Year 1994-96

- Financial statements not auditable

Fiscal Year 1997

- Qualified opinion on Statement of Financial Position
- No audit of Statement of Operations or cash flow
- Two qualifications, six material weaknesses identified

Fiscal Year 1998

- Audit of full set of statements for fiscal year 1998 near completion
- Results not yet available
- Implementing Action Plan to correct weaknesses

We, too, Mr. Chairman, had hoped that along with our Inspector General Luise Jordan we could report on the results of the fiscal year 1998 audit today. However, the Inspector General and her auditors from KPMG are holding open that audit while we provide additional documentation they need.

That audit is ongoing. And the Inspector General and I will report to you the results of the audit in the very near future. But even if we obtain a clean opinion, which, of course, is our aim, we know that we will still have financial management material weaknesses.

Last fall Congress provided additional resources to speed our progress in correcting those weaknesses. We submitted a detailed action plan to do so that builds on the previous plans and steps that we had taken and accomplished much in.

The plan calls for action in nine areas. It includes 177 specific tasks with deadlines. To date we have completed 69 of them. Let me be clear: though progress has been made, it is not enough to satisfy you, Senator Mikulski, or me. Much remains to be done.

Let me tell you what we are doing in three key areas shown on this chart, areas that affect many of the material weaknesses, and are key to the solutions.

Management Progress

	March 1998	March 1999	2000
Y2K Compliance	Systems not assessed Hardware not compliant	Mission-critical systems compliant except for financial management Most hardware compliant	All systems compliant All hardware compliant
Financial Management System	Not Y2K compliant Not compliant with Federal standards	New system selected that is Y2K compliant and compliant with federal standards Implementation underway	New system fully operational
National Service Trust	Paper-based	Installing imaging technology Testing web-based reporting	Imaging technology operational Web-based reporting Operational

PROGRESS ON FINANCIAL MANAGEMENT

Since last fall all of our mission critical systems, except for financial management, have been made year 2000 compliant. And most of our hardware is now compliant. We are confident we will be prepared for the year 2000. Many of the problems stem from the weaknesses in our core accounting system that we took over.

We have selected a new financial management system known as Momentum, and implementation is under way. The system will be fully operational this year.

To ensure the accuracy of the data in the National Service Trust we are, right now, installing imaging technology, and we are pilot-testing a Web-based reporting system, a breakthrough system in this field. By next year, they will both be fully operational.

In our next report, due the middle of April, you will continue to see progress on these and on other items in the Action Plan. And we will be able to report to you the results of the audit.

INDEPENDENT EVALUATIONS

As we grapple with these critical questions of financial management, Mr. Chairman, let us not lose sight of the success and impact of National Service. Today we are releasing an independent study, reflected on the chart, that demonstrates how AmeriCorps is strengthening local organizations and communities and having a positive impact on the lives of AmeriCorps members—now totalling in 4 years, more than 100,000.

SUMMARY OF RECENT NATIONAL EVALUATION OF AMERICORPS

Eighty-two percent of community representatives report AmeriCorps' impact as "good" or "outstanding."

AmeriCorps improves the quality and quantity of local organizations' community services.

More than 75 percent of members have gained significant life skills.

AmeriCorps instills ethic of service in members.

Source: Aguirre International, 1999.

I hope members of this committee will read the summary of this report which we are providing for the committee and we'll be happy to sit down with your staff, and with you, to talk further in depth on what those results mean. It was conducted by Aguirre International. Mr. Aguirre was President Ford's Commissioner of Education and we consider this a very landmark and important study.

As this other chart shows, recent studies have also documented that service learning programs benefit communities while instilling a sense of civic responsibility and raising the academic performance of participating students.

RECENT NATIONAL EVALUATIONS OF LEARN AND SERVE AMERICA

Students participating in service-learning programs report gains in following areas: Civic attitudes; Volunteering; School engagement; Academic performance.

Projects rate students' service as outstanding.

Source: Brandeis University and Abt Associates, 1998.

Mr. Chairman, you can see that our work around the country is going well. And we will look forward to showing you in more detail how well it is going. In many cases we have a state-by-state analysis including the extraordinarily successful—many programs in the State of Maryland and programs in Missouri. There are many places where the state commissions, appointed by governors, have had their own evaluations. And we have materials from governors estimating the impacts, such as Governor Voinovich's last letter to me outlining the impact of National Service programs that he thought was tremendous in Ohio. And the outline of the impact that Governor Locke and Governor Raciocot of Washington and Montana sent to all new governors telling them of the tremendous contribution of the three programs of National Service and the commissions in their states.

I think it is this success that people around the country see on the ground that is the reason for the growing bipartisan support—not only in Congress but especially in the states, cities, schools and neighborhoods where ordinary Americans are making an extraordinary difference every day.

PREPARED STATEMENT

So I look forward to working with you to extend the reach of National Service and to complete the task of making the Corporation the kind of high-performing organization we all want it to be. Thank you.

[The statement follows:]

PREPARED STATEMENT OF HARRIS WOFFORD

Mr. Chairman, Senator Mikulski, and members of the Subcommittee, I appreciate this opportunity to review the achievements of national service over the last year, report on the status of our efforts to issue financial statements and improve financial management, discuss our fiscal year 2000 budget request, and respond to your questions. I very much appreciate the Committee's past support, including the \$10 million in additional fiscal year 1999 appropriations for AmeriCorps grants, as well as the additional funds to speed our progress on essential improvements in our financial management systems.

The Corporation has made good progress on many fronts. Last October, the 100,000th AmeriCorps member was sworn in. The service of AmeriCorps members in more than a thousand local, state and national non-profit programs is helping solve community problems all across the country. Service-learning activities of more than a million college, high school and elementary school students, assisted by our Learn and Serve program, is demonstrating how well-organized community service can help the community while instilling the ethic of service and pride of citizenship in participating students. In short, through AmeriCorps and Learn and Serve America, the Corporation is carrying out the three prime purposes set by Congress in the National and Community Service Trust Act of 1993 (42 U.S.C. § 12501):

(1) meet the unmet human, educational, environmental, and public safety needs of the United States, without displacing existing workers;

(2) renew the ethic of civic responsibility and the spirit of community throughout the United States; and

(3) expand educational opportunity by rewarding individuals who participate in national service with an increased ability to pursue higher education or job training.

Before providing more details of the accomplishments of these programs, let me start with a brief summary of our budget request and a discussion of our work to improve financial management.

I. BUDGET REQUEST SUMMARY

The total fiscal year 2000 budget request for national service programs authorized under the National and Community Service Trust Act is \$545.5 million, an increase of \$110 million over the fiscal year 1999 appropriated level of \$435.5 million. This is a large increase for a relatively small agency, but the needs that AmeriCorps members are helping communities meet—particularly the needs of children and youth—are very large. The added value of this service by AmeriCorps members (generally full-time) in leveraging large numbers of unpaid part-time community volunteers and in strengthening the work of non-profit, educational and faith-based organizations is a powerful new resource for the renewal of America's civic sector.

The new funds will provide for approximately 60,000 AmeriCorps members through grant programs and the education award program, as well as approximately 1,100 AmeriCorps members through the National Civilian Community Corps (NCCC) program. As part of the AmeriCorps budget, our budget request also includes a new program to engage 5,000 high school students in intensive, full-time service during the summer. Participants in the AmeriCorps*VISTA program, funded through the Subcommittee on Labor, HHS, Education and Related Agencies, will bring the total to approximately 69,000 AmeriCorps members, with a goal of 100,000 members per year starting in 2002.

The new funds for the Learn and Serve America program will help schools, colleges and universities, and community organizations strengthen and expand service-learning activities. If the 60 million students in America are seen as—and see themselves as—resources and potential leaders, they can be a powerful source of service for communities. Tapping this potential is a double investment—in the education of the next generation as citizens of character and competence, and in meeting the country's unmet needs.

I also want to emphasize the important contributions of the Points of Light Foundation and how much the Corporation values its partnership with the Foundation and with its network of hundreds of Volunteer Centers. An increasing number of AmeriCorps members and AmeriCorps*VISTA members—already more than a hundred—are working directly with, and under the leadership of, these centers for volunteer service. We are requesting \$5.5 million for the Points of Light Foundation in fiscal year 2000.

Jointly, the Corporation and the Points of Light Foundation were the original sponsors and organizers of the Presidents' Summit for America's Future in Philadelphia convened in 1997 by President Clinton and President Bush. We work together

as key partners in the post-Summit campaign led by General Colin Powell's America's Promise—the Alliance for Youth. This close and continuing collaboration between the Foundation created by President Bush as a center for volunteering and the Corporation proposed by President Clinton as the vehicle for national service is a demonstration of how what George Romney called “the twin engines” of full-time stipended national service and part-time unpaid community volunteering can and should pull together to help communities solve serious social problems.

We are seeking \$33 million for program administration, including funds for State Commissions—an increase of \$4.5 million over the fiscal year 1999 level. This increase will provide the administrative support necessary to keep up with the growing work-load of the Corporation and is discussed in greater detail later in the testimony. In addition, we are requesting \$5.5 million for program evaluation, and a separate appropriation of \$3 million from this Subcommittee for the Office of the Inspector General.

THE AUDIT AND THE ACTION PLAN

The Corporation shares the view of the Subcommittee that prompt action on auditability and other financial and management weaknesses is urgently needed. These issues are our top internal priority. With the help of the Committee and the Inspector General, we have focused substantial resources and activity on achieving solid and lasting solutions.

The Corporation has made steady progress over the past year toward its goal of improving fiscal oversight and of obtaining an unqualified opinion on its financial statements. As the Subcommittee knows, until last year, the Corporation was unable to produce financial statements that the Inspector General could audit. But, in July 1998, the Inspector General issued an Auditability Assessment that indicated that the Corporation had made progress and that, although late, we could proceed with an audit effort for fiscal year 1997. In October 1998, the Inspector General issued a qualified opinion on the Corporation's fiscal year 1997 Statement of Financial Position. There were two qualifications—grant accrual and net position—and six material weaknesses.

Now, for fiscal year 1998, the Corporation is preparing a full set of statements, and these statements are being subjected to independent audit by the Inspector General. The Corporation, the Inspector General and the auditors are still at work on the audit. We are collecting and providing information to the auditors, and the auditors are reviewing and assessing that data. At this time, we are uncertain of the auditor's opinion, but we are working closely with the Inspector General and her audit staff to complete the financial statement audit.

We know that there are material weaknesses—weaknesses identified in the fiscal year 1997 balance sheet audit and two new weaknesses that will be identified in this audit resulting from the broader scope of the fiscal year 1998 audit. Based on the fiscal year 1997 audit, and with funds made available by this Committee, we are implementing a comprehensive Action Plan to correct these weaknesses and improve Corporation management. We are working to correct a number of these weaknesses this year; others will take longer. But you can and will see progress every month as we work to achieve the goals set forth in this Plan.

We submitted the Action Plan to your Subcommittee on December 21, 1998. It included 168 tasks. In a February 17, 1999, letter from Chairman Bond and Chairman Walsh of the House VA/HUD Subcommittee, you asked that we revise the plan to include procurement management and to provide more information on the expenditure of funds associated with the plan. In our first progress report on February 19, 1999, (which I would like to submit for the record) we did those two things. The Plan now includes 177 tasks, of which 69 have been completed. You also asked for more information on specific performance measures. We have included such information in our Government Performance and Results Act Performance Plan and will be happy to discuss additional measures with your offices.

Your letter of February 17 indicates that, with these changes, you have no substantive disagreements with the contents of the Action Plan. In fact, we believe the Plan offers us a clear path toward resolving outstanding financial management issues once and for all. Although these changes cannot happen overnight, there is a firm commitment on the part of the Corporation to advancing solutions as quickly as we possibly can.

The Action Plan includes 9 goals and a number of objectives within each goal: (1) General Control Environment; (2) National Service Trust; (3) Financial Operations; (4) Grants Management; (5) Financial Systems; (6) Financial Reporting; (7) Information Technology—Year 2000; (8) Information Technology; and (9) Procurement Management. Summary information on these goals and objectives follows:

General Control Environment.—We are working to establish a strong and effective control environment, including a commitment to excellence, organizational structure, and assignment of authority and responsibility. Included in this goal is the financial statement audit process. On other important fronts we have done good work towards issuing a comprehensive set of policies and procedures; we are working on an assessment of management controls by selected Corporation managers as part of a pilot program for fiscal year 1998; we are filling key positions; we are developing a comprehensive training plan; and we are including financial performance measures in the Corporation's Government Performance and Results Act Performance Plan.

National Service Trust.—We are determined to ensure the integrity of the National Service Trust, accurately recording member information and education award liability, and efficiently processing transactions related to enrollment and award processing.

In the past year, we and our prime grantees, the State Commissions, have undertaken two major technological initiatives specifically designed to strengthen the Trust. First, as I reported last year, we have introduced imaging technology designed to improve the quality and dependability of information in the Trust.

We are using imaging technology to electronically capture our records and ensure that we have complete and readily accessible information for every member enrolled in the National Service Trust. By the middle of April, a contractor will complete the process of scanning all of the paper documentation from our files on every current member of the National Service Trust, and we will then begin the process of checking the input data with our program records to capture any missing pieces of data. Additionally, in April, the National Service Trust will begin using imaging technology to scan forms into the system as the forms are received.

Second, we are in the midst of testing a breakthrough innovation—a world wide web-based reporting system (WBRs), that will enable the National Service Trust to receive member data— enrollment forms, change of status forms, and end-of-term forms—electronically. WBRs currently is being used to input enrollment data on a trial basis in Maine and California. If the tests are successful, State Commissions will be using this technology for enrollment forms by the end of this year. In partnership with the Corporation, the State Commissions developed WBRs. The Corporation contracted with Ernst and Young in October 1998 to do a security review of the data transfer. When appropriate development, testing and training are completed, we will phase in the use of the technology for change of status and end-of-term forms and extend the system to our national direct grantees.

There are three related goals: Financial Operations, Financial Systems and Financial Reporting.

Financial Operations.—We are making progress in the area of financial operations. We promulgated our debt collection regulations and are working to finalize our agreement to have the Department of the Treasury service our delinquent financial transactions. Other efforts are underway to clean up financial data in preparation for the conversion to the Momentum accounting system.

Financial Systems.—We are in the midst of implementing a new financial management system—Momentum—that will modernize our record-keeping and allow us to input and recover data in an easier and more timely fashion than our previous system. The Corporation selected the Momentum package last November and entered into a cross-servicing agreement with the Department of the Interior's National Business Center to support the implementation process. Momentum is a commercial off-the-shelf software system compliant with the Federal Government's Joint Financial Management Improvement Program system requirements, and it is Year 2000 compliant. Momentum implementation includes data conversion, setting up system interfaces, testing and staff training. We have an aggressive schedule to complete this process and make the Momentum system fully operational this year.

Financial Reporting.—Our goal is to produce accurate and timely financial information, issue timely reports and financial statements, obtain an unqualified opinion on our financial statements and reduce—and as soon as possible eliminate—the number of reported material weaknesses. I have already described our progress in this area.

Grants Management.—We have undertaken important efforts to improve grants administration and the procedures for AmeriCorps service hour reporting. In January we held a conference for all State Commission and National Direct Executive Directors to reinforce the importance of the procedures and reporting requirements associated with their grants. Executive Directors have been contacting us with detailed follow-up questions, and we have already sent out a formal response to questions elicited at the conference and intend to continue to follow-up with the grantees. Also, as a further step in devolution to the governor-appointed state commis-

sions, we have eliminated any Washington office programmatic review of the formula program proposals submitted by well-functioning State Commissions. With OMB approval this past year, we are testing simplified grant approaches, including fixed amount grants.

Information Technology—Year 2000 and beyond.—Making sure that all systems are Year 2000 compliant is a goal that cuts across all aspects of the Corporation. Through the additional funding included in the fiscal year 1999 Treasury, Postal Service Appropriations bill, the Corporation received \$800,000 to assist in our compliance and verification work.

Our mission-critical systems, except for the financial management system and its related interfaces, are Year 2000 compliant today. We will be performing independent verification and validation in the coming months. Our headquarters and service center network and personal computer workstations are compliant; we are still working on our field office and NCCC workstations, but anticipate no difficulty. The new Chief Information Officer whom we will designate soon will do much of our long-range planning in the information technology area. Some aspects of our long-range plan will include improving our technology for communication with state offices, designing a single, integrated grants system, selecting a procurement module to add to the Momentum system, and providing better data for decision-making.

Procurement Management.—We added this goal to our Action Plan in February in response to work conducted by the Inspector General. We are revising procurement policies and are working to resolve specific contract issues. We are also developing training sessions for our procurement office and Corporation staff.

The Corporation is committed to improving its management and has made substantial progress in this direction. More remains to be done, and the Subcommittee will continue to see progress in carrying out our Action Plan. We will continue to report regularly to you and the other appropriate committees in Congress.

GOVERNMENT PERFORMANCE AND RESULTS ACT

The Corporation continues its full compliance with the requirements of the Government Performance and Results Act. Building on the experience of the first year under GPRA, we have prepared an expanded annual Performance Plan for fiscal year 2000. This plan provides in a more accessible format our revised performance goals for fiscal year 1999 and the goals for fiscal year 2000. We have organized our performance goals into two broad categories: annual performance indicators, and focused (usually one-time-only) program evaluation studies.

Annual Performance Indicators are measures based on information collected regularly (usually yearly) from grantees and subgrantees of the Corporation and from program participants. Primarily these indicators measure aspects of program performance that are in the direct control of the Corporation. These data are useful for oversight and management of the programs. Many of these measures focus on what programs do with federal funds—such as implementing projects; selecting, training and enrolling Members; and awarding subgrants. In addition, annual indicators can include customer satisfaction, community impacts, and program accomplishments.

Focused (Usually One-time-only) Program Evaluation Studies represent a significant area of investment by the Corporation. Unlike annual performance indicators, many outcome evaluation studies are not likely to occur every year because they are more expensive and time consuming to carry out. Program outcome studies, however less frequent than indicator data, will provide useful information on what national service programs achieve for the American people.

Our 2000 Performance Plan contains information on programs and administrative activities that will interest anyone wanting to learn more about the Corporation and national service. For each program, the fiscal year 2000 Performance Plan presents:

- A concise description of the program with information on program design, numbers of participants, types of service, and levels of funding.
- Special initiatives underway and planned for the coming years.
- Performance indicators and goals for fiscal year 1999 and fiscal year 2000.
- Key findings from completed program evaluations.
- Pending and planned program evaluation topics.

This year we have added a section that highlights the three budget activities supporting the Corporation's programs: Innovation, Evaluation, and Program Administration. "Innovation" describes our plans to expand and strengthen training and technical assistance for all streams of service. Under "Evaluation" is found the Corporation's evaluation plan for 1999 and beyond. And "Program Administration" summarizes the efforts underway to improve financial management. This new section includes five new performance indicators that focus on our most critical administra-

tive issues: auditability, data accuracy in the Trust, grants management, financial management systems, and the Year 2000 status of computer systems.

Finally, the new format of the fiscal year 2000 Performance Plan represents the first step in linking the budget proposal with the Performance Plan. Next year, we plan to submit one, fully-integrated, budget and performance plan.

PROGRAM ADMINISTRATION

The Corporation is requesting \$33 million for Program Administration in fiscal year 2000—an increase of \$4.5 million over the fiscal year 1999 appropriation. Program administration supports the Federal share of the costs of activities of the State Commissions, which implement and monitor national service programs at the local level, as well as the activities of the program, policy, and management staff in the Corporation's headquarters.

Last year, the Congress provided an increase of \$1.5 million in Program Administration funding to address urgent program administration requirements related to financial management, grants management and systems implementation. Congress also called on the Corporation to shift \$1.5 million out of lower priority efforts to address urgent program administration needs. These additional funds have improved the quality and the timeliness of the Corporation's responses to these outstanding problems. Now, in order for the Corporation to move forward on financial and management issues in the most expeditious manner possible, more funds are needed.

The workload of the Corporation has grown enormously since 1994. The annual number of AmeriCorps members has increased from 25,000 in fiscal year 1995 to approximately 50,000 in fiscal year 1999 to a proposed 69,000 in fiscal year 2000. The cumulative number of enrollments in the National Service Trust has grown from those initial 25,000 to over 100,000 and will grow to over 140,000 with funds already appropriated. The Corporation needs additional resources to respond to this greatly increased workload.

The requested increase in funding will support the following urgently needed activities, many of which are described in further detail in the section of the testimony dealing with the audit and Action Plan: achieving an unqualified opinion on our financial statements and reducing the number of material weaknesses; significantly increasing funds devoted to systems development; strengthening the National Service Trust; increasing the support for State Commissions; and replacing aging computer hardware.

AMERICORPS AND SERVICE-LEARNING EVALUATIONS AND ACCOMPLISHMENTS—THE IMPACT OF SERVICE

In the last year, we have received the results of three major evaluations of Corporation programs. The following is a brief summary of each evaluation. The results show that national service has a dramatic impact both on the communities and individuals served and the service participants themselves.

Impact Evaluation of AmeriCorps State/National Direct

Today we are releasing one of those studies—an independent evaluation of the impact of AmeriCorps State/National programs performed by Aguirre International. This study collected survey data from all ongoing programs and specifically examined 60 randomly-selected programs over a three year period. The study looked at what AmeriCorps members accomplished, the impact of those accomplishments on service recipients, the impact on the life skills and civic attitudes of members, and the impact of AmeriCorps on grantee institutions and the communities in which the programs were located.

Among the key findings of the study

- AmeriCorps programs strengthened local organizations and communities served:
 - The majority of institutions that received AmeriCorps grants reported that association with AmeriCorps improved their organization's quality and/or quantity of services and increased their overall professionalism.
 - 82 percent of community representatives interviewed reported that AmeriCorps' impact upon their community had been "very good" or "outstanding."
- AmeriCorps provided significant member benefits:
 - More than 75 percent of AmeriCorps members reported substantial gains in life skills during their program year. These changes occurred in members of all ethnic, racial, economic and educational backgrounds.
 - AmeriCorps members' life skills gains were significantly greater than the gains reported by a matched comparison group of nonmembers. Members whose skills were the lowest upon entering the program gained the most.

—AmeriCorps members' levels of civic engagement were positively affected by AmeriCorps service.

We are pleased that this major new study demonstrates that AmeriCorps is accomplishing precisely what it was designed to do—it is getting things done in our communities and producing significant benefits for those who serve.

LEARN AND SERVE AMERICA K-12

Between 1995 and 1998 Brandeis University and Abt Associates conducted an evaluation of 17 high quality service-learning programs at middle schools and high schools across the country. The evaluation followed a group of participating and comparison group students over two years. The evaluation found:

Service-Learning programs provide significant benefits to their communities:

The service provided by the students was highly rated by the community agencies where students provided assistance; 99 percent of the agencies rated their experience as "good" or "excellent."

On average, participants in the programs in the study produced service valued at nearly four times the program cost during the 1995-1996 program year.

The service-learning programs in the study were strongly supported by administrators and teachers, and a large majority of programs appear likely to continue to operate after the end of their grants.

Service-learning programs had a positive impact on students:

Students rated their program experience highly with more than 95 percent of the students reporting that they were satisfied with their community service experience.

At the end of one program year, student participants compared to non-participants showed significant positive impacts. The students: were more appreciative of cultural diversity, service leadership and civic involvement; were more likely to be involved in some form of volunteer service; provided more than twice as many hours of service; were more likely to show small, positive impacts on school engagement and on math and science grades and core grade point averages.

The Superintendent of Schools in Gresham, South Carolina states that Corporation grants have funded "service-learning programs that reinforce academic skills taught in the classroom and meet community needs" and have had "a significant impact on our school system and the community. It has "reconnected our youth to the community and has actively engaged our young people in the learning process." An example of such results in the Gresham High School is in the appendix.

LEARN AND SERVE AMERICA HIGHER EDUCATION

Between 1995 and 1998 the Rand Corporation conducted an intensive evaluation of the Learn and Serve Higher Education Program's implementation, achievements and impacts on sponsor institutions, community agencies and participating students. The study found:

Participating students made valuable contributions to the organizations—non-profit agencies, schools, and others—in which they served.

Community organizations' staff assigned high marks to the student volunteers. Respondents assigned the highest ratings to students' enthusiasm, ability to work with staff and clients, and interpersonal skills. Staff reported that they were able to improve the quality of services and provide more services as a result of the student volunteers.

Students in service-learning courses, compared to students in similar courses without a service component, reported larger gains in civic participation (involvement in community service) and life skills (interpersonal skills and understanding of diversity).

LITERACY AND EDUCATION ACTIVITIES

Since fiscal year 1994, education programs, including especially literacy activities for elementary students, have been a high priority for national service. Governor-appointed state commissions on national and community service have focused national service resources on needs in education. In addition, AmeriCorps*National and Education Award programs, as well as service-learning programs at the K-12 and higher education levels, have focused service on the education needs of young people.

For fiscal year 1998, this Subcommittee appropriated an additional \$25 million to the Corporation to conduct activities designed to ensure that every school child can read well and independently by the end of the third grade. These additional funds were granted to 30 separate organizations selected by states, including statewide literacy initiatives in Florida, Louisiana, Maryland, Maine, Massachusetts, Mississippi, New Jersey, Ohio, Oklahoma, Washington, and West Virginia. In total, an

additional 1,700 full-time equivalent AmeriCorps members are engaged this year as organizers, leaders, and participants in these local literacy programs, including summer and after-school programs.

Research results show that national service can produce strong positive outcomes in early childhood literacy. Literacy programs supported by the Corporation under the AmeriCorps*State and National category reported the following results for the 1996-97 program year:

In all programs, 5,700 members at 305 sites supported the tutoring of youth in grades 1-12. Sixty-seven percent of youth tutored in grades 1-12 (of 128,000 measured) showed improvement during the program year.

In all programs, 4,700 members supported academic mentoring at 258 sites. Seventy-six percent (of 53,000 mentored students measured) showed improvement during the program year.

In all programs, over 2,000 members taught in grades 1-12. Sixty-nine percent (of 70,000 students measured) showed improvement during the program year.

In addition to the very positive, self-reported achievements by projects, independent evaluations of specific literacy programs are documenting positive outcomes. Professor George Farkas of the University of Texas documented gains for a Reading One-to-One program of 0.4 to 0.7 grade equivalents above what students would have attained without tutoring, a significant improvement. The program uses college students, AmeriCorps members, and community residents to tutor more than 6,000 students in more than 70 schools across ten school districts in Texas.

Other recent reports contain an equally positive message. In the District of Columbia, low-achieving children who were tutored by Federal Work-Study students and other volunteers in a program managed by AmeriCorps*VISTA members had reading scores at the national average at the end of the first year of the program. In New Haven, Connecticut, the Leadership, Education, Athletics in Partnership program helped produce independently documented increases in children's reading test scores. In this program children read an average of 24 books during the summer.

In addition to AmeriCorps, the Corporation's service-learning programs, also under the jurisdiction of this Subcommittee, have contributed to the America Reads Challenge. The Corporation works in coordination with the Department of Education. Over 1,000 colleges and universities have pledged to use a portion of their Federal Work-Study funds to enable college students to tutor children and work in family literacy programs. In addition, the Corporation's grants to state education agencies support service-learning programs in schools and communities across the country. The dominant service activity reported by service-learning grantees at the middle and high school level is education, including mentoring, tutoring, and classroom assistance. These programs have double benefits; since teaching is often the best way to learn, middle and high school students who tutor younger students often increase their own skills, not only in English but in math, science, and the use of computers.

AMERICORPS

*AmeriCorps*State and National Program Update*

Last October, the 100,000th AmeriCorps member was sworn in, and members are continuing to get things done in their communities all across the country. Together, AmeriCorps members, most age 18 to 25, are showing their idealism and devoting a year or more to help strengthen communities by tackling the nation's most serious problems.

Since the inception of the program, over 100,000 AmeriCorps members have:

- Served nearly 33 million people in more than 4,000 communities.
- Taught, tutored or mentored over 2.6 million children.
- Served over 560,000 at-risk youth through after-school programs.
- Built or rehabilitated over 25,000 homes.
- Given food, clothing or other necessities to homeless individuals in over 2.4 million instances.
- Planted 52.5 million trees.
- Recruited, trained or supervised over 1.6 million volunteers.

In an appendix to this statement, we are providing examples of AmeriCorps members getting things done in our communities.

Fiscal Year 1999 Budget Update

Last year Congress appropriated an additional \$10 million for AmeriCorps grants. As a further example of our commitment to devolving authority, all of that funding was directed to state initiatives. Of that \$10 million, \$3 million was added to the

formula grants to state commissions. The other \$7 million was directed towards a Governor's Service Initiative, which will fund new statewide initiatives that tie into a governor's priorities and could benefit by a service component.

Fiscal Year 2000 Budget Request for AmeriCorps

The budget request for fiscal year 2000 for AmeriCorps will provide for approximately 60,000 AmeriCorps members through grant programs and the education award program, as well as approximately 1,100 AmeriCorps members through the National Civilian Community Corps (NCCC) program. Participants in the AmeriCorps*VISTA program, funded through the Subcommittee on Labor, HHS, Education and Related Agencies, will bring the total to approximately 69,000 AmeriCorps members, with a goal of 100,000 members per year starting in 2002.

That total includes a new program to engage 5,000 high school students in intensive, full-time service during the summer. This new initiative will allow high school students already involved in community service to serve full-time in the summer and, if they wish, part-time during the school year and receive reduced stipends and education awards for their service during the summer.

*AmeriCorps*NCCC*

The National Civilian Community Corps (NCCC) is a distinctive part of the AmeriCorps network of programs; it is a residential program, and it is the only element of AmeriCorps that is administered directly by the Corporation for National Service. NCCC members are housed in dormitory-style residences primarily at closed or downsized military bases at Charleston, SC; San Diego, CA; Denver, CO; Perry Point, MD; and Washington, DC. Members serve on teams in the local community and are deployed on "spikes" in communities in every state to meet the critical needs of urban and rural communities, including disaster relief, education, environment, public safety, and other human needs.

Although now a part of AmeriCorps, the NCCC was first proposed in 1992 in separate legislation, S. 2373, sponsored by Senators Boren, Warner, and Specter. Their bill sought to create a civilian community corps modeled on the Depression-era Civilian Conservation Corps (CCC) while simultaneously responding to the need to reuse closed military bases. The CCC section of the bill was offered and unanimously approved as an amendment to the fiscal year 1993 Defense Authorization Act. Among the key sponsors of this bipartisan amendment were Senators Boren, Dole, Warner, Mikulski, McCain, Kennedy, Seymour, and Nunn. In a floor statement during debate on the amendment, Senator Dole said "As I thought about this program, it was easy to see that many of today's youth could benefit from a modernized version of the CCC * * *. Far too many of our youth—both in urban and rural areas—are at risk—to drugs, to crime, to gangs, to teen pregnancy. It is these youths who could benefit from the new CCC Program." The following year, the National and Community Service Act of 1993 placed the administration of the NCCC in the hands of the newly-created Corporation for National Service.

The NCCC is one of the most successful and effective components of AmeriCorps. For example, in fiscal year 1998, members performed about 550 service projects in local communities in all 50 states. Accomplishments included renovating 346 houses, building 91 new homes, and tutoring 18,000 children, among many others. Here are several of the distinctive features of the NCCC that account for its extraordinary success:

NCCC members are highly trained and organized. They are particularly effective at mobilizing and supervising other volunteers. Habitat for Humanity and the Boys and Girls Clubs rely heavily on NCCC members to supervise and thereby enhance the effectiveness of their part-time volunteers. NCCC members are specially trained to respond rapidly in times of natural disaster, and they work in close partnership with the Federal Emergency Management Agency (FEMA) and the Red Cross to respond to almost every major natural disaster, including fires, tornadoes, floods, and even the Oklahoma City bombing.

True to its roots, NCCC adheres in part to a military model—members wear uniforms, work in teams, participate in a physical fitness regimen, and serve in a highly structured and tightly disciplined environment.

Members work long hours doing hard work—and the results are visible in communities across the nation. This has made the NCCC one of the most popular AmeriCorps programs. In 1998, more than 3,000 applicants applied for approximately 850 positions.

Funding for the NCCC was originally set in 1994 at \$30 million (including \$20 million in an earmarked Department of Defense appropriation). The 1995 appropriation was reduced in a rescission from \$26 million to \$18 million, and funding has been held at that level ever since. As a consequence, the NCCC has reduced the

number of members, delayed filling personnel vacancies, reduced the number of “spikes,” and otherwise done everything possible to make ends meet. However, it is now clear that fewer communities are being served, and program quality is at risk of slipping.

The budget request for NCCC, a \$3 million increase over the fiscal year 1999 level. The requested increase will finance the continuation of activities at five campuses and the enrollment of 1,141 Corps members, a 29 percent increase from fiscal year 1999 member population. The increase will also address reductions of essential personnel, operations, and administrative/logistics that were incurred in fiscal year 1998 when the fifth campus was established.

In addition the increased participation level financed by the request would serve to decrease the per member cost of the program. The NCCC’s per member costs are artificially inflated currently at almost \$26,000 per member (including the education award) because NCCC has had to limit and even cut the number of members in recent years. Recently, the Corporation reached a bipartisan agreement with Senator Grassley to reduce the Corporation’s average budgeted cost per AmeriCorps member by \$1,000 per year to reach \$15,000 per member next year. If Congress approves the NCCC’s fiscal year 2000 budget request, the number of members will increase, reducing the per member cost to about \$23,100 and allowing the Corporation to achieve the goal of an average AmeriCorps member cost of \$15,000.

We urge Congress to adopt the President’s budget request to increase funding for the NCCC to \$21 million in fiscal year 2000—the first increase in four years.

AmeriCorps National Direct

The National and Community Service Act dictates that two-thirds of AmeriCorps funding flows to State Commissions and the remaining one-third supports national non-profit organizations through AmeriCorps National Direct grants. Each year since 1996, the appropriations law has imposed a cap of \$40 million on these AmeriCorps National Direct grants.

When established in 1996, the cap on AmeriCorps National Direct funding sought to address Congressional concerns stemming from grant allocations to other federal agencies. As part of a bipartisan agreement with Senator Grassley, the Corporation later agreed to eliminate all grants to federal agencies.

Currently, AmeriCorps makes national direct grants to 39 national non-profits, including Habitat for Humanity, the American Red Cross, YouthBuild USA, Los Angeles Veterans Initiative, City Year, Youth Volunteer Corps of America, and the National Association of Community Health Centers. These non-profit organizations are widely supported in the Congress and in our communities. The Corporation ensures that these programs are funded in a completely non-partisan and non-ideological manner.

National non-profits have special qualifications to engage in national service activities at the local level, including:

- years of expertise in supporting service: many of these organizations were funded from 1990 to 1993 by Commission on National and Community Service appointed by President Bush;
- well-developed program concepts and service delivery models;
- experience in program management and community collaboration;
- readily accessible training for staff and members; and
- strong ability to reach under-served areas and expand programs to states with smaller populations.

The National Direct grant program minimizes the administrative burden necessary to deliver national service. For nationwide organizations like Habitat for Humanity or the American Red Cross, it is more efficient to apply one time to the Corporation and then to allocate resources to local chapters, rather than to apply multiple times through individual State Commissions.

AmeriCorps National Direct programs also cost less than other AmeriCorps programs, because national non-profit organizations:

- Provide significant matching funds. The 1998 programmatic match is 57 percent, which is significantly higher than the requirements of the statute and the match provided by AmeriCorps state projects; and
- Attract major private support. Partners include corporations such as IBM, Sony, Dow Chemical, the Timberland Corporation, Nike, United Parcel Service, and the Disney Corporation that otherwise might not engage in national service.

The cap on National Direct prevents AmeriCorps from supporting some of its most effective grantees:

- The Corporation’s ability to meet increasing demands for service addressing local community needs has been curtailed, as community-based affiliates of na-

- tional non-profit organizations translate reduced grant support into a reduced number of AmeriCorps members and receive no funds for program development;
- The quality of service efforts is increasingly challenged due to limited training funds; and
- Since new grants require funding reductions to existing programs, which endangers the continued viability of these efforts, it is impossible for the Corporation to fund more than a handful of prospective new National Direct grantees in any given year.

For these reasons, we strongly believe that the overall quality and effectiveness of AmeriCorps programs will increase if the appropriations cap is lifted, and we are enabled to carry out the original intent of the 1993 Act that one-third funds are awarded in the form of National Direct Grants. We ask the Subcommittee to give this request careful consideration.

IMPORTANT INITIATIVES AND SPECIAL PROGRAMS

AmeriCorps' Call to Service

Last month, AmeriCorps launched the Call to Service—a year-long effort to encourage young Americans to serve their community and country through AmeriCorps. Asking young people, “Are you up to the challenge?” the Call to Service, which is AmeriCorps’ biggest recruitment drive to date, seeks to enroll more than 50,000 AmeriCorps members over the next year.

The Call to Service was kicked off on February 10th at the University of Maryland with participation from President Clinton, Maryland Gov. Glendening and Lt. Gov. Kathleen Kennedy Townsend, University of Maryland President Mote, AmeriCorps members and others. It will continue throughout the spring and summer with a number of campus-based events, community-wide service events, summer of service kick-offs, and the events marking AmeriCorps’ five-year anniversary in September.

AmeriCorps Promise Fellows

As noted earlier, along with the Points of Light Foundation, the Corporation was a co-convenor of the Presidents’ Summit for America’s Future in Philadelphia two years ago. We continue to work closely with General Powell and America’s Promise, the organization designed to follow-up on the five goals established at the Summit. As a special initiative in conjunction with General Powell and America’s Promise, the Corporation created the AmeriCorps Promise Fellow initiative, which is designed to identify and support talented individuals who will assist with state and local efforts to provide all young people with the five fundamental resources identified at the Presidents’ Summit:

- Caring adults in their lives, as parents, mentors, tutors, coaches;
- Safe places with structured activities in which to learn and grow;
- A healthy start and a healthy future;
- An effective education that equips them with marketable skills, and
- An opportunity to give back to communities through their own service.

Five hundred new AmeriCorps members will serve this year as AmeriCorps Promise Fellows to help communities meet the needs of young people.

AmeriCorps Promise Fellows will be community organizers and facilitators drawn from many walks of life, including academia, business, the military, and the service field. They will bring their diverse and considerable experience to the hundreds of national, state, and local nonprofit organizations that are sponsoring them. Among the projects that AmeriCorps Promise Fellows will support are:

- Recruiting and coordinating volunteers to run after-school programs;
- Implementing curricula coordinating service and education in elementary schools;
- Coordinating communities’ Summit follow-up activities, and
- Building private sector support for projects supporting children and youth.

The more than 500 AmeriCorps Promise Fellows will serve in almost every state, two American Indian tribes, and one U.S. territory, as well as with 17 national organizations that deliver community services on a local basis.

In an appendix, we have also provided several examples of the manner in which States intend to deploy Promise Fellows to solve problems in local communities. I am also attaching to this testimony General Powell’s statement on the AmeriCorps Promise Fellows published on America’s Promise web site—www.americaspromise.org.

AMERICORPS EDUCATION AWARDS PROGRAM

The Education Awards Program is a central element in the Corporation's plans to expand the number of AmeriCorps members. Because we will add more members to the Education Award Program this year, we anticipate even further reductions in the cost per AmeriCorps member to the Corporation and more opportunities for traditional nonprofit organizations to take advantage of the opportunity to utilize AmeriCorps members.

Across the country, faith-based organizations tackle some of our greatest challenges—and AmeriCorps members are playing an increasingly significant role in helping them solve community problems. Of the 40,000 AmeriCorps positions this year, nearly 6,000 are in faith-based organizations. Since 1994, more than 13,000 AmeriCorps members have served with faith-based groups. A significant number of these positions are in the Education Awards program.

Since its inception as a bipartisan initiative agreed to with Senator Grassley, the AmeriCorps Education Awards Program has greatly expanded opportunities for young people to serve as AmeriCorps members, brought new communities and new sponsors as partners in AmeriCorps, and produced new non-federal resources to support service programs. Now beginning its third year, the Education Awards program encourages organizations to apply to State Commissions or to the Corporation and demonstrate their capacity to recruit, train, supervise and generally support AmeriCorps members with little Corporation assistance beyond the education award. The members who successfully serve in such programs are eligible to receive an AmeriCorps educational award, but they do not receive a living allowance, health care or child care from the Corporation, and the sponsoring organizations receive only minimal administrative assistance. At the Presidents' Summit on America's Future in Philadelphia, President Clinton challenged faith-based organizations, nonprofits, and colleges and universities to support this initiative.

We have approved and launched more than 140 Education Awards programs, including about 80 organizations that had not previously hosted AmeriCorps members. The rest are existing AmeriCorps grantees that were able to add new components as a result of this new opportunity. Once fully operational, the programs approved thus far will support more than 20,000 new AmeriCorps members. In general, sponsors are national, state, and local organizations and agencies, and programs range in size from 1,000 or more to fewer than 20 members, carrying out service to respond to all types of community problems. Sponsors include:

- The Boys and Girls Clubs of America, which will place 1,000 AmeriCorps members in Clubs across the country to serve younger Club members and engage those younger boys and girls themselves in service to their communities;
- Two national faith-based organizations: the National Council of Churches and the Catholic Network for Volunteer Service, which together have placed over 6,000 AmeriCorps members in non-religious community service activity;
- The L.A. Veterans' Initiative, which is placing more than 200 members across the country to assist in homeless veterans' returns to independent and productive living; and
- A number of colleges and universities that are placing college students in intensive community service settings.

THE MARTIN LUTHER KING JR. DAY OF SERVICE

In 1994, Congress passed the King Holiday and Service Act of 1994 to transform the federal holiday honoring Dr. King into a day of service that reflects his life and teaching, bringing people together around the common focus of service. At that time, Congress charged the Corporation for National Service to work in partnership with the National King Holiday Commission (now replaced by the King Center for Non-violent Social Change, Inc.) and play a leading role in making the holiday a day "on" for service, not just a day off from work or school. Service was at the heart of Martin Luther King Jr.'s philosophy and action. Dr. King said, "Everybody can be great because anyone can serve," and urged Americans to take action to improve our communities and the lives of fellow citizens. Our other national partners include: the United Way of America; the Points of Light Foundation and its Volunteer Center network; First Book, which donated over a million books to literacy efforts; and Do Something, a youth service organization that provides a special service-learning curriculum to school aged youth.

This year on the King holiday tens of thousands of volunteers in thousands of projects across the country joined together to tutor children, build homes, clean parks, paint classrooms, deliver meals, and provide other service to improve their communities in all fifty states, the District of Columbia, Puerto Rico, and the Virgin Islands. The projects varied widely in scale and in focus. In Philadelphia, 12,000 vol-

unteers fanned out across the city to renovate schools, clean neighborhoods, and read to children. In Jackson, Mississippi over a dozen youth groups served together on cross-faith, cross-racial teams to renovate low income housing and restore after-school play spaces. In Zuni, New Mexico, volunteers from the Indian Reservation and from the Senior Corps and AmeriCorps collaborated with the local fire department to create a wood bank for low-income residents to heat their homes through the winter. In all these efforts we have called on all the Corporation's streams of service—AmeriCorps, Learn and Serve America and the Senior Corps—to play an active part in the observance.

In the fourth year of the Martin Luther King Jr. Day of Service, we are gaining momentum toward our goal—fulfilling the legislative responsibility to promote service in honor of Dr. King.

In an appendix, we have provided examples of Martin Luther King Jr. Day of Service activities.

LEARN AND SERVE AMERICA

FISCAL YEAR 2000 BUDGET REQUEST

The Learn and Serve America fiscal year 2000 appropriation request reflects an increase of \$7,000,000 over the fiscal year 1999 budget. These additional funds are requested to expand the reach and impact of service-learning programs for school-age and college youth and meet the local demand for service-learning implementation and training. Learn and Serve America's funding has remained constant since fiscal year 1996. In the intervening years, service-learning has gained stature and importance in education at the elementary, secondary and post-secondary levels because of its positive impact on youth in academic achievement, school engagement, civic responsibility, understanding of racial diversity, and in the contribution service-learning makes to communities.

The goal of the Learn and Serve America programs is to make service an integral part of the education and life experiences of all young people, thereby building a lifelong ethic of responsibility and service. All Learn and Serve America programs—K-12 school- and community-based and higher education—integrate community service with academic curriculum or with out-of-school time and extracurricular learning opportunities.

In fiscal year 2000, Learn and Serve America's new and existing resources and capabilities at the local, state and national levels will be mobilized to: support the increasing demand for service-learning implementation and training; support the expansion of out-of-school time programs; better support higher education institutions' efforts to create permanent service-learning programs; and increase the ability of colleges and universities to utilize Federal Work-Study students in community service, including America Reads literacy programs.

In an appendix, we have provided examples of local service-learning programs at the K-12 and higher education levels.

SPECIAL SERVICE-LEARNING INITIATIVES AND PROGRAMS

National Service-Learning Leader Schools Program

Sponsored by the Corporation for National Service, the National Service-Learning Leader Schools Program is a new presidential initiative that will recognize high schools from across the nation for high quality service learning. In its pilot year, 1998-1999, the program will recognize up to 100 high schools for their exemplary integration of student service into the curriculum and the life of the school. The first National Service-Learning Leader Schools will be announced in June 1999, and at that time, the schools will begin a two-year award period in which they will provide support and training to other schools interested in developing or expanding service-learning programs.

The President's Student Service Scholarships

The President's Student Service Scholarships program is now in its third year and has awarded scholarships to over 4,000 young people, but many more students are eligible and deserving. Each high school in the country may select one junior or senior to receive a \$1,000 scholarship for outstanding service to the community. Through the National Service Trust, the Corporation for National Service provides \$500, which is matched with \$500 from local scholarship sponsors. Scholarship recipients must have served at least 100 hours within a 12-month period. In addition to the scholarships, many other students will receive recognition through the President's Student Service Award program, which honors youth ages 5 to 25 who per-

form at least 100 hours of service to the community in a 12-month period; they receive a gold pin, as well as a presidential certificate, and a letter from the President.

The scholarship program is succeeding. Matching scholarships have been provided by the high schools themselves as well as by a host of community foundations, local businesses, and religious and civic organizations including Kiwanis Clubs, Lions Clubs, the Miss America Organization, Elks Lodges, Moose Lodges, and Dollars for Scholars.

In addition, states and regional partners are supporting the President's Service Scholarships. For example, in Minnesota the state legislature has made funds available to meet the match for each scholarship awarded in the state; in Houston, Texas local corporate and foundation sponsors provide the match for the scholarship in 50 schools. Local nonprofits such as hospitals, senior centers, YMCAs or YWCAs, or United Ways may benefit from or coordinate student service; they provide the match for the scholarship in many communities.

We are working to expand our partnerships to encourage the additional matching resources required to expand the program. Boys and Girls Clubs, for example, have agreed to match up to 2,000 scholarships to young people in their local sites.

Our fiscal year 2000 budget proposal includes \$10 million for the President's Student Service Scholarship to support scholarships for 20,000 high school juniors and seniors.

Points of Light Foundation

Under Title III of the National and Community Service Act, the Corporation for National Service is authorized to provide funds for the Points of Light Foundation, which was created under President Bush to encourage every American and every American institution to help solve the nation's most critical problems by volunteering in community service. The Foundation also disseminates information on promising community service approaches and builds the capacity of institutions and individual leaders to support volunteer service. The Corporation enthusiastically urges the Committee to appropriate \$5.5 million for the Points of Light Foundation in fiscal year 2000, the same amount appropriated last year. The Corporation and the Points of Light Foundation continue to work closely together in pursuit of our common objectives.

CONCLUSION

In conclusion, the success of AmeriCorps and Learn and Serve America warrant the additional support requested in the budget. Thank you.

APPENDIX ONE—EXAMPLES OF NATIONAL SERVICE PROGRAMS

AMERICORPS*STATE AND NATIONAL

The following is a sampling of AmeriCorps members' accomplishments around the country:

In St. Louis, Missouri, AmeriCorps members serve with the St. Louis Partners Safety Service Corps. The team has assisted the U.S. Forest Service in fire suppression on over 1,600 acres in Missouri. The Corps has also received recognition from President Clinton for their work around the country, which includes clearing fallen trees from roads and power lines in the wake of ice storms in Maine and New Hampshire, providing relief and assistance to residents of Michigan following severe storms that included gale force winds and responding to an interagency call for assistance in fighting major forest and grass fires in Florida.

In Montgomery County, Maryland, AmeriCorps members participate in Community Assisted Policing (CAP) with the Montgomery County Police, who credit AmeriCorps members with adding to their arrest rates. With AmeriCorps members tracking down the location of criminals, police were able to arrest 33 percent of those with outstanding warrants. In addition, with AmeriCorps members completing administrative duties, police were able to devote additional time in December to the Driving While Intoxicated (DWI) Holiday Task force, which resulted in 201 arrests of drunk drivers, many of whom were underage.

In Birmingham, Mobile and Montgomery, Alabama, AmeriCorps members serve in 13 schools through the Alliance for Catholic Education (ACE). During their two-year commitment, ACE AmeriCorps members participate in intensive teacher-training and service-learning courses during the summers and teach full-time. Over the past four years, ACE AmeriCorps members in schools across the South have taught nearly 5,000 underprivileged school children, and 100 percent of participating principals have rated the program highly.

ACE AmeriCorps members make an impact with their students that goes far beyond the classes they teach. At St. Jude's High School in Montgomery, ACE AmeriCorps members have started a popular drama program and directed students in several service-learning projects. In Birmingham, an ACE AmeriCorps member directs a service project that she integrates with classroom work. Students volunteer at a homeless shelter/soup kitchen and then are assigned to write and reflect about their experiences.

In Des Moines, Iowa, AmeriCorps members serve at the Iowa Coalition Against Domestic Violence. Operating since 1985, the Iowa Coalition Against Domestic Violence offers assistance to battered women and children living in 99 rural communities throughout Iowa. AmeriCorps members enable the Coalition to maintain field offices in underserved areas, offering services in crisis intervention, counseling, protective orders, shelter, and medical services. Last year, members assisted close to 3,500 women and 4,000 children through 29 domestic violence agencies/projects across the state. Additionally, members provided 260 education programs to the public, including classes on date rape and conflict resolution to hundreds of elementary, junior high and high school students. Overall, the AmeriCorps program in the last four years has made it possible for members to assist 20,000 victims of domestic violence.

Throughout West Virginia, AmeriCorps members serve with Energy Express. Initially serving two sites in 1994, Energy Express now includes 68 sites where AmeriCorps members provide summer learning experiences and nutrition to children living in low-income and rural communities across West Virginia. Of the more than 3,000 elementary age children enrolled in the 1998 summer program, 70 percent of those tested maintained or improved their reading achievement scores and benefited from a nutritious breakfast and lunch served daily over the six-week program.

In Flagstaff, Arizona, AmeriCorps members serve in the Coconino County Rural Environmental Corps. AmeriCorps members focus on three areas of the environment in Northern Arizona: fire prevention, hazardous fuel reduction, and natural resource management. Members performed home fire safety inspections for 370 residents, thinned eight acres of land near the Flagstaff Arboretum, participated in annual revegetation projects, and developed a youth service component to assist with U.S. Forest Service trail maintenance. In response to a firewood shortage in Native American communities in Northern Arizona, thinned wood was dried and delivered for use during cold winter months.

In Houston, Texas, 135 AmeriCorps members serve children in disadvantaged neighborhoods throughout Houston, reaching a school population of nearly 6,000 through SERVE HOUSTON. The wide array of services provided by AmeriCorps members include learning enrichment activities, one-on-one tutoring, student wellness education, development of parent resource centers, and ongoing service-learning opportunities. Through their comprehensive activities, and in close collaboration with individual school staff, SERVE HOUSTON members expand these schools' overall capacity to provide academic and extra-curricular activities, and get things done for these kids. AmeriCorps members work with a wide variety of community partners including the YMCA of Greater Houston, Volunteer Houston, Interfaith Ministries, Junior Achievement, the Scouts of America, and the Children's Museum of Houston.

In New Jersey, AmeriCorps Members serve through the New Jersey Department of Education in ten New Jersey schools. Members provide safe havens for children by extending the school day where they tutor children and run after school programs. Members also provide in-class academic support and mentoring activities aimed at improving math, science, and literacy skills. The program aims to improve the school success of 80 percent of 600 students served in 5 districts—Camden, Paterson, Pleasantville, Roselle, and Trenton.

In Montana, 40 full-time and 80 part-time AmeriCorps members serve through the Montana Conservation Corps. The AmeriCorps members serve throughout the state on crews of 6 under the leadership of a crew supervisor, and they work to address critical needs in maintaining Montana's natural resources. AmeriCorps members are constructing and maintaining 250 miles of trail and 36 parks, restoring and enhancing degraded watersheds, helping improve water quality, correcting site erosion, and preventing further degradation and restoring habitat. AmeriCorps members are constructing homes for ten low-income families, and rehabilitating housing for 80 low-income senior citizens and ten community agency facilities. Through its CorpsLink program, the AmeriCorps members are mentoring 450 adjudicated youth that they have engaged in 210 service projects.

In Idaho, 17 full-time and 19 part-time Idaho Trio AmeriCorps members are improving the academic performance of 2,309 Head Start, K-12 and college students

in various sites throughout the state. The majority of these students face challenges including physical disabilities, disruptive home life, and poor English skills. Teachers benefit from AmeriCorps members providing in-class support by giving one-on-one and small group assistance to many students.

AMERICORPS PROMISE FELLOWS

The following are some examples of how states intend to utilize the new Promise Fellows:

In Arizona, ten AmeriCorps Promise Fellows will be serving in urban and rural communities across the state to build upon and enhance the existing network of service organizations. Three AmeriCorps Promise Fellows will be based at the Arizona Governor's Community Policy Office where they will concentrate on identifying existing service organizations that are already providing the five fundamental resources for children and youth in Arizona. Those programs will serve as models that can be replicated and teamed with other service organizations. Seven AmeriCorps Promise fellows will be placed in rural and under-served communities. For example, an AmeriCorps Promise Fellow serving in Graham and Greeley counties will, among other things, develop a youth council, bringing high school students in the area together to share ideas, give voice to community concerns, and themselves serve the community.

In Florida, eleven AmeriCorps Promise Fellows will be engaged in a variety of diverse activities to help fulfill the goals set for children and youth at the Presidents' Summit in Philadelphia and the Florida Promise Summit, including:

- Identifying safe places for children in Pinellas County through the Youthmapping for Safe Places;
- Starting a literacy project that will distribute books to programs across the state;
- Organizing a mentor recruitment drive to involve more people in becoming positive role models; and
- Creating and managing a Youth Opportunities Directory to provide valuable resources to every child.

In Oklahoma, thirteen AmeriCorps Promise Fellows will serve to develop, expand and coordinate initiatives aimed at answering the America's Promise Challenge, including:

- Designing a database of volunteers for the American Red Cross;
- Expanding the volunteer base for the Oklahoma City Boys and Girls Clubs;
- Developing an afterschool program at the Texas County YMCA in Guymon, OK to provide safe places and more mentors to youth in the area; and
- Creating a volunteer center for the United Way of Ponca City, OK.

MARTIN LUTHER KING JR. DAY OF SERVICE

The following are examples of Martin Luther King Jr. Day service projects: In Athens, Alabama, the city of Athens provided a day of continuous service and education for adults, teens, and children about how to resolve racial conflicts. Community leaders provided educational training on nonviolent solutions and then the attendees participated in serving lunch to area senior citizens and the needy.

In Baltimore, Maryland, students, faculty, staff and alumnae of the College of Notre Dame of Maryland along with community volunteers staffed the Caroline Center, a job training/education program for women living in poverty. Their efforts allowed the Center to open on the holiday and to provide a safe, supervised environment when the schools were closed. Volunteers worked with children at the center to create picture books about racial harmony and cultural diversity. The women of the Center participated in seminars about self and community development and were also given a presentation on the role of women in the Civil Rights Movement.

In Helena, Montana, staff and volunteers from the United Way read books to over 150 youth for the holiday. The books focused on the accomplishments of Martin Luther King and the contributions of African-American and Native American cultures. Following the reading, children and adults served in local community service projects in the Helena area.

In Passaic, New Jersey, staff of the Anderson Lee Vocational and Technical School and NAACP youth volunteers helped to renovate three classrooms in need of repair. The volunteers added plumbing fixtures, installed new flooring, and repainted faded walls.

In Austin, Texas, on the Saturday before the holiday, residents of Austin fanned out over the city to over 40 sites to participate in community service projects. Over 1,500 people helped to build houses with Habitat for Humanity; planted trees;

cleaned-up trash in neighborhoods; visited nursing homes; and participated in clothes drives.

In Morgantown, West Virginia, volunteers renovated a playground to ensure compliance with state regulations. They refinished existing playground equipment, replaced rusted fencing, and enlarged the play area by 15 feet to install a new playground set.

LEARN AND SERVE AMERICA—SCHOOL- AND COMMUNITY-BASED

The following are examples of the success of School- and Community-based Learn and Serve America programs:

In Gresham, South Carolina, high school students, after completing a needs assessment, built a rural fire department on property donated by a community member. Having a fire department in the community has resulted in a re-classification which has saved every homeowner substantial money on their homeowner's insurance. This experience has greatly impacted the safety curriculum throughout the K-12 system.

In Sedalia, Missouri at Smith-Cotton High School, industrial technology students with help from the art students converted waste materials from a local pre-fabricated building company into 400 bluebird nesting boxes. Students installed the nesting boxes on the vast Missouri State Fair Grounds, the adjacent State Fair Community College campus, the City of Sedalia's soccer fields, and other public grounds. A late summer inspection revealed dramatic nesting success, and the students learned basic wood shop, equipment safety and operation, problem-solving, mass manufacturing techniques, quality control, and natural history.

In Iowa City, Iowa the Iowa Service-Learning Partnership incorporates service-learning into teacher education programs at Iowa State University, the University of Iowa, and Northern Iowa University. Along with training current K-12 teachers and administrators, the Partnership trains future teachers who pair up with supervising teachers during their student teaching assignments to implement a service-learning project for the K-12 students.

More than 3,500 Iowa school children have been involved in service-learning projects, thanks to the work of the 400 current teachers, and 450 prospective teachers who have received training in service-learning concepts and practice over the past three years. A follow-up study found 50 percent of the classroom teachers continued service-learning a year after the original Partnership experience.

At Jane Addams Elementary School, in Chicago, Illinois fifth through eighth grade students tutor younger students in several academic areas. Students this year achieved the highest level ever in the history of the school on national basic skills tests for mathematics and reading. The school is located in an inner-city neighborhood that is populated by first generation immigrants. Because English is a second language for most students, peer tutors received special pre-service training in tutoring techniques.

The Hamilton YMCA, a branch of the YMCA of Metropolitan Chattanooga, Tennessee, has expanded their Before and After School Child Care Tutorial program in partnership with East Brainerd Elementary School. The after-school program involves children ages 5 to 11 in service-learning projects such as peer tutoring and creating a vegetable garden at school. Twenty-five students tutor 70 "at-risk" elementary school pupils in their areas of academic weakness. In collaboration with local environmental agencies, the students are developing a Field Guide to be used on the East Brainerd Elementary Nature Trail by 500 students at the school. The program has a proven track record of student gains in academic achievement and self-esteem.

LEARN AND SERVE AMERICA—HIGHER EDUCATION

The following are examples of the success of Higher Education Learn and Serve America programs:

In Mobile, AL, first year engineering students at the University of South Alabama partner with math and science middle school teachers to design course software and hardware that meet the classroom needs and specifications of the teachers. This affords the college students an opportunity to practice engineering design within a "real world" environment, while meeting the community-identified need of more active, hands-on learning of science and math at the middle school level.

In Crow Agency, MT, Business Administration students at Little Big Horn College work with the Tribal Business Information Center to provide technical assistance and office services to the Center. They also serve as information systems technicians for community agencies, work with local, state, and national parks to serve as cul-

tural and historical interpreters, and serve as advocates for clients with health or educational needs.

Based in Mesa, Arizona, the Campus Compact National Center for Community Colleges has a national project which teams seven community colleges with a neighboring four-year college or university to collaborate on community service-learning projects, and faculty and student service-learning training and research projects. Nationally, the program's goal is to provide exemplary models and effective practices for developing and sustaining partnerships between two- and four-year institutions of higher education to serve community needs. Each collaborative project is locally determined and managed. Examples of these innovative programs include:

- an Ohio program in which service-learning courses are focused on the restoration of a polluted Appalachian watershed and on the history and heritage of the impoverished community living in the watershed area; and
- an America Reads program in Florida in which college students tutor elementary school children both in school and in community-based afterschool centers while developing their teaching skills through service-learning courses in education, psychology, and communication.

NATIONAL SERVICE PROGRAMS ENGAGED IN LITERACY ACTIVITIES

The following are some examples of national service programs engaged in literacy activities: In Connecticut, AmeriCorps members tutor seven- and eight-year-olds in reading during the school year and during the summer in nine public housing communities in Hartford, New Haven, and New London, CT. Members also coach parents in supporting their child's efforts to read, volunteer in classrooms, and work with teachers to reinforce school curriculum with supplementary services.

In Florida, AmeriCorps members tutor under-achieving K-3 students so that all will read at or above their respective grade level. Members also train middle and high school students to become elementary school student tutors, and teach parent education workshops to parents to increase the number of parents reading to their young children. Members serve throughout Florida in local elementary schools with critically low student performance.

In Houston, Texas, Literacy*AmeriCorps Members provide literacy instruction for children and adults and target the specific need of increasing children's reading skills. AmeriCorps Members increase literacy for families by providing English as a Second Language courses, basic skills, pre-GED and GED classes, homework assistance to school-age children, and family and parent literacy programs. America Reads activities include recruiting and training volunteers as tutors for young children.

In San Francisco, California, there is a higher education service-learning program where Corporation funds help train and place college work-study students in schools to provide one-on-one tutoring to third grade students who are underachieving in reading. The program includes an intensive 45 hours of training in reading instruction, reflection sessions and mentoring opportunities with teacher collaborators. The project expects to develop materials for dissemination, including the revised course syllabus, a tutoring resource manual and readings, placement procedures and supervision guidelines, recruitment materials, and evaluation instruments assessing the performance of tutors and tutees alike.

In Washington state, the Governor has launched a statewide effort to improve literacy among young children. All parts of national service, including AmeriCorps and service-learning, are contributing to this effort.

[From the Dispatch, Feb. 1999]

A SALUTE TO THE FIRST PROMISE FELLOWS

(By General Colin Powell)

For some of our young people, preserving our democratic way of life means shouldering a rifle, or climbing into a cockpit, or weighing anchor and setting out to sea. For others it means helping a child to read, or helping that child to secure needed vaccinations or health care. Or it means building a park, or helping to bring peace to troubled neighborhoods, or helping communities recover from natural disasters, or reclaiming the environment.

For a select group of young people called Promise Fellows, it means a special mission: It means providing young people with access to the five America's Promise Fundamental Resources they need to lead successful lives.

The Promise Fellows are new dimension in the ongoing partnership between America's Promise and the Corporation for National Service—AmeriCorps. From the very beginning, the Corporation for National Service has been one of our staunchest allies. Former Senator Harris Wofford, the Corporation's CEO, helped make the Presidents' Summit in Philadelphia the seminal event it was, and he has been a valued supporter of America's Promise ever since.

The creation of the AmeriCorps Promise Fellowships was announced by President Clinton last June. This month, the first Promise Fellows—some 500 of them—will undertake their training and then fan out all across the country to assist in local efforts to provide the five America's Promise Fundamental Resources.

Promise Fellows will be starting a literacy project in Florida that will distribute books to programs across the state. In Illinois, they will organize a summit for youth and community members. In Oklahoma, they will be developing an after-school program at a local YMCA and establishing a database of volunteers for the local Red Cross. In North Carolina, they will assist a program that matches elementary school children with senior volunteer mentors. In Mississippi, they will work with 100 Black Men of America to recruit 10,000 new mentors in the city of Jackson. In New Jersey, Promise Fellows will serve as coordinators of Communities of Promise projects in all 21 New Jersey counties. Nationally, Promise Fellows will work with another ally of America's Promise, Communities in Schools, to identify and create up to 500 Schools of Promise across the country.

These are just a few of the many ways in which Promise Fellows will be making America a better place by giving young people a better chance at life. Their motto is, "Delivering on America's Promise to Youth"—and that is exactly what they are going to do.

The 500 Promise Fellows are the first of the hundreds more we expect in the years ahead. Because these young people are going to be serving in positions of leadership, they are going to exert an influence far in excess of their numbers. They are going to be catalysts and coordinators for a whole range of projects designed to advance the five America's Promise Fundamental Resources. They are going to be examples and role models for other young people. Finally, when they finish their year of service as Promise Fellows, they are going to carry that experience with them for the rest of their lives. Whenever they are confronted with a problem or need in their communities—particularly one involving young people—they will be able to draw on their experience as Promise Fellows in devising solutions, and their neighbors will be able to look to them for leadership and advice. I look forward to giving you further reports on the success of this new adventure in public service.

Senator BOND. Thank you very much, Senator. We will have a number of questions for you submitted for the record. But let me go back to the management reform. You made the commitment last year to correct a number of the weaknesses. The IG has found that the same material weaknesses exist. In fact, the number of material weaknesses has expanded to two new areas in the Corporation's financial operations.

You have developed an action plan. What sort of strategy or plan did you have in place last year to address the material weaknesses? Have you determined that implementing this action plan will eliminate or will remedy the weaknesses, and when do you expect to have them remedied?

ADDRESSING MATERIAL WEAKNESSES

Mr. WOFFORD. In just a minute, if I may, I would like our chief operating officer, who has been a driving leader in this, to add her comments.

As to the sequence of plans, I would like to make sure you see this is not just one plan after other plan. The top management of OMB, before our last hearing, had put a lot of power and leadership—working with us very directly—into the plan we reported to you at this committee. We made great progress in that plan.

As the other studies by the Inspector General, our own studies, and then the balance sheet qualified opinion and its recommenda-

tions and findings came, we necessarily had to go into greater depth, greater detail and specificity with our plan submitted to you. I was glad to see that except for the two additional points you wanted us rightly to include in that plan—which we have now added—that will show you every 60 days whether we have made our targets, you have no objection to the plan that is before you.

Let me add one other thing about that sequence and the sequence of leadership. Out of the collaboration with OMB's management leadership, we were very fortunate to bring on board our new chief operating officer—they let us have Wendy Zenker, one of their top people, who by the way had run grants management at the Department of Education some time before.

But she came in, fortunately overlapping at the same time that our chief operating officer was taken to be Secretary of the Army, and a little while thereafter, you probably know, our chief financial officer was taken to be the chief financial officer of Internal Revenue.

Wendy Zenker has given extraordinary leadership. She has been brought in as a strong extra accounting support and I would like her to comment, if she may, on your question.

Senator BOND. Thank you.

STATEMENT OF WENDY ZENKER

Ms. ZENKER. Thank you very much, Mr. Chairman. As you noted, we do have an Action Plan that addressed, at the time, all of the six material weaknesses that the Inspector General had noted in her fiscal year 1997 balance sheet audit that was issued in October of last year. We specifically organized the plan around those material weaknesses so we would have an assurance that we would be able to show to you progress, and also results, in correcting those weaknesses. The plan is dynamic. As the year goes on, as we learn more, if it is necessary to modify the plan or add a particular goal or objective, we do that. As a matter of fact, in our February progress report to you we added procurement management. We recognized, based on the information that we had been receiving, that there was, in all likelihood, a material weakness in that area and have added that to our action plan. So, as I say, we can show you results every 60 days and we can show you real improvement within this year and the next.

You asked how long it will take to fix the material weaknesses. We believe that we can fix them within the next 2 years. That is, 1999 and 2000. The reason I say that to you is because many of the weaknesses are tied to our very poor current financial management system. The efforts that we are taking to install a new financial management system will address several of the material weaknesses that the Inspector General has identified.

Senator BOND. Thank you very much, Mrs. Zenker. Senator Wofford, we are delighted you brought in a chief operating officer, but we are still very much concerned about the attention and time being dedicated to the Corporation's management weaknesses.

What are the reasons that you do not have a CFO? You have a deputy. What are you going to do about that?

CHIEF FINANCIAL OFFICER

Mr. WOFFORD. I am glad to be able to report to you that, after a frustrating and hard search, we have identified someone who we think will perform with outstanding ability and experience. That person is being vetted at this moment by the White House.

Senator BOND. When do you hope to have them on board?

Mr. WOFFORD. I hope any day; we hope very soon. We will have the vetting process for the initial announcement and, of course, thereafter—

Senator BOND. Obviously we wish you luck.

Mr. WOFFORD [continuing]. There are the various studies that go on, as you well know, before that person can take full charge. That is why it is very fortunate that during this interim, which was longer than we wanted, that we have had the kind of leadership that Wendy Zenker is giving right now, every day. So we have had nothing dropped. In fact, she came directly out of the shaping of our plan last year, and came over here to help us implement it.

NATIONAL SERVICE TRUST

Senator BOND. Senator, the Corporation is requesting \$93 million more for the National Service Trust account. The IG states in her testimony that as of September 30 last year, the trust liability totaled \$161 billion, but the Corporation had reserved \$357 million in the trust. And thus, she calculated, there is a projected surplus of about \$196 million, according to the auditors.

Do you agree with the auditors' assessment? Was this existence of the surplus factored in? And the thing that really concerns us, both from both a financial management as well as programmatic standpoint, does this indicate that the actual education award usage was less than what the Corporation has been estimating?

Mr. WOFFORD. No. Let me separate the two parts of this problem, which it is crucial to separate.

One, the most prudent and appropriate way to report the liability on the financial statements is in the audit that is just underway now. The Corporation in the beginning, it seems to me rightly, reflected the Act, which says that every member of the trust—of AmeriCorps—who completes service is entitled to an education award. And we have an obligation—in fact, the Act makes it very clear—that the money for those educational awards must be held in the trust.

Therefore, in the beginning, with no evidence as to how many would use those awards, knowing, of course, that some would not—some may not want to go to college, a significant proportion are over 30, and even though an increasing number of people over 30 and over 70 are interested in college—we have always known that not all members are going to use it. Some go directly to jobs out of programs that have taught them how to build houses for the homeless. But we accept the auditor's recommendation that, at this point, it would be wise to discount the amount needed—the amount that is listed as a liability, because now we have some experience.

Experience indicates that about 78 percent—and it could go higher—use the award. So we accept the recommendation of the audi-

tors and we are changing the financial statement to reflect that liability.

But that is a different question from what funds are needed now to be in the trust fund.

We have been discounting our request to Congress at that 78 percent rate for 2 years now. And if we had not discounted it by that factor, we would be asking for some 70 million more for the trust.

Maybe Wendy Zenker would want to see if I adequately conveyed that.

Ms. ZENKER. One way to think about this is—there is one way to think about the liability as we record it on the financial statement, and a different way that we prepare our budget estimates that we share with you and the Congress.

In terms of our liability on the statement, we felt that it was prudent to take a very conservative approach and assume that every member who enrolled in the trust was going to use their education award until we had actual facts and proof that that was not the case.

Senator BOND. In essence, now you agree that there is that—

Ms. ZENKER. We still believe it is a judgment call. We have not gone through a full 7-year cycle yet. So for the first class that were enrolled, we have some usage figures and very high usage figures for that class. But since they have not had the full 7 years, we do not know, for sure, exactly how many people will use their education award.

Mr. WOFFORD. Some are predicting a peak coming at the end of the 7 years when people say, I will no longer have my voucher—my education award—if I do not use it. So we have to take into account the uncertainty.

Senator BOND. That is possible.

I think I have benefited from a hometown-like system. Back in the heartland, if you have a referee that comes from the same town as one of the teams, you can always count on getting better calls.

I think I have gotten a better call on the light system. So I will terminate my question and turn to my ranking member for her questions. Maybe we can give you a small hometown advantage.

Senator MIKULSKI. That is fine with me. As you know, we have two basketball teams in the tournament, one a big school like Maryland and then we are very proud of Mount St. Mary's College, a small college that has a lot of grit and determination. Keep your eye on them. It is the small sizes that sometimes triumphant over the giants. [Laughter.]

USE OF AMERICORPS EDUCATION AWARDS

Having said that, I would like to follow up really on Senator Bond's question about use. I really had a hard time following that answer. And here is my question: Of the number of volunteers, full-time and then the number of AmeriCorps volunteers part-time—remember the part-time model which was to be so crucial, was one of the things I advocated, because it did not require relocation, enabled people of disabilities to be recruited because their supports would be available.

My question is as far as you know now, how many people have either used AmeriCorps to pay down their debt, which is one category, or to use their voucher for additional education?

Mr. WOFFORD. Over 76,000 have earned the educational awards and, of those, already 35,000 have used them or are using them now.

Senator MIKULSKI. To do what?

Mr. WOFFORD. To pay either the loans that they had taken out from college or to pay directly to colleges.

Senator MIKULSKI. Of the 35,000 then, how many have used their service in AmeriCorps to pay down their debt, which was one of the original purposes of the program?

Mr. WOFFORD. About 34 percent have used it to pay down their debt, 56 percent use it to pay for continuing college education, and 10 percent use it for both purposes.

Senator MIKULSKI. I do not know what continuing college education means.

Mr. WOFFORD. About 25 percent of all members are precollege and they use their award to pay for entering college.

Senator MIKULSKI. Yes?

Mr. WOFFORD. A continuing might also be that more than—

Senator MIKULSKI. I am going to be very hard here. Forty-five percent used it to pay down their debt. And was that the full-time or the part-time people?

Mr. WOFFORD. Both: we can give you the breakdown, in general, there is no significant difference in the use of awards between full-time and part-time members.

Senator MIKULSKI. That will be important. If we are looking ahead at where we need to put our money, and even where you are going to do your recruitment, which is who are the most people who make the advantage, this is like the epidemiology of the program. It tells you what is healthy and what needs immunization and what has got real big problems.

So if 45 percent did that, but when we say continuing—are you saying that 30 percent of the 55 percent are people who used AmeriCorps to essentially get a voucher to begin their higher education?

Mr. WOFFORD. The—exactly 30 percent, I will not say.

Senator MIKULSKI. I do not care if it is 29 or 30.

Mr. WOFFORD. Senator, yes. Of those who have not gone to college, a high proportion—

Senator MIKULSKI. That is not continuing. They never began.

Mr. WOFFORD. I meant beginning their education; it is post-secondary education. Some go to job training; most go to college. Second, there is a significant number who serve in the middle of their college. They take a year out—the full-time members. And an even larger number of the part-time members are in college as they serve, and they use it for future college expenses.

Senator MIKULSKI. Is that the part-time group?

Mr. WOFFORD. Yes. A significant proportion of part-time AmeriCorps members are at the same time studying at college. It is part-time service in AmeriCorps, and they earn a part-time educational award. Part-time service is an area you have been inter-

ested in growing, and last year we had over 14,000 part-time and reduced part-time members, compared to 7,500 the year before.

Senator MIKULSKI. Yes. And I would like then to have worthy information on this.

Now the 25 percent who then use their voucher to begin some type of post-secondary education, whether it is job training that is very specific—it could be computer something or other or it could be—how many of those went to a full 4-year program and how many went to a 2-year program?

Mr. WOFFORD. We may be able to get that information for you. And, if not, we can get it in due course.

[The information follows:]

Program year	Full-time members	Full-time percent	Part-time members	Part-time percent	All members
1994	16,054	64	9,163	36	25,217
1995	17,844	71	7,338	29	25,182
1996	17,608	70	7,520	30	25,128
1997	22,963	61	14,586	39	37,549
Total	74,469	66	38,607	34	113,076

Senator MIKULSKI. That is not a judgment about whether you go to 2 year or 4 year. Again, it talks about who are we recruiting and who sticks with the program.

I think it would be fantastic if somebody who never had a chance comes into AmeriCorps and then they go and get their voucher to get their 2-year program in nursing, or maybe a 2-year program in emergency management, something they have got a flavor for when they worked in AmeriCorps, and they keep on going with the experience they earned in it.

Maybe they go into construction technology because they did Habitat for Humanity, but those 2 years—AmeriCorps goes 2 years day school and then maybe they go on to night school or the wonderful ways higher education recruits people. But you see how we have to—

Mr. WOFFORD. Exactly.

ATTRITION

Senator MIKULSKI. Now of the number of the people that have come into AmeriCorps, what is the dropout rate?

Mr. WOFFORD. I think the 78 percent figure is one way of throwing light on that. The report that is—

Senator MIKULSKI. What is the dropout rate?

Mr. WOFFORD. About 16 percent—who come in, do not complete the service, or have a shorter term of service. They do not have urgent personal or family reasons to leave, and they have not left for positive reasons, such as to take a job in a welfare-to-work program.

Ms. ZENKER. There is, Senator, a range of dropout rates. I do not mean to not answer your question. But when we look at each of our program years, we have statistics that range from 16 to 20 percent in terms of a dropout rate.

Senator MIKULSKI. What is the dropout rate in each year of the last 3 years?

Ms. ZENKER. For the last 3 years—if I may, if I can start from the first year? We only have 4 to report to you.

Senator MIKULSKI. Sure.

Ms. ZENKER. The dropout rate in year one, which was the 1994 to 1995 year was 20 percent. The dropout rate in year two, 1995 to 1996, was 18 percent. The dropout rate in year three, 1996 to 1997, was 14 percent. And the dropout rate in the year four, 1997 to 1998, is currently 16 percent but we still have people serving in that year. I would suggest that that is not a final figure.

Senator MIKULSKI. You would say in terms of the dropout rate that you have really improved your screening procedure. You see, for everybody, for whatever reason they drop out, we have made a tremendous investment. And they have taken a slot. So the better the screening—that is a pretty good rate.

Mr. WOFFORD. Senator, could I just add two figures that may be very important to you in comparing this. Forty-seven percent of first year students at 2-year public colleges drop out. Thirty-one percent of first year students at 2-year private schools drop out. Thirty-three percent—

Senator MIKULSKI. We are not talking about going to school. There are a lot of reasons why people drop out of school. And this is not a hearing in the Ed Labor Committee. I am very familiar with why they drop out of school. What I am interested here is—that is not a comparison that is relevant.

Mr. WOFFORD. Peace Corps and Job Corps and the military are the other three figures I will give you just to compare.

Senator MIKULSKI. I am interested in AmeriCorps. I am interested in the viability of AmeriCorps. That is what this hearing is about.

Mr. WOFFORD. No one is more interested than you—

Senator MIKULSKI. So then having asked that question, I see that my time is up in terms of recruitment. I was just going to ask another question.

Senator BOND. Take one more. I will give you the hometown advantage.

SUSTAINABILITY OF AMERICORPS PROGRAM IMPACT

Senator MIKULSKI. Thank you. Could you then tell me the issue in terms of the in-programmatic impacts? We have a variety of statements here. You in your own reports talk about how, for example, reading improves when the volunteers are there. What I am interested in is what are the studies to show when the volunteers leave.

In other words, is there a sustainability to the impact of AmeriCorps as compared to AmeriCorps being there?

Mr. WOFFORD. In the report that Aguirre prepared—that we are releasing on AmeriCorps, we have figures that are not on this chart of the estimate of the percentage who continue to serve as volunteers in their communities. There is a very strong report from this—I think you will find a very substantial report on just exactly how AmeriCorps has instilled—the evidence that shows that it has instilled an ethic of continuing service in the members.

There is already an AmeriCorps alums organization that the AmeriCorps members have started that is very actively—

Senator MIKULSKI. That is an alumni association? Because that was going to be one of the key components of the program.

Mr. WOFFORD. There is definitely one, very active and full of plans and growing and committed to furthering service. The alums have committed themselves to the five goals of the President's summit and have made specific commitments as to what they want to do.

Senator MIKULSKI. Let me just ask my last question here and then I will come back for a second round. It says here: in all programs 5,700 members at 305 sites supported the tutoring of youths in grades 1 to 12. Sixty-seven percent of those tutored showed improvement during the program year, which is great.

Then what happened in the second year? Do we know that? In other words, what is next? If you build a Habitat for Humanity house, there is the house. I know it is hard to do education. I know it is hard to do public health. I know it is hard to do these to do these things.

Mr. WOFFORD. In tutoring and reading?

Senator MIKULSKI. Yes.

Mr. WOFFORD. The report I want to do for you is going to show the accumulating evidence from around the country from literacy programs, in which AmeriCorps members serve, that involve measurable test scores year by year.

Remember, that the AmeriCorps member—we do not run literacy programs. AmeriCorps members get assigned to local literacy—

Senator MIKULSKI. I understand all that. Is that report done, Senator Wofford?

Mr. WOFFORD. We have a lot of that—yes, because we are a major partner in the—

Senator MIKULSKI. Is the report done?

Mr. WOFFORD. We have reports that are done.

Senator MIKULSKI. It says the summary of recent national evaluation. Is that a single report?

Mr. WOFFORD. No. In addition to this summary report, which we are releasing today, we have a number of reports that we and the Education Department have on what AmeriCorps participating literacy programs are accomplishing. We will send you the report and that study in a summary.

Senator MIKULSKI. We will come back to it.

Senator BOND. Thank you, Senator Mikulski. We are delighted to have Senator Kyl today.

Senator KYL. Thank you, Mr. Chairman. I will take so little time that it will make up for all of that hometowning that you were doing with each other. I just wanted to stop by and say hello to Senator Wofford and commend you for your efforts in trying to accomplish all that I know you wish to accomplish with the program.

Mr. Chairman, since I am (A) a late arrival and (B) new to the committee with not enough information to really contribute, I will defer to you and your expertise to continue the line of questioning. Thank you.

Senator BOND. Senator Kyl, you are always welcomed and we are delighted to have any questions.

I am going to turn back to Senator Mikulski. I have just one or two quick questions. We are going to have the IG and KPMG. If you could stay around, Senator Wofford, I welcome to give you an opportunity to respond orally to any of the points that they raise. And obviously on this hearing as in any others we not only will keep the record open for questions that members may have, but if information developed at the hearing triggers your additional thoughts, if you want to have specific responses to that, we would be happy to have it.

NATIONAL SERVICE TRUST

To follow up on the National Service Trust, 16 percent do not use the education award. How is this accounted for in the trust fund account? Do you now believe that that \$196 million is excess funds?

Ms. ZENKER. No, Senator, I do not. As we stated, there is a distinction between the way we provided the liability estimate and the draft financial statement and the way we provided a budget estimate for the Congress. In providing a budget estimate, we have taken into account what is simply called “the discount”—the people who have earned an award but who we do not believe will use those awards. So we have applied that discount factor in our budget estimating practices that we have shared with you. There is still a modest surplus in the trust account and it is there for the unexpected use of these awards by students who may, indeed, come back and use them.

If some of those people show up and say, we are in our last two program years, we want to make use of that education award, we feel we need to have the money available for them to make use of that award.

So there is a modest amount of money that is in the trust. But there is no large surplus to the extent that has been described.

WASTE, FRAUD, AND ABUSE

Senator BOND. Let me turn for the last general question to an area that reflects the concern we have about the Corporation’s management capacity, and that is the vulnerability to waste, fraud or abuse.

The Inspector General has repeatedly found problems related to grant oversight and monitoring. In one case an OIG investigation revealed evidence that at one grantee site the executive director had misapplied funds and as a result the IRS seized and sold the site’s assets to satisfy delinquent taxes. The OIG also questioned more than 12 percent of the grantee’s claimed costs, and yet despite these problems I understand that the Corporation continues to fund this grantee.

Could you tell us why you continue to fund the grantee? What procedures and controls do you have in place currently to prevent these sorts of problems, and have there been other cases where you have taken action against noncompliant grantees?

Mr. WOFFORD. Indeed, is the answer to the latter. The Congressional Hunger Center is the sponsor of the program that is referred to. One of their sites did have the problems that we found—certainly the Inspector General found and that site has been terminated by the Congressional—

Senator BOND. It was a site-specific problem of a larger grantee?

Mr. WOFFORD. It was a site-specific problem. And we have confidence in the Congressional Hunger Center's impact as a program; it is one of the outstanding programs in the Corporation. That site was a disaster.

Senator BOND. Did you find that or was it the IG that found it?

Ms. ZENKER. Initially, there was a participant at the site who brought the issue to our attention. When we heard of it, we directed that individual immediately to go to the IG's office so that the IG could conduct the appropriate investigation into what was going on.

Senator BOND. Are the problems that were found there the kinds of problems that you would normally identify in your oversight of grantees?

Ms. ZENKER. If I may, Mr. Chairman. We have a situation in the Corporation where we have grants that we give to state commissions and other national directs, and they in turn give subgrants to sites around the country. We have a direct responsibility to monitor our grants and we do that. We are not able to monitor our subgrantees.

Senator BOND. Was this a subgrantee?

Ms. ZENKER. It was a subgrant of the Congressional Hunger Center, a smaller site. I would have to honestly tell you, I do not think we have the resources to appropriately monitor all of the subgrantees and program sites around the country. What we do try to do is to make sure that our grantees understand what their responsibilities are to monitor those sites and those subgrantees.

Senator BOND. So in this instance the grantee blew it?

Ms. ZENKER. To a certain extent the grantee blew it. They hired and had a program director at a site who turned out to be a crook. I am looking for another word but I cannot find one.

Senator BOND. That is the problem. How do we make sure that somebody is getting the crooks out of there?

Ms. ZENKER. In this instance it happened, and I would suggest the response happened in the appropriate way. This is one project director in terms of thousands that we have around the country. It was a bad apple and through the hotline, and other mechanisms to encourage people to bring these things to our attention, the Inspector General was able to go out and do the type of review that needed to be done to shut down the site.

Mr. WOFFORD. Mr. Chairman, could I just add, we have convened all the national nonprofit grantees and all the main grantors from the state commissions appointed by governors to a training conference that focused on just this issue.

The Inspector General gave a very detailed and challenging report of the hardest of her findings. The impact of that training conference—I have seen it in a number of states that I have visited. The state commission executive directors have themselves called conferences of their grantees to make sure that they are monitoring more effectively, if they had been inadequate in the past.

There are a number of additional steps we are going to take to ensure the responsibility of the state commissions—to which two-thirds of the grants are made—and the national nonprofits.

MONITORING GRANTEES

Senator BOND. The final question is, do you now have in place the resources to do an effective job of monitoring, whether it is through your direct grantees or through the state commissions? And, if not, have you requested the funds to provide those resources to make sure there is an effective grants monitoring regimen in place?

Ms. ZENKER. Mr. Chairman, yes. We have requested additional funds to improve our grants management activities. But even as we await the results of the 2000 budget request, we are still this year putting more resources into grants management and into grant monitoring.

One of the activities that our program offices have done is to look at the criteria that we provide to determine where they should perform site visits this year—so that we make sure we go to the more vulnerable sites versus the stronger sites in our oversight activities. So we are doing things this year, but in terms of our 2000 request, a portion of that will also go to improve grants management.

Senator BOND. Thank you very much. Senator Mikulski.

Senator MIKULSKI. Thank you, Mr. Chairman. I know we will have other questions submitted to the record.

CHARACTERISTICS OF FULL- AND PART-TIME PARTICIPANTS

Just now that as we look at the results of AmeriCorps Learn and Serve, particularly AmeriCorps, I am interested in the distinction between the full-time participant as well as the part-time participant and who really made use of either/or. Did they come predominantly from—what social backgrounds, et cetera?

And, also, the part-time model which was to be focused on the fact that many people cannot go away because of family obligations or do not want to go away, but want to participate in a program like this. So that is why the part-time model was there, to meet that need.

And it was often designed particularly for women and perhaps a little bit older women volunteers who wanted to be in AmeriCorps because they either had a family obligation—they might have been a caregiver to an older parent—as well as people even, for example, with certain disabilities. If you have your whole network lined up in your hometown, like in Baltimore, and you have your physician, you have your support services and so on, you can still be a volunteer. In fact, it is important to show that in AmeriCorps everybody is welcomed who wants to do a job. That was one of the other aspects.

So anyway, I am interested in the part-time model. As we go ahead with reauthorization, we need to know this as well as the funding.

What I have here is the Brandeis report which I have read, which says that everybody likes AmeriCorps and everybody likes AmeriCorps when they are there, but it is questionable about the sustainable effort. That is complicated in education. But if we go to this report—that says Aguirre International? Is this report going to be released today?

Mr. WOFFORD. Yes.

Senator MIKULSKI. I sure wish we would have had it for the hearing.

Mr. WOFFORD. My testimony goes into some detail, the 28-page testimony.

Senator MIKULSKI. I appreciate that. But I would have liked to have seen the report. What time are you going to release it?

Mr. WOFFORD. It is available, as far as I know, right now. We have it here. We will give it to you—

[The information follows:]

AMERICORPS STATE/NATIONAL FULL-TIME/PART-TIME STATUS 1997–1998

Senator MIKULSKI. I would have liked to have had it last night or something. This is the hearing. This is the shot. This is the opportunity. I am glad you are releasing it and everybody who has a newspaper will read it. But I would like to know when do I get to read it. I do not mean to be brusque here.

Mr. WOFFORD. The detailed summary of this was provided to the staff.

Senator MIKULSKI. I do not want a summary, Senator Wofford. I really want this report because I am digging into this program. I really do not want a summary. I really wanted the report. So let us see what we can do here. But this is kind of where we are: I am going to be helpful, but this was my window of opportunity to really then focus on this for the hearing. So let us have the report. Do you understand?

Mr. WOFFORD. Yes.

Senator MIKULSKI. I am glad you gave the testimony. If I had the report, I could have had, I think, better questions.

Mr. WOFFORD. We will give you an analysis of the part-time, which is an increasing proportion of AmeriCorps.

May I add one other thing, Mr. Chairman, on this point? Namely—

Senator MIKULSKI. I did not give up my time yet.

Mr. WOFFORD. I give up mine, which does not exist.

HEALTH SERVICES AND SENIOR SERVICES

Senator MIKULSKI. In terms of all of the people that we are talking about here, it says that AmeriCorps members serve in clinics, VA hospitals and other health-related facilities. It says close to 500,000 people were immunized. I would like to know what other things they did in the area of health services.

It says that over a million volunteers were generated, recruited, trained or supervised. I hope the report goes into how that happened and, also, this whole thing with the effort to the seniors, helping them maintain independent living would be very important, because that was one of the other missions and I would like to know where that is spelled out. Is that all in that report or not?

Mr. WOFFORD. It will be in the report that will come to you. I cannot say that it is all in the Aguirre report. No.

[CLERK'S NOTE.—The following report "Making a Difference: Impact of AmeriCorps* State/National Direct on Members and Communities 1994-95 and 1995-96" can be found in the subcommittee files.]

Senator MIKULSKI. I have other questions for the record. I know we want to move on to the IG and anything else that Senator Wofford wants to tell you.

Senator BOND. I will give Senator Wofford an opportunity to take one last crack.

Mr. WOFFORD. Just one minute to make clear that with the exception of a few programs—Teach for America, a large program which sends teachers all around the country; Alliance for Catholic Education which sends teachers to southern Catholic schools—a few programs, the overwhelming majority of our programs are programs locally based where people serve locally. We do not come in from outside.

I want to make those facts clear to Senator Mikulski because it is not a program—with the exception of the American Red Cross project and the Disaster Relief teams of NCCC—that parachutes anyone into a community. The Red Cross sends people into disaster areas, the AmeriCorps teams. Otherwise it is a locally based program in which the local programs select the members, recruit them, administer them.

Senator BOND. Thank you very much, Senator Wofford. I appreciate your testimony and Ms. Zenker's. And I do ask you to stick around if you would care to respond. And now I invite the Corporation's Inspector General Luise Jordan and Karen Molnar from KPMG to come forward. If you would, take your places up here. We would appreciate that.

We have just heard from the Corporation regarding a variety of issues about their efforts to correct management deficiencies. If you have any thoughts you have in response to the Corporation's testimony, we would welcome those.

I also would like to hear the auditors' assessment to date on the financial statements audit. Especially on the auditability of the Corporation's statement. I will be especially interested in hearing the auditors' view on the Corporation's progress, addressing its management deficiencies and what recommendations you may have that can assist the Corporation.

Last, I am concerned about the discussion of the audit finding of the \$196 million in surplus funds. We are going to invite you to provide details on that. I understand you have written testimony which we will make a part of the record. And I would like to ask you to take about 5 minutes to make any oral statement you wish to make. Thank you.

STATEMENT OF LUISE S. JORDAN

Ms. JORDAN. Mr. Chairman, Senator Mikulski, I appreciate the opportunity to be here today to provide information related to the Corporation's financial management.

To answer your question, although the Corporation has taken steps to achieve financial accountability, progress to correct its financial management deficiencies has been slow. Last year for the first time we were able to audit the Corporation's balance sheet. Presently we are in the final phases of a full-scope audit of the Corporation's 1998 financial statements.

The audit, as you indicated, is being performed by KPMG under contract to my office. Karen Molnar, the auditor partner responsible for the work, has accompanied me here today. Senator Bond, your referee hails from Missouri.

We planned and conducted the audit in accordance with generally accepted government auditing standards with an intended reporting deadline of March 31, 1999. Because of known internal control weaknesses, the audit required, as you indicated, extensive, costly and time-consuming procedures that took into account in their design the pervasive deficiencies in the Corporation's operations and systems.

Today, however, I am reporting that completion of the audit is delayed due primarily to my decision to allow the Corporation to revise its estimates of grant advances and payables. The balances related to grants are among the most significant items on the financial statements. Audit work to date has revealed that the Corporation's procedures to estimate the advances and payables are flawed. Because the estimates are flawed, the Corporation has requested additional time to correct the information by using actual information from grantee-submitted financial reports.

The Corporation's work is made more time-consuming and more extensive because not all the financial reports have been entered into the financial systems. To date, however, as has been discussed, the financial statement audit has revealed material weaknesses in eight areas including two new areas. Those will be item 7 and 8 in this list.

First, the general control environment. The Corporation's general control environment is weak and not conducive to ensuring an effective system of internal control. Control environment factors include commitment to competence, management philosophy and operating style, organizational structure and assignment of authority and responsibility. The control environment sets the tone of an organization, influences the level of control consciousness and provides the discipline and structure of an organization. The Corporation's lack of effective management control is evidenced by the volume of material weaknesses and other reportable conditions identified in this audit and the number that have remained uncorrected over the years. Without a strong control environment, control weaknesses will continue, increasing the risks and inefficiencies and reducing the reliability of the Corporation's financial information.

Second, Financial management and reporting. The Corporation does not currently have a chief financial officer or other strong fi-

nancial management personnel in place to provide leadership and oversight necessary for effective quality control of accounting and financial reporting activity. It lacks an effective quality control structure to ensure that significant errors and omissions are identified and corrected in its financial information.

Third, Grants management. Adequate procedures for monitoring grantees' financial activities and their compliance with laws and regulations are not in place. Expired grants are not closed out on a timely basis. And, as I stated earlier, a reliable method for estimating expenses incurred by grantees has not been established.

We have repeatedly reported deficiencies related to grants oversight and monitoring in individual audit reports and in our semi-annual reports. Over the past 4 years our audits of 73 of the Corporation's grantees reported that over one-third experienced problems with their financial reports. The audits disclosed that more than half of these grantees had accounting systems and management controls inadequate to report the expenditures or to safeguard Federal funds and that about a half had inadequate timekeeping systems. We also reported that one-third of these grantees failed to adequately monitor their subrecipients.

As a result of these and other conditions, we questioned more than six million, or six percent, of the funds awarded to the grantees.

The Corporation remains responsible for the proper spending of its funds, the proper oversight of its programs, regardless of the location or regardless of whether a grantee is a subgrantee or immediate grantee.

Financial systems. The Corporation's general——

Senator BOND. Unfortunately—we will make your full statement part of the record. And, if you would, just hit on the high points. We have other witnesses we need to get on to.

Ms. JORDAN. All right. As a result of these conditions, the Corporation cannot provide reasonable assurance that its management controls properly safeguard its assets, that its information is accurate and it complies with laws and regulations. As I stated when I began, most of these conditions have been reported as material weaknesses since we began auditing.

In response, the Corporation has initiated several action plans. However, much remains to be accomplished. The Corporation's most recent action plan incorporates many of the recommendations. It is the Corporation's most ambitious plan to date. However, because it has only been in effect for 2 months, it is too early to know when or whether the Corporation will correct these deficiencies. However, based on the Corporation's history, it is probable that without a strong and consistent commitment from senior management to effective management, without a serious and continuous commitment of resources and without competent financial management oversight and monitoring, the deficiencies will not be corrected in a timely fashion.

PREPARED STATEMENT

Last but equally important, the audit revealed that as of September 30 the National Service Trust had a projected surplus of \$196 million. Under the National Community Service Act as

amended this surplus can be used to provide additional education benefits. Ms. Molnar is here to provide any additional information on that matter, if we can, at this time.

And at this time I will be glad to answer any questions that you or Senator Mikulski has of me.

[The statement follows:]

PREPARED STATEMENT OF LUISE S. JORDAN

Mr. Chairman and members of the subcommittee, I appreciate the opportunity to be here today to provide information related to the Corporation's financial management.

OIG first reported financial management issues in an Auditability Assessment of the Corporation issued in March 1996. The assessment resulted from our attempts to audit the Corporation's financial statements as required by the Government Corporation Control Act. During an initial survey of the Corporation's internal controls, we found many material weaknesses in the Corporation's records and accounting systems. As a result, we concluded that the Corporation's financial statements were unauditably. Although the Corporation has taken steps to achieve financial accountability, progress to correct the deficiencies has been slow. Last year, for the first time, we were able to audit the Corporation's balance sheet.

Presently, we are in the final phases of a full-scope audit of the Corporation's fiscal year 1998 financial statements. The audit is being performed by KPMG under contract to OIG. Karyn Molnar, the audit partner responsible for the work, is accompanying me today.

We planned and conducted the audit in accordance with generally accepted government auditing standards, with an intended reporting deadline of March 31, 1999. Because of the known financial management weaknesses that we have previously reported, our audit required extensive, costly, and time-consuming audit procedures that considered the material weaknesses and other pervasive deficiencies in the Corporation's operations and systems.

Today, however, I am reporting that completion of the audit is delayed. The delay is due primarily to my decision to allow the Corporation to revise its estimates of grant advances and payables. The balances related to grants are among the most significant items on the Corporation's financial statements. Audit work to date has revealed that the Corporation's procedures to estimate grant advances and payables are flawed. Because the estimates are flawed, the Corporation has requested additional time to correct the information by using "actual" information from grantee financial status reports (FSRs). The Corporation's work is made even more extensive because not all of the FSRs have not been entered into the Corporation's financial systems on a timely basis.

The financial statement audit has revealed material weaknesses in eight areas of the Corporation's financial operations, including material weaknesses in two new areas, specifically—

General Control Environment.—The Corporation's general control environment is weak and is not conducive to ensuring that an effective system of internal control is maintained to safeguard assets, produce reliable financial reports, and comply with applicable laws and regulations. The control environment sets the tone of an organization and, thereby, influences the level of control consciousness and provides the discipline and structure of an organization. Control environment factors include commitment to competence, management philosophy and operating style, organizational structure, and assignment of authority and responsibility.

That the Corporation lacks an effective management control environment is evidenced by the volume of material weaknesses and other reportable conditions identified in the audit and the number that have remained uncorrected over the years. Without a strong control environment, control weaknesses will continue to permeate the organization, thus increasing risks and inefficiencies and reducing the reliability of financial information.

Financial Management and Reporting.—The Corporation does not have a Chief Financial Officer or other strong financial management personnel in place to provide the leadership and oversight necessary for effective quality control of accounting and financial reporting activities. The Corporation lacks an effective quality control process to ensure that significant errors and omissions are identified and corrected in its financial information. Throughout the audit, the auditors found numerous errors in the Corporation's draft statements and supporting documentation, many of which would have been caught and corrected if an effective process was in place, and competent financial managers had adequately reviewed the information.

Grants Management.—Adequate procedures for monitoring grantees' financial activity and compliance with laws and regulations are not in place; expired grants are not closed out on a timely basis; and a reliable method for estimating expenses incurred by grantees, and related amounts advanced or payable to grantees, has not been established.

OIG has repeatedly reported deficiencies related to grants oversight and monitoring in individual audit reports and in our Semiannual reports. For example, over the past four years, our audits of 73 of the Corporation's grantees reported that over one-third have experienced problems with their FSRs, which provide critical information on grant expenditures. The audits also disclosed that more than half of these grantees had accounting systems and management controls that were inadequate to report grant expenditures and to safeguard Federal funds, and that about half (47 percent) had inadequate time-keeping systems. We also reported that about one-third of these grantees failed to provide adequate oversight of their subrecipients. OIG investigations have also dealt with allegations of irregularities at grantees, some of which may have been prevented by better grantee oversight. As a result of these and other conditions we have questioned more than \$6 million (6 percent of the funds awarded to these grantees).

In one recent audit, we reported on a grantee that had experienced severe financial problems at one of its operating sites. Although an OIG investigation had revealed evidence that the site's Executive Director had misapplied funds, the cognizant United States Attorney declined to prosecute. The Internal Revenue Service, however, seized and sold the site's assets to satisfy delinquent taxes, and the operating site closed. When this occurred, high-level Corporation management came to my office to express their consternation as to how this could have happened just months after awarding the grant. I responded that my Office had reported to the Corporation in March 1996 that it did not perform or require effective reviews of grantee financial systems or controls prior to grant awards.

Later, during fiscal year 1998, at the request of the then Chief Operating Officer, we audited both the grantee and the Corporation's oversight of the grant. The grant audit revealed numerous compliance and internal control weaknesses still existed at the grantee. We questioned more than 12 percent of the grantee's claimed costs.

The review of the Corporation's oversight found that the Corporation had failed to adequately monitor the grant—even though it was aware of the grantee's history. Site visits performed by the Corporation had focused largely on programmatic, rather than financial matters. We also reported that the Corporation failed to monitor and detect that the grantee drew down funds in excess of its needs and that the grantee had not submitted required information such as evaluation reports, rosters of its AmeriCorps Members, and its required financial audit reports, to the Corporation on a timely basis. The Corporation continues to fund this grantee.

Issues related to grantee financial information have been reported in a number of OIG audit reports and Semiannual Reports to the Congress. We recently reported that the Corporation had yet to close out grants made by its predecessor, the former Commission on National Service, although grant performance periods expired several years ago. It is my understanding that, few, if any, of the Commission or AmeriCorps grants have been closed. Closing out grants is necessary to determine the actual spending so that the accounting records and related budgetary information can be properly adjusted.

In September 1998, we issued our report on the audit of the Corporation's fiscal year 1997 balance sheet. In that report we described the need for the Corporation to ensure timely processing of its FSRs and to develop an appropriate methodology to estimate grant advances and payables. We clearly stated that deficiencies in these processes were a major factor in our inability to issue a "clean" opinion on the balance sheet. We recommended that Corporation take action to correct these deficiencies. As I mentioned earlier, the Corporation's failure to take action is the major cause of the delay in completing our audit of the Corporation's fiscal year 1998 financial statements.

Financial Systems.—The Corporation's general ledger system is not adequate to support its financial information needs, including funds control, or to facilitate the preparation of annual financial statements. The Corporation plans to replace its general ledger accounting system during this fiscal year. As we have previously reported, it must do so because the current system is not Y2K compliant. We have also called your attention to the high risk related to the tight time frames in which the new system is scheduled to be implemented. To the best of our knowledge, the Corporation has not identified any contingency plan to support its financial operations should implementation fail or be delayed.

National Service Trust.—Procedures to obtain AmeriCorps membership roster information prepared by program sites and to reconcile this data to corresponding in-

formation on file at the Corporation are ineffective. This information is necessary to support the payment of education awards and to validate the accuracy and completeness of the data supporting the calculation of the service award liability.

Fund Balance with Treasury.—The reconciliation of Corporation records to those maintained by Treasury is not performed in an effective manner and does not adequately support the separate balances related to Appropriations, Gift, and Trust accounts. Not reconciling fund balances could result in material misstatements in the financial statements and increases the risk that data in the general ledger is inaccurate or incomplete. In addition, the absence of effective procedures increases the risk that a misappropriation of cash could remain undetected, and hinders effective cash management.

Net Position.—Adequate procedures for ensuring accurate and timely deobligation of funds for undelivered orders are not in place, and changes in the components of net position are not reviewed for propriety on a timely basis. As a result, the Corporation reports obligations that will never be expended. Controls have not been established to ensure compliance with appropriation laws.

Revenue from Reimbursable Agreements.—Procedures are not in place to ensure revenue related to offsetting collections from reimbursable agreements is fairly stated and properly recorded in the general ledger accounts.

As a result of these eight conditions, the Corporation cannot provide reasonable assurance that its assets are properly safeguarded, its financial information (including budgetary information) is accurate, and that it complies with laws and regulations.

Most of these conditions have been reported as material weaknesses since we began auditing the Corporation. In response, the Corporation has initiated various action plans over the past several years. However, as the above listing indicates, much remains to be done.

The Corporation's most recent Action Plan, issued December 21, 1998, incorporates many of the recommendations that we have made over the years to correct these conditions. Issued in response to a Conference Committee report, it is by far, the Corporation's most ambitious plan to date.

Because the latest Action Plan has only been in effect for two months, it is too early to know when or whether the Corporation will correct these serious deficiencies. However, based on the Corporation's history, it is clear that without a serious and continuous commitment of resources, and competent financial management oversight and monitoring, the deficiencies will not be corrected in a timely and effective manner.

In addition to weaknesses in the Corporation's financial operations, the audit work completed to date has revealed two issues relating to compliance with laws and regulations.

First, the Corporation is subject to the reporting requirements of the Government Corporation Control Act, as amended. This Act requires Corporation management to provide an annual statement on its internal accounting and administrative controls consistent with the requirements of the Federal Managers' Financial Integrity Act—FMFIA. The Corporation recently made its first attempt at a Corporation-wide assessment. However, the Corporation has yet to establish an effective risk-based assessment program. The Corporation's Action Plan indicates that by March 31, 1999, it will establish a formal management control plan.

Second, the Corporation has not submitted its annual management report in a timely fashion and apparently will not meet the deadline this year. The Corporation is required by law to submit an annual management report 180 days after the end of its fiscal year. Its fiscal year 1998 report is due March 31, 1999. However, the Corporation's Action Plan indicates that it will not submit the report until April 30, 1999.

Equally important, the audit provided another benefit to the Corporation. Our procedures revealed that, as of September 30, 1998, the National Service Trust has a projected surplus of about \$196 million. The auditors performed extensive analytical procedures on the actual usage of education awards and determined that the Trust's liabilities totaled about \$161 million, which is about \$100 million less than the Corporation originally estimated. At September 30, 1998, the Corporation had \$357 million in Trust investments to fund this liability, resulting in the projected \$196 million surplus. Under the National and Community Service Act, as amended, this excess can only be used by the Corporation to fund education benefits, including payment of all or part of the attendance at an institution, repayment of student loans, certain student loan interest, and payment of expenses for approved school-to-work programs. The Corporation has requested that \$93 million be appropriated to the Fund in fiscal year 2000.

Mr. Chairman, this concludes my prepared statement. I will be pleased to answer any questions you or members of the subcommittee might have.

Senator BOND. Ms. Molnar, would you care to—do you have any brief comments you wanted to make in addition to what was said?

Ms. MOLNAR. No, I do not, Senator Bond. I will be happy to answer any questions you have.

Senator BOND. I have had a little experience as an auditor. It did not really affect me that much and I did not learn that much but I do understand some of audit speak. But let me try to make this a little clearer.

You talk about, I guess, your major finding is a lack of control at the top. For those of us who monthly fight the battle of the checkbooks—and I would have to say that in the last column I always get the cents mixed up, and I miss agreeing with the bank by a couple of dollars at the end of the month—now, are we talking about problems that are way over in the right-hand column, in the small figures? Or are you saying that the checks—some of the checks are not entered into the book, some of the bills are being paid twice? What, in layman's terms, what is the impact of what you say is this lack of control, and how serious is it?

Ms. JORDAN. The immediate impact on the financial statements has been adjustments in the millions of dollars. For example, when we held open for adjustment on the estimates of grants, advances and payables, the adjustments in the first round exceeded \$40 million.

The adjustments to the other accounts ranged from \$5 million, \$10 million, in that type of range. Cash is the one that you refer to when you talk about the cents being different from the bank.

There were differences from the Treasury records that exceeded about \$2 million.

Ms. MOLNAR. \$2.4 million.

Ms. JORDAN. That is a significant difference for the Corporation, which is a small agency. More importantly, those differences are not reconciled on the appropriation level, on the gift account level or on the trust fund level. They are not tracked on a monthly basis. That increases the risk of fraud.

Senator BOND. What is the risk of fraud? Is this a situation where somebody could be absconding with funds or mis-billing or committing fraud on the Corporation? What is the extent of the exposure? Are you talking about mis-accounting? What is the impact on the Corporation and on the taxpayers' dollars?

Ms. JORDAN. First of all, we do find fraud and most recently the court sent an executive director at one of our grantees to jail because of the fraud we found.

Controls are designed to reduce risk and prevent or detect errors or irregularities. The Corporation's controls are so weak that they do not effectively detect. My investigators refer to the Corporation as a target-rich environment.

Senator BOND. I think I understand that.

Ms. Molnar would you explain the discovery in your analysis of the surplus of \$196 million in the trust fund account?

Ms. MOLNAR. Certainly. The analysis that we performed on the trust fund liability, which is what we were talking about, what you make reference to, is the fact that members do earn certain awards

based on the service that they have provided. And until recently the Corporation has not had sufficient historical experience to actually figure out how many members will use their awards over the lifetime that they are available to be used.

However, it is reasonable to expect that not everyone will use the awards that they have earned and that some of them will expire before the end of the 7-year period. But based on the information that has now been available in doing some cash flow modeling, we were able to determine that of those members who had earned awards and those members that are still earning awards, it is likely that only about 80 percent of those amounts will ultimately be used, even though we have not reached the end of a 7-year period.

So based on those analyses and using statistical models, we computed a new amount based on that information and compared it to what the Corporation had recorded using a very conservative method, as you heard, expecting everyone to use their award. And the difference was approximately \$100 million and that is what you have been referring to as a surplus.

That amount cannot be used just for anything. It must be used for educational awards. And it is, therefore, available to both take care of any unexpected use and also to fund other awards.

Senator BOND. Let me be clear on this. Taking a very conservative approach, if you had a program which potentially had \$500 billion that could be spent, and you know from experience that 22 percent of it is not being used and you have a broad enough spectrum to make that a sound projection, the most conservative approach would be to say that you need to keep all \$500 million even though you know from past experience that 22 percent will not be used at the end of the day.

Do I understand you to say that based on experience that you believe is adequate, that \$110 million would be surplus, because with only 78 percent being used, to the \$500 million—if my math is correct—\$110 million can reliably be predicted not to be used? Is that a fair assessment?

Ms. MOLNAR. That is a fair assessment. And also, I guess, to expand on that a little bit, the trust fund itself, the money that is in there, the investments that are funding the trust fund are also earning interest that is also put into the trust fund. And that has not been taken into consideration in determining what the ultimate outflow or the availability is going to be in the most conservative approach.

Senator BOND. Did you take into account the fact that all of a sudden people may get religion or perhaps more accurately may get education enthusiasm at the end of the 7 years and come running back in and say, whoops, before this expires, I want to get my education?

Ms. MOLNAR. We made some assumptions of a certain percentage of youths every year until the entire 7 years is over. But we did not take into account the fact that everyone who had not used it would ultimately decide in the last hour, oh, my God, I have got to use this money. That just is not a reasonable assumption.

Senator BOND. Senator Mikulski.

Senator MIKULSKI. Thank you very much, Mr. Chairman. And really I am a very strong supporter of the IG's office not only to

detect, as you said, mismanagement, but it often has provided very important managerial advice to the agency in which the IG functions, so that they could better improve their both management and fiscal accountability so we can do the mission. Accountability is really mission. And so we thank you.

In terms of the use of the educational grant, I note that—I think there is a lot of lessons yet to be learned but I am going to come back to my question. What we see in VA now with the new kind of group coming out, that often young people do not take advantage of their educational grant until they gain a little bit more civilian insights into their life, which is usually now in their late twenties, and that is one of the reasons why I wanted the VA educational benefit to be used for lifetime earning. I am not advocating this here. But I think we will have a lot of lessons learned as we move along.

Senator MIKULSKI. Ms. Molnar, I want to ask you a question because we then go to this. Obviously a great audit was done here. My question is does KPMG have a lot of experience in auditing nonprofits and community-based corporations?

Ms. MOLNAR. Yes, we do, across the country.

Senator MIKULSKI. That gives me confidence because this is not General Motors here. Nonprofits, as you know, are often big on idealism and they keep—and particularly at a very community, neighborhood-based level where I worked for so many years—essentially it is what I call the cigar box mentality. They just put everything in a box and say I will get to it because they were out either organizing or helping build the housing.

Do you feel that part of the local accounting problems are based on those kinds of community groups that do a great job in the community, but do a terrible job or mediocre job in keeping their records? Or do you think this is far more systemic? You know the kind of group I am talking about.

Ms. MOLNAR. I believe your assessment is probably correct in that there are a number of grantees and subgrantees that were referred to earlier that do concentrate more on mission, in getting the money out and not so much on administration and adhering to the guidelines that have been provided to them for doing things right. However, I do not think that that absolves them from complying with laws and regulations and for submitting their financial activity reports on time. If they do not, they need to accept the consequences, which may be that their funding will dry up.

Senator MIKULSKI. I appreciate that, Ms. Molnar. It is by way of a temporary explanation. We have also within our portfolio here something called the Neighborhood Reinvestment Corporation which really teaches community groups how to both do a job in the community and be accountable for the funds they receive, which is often the groundwork for getting more funds to do even more, better work in the community.

Do you think, as one of the mandated criteria for the awarding of a grant, is that a state commission have criteria in place that anyone who gets a grant from the National Service Corporation have sound accounting as part of their ability to get a grant?

Ms. MOLNAR. Yes, I do. And I believe that those requirements are probably already in their grant agreements.

Senator MIKULSKI. I think we should maybe take a look at that and then ensure that that really be an oversight, I mean, really a vigorous oversight because it is what I would say to community groups. You have got to get beyond the cigar box, because the more you can show wise stewardship over the funds, the more likely others will come in, like foundations, et cetera, whether it is literacy or low-income housing services or whatever.

Let us go right to the audit. This is under—this checklist that you have here for us, it does not look like progress has been made. I want to clarify the chart. The chart that you have in your testimony, Ms. Jordan, says that 1994 to 1996 it was unauditible. Then when you move on you have materially weak, those little red checks and then you have four areas of reportable conditions. But then when we go over to 1998 the four reportables drop to two and the red checks increased, which were meaning materially weak.

Are we making steady progress or are we losing ground here? If you are making progress, that is one track we are on. I am just looking at this chart.

Ms. JORDAN. As I said, progress has been slow. It has not always been steady. Some things that could have easily been fixed have not been fixed. Other things have worsened. The Corporation has become auditible because it does a better job in retaining records. We now can audit the Corporation because of that improvement. Improvements have occurred but not always evenly. I hope that this answers your question.

However, one other question that has come up. There are nine conditions on that chart. The ninth area of weakness is procurement and results not from the KPMG audit but an audit that we did recently, which revealed material weaknesses in the Corporation's procurement activities.

Senator MIKULSKI. I know our time is moving along and we have to go to the CDFI. First of all, I want to thank you for your report. And the question I asked you, Ms. Molnar, was more of a question of background and never a question of competency, and we thank you for your work.

I find this report quite troubling. And I find it troubling in the sense—because it talks about leadership, and leadership is not only management but it is about creating a state of mind. And, therefore, if the state of mind is not present about stewardship, then that goes to the state commissions as well as then to local grantees. And I think that this will have to be addressed in a different forum about this.

But you have given us excellent MRI here. I am looking at the epidemiology—you can see I am on Dr. Frisk's health committee. We are looking at the service that is rendered and what needs to be done here. So I am going to thank both of you.

Senator BOND. Thank you, Senator. Thank you very much, Mrs. Jordan and Mrs. Molnar. Senator Wofford, do you have a brief comment on the pathologist's report?

Mr. WOFFORD. Yes. Mr. Chairman, just a final brief word. We will take advantage of your offer to clarify in the record.

Senator BOND. I appreciate that.

Mr. WOFFORD. Our main response is going to be in action and we trust you are going to see it. We have a strong commitment to

an all-out effort. My team and I have never worked as hard on anything, certainly in my life. And you are going to see continued progress.

ADDITIONAL COMMITTEE QUESTIONS

Senator BOND. Thank you. I know that we do want to give you that opportunity and we will look forward to hearing your response on that.

[The following questions were not asked at the hearing, but were submitted to the Corporation for response subsequent to the hearing:]

QUESTION SUBMITTED BY SENATOR BOND

Question. For fiscal year 2000, the Corporation is requesting \$93 million for the National Service Trust account. The IG stated in her testimony that as of September 30, 1998 the Trust's liabilities totaled about \$161 million but that the Corporation actually had \$357 million in Trust investments to fund this liability. As a result, the trust has a projected surplus of about \$196 million according to the auditors. This raises questions about the need for the \$93 million request. Do you agree with the auditor's assessment? When were you first aware of any surplus in the Trust's account? Has the surplus been factored into your budget requests? If so, when did you first begin factoring in this surplus? Is the interest earned on the Trust investments factored into your budgeting estimate? How many members could be served with this surplus amount? How many members are you projecting to serve with the \$93 million you requested for fiscal year 2000?

Answer. The Trust liability reported in the financial statement as of September 30, 1998 is an incomplete picture of the full estimated liability. The liability reported in the financial statement does not include estimates for members who started service during the summer and for members whose service, funded with fiscal year 1998 appropriations, will start on or after October 1. This methodology used by the auditors to calculate the liability estimate for the purposes of the financial statements does not include these two factors; thus, the estimated liability is far greater than reported in the statement and the reserve maintained in the Trust is far less than described in the question. The methodology used to calculate the budget request considers the two factors referenced above as well as estimates education award utilization patterns. The Corporation does not believe there is an inappropriately large surplus in the National Service Trust. Rather, the amounts in the Trust represent a prudent reserve designed to ensure that all AmeriCorps members who have earned an educational award will actually receive them. The following fact sheet provides detailed information concerning the Trust, its funding history, and our estimates of the current liability.

NATIONAL SERVICE TRUST ALLOCATION AND USE OF EDUCATION AWARDS: BACKGROUND INFORMATION

The primary purpose of the National Service Trust is to serve as a secure financial repository in the Treasury for AmeriCorps education awards to be set aside for eligible participants in national service programs. The Trust makes education awards available to each individual who successfully completes a term of service in an approved national service position.

Funds from the Trust may be expended for the purpose of providing an education award to a national service member who has earned such an award, and must always be paid directly to the qualified institution (college, university or other approved educational institution or a lending institution holding an existing qualified student loan) designated by the participant. Disbursements from the Trust may also be used to meet certain interest expenses that may accrue when an individual has obtained forbearance in the repayment of a qualified student loan during his or her term of service, and for other purposes specifically designated in appropriations statutes (scholarships for high school students).

The amount of the education award for completing a full-time term of service is \$4,725. By law, a member has up to seven years to use an education award that he or she has earned. That seven-year period expires for the first group of AmeriCorps members in 2002.

Operationally, each year the Corporation allocates a specific number of AmeriCorps members to grantees based in part on the amounts available in the Na-

tional Service Trust for education awards, funds appropriated by Congress for AmeriCorps grants, and the quality of applications received for funding. In their grant document, each grantee receives authorization for a certain number of full and part-time AmeriCorps members. These numbers represent ceilings beyond which a grantee cannot enroll members.

If a program does not actually enroll a member, then grant funds may not be spent for the direct costs of that member and the slot held for the education award is available for future use.

Under AmeriCorps*VISTA and AmeriCorps*NCCC, slots are reserved in the Trust based on the size of the program budget and the number of members serving in a given year.

Since the very beginning of the National Service Trust, the Corporation's approach to managing was to be conservative to ensure we would have funds to honor all awards earned. The Corporation's authorizing legislation required an amount to be deposited equivalent to the value of a full-time national service educational award times the total number of approved national service positions. The legislation also restricts the Corporation from approving national service positions under this subtitle for a fiscal year in excess of the number of such positions for which the Corporation has sufficient funds available in the National Service Trust for that fiscal year. (See sections 121(c) and 129(f) of the National and Community Service Act of 1990, as amended.)

In general, in fiscal years 1994 and 1995 based on budgetary requests, the Congress appropriated sufficient funds to pay members under the assumption that all members would enroll in full-time service positions, complete service, and then fully use the education award.

In fiscal year 1996, the amounts appropriated were reduced from \$115 million to \$56 million, based on the consideration that not all members would complete service and that a reserve had been created in the first two years. Budget justifications provided to the Congress since then identified these factors, as well as the interest earned on Trust Fund investments, as having been considered in developing the Administration's budget requests.

The Corporation has followed this approach in the development of the fiscal year 2000 budget. Our request for the Trust is \$93 million. If everyone earning an award based on the fiscal year 2000 budget was to use the entire full or part-time award, the amount of budget authority needed to fund these awards (including the President's Student Service Scholarship Program) would be \$167 million. This amount is not required because not all members enrolling will earn and use an award, and because of funds that remain available at the start of the year.

In developing budgetary requirements, attention must also be paid to the need for a prudent reserve and the avoidance of major fluctuations in annual budget requirements. A prudent reserve guarantees that the Trust can adjust to changes in annual program funding levels, and changes in usage patterns, without having to present the Congress with a request for immediate funding needs or annual fluctuations in budget requirements. Historically, Congress has been critical of agencies that present major annual budget fluctuations in requirements based on changing estimates. Quite frankly, it is extremely difficult for the Congress to consider budgetary requests that could fluctuate significantly, given the appropriations process and spending caps.

The budget estimates reflect, by necessity, insufficient experience with patterns of usage of the education award. The first class of Trust enrollees has yet to exhaust its 7 year availability period for using the award. We will not have a refined estimate until several classes of members have exhausted the availability period. Moreover, modest adjustments in assumptions over a multi-year period have a significant impact on estimated requirements.

Finally, there are several major difficulties with using the liability estimate alone, as developed by the auditors in preparing the financial statements, for considering Trust Fund requirements in the 2000 budget. Specifically, the liability estimate, being by design a snapshot as of September 30, 1998, does not reflect:

1. *Activity after September 30, 1998 for some of the members enrolled by that date.*—The liability estimate in the financial statements does not include amounts for members who had not completed 15 percent of their service by September 30, 1998. The amount required for these members is approximately \$36 million.

2. *Enrollments after September 30, 1998.*—The liability estimate in the financial statements does not include amounts for any members projected to enroll after that date and who are supported with fiscal year 1998 program funds, even though the program budgets and the Trust appropriation for fiscal year 1998 specifically support such members in this forward funded program. The amount is approximately \$45 million.

3. *The fiscal year 1999 appropriation and projected program activity.*—The Corporation's appropriation is less than the amount required to support the Trust activity in that year. In fact, under the assumption that all members earning an award would fully use it, the budget is \$64 million less than Trust requirements for that year. Assuming that members use 78 percent of the amounts earned, our current estimate of Trust usage, the budget is \$37 million less than Trust requirements for that year.

4. *The fiscal year 2000 budget and projected program activity.*—As mentioned above, if everyone earning an award based on the fiscal year 2000 budget was to use the entire award, the amount of budget authority needed to fund these awards (including the President's Student Service Scholarship Program) would be \$167 million, or \$74 million more than the request. Assuming that members use 78 percent of the amounts earned, the budget is \$41 million less than Trust requirements for that year.

Further Background Information on Members' Use of the Education Award:

Those who served in program year 1994–95 had used 58 percent of the amount they earned by the end of fiscal year 1998 and have used about 61 percent as of March of this year. A major unknown is whether there will be a significant increase in the use of the award by the first year class prior to the end of the seven-year period. Some argue that many members will use the award before it expires; others argue that former members are not likely to go to school several years after leaving AmeriCorps. Only the experience of the next several years will fully resolve this issue.

Before this year, the Corporation did not have enough data to predict a percentage of awards earned that would not be used in full by the end of the seven-year period of availability. We predict that about 78 percent of these funds will be used at the end of the seven-year period; however, for the reasons stated above this could increase. In formulating the fiscal year 2000 budget, we specifically estimated that 22 percent of the awards earned would not be used.

Question. I understand that the Corporation's current financial management system is not Y2K compliant. Under the Corporation's Action Plan, you plan to install a new financial management system, called "Momentum," by the end of June 1999. However, some of the interim deadlines in the revised Action Plan have slipped. Are you confident that the new financial management system will be implemented on time? Does the Corporation have a contingency plan in case the new system does not operate correctly or its implementation is delayed?

Answer. The Corporation continues to make good progress toward upgrading to the new core financial management system, "Momentum." The Department of Interior and AMS have been working closely with the Corporation's new financial management system team. There have been some adjustments to the original schedule and these are reported in the Corporation's bimonthly Action Plan, however, we remain confident that the new system will be implemented on time. The Corporation plans to go on-line with the new core system in July 1999.

We do have a contingency plan. Should there be any unforeseen delays in Momentum implementation, the Corporation's contingency plan is to continue to operate the current accounting system, Federal Success, through September 30, 1999, and start the new fiscal year, October 1, by manually entering summary data into Momentum. Momentum, itself, is a certified Federal system. The basic workings of the software have been tested and meet Federal standards. The uncertainty is not Momentum software, but rather the Corporation's ability to convert the data from the old system into the new system. Our contingency plan is based on using the Momentum software.

Question. I appreciate the work the Corporation has done on its performance plans in response to the Results Act. In your written statement, you indicated that the annual performance indicators measure aspects of program performance that are in the direct control of the Corporation and that they would be useful oversight and management of programs. Please explain in more detail how these indicators are being used for oversight and management.

Answer. The Corporation's 1999 and 2000 performance measures are used in several ways and at many levels of activity by managers of national service programs. AmeriCorps® State and National enrollment data, as an important example, is used regularly by the Office of Recruitment to measure the results of targeted recruitment efforts and to identify areas for more emphasis. The Trust Office uses the enrollment data as part of its management of the rapidly growing Trust obligations. As our grantees come on-line this year with web-based reporting of enrollments and terminations, we will be able to use these data to respond more quickly to grantees' needs for training and technical assistance in areas like recruitment and member retention.

In Learn and Serve America, customer satisfaction surveys are being designed now and data will be collected in the 4th quarter. Among Learn and Serve's primary customers are major educational institutions and organizations that are grantees and subgrantees, such as state education agencies, colleges and universities, and State Commissions on National Service. Our surveys will be asking representatives of these institutions how well their needs for promoting service-learning are enhanced by our grant awards and what we can do in the future to make our partnership a more productive one. We will be using the feedback from these surveys to improve the quality of our support for the national service-learning community.

The National Senior Service Corps is using performance measurement to track implementation of its important Programming for Impact initiative. Senior Corps program officers and Corporation State Office staff, for example, are tracking the rate at which local programs shift to outcome-based assignments. Each state has target levels that have been set for this year, and State Offices are monitoring this closely, making regular reports to the national office.

Question. I am a great believer in devolving program responsibilities to the local level. Under some of your programs, the States have a significant role in administering programs. Last year, Mr. Wofford, you stated that devolving responsibility to the State level has been a major emphasis of the Corporation and may be so even more in the future. Could you tell us in what specific areas the Corporation has increased roles and responsibilities of the States over the past year and what your plans are in the upcoming year?

Answer. The Corporation continues to work with states on increasing their roles and responsibilities. Examples and major changes are described below.

Grant Application Review and Recommendation Process.—The Corporation used to conduct a peer review consisting of panels of outside experts for all new applications followed by a full staff review. Staff then recommended which programs to fund. Since 1997 the Corporation no longer provides a peer review or full staff review of new applications that states plan to fund with their formula grants. States perform the peer and staff review, and the Corporation accepts the states' funding recommendations. Corporation staff checks applications for financial and programmatic compliance issues and until 1999 provided states with documentation on both compliance and continuous improvement suggestions. In 1999 staff will simply review states' formula applications to check for compliance issues which will be noted and handled during negotiations with states. Corporation staff will no longer provide states with continuous improvement suggestions. Additionally, on a trial basis in 1999 the Corporation did not provide a peer review of new applications that states submitted for national competitive funds and instead relied on the states' peer review process.

For fiscal year 2000 the Corporation is discussing the possibility of further devolution in which states would submit applications chosen for formula funding for the record but there would be no Corporation staff review. Instead states would certify that they have reviewed all applications for financial and programmatic compliance and will resolve all issues with programs before awarding funds.

Statewide Initiatives.—Last year the Corporation gave states the option of submitting individual America Reads proposals or a statewide America Reads initiative. The statewide initiatives provided greater flexibility. They also allowed states to submit a plan delineating statewide needs, America Reads activities and types of partners states would engage rather than requiring states to run a competition and select programs ahead of time. State commissions responded favorably to this option. In 1999 the Corporation again offered the option of America Reads statewide initiatives and added a Governor's Initiative competition. This new statewide initiative enables states to develop a plan that is tied to a governor's priority. Funds requested from the Corporation must be related to a larger plan and effort by the state that would benefit by the inclusion of national service. The Governor's Initiative plan will include a substantial financial commitment from the state beyond the statutory matching fund requirements for AmeriCorps programs. Many states are pleased with this new initiative because it enables them to become partners in large statewide efforts and provides a great deal of flexibility.

Program Development Assistance and Training Funds.—The Corporation has reduced the budget for national training and technical assistance providers and has increased the program development assistance and training funds available to states by 50 percent. In addition, by giving states greater flexibility in how these funds can be used, commissions are now able to provide training that fosters collaboration among programs in various streams of national service.

Reporting Requirements and Site Visits.—The Corporation has been in discussion with states for some time concerning ways to reduce reporting requirements. Instead of quarterly progress reports states now submit reports three times a year.

The Corporation is exploring the possibility of reducing this further and requiring semi-annual progress and financial status reports from state commissions. The purpose and number of program site visits has changed. Corporation staff visit far less program sites than before and are more focused on evaluating the performance of state commission staff's site visits.

Fixed Price Grants.—In 1999 the Corporation awarded fixed amount grants to AmeriCorps Promise Fellow grantees. Using fixed amount grants, the Corporation awards a fixed amount of funding per AmeriCorps member and the grantee secures any additional financial support necessary to carry out the program. These grants eliminate the need for a detailed line item budget and various accounting and record keeping procedures by programs as well as state commissions. Beginning in 1999 Education Awards Programs will also be issued fixed price grant awards.

Question. Literacy is a very important priority for me. This subcommittee has provided funding for child literacy activities such as the America Reads and other initiatives. Could you please give me a status [report] on America Reads and other literacy efforts of this Corporation and what sort of impact these initiatives are having on child literacy rates?

Answer. National service is actively engaged in supporting literacy programs across the country, an area that is of keen interest to this Subcommittee.

Everywhere I go and talk with teachers, principals, and other education professionals, they tell me how it is extremely important that the entire community support efforts to teach young children to read. Volunteers do not substitute for the teacher's responsibility to teach a child to read. And, as first teachers, parents have a critical role to assure success.

Most of what we do is to supplement the role of teachers by providing additional one-to-one support for children, including after-school, weekend, and summer programs. We are also heavily involved in programs providing support to parents to make them effective first teachers of children.

I'd like to stress six points about our role in this literacy initiative, a goal shared by governors, school superintendents, and employers across the country:

First, we have a long history in all of our programs—AmeriCorps, Learn and Serve America, and the National Senior Service Corps—of supporting local literacy efforts.

Second, we provide resources, mostly in the form of people, to local programs. They determine the literacy approach, and we are there to support it. In states as diverse as Rhode Island and Washington, AmeriCorps, service-learning, and senior volunteers are supporting statewide literacy efforts.

Third, we establish local relationships with programs that have expertise in literacy. Examples include school systems, state education agencies, Even Start programs, Head Start programs, volunteer literacy organizations, citywide reading programs, and universities and colleges. These entities have structured programs that make the best use of national service and volunteers.

Fourth, we insist that all local programs provide quality training for those working with children. And we encourage the training to be done by experts—reading specialists, university professors, and others.

Fifth, we have partnerships at the national level with key education organizations, including the Department of Education.

Sixth, and finally, we believe in the bottom line—our efforts need to be evaluated as to whether we are helping local literacy programs meet an objective of having children read well and independently by the end of the third grade. There is much evidence that this one-to-one support for children, when it is well done, works. The recently released study by the National Academy of Sciences, on the issue of volunteer tutors, reached this conclusion: "Volunteer tutors are effective in reading to children, for giving children supervised practice in oral reading, and for allowing opportunities for enriching conversation." They also said the role of volunteers should not be "to provide primary or remedial instruction." That is, of course, the role of teachers.

As I indicated in my testimony and in response to other questions, there is growing evidence of the effectiveness of these literacy programs. And we are supporting a nationwide evaluation to determine the effectiveness, in the aggregate, of national service efforts.

Question. In response to congressional concerns about the costs of the Corporation's programs, the Corporation agreed to a number of cost-cutting steps such as reducing average participant costs. For the record, please give us a status and a description of the specific actions the Corporation has taken to reduce per-participant costs.

Answer. Over the last several years, the Corporation has taken a series of steps to reduce the per member costs in the AmeriCorps program.

In 1996, the Corporation entered into an agreement with Senator Grassley and others to reduce its average budgeted cost per AmeriCorps member to \$17,000 in fiscal year 1997, \$16,000 in fiscal year 1998, and \$15,000 in fiscal year 1999. We are on target to achieve these goals.

Meeting them has required a series of actions. Beginning in fiscal year 1996, AmeriCorps State and national grantees were informed that the cost per member had to be reduced by at least 10 percent in programs that averaged above \$13,800 per member, excluding education awards. Subsequently, average Corporation budgeted costs per member in these grants was reduced to \$11,750 in fiscal year 1997 and \$11,250 in fiscal years 1998 and 1999. Further, a maximum Corporation contribution per project was set at \$14,500.

Beginning in fiscal year 1996, no Corporation funds were to be spent on the relocation of members under AmeriCorps grant programs. This prohibition has remained in effect to the present time.

Grants to federal agencies were discontinued in program year 1996-97.

Also since fiscal year 1996, certain items which were originally required to be part of the budget were made optional, thereby providing projects with greater flexibility to reduce budgets.

The education award only program, introduced in the fall of 1996, has grown rapidly. Under this program, the Corporation provides the education award and a modest amount, averaging less than \$500, for program support, while the project provides all other costs, including members' living allowances. When originally designed, the Corporation anticipated this program operating initially at a modest level of 2-3,000 members annually. The Corporation has actually achieved 3-4 times these levels in fiscal years 1997 and 1998, and expects continued high levels of participation in fiscal year 1999.

Matching requirements were increased to from 25 percent to 33 percent for non-member costs.

Under the AmeriCorps*National Civilian Community Corps, specific cost reductions have included the closing of a large campus in 1995; a decrease in the member living allowance from \$8,000 per annum in fiscal year 1994 to \$6,000 per annum in 1995 and finally to \$4,000 per annum in 1996 to date; and a reduction in staff from fiscal year 1995 to fiscal year 1998 of some 38 percent.

Under AmeriCorps*VISTA, the Corporation has expanded its "cost share program," where the majority of the costs of supporting a member is paid by non-Corporation sources.

Question. Have your cost-cutting actions had any impact on program performance?

Answer. Many of these measures are intended to increase support from state, local, and private sources, thereby decreasing the reliance on the amount per member provided by the Corporation. In general, as measured by the successes of efforts such as the education award program, this strategy has been successful. In projects where the mixture of support has changed to a reduced reliance on federal support and a greater share of non-federal support, we don't believe there is a negative effect on program performance. A recent review of the education award program did identify, however, a number of areas for improvement, and we intend to pursue such changes to assure program quality.

In some instances, we have heard from projects that they are unable to increase the amount of non-Corporation support and will need to drop its AmeriCorps program. These organizations are typically smaller, less-well financed, community-based entities. To date, these have been relatively isolated cases; however, we intend to monitor this situation carefully as the continued involvement of such organizations in AmeriCorps is important to achieving its stated mission and goals.

Other measures have reduced the total amount of support per member in a project. While some of these measures represent efficiencies following an initial start-up period, there is also some evidence that important support functions, such as training and evaluation, may suffer a disproportionate share of reduced budgets. We also continue to monitor this situation carefully, and are committed to assuring that projects not sacrifice quality in a manner that will affect AmeriCorps' ability to meet its long-term goals.

While the Corporation continues to advocate greater state, local, and private support for AmeriCorps programs, there is also the reality that there is a basic amount necessary to enable an individual to provide a year of full-time service in a local community in a high quality program that meets community needs.

Further, the National and Community Service Act sets forth a number of different programs that are to be supported in the areas of education, public safety, the environment, and health and other human needs. These different program models of national service are frequently delivered by varying types of local organizations, with

significant differences in capacity and financial resources. If national service is to continue to be provided in a decentralized manner through these wide varieties of local service agencies, reaching out to community organizations, faith-based entities, and nonprofit organizations with limited financial resources, then any funding strategy must recognize the need for continuous, flexible support from the Corporation.

Finally, we are initiating a study of this particular issue because of its importance to AmeriCorps' mission and goals, and will report its results to the Congress.

Question. The Corporation has requested about \$11 million in fiscal year 2000 to fund training and technical assistance. I understand that most of the grantees have a fairly long-term relationship with the Corporation. Given this long-term relationship, how long do you expect the Corporation to continue funding for training and technical assistance? How does the Corporation determine which programs/grantees are eligible for which training and technical assistance programs? Has the Corporation performed any analysis of which programs (newer versus older) are receiving which types and amounts of training and technical assistance?

Answer. The Corporation's training and technical assistance system was designed not only to help develop high quality programs but also to help them maintain successful levels of operation. The commitment to the continuous improvement of national service programs is a fundamental concept of the Corporation's training and technical assistance approach. We believe that there is always something new to learn and room to improve; always new, higher levels of sophistication of operation and effectiveness to achieve. The Corporation provides training and technical assistance, customized to the experience and sophistication of the grantee, to address both immediate and long-term needs.

The reality of operating non-profit service organizations includes managing high staff-turnover and addressing ever changing, compelling community needs. So while the Corporation assists national service organizations to develop and institutionalize good operational systems, there are many times when we receive repeat calls from the same program but different, new staff or to help address new problems. In addition, the number of requests is directly related to the number of grantees. Recent significant increases in national service programs have therefore caused an increase in the number of requests for training and technical assistance.

Training and Technical Assistance strives to keep grantees abreast of tried and true effective practices, as well as the latest thinking, technology, practices and applications in the national service field. Corporation-provided training and technical assistance is relevant and useful in addressing grantees' needs as evidenced by a recent customer satisfaction survey where approximately 85 percent of the respondents indicated satisfaction with these services. National service program staff appreciate this resource and see the value of accessing it for their varied professional development and continuous improvement needs.

Training and technical assistance—that is, ongoing or targeted project support and member or staff training—is available to Corporation programs at the local, state, regional and national levels. All Corporation funded programs are eligible for this assistance. Programs request assistance directly or are referred by their respective administrative entities (e.g., State Commissions) or Corporation staff based on needs of program. Most training and technical assistance occurs at local or state levels.

We are committed to continuous program improvement. Programs' strengths and weaknesses are identified at local and state levels through program monitoring and formal and informal needs assessments. In addition, the Corporation regularly conducts nationwide needs assessments (in 1993, 1996, and 1999 respectively) which identify both effective practices and training needs of grantees and sub-grantees, especially those that cut across programs and states.

The Corporation requires all its training and technical assistance providers to keep records of the number and types of programs to which they provide services, as well as the type of service provided. As we have reviewed both the performance of our providers and the progress of our programs, we have found that programs' needs for technical assistance are driven less by the length of time it has been in operation than by the needs of the staff operating the program.

For example, the director of a program that has received an AmeriCorps grant for three years may leave to lead another program. The new program director may likely be hired from outside AmeriCorps, changing the needs of this "old" program to be more like those of a "new" program.

We have found that centering our needs assessment on what is required by a program director and staff for the success of their program to be more useful for deciding how to deploy our training and technical assistance resources. While evaluation of our training and technical assistance services shows that 85 percent of recipients rate the service as good or very good, we are also mindful that programs' needs

change with time, particularly as they branch out into new areas of service, such as the America Reads initiative or the increased emphasis on mentoring spurred by the Presidents' Summit and America's Promise.

We are currently conducting our third national assessment of the needs of our programs. We will likely find that much of the type of assistance we've traditionally provided for newer programs will be replaced by new needs arising from the changing needs of our program directors, their staff and members.

Question. The Corporation noted in its budget submission that it would "share with the grantees the lessons learned across program for rigorous monitoring and evaluation." What lessons have been learned thus far from the monitoring effort? Please describe the Corporation's proposed use of Evaluation funds in its budget submission? Does the Corporation have a monitoring and evaluation office or division? Is there a site visit schedule? Is there a site visit protocol? Are there written site visit reports?

Answer. Funds will be used to support the independent evaluation of National Service programs, to determine their impact on communities, recipients of services, and members/participants providing the service.

The Corporation has an evaluation office within the Department of Evaluation and Effective Practices. As the Aguirre evaluation study reflects, much has been learned about the effects of AmeriCorps programs. We are also developing a means of disseminating "effective/best" practices to Corporation funded programs via electronic means (e.g., websites, listserves), in addition to our traditional distribution methods.

Monitoring of grantees and sub-grantees is conducted by AmeriCorps program and grants staff as well as the State Commissions. The Corporation's AmeriCorps*State/National, as well as the Grants Management Office staff, have established protocols for conducting site visits. A schedule is developed at the beginning of each fiscal year based on an assessment of risk factors. The site visits focus on state commissions and direct grantees (national non-profits, tribes and territories) to review their fiscal and program management systems. These grantees are responsible for conducting site visits to the programs and operating sites. Each site visit, whether conducted by the Corporation, state commission, or national non-profit organization, has written documentation and results in a letter that is sent to the grantee/sub-grantee.

Information gathered by the program staff during the monitoring process is employed in a variety of ways to promote continued improvement of grantee programs. Regular communication among grants and program staff permits our staff to detect and react to patterns in grantees' performance and/or needs. For example, when inadequacies in certain record-keeping practices were raised regarding several grantees, the monitoring protocol was modified to ensure that those systems were scrutinized for all grantees, thereby detecting and correcting any additional problems. When monitoring officers began to report concerns about certain grantees' financial systems, a mandatory financial management conference was held to ensure that grantees had the proper information. In the first years of the Corporation, information gained during monitoring was used to fine tune the grant application process so as to encourage successful program designs. In these ways, monitoring becomes part of the information loop that permits the Corporation to serve as well as guide its grantees.

In addition, this spring and summer, we will be field testing a Commission administrative performance standards review process which will allow us to assess the overall administrative operation of State Commissions.

QUESTIONS SUBMITTED BY SENATOR SHELBY

Question. The Shelby County Commission and the Directors of the Shelby County Retired and Senior Volunteer Program (RSVP) have determined that the multi-county program that Positive Maturity now sponsors is insufficient for serving the needs of Shelby County given its population growth over the last decade. Given the surplus funds in the National Service Trust and the additional funds the President is requesting for the Corporation for National Service, how can you justify not supporting an independent program for senior citizens of Shelby County?

Answer. We appreciate Senator Shelby's continued interest in the administration of the RSVP program in Shelby County.

It is important to note that the Corporation for National Service does not believe there is a surplus in the National Service Trust. Rather, the funds in the Trust represent an appropriate reserve designed to ensure that AmeriCorps members who earn an education award receive that award. Even if a surplus existed in the Trust,

the Corporation cannot transfer these funds to any other program, including the RSVP program. Not only is the National Service Trust funded in a different appropriations measure (the VA-HUD appropriations bill) than the RSVP program (the Labor-HHS-Education appropriations bill), but specific language contained in the VA-HUD appropriations bill prevents the Corporation from transferring Trust funds to any other use, even among the other national service programs funded by that appropriations measure.

In addition, there have only been very limited funds for new RSVP programs in recent years. New funds are being used by the Corporation in accordance with the requirements of the Domestic Volunteer Service Act and the appropriations bill for fiscal year 1999. The Act requires the Corporation to direct one-third of any new funds to existing programs for programs of national significance. The appropriations bill also requires a 3 percent administrative cost increase before new programs can be funded. As a result, there is only a limited amount of funding for new programs.

The decision on the reach of a local RSVP service area has purposefully been kept at the state and local level by the Corporation, since we believe that individuals at that level are in closer touch with the needs of the community. When the Corporation awards an RSVP grant, it approves a service area proposed by the grantee in which volunteers are recruited and placed. Subsequent changes in the service area must be requested by the local sponsor and approved by the Corporation. If Positive Maturity, Inc., the grantee in a five-county area that includes Shelby County, wishes to establish a different service area, our Alabama State Office will work closely with them to assess its impact on existing project operations.

Should Positive Maturity decide to relinquish part of its grant in order to establish an independent project in the approved service area, we will conduct a competitive process for new sponsorship. Depending upon an analysis of current population and RSVP funding allocations, the Corporation designates the area(s) of competitive eligibility.

Currently, 55 percent of U.S. counties lack any access to the RSVP program at all, and many of these counties have long expressed an interest in competing for new resources as they become available. As a result, the Corporation cannot justify establishing an independent program in Shelby County, which is currently being served, except through a competition available to these unserved areas as well.

In order to facilitate the best possible outcome for all involved, the Corporation has taken the initiative of trying to encourage discussions between all interested parties at the state and local level. These parties are in the best position to make final decisions about the best service delivery structure in Shelby County and the surrounding areas in Alabama. We will continue to encourage that process and to support the decision of the community on this subject.

QUESTIONS SUBMITTED BY SENATOR KYL

Question. What is the total dollar value of all compensation and/or benefits provided to a typical AmeriCorps volunteer in exchange for a year of service—broken down by stipend, college tuition voucher or credit, health insurance, child care, or any other applicable benefit? What is the total average cost to taxpayers per volunteer?

Answer. Under the National and Community Service Act, local programs have some flexibility in setting specific benefit levels for AmeriCorps members. A full-time member typically receives:

- A stipend or living allowance set at levels minimally necessary to permit full-time service; the typical amount this year is \$8,300, of which the Corporation pays no more than 85 percent of that amount.
- Health care that averages between \$900–\$1,100 in annual costs, although the 1998 average cost for AmeriCorps*State and National is about \$500 per member, because many members maintain existing coverage at their own cost.
- Child care when necessary, which is needed by only a few members and therefore averages about \$200–300 across all members.
- An education award upon successful completion of service of \$4,725.

The Corporation's average budgeted cost per full-time AmeriCorps member, across all programs, is currently \$15,300 for the program year 1998–99. This average includes all AmeriCorps programs, including AmeriCorps*State, AmeriCorps*National, AmeriCorps*Education Award, AmeriCorps*VISTA, AmeriCorps*NCCC, and the new AmeriCorps*Promise Fellows. By law and Corporation policy, organizations using AmeriCorps members are expected to provide a significant portion of the program's costs.

Question. In your written testimony, you discussed the literacy programs supported by the Corporation and the results achieved for the 1996–1997 program year. You mentioned on page 11 that 67 percent of youth tutored in grades 1–12 showed improvement. But these results were apparently self-reported, and you cite only a few independent evaluations of the progress that is actually being made. Has there been any attempt to incorporate regular independent review of the improvements made by students in each of the various programs in which AmeriCorps participants are involved—in terms of test scores, grades, or other measures of achievement?

Answer. Local projects define objectives and measure their progress against those objectives. Many independent assessments are conducted of local programs. In many literacy projects, this information is in fact gathered by local school officials as part of their ongoing responsibilities for providing education.

Summarizing this information across projects is extremely difficult, however, because they have different objectives and use a wide variety of techniques and measurement devices to assess progress. For example, a simple measure such as improved attendance may or may not be part of a program's objectives, and different school systems have different techniques for measuring attendance. The Corporation does not impose specific measures for all local literacy projects.

There have been many independent evaluations of effective tutoring programs, and we have identified some of those in our written testimony. We specifically promote the adoption of the effective practices identified in the research by projects using AmeriCorps members to help them achieve their objectives.

To obtain impact data across all projects, and as noted in response to an earlier question, the Corporation is engaged in a national study of literacy projects. The first phase of that study is a descriptive analysis that will permit us to characterize how these programs' practices compare to what is known about effective program models. Data from this study will be available in Fall 1999. The second phase of the study, to begin in September 1999, will collect outcome data on reading ability in a rigorous design intended to permit us to make definitive statements about the effects of Corporation-sponsored tutoring efforts. Results from that phase of the research will be available late in 2000.

Question. In your testimony, you mention other activities in which AmeriCorps participants are involved, including after-school programs for at-risk youth (page 12). What are the specific after-school programs in which AmeriCorps participants are engaged? Has there been any independent evaluation of how successful these programs have been, in terms of academic achievement, youth crime rates, etc.?

Answer. While there have been studies of various education related programs (e.g., tutoring, literacy), which may occur in-school or after-school, there have been no independent studies of AmeriCorps participants serving just in after-school programs. Please see the attached list of all after-school programs.

Grantee: Alabama State Commission on National and Community Service
 Subgrantee: Birmingham Cultural and Heritage Foundation
 Program Name: AmeriCorps*In Tune
 Grant Type: State Program
 Full-time AmeriCorps members: 25
 Part-time AmeriCorps members:

Program Descriptions: AmeriCorps members provide tutoring and homework assistance, music instruction, and preparation for musical performance to increase the academic performance, improve attitude toward learning, and increase participation in school of 300 K–8 students in Birmingham's Enterprise Community.

Grantee: Alabama State Commission on National and Community Service
 Subgrantee: Family Healthcare of Alabama
 Program Name: Rural AmeriCorps Student Project
 Grant Type: State Program
 Full-time AmeriCorps members: 25
 Part-time AmeriCorps members:

Program Descriptions: AmeriCorps members tutor and mentor 400 disadvantaged and predominantly African-American students in grades K–6 to improve their academic performance and school attendance. Seventy-five percent of students are expected to increase by at least one letter grade in math or reading. Services are provided at ten schools during regular school hours, in after-school and weekend programs, as well as during the summer in rural Greene and Sumter Counties in west Alabama.

Grantee: Alabama State Commission on National and Community Service
 Subgrantee: Butler Co. Board of Education
 Program Name: AmeriCorps Instructional Support Team

Grant Type: State Program
 Full-time AmeriCorps members: 20
 Part-time AmeriCorps members:
 Program Descriptions: AmeriCorps members tutor and mentor 250 K–3 students in three rural Alabama schools. Members tutor students individually and in small groups, provide mentoring in after-school activities and provide homework assistance and enrichment activities. Member service will result in improved academic performance, improved attitude toward school, and improvement in attendance.

Grantee: Alabama State Commission on National and Community Service
 Subgrantee: Calhoun Community College
 Program Name: Calhoun Community College AmeriCorps Program (CAP)
 Grant Type: State Program
 Full-time AmeriCorps members: 20
 Part-time AmeriCorps members:
 Program Descriptions: AmeriCorps members tutor and mentor 300 K–3 children in an America Reads initiative in ten north Alabama elementary schools. Eighty percent of students increase reading skills by at least one grade level. Members also conduct after-school and summer educational programs for children and youth. The program is endorsed by Decatur's Promise.

Grantee: Alaska State Community Service Commission
 Subgrantee: Nine Star Enterprises, Inc.
 Program Name: AmAK Literacy Project
 Grant Type: State Program
 Full-time AmeriCorps members: 16
 Part-time AmeriCorps members: 2
 Program Descriptions: AmeriCorps Members serve in 16 community based organizations providing literacy and computer training to preschool and elementary school students and their families. Members serve in single site placements in rural communities in Alaska.

Grantee: Arkansas Commission on National and Community Service
 Subgrantee: Southeast Arkansas Community Based Education Center
 Program Name: POP's Latchkey Program
 Grant Type: State Program
 Full-time AmeriCorps members: 6
 Part-time AmeriCorps members: 6
 Program Descriptions: AmeriCorps Members provide a safe haven and enrichment activities for children in Kindergarten through 6th grade, assist with Spanish translation for parents and students in schools, and offer life skills trainings to families. Members are placed in four elementary schools and two child care centers.

Grantee: California Commission on Improving Life Through Service
 Subgrantee: Child Abuse Prevention Council of Sacramento, Inc. +
 Program Name: Child Abuse Prevention Council of Sacramento, Inc.
 Grant Type: State Program
 Full-time AmeriCorps members: 70
 Part-time AmeriCorps members:
 Program Descriptions: 70 AmeriCorps members serve a consortium of public and non profit organizations in three municipalities whose purpose is to provide a continuum of services to children at risk for neglect or abuse. Members are recruited from the communities surrounding three service centers to tutor/mentor children identified by child protective services or their teachers for participation in the program. Some members serve in the centers to assist with intake and make referrals to services for families. Members also serve as points of contact from the apartments and homes in which they live to serve members of the community in need. Many members are receiving temporary assistance to needy families. The program also provides training to 900 elementary students in a child prevention curriculum and a summer recreation program which provides free lunches.

Grantee: California Commission on Improving Life Through Service
 Subgrantee: California Conservation Corps—Cadre of Corps +
 Program Name: Cadre of Corps
 Grant Type: State Program
 Full-time AmeriCorps members: 130
 Part-time AmeriCorps members: 4
 Program Descriptions: Cadre of Corps is a statewide AmeriCorps program sponsored by the California Conservation Corps. 134 AmeriCorps members are assigned to one of nine sites, sponsored by a District Office of the California Conservation

Corps or by a local conservation corps office. The areas served include Klamath, Shasta-Pacific, Marin, San Francisco, Pacific Bays, San Jose, Central Coast, Los Angeles, and Long Beach. Members provide tutoring for 1216 at risk youth, environmental education for 6,217 students in 89 schools, and community service activities for 7,332 youth in 49 communities or neighborhoods.

Grantee: California Commission on Improving Life Through Service
Subgrantee: California Conservation Corps—Watershed Project

Program Name: Watershed Project
Grant Type: State Program
Full-time AmeriCorps members: 147

Part-time AmeriCorps members:

Program Descriptions: The Watershed Project engages 147 full time members to coordinate school and community partnerships that foster community responsibility for healthy watersheds. Members assist teachers in developing service-learning activities centered around watershed restoration and lead field trips for students to complete service projects. Members also complete watershed restoration projects such as protection against erosion or building trails. Members serve in 11 regions of the California Conservation Corps system: Lassen/Plumas, Mendocino, Napa, San Diego, San Francisco, Shasta, Siskiyou, Sonoma, Tahoe/Placer, Tehama and Trinity.

Grantee: California Commission on Improving Life Through Service

Subgrantee: San Diego State Univ. Foundation +

Program Name: CA YMCA/CSU PRYDE AmeriCorps Consortium

Grant Type: State Program

Full-time AmeriCorps members: 22

Part-time AmeriCorps members: 85

Program Descriptions: The YMCA PRYDE AmeriCorps program engages 22 full-time and 88 part-time members to serve in five regions of California: San Diego, Long Beach, Los Angeles, Oakland/East Bay, and San Francisco. Within each region, members are placed at school or YMCA sites to conduct after school programming. Activities include academic/homework assistance, life skills development (conflict resolution, substance abuse prevention, pregnancy prevention, communication), recreation activities, and field trips. A partnership with the local California State University campuses provides training and technical assistance for members and staff.

Grantee: California Commission on Improving Life Through Service

Subgrantee: Los Angeles Unified School District +

Program Name: AmeriLiteracy

Grant Type: State Program

Full-time AmeriCorps members: 50

Part-time AmeriCorps members:

Program Descriptions: AmeriLiteracy AmeriCorps members tutor elementary students in fifteen schools throughout the Los Angeles Unified School District. The program utilizes 5 distinct models for member involvement in the schools, ranging from involvement in intersession classes to sustained tutoring, in which the same group of children are tutored daily for 30 to 40 minutes.

Grantee: California Commission On Improving Life Through Service

Subgrantee: Los Angeles Conservation Corps +

Program Name: Building Up Los Angeles

Grant Type: State Program

Full-time AmeriCorps members: 50

Part-time AmeriCorps members: 60

Program Descriptions: In the Building Up Los Angeles AmeriCorps program, 50 full-time and 80 part-time members serve in teams at one of 7 clusters in the greater Los Angeles area: San Fernando Valley, South Central/Watts, Northeast, Hollywood, Pico Union, Central City, and East Los Angeles. Service objectives include: (1) providing in-class tutoring in specific subjects and skills for students in grades 1–12 who are at risk of academic failure; (2) conducting after school and intersession programs that provide academic assistance/enrichment and recreation activities; and (3) holding seven 2 week Summerbridge Programs to prepare and mentor entering middle and high school students for academic and personal success.

Grantee: California Commission on Improving Life Through Service

Subgrantee: Lifespan Services Network, Inc. +

Program Name: San Luis Obispo County AmeriCorps

Grant Type: State Program

Full-time AmeriCorps members: 40

Part-time AmeriCorps members: 10

Program Descriptions: The San Luis Obispo County AmeriCorps program engages 50 AmeriCorps members to serve at risk youth with goals of decreasing juvenile crime, substance abuse, and teen pregnancy and increasing school success and positive behavior. Fourteen AmeriCorps members serve as mentors to 120 juvenile offenders, helping them complete their probation contracts and resist new criminal activity. Six members assist youth who are enrolled in the county's substance abuse program. Members assist youth in developing an action plan to resist substance abuse and in learning positive decision making skills. Thirty members assist 240 youth who are at risk of academic failure.

Grantee: California Commission on Improving Life Through Service

Subgrantee: East Bay Conservation Corps

Program Name: East Bay Conservation Corps

Grant Type: State Program

Full-time AmeriCorps members: 159

Part-time AmeriCorps members:

Program Descriptions: 143 AmeriCorps members serve as literacy tutors for 1,300 Oakland students in 13 elementary schools to improve reading scores by at least one grade level. Teams of 10–12 members provide in school and after school tutoring to 10 students each. 8 AmeriCorps members serve in a school health program which involves children in the development and maintenance of the garden and introduces a healthy diet curriculum. 8 AmeriCorps members work with teachers at the elementary and middle school level to develop service learning curricula and activities.

Grantee: California Commission on Improving Life Through Service

Subgrantee: EYE Counseling and Crisis Services +

Program Name: EYE Empowerment Corps

Grant Type: State Program

Full-time AmeriCorps members: 40

Part-time AmeriCorps members: 20

Program Descriptions: In the EYE Empowerment Corps, 40 full-time and 20 part-time AmeriCorps members provide services for youth in the greater Escondido area. Half of the members serve on the Community Services team and provide mentoring to first time youth offenders. Members and youth participate in community service activities as a means to: help students develop a service ethic, provide needed assistance to the community, and create an environment where mentoring can happen. The other group of members serve on the education team as mentors to children who have been identified as being at risk for school failure. Members provide an after school program where children receive academic assistance, participate in recreation activities, and develop a relationship with another caring adult.

Grantee: California Commission on Improving Life Through Service

Subgrantee: Chancellor's Office, CA Community Colleges +

Program Name: Chancellor's Office, CA Community Colleges

Grant Type: State Program

Full-time AmeriCorps members:

Part-time AmeriCorps members: 724

Program Descriptions: 616 AmeriCorps Members recruited from the T–A–N–F and other student populations of 15 community colleges are trained in the “rolling readers” curriculum and tutor 7–9 children each in K–3 public schools and head start programs. A minimum of 2,168 low-income and/or limited English proficiency children will complete 80 percent of their individual student literacy development goals.

Grantee: California Commission on Improving Life Through Service

Subgrantee: City Year, Inc. +

Program Name: City Year San Jose/Silicon Valley

Grant Type: State Program

Full-time AmeriCorps members: 69

Part-time AmeriCorps members: 6

Program Descriptions: AmeriCorps members in the City Year San Jose/Silicon Valley program are organized in diverse teams of 8 to 10 members. The 75 members are involved in one or more of the following activities: tutoring youth to improve basic academic skills, mentoring youth in the development of an ethic of citizenship, providing assistance to low income families, seniors, and non profit organizations, and providing safe and supportive environments for youth.

Grantee: California Commission on Improving Life Through Service

Subgrantee: Bay Area Community Resources—San Jose

Program Name: San Jose AmeriCorps Program

Grant Type: State Program

Full-time AmeriCorps members: 20

Part-time AmeriCorps members:

Program Descriptions: The San Jose AmeriCorps program has 20 members who serve in four schools in the Franklin McKinley Elementary School District. The members address the needs of students who have a low rate of academic success. Members tutor students in the classroom and after school, conduct intersession academic and recreation programs, and develop and implement activities to involve parents of the student participants. In addition, members implement a sunshine club intended to reduce truancy by having members meet with students before school to help prepare them for the day and to ensure participation in a nutrition program.

Grantee: California Commission on Improving Life Through Service

Subgrantee: California Conservation Corps Ambassador's Mentoring Project

Program Name: Ambassador's Mentoring

Grant Type: State Program

Full-time AmeriCorps members: 23

Part-time AmeriCorps members: 2

Program Descriptions: The Ambassador's Mentoring Project supports 25 AmeriCorps members who are placed with agencies around the state that provide mentoring services for youth and/or support mentoring initiatives. Members recruit, train, and support individuals who serve as mentors. Members also serve as mentors for at risk youth.

Grantee: California Commission on Improving Life Through Service

Subgrantee: Amador Tuolumne Community Action Agency

Program Name: AmeriCorps Academic Mentoring

Grant Type: State Program

Full-time AmeriCorps members: 20

Part-time AmeriCorps members: 4

Program Descriptions: Members in the AmeriCorps Academic Mentoring program tutor 200 at-risk K-8 grade students at 10 schools in Amador and Tuolumne counties. The goal of the program is to increase the students' reading and math skills and comprehension in other academic topics. Tutoring occurs before, during and after school; in and out of the classroom; one on one and in small groups. Improvement will be measured against an individual academic plan created for each student and through standardized state test results (Stan 9). The 24 members also mentor 100 at-risk youth to increase positive personal growth and citizenship skills and to reduce negative risk-taking behaviors such as truancy and disruptive behavior.

Grantee: California Commission on Improving Life Through Service

Subgrantee: Bay Area Community Resources—Larkspur

Program Name: BAYAC AmeriCorps

Grant Type: State Program

Full-time AmeriCorps members: 79

Part-time AmeriCorps members: 10

Program Descriptions: AmeriCorps Members provide tutoring and mentoring to at risk youth in Bay Area communities, so that they can achieve school success and realize their potential. Members work in small teams with twenty collaborating community based organizations to provide tutoring and mentoring to 2,155 young people.

Grantee: California Commission on Improving Life Through Service

Subgrantee: California Human Development Corporation +

Program Name: Rural AmeriCorps Partnership

Grant Type: State Program

Full-time AmeriCorps members: 18

Part-time AmeriCorps members: 4

Program Descriptions: AmeriCorps members tutor and mentor middle school Limited English Speaking (LEP) students considered to be educationally at risk in order to reduce the number of drop outs during high school. Members serve in teams of two in middle schools in rural Sonoma, Yolo, and San Joaquin Counties and serve a largely Latino population.

Grantee: California Commission on Improving Life Through Service

Subgrantee: Feather River Community College +

Program Name: AC Academic Mentoring Program of Plumas County

Grant Type: State Program

Full-time AmeriCorps members:
 Part-time AmeriCorps members: 40
 Program Descriptions: AmeriCorps members mentor five educationally at risk high school or college students to increase academic success, encourage attendance in higher education, and prevent drop out. Each beneficiary will develop an individual development plan.

Grantee: California Commission on Improving Life Through Service
 Subgrantee: Volunteer Center of San Francisco +
 Program Name: San Francisco AmeriCorps Collaborative
 Grant Type: State Program
 Full-time AmeriCorps members: 46
 Part-time AmeriCorps members:
 Program Descriptions: AmeriCorps members serve in public schools and community based organizations in the Bay area to engage youth in service learning activities, mobilize adult volunteers and build sustainable school and community partnerships. Members serve in one of the four teams. One team's activities focus on developing service learning activities, one is engaged in healthy start activities, one team focuses on volunteer generation; and one team serves in child development centers to increase literacy of pre-K to third grade.

Grantee: California Commission on Improving Life Through Service
 Subgrantee: Partners in School Innovation +
 Program Name: Partners/ACT
 Grant Type: State Program
 Full-time AmeriCorps members: 30
 Part-time AmeriCorps members:
 Program Descriptions: AmeriCorps members serve in small teams at schools serving K–12 students. Members support whole-system change efforts of schools. Activities are designed to increase literacy and reading comprehension and increase parent and community involvement in the school.

Grantee: Catholic Network of Volunteer Service
 Subgrantee: Catholic Network of Vol. Service
 Program Name: CNVS AmeriCorps Program
 Grant Type: Ed Award Only
 Full-time AmeriCorps members: 750
 Part-time AmeriCorps members: 286
 Program Descriptions: Members will serve in areas of child care, school counseling, tutoring, literacy, elderly outreach, social services, counseling and civic responsibility.

Grantee: City Year, Inc.
 Subgrantee: City Year—Columbia
 Program Name:
 Grant Type: National Direct Central
 Full-time AmeriCorps members: 48
 Part-time AmeriCorps members: 4
 Program Descriptions: City Year is a national non-profit with strong public-private partnerships, devoted solely to full time national service and the development of a diverse and well-trained corps. AmeriCorps Members serve in classrooms, run after school and school break programs, teach violence and HIV/AIDS prevention, rehabilitate public housing units and build parks and playgrounds. Members increase academic success through in school tutoring, increasing parental involvement and promoting conflict resolution. They increase civic responsibility by engaging children and youth in out-of-school activities and meet needs of local organizations through short term physical and human needs projects.

Grantee: City Year, Inc.
 Subgrantee: City Year—Cleveland
 Program Name: City Year—Cleveland
 Grant Type: National Direct Central
 Full-time AmeriCorps members: 95
 Part-time AmeriCorps members: 10

Program Descriptions: City Year is a national non-profit with strong public-private partnerships, devoted solely to full time national service and the development of a diverse and well-trained corps. Grantee: Colorado Governor's Commission on Nat'l & Community Service
 Subgrantee: Adams County School District 14
 Program Name: Community Action on Reading and Education
 Grant Type: State Program
 Full-time AmeriCorps members: 20
 Part-time AmeriCorps members: 4

Program Descriptions: Members serve as literacy instructors and tutors for children in grades 1, 2, 3, 6, and 9. They also launch a family literacy program, and provide instruction and tutoring to out-of-school youth. This program provides team based services in an urban community.

Grantee: Colorado Governor's Commission on Nat'l & Community Service
 Subgrantee: Sheridan School District #2
 Program Name: Sheridan Family Res. Center AmeriCorps
 Grant Type: State Program
 Full-time AmeriCorps members: 29
 Part-time AmeriCorps members: 1

Program Descriptions: AmeriCorps Members tutor and mentor at-risk youth in the Sheridan School District. Members also implement interactive educational after-school and summer camp programs for students. Additionally, Members coordinate health promotion activities in the Sheridan School-Based Clinic.

Grantee: Colorado Governor's Commission on Nat'l & Community Service
 Subgrantee: St. Andrew's Episcopal Church
 Program Name: The Children's Center for Arts and Learning
 Grant Type: Ed Award Only
 Full-time AmeriCorps members:
 Part-time AmeriCorps members: 2

Program Descriptions: Members offer a free afterschool and summer program of arts instruction and tutoring for at-risk children.

Grantee: Connecticut Commission on National and Community Service
 Subgrantee: Bridgeport Police Dept. Regional Youth/Adult Substance Abuse
 Project Program Name: Safe Neighborhood AmeriCorps Partnership, Year I
 Grant Type: State Program

Full-time AmeriCorps members: 44
 Part-time AmeriCorps members: 96
 Program Descriptions: Members provide tutoring, mentoring, and community service projects through after-school programs for 100 youth in the East End, East Side and South End neighborhoods of Bridgeport. Members conduct home security assessments and installations for 200 elderly residents, individuals with disabilities, and other vulnerable populations in 6 Bridgeport neighborhoods. Members also engage in community revitalization projects including planting community gardens, boarding up abandoned buildings, and installing ramps for physically challenged residents.

Grantee: Connecticut Commission on National and Community Service
 Subgrantee: City of Meriden, Connecticut
 Program Name: City SERVE! AmeriCorps
 Grant Type: State Program
 Full-time AmeriCorps members: 20
 Part-time AmeriCorps members:

Program Descriptions: Members provide in-class support and after-school enrichment activities for 400 elementary school children. Members work one-on-one with the students to improve their reading and writing abilities. Members also provide enrichment activities for 8 preschool classes to prepare them to succeed in school. In addition, Members provide after-school tutoring and mentoring for K–12 youth to help improve their academic achievement and improve their behavior.

Grantee: Connecticut Commission on National and Community Service
 Subgrantee: Leadership, Education and Athletics in Partnership
 Program Name: LEAP
 Grant Type: State Program
 Full-time AmeriCorps members:
 Part-time AmeriCorps members: 280

Program Descriptions: AmeriCorps Members tutor and mentor over 1,100 inner-city children ages 7 through 16 in after-school programs. During the Summer months Members live in the housing developments where the children reside and provide structured activities throughout the day. The intensive tutoring and mentoring provided by the Members result in improved reading skills, increased self-esteem and better social behavior for 80 percent of the participating school-aged children. In addition, Members organize 300 community service activities for the children, their families and neighbors to participate in during the program year.

Grantee: Connecticut Commission on National and Community Service
 Subgrantee: Volunteer Center of Greater Bridgeport (BIRA)
 Program Name: Bridgeport InterRegional AmeriCorps
 Grant Type: State Program
 Full-time AmeriCorps members: 30
 Part-time AmeriCorps members: 5

Program Descriptions: AmeriCorps Members coordinate community volunteer programs at high schools and community-based organizations throughout the city of Bridgeport and its neighboring communities. Through their scattered-site placements Members provide in-school and after-school activities for K–12 children to increase math, reading and computer skills. Members also provide mentoring and after-school enrichment activities for youth ages 6–14 to improve academic and social skills, literacy skills training for adult learners and their children, and health and parenting education classes.

Grantee: Connecticut Commission on National and Community Service
 Subgrantee: Community Action for Greater Middlesex County, Inc.
 Program Name: CAGMC AmeriCorps
 Grant Type: State Program
 Full-time AmeriCorps members: 20
 Part-time AmeriCorps members: 8

Program Descriptions: AmeriCorps members serve in 15 rural communities in Middlesex County where they tutor and mentor children in before, during, and after-school programs. Members also work with parents of young children providing them with assistance in accessing health care, and other services to help ensure a healthy start for their children.

Grantee: Connecticut Commission on National and Community Service
 Subgrantee: Southend Community Services, Inc.
 Program Name: Hartford AmeriCorps
 Grant Type: State Program

Full-time AmeriCorps members: 30
 Part-time AmeriCorps members:
 Program Descriptions: AmeriCorps members serve in public elementary and middle schools in Hartford. They tutor children in English language arts, and provide assistance in after-school programs like homework clubs. Members also engage youth in service learning projects and recruit community volunteers to participate.

Grantee: Delaware Community Service Commission
 Subgrantee: University of Delaware
 Program Name: First State Mentor Corps, CHEP
 Grant Type: State Program

Full-time AmeriCorps members: 3
 Part-time AmeriCorps members: 63
 Program Descriptions: AmeriCorps Members participate in the state-wide initiative to enlist citizens to serve as one-on-one mentors. Members collaborate with RSVP participants to recruit and train volunteers to serve as mentors to 800 pre-kindergarten through middle school students. In addition, Members engage Delaware businesses in Adopt-A-School mentoring programs.

Grantee: Educational Service District 112/Northwest Service Academy, Inc.
 Subgrantee: Northwest Service Academy/ESD112—Parent
 Program Name: Northwest Service Academy/ESD 112
 Grant Type: National Direct

Full-time AmeriCorps members:
 Part-time AmeriCorps members:
 Program Descriptions: Educational Service District 112 serves largely as financial overseer of the three sites, provides in-kind staff support, and acts as an advisor on program-related decisions. The major responsibilities for program design, accomplishing objectives, day-to-day management and strategic planning rest with the Northwest Service Academy executive director and the site directors. AmeriCorps members at one residential and two non-residential sites restore Northwest watersheds, provide environmental education and academic reinforcement to schools, and help rebuild communities.

Grantee: Florida Commission on Community Service
 Subgrantee: Centro Campesino
 Program Name: AmeriCorps Youth Pride
 Grant Type: State Program

Full-time AmeriCorps members: 22
 Part-time AmeriCorps members:
 Program Descriptions: AmeriCorps members tutor and mentor 250 low income youth ages 6 to 18 to ensure that 80 percent achieve grade level as measured by the Basic Reading Inventory. Members also provide after-school activities to 350 students to decrease school suspensions and detention among 90 percent of those served. Students' parents are encouraged to attend a Parent Club. Members serve in one of four school and two community-based sites. AmeriCorps YouthPride involves over 20 adult mentors who volunteer 2,000 hours.

Grantee: Florida Commission on Community Service
 Subgrantee: Academy for Better Communities—Barry University School of Social Work

Program Name: Americorps Barry University
 Grant Type: State Program

Full-time AmeriCorps members: 18
 Part-time AmeriCorps members:
 Program Descriptions: AmeriCorps members provide individual and group social services to 900 elementary school children in order to decrease school absenteeism, detentions and suspensions by 24 percent, improve grades by 20 percent, and improve classroom behavior by 25 percent. Members also provide to 450 parents classes and counseling sessions to improve parenting skills by 33 percent. Members serve in small teams at six elementary schools and middle schools in Dade County.

Grantee: Florida Commission on Community Service
 Subgrantee: College of Fine Arts, USF
 Program Name: AmeriCorps Arts, USF
 Grant Type: State Program

Full-time AmeriCorps members: 6
 Part-time AmeriCorps members: 18
 Program Descriptions: AmeriCorps members teach arts skills (dance, visual arts, theater, music, singing, etc.) in after-school programs to 500 low income children

ages 6 to 14. Members are assigned to one of nine Boys & Girls Club sites throughout Hillsborough County and serve in teams. Small teams of volunteers are utilized to support program activities through fund raising and assisting with service projects. There is a 10 week summer component.

Grantee: Florida Commission on Community Service
 Subgrantee: Eckerd Family Youth Alternatives, Inc.
 Program Name: Americorps Hi-Five
 Grant Type: State Program
 Full-time AmeriCorps members: 14
 Part-time AmeriCorps members: 10

Program Descriptions: AmeriCorps members tutor 90 elementary school students so that 75 percent will increase one grade level in the targeted subject area. Another 90 students will be provided conflict resolution training to reduce disciplinary referrals by 30 percent. Selected Members work with parents of students with chronic behavioral problems, students who are struggling academically, and students who are chronically absent from school so that 75 percent of the families will report increased knowledge of their child's academic progress and behavior in school. Members serve in one of three elementary schools and four after-school locations. Volunteers are also recruited to serve as mentors to at-risk students.

Grantee: Florida Commission on Community Service
 Subgrantee: Lake County Board of Commissioners
 Program Name: Partners For Success
 Grant Type: State Program
 Full-time AmeriCorps members: 15
 Part-time AmeriCorps members:

Program Descriptions: AmeriCorps members tutor 200 K-2 academically at risk and under-achieving students to increase the reading ability by two grade levels of 80 percent of those participating. Members also provide out-of-school programs to 200 students to increase by 25 percent the study skills of at least 60 of those students. Members serve at one of three elementary schools. AmeriCorps Partners for Success recruits and utilizes 50 community volunteers to collect books and read to students.

Grantee: Frostburg State University
 Subgrantee: Frostburg State
 Program Name: Allen HallSTARS!
 Grant Type: Ed Award Only
 Full-time AmeriCorps members:
 Part-time AmeriCorps members: 80

Program Descriptions: Members will tutor, mentor, and lead environmental activities for youth. Some member activities include taking part in the America Reads Challenge.

Grantee: Georgia Commission for National and Community Service
 Subgrantee: Fannin County Family Connection (NPPSIS/Fiscal Agent)
 Program Name: AmeriCorps Service to Families in Fannin County
 Grant Type: State Program
 Full-time AmeriCorps members: 18
 Part-time AmeriCorps members: 4

Program Descriptions: AmeriCorps members tutor 250 children in pre-school through middle school during school hours and after school to improve reading and math skills by ½ grade level in 80 percent of students served. In addition, members mentor 30 middle-school students to increase school attendance and decrease behavior problems. Members also recruit community volunteers to deliver additional services to children.

Grantee: Georgia Commission for National and Community Service
 Subgrantee: Southwest Georgia Easter Seal Society, Inc.
 Program Name: Easter Seal-AmeriCorps After School & Summer Enrichment
 Grant Type: State Program
 Full-time AmeriCorps members: 8
 Part-time AmeriCorps members: 20

Program Descriptions: AmeriCorps members provide in-school and after-school tutoring, homework assistance, and supervised recreation for children with disabilities, their families, and their non-disabled peers in five southwest Georgia counties. In pre-school settings members develop and provide activities that support the growth and early development of children with disabilities from low-income families, and conduct parenting classes for these families. Members also assist program par-

ticipants with daily living functions and provide them with opportunities for community service.

Grantee: Georgia Commission for National and Community Service
 Subgrantee: City of Macon/Macon Police Department
 Program Name: MPD/AmeriCorps Cadet Program
 Grant Type: State Program
 Full-time AmeriCorps members: 20
 Part-time AmeriCorps members: 5

Program Descriptions: AmeriCorps members conduct bicycle patrols within five low-income/high crime neighborhoods in this community policing program. In addition, members conduct crime prevention activities and operate police athletic leagues and other enrichment services for at-risk youth. All activities are undertaken to reduce the fear of crime within targeted neighborhood and increase civic responsibility among neighborhood residents.

Grantee: I Have A Dream Foundation, Inc.
 Subgrantee: I Have A Dream Foundation—New York
 Program Name: “I Have a Dream” Foundation-New York/AmeriCorps
 Grant Type: National Direct Sub
 Full-time AmeriCorps members: 3
 Part-time AmeriCorps members: 16

Program Descriptions: The I Have a Dream Foundation (IHAD) model connects individuals who want to sponsor a group of children with neighborhood in need. An entire elementary school class or an age group in a housing project become “Dreamers” and receive academic and social support designed to see them through high school and into productive lives. Those Dreamers who graduate from high school are eligible for college or vocational school tuition assistance. Members enable (IHAD) sites to intensify their outreach to Dreamers, their families and the community. In addition to tutoring and mentoring, providing academic and social enrichment, members recruit and train community volunteers, organize family involvement activities and lead Dreamers in community service projects.

Grantee: Iowa Commission on Community Service
 Subgrantee: Des Moines Public Schools—New Horizons Program
 Program Name: AmeriCorps Enterprise Community Service Project
 Grant Type: State Program
 Full-time AmeriCorps members: 20
 Part-time AmeriCorps members:

Program Descriptions: The AmeriCorps Enterprise Community Service Project utilizes 20 members to tutor more than 100 youth, renovate low-income houses, create community green spaces and organize neighborhood safety patrols. The program maintains a diverse member base and partnerships with government and community-based organizations.

Grantee: Kentucky Commission for Community Volunteerism and Service
 Subgrantee: The City of Leitchfield
 Program Name: Tri-City Link
 Grant Type: State Program
 Full-time AmeriCorps members: 3
 Part-time AmeriCorps members: 14

Program Descriptions: AmeriCorps members tutor and mentor students in grades 1–12 and engage classes in service-learning activities focused on environmental

awareness. Individual tutoring decreases the high school drop-out rate of 125 students participating in the program hosted at Family Youth and Resource Centers in three counties. Members with Tri-City Link also provide community enrichment activities through structured quality after-school programs for youth, from recreation to cultural arts.

Grantee: Lincoln University
 Subgrantee: Lincoln University
 Program Name: You Can Institute on Family Values & Rites of Passage
 Grant Type: Ed Award Only
 Full-time AmeriCorps members:
 Part-time AmeriCorps members: 20

Program Descriptions: Members will launch a program to assist at-risk youth in the transition from adolescence to adulthood through a year long program including an after-school enrichment program.

Grantee: Local Initiatives Support Corporation
 Subgrantee: New York LISC
 Program Name: New York City LISC AmeriCorps
 Grant Type: National Direct
 Full-time AmeriCorps members: 10
 Part-time AmeriCorps members:

Program Descriptions: The Local Initiatives Support Corporation is a national non profit organization that provides funding and technical guidance to local Community Development Corporations (CDC's) which are rebuilding neighborhoods across the nation. Members engage in community revitalization activities including housing outreach and education, job training, youth education programs, neighborhood planning, and human services planning.

Grantee: Louisiana Serve Commission
 Subgrantee: St. Mark's Community Center
 Program Name: AmeriCorps of New Orleans
 Grant Type: State Program
 Full-time AmeriCorps members: 45
 Part-time AmeriCorps members:

Program Descriptions: AmeriCorps Members tutor and mentor at-risk children, perform home repairs on a minimum of 30 low income homes, board up a minimum of 90 abandoned houses and help revitalize neighborhood green spaces and parks. In addition, the program works with local organizations to address the needs of children. These include working with homeless youth, teen parents and youth crisis services. Most Members serve in teams, although a few are single-site placements. Potential impacts of the program include, 80 percent of participating students will advance a minimum of one grade level in mathematics and reading skills, increased sense of security by residents and reduction in illegal activities, and allowing homeowners to remain in their homes and prevent further deterioration of the housing stock. This is an urban program.

Grantee: Lower Mississippi Delta Service Corps
 Subgrantee: Center for Community Development, Delta State University
 Program Name: Mississippi Delta Service Corps
 Grant Type: National Direct
 Full-time AmeriCorps members: 70
 Part-time AmeriCorps members:

Program Descriptions: The Lower Mississippi Delta Service Corps, Inc. (LMDSC) is a national non-profit, tri-state collaboration with partners in Louisiana, Arkansas, and Mississippi, whose mission is to provide effective management and governance of a regional national service corps. The Lower Mississippi Delta Service Corps, Inc., is committed to meeting the unique needs of the people of the Delta. AmeriCorps Members perform a variety of functions in the areas of education and human service. Activities include tutoring children and adults in literacy skills, serving in food banks, locating shelter and affordable housing for low income residents, and facilitating independent living for homebound. Members are placed individually or in small groups in host agencies throughout the Delta.

Grantee: Maryland Governor's Office on Service & Volunteerism
 Subgrantee: University of Maryland at Baltimore
 Program Name: Enhancing Neighborhood Action By Local Empowerment
 Grant Type: State Program
 Full-time AmeriCorps members: 38
 Part-time AmeriCorps members: 240

Program Descriptions: AmeriCorps Members, conduct health assessments and monitor clinical symptoms for persons with chronic illnesses, and provide the HIPPY (Home Instruction Program for Preschool Youngsters) and other pre-school readiness programs. In addition, Members provide after-school literacy tutoring for 500 2nd and 3rd grade students, and reduce environmental risks for children and families by educating residents about reducing lead hazards in their homes and establishing recycling programs. Members serve in teams organized around the 4 separate initiatives: Community Health, Early Childhood Development, Reading Edge, and Healthy Environment. Through the Reading Edge initiative, Members also provide literacy tutoring to 1000 K–3 children in summer camps.

Grantee: Maryland Governor's Office on Service & Volunteerism
 Subgrantee: Frostburg State University (A STAR in Western MD)
 Program Name: A STAR! in Western MD (Appalachian Service Through Action & Resource)
 Grant Type: State Program
 Full-time AmeriCorps members: 32
 Part-time AmeriCorps members:

Program Descriptions: AmeriCorps Members provide independent living assistance, with a focus on preventive health, shelter and housing support, to families, children, and the elderly, create and implement youth literacy programs and other after-school educational programs, and conduct environmental preservation projects. Members create green spaces, implement recycling programs, partner with Habitat for Humanity to construct low-income housing, and reduce environmental risks in homes by conducting home safety assessments including tests for water contamination and radon. Through an alliance of community-based organizations in Western Maryland, Members are scattered throughout the region performing a wide-variety of services.

Grantee: Maryland Governor's Office on Service & Volunteerism
 Subgrantee: Salisbury State University
 Program Name: Partnership for Adolescents on the Lower Shore
 Grant Type: State Program
 Full-time AmeriCorps members: 23
 Part-time AmeriCorps members: 9

Program Descriptions: AmeriCorps Members tutor and mentor at-risk adolescents on the Lower Eastern Shore of Maryland. In addition, Members improve the life and parenting skills of pregnant and parenting teens through health education. Members also conduct health screenings and health education events, and provide conflict resolution training for adolescents. Members will help improve the educational achievement and school success of adolescents as measured by an increase in grade point average and a reduction of school reports of violence, expulsions, and suspensions.

Grantee: Maryland Governor's Office on Service & Volunteerism
 Subgrantee: Dept. of Natural Resources—Maryland Conservation Corps
 Program Name: United Youth Corps of MD (UCOM)
 Grant Type: State Program
 Full-time AmeriCorps members: 142
 Part-time AmeriCorps members: 100

Program Descriptions: AmeriCorps Members maintain and restore state forests, parks, and wildlife management areas. Members rehabilitate abandoned houses, construct community parks and gardens in low-income Baltimore neighborhoods, and tutor students with special needs. In addition, Members develop after-school programs where middle school students perform community service and participate in environmental education activities.

Grantee: Maryland Governor's Office on Service & Volunteerism
 Subgrantee: Action for the Homeless, Inc.
 Program Name:
 Grant Type: State Program
 Full-time AmeriCorps members: 35
 Part-time AmeriCorps members: 26

Program Descriptions: AmeriCorps Members help 5,000 homeless and near homeless households obtain access to service providers. Members also help 1,250 homeless and near homeless families to obtain permanent housing or to prevent from being evicted. In addition, Members operate a Summer camp program for 320 at-risk homeless youth in Baltimore and coordinate after-school service-learning clubs for 10,000 students. The Adopt-A-Shelter program is one example of the partnerships forged between local schools and shelters.

Grantee: Maryland Governor's Office on Service & Volunteerism
 Subgrantee: Governor's Office—Volunteer Maryland
 Program Name: Volunteer Maryland
 Grant Type: State Program
 Full-time AmeriCorps members: 40
 Part-time AmeriCorps members:

Program Descriptions: AmeriCorps Members develop volunteer programs and management systems in community-based organizations and public agencies. They mobilize and supervise volunteers who provide direct service to communities in need. Sample projects include rehabilitating low-income housing for families, tutoring programs for school-age children, and preserving public land along Maryland's rivers.

Grantee: Maryland Governor's Office on Service & Volunteerism
 Subgrantee: Anne Arundel Community College—#2
 Program Name: Campus Corps
 Grant Type: State Program

Full-time AmeriCorps members:
 Part-time AmeriCorps members: 48
 Program Descriptions: AmeriCorps Members coordinate service learning activities at 15 community colleges for 1500 community college students. Each of the students will engage in an average of 15 hours of service to benefit their communities. In addition, Members create cascading volunteer programs in which community college students train high school students to tutor elementary school students.

Grantee: Massachusetts Service Alliance
 Subgrantee: Cambridge Community Services
 Program Name: Cambridge Community Service, Inc.
 Grant Type: State Program
 Full-time AmeriCorps members: 2
 Part-time AmeriCorps members: 18
 Program Descriptions: AmeriCorps members run academic enrichment programs, focusing on literacy and the use of technology, for 200 pre-teens (grades 3–8) and new immigrant high school youth. Members serve in teams at 8 after-school and summer enrichment programs. Members also coordinate service-learning projects for the youth at each of the 8 sites. At least 75 percent of the students involved will demonstrate improved academic skills and knowledge as measured by pre-post tests.

Grantee: Massachusetts Service Alliance
 Subgrantee: Lawrence Family Development and Education Fund, Inc.
 Program Name: City C.O.R.E.
 Grant Type: State Program
 Full-time AmeriCorps members: 35
 Part-time AmeriCorps members:
 Program Descriptions: AmeriCorps Members serve as teachers' assistants and tutors for elementary school children in an effort to improve teacher capacity and increase academic performance. Members also provide in-school and after-school literacy programs for K–3 students reading below grade level, and coordinate after-school service-learning activities for school students. School and community volunteers are generated to help run the literacy programs and service-learning activities focusing on healthy living, the environment and watershed revitalization. As a result of these services more students will reach grade level in reading skills and demonstrate an increased knowledge of issues relating to the service projects they perform.

Grantee: Massachusetts Service Alliance
 Subgrantee: City Year Boston
 Program Name: City Year Boston
 Grant Type: State Program
 Full-time AmeriCorps members: 249
 Part-time AmeriCorps members: 32
 Program Descriptions: AmeriCorps Members tutor and mentor inner-city children in public elementary and middle schools throughout Boston. Members serve over 10,000 young people by providing in-class assistance, after-school and weekend programs, camps during school vacations and the Young Heroes program. Members coordinate 25 "legacy" service projects, including vacant lot clean-ups, community gardens and rehabilitating low-income housing. Over 1000 community volunteers participate in these projects. In addition, Members partner with local organizations such as the American Red Cross and Peace at Home to conduct health awareness, HIV/AIDS prevention, and violence prevention workshops for young people.

Grantee: Massachusetts Service Alliance
 Subgrantee: Franklin County DIAL/SELF
 Program Name: GAP Youth-Corps
 Grant Type: State Program
 Full-time AmeriCorps members: 11
 Part-time AmeriCorps members:
 Program Descriptions: AmeriCorps Members provide support services to at least 60 homeless, runaway, and other at-risk youth. Members work with the participating youth to develop individual working plans and track progress made toward those plans. Members also facilitate prevention and support groups for at least 150 youth focusing on issues such as HIV/AIDS, drug use, smoking, self esteem, and parenting skills, and provide after-school programs for school-aged youth which provide tutoring academic enrichment, and recreational activities.

Grantee: Massachusetts Service Alliance
 Subgrantee: Greater Holyoke Foundation, Inc.

Program Name: Greater Holyoke Youth Services
 Grant Type: State Program
 Full-time AmeriCorps members: 24
 Part-time AmeriCorps members:
 Program Descriptions: Members serve in 6 Community Policing Substations in targeted neighborhoods. They coordinate crime prevention initiatives including crime watches, open houses, gang and drug awareness training, and personal safety training. Members operate after-school service programs for 60 8–15 year olds providing them with structured activities and a safe place during out-of-school time. Members also coordinate service activities for 40 first-time juvenile offenders through the Juvenile Diversion Program.

Grantee: Massachusetts Service Alliance
 Subgrantee: University of Massachusetts Boston, (CAPAY) Institute for Asian American Studies

Program Name: CAPAY Community YouthLearn AmeriCorps Program
 Grant Type: State Program
 Full-time AmeriCorps members: 1
 Part-time AmeriCorps members: 17
 Program Descriptions: AmeriCorps Members tutor and mentor 350 Asian Pacific American youth in after-school programs. In addition, Members tutor adults in ESL and serve as reading tutors in a family literacy program. Members also recruit youth to volunteer in community and school success service projects.

Grantee: Massachusetts Service Alliance
 Subgrantee: B.E.L.L. Foundation/BASICS
 Program Name: BASIC's
 Grant Type: State Program
 Full-time AmeriCorps members:
 Part-time AmeriCorps members: 50
 Program Descriptions: Fifty part-time AmeriCorps Members tutor and mentor elementary school children during the school year and the summer holidays. Members use the BASICS curriculum to increase children's knowledge and mastery of reading, writing, and arithmetic skills, enhance self-esteem, and strengthen communication between parents and teachers. Members engage children in a 6-week summer camp where the skills learned during the school year are reinforced and built upon.

Grantee: Massachusetts Service Alliance
 Subgrantee: YouthBuild Boston, Inc.
 Program Name: YouthBuild Boston
 Grant Type: State Program
 Full-time AmeriCorps members:
 Part-time AmeriCorps members: 50
 Program Descriptions: Members rehabilitate 6 units of previously abandoned housing so that 6 low-income and/or homeless families have access to affordable housing and the opportunity to be first time homeowners. Members also operate an after school and summer enrichment program for at-risk youth. Up to 300 youth receive tutoring and mentoring so that 80 percent demonstrate an increase in academic success and self-esteem, as measured by parent and teacher feedback. Members also engage in community service projects where they work in partnership with local non-profits to rehabilitate and repair facilities where community based organizations are based.

Grantee: Massachusetts Service Alliance
 Subgrantee: Worcester Community Action Council
 Program Name: CITYWORKS
 Grant Type: State Program
 Full-time AmeriCorps members: 20
 Part-time AmeriCorps members:
 Program Descriptions: AmeriCorps Members serve as school-based literacy tutors for 40 public school students in grades K through 4. Members also operate ESL programs and adult basic education sessions at low income housing developments for adults. In addition, Members increase the usage of city parks by removing safety hazards and conducting community watch programs.

Grantee: Massachusetts Service Alliance
 Subgrantee: Health and Education Services, Inc.
 Program Name: AmeriCorps Victim Assistance Linkages & Enhancements
 Grant Type: State Program
 Full-time AmeriCorps members: 6

Part-time AmeriCorps members: 8

Program Descriptions: AmeriCorps Members provide crisis intervention, information and referral services to victims of crime. Member referrals result in 400 linkages to regional health care organizations. In addition, Members provide hotline and in-person counseling to residents of the North Shore communities. Members conduct presentations to school children and community members to increase awareness about issues such as physical and sexual abuse and the wide range of services that are available. Members also work with established community partners to build a coordinated approach to victim assistance.

Grantee: Massachusetts Service Alliance

Subgrantee: Just A Start Corporation

Program Name: YouthBuild Just A Start Program

Grant Type: State Program

Full-time AmeriCorps members: 1

Part-time AmeriCorps members: 40

Program Descriptions: AmeriCorps Members serve in teams to renovate and rehabilitate 10 to 15 affordable housing units for low income families, provide major renovations to 3 to 5 units for sale to first-time home buyers, and upgrade public hallways and exterior painting to 185 units of public housing. In addition, Members tutor, mentor, and provide after-school activities to at least 100 6–14 year old low-income children.

Grantee: Massachusetts Service Alliance

Subgrantee: People Acting in Community Endeavors, Inc.

Program Name: YouthBuild New Bedford

Grant Type: State Program

Full-time AmeriCorps members: 10

Part-time AmeriCorps members: 20

Program Descriptions: AmeriCorps Members rehabilitate two community centers and renovate an abandoned home for a low-income family. In addition, Members mentor 75 elementary school students during in-school and after-school programs. The students participate in academic and recreational activities.

Grantee: Massachusetts Service Alliance

Subgrantee: The Student Conservation Association

Program Name: c/o SCA, Inc.

Grant Type: State Program

Full-time AmeriCorps members: 20

Part-time AmeriCorps members:

Program Descriptions: AmeriCorps Members, based at a rustic residential camp in Western Massachusetts, revitalize neighborhoods by restoring green spaces, creating community gardens and other community recreational areas, and assist in revitalizing and protecting natural resource areas, state and local parks and riverways. In addition, Members assist community organizations with the elimination of environmental hazards and reduce environmental risks for youth. During the winter months, Members serve as in-school assistants, providing environmental and conservation instruction and service learning activities, and mentors to 400 to 800 school-aged youth.

Grantee: Michigan Community Service Commission

Subgrantee: Oakland University

Program Name: Oakland University

Grant Type: State Program

Full-time AmeriCorps members:

Part-time AmeriCorps members: 40

Program Descriptions: The Oakland University AmeriCorps program provides reading/literacy and life skills training for youth and families. The program provides year-round support for youth through educational programs including a Character Education curriculum that focuses on topics such as respect, trustworthiness, responsibility and citizenship. Members conduct workshops with parents to encourage parents to read with their children at home. Members serve on teams in elementary and junior high schools. This program serves an urban population.

Grantee: Michigan Community Service Commission

Subgrantee: The Regents of The University of Michigan

Program Name: The Michigan Neighborhood AmeriCorps Program

Grant Type: State Program

Full-time AmeriCorps members: 20

Part-time AmeriCorps members: 50

Program Descriptions: The Michigan Neighborhood AmeriCorps program strengthens the social development of children and families in Detroit neighborhoods through violence prevention workshops, after-school and summer programs, and increased access to health education and health promotion services. Members will serve in teams. This program serves an urban population.

Grantee: Michigan Community Service Commission

Subgrantee: United Way Community Services

Program Name: Detroit's Academic Success Project

Grant Type: State Program

Full-time AmeriCorps members: 25

Part-time AmeriCorps members:

Program Descriptions: The Detroit Academic Success Program increases the academic achievement and reading comprehension of youth in kindergarten through fifth grade in Detroit's Empowerment Zone. The program infuses service learning as an instructional method, while building lasting partnerships between schools and communities to create an educational environment supportive of academic excellence. AmeriCorps members placed in five elementary schools located in Detroit's Empowerment Zone provide tutoring to low achieving students, enrichment and academic support workshops to parents, and develop service learning curriculum in math English and science. This program plans to serve 3,000 students.

Grantee: Mid-Atlantic Network of Youth & Family Services, Inc.

Subgrantee: Mid-Atlantic Network of Youth & Family Services—Parent

Program Name: Mid-Atlantic Network of Youth & Family Services (MANYCorps)

Grant Type: National Direct Sub

Full-time AmeriCorps members:

Part-time AmeriCorps members:

Program Descriptions: The Mid-Atlantic Network of Youth and Family Services (MANY) is a regional network of 50 community-based agencies providing services to runaway, homeless and other youth in high-risk situations. MANY provides coordination, training, and technical assistance to affiliates in six states. AmeriCorps Members tutor and mentor runaway, homeless and at-risk youth. They lead after school and summer education and enrichment programs, teach independent living, engage in intergenerational projects such as renovation of facilities for use by the elderly, build recreational facilities for adventure-based programming, conduct drug and alcohol prevention workshops, and organize volunteers for Big Brothers/Big Sisters.

Grantee: Mississippi Commission for National and Community Service

Subgrantee: North MidTown Community Development Corporation

Program Name: AmeriCorps Assist

Grant Type: State Program

Full-time AmeriCorps members: 20

Part-time AmeriCorps members: 10

Program Descriptions: AmeriCorps members serve the North Midtown community of Jackson through home renovations, adult education tutoring, after-school tutoring, and health care assistance. Divided in four teams, the housing renovation team rehabilitates 15 sub-standard homes, the child care team provides parent supportive services for 36 children, the health care team assists the medical clinic in offering health education seminars, the adult education team recruits and tutors 60 welfare recipients in attainment of their GED, and after-school team tutors children to increase their reading levels.

Grantee: Mississippi Commission for National and Community Service

Subgrantee: Campus Link—AmeriCorps formula

Program Name: Campus Link

Grant Type: State Program

Full-time AmeriCorps members: 15

Part-time AmeriCorps members: 20

Program Descriptions: AmeriCorps members tutor 500 under-achieving elementary school students from fourteen partnering schools in order to increase the reading comprehension two levels for 75 percent of those students participating, as well as increase the students' self-esteem and motivation for reading. The fifteen full-time and twenty part-time members serve in pairs at 10 university campuses throughout Mississippi via existing or newly established Campus Service Centers. Volunteer generation is a key component of this program—members are certified as reading tutors and recruit and train 500 volunteers who contribute 17,000 hours of tutoring through this program.

Grantee: Mississippi Commission for National and Community Service
 Subgrantee: Mississippi Institutions of Higher Learning
 Program Name: Learning Experiences for Adults to Develop Employability Related Skills

Grant Type: State Program
 Full-time AmeriCorps members: 8
 Part-time AmeriCorps members: 12
 Program Descriptions: AmeriCorps members assist 345 out-of-school, unemployed 16–25 year olds in their preparation for employment opportunities. Through skill building and experiential community problem solving, the LEYDERS program focuses on alternative methods to improving marketable key competencies, interpersonal social skills, and thinking skills such that 229 youth participate in community problem solving activities and 25 youth are placed in jobs related to their career education plan.

Grantee: Mississippi Department of Education
 Subgrantee: Mississippi Department of Education
 Program Name: Volunteer Assistant Teachers Train to Become Teachers
 Grant Type: Ed Award Only
 Full-time AmeriCorps members: 200
 Part-time AmeriCorps members:
 Program Descriptions: Members will serve as assistant teachers, tutoring to raise literacy levels and receiving more training to better their abilities.

Grantee: Missouri Community Service Commission
 Subgrantee: American Youth Foundation (Education Program)
 Program Name: St. Louis Partners AmeriCorps—Education
 Grant Type: State Program
 Full-time AmeriCorps members: 30
 Part-time AmeriCorps members: 12
 Program Descriptions: AmeriCorps Members tutor elementary and middle school children, and assist teachers in developing projects in literacy, the environment, first aid and personal safety, and substance abuse prevention. Activities are structured at six sites, continue into an extended literacy program, and lead into a Summer Literacy Institute. This is a team-based program which serves an urban community in St. Louis.

Grantee: Montana Community Services Advisory Council
 Subgrantee: The University of Montana
 Program Name: The Montana Campus Corps
 Grant Type: State Program
 Full-time AmeriCorps members: 3
 Part-time AmeriCorps members: 32
 Program Descriptions: AmeriCorps members recruit and place students from Montana colleges to provide tutoring and mentoring to at-risk students.

Grantee: National Assoc. of Child Care Resource & Referral Agencies, Inc.
 Subgrantee: National Association of Child Care Res Referral Agencies—Parent
 Program Name: National Association of Child Resource and Referral Agencies
 Grant Type: National Direct Central
 Full-time AmeriCorps members:
 Part-time AmeriCorps members:
 Program Descriptions: The National Association of Child Care Resource and Resource (NACCRRRA) and Referral Agencies promotes the growth and development of high quality resource and referral services; and exercises national policy leadership to build a diverse, high quality child care system with parental choice and equal access for all families. AmeriCorps members build community stability by improving the quality and availability of infant/toddler and school age child care. Members work directly with families, children, child care providers and the community by serving in child care settings, provide trainings to child care providers, consult with child care centers on program improvements, provide resource materials to families, and help families obtain education, health care, and other services.

Grantee: National Council of Churches of Christ
 Subgrantee: Ecumenical Program for Urban Service (EPRUS)—Parent
 Program Name:
 Grant Type: National Direct
 Full-time AmeriCorps members:
 Part-time AmeriCorps members:

Program Descriptions: The National Council of the Churches of Christ is the nation's largest ecumenical organization. The Council's mission is to support its member denominations and churches in working toward social, economic and racial justice. The Council received a National Direct grant in 1994. AmeriCorps Members serve in schools and community organizations in low-income neighborhoods, primarily offering tutoring and mentoring support, leading after-school recreation and enrichment activities, assisting runaway and homeless youth, providing drug abuse prevention and other healthy lifestyle information, and delivering gang prevention and intervention assistance.

Grantee: Nebraska Volunteer Service Commission

Subgrantee: Community Action of Nebraska, Inc.

Program Name: Community Action of Nebraska

Grant Type: State Program

Full-time AmeriCorps members: 33

Part-time AmeriCorps members:

Program Descriptions: Community Action of Nebraska is a statewide program that implements conflict resolution training for in-class training and for youth groups, enhances the educational performance of at-risk youth through tutoring, and works with Head Start programs to teach conflict resolution skills. Members also recruit and train volunteers. Most of the members serve in teams ranging from two to ten Members. Some Members serve at individual placement sites. Potential outcomes of the program are an increase in conflict resolution skills, a reduction of detentions, suspensions, fights and expulsions in schools establishing peer mediation programs, and an increase in the academic performance of students being tutored. This program serves both rural and urban youth.

Grantee: Nebraska Volunteer Service Commission

Subgrantee: Lincoln-Lancaster County Health Department

Program Name: Lincoln-Lancaster County Health Dept.

Grant Type: State Program

Full-time AmeriCorps members: 18

Part-time AmeriCorps members:

Program Descriptions: The Comprehensive School Health Initiative integrates health education into academics. The program works directly with students, parents, educators, and community members to enrich educational opportunities, provide outreach and mentoring to encourage the adoption of healthy lifestyles, and cultivate the creation of school and community partnerships. Members will serve in teams and individually during the course of the program year. Potential impacts of the program include an increase in academic achievement by the students being tutored, the availability of after school programming for youth that will provide a safe and academically enriching environment, and increased parental involvement in school and community activities. This program serves an urban population.

Grantee: New Hampshire College and University Council

Subgrantee: NH College and University Council

Program Name: Campus Compact for New Hampshire

Grant Type: Ed Award Only

Full-time AmeriCorps members:

Part-time AmeriCorps members: 75

Program Descriptions: Members enhance and expand service-learning programs at 15 Institutions of Higher Education to meet the needs of children and youth across NH. Coordinate 60 community service-learning partnerships which engage in appropriate activities, incl. America Reads.

Grantee: New Hampshire Job Training Council

Subgrantee: Tri-County Community Action Program, Inc.

Program Name: Natural Resource Conservation & Development Area Council

Grant Type: State Program

Full-time AmeriCorps members: 20

Part-time members:

Program Descriptions: AmeriCorps members serve in single site placements throughout the North Country region of rural NH. Members target specific community needs in the areas of education and other human needs. Members develop and implement service-learning opportunities for 200-300 youth in grades K-14; tutor 200 youth and adults in basic academic skills; develop and provide well health services and programs to 500 families; and support community health agencies in such areas as coordinating cancer screenings, facilitating immunizations, disseminating preventative health literature, and securing pharmaceutical samples for low income

clients. Members will strive to sustain this support by generating volunteers and by initiating collaborations among the various programs.

Grantee: New Jersey Commission on National and Community Service
 Subgrantee: NJ Department of Education (Urban Schools Service Corps)
 Program Name: USSC Administrator
 Grant Type: State Program
 Full-time AmeriCorps members: 75
 Part-time AmeriCorps members: 10

Program Descriptions: AmeriCorps Members serve community schools in eight New Jersey school districts. Members provide safe havens for children by extending the school day where they tutor children and run after-school programs. Members also provide in-class academic support and mentoring activities aimed at improving math, science and literacy skills. The program aims to improve the school success of 80 percent of 600 students served in eight districts.

Grantee: New Jersey Commission on National and Community Service
 Subgrantee: New Jersey Dept. of Human Services—Youth Corps
 Program Name:

Grant Type: State Program
 Full-time AmeriCorps members: 80
 Part-time AmeriCorps members: 51

Program Descriptions: AmeriCorps Members serve in five teams assigned to five sites that focus on a distinct issue area. One site emphasizes school success through teaching and motivating children at the Jersey Explorer Museum. Another site concentrates on violence prevention through mediation in public schools. A third site focuses on community revitalization by rebuilding neighborhoods and parks. At the last site, members provide meals to the homebound in an effort to increase independent living.

Grantee: New Jersey Commission on National and Community Service
 Subgrantee: A+ for Kids Teacher Network, Inc.

Program Name: Mercer County Reads Literacy Program
 Grant Type: State Program
 Full-time AmeriCorps members: 20
 Part-time AmeriCorps members:

Program Descriptions: Twenty AmeriCorps members provide literacy tutoring to 190 students at the district's most troubled school; they also provide after-school homework assistance and run a summer reading lab. Members provide tutoring and mentoring services to children and parents in transitional housing with an emphasis on employability skills for parents. The program brings at least 50 percent of the children who receive literacy tutoring up to grade level.

Grantee: New Jersey Commission on National and Community Service
 Subgrantee: Catholic Community Services
 Program Name: C.C.S AmeriCorps

Grant Type: State Program
 Full-time AmeriCorps members: 21
 Part-time AmeriCorps members:

Program Descriptions: AmeriCorps members tutor and mentor children who are homeless or in crisis. Members also provide case management services to clients living in shelters in the areas of public assistance, job readiness skills, health care and living skills. As a result, 80 students per shelter are tutored, 20 preschool children participate in school readiness activities, and 70 families are assisted.

Grantee: New Jersey Commission on National and Community Service
 Subgrantee: International Institute of New Jersey
 Program Name: "Bringing New Jersey Together"

Grant Type: State Program
 Full-time AmeriCorps members: 9
 Part-time AmeriCorps members: 16

Program Descriptions: AmeriCorps Members work with immigrants from seven nationalities to (1) improve the academic performance of children, (2) assist families to access mainstream human service and health care delivery systems, and (3) resolve problems experienced by victims of bias crime and housing related violations. Goals include improved grades for 450 of the tutored children and improved satisfaction by 675 people from the serviced populations.

Grantee: New Jersey Commission on National and Community Service
 Subgrantee: Urban League of Hudson County
 Program Name: AmeriCorps Problem Solvers

Grant Type: State Program
 Full-time AmeriCorps members: 5
 Part-time AmeriCorps members: 36
 Program Descriptions: AmeriCorps Members who are parents serve as teaching assistants in day care classes, deliver community outreach literacy programs, assist with recycling and beautification efforts and lead substance abuse prevention activities.

Grantee: New Jersey Commission on National and Community Service
 Subgrantee: Red Bank Borough Board of Education
 Program Name:
 Grant Type: State Program
 Full-time AmeriCorps members: 10
 Part-time AmeriCorps members: 10
 Program Descriptions: AmeriCorps Members support the success and achievement of 150–200 school-aged children, particularly in math and reading. Members provide in-class support, after-school tutoring, group mentoring, and safe havens for youth. Additionally, Members increase the number of community volunteers who work with students. Goals include increasing math and reading scores by 10 percent, increasing attendance while decreasing the numbers of students suspended, and increasing volunteer participation.

Grantee: New Jersey Commission on National and Community Service
 Subgrantee: St. Paul's Community Development Corp.
 Program Name: City SERVE AmeriCorps
 Grant Type: State Program
 Full-time AmeriCorps members: 15
 Part-time AmeriCorps members: 20
 Program Descriptions: AmeriCorps Members provide literacy and ESL training for low-income adults, reading improvement for homeless elementary school children, after-school and summer programming for teens, and family literacy activities that raise parents' awareness about the need for early literacy development. As a result of these efforts, 50 children will show an increase of 25 percent in reading improvement, low income adults will show a grade level improvement in their basic education skills, 50 teens will demonstrate increased motivation to stay in school, and parents will show increased self confidence in their work with children.

Grantee: New Jersey Commission on National and Community Service
 Subgrantee: New Jersey Statewide Initiative
 Program Name: NJ Reads (America Reads)
 Grant Type: America Reads
 Full-time AmeriCorps members: 27
 Part-time AmeriCorps members: 18
 Program Descriptions: This is a statewide initiative where 45 AmeriCorps members recruit and train 450 volunteers (10 per member) to assist with tutoring, mentoring and family literacy. Members and volunteers tutor and mentor 900 K–3 students to bring the reading abilities of 80 percent of the 900 students targeted up to or above grade level.

Grantee: New Jersey Commission on National and Community Service
 Subgrantee: New Jersey Commission—PF
 Program Name:
 Grant Type: Promise Fellows
 Full-time AmeriCorps members: 15
 Part-time AmeriCorps members:
 Program Descriptions: Fellows will serve as coordinators of Communities of Promise projects in 21 New Jersey counties. Service activities will include expanding the KidCare program that provides health care coverage for every child, promoting service learning for inner city youth and K–12 students, and establishing after-school mentoring programs for children. Anticipated outcomes are 5,000 children enrolled in health care coverage, 2,500 youth participate in service learning projects, and 500 youth involved in mentoring programs. Fellows will be placed in Volunteer Centers across New Jersey.

Grantee: New Mexico Commission for National and Community Service
 Subgrantee: National Indian Youth Leadership Development Project Inc.
 Program Name:
 Grant Type: State Program
 Full-time AmeriCorps members: 20
 Part-time AmeriCorps members: 8

Program Descriptions: 30 AmeriCorps members will serve in eight schools and two hospitals. Members will provide direct tutoring services, and will coordinate cross-age tutoring and mentoring activities for children K-8. Service activities will take place in eight schools and two hospitals, and will also take place on weekends and evenings. Additionally, members will host a four week summer literacy camp. In the schools, members will serve in teams of two or three.

Grantee: New Mexico Commission for National and Community Service

Subgrantee: Families and Youth

Program Name: Families and Youth, Inc.—CARAS Program

Grant Type: State Program

Full-time AmeriCorps members: 25

Part-time AmeriCorps members: 19

Program Descriptions: AmeriCorps Members tutor and mentor at-risk students. Working in three teams, Members will provide an alternative education program to youth ages 11-17 who have been suspended or expelled from school, develop reading skills and parental reading support among elementary students grades K-3 who are reading below grade level, or provide homework assistance and mentoring in class and in an after-school homework club for middle school students who have a history of incomplete assignments. This program will operate in city of Las Cruces.

Grantee: New York Office of National and Community Service

Subgrantee: New York Restoration Project

Program Name: Don't Trash New York

Grant Type: State Program

Full-time AmeriCorps members: 30

Part-time AmeriCorps members:

Program Descriptions: AmeriCorps members focus on environmental clean-up in New York City. Members clean, create, restore and maintain 350 acres of parkland; provide neighborhood ecology at 2 outdoor science learning facilities for 1000 students; build a boat with community students; engage community leaders in the creation of a plan for sustainability; and link public spaces to the public education system.

Grantee: New York Office of National and Community Service

Subgrantee: Schenectady County Job Training Agency

Program Name: The Schenectady Bridge Builders

Grant Type: State Program

Full-time AmeriCorps members: 29

Part-time AmeriCorps members:

Program Descriptions: AmeriCorps Members serve in teams to tutor students in grades K-3; mentor youth in after school programs in conflict resolution, personal safety, and drug resistance; rehabilitate 2 single family low income houses; and construct community paths and revitalize nature trails. As a result of the tutoring services provided to 2000 students and family members, ninety five percent of the participating students will be able to read independently by age 8. Additionally, forty percent of parents will complete activities at home to strengthen student reading skills. Three hundred youth will learn new skills improve their attitudes and behavior. Two low or moderate income families will own newly renovated homes, not otherwise available to them. The community parks will be more accessible to the public as well as to the disabled community. Volunteers will contribute 100 hours to a greenhouse and community gardens.

Grantee: New York Office of National and Community Service

Subgrantee: Phoenix House Foundation, Inc.

Program Name: New York State Substance Abuse Service Program

Grant Type: State Program

Full-time AmeriCorps members: 85

Part-time AmeriCorps members:

Program Descriptions: The Phoenix House AmeriCorps program expands and improves the network of substance abuse and alcohol treatment/prevention services available to New Yorkers. Members assist various communities by developing linkages between treatment providers, organizations, and schools. Members provide substance abuse prevention counseling and education to community residents, including individuals in recovery, educators, school-aged youth and parents.

Grantee: New York Office of National and Community Service

Subgrantee: Grand Street Settlement

Program Name: AmeriCorps

Grant Type: State Program

Full-time AmeriCorps members:
 Part-time AmeriCorps members: 40
 Program Descriptions: 40 part time AmeriCorps members serve in various sites throughout the lower east side of Manhattan. Members address school safety, school readiness and school success issues of community residents. By escorting youth to after school activities, program attendance has increased. Service in the Early Head Start Program and work with parents support family literacy and school readiness. Members also provide homework assistance, computer training, and one to one tutoring to promote school success.

Grantee: New York Office of National and Community Service
 Subgrantee: YMCA of Greater New York
 Program Name: YMCA AmeriCorps School Success Program
 Grant Type: State Program
 Full-time AmeriCorps members: 72
 Part-time AmeriCorps members:
 Program Descriptions: YMCA School Success program is an extended day youth-based program where 72 AmeriCorps Members facilitate classroom-based service activities and enrichment activities in 12 Low-performing schools. Members also lead physical fitness and health awareness activities and provide community service-learning activities. Expected impact includes, 120 service projects, a 5-percent increase in student reading and math scores, and a 15-percent increase in student fitness levels.

Grantee: New York Office of National and Community Service
 Subgrantee: Monroe Community College
 Program Name:
 Grant Type: State Program
 Full-time AmeriCorps members: 94
 Part-time AmeriCorps members:
 Program Descriptions: 94 full-time AmeriCorps Members serve in 25 community-based organizations in Rochester, New York's Enterprise Community. The purpose of this program is to increase the reality and perception of public safety in the community. Members provide assistance to police substations, prevention and intervention education to youth around issues of substance abuse and conflict resolution, and implement positive developmental and community service activities with neighborhood youth. Expected impacts include: a 20 percent increase in geographic area covered by Neighborhood Watch and block clubs; a 20 percent increase in contacts at police substations; a reported increase in intervention/prevention services offered to youth; and a 10 percent increase in numbers of youths participating in targeted activities.

Grantee: New York Office of National and Community Service
 Subgrantee: Bank Street College of Education
 Program Name: AmeriCorps Community Service Internship
 Grant Type: Ed Award Only
 Full-time AmeriCorps members:
 Part-time AmeriCorps members: 25
 Program Descriptions: Members provide classroom and after-school literacy training and reading/tutoring support for 700+ elementary school students who do not perform at grade level.

Grantee: New York Office of National and Community Service
 Subgrantee: Research Foundation of SUNY—New Paltz
 Program Name: AmeriCorps Education Awards Program
 Grant Type: Ed Award Only
 Full-time AmeriCorps members:
 Part-time AmeriCorps members: 100
 Program Descriptions: Members provide tutoring and literacy assistance to 500+ youth; after school, weekend, and summer activities in 4 community centers; and involve youth in community service efforts.

Grantee: New York Office of National and Community Service
 Subgrantee: Albany Service Corps
 Program Name: Albany School Success AmeriCorps Program
 Grant Type: State Program
 Full-time AmeriCorps members: 16
 Part-time AmeriCorps members: 16
 Program Descriptions: AmeriCorps members support school success through three principal initiatives: (1) to improve the literacy of 500 students, (2) to provide ex-

tended day programming for 500 youth, and (3) to improve school attendance of 300 students. The program goals are to improve the achievement potential of at-risk youth.

Grantee: New York Office of National and Community Service

Subgrantee: Buffalo Place Foundation

Program Name: AmeriCorps Ranger Escort Program

Grant Type: State Program

Full-time AmeriCorps members: 12

Part-time AmeriCorps members:

Program Descriptions: AmeriCorps Members increase public safety visibility and effectiveness through identifying potential crimes and patrolling the streets of downtown Buffalo. Expected impacts include a 10 percent decrease in crime and a 20 percent increase in the perception of a safer downtown area. Additionally, members provide safety escorts for 500 people and distribute safety tips to 3000 people.

Grantee: New York Office of National and Community Service

Subgrantee: Syracuse Area Catholic Charities

Program Name: Syracuse Area Catholic Charities AmeriCorps Program

Grant Type: State Program

Full-time AmeriCorps members: 15

Part-time AmeriCorps members: 1

Program Descriptions: AmeriCorps members serve in seven centers in the greater Syracuse, NY region with attention in three areas: (1) to assist with the early childhood education of 150 3–5 year olds to foster school readiness and school success, (2) to teach and model prosocial skills to 1200 children 5–18 years and (3) to transport 800 low income children and women to medical appointments to improve compliance with medical treatment. Members work with children in schools and in after school programs. Additionally, members will expand their service to support the needs of refugee youth in the area, which includes providing them an orientation to the community and to the schools, providing support with the adjustment to a new culture, and teaching ESL and assisting with citizenship classes.

Grantee: New York Office of National and Community Service

Subgrantee: Oswego City-County Youth Bureau

Program Name: Oswego AmeriCorps Program

Grant Type: State Program

Full-time AmeriCorps members: 17

Part-time AmeriCorps members: 48

Program Descriptions: AmeriCorps members serve in multiple agencies throughout Oswego County to provide positive prevention services to youth and families. Members assist youth and families with basic needs that permit self-sufficiency such as with food, clothing, shelter, child care and safety. Additionally members provide school readiness, literacy readiness and tutoring opportunities by supporting parents of preschoolers, assisting with in-school and after school activities, and establishing a summer reading program for elementary students. Members also provide positive alternatives and relationships for youth and their families by developing a youth leadership program, establishing parent support groups and developing meaningful community service projects. Members will serve at least 2000 youth and their families.

Grantee: New York Office of National and Community Service

Subgrantee: West Seneca Youth Bureau—Share the Word

Program Name: Sharing the Words, America Reads

Grant Type: State Program

Full-time AmeriCorps members: 38

Part-time AmeriCorps members: 80

Program Descriptions: In partnership with Universities at Buffalo, Buffalo State College and the King Urban Center, 38 full-time AmeriCorps Members provide one-on-one tutoring to 2500 at-risk children in Buffalo, New York. Members will “adopt” elementary and secondary schools with low retention rates in order to increase retention through tutoring and providing public awards for the students’ work. Members also design and implement service projects with these students. Expected impacts include: a 75 percent improvement in test scores of students tutored; a 75 percent satisfaction rate among service recipients; and a 75 percent improvement in student retention rate.

Grantee: New York Office of National and Community Service

Subgrantee: The Institute for Human Services, Inc.

Program Name: AmeriCorps Kids First Initiative/Steuben County

Grant Type: State Program
 Full-time AmeriCorps members: 20
 Part-time members:

Program Descriptions: Twenty AmeriCorps members serve in single site placements throughout rural Steuben County supporting various goals of the Summit. Members provide 3750 of the county's youth with positive role models and alternative activities through tutoring, mentoring, and planned activities. Members ensure that youth and their families receive the support needed to succeed in and stay in school. Additionally, members provide support to ensure that children have safe and healthy home environments and behaviors. Specific member services include providing safe places, substance abuse prevention counseling, adolescent pregnancy training, health care counseling, and alternative after school activities.

Grantee: New York Office of National and Community Service
 Subgrantee: Pace University
 Program Name: Lower East Side/Chinatown AmeriCorps
 Grant Type: State Program
 Full-time AmeriCorps members:
 Part-time AmeriCorps members: 57

Program Descriptions: 11 part-time and 46 reduced part-time members serve the primarily Asian community in Lower Eastside NYC. Members tutor and mentor low achieving junior high students to improve their grades and attendance; provide college and career counseling to high school students and their parents to increase the rate of h.s. graduation, college matriculation and career/employment options; and provide service-learning opportunities to students to help them increase their problem solving skills.

Grantee: New York Office of National and Community Service
 Subgrantee: City College of the City University of New York
 Program Name: City College's Empowering Communities Program
 Grant Type: State Program
 Full-time AmeriCorps members:
 Part-time AmeriCorps members: 30

Program Descriptions: AmeriCorps Members from the City College of New York facilitate a community service learning program that increases community members' computer skills and school success. Members train community members in computer skills, tutor students after-school, and work with parents to involve them more in their child's education. Expected impacts include: Community members will be trained in computer skills and targeted youth will show an improvement in college preparatory skills.

Grantee: New York Office of National and Community Service
 Subgrantee: SUNY Oneonta Research Foundation
 Program Name: Oneonta Rural School Empowerment Program
 Grant Type: State Program
 Full-time AmeriCorps members: 30
 Part-time AmeriCorps members: 30

Program Descriptions: AmeriCorps members improve the school success of youth in Oneonta County. Focusing on reading and math, members tutor and mentor 900 students in school and engage 450 students in after school and evening programs. Additionally, through the development of 15 Youth Leaders in Action service clubs, members provide leadership training for 225 youth.

Grantee: New York Office of National and Community Service
 Subgrantee: Latino Pastoral Action Center
 Program Name: Latino Pastoral Action Center
 Grant Type: State Program
 Full-time AmeriCorps members: 20
 Part-time AmeriCorps members:

Program Descriptions: AmeriCorps Members improve the literacy of 150 5-7 year old students through a comprehensive school day and extended day program. Additionally, members improve the academic performance of 150 6-14 year olds through an after school program. Members also serve to increase the access and use of community services by 100 youth and their family members.

Grantee: New York Office of National and Community Service
 Subgrantee: Families First in Essex County
 Program Name: Families First in Essex County
 Grant Type: State Program
 Full-time AmeriCorps members: 12

Part-time AmeriCorps members: 14
 Program Descriptions: AmeriCorps Members serve in eleven agencies throughout Essex County to address all five goals of the Summit as well as the human needs of its citizens. Members tutor, mentor, and counsel youth, train parents of youth with disabilities and provide educational support to older adolescents. Program goals are to improve the academic and behavioral performance of students in schools and to increase the numbers of community agencies and businesses that collaborate.

Grantee: New York Office of National and Community Service
 Subgrantee: Student Conservation Association NY
 Program Name: NY Adirondack Youth Conservation AmeriCorps
 Grant Type: State Program
 Full-time AmeriCorps members: 20
 Part-time AmeriCorps members:

Program Descriptions: AmeriCorps members serve in a residential environmental conservation program in the Adirondacks region. Members build, repair, refurbish and restore recreational and natural areas such as hiking trails, camp grounds, recreational and historic buildings. Additionally, members use service learning models to provide environmental and ecological education for 400–800 in-school, after school, and out of school youth. 60–100 volunteers will be recruited and trained to assist with these activities.

Grantee: North Carolina Commission on National & Community Service
 Subgrantee: Children First of Buncombe County
 Program Name: Project POWER
 Grant Type: State Program
 Full-time AmeriCorps members: 16
 Part-time AmeriCorps members: 6

Program Descriptions: AmeriCorps members serve as reading coaches to K–8th grade children performing below grade level in Asheville/Buncombe County schools. In addition, members set up mediation programs to teach conflict resolution to children in grades 5 and 6 and lead small groups of students in service learning projects.

Grantee: North Carolina Commission on National & Community Service
 Subgrantee: Communities in Schools of North Carolina, Inc.
 Program Name: Project REACH
 Grant Type: State Program
 Full-time AmeriCorps members:
 Part-time AmeriCorps members: 30

Program Descriptions: AmeriCorps members tutor 400 elementary school children who read below grade level, utilizing the Great Leaps curriculum to increase reading proficiency and comprehension. Members also train parents to better support their children's learning and recruit 90 community volunteers to tutor in the schools.

Grantee: North Carolina Commission on National & Community Service
 Subgrantee: Warren Family Institute
 Program Name: Warren Service Corps
 Grant Type: State Program
 Full-time AmeriCorps members:
 Part-time AmeriCorps members: 40

Program Descriptions: AmeriCorps members provide one-on-one instructional support to K–12 students and GED students; literacy development with pre-schoolers in day care; and provide homework assistance and enrichment activities in after-school and Saturday academies.

Grantee: North Carolina Commission on National & Community Service
 Subgrantee: Southeastern Community College
 Program Name: Steps to Success
 Grant Type: State Program
 Full-time AmeriCorps members: 20
 Part-time AmeriCorps members:

Program Descriptions: AmeriCorps members tutor and mentor 400 3rd–5th grade students to increase reading proficiency and school attendance. Members serve in four schools in Columbus County.

Grantee: Northeastern University
 Subgrantee: Athletes in Service to America—Parent
 Program Name: NE University/Athletes in Service
 Grant Type: National Direct

Full-time AmeriCorps members:

Part-time AmeriCorps members:

Program Descriptions: The Northeastern University Center for Sport in Society increases awareness of sport's relation to society and develops programs that identify current problems and offer solutions promoting the benefit of sport. The Center, founded in 1984, designed the program models used by sites: Project TEAMWORK (conflict resolution) and Mentors in Violence Prevention (MVP) concerning gender-based violence. President Clinton recognized TEAMWORK as a national model in 1994. AmeriCorps Members recruit college and high school students to tutor and mentor school-age youth during full-time summer and year-round after school programs. The full-time Members train part-time Members and community volunteers in curriculum development and tutoring skills and all Members expand the program's partnership with families, schools and community agencies.

Grantee: Notre Dame Mission Volunteer Program, Inc.

Subgrantee: Notre Dame Mission Volunteer Program, Inc.—Parent

Program Name: Notre Dame Mission Volunteers, Inc.

Grant Type: National Direct Central

Full-time AmeriCorps members:

Part-time AmeriCorps members:

Program Descriptions: The Notre Dame Mission Volunteers, Inc., is a non-profit organization founded by the Sisters of Notre Dame, a religious institution which has been serving communities in need for over 150 years. Among other social issues which the organization addresses, the Notre Dame volunteers target the educational needs of the disadvantaged youth and their families. AmeriCorps Members tutor low income children, teach ESL to immigrants and GED and literacy skills to adults such as single mothers and high school drop-outs, and operate after school programs. Members also recruit volunteer parents for enrichment programs, teach conflict resolution skills, and provide school-to-work transition support for migrant farmworkers.

Grantee: Oregon Community Service Commission

Subgrantee: Central Oregon Community College Foundation

Program Name: COCC/AmeriCorps Service to Community

Grant Type: State Program

Full-time AmeriCorps members: 9

Part-time AmeriCorps members: 58

Program Descriptions: 9 full-time and 36 part-time AmeriCorps members serve in an urban and several rural communities in central Oregon in small teams or individual placements. These members provide tutoring in elementary schools to increase literacy and life skills; provide community service projects in middle schools; and develop leadership training and opportunities for high school.

Grantee: Oregon Community Service Commission

Subgrantee: Forest Grove School District

Program Name: Partnerships For Student Achievement

Grant Type: State Program

Full-time AmeriCorps members: 20

Part-time AmeriCorps members: 10

Program Descriptions: AmeriCorps members serve in eleven schools in the Forest Grove school district in K–12 grades to improve literacy among low achieving and at risk students, and generate parental involvement in the schools. As a result five hundred school students will increase reading scores and parental involvement will increase by 15 percent in targeted schools.

Grantee: PennSERVE: The Governor's Office of Citizen Service

Subgrantee: City Year, Inc. PA

Program Name:

Grant Type: America Reads

Full-time AmeriCorps members: 12

Part-time AmeriCorps members:

Program Descriptions: AmeriCorps Members deliver a specialized literacy curriculum to children with physical, emotional, and cognitive disabilities and to children for whom English is a second language. Through a partnership with City Year Philadelphia and the Institute on Disabilities, Members serve in 2 public elementary schools where they provide one-on-one tutoring to 60 children in grades K–3. Members help improve reading ability and interest levels for the children they serve in addition to integrating children with disabilities into normal classroom activities.

Grantee: PennSERVE: The Governor's Office of Citizen Service

Subgrantee: Keystone School District
 Program Name: Keystone SMILES
 Grant Type: State Program
 Full-time AmeriCorps members: 27
 Part-time AmeriCorps members: 59
 Program Descriptions: AmeriCorps members tutor and mentor K–12 school aged children. Their primary focus is on students at risk of not completing school. They accomplish their goal by expanding learning environments, recreational and health facilities. As a result of Members' efforts, 281 students are tutored and 1,282 students participate in the Computer Lab.

Grantee: PennSERVE: The Governor's Office of Citizen Service
 Subgrantee: Appalachia Intermediate Unit 8: Pennsylvania Mountain Service Corps

Program Name: Pennsylvania Mountain Service Corps
 Grant Type: State Program
 Full-time AmeriCorps members: 56
 Part-time AmeriCorps members: 4
 Program Descriptions: AmeriCorps Members serve in teams where they institute violence prevention programs for students, provide health care and education to the elderly and preschoolers. Members also design and implement watershed projects in a vast 10 county rural area through the cooperative use of volunteers. Members' efforts result in the increase of school readiness and parental involvement for 2,000 individuals.

Grantee: PennSERVE: The Governor's Office of Citizen Service
 Subgrantee: Family Services of Butler Memorial Hospital
 Program Name: Family Services of Butler Memorial Hospital
 Grant Type: State Program
 Full-time AmeriCorps members: 30
 Part-time AmeriCorps members: 16
 Program Descriptions: Members provide family support services in the areas of counseling, child development, parenting classes, violence prevention, and personal development. Members support needs identified by the community to reduce isolation; increase access to health, education and recreation programs; and increase volunteerism. Members also assist 30 new programs, expand or enhance the services of existing programs by 10 percent, and increase local volunteerism by 10 percent.

Grantee: PennSERVE: The Governor's Office of Citizen Service
 Subgrantee: County of Allegheny DFP (KEYS to Success)
 Program Name: KEYS PUBLIC SAFETY INITIATIVE
 Grant Type: State Program
 Full-time AmeriCorps members: 22
 Part-time AmeriCorps members: 7
 Program Descriptions: AmeriCorps members improve the rate of academic success by tutoring 175 economically disadvantaged and high risk students. They broaden the horizons of these students through engagement in 16 service-learning/community service projects and the development of individual career plans. To assist with these efforts, parents provide 100 hours and other volunteers provide 650 hours of additional support.

Grantee: PennSERVE: The Governor's Office of Citizens Service
 Subgrantee: County of Allegheny DFP (Public Safety)
 Program Name: Knowledge to Empower Youths to Success (KEYS) Service Corps
 Grant Type: State Program
 Full-time AmeriCorps members: 19
 Part-time AmeriCorps members: 8
 Program Descriptions: AmeriCorps Members serve in sites throughout Allegheny County to develop and implement crime prevention strategies, including community policing. Members also develop and implement youth mentoring programs. Members' efforts result in the implementation of six neighborhood watches or block clubs.

Grantee: Puerto Rico State Commission on Community Service
 Subgrantee: University of the Sacred Heart
 Program Name: USH AmeriCorps Program: Public Safety Through School and Community Empowerment
 Grant Type: State Program
 Full-time AmeriCorps members: 10
 Part-time AmeriCorps members: 20

Program Descriptions: AmeriCorps members work with 100–160 students at each of five schools (elementary, intermediate, and high schools) to increase school success and reduce at-risk behavior. Members serve to reduce the use of alcohol, tobacco, and other drugs; prevent the crime and violence that often accompanies this behavior; and improve the school success of the students. Program strategies include the use of fine arts and the development of student groups at each school. Additionally, the program emphasizes the training of teachers and parents in the management of high risk youth and violence for the improvement of public safety.

Grantee: Rhode Island Commission on National and Community Service

Subgrantee: Children's Museum of Rhode Island

Program Name: Providence Children's Museum AmeriCorps Program

Grant Type: State Program

Full-time AmeriCorps members: 15

Part-time AmeriCorps members:

Program Descriptions: Fifteen AmeriCorps Members provide community service opportunities through the Children's Museum of Rhode Island for low-income high-risk families. Members serve in three teams—after school learning club, community service learning, and Head Start. In the After School Learning Clubs, five members encourage students to increase independent learning and serve as a resource for parents. The community service team involves four members and at least 500 children who participate in "Community Quest" a program that explores the meaning and importance of serving the community. The Head Start team is made up of three members and serves 886 children in 44 classes. With Head Start teachers and parents, members develop enriched museum visits for Head Start students. These classes visit the Children's Museum where they explore exhibits and participate in art activities.

Grantee: Rhode Island Commission on National and Community Service

Subgrantee: Rhode Island Children's Crusade for Higher Education

Program Name: Rhode Island Children's Crusade for Higher Education

Grant Type: State Program

Full-time AmeriCorps members: 40

Part-time AmeriCorps members:

Program Descriptions: AmeriCorps Members support the educational success of participating students in the sixth through ninth grades. Additionally, members provide direct service to strengthen schools, families, and communities in order to support poor children at risk of dropping out of school. The Crusade assists children to graduate and take advantage of a scholarship for higher education. Members complete assessments and assist the progress of 80 percent of the at-risk children identified as Crusaders and make appropriate referrals to service agencies to help students and their families. Approximately 3270 sixth–ninth grade children will be profiled, followed, and aided in staying in school and maintaining satisfactory academic performance.

Grantee: Rhode Island Commission on National and Community Service

Subgrantee: Public Education Fund (Parents Making a Difference)

Program Name: Parents Making A Difference

Grant Type: State Program

Full-time AmeriCorps members: 35

Part-time AmeriCorps members: 14

Program Descriptions: AmeriCorps members create and operate family centers in 21 Providence elementary, middle and high schools as part of a state-wide effort at school reform. In the family centers, members provide GED, ESL, and parenting education classes as well as Domestic Violence Prevention training for 3,000 adults in the community. Members also plan to tutor and mentor 14,600 students in those participating schools. This program addresses the America Reads challenge by launching Providence Reads where they collaborate with Learn and Serve America. Members are actively recruited from the local welfare to work program.

Grantee: Rhode Island Commission on National and Community Service

Subgrantee: City Year, Inc.

Program Name: City Year Rhode Island

Grant Type: State Program

Full-time AmeriCorps members: 100

Part-time AmeriCorps members: 10

Program Descriptions: One hundred and seven full-time and 6 part-time AmeriCorps Members tutor and mentor elementary school children, implement an after school program, and present special issues workshops. In middle schools, members teach a six week Creating Community Curriculum and operate Young Heroes

which is a junior service and service-learning program. Finally, members work to revitalize 6 urban neighborhoods. These members serve in three teams and are placed at six high need urban elementary and middle schools. Impact includes: improved learning environment for 2,870 children; enriched middle school environment for 1,200 children; and improved urban habitat for children and families in 6 urban neighborhoods.

Grantee: Rhode Island Commission on National and Community Service

Subgrantee: City of Pawtucket

Program Name: Partners in Learning/AmeriCorps

Grant Type: State Program

Full-time AmeriCorps members:

Part-time AmeriCorps members: 21

Program Descriptions: AmeriCorps Members provide educational assistance for at-risk children grades K–2 from the diverse Cities of Pawtucket and Central Falls. Members also tutor adults enrolled in GED, ESL and literacy programs and involve children in community based academic enrichment programs during the summer months. Expected impacts include, 60 percent of those who receive tutoring support will show progress in reading skills; 70 percent of those parents involved in these programs will report involvement in their child's schooling; and 80 percent of those enrolled in summer enrichment programs will report improved attitudes and interest in the sciences as career options.

Grantee: Rhode Island Commission on National and Community Service

Subgrantee: Community College of Rhode Island

Program Name: CRRRI—AmeriCorps

Grant Type: State Program

Full-time AmeriCorps members: 30

Part-time AmeriCorps members: 4

Program Descriptions: AmeriCorps Members serve in three sites in the Providence area, to provide educational support, bridge community needs through service learning, and encourage civic responsibility. Members specifically provide school readiness activities for limited English proficient children, tutor and mentor low-income elementary school students, and assist parents in skills to enhance child development. Expected impacts include, 75 percent of children who participate will increase their school readiness by 75 percent; 75 percent of children participating will increase their English language skills; and 75 percent of parents participating will report a 50 percent increase in their parenting skills.

Grantee: Rhode Island Commission on National and Community Service

Subgrantee: Rhode Island Commission—PF

Program Name: AmeriCorps Promise—Rhode Island

Grant Type: Promise Fellows

Full-time AmeriCorps members: 5

Part-time AmeriCorps members:

Program Descriptions: Fellows will serve in several capacities led by the United Way in order to focus on all five resources of the Summit. Service activities will include establishing 50 neighborhood homework safe places, encouraging 100 Employers to allow employees paid time off for community service, and organizing an interactive Youth Resource Bank where people can contribute skills and talents to the community. Expected results include increased volunteerism and resources across Rhode Island. Fellows will serve in sites to be selected in a competitive process.

Grantee: Robert F. Kennedy Memorial

Subgrantee: RFK Fellows AmeriCorps Program—Parent

Program Name:

Grant Type: National Direct

Full-time AmeriCorps members:

Part-time AmeriCorps members:

Program Descriptions: The Robert F. Kennedy (RFK) Memorial works across the county and around the world to carry forward Robert Kennedy's mission for social justice by helping disadvantaged and oppressed people and recognizing, training, and supporting upcoming leaders. It currently sponsors the RFK Fellows program, which is designed to train young people and provides them with public-service placements. AmeriCorps Members, placed at community-based organizations, will assist at-risk youth to gain leadership skills through provision of solutions to neighborhood violence and out-of-school learning activities. Members will serve as mentors and tutors, organize out-of-school activities, teach conflict resolution and violence prevention, youth case management, and integrate community members in service.

Grantee: Round Rock Chapter
 Subgrantee: Round Rock Chapter
 Program Name: Round Rock AmeriCorps
 Grant Type: Tribe Territory
 Full-time AmeriCorps members: 15
 Part-time AmeriCorps members:
 Program Descriptions: AmeriCorps Members tutor 85 K–5 students to bring them up to grade level in reading on this remote chapter of the Navajo Nation in Arizona. Members are also constructing 2 homes and a teen center, building 8 bathrooms for houses that lack them, and producing a community newsletter. Members will recruit 115 community members including local teens, to assist them in providing youth recreational activities and culture camps after school and in the summer. Members serve in two teams in a isolated, rural area.

Grantee: South Carolina Commission on National and Community Service
 Subgrantee: Winthrop University
 Program Name: Winthrop AmeriCorps: Empowerment Through Literacy
 Grant Type: State Program
 Full-time AmeriCorps members: 8
 Part-time AmeriCorps members: 24
 Program Descriptions: AmeriCorps members tutor 225 low performing students in grade 2–6 and 9–12 to raise 90 percent of their reading scores above the 50th percentile or pass the state competency for reading and literacy. Members also tutor 30 special needs students in grades 2–6 to increase their standardized test scores by one grade. Additionally members tutor 100 students in grade 2–5 to increase their reading comprehension scores by one grade level. Members serve at one of four sites. The program will recruit and utilize 40 community volunteers in support of this literacy effort.

Grantee: South Carolina Commission on National and Community Service
 Subgrantee: Benedict College
 Program Name: Benedict College AmeriCorps Program
 Grant Type: State Program
 Full-time AmeriCorps members: 12
 Part-time AmeriCorps members:
 Program Descriptions: AmeriCorps members tutor 150 K–6 low-achieving students (both in-school and after-school) so that 85 percent increase reading and math scores one grade level. Members also tutor 75-achieving students in a summer enrichment program so that 85 percent increase math and reading scores one grade level. Members serve in one of three elementary school. This program recruits and utilizes 30 volunteers to provide 1,500 hours of service.

Grantee: Summerbridge National, Inc.
 Subgrantee: Summerbridge National—Parent
 Program Name: Summerbridge ACorps Teaching Program
 Grant Type: National Direct Central
 Full-time AmeriCorps members:
 Part-time AmeriCorps members:
 Program Descriptions: Summerbridge National promotes school success while preparing students for high-school programs and developing high school and college students as future educators. Summerbridge National AmeriCorps Members provided tutoring and mentoring support in after-school, weekend, and summer settings, provided enrichment class instruction, provided service and service-learning opportunities for elementary, middle, secondary school and college students, and cultivated young educators.

Grantee: Teach For America, Inc.
 Subgrantee: Baltimore/Teach For America, Inc.
 Program Name: Teach for America—Baltimore
 Grant Type: National Direct Central
 Full-time AmeriCorps members: 63
 Part-time AmeriCorps members:
 Program Descriptions: Teach for America (TFA) is a national teacher corps dedicated to improving educational achievement of under-served school age youth. TFA places a diverse group of recent college graduates as teachers in urban and rural school districts facing critical teacher shortages. AmeriCorps Members teach under-served youth at inner-city and rural public schools. Members assume leadership roles on school committees, sponsoring after school enrichment and recreational opportunities. Members also coordinate and implement service projects addressing specific community needs.

Grantee: Teach For America, Inc.
 Subgrantee: Houston/Teach For America, Inc.
 Program Name: Teach for America
 Grant Type: National Direct Central
 Full-time AmeriCorps members: 37
 Part-time AmeriCorps members:

Program Descriptions: Teach for America (TFA) is a national teacher corps dedicated to improving educational achievement of under-served school age youth. TFA places a diverse group of recent college graduates as teachers in urban and rural school districts facing critical teacher shortages. AmeriCorps Members teach under-served youth at inner-city and rural public schools. Members assume leadership roles on school committees, sponsoring after school enrichment and recreational opportunities. Members also coordinate and implement service projects addressing specific community needs.

Grantee: Teach For America, Inc.
 Subgrantee: Enfield/Teach For America, Inc.
 Program Name: Teach for America
 Grant Type: National Direct Central
 Full-time AmeriCorps members: 60
 Part-time AmeriCorps members:

Program Descriptions: Teach for America (TFA) is a national teacher corps dedicated to improving educational achievement of under-served school age youth. TFA places a diverse group of recent college graduates as teachers in urban and rural school districts facing critical teacher shortages. AmeriCorps Members teach under-served youth at inner-city and rural public schools. Members assume leadership roles on school committees, sponsoring after school enrichment and recreational opportunities. Members also coordinate and implement service projects addressing specific community needs.

Grantee: Teach For America, Inc.
 Subgrantee: McAllen/Teach For America, Inc.
 Program Name: Teach for America—McAllen
 Grant Type: National Direct Central
 Full-time AmeriCorps members: 78
 Part-time AmeriCorps members:

Program Descriptions: Teach for America (TFA) is a national teacher corps dedicated to improving educational achievement of under-served school age youth. TFA places a diverse group of recent college graduates as teachers in urban and rural school districts facing critical teacher shortages. AmeriCorps Members teach under-served youth at inner-city and rural public schools. Members assume leadership roles on school committees, sponsoring after school enrichment and recreational opportunities. Grantee: Tennessee State Commission on National and Community Service
 Subgrantee: The University of Tennessee at Chattanooga
 Program Name: Chattanooga Family Service Corps
 Grant Type: State Program
 Full-time AmeriCorps members: 20
 Part-time AmeriCorps members: 16

Program Descriptions: AmeriCorps members provide mentoring, in-school and after-school tutoring, and summer learning opportunities to more than 250 children, of which 75 percent will reach their individual reading learning goal. Chattanooga Family Service Corps aims to improve the academic success of low-income children from south Chattanooga who have been identified as at-risk of school failure and encourages parental participation in school activities by involving more than 100 parents of the children tutored. Members also coordinate service-learning at 4 area schools with children in grades K-3 and involve parents to participate in school activities.

Grantee: Tennessee State Commission on National and Community Service
 Subgrantee: Upper Cumberland County Community Health Agency
 Program Name: School Achievement Partnership Project
 Grant Type: State Program
 Full-time AmeriCorps members:
 Part-time AmeriCorps members: 30

Program Descriptions: AmeriCorps members tutor children and make family contacts in an effort to promote regular attendance of children identified as truant and to involve the parent in the children's academic achievements. The School Achieve-

ment Partnership Project is increasing attendance by 15 percent of at least 70 percent of the 450 students served. Of the 300 elementary school children tutored in four participating rural counties of the Upper Cumberland region of Middle Tennessee, 70 percent will demonstrate academic success with an increase of one or more letter grade(s). In the summer, corps members organize Youth Power Teams to engage 4th–6th graders in service-learning activities.

Grantee: Tennessee State Commission on National and Community Service

Subgrantee: Emerald Avenue Urban Youth

Program Name: Emerald Avenue AmeriCorps Urban Youth Initiative

Grant Type: State Program

Full-time AmeriCorps members: 12

Part-time AmeriCorps members:

Program Descriptions: AmeriCorps members tutor at-risk students in grades 2–5, as well as teach computer skills through newsletter production in an after-school program and summer day camp for 6th–8th grade students. Of 75 children tutored, 65 percent demonstrate an increase in academic achievement. Members also lead nonviolent learning sessions to 100 students in grades 2–8, resulting in a 30 percent decrease of violent/aggressive behavior by the end of the year and 75 percent decrease in nonviolent classroom behavior. Members are assigned to three community centers in the Knoxville area.

Grantee: The Arc of The United States

Subgrantee: The Arc of Montgomery County

Program Name: The ARC of Montgomery County—C.O.N.N.E.C.T.S.

Grant Type: National Direct

Full-time AmeriCorps members: 20

Part-time AmeriCorps members:

Program Descriptions: The Arc of the United States is the nation's largest volunteer organization solely devoted to improving the welfare of Americans with mental retardation and their families, working through 1200 chapters across the nation. AmeriCorps Members mentor individuals with mental retardation on a one-to-one basis, teach independent living skills, and assist integration into community life. Members serve as liaisons between the community and disabled persons and educate community groups, local businesses and the general public about the needs of developmentally disabled.

Grantee: The ASPIRA Association Inc.

Subgrantee: Aspira (Washington)—Parent

Program Name: ASPIRA/AmeriCorps Community Service Program

Grant Type: National Direct

Full-time AmeriCorps members:

Part-time AmeriCorps members:

Program Descriptions: Aspira Association, Inc. is a national non-profit organization devoted solely to serving Puerto Rican and other Latino youth through leadership development and education. AmeriCorps Members teach Latino youth literacy, language and mathematical skills through tutoring and mentoring in school and after school. Members develop and facilitate programs providing leadership development, service learning, and enrichment activities. Members also conduct outreach to parents individually and through group programming.

Grantee: The Houston READ Commission

Subgrantee: The Houston READ Commission—Parent

Program Name: National Direct Sub

Grant Type:

Full-time AmeriCorps members:

Part-time AmeriCorps members:

Program Descriptions: The Houston READ Commission is a non-profit created in 1988 by the City of Houston to coordinate, promote and expand adult and family literacy services in the greater Houston area. It has been instrumental in raising an additional million dollars to support local community-based literacy efforts. It enjoys strong relationships with the Houston Community College System and the Texas State Commission. Literacy* AmeriCorps Members provide literacy instruction for children and adults and target the specific need of increasing children's literacy skills. AmeriCorps Members increase literacy for families by providing English as a Second Language courses, basic skills, pre-GED and GED classes, homework assistance to school-age children, family and parent literacy programs. America Reads activities include recruiting and training volunteers as tutors for young children.

Grantee: University of Maryland Baltimore County

Subgrantee: UMBC/Shriver-Choice
 Program Name: The Choice Program
 Grant Type: Ed Award Only
 Full-time AmeriCorps members: 131
 Part-time AmeriCorps members: 11
 Program Descriptions: Members work in round-the-clock service designed to curb delinquency and reduce school dropout among the most troubled youth in the area.

Grantee: University of St. Thomas
 Subgrantee: Minnesota Campus Compact
 Program Name: STAND and Deliver
 Grant Type: Ed Award Only
 Full-time AmeriCorps members:
 Part-time AmeriCorps members: 100
 Program Descriptions: Members will organize and lead service-learning projects—tutoring, building homes, researching, and cleaning streams.

Grantee: Utah Commission on Volunteers
 Subgrantee: Salt Lake County Reads and Promotes Service
 Program Name: Salt Lake County Reads and Promotes Services (SLORPS)
 Grant Type: Ed Award Only
 Full-time AmeriCorps members:
 Part-time AmeriCorps members: 85
 Program Descriptions: Members provide small group instruction for youth who need additional help after-school.

Grantee: Vermont Commission on National and Community Service
 Subgrantee: Lyndon State College
 Program Name: Northeast Kingdom Initiative
 Grant Type: State Program
 Full-time AmeriCorps members: 14
 Part-time AmeriCorps members: 10
 Program Descriptions: Members tutor 300 Northeast Kingdom youth. Also, members operate resource centers that provide 400 residents of rural Vermont with computer resources, educational material, and courses on adult literacy and parenting skills. These members effectively impact 150–220 children and adults by increasing reading skills by a grade level; assisting 125 victims of domestic violence resulting in 70 percent of the families choosing healthy behavior; and mentoring 200 youth in order to increase their academic success by 40–55 percent.

Grantee: Vermont Commission on National and Community Service
 Subgrantee: Lyndon State College
 Program Name: Literacy in the Kingdom (Northeast Kingdom Initiative AmeriCorps)
 Grant Type: Ed Award Only
 Full-time AmeriCorps members:
 Part-time AmeriCorps members: 20
 Program Descriptions: Members provide tutoring, reading, and mentoring to young children and at-risk youth. Members also provide needed support for unemployed or underemployed adults and welfare recipients.

Grantee: Vermont Commission on National and Community Service
 Subgrantee: Vermont Commission—PF
 Program Name: Vermont America's Promise Fellowship Program
 Grant Type: Promise Fellows
 Full-time AmeriCorps members: 8
 Part-time AmeriCorps members:
 Program Descriptions: Fellows will serve in non-profit and state agencies to help private and public agencies focus on the goal of serving 15,000 additional Vermont Children by 2000. Service activities will include identifying and working with community partners to develop service learning programs, developing a T/TA Needs Assessment tool and organizing a statewide conference to disseminate information, and coordinating a process to recruit mentors. Anticipated outcomes are an increase in students participating in service learning, a system to recruit mentors and volunteers, and the creation of afterschool programs and out of school programs. Fellows will serve in eight organizations across the state.

Grantee: Virginia Commission on National & Community Service
 Subgrantee: Fredericksburg City Public Schools
 Program Name: Rappahannock AmeriCorps
 Grant Type: State Program

Full-time AmeriCorps members: 14
 Part-time AmeriCorps members: 20
 Program Descriptions: AmeriCorps members provide in-class support to educationally at-risk students in grades K–8 to increase K–5 grade children to “satisfactory” performance and to improve middle schoolers’ grade point average at least one letter grade. Members also provide individual tutoring for students at risk of failing state-mandated achievement tests, and mentor truant students in after-school programs. A total of 500 students are served.

Grantee: Virginia Commission on National & Community
 Subgrantee: Virginia Cooperative Extension Americorps Program
 Program Name: VCE AmeriCorps
 Grant Type: State Program
 Full-time AmeriCorps members:
 Part-time AmeriCorps members: 40
 Program Descriptions: AmeriCorps members deliver educational activities at 4-H after-school and summer programs for youth ages 5–14. Members plan and conduct training sessions for workforce preparation for 13- to 19-year-old teens. Members serve in one of three northern Virginia communities.

Grantee: Virginia Commission on National & Community
 Subgrantee: Northern Virginia Urban League—2
 Program Name: Alex Can Read Initiative
 Grant Type: State Program
 Full-time AmeriCorps members:
 Part-time AmeriCorps members: 24
 Program Descriptions: AmeriCorps members provide tutoring in reading to 100 K–3rd grade children in four elementary schools to increase student reading ability by ½ grade level. Members also lead and support learning activities for 3- to 5-year-olds in Head Start classrooms, and coordinate the reading tutorial services of community volunteers in the schools served by members.

Grantee: Virginia Commission on National & Community
 Subgrantee: Virginia Commonwealth University Americorps
 Program Name: VCU AmeriCorps
 Grant Type: State Program
 Full-time AmeriCorps members: 15
 Part-time AmeriCorps members: 40
 Program Descriptions: AmeriCorps members assist families transitioning from welfare to work in three impoverished inner-city neighborhoods. Services include job readiness training, job search assistance, and quality care and academic enrichment to pre-school and school-aged children during the school day and after school.

Grantee: Washington Commission on National and Community Service
 Subgrantee: Washington Dept. of Social and Health Services
 Program Name: Fostering Youth and Community Partnerships
 Grant Type: Ed Award Only
 Full-time AmeriCorps members: 5
 Part-time AmeriCorps members: 20
 Program Descriptions: Members recruit, select, train and support mentors for adolescents in foster care.

Grantee: West Virginia Commission for National and Community Service
 Subgrantee: Regional Family Resource Network
 Program Name: Regional Family Resource Network
 Grant Type: State Program
 Full-time AmeriCorps members: 20
 Part-time AmeriCorps members: 3
 Program Descriptions: AmeriCorps members tutor and mentor 575 children to improve academic and behavioral problems, coordinate immunizations and health clinics for more than 7,200 children resulting in a 10 percent increase in the area’s immunization rate, and assist in the development of pre-school programs that enrich parent/child interactions and school preparedness for more than 200 families. Members are assigned to one of 8 participating Family Resource Center sites in rural and urban communities of West Virginia and, in addition to their direct services, they recruit and train more than 250 parents and community volunteers to assist in service activities.

Grantee: West Virginia Commission for National and Community Service
 Subgrantee: North Central Regional Education Service Agency
 Program Name: The Challenge Club

Grant Type: State Program
 Full-time AmeriCorps members: 10
 Part-time AmeriCorps members:
 Program Descriptions: AmeriCorps members tutor and mentor 600 elementary-aged school children in-and after-school, and as part of a summer program. Through a balance of educational and recreational activities, more than 80 percent of the 600 students participating improve one letter grade in one subject tutored and demonstrate marked improvements in their social and life-coping skills. Members with The Challenge Club are serving two communities of north central West Virginia.

Grantee: Western Washington University/WA Campus Compact
 Subgrantee: Western Washington University /WA Campus Compact
 Program Name: Campus Reads Education Awards Program
 Grant Type: Ed Award Only
 Full-time AmeriCorps members:
 Part-time AmeriCorps members: 210
 Program Descriptions: Members tutor K–6 youth using resources from WA Institutions of Higher Education to improve reading skills.

Grantee: Wisconsin National & Community Service Board
 Subgrantee: North Central Community Action Program
 Program Name: AmeriCorps Team-Greater Wausau Area
 Grant Type: State Program
 Full-time AmeriCorps members: 9
 Part-time AmeriCorps members: 16
 Program Descriptions: AmeriCorps members provide direct service to youth to increase their level developmental assets in order to reduce youth involvement in at-risk behaviors. Members activities include literacy tutoring, mentoring, after-school activities, and volunteer generation.

Grantee: Woodrow Wilson National Fellowship Fnd.
 Subgrantee: National School and Community Corps (Princeton)—Parent
 Program Name:
 Grant Type: National Direct
 Full-time AmeriCorps members:
 Part-time AmeriCorps members:
 Program Descriptions: The Woodrow Wilson National Fellowship Foundation identifies critical education needs and develops programs to address those needs, including fellowships and programs for students, minorities and teachers. The National School & Community Corps (NSCC) was established in 1994. Its AmeriCorps Members provide services in literacy, the arts, and service learning to children and adults. Members also provide mentoring, homework assistance, club activities, youth leadership, conflict resolution, and other programs as identified by local communities and schools.

Grantee: Youth Volunteer Corps of America, Inc.
 Subgrantee: Youth Volunteer Corps of America—Parent
 Program Name: Youth Volunteer Corps of America
 Grant Type: National Direct Central
 Full-time AmeriCorps members:
 Part-time AmeriCorps members:
 Program Descriptions: Youth Volunteer Corps of America (YVCA) creates and increases volunteer opportunities to enrich America's youth, addresses community needs, and develops a lifetime commitment to service. There are currently Youth Volunteer Corps programs in over 50 communities in the United States. AmeriCorps Members act as service learning coordinators, recruiting and training school-age youth to recognize and address community problems, and provide tutoring, mentoring, and reading support. Members also recruit, lead, and supervise volunteers in youth-generated service projects, while encouraging each volunteer to commit to a lifetime of service.

Grantee: Youth Volunteer Corps of America, Inc.

Grantee: YouthBuild USA, Inc.

Subgrantee: YouthBuild USA—Parent

Program Name: Youthbuild USA

Grant Type: National Direct

Full-time AmeriCorps members:

Part-time AmeriCorps members:

Program Descriptions: YouthBuild USA, Inc., is a national non-profit organization that engages educationally at risk youth in a combination of service and youth development activities. The service activities focus primarily on renovating houses and buildings for the homeless and low income families. YouthBuild USA has a substantial number of affiliate organizations across the country. Members serve directly with community based organizations to rehabilitate abandoned housing and build new homes for homeless people, persons with HIV/AIDS, the physically challenges, and low income families. They build awareness of community issues and generate volunteers for local service projects.

Question. A news report on December 31, 1998 indicated that AmeriCorps participants have engaged in partisan political activities and so-called “AmeriRallies” to solicit money for political purposes and to hand out political literature for partisan causes. The report even mentions rallies for Members of Congress. I will provide you with a copy of the report. Can you tell me if AmeriCorps workers are indeed engaged in these kinds of activities, and if so, what the justification is for it? What rules are in place to guard against misuse of AmeriCorps participants for partisan political causes?

Answer. The report essentially repeats concerns expressed several years ago by the House Education and the Workforce Subcommittee on Oversight and Investigations. At that time, the Corporation reviewed each matter and determined either that the allegations were not supported in fact or had been appropriately addressed by the responsible oversight agency.

For example, on June 7, 1995, the Corporation explained to the Subcommittee that the “Maxine Waters Day of Caring” was a service event sponsored by a local non-profit foundation, which occasionally names service events after well-known citizens of Los Angeles. Representative Waters did not attend the event; her staff did not attend the event; and no political activity occurred on that day. Instead, community volunteers and AmeriCorps members gave food and other assistance to homeless veterans in Los Angeles. When questions were raised about this event, the Corporation provided supporting documentation to the committee from the Los Angeles Veterans Education and Training Service, the Los Angeles Veterans Initiative, and the Kenny Nickelson Memorial Foundation for Homeless Veterans.

The Corporation takes such concerns seriously. We have adopted strict rules prohibiting partisan political activities by AmeriCorps members. The grant agreement for every AmeriCorps program contain very detailed restrictions, including the following:

While charging time to the AmeriCorps Program, accumulating service/training hours or otherwise engaging in activities associated with the AmeriCorps program or the Corporation, staff and Members may not engage in the following activities:

- a. Any effort to influence legislation.
- b. Organizing or engaging in protests, petitions, boycotts or strikes.
- c. Assisting, promoting or deterring union organizing.
- d. Impairing existing contracts for services or collective bargaining agreements.
- e. Engaging in partisan political activities or other activities designed to influence the outcome of an election to any public office.

—f. Participating in, or endorsing, events or activities which are likely to include advocacy for or against political parties, political platforms, political candidates, proposed legislation, or elected officials—.

—g. Voter registration drives by AmeriCorps Members.

These prohibitions on political activities are in place to guard against misuse of AmeriCorps members for partisan political causes. Should any instance of violation be brought to our attention, we will take swift action to enforce the prohibitions.

QUESTIONS SUBMITTED BY SENATOR MIKULSKI

Question. How many AmeriCorps members have completed their term of service?

Answer. As of March 17, 1999, 77,514 have earned an education award. Most members in program years 1994 through 1997 have completed their service. Most members funded in program year 1998 are still serving.

Question. How many AmeriCorps members have used their education awards?

Answer. Of the awards earned, 43,793 have been used in whole or in part. Members have seven years after completion of their service to use the education award. About 70 percent of the awards earned in the first year of the program have been used in whole or in part. Members in that first year have until 2002 to use their awards. See attached fact sheet entitled "AmeriCorps and the National Service Trust: Enrollment Data and Use of the Education Award" for more information.

Question. How many volunteers were recruited? What have they done in their communities?

Answer. Most AmeriCorps programs recruit, train, and/or supervise uncompensated members of their local community to assist in their service activities. These so-called leveraged volunteers substantially increase the amount of service AmeriCorps can provide to communities. In addition, the volunteers benefit from the opportunity to give back to their communities through meaningful, well-planned activities.

We estimate that during the period 1994 through 1999, AmeriCorps programs recruited, trained or supervised about 1.7 million community volunteers. This averages out to about 12 leveraged volunteers per member since 1994.

The recently released evaluation of AmeriCorps State/National Direct sheds some light on the roles, contributions and experiences of leveraged volunteers in AmeriCorps programs. The report notes that the leveraged volunteers "varied greatly in education, age, demographics and socioeconomic backgrounds." They were involved in a range of service activities, including " * * * holding one day events, for example, health fair, tutoring students, constructing houses, cleaning up trash, and other labor intensive environmental projects." The researchers drew a clear distinction between the roles of the AmeriCorps members and those of the community volunteers. Members tended to be engaged in activities that traditional volunteers could not perform because they required full-time or extensive part-time effort. Community volunteers were used in roles more appropriate to their available time, usually a few hours per week at most. The programs and the communities appear to have benefited from the relationships, however. The volunteers were interested in what AmeriCorps programs were doing, and often benefited from the overall impact of the program on their community. The AmeriCorps programs, in turn, used the knowledge gained from volunteers to more quickly tailor the programs to community needs, to reduce resistance toward new community initiatives, and to more deeply engage their members.

The report points out that for volunteers to be used to greatest advantage, and to ensure that they have a positive experience, certain conditions need to be met, for example, programs must be well-organized, be able to solicit community members to become involved. Some programs during the startup years of AmeriCorps struggled to meet these conditions. Others were hampered by the realities of their program locations; community members were too economically pressed to have spare time to volunteers or, in other cases, had concern for their personal safety.

Overall, however, AmeriCorps' efforts with community volunteers have been of great value to the programs, the volunteers, and their communities. To better understand AmeriCorps' use of community volunteers, their value to the programs, and their experiences, the Corporation's Office of Evaluation will be initiating a study during this fiscal year to study volunteer leveraging in detail.

Question. What happened in the communities where members served?

Answer. Aguirre International's evaluation of AmeriCorps during 1994–1996 documents many of the significant contributions that AmeriCorps made to communities during its first years. Perhaps first among them is the tremendous volume of service accomplishments achieved by the local AmeriCorps programs. The report describes

a detailed investigation of randomly selected programs and concludes that, overall, the accomplishments resulted in positive impact on the service recipients. The report is also encouraging in its depiction of the role of AmeriCorps in strengthening the institutions and communities in which it serves. The report concludes:

“The institutional impacts of AmeriCorps were far stronger than expected * * *. Often as a result of partnership with AmeriCorps, institutions were able to streamline their service delivery within communities * * *. New relationships between agencies were made [that permitted agencies to] pool resources—and provide communities with more cohesive, comprehensive services. In some instances, AmeriCorps was a catalyst for change [among community agencies].

“In almost all cases (95 percent), involved institutions felt that AmeriCorps had a positive impact on their organizations. Only 2 percent said that they did not want to continue their AmeriCorps collaborations. Involved institution representatives stated that AmeriCorps had infused their organizations with new resources, helped them achieve their goals, made their jobs easier, and helped their clients. Schools that were host sites to members were particularly grateful to AmeriCorps programs for easing teachers’ burdens, expanding the quality of education, and increasing contacts between students and adults. Businesses that began by providing resources often became involved in direct service over time.”

As the report details, community representatives nationwide gave AmeriCorps high marks for the impact of its services and for the role it is playing in the community. The authors note that “The impact of AmeriCorps in terms of mobilizing communities and infusing hope into depressed communities cannot be understated.”

In addition to results for communities and service recipients, the report provides data on the positive short-term outcomes of service for AmeriCorps members themselves. Members achieved statistically significant gains in so-called SCANS skills (life skills, general employment skills) over comparison groups of non-members. These skills permit members to better help themselves, as well as their communities, long after their service ends.

Question. What is the sustainability of the impact of AmeriCorps on local communities?

Answer. The Aguirre International report provides clear indication AmeriCorps programs are providing the services whose impact will be sustained. As the following table, taken from the Aguirre report, indicates, programs are having the type of impact likely to be sustained in communities. Community members value the program services, perceive the program to have a very positive impact on their communities and view them as strengthening their communities. All of these indicators are critical to the sustainability of the service impact.

COMMUNITY REPRESENTATIVE RATINGS OF AMERICORPS’ COMMUNITY STRENGTHENING INDICATORS

[Percentages]

Measure	Out-standing	Excellent/ Very Good	Satisfac-tory	Unsatisfac-tory/Develop-ment Need-ed
Overall project impact	14	69	13	3
Impact on the community	11	71	17	2

Source: Community representative interviews.

For several reasons there is, at present, no more direct evidence about the sustainability of the impacts of AmeriCorps service on local communities. For the most part, successful AmeriCorps programs continue to receive Corporation funding. A study being initiated this year will attempt to assess the sustainability of the institutional networks and community building effects of AmeriCorps.

Question. What have participants done once they have left programs?

Answer. Although the Corporation has not conducted a specific survey of all former AmeriCorps members to determine what they do following AmeriCorps service, we do know several things.

First, after leaving service members enter or continue schooling. Of those members earning education awards in the first program year, approximately 50 percent have used all or a portion of their award to attend institutions of higher education. (Others have used their education award to pay off loans, and still others have several years remaining in which to use the award.)

Second, many members continue their service activities. A study of the alumni in the AmeriCorps Leader program concluded the following:

- 92 percent volunteered in their community.
- 96 percent contributed monies to nonprofit organizations and charities.
- 87 percent provided labor, training, grant writing and consulting assistance to local projects.
- 87 percent continued in service as a profession.

A national study of all AmeriCorps members conducted by Aguirre International found strong interest in community service careers among AmeriCorps members. Two-thirds of those leaving said they would probably or definitely become involved in community service as staff members. In terms of actions taken, one in eight had already taken steps to secure a staff position in a community service agency.

This same study found that by the end of the AmeriCorps service term, almost all members (99 percent) reported plans of engaging in future community service.

Third, we know from the experience of Peace Corps and AmeriCorps*VISTA that many former members will go on to be among the political, civic, and education leaders of our communities. There are already many individual stories of remarkable career successes by former members.

Beginning this fiscal year we are considering initiating a longitudinal study of AmeriCorps members that will provide a detailed analysis of the post-program life and career paths of former members. Alternatively, we are considering conducting a retrospective study of AmeriCorps members who have graduated.

Question. Is there an AmeriCorps alumni association?

Answer. Yes. Please see the attached information.

LETTER FROM KATIE FLOYD

AMERICORPS ALUMS, INC.
Washington, DC, April 14, 1999.

Senator BARBARA MIKULSKI,
Senate Office Building,
Washington, DC.

DEAR SENATOR MIKULSKI: Greetings from AmeriCorps Alums, Inc., the national alumni association for AmeriCorps graduates. I am aware that at the Senate hearing for the Corporation for National Service in early March, you inquired about the existence of an alumni association for AmeriCorps. I would like to take this opportunity to introduce you to our small but growing organization.

Our history dates back to the fall of 1995. That year, AmeriCorps Alums was launched as a program of the Partnership for National Service, a non-profit organization which raised private sector support for AmeriCorps programs. In April 1997, the weekend of the Presidents' Summit in Philadelphia, roughly 70 alumni convened

for the first-ever reunion of AmeriCorps graduates. During the weekend, AmeriCorps Alums officially incorporated as an independent 501(c)(3) non-profit association. Our three-fold mission is to meet the needs of AmeriCorps graduates, to support AmeriCorps, and to uphold the ethic and practice of community service.

Currently, the organization serves almost 1,600 active members. Though we have limited resources at this point, I am proud to note that through our programs, we have been able to keep alumni informed about legislative updates; direct alumni to post-AmeriCorps career opportunities; deliver transitional training to a few thousand graduating corps members; and start the development of local alumni chapters in 13 cities across the U.S.

An October 1997 survey of AmeriCorps Alums' membership shows that almost 70 percent are working in the non-profit field, and over 60 percent continue to volunteer in their communities at least 10 hours a month. Given the civic-mindedness that many AmeriCorps members possess and develop upon entering the program, coupled with the skills they acquire while in AmeriCorps, I am confident that there are thousands of AmeriCorps alumni who continue to touch the communities in which they live.

The enclosed flyer, list of achievements, and newsletters should give you a greater understanding of the organization. If you have any other questions about AmeriCorps Alums, Inc., please do not hesitate to contact me at (202) 729-8180 or Acorpалums@aol.com. Thank you for your interest.

In service,

KATIE FLOYD,
Member Services Coordinator.

AMERICORPS ALUMS, INC. ACCOMPLISHMENTS: 1997-1998

Meeting the Needs of AmeriCorps alumni

Developing partnerships which provide association members with over 1,800 jobs each year.

Preparing 2,500 members of the AmeriCorps Class of 1998 for the post-AmeriCorps transition through career development training.

Improving communication with alumni by launching two e-mail listservs for networking and job searching, and by doubling the size of Alum Action, the association newsletter.

Raising the awareness of the education award tax with the help of an AmeriCorps graduate who relayed statistics and hardship stories to 15 congressional offices and two leading publications: *The Chronicle of Higher Education* (July 31, 1998) and the *Christian Science Monitor* (September 22, 1998).

Building a national network of AmeriCorps graduates

Increasing current association membership by 225 percent.

Establishing affiliate networks with local alumni leaders in Baltimore, Philadelphia, and Washington.

Instituting partnerships with fifteen state community service commissions, which provides AmeriCorps Alums, Inc. memberships to over one-third of all AmeriCorps programs (providing our career development resources to over 5,500 current AmeriCorps members).

Creating an official website (<http://www.americorpsalums.org>) into a one-stop shopping place for graduates by linking them to the association, one another, service opportunities, job postings, financial and education award tips, higher education resources, and information on the AmeriCorps reauthorization process. Over 8,000 hits to date.

Strengthening Organizational Capacity

Hiring a full-time member services coordinator.

Developing training capacity so that AmeriCorps Alums, Inc. can assist AmeriCorps grantees in increasing the likelihood of success of the AmeriCorps graduate.

Raising \$25,000 and \$32,000 in the first two annual "Friends of AmeriCorps" fundraisers, with honored guest First Lady Hillary Rodham Clinton attending the second celebration.

Collaborating with nationally-recognized membership organizations (NAACP, Child Welfare League, National Peace Corps Association) and higher education institutions (College of William and Mary, University of Notre Dame) to implement a national network of AmeriCorps alumni chapters.

[CLERK'S NOTE.—Additional background on AmeriCorps Alums can be found in the VA-HUD subcommittee's files.]

Question. How many education awards are used to pay off loans? What percentage of those awards are for full-time participants?

Answer. Of the awards that have been used, 44 percent have been used in whole or in part to pay off existing student loans. Of those, 82 percent were full time awards.

Question. What percentage of participants use their vouchers to begin higher education?

Answer. Approximately one-fourth of all AmeriCorps members have a high school education or less, and use their voucher to begin higher education. The other 75 percent of AmeriCorps members use their voucher to continue higher education or pay off qualified student loans.

Question. Of the participants who use their education award to begin higher education, how many went to two-year schools and how many went to four-year schools?

Answer. The Corporation does not routinely collect data on the types of institutions attended by AmeriCorps members, including a breakdown of two- and four-year institutions. If the Committee wishes a separate study to be done on this matter, the Corporation can do so.

Question. Have AmeriCorps participants used their education awards to further higher education?

Answer. Yes. Please see the attached information.

AMERICORPS AND THE NATIONAL SERVICE TRUST

ENROLLMENT DATA AND THE USE OF THE EDUCATION AWARD ¹

Education awards earned

To date, over 77,000 awards have been earned. Of those, full-time members have earned 70 percent of the awards, and part-time members have earned 30 percent.

Part-time members

Since the beginning, State Commissions and local programs have enrolled a significant number of part-time members, including those serving in summer programs. The following table summarizes actual full-time and part-time Trust enrollments by program year:

Program year	Full-time members	Full-time percent	Part-time members	Part-time percent	All members
1994	16,054	64	9,163	36	25,217
1995	17,844	71	7,338	29	25,182
1996	17,608	70	7,520	30	25,128
1997	22,963	61	14,586	39	37,549
Total	74,469	66	38,607	34	113,076

Use of education awards

Members have used over 40,000 awards to:

- Pay for the cost of going on to school (56 percent);
- Pay education loans for previous schooling (34 percent); and
- Pay for both going on to school and for loans for previous schooling (9 percent).

Of those members enrolled in the first year class (94) who earned awards, 70 percent have used all or a portion of their award.

Of the dollar value of the education awards earned by members in the first year class (94), 61 percent has been used to date. First-year members have three more years to use their awards. The Corporation's budget estimates that 78 percent of awards earned will be used before the seven-year expiration date.

There is no substantial difference in the use of awards between full-time and part-time members, except that those serving only in summer programs tend to use their award, which is smaller, more quickly than those serving in full-year programs.

Question. What has been the impact of literacy programs?

Answer. Since fiscal year 1994, education programs, including literacy activities for young children, have been a high priority for national service. Governor-appointed state commissions on national and community service have focused national service resources on unmet needs in education. In addition, AmeriCorps*National and Education Award programs, as well as service-learning programs at the K-12

¹ As of March 16, 1999.

and higher education levels, and senior programs have targeted service activities on the education needs of youth.

I summarized some of these impacts in my written statement for the record. We will provide copies of all literacy evaluations to the Committee.

Literacy programs supported by the Corporation under the AmeriCorps*State and National category reported the following results for the 1996–97 program year:

1. In all programs, 5,700 members at 305 sites supported the tutoring of youth in grades 1–12. Sixty-seven percent of youth tutored in grades 1–12 (of 128,000 measured) showed improvement during the program year.

2. In all programs, 4,700 members supported academic mentoring at 258 sites. Seventy-six percent (of 53,000 mentored students measured) showed improvement during the program year.

3. In all programs, over 2,000 members taught in grades 1–12. Sixty-nine percent (of 70,000 students measured) showed improvement during the program year.

An independent analysis of these project reports and program generated evaluation materials, noted:

“* * * programs are using measures [evaluation] that are appropriate for the individuals they are serving and the type of tutoring they are providing.
* * * tutoring programs investigated in this study reported positive changes for the students who receive tutoring.”

In a 1999 study of the Corporation for National Service’s Seniors for Schools pilot program, principals and teachers indicated the following: 90 percent reported an increased positive attitude in students toward reading; 85 percent reported improved self-esteem among students; 84 percent reported increased self-confidence in reading; 82 percent reported increased reading skills; and 79 percent reported general academic improvement. Of the teachers reporting in that same study, 79 percent reported improved student attitudes, 60 percent reported improved overall student performance levels; and 58 percent reported an increased number of students keeping up with the class.

In the District of Columbia, low achieving children, tutored by Federal Work Study students and other volunteers in a program managed by AmeriCorps*VISTA members, improved reading scores to the national average at the end of the first year of the program.

Other Senior Corps evaluations have produced similar results. The recent evaluation of Foster Grandparents in Head Start centers (1998) found volunteers exhibiting well-researched positive caregiver behaviors. It also concluded that consistent with previous research, these effective practices were observed to contribute to the emotional, social, behavioral, and cognitive development of the pre school children as well as to classrooms and centers.

In addition to these recent studies done by the Corporation, independent evaluations of individual projects have produced comparable results. Several examples are provided below:

Professor George Farkas of the University of Texas documented gains for a Reading One-to-One program of 0.4 to 0.7 grade equivalents above what students would have attained without tutoring. This significant improvement will help assure that these children become literate. The program uses college students, AmeriCorps members, and community residents to tutor more than 6,000 students in more than 70 schools across ten school districts.

In New Haven Connecticut, the Leadership, Education, Athletics in Partnership program helped produce increases in children’s reading test scores; children read an average of 24 books during the summer in the program.

In West Virginia, a summer project that uses AmeriCorps members documented the following results:

“Energy Express, through a print-rich environment, increases children’s reading scores. An intensive evaluation to measure impact was conducted for last summer’s project by West Virginia University faculty members and graduate students. Six hundred four children were tested in matched pairs pre to post using the Woodcock Johnson (revised 1989). Data indicates significant increases in reading comprehension ($p < .0001$) and word recognition ($p < .0001$). Seventy-one percent of all children increased in reading comprehension and 67.6 percent in word identification.”

An independent researcher who examined Jumpstart, a pre-school program noted:

“The results of the analyses on the first 2 Cohorts of children over their first year in the Jumpstart program suggest that the program has positive effects on at-risk children’s school readiness, and suggest that, as the pro-

gram is developed further and more children participate in the evaluation, there is real potential for showing stronger and positive program effects.”

University of Delaware researchers concluded:

“Tutoring, that is, periodic meetings of a student with a tutor as a supplement to classroom instruction, can increase reading achievement, improve self-confidence in one’s reading skills, and increase motivation for reading. Positive results for reading have been obtained with volunteers, peers, and cross-age tutors, as well as with professionals.”

Finally, the Corporation is engaged in a national study of Corporation-sponsored tutoring programs funded by AmeriCorps State/National and America Reads. The first phase of that study is a descriptive analysis that will permit us to characterize how these programs’ practices compare to what is known about effective program models. Data from this study will be available in Fall, 1999. The second phase of the study, to begin in September, 1999, will collect outcome data on reading ability in a rigorous design intended to permit us to make definitive statements about the effects of Corporation-sponsored tutoring efforts. Results from that phase of the research will be available late in 2000.

[CLERK’S NOTE.—Further information concerning the literacy question can be found in the VA–HUD subcommittee files.

- Seniors for Schools Content Analysis of 1997–98 Project Evaluation Reports
- Effective Practices of Foster Grandparents in Head Start Centers
- Evaluation of DC Reads Book Partners Program Year 1 Final Report
- Foster Grandparent Program Accomplishment Summary July 1, 1997–June 30, 1998 National Senior Service Corps
- Retired and Senior Volunteer Program Accomplishment Summary July 1, 1997–June 30, 1998 National Senior Service Corps.]

Question. With the exception of immunizations, what accomplishments have occurred in the Health care area?

Answer. AmeriCorps programs are involved in providing a variety of health care related services in local communities. Data taken from the Aguirre evaluation report indicates AmeriCorps programs, in addition to immunizations, provided the following health care related services:

- Made independent living easier for disabled, elderly, or hospitalized individuals by providing independent living assistance to over 15,000 people;
- Provided emergency medical services, as well as health training and education;
- Provided access to health care, diagnosis, and/or follow-up to over 57,000 individuals and/or screened for needed care;
- Provided access to pre-natal care, screening or actual health services, and/or taught about children’s health or development, * * * to over 21,000 pregnant women or families with young;
- Distributed health related informational material to over 973,000 people.

Question. What is AmeriCorps doing to help seniors live independently?

Answer. There are currently fifteen programs that focus specifically on working with seniors to assist them in living independently. Programs are located in the Atlantic region (Maryland); the Northeast (New York, Massachusetts, New Jersey, Vermont); the Southeast (Florida, North Carolina, Mississippi, Georgia, South Carolina, Alabama); and the Southwest (Texas).

DEPARTMENT OF THE TREASURY

COMMUNITY DEVELOPMENT FINANCIAL INSTITUTES FUND

STATEMENT OF ELLEN W. LAZAR, DIRECTOR

ACCOMPANIED BY:

MAURICE A. JONES, DEPUTY DIRECTOR, PROGRAM AND POLICY

PAUL R. GENTILE, DEPUTY DIRECTOR, MANAGEMENT AND CHIEF
FINANCIAL OFFICER

OPENING REMARKS

Senator BOND. Now I want to call on a final panel, Ellen Lazar, the Director of the CDFI program, accompanied by her Deputy Director Mr. Maurice Jones and Deputy Director for Management and the CFO Mr. Gentile.

The administration's budget requests for CDFI asks for an increase of \$30 million from \$95 million to \$125 million for the year 2000. I understand that \$15 million of the request would be to fund the new microenterprise program. I am very much concerned about the amount and purposes of the CDFI funding request, especially as we prioritize the funding needs of some of the primary programs and activities. It is a relatively new operation and its track record is still unclear. And it does seem that some of its activities overlap with those of other programs designed to revitalize distressed communities. I do want to congratulate the director of the fund, Ms. Lazar and her staff, for correcting the management deficiencies identified in the past.

KPMG, the Fund's independent auditors, has provided an unqualified or clean opinion on its financial statements and further reported no new material weaknesses. We all know the CDFI had a rocky beginning. I am interested to hear the specific steps taken to address the program management.

Second, we are interested in how well the performance goals and objectives are being met. GAO had a report last July and had some questions about emphasis on outputs rather than outcomes. A particular concern was in the area of external factors that the Fund's strategic plan only partially meets the requirements to describe the external factors. I think it is critical that we look at the Fund's activities where they may be overlapping.

And finally, I have some real questions about the Program for Investment in Microentrepreneurs or PRIME. I happen to chair the Committee on Small Business Administration and the SBA has programs in that area, as does the Economic Development Administration and many states in their welfare-to-work programs.

I would also say that I will ask unanimous consent to include in the record a statement by Senator Shelby, a member of the committee, raising serious questions about some of the CDFI activities, challenging whether the Fund has received the necessary author-

ization from the authorizing committee, the Committee on Banking, Housing and Urban Affairs. And he also raises questions about the new so-called PRIME program in the Banking Committee's letter to the Budget Committee on which I also serve, transmitting the views and estimates of the Banking Committee.

The Banking Committee notes that it opposes any increase in funding for CDFI. The Committee has not received adequate assurances that CDFI's current operations are fully consistent with congressional intent and void of any form of misuse of public moneys.

Senator BOND. With those opening comments, any opening comments you wish to make, Senator Mikulski?

STATEMENT OF SENATOR BARBARA MIKULSKI

Senator MIKULSKI. Just a very few, Mr. Chairman, one to Ms. Lazar and to her team. Thank you for really strengthening the management so that we could get to the ability to evaluate the programmatic impacts and where best to target our resources. Second, I have to leave at about 11:20 a.m. So if I am not here, it is not because of a lack of interest.

I note the Maryland programs. I think groups like the Enterprise Foundation working with you have always, from what I know, leveraged other funds. So we look forward to it. Some programs I am not familiar with, but others I am. So I look forward to your testimony.

I just want to say this generally. We are in the world of the mega-merger of the bank, so we have big banks buying each other and big banks then being bought internationally. And then what happens at the local community, whether it is to the community or the Small Business Administration, whether it is the farmer or the business person trying to get started in a multi-ethnic community, goes to how do we stay local while we go global?

I think that is one of the big challenges for both the Banking Committee—knowing we have to reform and change, but all I see is us going global. The more global—I know right now a couple of organizations are merging in Maryland. And Alex Brown was sold to Bankers Trust, which is now in line to be bought in Deutsche Bank; and where I used to go downtown to the Center Club to talk things over, I might now have to go to Berlin. And what I am interested in is the neighborhoods in Baltimore. So any insights you could provide to us would be very helpful.

Senator BOND. Ms. Lazar.

STATEMENT OF ELLEN LAZAR

Ms. LAZAR. Good morning. Thank you, Chairman Bond and Ranking Member Mikulski. I am happy to be here today. I am Ellen Lazar. I am the director of the Community Development Financial Institution's Fund at the Treasury Department. I am here today with my two deputies, Paul Gentile our deputy director for management and CFO and Maurice Jones our deputy director for program and policy. I would ask the chair to submit my written statement for the record and for the purposes of time I will abbreviate my testimony.

Senator BOND. We appreciate that. And we will accept your full written statement and give you 5 minutes.

Ms. LAZAR. Thank you, Senator.

MAJOR POINTS

I will talk about four major points today: management, programs activity, our evaluation and impact work, and our fiscal year 2000 budget request.

We have, at the front, have taken key steps over the past year to develop and implement necessary improvement to the Fund's financial and program management. I am happy to report, as you had so observed, that this year we received for our second year in a row a clean audit from KPMG Peat Marwick. All the material weaknesses identified in 1997 have been corrected and no new material weaknesses have been found for 1998. We have worked hard to build an infrastructure and have hired a staff at the Fund to serve. We are disbursing our funds more expeditiously and we have developed a strategic plan that has been delivered to the Hill for consultation and consideration.

CDFI'S

On the program side, the Fund's mission is to promote access to capital and local economic growth by directly investing in and supporting community development financial organizations, what we call CDFI's. We also work towards expanding financial service organizations, lending investment and services within under served communities. Our CDFI's—it is really an umbrella term for a number of different types of organizations: community development banks and community development credit unions, which are regulated institutions, nonprofit loan funds which can be working in both business and housing, microenterprise loan funds, community development venture capital funds.

The CDFI program includes our core funding which helps build the financial capacity of CDFI's by providing equity investments, grants, loans or deposits to enhance the capital base of these institutions to help them better address unmet community development needs in their target markets. We also have a technical assistance program which fills the capacity of start-up, young and small institutions.

BANK ENTERPRISE AWARDS PROGRAM

Another major program is our bank enterprise awards program which is our primary tool for pursuing our strategic plan goal of expanding banks and thrifts, community development, and lending and investment activity. Incentives encourage banks to increase investments in underserved communities, and we have seen startling leveraging numbers of the \$58 million that we have provided in incentives to the banks. We have seen their investments grow to \$983 million, 17 times the amount of our investment.

NONMONETARY PROGRAMS

Each year there has been an increased demand for our funding. And since 1996 we have obligated \$190 million in funding. We run a number of other programs both nonmonetary and in initiatives that I would like to talk to you about for a minute.

Our Presidential Awards for Excellence in Microenterprise Development is a nonmonetary award which brings attention to organizations that have demonstrated excellence in microentrepreneurship. We have begun our Native American Lending Study and Action Plan which will help to improve access to capital for Native Americans.

And, finally, we have embarked on a policy and research program to evaluate the impact of our Federal investments.

IMPACT OF OUR FEDERAL INVESTMENTS

I would like to talk with you for a few minutes now about those evaluations and the outcomes that we have unearthed. The Fund collected performance and outcome data on 30 of our first-round awardees; those 30 awards totalled \$34 million. This was money that was obligated in 1996 that was put out over the subsequent 18 months and has been put to work now for over a year. Our plans for these organizations are based on a 5-year business plan that we require of our awardees.

Over the past 3 years our preliminary data shows that \$565 million in CD loans and investments have been made by these institutions. They have created or expanded 895 microenterprise organizations and over 1,100 businesses. They have helped to create or retain over 12,000 jobs. That have developed over 8,000 units of affordable housing. They have developed child care, health care, human service and educational facilities and they have provided business training, credit counseling, home buyer training and other development services to over 10,000 people.

The assets of these organizations have grown by 122 percent, from \$473 million to \$1.5 billion in the aggregate in 1998. Seventy percent of the clients served by these organizations are low income and 53 percent of them live in the inner city.

We have also been conducting case studies. We have done field work in Boston, Santa Cruz and San Antonio. And my written statement contains more information about these case studies. Our initial research shows how positively these CDFI's are affecting their communities.

FISCAL YEAR 2000 BUDGET

I would like to take a minute now to talk about our fiscal year 2000 budget. We have asked for \$125 million, an additional \$30 million above the fiscal year 1999 funding level. Fifteen million dollars has been set aside for our core programs and \$15 million for the new PRIME Act, the Program for Investment in Microentrepreneurs. The PRIME Act legislation was introduced by Congressman Bobby Rush and Chairman Leach in the House as H.R. 413. It was introduced by Senators Domenici and Kennedy as S. 409 here in the Senate. Essentially PRIME will allow the CDFI Fund to build the capacity of low income and disadvantaged microentrepreneurs, to build the capacity of micro organizations to better serve these low-income clients and to support best practices and research in the field. The PRIME Act essentially complements the current work of the Fund, which is to build community-based organizations, to serve low income and very low-income people in communities.

PREPARED STATEMENT

I think our fiscal year 2000 funding request is a logical one, based on need demonstrated in the field. We want to continue our vision of providing greater access to credit for all Americans. And I would like to thank the committee for the opportunity to talk with you this morning and look forward to working with you on this appropriation. I am happy to entertain any questions, as are my deputies.

[The statement follows:]

PREPARED STATEMENT OF ELLEN W. LAZAR

INTRODUCTION

Chairman Bond, Senator Mikulski and distinguished Members of the Subcommittee, it is a pleasure to be before you today to represent the Community Development Financial Institutions (CDFI) Fund. I am Ellen Lazar, the Director of the Fund. Before I begin my testimony, I would like to introduce you to two other key members of the Fund who are with me today: Paul Gentile, Deputy Director for Management/Chief Financial Officer of the Fund, and Maurice Jones, Deputy Director for Policy and Programs at the Fund.

STRONG AND EFFECTIVE MANAGEMENT

When I testified before this Subcommittee this time last year, I described key steps that the Community Development Financial Institutions Fund (the CDFI Fund or the Fund) would take to develop and implement necessary improvements to the Fund's financial and program management, reporting systems, internal controls, operating procedures, and awards monitoring. I am very pleased to report to the Subcommittee that over the past twelve months we have made great progress in these areas.

In the Fund's financial audit for fiscal years 1995 through 1997, our independent auditors, KPMG Peat Marwick, LLP (KPMG), provided an unqualified opinion, affirming that our financial statements fairly presented the financial position of the Fund as of September 30, 1997, 1996, and 1995. KPMG also confirmed our identification of material weaknesses that we needed to correct.

KPMG recently completed the Fund's fiscal year 1998 audit, and I am pleased to report that we have again received an unqualified opinion. In addition, KPMG verified that we have successfully corrected all material weaknesses identified in last year's audit. They have reported no new material weaknesses for this year's audit.

We are in compliance with the Federal Managers' Financial Integrity Act (FMFIA). Our system of internal management, accounting and administrative control has been strengthened and is operating effectively. Our enhanced policies and procedures ensure that our programs achieve their intended results; our resources continue to be used in a manner that is consistent with our mission; and our programs and resources are protected from waste, fraud, and mismanagement.

As evidenced by our auditor's report, the Fund has taken critical steps to strengthen and build its infrastructure and hire staff. During fiscal year 1998, a Deputy Director for Management/Chief Financial Officer, Awards Manager and Financial Manager were hired—critical positions for ensuring proper internal controls and accountability. In addition, a Deputy Director for Policy and Programs was appointed and program managers for each program were hired. The Fund's legal department was substantially increased and additional staff have been hired to help carry out the Fund's many programs. Our enhanced internal procedures and staff capacity has helped us to deliver more effectively our award dollars to the institutions selected to receive awards. For example, with respect to our Core Component CDFI Program, all of our 1996 awardees have received disbursements and 84 percent of our 1997 awardees has received disbursements. We are currently disbursing the 1998 awards, which were announced in late September of last year. We anticipate disbursing funds to all 1998 awardees by August of this year. Our 1999 awards have not been determined yet.

As I discussed with the Subcommittee last year, the Fund is committed to managing for results. We have undertaken a rigorous review of the Fund's five-year strategic plan, goals, and performance measures. I am happy to report that we have

completed this process and have forwarded to you a draft of our revised strategic plan for your consultation and consideration.

STRENGTHENING COMMUNITIES: PROVIDING ACCESS TO CAPITAL

Overview

The Fund's mission is to promote access to capital and local economic growth by directly investing in and supporting community development financial institutions (CDFIs) and expanding banks' and thrifts' lending, investment, and services within underserved markets.

Currently, the CDFI Fund pursues its mission primarily through five initiatives: the CDFI Program, which includes the Core, Technical Assistance and Intermediary Components; the Bank Enterprise Award (BEA) Program; the Presidential Awards for Excellence in Microenterprise Development; the Native American Lending Study and Action Plan; and our Policy and Research Programs. The CDFI Fund also administers a Certification Program for community development financial institutions.

CDFI Program and Certification

The CDFI Program has three funding components: Core, Intermediary and Technical Assistance. These three components promote the CDFI Fund's goal, articulated in its strategic plan, of strengthening the expertise and the financial and organizational capacity of CDFIs to address the needs of the communities that they serve. CDFIs include community development banks, community development credit unions, non-profit loan funds, micro-enterprise loan funds, and community development venture capital funds.

The Core Component builds the financial capacity of CDFIs by providing equity investments, grants, loans or deposits to enhance the capital base—the underlying financial strength—of these organizations so that they can better address the unmet community development needs of their target markets. In addition, under the Core Component, the Fund provides technical assistance grants in conjunction with loans and investments in order to maximize the community development impact of the Fund's awards.

The Fund selects awardees that clearly demonstrate private sector market discipline and the capacity to positively impact underserved communities. The Core Component leverage encourages additional private and public sector investments into these same organizations through its one-to-one non-federal match requirement.

The Intermediary Component allows the Fund to invest in additional CDFIs indirectly, through intermediary organizations that support CDFIs. These intermediary entities, which are also CDFIs, generally provide intensive financial and technical assistance to small and growing CDFIs, thereby strengthening the industry's financial and institutional capacity.

Since inception, under the Core and Intermediary Components, the Fund has made 123 awards totaling \$122 million.

The Technical Assistance (TA) Component of the CDFI Program is the Fund's newest funding program. Introduced in 1998, this component builds the capacity of startup, young and small institutions. The TA Component allows the Fund to direct relatively small amounts of funds to CDFIs that demonstrate significant potential for generating community development impact but whose institutional capacity needs to be strengthened before they can fully realize this potential.

In the first TA Component round held in 1998, the Fund awarded \$3 million to 70 institutions.

In 1998, the Fund awarded a total \$47 million to 112 institutions through its CDFI Program. In 1998 as in all previous years, demand for CDFI Program funding far exceeded the funding we announced as available. Under the Core and Technical Assistance Components we announced the availability of approximately \$45 million. We received requests for more than \$176 million.

For 1999, with the help of the \$95 million appropriated to the Fund for fiscal year 1999, we anticipate that we will make \$62 million in awards to 130 institutions under the CDFI Program. In October, the Fund published the fiscal year 1999 Notice of Funds Availability (NOFA) for both the Core and Intermediary Components, announcing a total of \$57.5 million available, \$50 million for the Core Component and \$7.5 million for the Intermediary Component. We received 153 Core applications requesting a total of \$184 million. We anticipate making approximately 55 Core awards. We received eight Intermediary applications requesting a total of \$16 million. We anticipate making five Intermediary awards. In January, we published the fiscal year 1999 NOFA for the Technical Assistance Component. With the \$5 million available for TA awards, we anticipate making 75 awards.

To date, institutions in 43 states plus Puerto Rico and the District of Columbia have received CDFI Program awards. To encourage applications from a diverse pool of applicants, the Fund is conducting a record number of informational workshops. Among the nineteen Core and Intermediary workshops conducted in 1998, five were located in States that have not had previous Core or Intermediary Awardees. This month the Fund will hold eighteen informational workshops on the Technical Assistance Component around the country, again selecting several regions in which there are no current awardees.

To further our goal of building the institutional capacity of the CDFI field, we provide debriefings to applicants that were not selected for an award. To date in fiscal year 1999, the Fund is responding to 92 requests for debriefings. Applicants are given valuable feedback about strengths and weaknesses of their applications as observed by those community development professionals involved in reviewing their requests for funding. Many of these applicants use the information gathered from the debriefing to build the strength of their operations and to improve their performance.

In addition to our CDFI funding programs, the Fund administers a CDFI Certification Program. CDFI certification increases the credibility of community lending organizations in the eyes of potential funders and investors. An organization that is certified is better able to attract private sector investments from local banks, corporations, foundations, and individuals. To date, we have certified a total of 280 organizations in 45 states, plus the District of Columbia and Puerto Rico. New applications arrive each month. Currently, applications are pending for the Virgin Islands, plus two of the five states that do not currently have any certified CDFIs.

Bank Enterprise Award Program

The Bank Enterprise Award (BEA) Program is the Fund's primary tool for pursuing its strategic plan goal of expanding banks' and thrifts' community development lending and investment activity. By providing incentives to these mainstream financial institutions, the Fund encourages them to increase their investments in underserved communities. These financial institutions do this in two ways: by providing loans, investments and services directly to the communities in need; and indirectly, by investing in local CDFIs or other community development programs, that then provide financial and development services to the communities.

The leveraging involved in this program is impressive. To date, 124 banks and thrifts in 30 states have received \$58 million in BEA funding. This \$58 million actually translates into investments in underserved communities of \$983 million, seventeen times the amount of the CDFI Fund's investment. The awardees have invested \$712 million in direct loans, investments and services to the community, and \$271 million into CDFIs.

The Fund dramatically increased our BEA awards in 1998 when we made 79 awards totaling \$28 million. In 1996, we made 38 awards totaling \$13.1 million; in 1997 we made 54 awards totaling \$16.5 million. The three-year total for the 171 BEA awards is \$57.5 million. For the fiscal year 1999 funding round, we conducted twelve informational workshops around the country and received 139 applications. The Fund anticipates selecting approximately 80 of these institutions to receive awards totaling \$25 million.

Presidential Awards for Excellence in Microenterprise Development

The Presidential Awards for Excellence in Microenterprise Development is a non-monetary program administered by the Fund that recognizes and seeks to bring attention to organizations that have demonstrated excellence in promoting micro-entrepreneurship. By recognizing outstanding microenterprise organizations, the Presidential Awards seek to promote best practices and bring wider public attention to the important role and successes of microenterprise development especially in enhancing economic opportunities among women, low income people and minorities who have historically lacked access to traditional sources of credit. This program is one of the ways that the Fund is promoting performance best practices in the industry.

In February of this year, the President presented awards to six organizations for their work in the microenterprise industry.

Native American Lending Study and Action Plan

Our Native American Lending Study and Action Plan is intended to stimulate private investment on Indian Reservations and other land held in trust by the United States. The first step in accomplishing this goal is identifying the barriers to private financing in these areas. In 1998, we launched an action plan that will examine lending and investment practices on Native American lands, identify lending and investment barriers and their impacts, and make recommendations for removing

them. As part of that plan, we will be holding workshops in 13 cities across the country this year. The workshops will involve the Native American community, financial institutions, state agencies and community development organizations. With the assistance of the participants in these workshops, we anticipate that the study will be completed in fiscal year 2000.

Policy and Research

The Fund is perhaps the largest single source of capital available to the CDFI industry nationwide. It has access to data from hundreds of community development financial institutions nationwide. This includes information about the institutions as well as their target markets. In addition to baseline data derived from the process of certifying or funding applicants, the Fund collects longitudinal data on all of its awardees over at least a five-year period. Our policy and research goals include: measuring and reporting on the performance and outcomes of the Fund and its awardees and seeking to advance the CDFI industry as a whole through involvement in industry-wide research and development efforts.

In 1998, we moved forward on the first of these, measuring and reporting on the performance and outcomes of Fund awardees. As you know, the Fund invests in CDFIs to promote their long-term viability and ability to serve distressed communities. Today, I am pleased to be able to report some preliminary findings of our efforts thus far with respect to the accomplishments of our awardees.

PERFORMANCE AND IMPACT

Surveys

Using surveys, the Fund collected performance and outcome data on 30 of our 31 first-round CDFI Core Component awardees. These awardees were chosen in 1996. We began our evaluation on only first round awardees because they have had at least a year to absorb the Fund's investments and put them to work. Our sample of 30 first round awardees includes six credit unions, fourteen loan funds, three community development banks, three venture capital funds, two microenterprise programs, and two multifaceted CDFIs. Together, they received \$34 million in CDFI awards. What has our \$34 million helped these institutions to accomplish?

Our preliminary findings demonstrate that these awardees have accomplished significant community development impact over the past three years. For example, they have made \$565 million in community development loans and investments. These loans and investments have helped to create or expand 1,895 microenterprises and 1,148 businesses; create or retain 12,412 jobs; develop 8,617 units of affordable housing, 98 childcare centers serving 7,168 children, 17 health care facilities serving 32,723 clients and 170 additional community, cultural, human services and educational facilities. Further, these awardees have provided business training, credit counseling, homebuyer training and other development services to 10,641 individuals.

Based on our sample, 70 percent of the clients of the average 1996 awardees are low-income individuals. Sixty percent are minority individuals. Fifty percent are women. Fifty-three percent live in the inner city. Eleven percent live in rural communities. Thirty-six percent live in suburban areas.

Since receiving their Fund awards, the 1996 awardees in our sample have strengthened their capacities to deliver products and services to their target communities. Their total assets have increased by 122 percent, growing from \$473 million in the aggregate before they received their awards to \$1.05 billion in the aggregate in 1998.

Case Studies

In addition to the outcomes surveys, the Fund is conducting in-depth case studies of a sample of awardees. The case studies include on site evaluations by the Fund to examine the CDFI's activities within the local economic development context. To date, we have completed three case studies. We anticipate completing several more in the coming year. The three case studies that have been completed thus far have been in Boston, Massachusetts, San Antonio, Texas and Santa Cruz, California. Our initial research suggests how CDFIs are positively affecting their communities.

In Boston, many of the city's poorer neighborhoods did not benefit from the economic growth in the 1980s; their conditions actually worsened during that period. Yet these same neighborhoods have experienced notable improvements in the past 10 years, thanks in no small part to the work of CDFIs such as the Boston Community Loan Fund and the Local Initiatives Support Corporation, two CDFI Fund awardees. These CDFIs have been critical behind-the-scenes actors. They have provided badly needed financial and technical support to two of the city's most effective community development corporations (CDCs), enabling the groups to develop the

scale necessary to carry out affordable housing and commercial projects that have revitalized long-declining communities such as East Boston and Egleston Square. Since the mid-1980s, the CDFIs have provided over \$7.5 million to the CDCs, which in turn have: built or rehabbed over 800 units of affordable housing; managed an additional 900 apartments and commercial properties; and operated after-school and other programs for 150 neighborhood youths. The CDFIs have also played a crucial intermediary role, working with bankers, city officials, and corporate and foundation leaders to encourage additional targeted investment in these neighborhoods. A number of bankers view the CDFIs as important partners in their community development work, crediting the CDFIs with effectively serving organizations and individuals that the banks cannot afford to serve.

All around San Antonio, public and private sector institutions recognize the important work of ACCION Texas, a CDFI Fund Awardee. From the city's Economic Development Office to local Chambers of Commerce to banks ranging in size from local independent banks to Chase Manhattan, ACCION is viewed as the source of financial services for a previously neglected—yet significant—segment of the population: the low- and moderate-income micro entrepreneurs who live and work in some of the city's poorest neighborhoods. ACCION is seen as the organization that can get loan capital into the hands of this underserved population—and just as important—get it back. ACCION's 400 clients include plumbers, electricians, seamstresses, independent taxi drivers, and street vendors. They are primarily Hispanic. Without ACCION, they would not have access to credit for their businesses. The stories are by now familiar: these micro entrepreneurs do not have sufficient collateral; they don't have good business records; or they don't need enough money to make them attractive to a bank. With ACCION, they are able to get the financial and technical assistance they need to grow their businesses and to make them more prosperous through better business management. ACCION's success in San Antonio has led it to begin opening offices around the state, in the Rio Grande Valley, Houston, Dallas, Austin, and Fort Worth.

In Santa Cruz county in California, the third largest community credit union in the nation, the Santa Cruz Community Credit Union (SCCCU), offers a wide range of financial products and services designed to meet the financial needs of a predominantly rural low income population. The need is perhaps greatest in Watsonville, where the unemployment rate is 15.8 percent—more than three times the national average. This area has been hard hit by recent plant closings resulting from import competition from Mexico. Adding to the unemployment rate are the once-migrant agricultural workers who are settling in the area in increasing numbers, even though agricultural work remains seasonal. The employment and income figures highlighted the importance of focusing on the Watsonville population. With the help of its CDFI Fund award, the Santa Cruz Community Credit Union opened a branch in Watsonville so that it could ensure credit and banking access for all citizens, especially the Latino population which had historically distrusted traditional banking enterprises due to discrimination and neglect.

THE YEAR AHEAD: FISCAL YEAR 2000

The President's fiscal year 2000 budget requests \$125 million in appropriations for the Fund. This request is \$30 million above fiscal year 1999 funding levels. The Fund proposes to use \$15 million of the increase to enhance its core programs; thus, \$110 million will be used to administer the CDFI, BEA, Training, Policy and Research and Secondary Market Programs and the Native American Lending Study and Action Plan. The remaining \$15 million will be used to launch a new initiative, the Program for Investment in Microentrepreneurs (PRIME).

In fiscal year 2000 and beyond, the CDFI Program will continue to focus on building the capacity of the CDFI industry to facilitate access to capital in underserved and low-income markets. I believe the Fund will be able to build on its previous years' experience and findings from its first outcomes surveys to inform our practice in identifying organizations that can maximize impact in needy communities. We will also seek to enhance the performance and impact of the industry through our Technical Assistance Program. Through the BEA Program, the Fund will continue its efforts to facilitate community reinvestment by providing incentives for banks and thrifts to reach new markets through partnerships with CDFIs and by targeting lending, investment and services in the most distressed neighborhoods. Finally, the Fund will seek to enhance the effectiveness and impact of CDFIs, banks, thrifts and others engaged in community development finance through its Training Program.

In fiscal year 2000, the Fund will complete its Native American Lending Study. We plan to make recommendations to the President and Congress on needed statu-

tory and regulatory amendments to existing Federal programs and other needed policy changes to improve access to capital for Native Americans.

Based on a feasibility study to be conducted in fiscal year 1999, in fiscal year 2000, the Fund plans to launch a secondary market program for loans made by CDFIs and examine the potential role of the Fund in creating and sustaining these efforts.

I believe one of the most exciting proposals in the President's budget is the creation of the Program for Investment in Microentrepreneurs (PRIME). The \$15 million PRIME Act was introduced in the Senate on February 10 of this year. Senator Kennedy introduced the bill. Senators Domenici, Reid, Grassley, Abraham, Robb, Collins, Boxer, Santorum, Sarbanes and Snowe are also sponsors of the bill. The bill was introduced in the House on January 19 of this year by Congressman Bobby Rush. House Banking Chairman James Leach and Ranking Member John LaFalce are among the bill's sponsors.

This program will allow the Fund to meet a growing need that we currently cannot address. This is the need to strengthen organizations that are providing critical training and technical assistance to the most vulnerable population of entrepreneurs: low-income and disadvantaged microentrepreneurs. One of the clearest lessons that has emerged from the first decade of microenterprise development in the United States is that provision of training and technical assistance is a necessary ingredient for building successful entrepreneurs. In the highly developed U.S. economy, starting and running a successful business requires a solid understanding of business regulations, tax issues, record keeping, and marketing. Many of the thousands of people who have started microenterprises to make ends meet do not have these skills.

Many of the organizations that provide training and technical assistance to microentrepreneurs are not currently eligible for Fund assistance because they do not meet our financing entity test under the CDFI Program. PRIME will allow the Fund to reach these organizations. The PRIME Act first, provides training and technical assistance to low income and disadvantaged microentrepreneurs; second, builds the capacity of microenterprise organizations so that they can better serve their low-income clients; and third, supports best practices research and development. I believe that PRIME complements the Fund's existing programs and will be a key tool for creating opportunity for low-income people.

CONCLUSION

Mr. Chairman, Members of the Committee, thank you for giving me the opportunity to provide you with this information on the Fund's current activities and its plans for the future. I look forward to working with you over the course of this year's appropriations process. I would be happy to respond to any questions you may have.

CDFI

Senator BOND. Ms. Lazar, the CDFI has not been authorized; is that correct? There is no legislation by which you can measure the accomplishments of goals because this has been an appropriated program created out of the hip pocket of the Treasury. It has not been reauthorized?

Ms. LAZAR. That is right. The program had been authorized originally in 1994 and the legislation sunsetted last September.

Senator BOND. One of the major concerns we have about the Fund is the ability to measure the impact of the programs. The GAO raised concerns about the impact of the strategic plan, the impact of external factors. How have you been able to measure the impact the CDFI Fund has on the economic development and revitalization of the depressed communities?

Ms. LAZAR. We have done a number of things. Why do I not start and I will ask Mr. Jones to add to it as we go along. The Fund requires each of its awardees to enter into an assistance agreement with us. We set up performance goals with measures for our awardees based on the 5-year business plan that they submit to us with their application. Those goals and measures are in large part

developed between our staff and the awardees after the award is made.

The GAO has suggested, when they came to visit with us last year, they made three recommendations for improvement in those goals and measures. They advised us that we should use greater accomplishment measures, outcome measures, if you will, rather than output measures. We have moved forward with doing that and adding at least one performance measure into the assistance agreements that reflects more of an outcome base.

We also have begun an evaluation system whereby we require all of our awardees to fill out a survey that we have recently pretested, and the data that I read to you earlier came from that survey. The survey will be a requirement to be submitted by all of our awardees on an annual basis. So we have good information that is coming from those surveys about the economic impact of our award.

We also were advised by the GAO to make sure that the measures that we set forth address key aspects of all the goals and we are moving forward with doing that. They also recommended that we provide baseline and target market information in our assistance agreements. And since last July when the GAO recommendations were final, we have been doing that. So we are working hard to make sure that we are consistent with the GAO recommendations.

On the strategic plan side, the GAO reviewed the strategic plan that had been prepared earlier. It was done for our fiscal year 1998 budget submission. We undertook last spring a very intensive process and a very consultative process to redo our strategic plan. That strategic plan has been sent up here to the Hill for consultation, and we look forward to talking with you about the contents of the strategic plan.

CONFLICTS OF INTEREST

Senator BOND. Thank you. We look forward to following up on that. As I mentioned earlier, I do congratulate you on a very effective job of dealing with the Fund's management deficiencies. It is nice to have a contrast where KPMG comes back and says that the financial controls are in place.

There is one serious issue that I must raise with you. It is been brought up by the Inspector General who rated a conflict of interest. I understand that you have taken some steps to address the potentials of conflicts of interest. The Treasury OIG has recently released a report and made some recommendations. They include training and materials for guidelines. What action have you taken to implement the recommendation on the conflicts of interest policy made by the Treasury OIG in their last month's audit?

Mr. JONES. We have undertaken several actions with respect to the OIG's recommendations as well as recommendations that we have received from congressional committees. One thing that we do is we use outside consultants to help us review applications. And all of the outside consultants have to disclose any relationships that they have with an applicant in a pool that they are about to review. We recuse them from that application as well as any other applications of the same category of institution. And so that way,

they are not only not reviewing an applicant with respect to which they have a conflict, they are also not reviewing an applicant that is competing against that application that they have a conflict with.

Internally, we also review all Federal individuals who are reviewing applications, fund staff as well as other Federal people. We get disclosure information from them as well and also recuse them from applications that there is a conflict with. So we are constantly keeping our eye on making sure, one, that there is no conflict of interest and, two, there is no appearance of a conflict of interest. And where there is, we take decisive and quick action to remove those folks from reviewing those applications.

PRIME PROPOSAL

Senator BOND. Thank you very much. Let me ask a question on the microenterprise program. I understand that in 1995 the White House directed the Secretary of the Treasury to take all appropriate actions to coordinate all microenterprise programs administered by the Federal agencies and departments, and the interagency coordinating body was to be chaired by the administrator of CDFI. To what extent has this interagency group been involved in the development of the PRIME proposal? How did the interagency group relate this to existing programs, for example, in the Small Business Administration?

Ms. LAZAR. Let me tell you a little bit about the interagency council, the interagency working group on microenterprise. We formed it in July of this past year, July 1998, and we brought together 12—

Senator BOND. It took 3 years to get that done?

Ms. LAZAR. I am sorry. I would have to say that is how long it took.

Senator BOND. For the immediate release, August 28, 1995. And it got going in 1998. Okay. We appreciate your coming on and taking that on.

Ms. LAZAR. We got started in July and I will say there had been some work done in anticipation of pulling together this working group. The first meeting of the working group took place July 8, 1998. We developed a mission for the group and we established three working committees.

Senator BOND. Without going into the group, did they develop the PRIME proposal?

Ms. LAZAR. No. The PRIME proposal had been developed prior to the group really forming.

Senator BOND. What was the relationship—developing the PRIME proposal, how did that relate to the programs of the Small Business Administration programs on micro loans and microenterprises?

Ms. LAZAR. In developing the PRIME program which was developed up on the Hill with input from us at the Fund, a good deal of time was spent trying to coordinate our efforts with other Federal agencies, trying to understand other Federal programs in this area. What distinguishes the PRIME legislation from other pieces of other programs is that it is really a training-led program rather than a credit-led program.

We are right now putting together a compendium of all the programs in the Federal Government that will be linked together through a Web site. This is part of the work that we have undertaken with the interagency work group. To that end, we are making sure that the programs are not duplicative but rather complementary with one another.

Senator BOND. I do believe the Small Business Administration has a technical assistance and capacity-building program already. And we will confer with our staff over there and submit some further questions because I am a little bit puzzled. It is a good idea but if it is being done once, that does not mean because it is a good idea, it ought to be done twice. We will work with our staffs on the Small Business side and perhaps submit some more questions for the record so I can get a better understanding of how this fills in an area that we are not already covering, or what the deficiencies are in these SBA programs.

I see that my opportunity to turn to other members of the committee for further questioning has deteriorated. At this point, I thank you for your testimony. I congratulate you on the good work that you have done and we will leave the record open.

There will be other questions, I am sure, from other members of the committee. I believe you will want to respond to the points raised by Senator Shelby in his statement for the record. That will be very helpful. And, as I said, we will have some further questions.

ADDITIONAL COMMITTEE QUESTIONS

Ms. LAZAR. Thank you very much, Senator. Thanks for having us.

[The following questions were not asked at the hearing, but were submitted to the Department for response subsequent to the hearing:]

QUESTIONS SUBMITTED BY SENATOR BOND

MICROENTERPRISE PROGRAMS

Question. In your fiscal year 2000 budget request, an initial funding of \$15 million is being proposed for a new microenterprise technical assistance and capacity building program called "PRIME." It is my understanding that there are already several microenterprise technical assistance and microloan programs throughout the federal government. In 1995, GAO identified seven other federal agencies and 20 specific federal programs that support microenterprise development. For example, SBA has been administering technical assistance and capacity building programs since 1992. The Administration is also proposing an increase to the SBA microenterprise programs to \$60 million in fiscal year 2000. I have also heard that some states and private foundations provide support for microenterprise development. I am concerned about creating a duplicative program within the Federal government, especially for an agency that does not have an established track record.

Could you please describe the objectives of "PRIME" and what distinctions this proposed program has from other existing programs?

Answer. The primary purpose of the PRIME Act is to build the institutional strength of microenterprise development organizations and programs and other qualified entities and assist these organizations to effectively meet the training and technical assistance needs of low-income and disadvantaged entrepreneurs. The proposed program would be a competitive grant program under which the Fund would provide funds to microenterprise development organizations, microenterprise development programs, intermediaries or other qualified organizations for the following purposes: (i) to provide training and technical assistance to low-income and disadvantaged entrepreneurs interested in starting or expanding their business; (ii) to

engage in capacity building activities in order to enhance their ability to serve low-income and disadvantaged entrepreneurs; and (iii) to engage in research and development activities aimed at identifying and promoting entrepreneurial training and technical assistance programs that effectively serve low-income and disadvantaged entrepreneurs.

PRIME would allow the Fund to meet a growing need that we currently cannot address. This is the need to strengthen organizations that are providing critical training and technical assistance to the most vulnerable population of entrepreneurs: low-income and disadvantaged microentrepreneurs. Many of the microenterprise development organizations that provide training and technical assistance to microentrepreneurs are not currently eligible for Fund assistance because they do not meet our financing entity test under the CDFI Program.

One of the clearest lessons that has emerged from the first decade of microenterprise development in the United States is that provision of training and technical assistance is a necessary ingredient for building successful entrepreneurs. In the highly developed U.S. economy, starting and running a successful business requires a solid understanding of business regulations, tax issues, record keeping, and marketing. Many of the thousands of people who have started microenterprises to make ends meet do not have these skills. PRIME would address this issue.

As you note, several agencies within the Federal government currently run microenterprise programs, and some states and private foundations provide support for microenterprise development. However, the overwhelming bulk of this support is in the form of loan capital. Support for microenterprise development organizations to meet the training needs of low-income and disadvantaged entrepreneurs has been minimal. PRIME is aimed at meeting such needs.

The SBA's microloan program currently focuses on lending to qualified intermediaries which in turn provide small scale loans to small businesses for working capital, materials, supplies or equipment. The intermediary may also receive grant funds in an amount that is no more than 30 percent of its SBA loan. The grant funds may be used by the intermediary to provide technical assistance to borrowers and prospective borrowers. In addition, SBA makes grants to non-profit entities that provide technical assistance. These technical assistance providers primarily assist clients to access capital by offering them marketing and management help. Finally, SBA offers training to intermediary lenders to enhance these lenders' capacity.

PRIME aims to meet the training and technical assistance needs of low-income entrepreneurs. It is a human capacity development strategy, rather than a credit and finance development strategy. The strategies are complementary, and are necessary to assist low-income people to enter the economic mainstream.

PRIME is targeted to some of our most vulnerable citizens. At least 50 percent of the grants made under the PRIME program must be used to benefit very low-income individuals, those persons with incomes of not more than 150 percent of the poverty line.

MANAGEMENT ISSUES

Question. Ms. Lazar, I am pleased about the progress the Fund has made in its management. It seems that you have been able to hire strong financial management leadership.

Could you please elaborate on how you were able to remedy the Fund's management problems? I would especially like to hear about how critical it has been to have a CFO and other financial management staff to deal with these matters.

Answer. Critical to success in remedying management problems was the Fund's organizational restructuring implemented in the fall of 1997. In addition to the Director, the restructured organization includes two Deputy Directors: a Deputy Director for Policy and Programs, responsible for Fund policy and programs and a Deputy Director for Management and Chief Financial Officer, responsible for management and administration functions. In addition, the Fund's Legal Counsel handles all of the legal matters of the Fund. The External Affairs Officer manages the Fund's outreach activities. This organizational structure enables the Fund to effectively manage its program, finance, management, legal and external affairs matters.

Simultaneously with restructuring, we focused on recruiting, developing and retaining high-caliber staff throughout the Fund. Our goal was to enhance the in-house capacity and expertise of the Fund's staff. Among other hiring, the Fund fully staffed a financial management unit, including a Financial Manager (controller), staff accountant, and budget officer, all critical to successfully performing the full range of federal financial management functions (e.g., planning, budget formulation and execution, accounting, internal controls, and auditing).

We also developed, implemented and completed an aggressive corrective action plan to address quickly the material weaknesses that had been identified by both our new CFO and KPMG during the fiscal year 1997 audit with a goal of achieving a “clean” audit for fiscal year 1998. Throughout the year, there was a constant management team awareness of and support for establishing and maintaining a strong management control environment within the Fund—key to an unqualified audit opinion. In addition, there was complete management involvement and participation in implementing the provisions of the Government Performance and Results Act (GPRA) and the integration of the Fund’s new strategic planning, performance planning, and budget processes.

Having a CFO and other financial management staff was critical in helping the Fund to successfully implement its corrective action plan and obtaining a clean audit opinion.

PERFORMANCE MEASURES

Question. Last year you indicated that the Fund, in its reporting process for its awardees, had created a rigorous process to allow you to understand the impact of the CDFIs at the community level and their capacity to sustain themselves over time.

Please provide some detailed results from this new process.

Answer. Since the Fund began making awards, we have required our CDFI awardees to submit quarterly reports, annual reports and financial statements. These reports enable the Fund to monitor the organization and financial condition of the awardees as well as understand the impact of the awardees on the communities that they serve. In 1998, we enhanced our ability to collect data on the impact of our awardees by requiring them to complete and submit an annual survey designed to collect detailed information on the accomplishments of the awardees and their capacity to sustain themselves over time and by conducting on-site, in-depth case study analyses of a number of the awardees and their communities.

In 1998, our survey collected performance and outcome data on 30 of our 31 first-round CDFI Program Core Component awardees. The Core Component is the largest of the CDFI funding programs administered by the Fund. The first-round awardees were chosen in 1996.

We began our evaluation on only first-round awardees because they have had at least a year to absorb the Fund’s investments and put them to work. Our sample of 30 first round awardees includes six credit unions, fourteen loan funds, three community development banks, three venture capital funds, two microenterprise programs, and two multifaceted CDFIs. Together, they received \$34 million in CDFI awards. What has our \$34 million helped these institutions to accomplish?

Our preliminary findings demonstrate that these awardees have accomplished significant community development impact over the past three years. For example, they have made \$565 million in community development loans and investments. These loans and investments have helped to: create or expand 1,895 microenterprises and 1,148 businesses; create or retain 12,412 jobs; develop 8,617 units of affordable housing, 98 child care centers serving 7,168 children, 17 health care facilities serving 32,723 clients and 170 additional community, cultural, human services and educational facilities.

Further, these awardees have provided business training, credit counseling, home buyer training and other development services to 10,641 individuals.

Based on our sample, 70 percent of the clients of the average 1996 awardees are low-income individuals. Sixty percent are minority individuals. Fifty percent are women. Fifty-three percent live in the inner city. Eleven percent live in rural communities. Thirty-six percent live in suburban areas.

Since receiving their Fund awards, the 1996 awardees in our sample have strengthened their capacities to deliver products and services to their target communities over time. Their total assets have increased by 122 percent, growing from \$473 million in the aggregate before they received their awards to \$1.05 billion in the aggregate in 1998.

The Fund’s case studies include on-site evaluations by the Fund to examine the CDFIs activities within the local economic development context. To date, we have completed three case studies. We anticipate completing several per year. The three case studies that have been completed thus far have been in Boston, Massachusetts, San Antonio, Texas and Santa Cruz, California. Our initial research suggests how CDFIs are positively affecting their communities.

In Boston, many of the city’s poorer neighborhoods did not benefit from the economic growth in the 1980s; their conditions actually worsened during that period. Yet these same neighborhoods have experienced notable improvements in the past

10 years, thanks in part to the work of CDFIs such as the Boston Community Loan Fund and the Local Initiatives Support Corporation, two CDFI Fund awardees. These CDFIs have provided financial and technical support to two of the city's most effective community development corporations (CDCs), enabling the groups to develop the scale necessary to carry out affordable housing and commercial projects that have revitalized long-declining communities such as East Boston and Egleston Square. Since the mid- 1980s, the CDFIs have provided over \$7.5 million to the CDCs, which in turn have: built or rehabilitated over 800 units of affordable housing; managed an additional 900 apartments and commercial properties; and operated after-school and other programs for 150 neighborhood youths. The CDFIs have also played a crucial intermediary role, working with bankers, city officials, and corporate and foundation leaders to encourage additional targeted investment in these neighborhoods. A number of bankers view the CDFIs as important partners in their community development work, crediting the CDFIs with effectively serving organizations and individuals that the banks cannot afford to serve.

Throughout San Antonio, public and private sector institutions recognize the important work of ACCION Texas, a CDFI Fund Awardee. From the city's Economic Development Office to local Chambers of Commerce to banks ranging in size from local independent banks to Chase Manhattan, ACCION is viewed as a crucial source of financial services for a previously neglected yet significant segment of the population: the low- and moderate-income microentrepreneurs who live and work in some of the city's poorest neighborhoods. ACCION is seen as the organization that can get loan capital into the hands of this underserved population and just as important—get it back. ACCION's 400 clients include plumbers, electricians, seamstresses, independent taxi drivers, and street vendors. They are primarily Hispanic. Without ACCION, they would not have adequate access to credit for their businesses. With ACCION, they are able to get the financial and technical assistance they need to expand their businesses and to make them more prosperous through better business management. ACCION's success in San Antonio has led it to begin opening offices around the state, in the Rio Grande Valley, Houston, Dallas, Austin, and Fort Worth.

In Santa Cruz county in California, the third largest community credit union in the nation, the Santa Cruz Community Credit Union (SCCCU), offers a wide range of financial products and services designed to meet the financial needs of a predominantly rural low- income population. The need is perhaps greatest in Watsonville, where the unemployment rate is 15.8 percent, more than three times the national average. Adding to the unemployment rate are the once-migrant agricultural workers who are settling in the area in increasing numbers, even though agricultural work remains seasonal. The employment and income figures highlighted the importance of focusing on the Watsonville population. With the help of its CDFI Fund award, the Santa Cruz Community Credit Union opened a branch in Watsonville so that it could ensure credit and banking access for all citizens, especially the Latino population.

SUBCOMMITTEE RECESS

Senator BOND. The hearing is recessed. Thank you.

[Whereupon, at 11:25 a.m., Thursday, March 11, the subcommittee was recessed, to reconvene subject to the call of the Chair.]

**DEPARTMENTS OF VETERANS AFFAIRS AND
HOUSING AND URBAN DEVELOPMENT AND
INDEPENDENT AGENCIES APPROPRIATIONS
FOR FISCAL YEAR 2000**

THURSDAY, MARCH 18, 1999

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, DC.

The subcommittee met at 9:32 a.m., in room SD-192, Dirksen Senate Office Building, Hon. Christopher S. Bond (chairman) presiding.

Present: Senators Bond, Burns, and Mikulski.

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

STATEMENT OF HON. DANIEL S. GOLDIN, ADMINISTRATOR

ACCOMPANIED BY:

**MALCOLM PETERSON, COMPTROLLER
LEE HOLCOMB, CHIEF INFORMATION OFFICER
ARNOLD G. HOLZ, CHIEF FINANCIAL OFFICER
JOHN D. SCHUMACHER, ASSOCIATE ADMINISTRATOR FOR EXTERNAL RELATIONS
EDWARD HEFFERNAN, ASSOCIATE ADMINISTRATOR FOR LEGISLATIVE AFFAIRS
JOSEPH H. ROTHENBERG, ASSOCIATE ADMINISTRATOR FOR SPACE FLIGHT
SPENCE M. ARMSTRONG, ASSOCIATE ADMINISTRATOR FOR AEROSPACE TECHNOLOGY
EDWARD J. WEILER, ASSOCIATE ADMINISTRATOR FOR SPACE SCIENCE
ARNAULD E. NICOGOSSIAN, ASSOCIATE ADMINISTRATOR FOR LIFE AND MICROGRAVITY SCIENCES AND APPLICATIONS
ROBERTA GROSS, INSPECTOR GENERAL
GHASSEM ASRAR, ASSOCIATE ADMINISTRATOR FOR EARTH SCIENCE**

OPENING STATEMENT OF CHRISTOPHER S. BOND

Senator BOND. Good morning.

The hearing of the Senate's VA-HUD-Independent Agencies Subcommittee will come to order.

This subcommittee meets today to review the fiscal year 2000 budget request of the National Aeronautics and Space Administration, or NASA.

We welcome Dan Goldin, NASA's Administrator and his staff.

I am always excited by what NASA does—the awe-inspiring visions which allow us to picture the far reaches of the universe, to see the birth of stars and galaxies, and to imagine the possibility of life existing throughout the universe.

This past year has continued that excitement, probably most emphatically with the return to space of Senator John Glenn and the successful launch of the first two elements of the International Space Station, which included the successful assembly of the Russian Zarya module and the U.S. Unity pressurized node.

I am optimistic, despite the many challenges facing NASA in the coming year, that NASA will have another exciting year of achievement and success. In addition, the administration's budget request for fiscal year 2000 has attempted to establish a more honest NASA budget. Over the last few years, the administration has failed NASA and the Congress by requesting budgets that underfunded priorities and pitted the escalating costs associated with the Space Station with the costs associated with Space and Earth Science Programs.

Nevertheless, with strong concerns voiced by both the ranking member, Senator Mikulski, my good friend and colleague, and me, the administration, at least within the NASA account, has begun to provide a more balanced and rational budget request by proposing some \$13.58 billion for NASA in the year 2000. While this is a decrease of \$86 million from the fiscal year 1999 appropriations, the President's budget does commit an additional \$180 million in fiscal year 2000 for the continued construction of the Space Station while providing balanced funding for the Space and Earth Sciences. Nevertheless, I expect this to be another very difficult year for funding decisions for the VA–HUD Appropriations Subcommittee.

Mr. Goldin, those who have been to previous hearings have heard this sad story. You should be no exception. I need to let everybody know what a tough year we expect to have, especially since the budget submitted by the President raises expectations by not structuring spending decisions according to fiscal requirements and program needs. We have significant funding needs that we must address in this subcommittee, ranging from medical care and increased costs of medical care for veterans, to climbing costs associated with housing for low-income Americans, to relief for victims of disasters.

We are not far enough along in the budget process to have an allocation for the subcommittee. So it is premature to discuss what levels of funding might be available to NASA. But you can be sure, with all of these pressures coming in other parts of our subcommittee's jurisdiction, it is going to be a tight year for allocations.

Moreover, we did not get the budget deficit under control by inventing new programs and priorities. The budget surplus belongs to the American taxpayers and, ultimately, priorities such as Social Security are going to have to be addressed first.

As we have learned, Federal spending must be responsible spending. NASA, as well as every agency, department, and office within the jurisdiction of this subcommittee, will have to justify fully its funding requests.

NASA's biggest priority remains the International Space Station. Despite the retirement of our good friend Dale Bumpers, the continuing escalating costs of the International Space Station, from \$17.9 billion to some \$24 billion, and likely more, at completion, will remain a point of controversy and concern.

Somebody will take up the cudgel, I am sure, to lead the opposition.

The problem is compounded by significant and continuing concerns certainly that I have and that others have expressed over Russia's ability to meet its financial commitment as a partner, coupled with questions over its ability to meet schedule and hardware commitments.

In addition, I have been very concerned that every year the funding for the Shuttle is reduced to continue to pay for the shortfalls and overruns of the International Space Station. And every year NASA assures us that safety issues for the Shuttle are not being short-changed.

For example, in fiscal year 2000, the Shuttle account will receive about \$20 million less than fiscal year 1999's appropriation.

Shuttle safety, the safety of the men and women who venture so heroically into space, must remain our highest priority. In addition, the next major issue of program debate in NASA is the future of space transportation, with additional investment in the Shuttle pitted against the development of Reusable Launch Vehicles, including the development of a Crew Return Vehicle for the ISS.

NASA is currently working with industry to develop a Reusable Launch Vehicle, or RLV, Program, that would be considered as a replacement program for the Shuttle, with a decision on the status of the RLV and the Shuttle due before the end of this century.

As we all know, the purpose of the RLV is to develop the next generation Reusable Space Transportation Systems, such as the Single Stage to Orbit, or SSTO, concept, under which a rocket attains orbit with only one stage, instead of the two which is more common today, carrying a cargo or crew. The purpose is to have a vehicle capable of returning to Earth, being serviced quickly, and flying again in a very short time.

Proponents believe the success of RLV will result in dramatically lower costs in accessing space, perhaps from the current \$12,000 per pound associated with the current Shuttle, to as low as \$1,000 per pound if our hopes and projections come out right on the Reusable Launch Vehicle.

But for the cost of going into space, the critical component of the success of a commercial space program, we need to insure that this debate begins now. With the exploding costs of the ISS as a reminder of the costs of exploring space, we need to find ways to justify the costs of these new technologies and have the private sector as a partner in developing these technologies.

Finally, I am very concerned about how NASA prioritizes programs and funding. We have been informed that a Hubble Telescope repair mission may be scheduled for the near future and that, because of failures of the gyroscopes, Hubble could stop being operational during this year.

Hubble is clearly one of the crown jewels of NASA, and the loss of its use for even a day would be more than unfortunate. Never-

theless, I understand that NASA is struggling with budgeting a repair mission in large part because it has used Hubble reserves for other program shortfalls.

I understand the risk of failure with the space mission because it is often cutting edge science. Nevertheless, NASA needs to budget its programs to anticipate needs like those of Hubble. We cannot continue robbing Peter to pay Paul. That is not an appropriate way to do business.

We clearly need to understand how NASA prioritizes its missions and activities and how funding decisions are made.

Finally, I conclude by applauding, once again, NASA on its many successes. I can assure you that I, and I believe all the members of this subcommittee and our staff look forward to working with NASA on its budget and programs.

Having said that, I now, with pleasure, turn to my colleague and ranking member, Senator Mikulski, for her statement and comments.

STATEMENT OF SENATOR BARBARA MIKULSKI

Senator MIKULSKI. Thank you very much, Senator Bond.

I am going to welcome you, Dr. Goldin, and the entire NASA team here as we consider our appropriations.

I am going to have a rather brief opening statement so that we can get right into the hearing. We have a vote on at 11:00.

I also want to acknowledge and express my appreciation to Senator Conrad Burns, who is actually on the Commerce Committee, which is the authorizer for NASA. Therefore, this is quite a lineup that you have here this morning, with authorizing and appropriating members here.

I really want to associate myself with many of the issues raised by Chairman Bond. But I will not elaborate on them in great detail until we get to the questions.

I am glad to see that the administration has funded NASA in a 5 year approach.

I am going to thank you, Dr. Goldin, for your work to insure that the out-year funding for NASA does not dip to a level that hollows out NASA programs. As you know, I have been deeply concerned about that.

Now with a stable request over 5 years, we need to take a look at what we are going to do.

I share Senator Bond's belief that we need to fund Social Security first, make sure that we set aside money for Medicare, because those two could really gobble up so much of our effort. But I do, I think, respectfully disagree with the other party that the money we are gathering in general revenues should not go for new tax cuts when we need to stabilize and modernize our programs. I'm not talking about new starts. But we have such a backlog of what we need to do to catch up in work, maintenance, and so on that I think "no new starts, no new tax cuts" might be a nice mantra.

Having said that, then, I want to say that not only are we looking for stable funding, but we are also looking for stability and safety in our programs.

We are pleased that NASA has included funding for the upgrades in the Shuttle's safety because it continues to be a top priority.

We also know that we are deeply concerned about the issue of the whole Space Telescope endeavor; for one, not only the funds for a new, next generation telescope, but I am very much concerned about Hubble.

We want to hear about the Hubble telescope. We want to hear about the mission that you are going to be doing, how it is going to be paid for and, once we do it, do we then truly extend the life of Hubble in a way that is reliable and sustainable. We will go into those questions.

The other continues to be—I see the flashing yellow light on my time—the other is the continued escalating cost of the Space Station. We now know that we are moving to assemble and we are dazzled by the pictures. But we are concerned, once again, about Russia as a partner in this.

As you know, Senator Bond and I asked you for a report on whether there should be new approaches. We had hoped to have that report in December so we could talk with the administration and so on. We want to hear from you on the report and why, quite frankly, it took you so long to give us the report so that we have it only a few days before the hearing, where we really could not give it the proper scrutiny.

But I know it will be the source of other conversations, some of which might be classified.

In terms of the Russians, I continue to be concerned about their missile transfer approaches and, therefore, their hand-to-hand complicit cooperation in the proliferation of the potential to deliver weapons of mass destruction.

There are many other issues that we want to talk about, and, of course, I will always be interested in the Goddard budget. But we are really interested in space science and Earth science because that truly is really why we are really here with NASA.

I could elaborate on this, but I would prefer to do it through the questions, knowing that Senator Burns will want to make some statements as well.

So we are glad to have your budget. We need to know how we are going to sustain it. We are also interested in the fact that I truly believe that, because of the situation in which we have been and the escalating costs of the Station, you have had to—I don't want to say "rob Peter to pay Paul," but you have certainly borrowed heavily. And if you have mortgaged the family farm, I think this is a good time to talk about it.

Having said that, I thought I would use an agricultural analogy in deference to you, Senator.

Senator BOND. Well, I'll tell you what—that dog will hunt. [Laughter.]

We need to block those metaphors and see if we can't avoid space interference from metaphors. [Laughter.]

With that, as Senator Mikulski said, we are very pleased to have the head of the authorizing team in the Senate, a member of this subcommittee, Senator Conrad Burns.

Senator Burns.

STATEMENT OF SENATOR CONRAD BURNS

Senator BURNS. Mr. Chairman, thank you. I have no statement, prepared statement. Because we are going to have a vote at 11:00, we should get Administrator Goldin and his directors' presentations this morning.

I share some of the same concerns that both of you have expressed.

However, Senator, we have changed the view of some folks on woofs. So if you need some woofs down in Missouri, why we know where to get them, how to transport them, and so on.

Senator BOND. You are putting them in the Space Shuttles, right? [Laughter.]

Senator BURNS. We want to send some to Missouri, don't we now?

Senator BOND. Are we on the same wavelength?

Senator MIKULSKI. I'm not going to jump in here. [Laughter.]

Senator BOND. I think we will not go there any further.

Thank you, Senator.

Dr. Goldin, we have your wonderful statement of about 25 pages in very small type. This is going to be great reading for us today. We will study it carefully.

I would appreciate it if perhaps you could summarize it for us in 10 minutes so that we will all get several rounds of questions before we get to our vote.

STATEMENT OF DANIEL S. GOLDIN

Mr. GOLDIN. Good morning, Mr. Chairman and members of the subcommittee. I am pleased to appear before you today to present the President's budget request for fiscal year 2000. And I am really pleased. For the first time in many years, NASA has a projected out-year budget that is higher than the budget year request.

I want to thank both the chairman and the ranking member for the support you have given this agency in working with the administration on this issue.

Funding has been added to the International Space Station's, Space Science and Future Launch. I am gratified by the administration's alignment of NASA priorities with the out-year NASA budget.

Nonetheless, the request of approximately \$13.6 billion for the fiscal year 2000 budget can be appropriately characterized as lean. It is below the fiscal year 1999 enacted levels and so tightly constructed that there are several areas where concerns have been raised and I heard a few of them.

Senator MIKULSKI. Was it deliberate that we turned out the lights?

Mr. GOLDIN. Yes.

Senator MIKULSKI. Is this because of a sun spot? [Laughter.]

Senator BURNS. It's Y2K. [Laughter.]

Mr. GOLDIN. It is not a Y2K bug. We were going to give you a multi-media presentation as I speak.

Senator BOND. Fantastic. Thank you.

[A video presentation was shown.]

Mr. GOLDIN. We will be glad to enter into a dialogue with the subcommittee today to address concerns you may have about our funding levels for aeronautics, academic programs, space launch and technology investments, or any other area in which you have concerns.

Mr. Chairman, we are proud of our accomplishments. Our agenda is ambitious, but it is achievable.

Last year, a new star appeared on the horizon. It is called "The International Space Station." With our international partners, we have begun to build this research center, which will be as big as the U.S. Capitol on orbit. The launches of Zarya and Unity and the spectacular EVA's to connect them mark the beginning of this next great human adventure in space.

NASA is more than about space. We are about life on Earth. Our technology enriches people's lives, like this child (indicating), who is wearing a suit to protect him from sunlight. You are seeing the first flower this child has ever picked.

Our Space Science Program is producing fantastic results as we keep driving down mission costs. We are in the middle of an intense launch period of 10 launches in 9 months.

Lunar Prospector, which cost only \$60 million for the entire mission, found indications of water ice on the moon, a still controversial finding.

Deep Space I is testing advanced technologies such as electric propulsion. Stardust will return samples of primordial material from a comet in interstellar space. Chandra will be our third great observatory in orbit. It will explore highly energetic bodies, like black holes and quasars.

Our Earth Science Program is experiencing the most ambitious year ever and is providing down to Earth benefits. We have a very ambitious program with almost a launch a month for the rest of the year.

For instance, our data helps improve agricultural management by identifying disease susceptibility, assessing soil moisture, and helping farmers determine how much fertilizer to use and where.

This year is very exciting as we launch Landsat 7. It will have many applications in agriculture, forestry, and regional planning. Terra will provide daily global measurements of ocean color and Earth's biosphere, key data for resolving unknowns in the global carbon cycle.

Quikscat, developed in just 12 months, will use ocean winds data to track movement of storm systems. This should lead to a significant advance in weather prediction.

In aeronautics, we are breaking through boundaries of flight. The solar powered, remotely piloted aircraft flew at a record breaking height of over 80,000 feet. The revolutionary X-33 is the flagship of our Reusable Launch Vehicle Program. You could see the oxygen tanks and the entire structure being built and the Aerospoke engine being tested.

NASA is doing more with less.

This committee has had concerns about the International Space Station hurting other programs. This chart (indicating) shows that by 2001, the Space Science budget alone will be greater than the International Space Station.

We have crossed over in fiscal year 1999 with a total science budget greater than that for the entire human space flight program. Recognizing this trend, the administration has included \$10 million for next decade planning in this budget to insure an appropriate vision for the future that integrates robotic and human exploration.

With funding for fiscal years 1999 and 2000, we are also continuing our Space Transportation Architecture studies to develop an investment strategy for reducing the cost of access to space by using commercial capabilities, Mr. Chairman.

Now I would like to share NASA's future plans with you. New challenges will require revolutionary approaches. We have embarked on a NASA-wide program to establish an intelligence synthesis environment. Our goal is to enable scientists and engineers who are in geographically dispersed areas to work together as a team in a totally immersive, controlled, real-time, virtual environment for end-to-end space design, development, test, manufacturing, and operation.

This will lower costs, accelerate development time, and increase mission success in times of ever decreasing budgets.

We will look forward to completing the construction of the International Space Station with our partners. This research center in space will include over 100 major pieces of hardware from 16 countries. These pieces will be delivered by 6 different vehicles from 4 different launch complexes around the world.

The availability of this lab in space will create new opportunities for long-term research. For example, biotechnology facilities will enable us to uniquely grow and study cellular structures, including living tissue and protein crystals.

The requirements of keeping a crew healthy in space so that we will be able to go to other planets in our solar system will lead to a whole new variety of medical technologies, including telemedicine techniques, that will have applications around the world.

One goal of our Space Science Program is to establish a virtual presence throughout our solar system, sending fleets of small spacecraft, rather than single large missions. This will include a sample return mission from Mars in the next decade. We will rendezvous with comets.

The next generation Space Telescope will build on Hubble's marvelous results. It should cost about one-fifth of what Hubble cost but be about 3 times bigger and 10 times more powerful. It will explore much longer wavelengths of key scientific interest.

In the future, NASA will have spacecraft, rovers, and probes in orbit around various planets and the moon, in their atmospheres around their surfaces, and burrowing underneath their surfaces.

We will require an inter-planetary internet to assemble and send back to Earth the tremendous amount of information that will be generated by these robotic emissaries. The first step at Mars is in this year's presidential budget.

Future Earth science will help us better understand our own planet. We will be able to see the Earth through different lenses showing water vapor, the biosphere, global cloud cover, ocean temperature, and crystal dynamics. Collectively, these views show us how the planet works as a system.

In the future, we will integrate detailed measurements at the global, regional, and local levels and combine them with predictive modeling. We hope to be able to understand and predict weather and climate on a seasonal, annual, and, ultimately, decadal basis.

Commercial applications will include agriculture, urban planning, disaster mitigation, environmental compliance, highway and pipeline siting, and resources management. A whole new industry is growing based on this work.

NASA will continue to push the frontiers of flight from general aviation to space access. We are developing aeronautics technology to help reduce the fatal accident rate by a factor of 5 in 10 years and a factor of 10 in 20 years.

For example, we are working advanced true interfaces that will make it easier for pilots to understand what is happening in and around the aircraft. We are working at putting air traffic control technologies in the cockpit to give pilots the ability to optimize their costs based on weather, traffic, and other factors.

With synthetic vision, pilots will be able to see the landscape no matter what the weather, day or night, decreasing the likelihood of accidents. This technology has applications for civil and military, commercial and private, large and small aircraft.

A new Ultra-Efficient Engine Technology program will push the state of the art in high temperature materials and combustion to lower fuel consumption and improve performance. We are looking to the future when there will no longer be a distinction between air and space travel. The X-43 is a flight experiment that will, for the first time in history, test a SCRAMjet at speeds of up to MACH 10.

Another concept we are studying is the rocket based combined cycle with magnetic levitation launch. This is not science fiction.

The revolutionary Reusable Launch Vehicle Program, a partnership with industry, is demonstrating technologies that could dramatically reduce the cost of launching a payload to orbit from today's roughly \$10,000 a pound to \$1,000 a pound while, at the same time, improving safety by a factor of 10.

Because NASA does not think small, because we plan for the long-term, not the short-term, this budget is not designed for the next decade. It is an investment in the next millennium.

PREPARED STATEMENT

NASA is proud to lead the way. This program is not for the faint of heart. NASA boldly pushes forward and performs to make America better. I am very proud and honored to lead the NASA team as we serve our country.

Here you are seeing a plane that will fly on Mars in 2003.

[The statement follows:]

PREPARED STATEMENT OF DANIEL S. GOLDIN

Mr. Chairman and Members of the Subcommittee: I am pleased to be here to present to you NASA's budget request for fiscal year 2000. It is a great time at NASA. This budget is the first budget for the 21st Century, a century in which humans will live permanently in space, on the International Space Station, and later perhaps beyond. Before we look ahead to the bright future, I want to lay the foundation by looking at the past. Our achievements, and yes, our problems, have prepared us for the future.

While the fiscal year 2000 request represents a decrease from the fiscal year 1999 enacted level, it is the first budget in five years which reflects an increase in the outyears. NASA has undertaken the challenge of the past five years by becoming more efficient. By prioritizing and, as required, cutting programs whose cost estimates were unrealistically low, schedules unacceptably long, or objectives no longer relevant to our mission, we saved valuable resources. With those savings, we started 9 new programs, like *Origins*, which could help us to answer fundamental questions about life in the universe, and *Advanced Space Transportation*, which could revolutionize space travel. The percentage of our budget devoted to science and technology has increased from 31 percent in fiscal year 1991 to 41 percent today, and is planned to grow to 45 percent in fiscal year 2004. At the same time, the percentage of our budget devoted to human spaceflight has declined from 48 percent in fiscal year 1991 to 40 percent today, and is projected to decline to 35 percent by fiscal year 2004. As a result, our budget is much more balanced.

We have made difficult choices to enable us to move toward an ambitious, but achievable, future.

We are managing our programs in a fiscally responsible manner. In 1992, a General Accounting Office survey of our major programs identified an average cost growth of 77 percent. We aggressively attacked the problem, and through management oversight, cost-cutting efficiencies and identifying the problems, have created positive results. *Cassini*, *Mars Global Surveyor*, *Mars 1998 Orbiter*, *Mars 1998 Lander*, *Stardust*, *NEAR*, *ACE*, and *Mars Pathfinder* have all been launched on time and within budget.

We continue to find efficiencies in operations while we improve safety; from fiscal year 1993 to fiscal year 1998, the annual Shuttle budget is down 29 percent, while the measures of Shuttle safety and performance have improved dramatically. I am proud of the NASA-contractor team that made this happen. Over the same time period, we have improved the manifest lead time by 28 percent, and increased the maximum lift capacity to the International Space Station by 71 percent.

Some of my favorite metrics are associated with science spacecraft design and development. In the early 1990s, the average cost of spacecraft development was \$590 million. From fiscal year 1995 to fiscal year 1999, it is \$205 million, and our goal for fiscal year 2000 to fiscal year 2004 is \$79 million. Development time has come down dramatically. In the early 1990s, the average development time for spacecraft was eight years. From fiscal year 1995 to fiscal year 1999, it is five years, and for fiscal year 2000 to fiscal year 2004 our goal is four years. Our annual flight rate went from two in the early 1990s to seven in fiscal year 1995–1999, and we plan on fourteen flights a year on average from fiscal year 2000 to fiscal year 2004. The missions are exciting, as attested to by extensive media coverage and hits on NASA's World Wide Web site, and scientifically sound.

We're not just talking about improvements, we're implementing them. Our *Discovery* series of spacecraft must be developed in less than three years and for less than \$150 million (FY 1992 dollars). *Stardust*, launched this month to gather and return samples from a comet, took 27 months to develop and cost \$120 million. We have 11 planetary spacecraft that, together, cost the same as the single *Galileo* spacecraft.

We have changed NASA as an institution. In 1995 we conducted a Zero Base Review (ZBR) which created Lead Centers and Centers of Excellence. This led to the elimination of redundant capability at our Centers and allows each Center to focus on what it does best. We redefined the role of Headquarters to define "what" NASA should do, and leave it to the Centers to figure out "how" to make it happen. We met our goal of cutting the total Government/contractor workforce at Headquarters by a factor of three, including cutting the civil servant staff in half. The total NASA workforce has come down from about 25,000 in fiscal year 1993 to 18,545 for fiscal year 1999 without a reduction-in-force.

We established a Program Management Council to catch cost overruns and schedule problems, and it is working in programs like *Chandra*, *Clark*, and *X-33/RLV*. Our new approach to contracting, holding contractors accountable for delivering on budget and on schedule, is working in programs like SFOC, CSOC and the TDRS-Hughes contract.

Within NASA, I have established safety as our most important core value. The safety ethic will permeate all NASA activities, on the ground, in the air and in space. Our current program is good; however, we can and will do better. I am working to ensure that all NASA managers understand what is expected of them when it comes to safety and health. Our managers and employees are stepping up to the challenge and working to identify and correct any deficiencies in safety and health as these are identified. No compromises shall be made when lives are at stake.

We at NASA are proud of our Strategic Plan. We have a vision for the Agency and roadmaps to get there. We look forward to working with this committee and others in the coming year as we revise and refine our Strategic Plan. Our fiscal year 2000 Performance Plan, which will be sent to you shortly, will include interim adjustments to our 1998 Strategic Plan. These changes reflect a special emphasis on safety and changes we have made in the NASA organization. Under the Government Performance and Results Act (GPRA), a fully updated Strategic Plan must be submitted by September 30, 2000. We intend to get an early start and will be working with you to enable the Committee's full participation in this process. GPRA, through its requirements for strategic and performance plans, has provided a structure for NASA to prove to the American taxpayer that we do what we say, and that what we do matters.

In order to assure that NASA can implement its Strategic Plan, we have underway a Core Capabilities Assessment, led by the Chief Engineer. The purpose of the assessment is to identify the physical and human assets required to deliver on the established Mission Areas and Center of Excellence assignments identified in the Strategic Plan. We will use the results of the assessment in formulating the fiscal year 2001 budget.

We had a very exciting year in 1998, full of new discoveries and heroes, and a celebration to commemorate our 40th anniversary. The sun rose on the International Space Station with the launch of the first element, Zarya (Sunrise), in November, and the world watched as our astronauts connected the U.S. Unity node to it in December. John Glenn returned to space in October for a nine-day research mission. We now have images of the faintest galaxies ever seen. We launched the Mars Climate Orbiter, the third mission to that planet in as many years. The Tropical Rainfall Measuring Mission, a cooperative mission with Japan launched last year, will revolutionize our knowledge of how storms and hurricanes form and dissipate and enable new weather forecasting methods. The U.S.-Canadian Radarsat created the first detailed radar map of Antarctica. We took atmospheric flight to new heights as the remotely piloted Pathfinder aircraft surpassed 80,000 feet. We continued to push the technology to lower space launch costs, making the first selection under the new Future-X program, which is the next step in the space access revolution. This is just a sampling; I will discuss in more detail the achievements of NASA's Enterprises later in the statement.

We see where we have been; where are we going from here?

In five years, the International Space Station (ISS) will be complete and serving as an outpost for humans to develop, use, and explore the space frontier. The ISS will greatly expand research opportunities, leading to exploration breakthroughs, scientific discoveries, technology development and new space products. We will continue to safely fly the Space Shuttle—the workhorse to support assembly for the Space Station. While we do this, we will make fundamental decisions on the long-range strategy for sustaining human access to space through upgrades to the Space Shuttle, or through replacement of the Space Shuttle. We will stay on the road to commercializing space operations, including space transportation, space communications, and the International Space Station. As we transition from operations to core R&D functions, we will lay the groundwork for decisions on extending human presence beyond Earth orbit.

In Space Science, we are poised on the edge of a new undertaking aimed at helping us answer some very old questions: What is our place in the cosmos? How did we get here? Are we alone? You first heard about the Origins program a few years ago. It is time to turn Origins into a reality. In the not-too-distant future, we will move from the planning stages to actual launch and operations of a number of Origins missions. These missions include powerful telescopes to find the earliest structure in the universe, to search for planets around other stars, and to look for potential evidence of life on these newly discovered planets. They also include robotic probes to Mars, Europa, and other targets in the search for the beginnings of life in the backyard of our own solar system. The data gathered from these new missions combined with what we continue to learn about the mysteries of the deep universe and our own Sun from ongoing missions should help us begin to unravel the answers to these questions that are as old as humankind itself. Our goal is simple—to do what no generation before us has been able to—understand our place in the cosmos.

Closer to home, through the Earth Science Enterprise (ESE) we will develop a comprehensive understanding of the total Earth system and the effects of natural and human-induced changes on the global environment. To accomplish this, we are drastically shrinking the size, cost and development time for missions in the next decade. But NASA is not going to stop with just smaller, cheaper versions of today's science satellites or be confined to low-Earth orbit. The state-of-the-art in instru-

ment and spacecraft technologies points to the near future when present-day thousand kilogram, cubic meter satellites are replaced by constellations of micro and nano-satellites with instruments on chips. These advanced satellites will not operate independently of each other—they will be intelligent constellations working together to provide the views having the temporal and spatial resolutions users want. They will be capable of on-board data processing and direct downlink of information to users' desktop computers in near real time at the cost of long distance telephone calls. While accomplishing our science objectives, these advanced satellites will enable the next great advances in weather and climate prediction, improve agricultural productivity, and advance the growth of the U.S. commercial remote sensing industry.

With the Aero-Space Technology Enterprise, NASA seeks nothing less than to revolutionize the way we travel to neighboring cities, countries and planets. The benefits of the communication revolution we are living through today will only be fully realized when it is accompanied by a transportation revolution. In a "wired" economy, we need to move people and goods more safely, more quickly, more efficiently, and with less environmental impact. Today, NASA is concentrating on these public goods issues in partnership with the aviation community. Working with the Federal Aviation Administration (FAA), airlines and industry, we are going to create a commercial aviation system that is safer, more efficient and friendlier to our communities and our globe. And while we are revolutionizing aviation, by significantly reducing the cost and increasing the reliability of space transportation, we will open space to human endeavor. Think of the science missions we do today, and then imagine space transportation systems that support faster missions with three or four times the amount of science at lower cost. Imagine the commercial opportunities that will develop in earth orbit for communications, materials science and pharmaceuticals, space-based power and other applications when the cost is one tenth or even one hundredth of today's costs. That is what we are working for.

We understand the road ahead presents challenges. First among these is keeping our promises on key programs such as International Space Station and the Earth Observing System. This will require in the first case flexibility and determination, and in the second case new information technologies and management approaches. Another challenge is within NASA itself: the design of the NASA organization, the skills of our workforce, the availability of research and technical facilities, the evolution of existing assets, and our interactions with customers, partners, and suppliers must reflect and support the changing nature of our programs. For instance, the emergence of "virtual" structures—collaborative and geographically dispersed teams—to conduct work requires new concepts of organization and management. And our emphasis on commercializing operations while focusing on R&D requires new ways of dealing with customers, partners and suppliers. The third major challenge I see for NASA is that of "continued relevance." Fundamentally, NASA needs to continue to benefit the taxpayers who foot the bill for a vibrant aeronautics and space program. To meet this challenge, we need to remain focused on our ultimate customer, the taxpayer, while doing a better job communicating the outcomes and benefits of our programs. Mr. Chairman, I believe NASA is poised to meet these challenges and achieve our vision for the future.

FISCAL YEAR 2000 BUDGET

This budget is another important step on NASA's path back to its roots in research and development, an important step towards achieving the vision I just laid out. The fiscal year 2000 budget provides stability in the outyears, and strikes a balance between upholding our commitment to the International Space Station (ISS) and advancing research and technology.

All of you are aware of the challenges facing us and our International Partners on the ISS program. This budget reflects an Administration policy decision to reduce the level of risk to the ISS with a net increase of \$1.4 billion over the next five years, including \$349 million more for fiscal year 2000 alone. We have enhanced Station budget reserves, are developing a robust Russian Contingency Plan, which includes use of the Shuttle for ISS reboost, development of a U.S. propulsion module, and additional Shuttle launches for logistics support. While advancing the ISS, we have preserved NASA's other core research activities and are investing in new technology initiatives that will provide robust options for exciting NASA missions in the next decade.

As ISS brightens the sky, so will many, many science missions funded in this budget. We are in the middle of launching ten Space Science missions in nine months. With the funds provided by the Administration in this budget, we will be developing Self-Sustaining Robotic Networks. Building on the enormous success of

Mars Pathfinder, these self-tasking, self-repairing, evolvable networks of small, highly mobile machines will give us the permanent “virtual presence” outposts we need to achieve high priority Origins science objectives on Mars, Europa, Titan, Callisto and other key points throughout the solar system. Thanks to Administration investments, we will also be developing the other end of the spacecraft technology spectrum in Gossamer Spacecraft. These are lightweight, large-scale, deployable spacecraft that will enable revolutionary, light-gathering capabilities for solar sails, telescopes, and power collection. Through Mars Micro-Missions and a Mars Network, the Administration is also supporting enhancements to the baseline Mars Surveyor program that greatly increase the quality and quantity of the Program’s science return and the Program’s opportunities in public education and exploration.

In recent days, I have accepted a recommendation from my senior management that NASA revise its previous plan for the next Hubble Space Telescope (HST) servicing mission (SM-3), to undertake an expedited servicing mission in October 1999, and a second servicing mission as soon as operationally feasible. The need for a mission to ensure continued HST science operations has arisen suddenly because two of the remaining five operational gyroscopes in the telescope’s guidance system have malfunctioned in the past six months. Although the loss of gyroscopes is expected over time, the recent loss of two, in rapid succession, leaves the Telescope one failure away from a total shutdown of science operations. The spacecraft is not in danger, and will remain safe until a repair mission can be launched. However, a shutdown in science operations would be a severe blow to the scientific community, as Hubble is arguably the most productive, and certainly the best-known, astronomical science facility in the world. Developing and executing this servicing mission within seven months is a challenge, and would not have been possible if it were not for the fact that training has been ongoing for the previously planned servicing mission. Furthermore, the HST replacement hardware required for this expedited servicing mission has been budgeted for in the fiscal year 1999 and prior budgets. We are in the process of identifying offsets to accommodate the costs of this expedited mission, and will submit a revision to our fiscal year 1999 Operating Plan to the Committee in the near future.

We will launch eight Earth Science missions this year, including the first two Earth Observing System missions. NASA will continue to contribute to the “Digital Earth” effort, by fusing Earth Science data, socio-economic data, and other data sets that can be “geo-referenced” and used to communicate a tremendous amount of information to scientists and non-scientists.

A broad new technology initiative I am particularly excited about is the Intelligent Synthesis Environment (ISE) that will revolutionize the way NASA conceives, plans, and develops its missions. In today’s engineering environment, we and industry take too long to develop our missions and effectively commit about 90 percent of cost very early in the development cycle when we only have about 10 percent of total design knowledge. Over the next five years NASA will research, develop, and implement the tools and processes to dramatically reduce spacecraft development time while creating much higher confidence in performance and total life cycle cost estimates. ISE will exploit emerging advances in ultra-high speed computing, advanced communication networks and totally new analysis methods; it will allow us to “virtually” build and test vehicles and systems before we spend money on expensive hardware. When fully deployed, ISE will enable geographically dispersed scientists and engineers to function as an integrated, collaborative team with the understanding and knowledge necessary to develop complex missions faster, with better-understood risk and much lower life-cycle costs.

We are continuing to focus on high-priority aeronautics research, aggressively pursuing our goals in aviation safety and systems capacity as well as next-generation design tools. And our pursuit of cheaper, more reliable space transportation for the next century continues with our Reusable Launch Vehicle technology program and the ongoing, industry-led Space Transportation Architecture Study (STAS). This Study was initiated last year to help us develop an investment strategy for reducing the cost of access to space by using commercial capabilities. The study is assessing: (1) if the Space Shuttle should be replaced; (2) if so, when the replacement should take place and how the transition should be implemented; and (3) if not, what upgrades should be made to continue safe and affordable flight of the Space Shuttle. We awarded study contracts to the Boeing Corporation, Kelly Space and Technology, Lockheed Martin Corporation, Orbital Sciences Corporation, and Space Access—representing the entire spectrum of players in the launch vehicle business—to solicit their assessments of future options to that could feasibly commercialize NASA’s space launch requirements. The industry teams gave NASA their final reports in late January. These results are being independently assessed and will be integrated

by an in-house team into space transportation architecture options. Over the next few months, additional work will be tasked to refine and further develop some of these options. NASA has set aside a portion of its outyear budget to provide resources for achieving a reduction in future launch costs, while funding the Space Shuttle Program at levels which accommodate essential safety obsolescence mitigation. The STAS will help us understand how we can make investments to leverage commercial launch capabilities that transition us away from owning and operating space transportation systems and toward private sector competition for NASA's launch requirements. From these options, the NASA Space Transportation Council will make recommendations this summer to me concerning a future space transportation investment strategy. We expect to continue to invest in critical technologies that reduce financial and technical risks for competing concepts leading to a competitive selection of a preferred approach or approaches in the 2002–2005 timeframe. I will make recommendations in this regard to the Administration this fall as part of the fiscal year 2001 budget process.

We have taken aggressive actions to ensure that our missions, systems, and supporting infrastructure and facilities are not disrupted by the transition to the year 2000. As of March 15, 1999, 93 percent of our 158 mission critical systems are, or have been made to be Y2K compliant. NASA has completed renovation and validation on all but one of the 101 mission critical systems we are repairing (Y2K work on the SOHO ground system has been deferred until full recovery is complete). We will complete implementation of planned repairs and replacements for mission critical systems by the end of March. In addition, we have repaired almost 350 non-mission critical systems, validated over 6000 commercial products, and tested over 52,000 workstations and servers. No significant Agency asset has been untouched.

While these accomplishments are noteworthy, NASA is going beyond stated requirements to ensure our missions and programs are ready for the new millennium. During the remainder of 1999, NASA will conduct a suite of extensive end-to-end tests that include interfaces to external infrastructure outside NASA control (e.g. electric power grid) to validate our Y2K operational readiness. For example, we will be executing a series of end-to-end tests, culminating in a Space Shuttle pad test, to verify that all aspects of the Space Shuttle program will be functional in the Year 2000. As part of this test, we will run a pre-launch countdown (to L+5 seconds) with a vehicle physically on the pad and all supporting systems in a Y2K configuration. For the International Space Stations, we are conducting an end-to-end test with Mission Control Center-Houston, Mission Control Center Moscow, and the supporting networks. We are also conducting a series of twelve end-to-end tests to demonstrate the readiness of command, tracking, telemetry, and data services supporting all NASA missions, including NASA's Deep Space Network, Ground Network, Space Network, and NASA Integrated Services Network. We will continue to conduct end-to-end tests for Space and Earth Science missions similar to the recently completed Cassini test. This test demonstrated end-to-end compliance by flowing data in a Y2K environment from a Deep Space Network facility at the Goldstone complex all the way to two end user sites at John Hopkins University and in England. In addition to ensuring compatibility between NASA's systems and external infrastructure, these end-to-end tests will provide added confidence regarding the operations of internal NASA systems.

As a further assurance, each NASA Enterprise and field Center is preparing business continuity/contingency plans to provide an acceptable level of NASA functions in the event of failures of internal or external assets or services due to Y2K anomalies. During the rollover weekend, we will have additional "Response Center" staff on-site at each field Center and Headquarters. We are also establishing strategies for all missions for the selective quiescence of facilities and systems, including restriction of spacecraft commands during the rollover. NASA is committed to ensure that the Agency transitions safely to the new millennium with zero failures or significant malfunctions and that any unforeseen discrepancies are resolved with minimal impact on normal operations.

We are excited about what the future holds for NASA. The fiscal year 2000 budget of \$13.6 billion provides not only continuity and stability, but also a moderate investment in far-term technologies and planning. This vote of confidence from the President that we are ready and energized to tackle new challenges in the new millennium is a challenge we proudly accept.

NASA'S ENTERPRISES

Human Exploration and Development of Space Enterprise

International Space Station.—The International Space Station (ISS) has become a reality. The foundation, befittingly named Zarya, for it marks the dawn of a new

era, was lifted to orbit aboard a Russian Proton launch vehicle last November. A month later, Unity was carried to orbit aboard Shuttle Endeavour and berthed with the Zarya module. Before long, passageways from Unity will link to other chambers such as: Destiny, the U.S. laboratory; the Russian Service Module; and the airlock.

Astronauts James Newman and Jerry Ross made it look easy, connecting umbilicals providing power and communication links from Zarya to Unity, bringing Unity's on-board systems to life. This is the first time ever that two such complex international spacecraft—built 10,000 miles apart, and assembled permanently in orbit over a period of a few short days—has been accomplished. We understood that the complex, international nature of this venture would present unprecedented challenges, because we would not be able to perform integrated testing of all international elements on the ground. The Zarya/Unity mating was truly an outstanding effort by the NASA/RSA team. Many challenges were overcome to reach that moment, and we know that many formidable tasks lay ahead. Since the beginning of the International Space Station Program, we have worked through many questions and uncertainties with our partners to achieve definite, measurable, and notable forward progress. In 1994, we were moving out of the design phase and into manufacturing. By 1997, we began to see major subsystems and elements take shape as we entered into test and validation activities. We began to integrate these systems with the Shuttle fleet. Today, while the Boeing developmental effort is over 80 percent complete, we continue to have elements in all phases of development, and operational elements on orbit. The International Team has demonstrated that it is fully committed to working together to overcome new challenges as they arise, to assure safe design and operations and to make the ISS a reality.

RUSSIA

When provided with adequate resources, the Russian Space Agency (RSA) has demonstrated worthy performance. However, despite a high level of commitment by RSA, Russia's fiscal realities continue to impede RSA's ability to deliver its substantial contributions to the ISS in a timely manner. Those contributions include propulsive attitude control, reboost, early crew quarters and life support, crew rescue, and command and control during the early assembly period. NASA has plans for U.S. capabilities in all these areas, which provide backup and in the long-term make ISS operationally more robust. But the costs of delaying the assembly until these U.S. capabilities are available would be significant; the prudent course is to continue to seek Russia's contributions.

NASA's approach to contingency planning has been to incrementally fund activities that permit station development to continue to move forward, although not as originally planned, should the planned contributions of our ISS partners not be delivered as scheduled. Our Contingency Plan to mitigate the financial and schedule risk from potential shortfalls in Russian contributions consists of: (1) building up U.S. capabilities as backup to protect against possible Russian shortfalls, which will also make the ISS more robust; and, (2) potential purchases from RSA in specific areas where Russian goods and services are of value to the United States.

In October 1998, to provide funding stability to RSA, NASA purchased for \$60 million valuable crew research time and stowage space in Russian elements of the ISS. To mitigate further schedule disruptions and cost growth, NASA is considering plans to continue contracting with RSA for additional goods and services of value to the U.S. We are carefully monitoring three areas before we make decisions regarding any follow-on contract with RSA for goods and services: (1) confidence in the Service Module launch schedule, based on successful testing, shipment to Baikonur, and funding flow; (2) clarity on the Russian Government plans for the future of the Mir, specifically including validation that any extension of Mir operations will cause no interference with Russian Government funding for their commitments; (3) clear understanding from RSA that other Russian hardware and vehicles they have committed for ISS are being produced. NASA has budgeted \$100 million in fiscal year 1999 to procure goods and services, which could include a Soyuz vehicle needed by the United States to enable a 6-person ISS crew prior to the deployment of a U.S. crew return capability. However, this budget includes no provision for purchases from Russia in fiscal year 2000 and beyond. We will continue to monitor the overall Russian situation in this regard.

The Interim Control Module (ICM), another element of NASA's contingency plan, can provide propulsion and attitude control capability. Through innovative Shuttle flight planning, NASA has developed an "each flight" reboost capability, under which NASA could, if necessary, offset as much as a 30 percent shortfall in Russian Progress vehicle propellant logistics. We are modifying the Orbiter fleet to enhance this Shuttle reboost capability to both increase flexibility of reboost as well as in-

crease the propellant shortfall offset to at least 50 percent. When coupled with the ICM's capabilities, Shuttle reboosts will provide needed contingency protection to safely maintain elements already in orbit, and allow us to continue ISS assembly in the event of Russian shortfalls until a U.S. permanent propulsion module can be deployed. As a result of our review of the Propulsion Module requirements and implementation plan on February 17, we have authorized the contractor to proceed with procurement of the next set of long-lead parts, and to prepare for a Systems Requirements Review later this month. Delivery of the Propulsion Module could be as early as fiscal year 2002.

Relative to the Service Module, Mr. Koptev, RSA's Director, informed me last month that despite running Service Module (SM) integration tests around the clock and on weekends, some schedule slippage has occurred due to normal technical difficulties. Our ISS management team will be traveling to in Russia for a General Designers Review and Service Module roll out prior to shipment to the launch site next month. At this meeting we will gain better insight into the progress of the SM, allowing the partners to evaluate a revised launch date for the Service Module. During our assessment last April, we knew that the July 1999 schedule for SM launch was aggressive and that a September date was possible. This slippage does not impact the elements already in orbit.

MIR SPACE STATION

Over the last six months, Russian news media have been reporting on the possibility of extending the life of the Mir space station. RSA has repeatedly made clear that the Russian Government's top priority for human space flight is the ISS. Any potential extension of the Mir program would require private funding and must not in any way impact Russia's ability to meet its commitment to the ISS program. In mid-January, Russian Prime Minister Primakov signed a decree outlining the conditions under which Mir could be extended on orbit on a commercial basis. RSA indicated that a final decision on a potential extension of Mir would be made in the Spring timeframe, depending on the success of finding a commercial investor. Assuming no investors come forward, RSA has stated that it intends to deorbit Mir in late summer. RSA has publicly stated that, currently, there are no investors coming forward. NASA is working closely with RSA to understand the status of their Mir deorbit plans, and related implications to their ISS commitments.

ISS BUDGET

Last year, the Committee heard from an outside task force of independent experts on the projected U.S. cost for the ISS. The Task Force report specifically highlighted the extraordinary level of complexity inherent in the ISS and concluded that the Program had made "notable and reasonable progress over the past four years" and faced no extraordinary or programmatic "show-stoppers." Nonetheless, the report concluded that Program cost and schedule projections were optimistic given the challenges ahead, partially due to domestic cost increases and partially due to the uncertain status of the Russian contributions.

We recognize the validity of findings of this Task Force, particularly in the resources needed for increased risk mitigation, schedule protection, and crew return capability. In my October 7, 1998, testimony before the Committee on Science, I stated that the Agency would require additional resources to continue forward with this valuable laboratory in space. I am happy to report that the President's fiscal year 2000 budget request provides an additional \$349 million in fiscal year 2000, and a total net augmentation of \$1.4 billion over five years, reconfirming the Administration's strong support of the ISS. We also recognize the recommendations of the Task Force in a number of management areas, and recognize our fiscal responsibility to the American taxpayer to balance all aspects of this program and manage within the resources available. The Administration has highlighted this responsibility by establishing the management of risks in development of the ISS as one of the Administration's Priority Management Objectives in the President's fiscal year 2000 Budget. We have already begun to make management improvements, including the initiation of a new management review process for those activities not under the prime contract, and are committed to making continued improvements. We are also making schedule adjustments and rephasing some content to limit the financial augmentation required.

DEVELOPMENT STATUS

In 1999, development activities are phasing down, while operations and research utilization activities are escalating. The fiscal year 1999 vehicle development budget is nearly \$600 million below fiscal year 1998, and the number of contractors sup-

porting the program is several thousand less than at the peak of the development effort. This trend will continue this year, with several thousand additional contractors transitioning to other tasks, such as sustaining engineering or other non-ISS work. ISS operations planning is now well underway. In fact, NASA is already working plans for operations that will occur in fiscal year 2001. Mission Control Center-Houston is already operational, and has overall authority and responsibility for the safety and operations of the ISS and crew. Mission Control Center-Moscow is currently performing the actual uplink of commands, and will continue to do so until U.S. communications and control systems become fully operational with the U.S. Laboratory delivery to orbit in fiscal year 2000.

Near-term, high visibility activities this year include the flight of critical ISS spares and an external Russian cargo crane to be flown in May 1999. This flight will be followed by the launch of the Russian Service Module, providing the early crew quarters and ISS propulsion systems. Next, another Shuttle logistics flight is scheduled, followed by Shuttle flights to assemble some of the U.S. external framework, electronics, communications, attitude control and thermal systems prior to flight of the first crew in early 2000.

Near-term hardware development activities are focused on completion and delivery of the U.S. airlock. The ISS involves many systems which entail multiple, identical elements, such as the photovoltaic arrays, of which four are planned. For the most part, the high-risk, first elements of these systems have been delivered to KSC. This year will begin the delivery to KSC of many of the subsequent, identical items. We will continue Multi-Element Integration Testing (MEIT) effort on the next complement of U.S. elements: the initial truss segment, the early thermal control system, the first Photovoltaic Arrays, the Canadian-built ISS robotic arm and the U.S. Laboratory, Destiny.

In 2000, we will launch the first ISS crew to orbit, as the launch of the first Soyuz to ISS enables permanent crew capability for three people. Microgravity research capability will be available in the spring of 2000, with the outfitting of the U.S. laboratory, Destiny. When Phase II of ISS is complete in late fiscal year 2000, the Station configuration will include Unity, Destiny, pressurized mating adapters, power, airlock, and Multi-Purpose Logistics Module (MPLM); Zarya, the Russian Service Module and Soyuz; and the Space Station remote manipulator system (SSRMS) provided by Canada. By early 2003, the ISS configuration will also include the second U.S. node, truss segments, three solar arrays, the Japanese Experiment Module (JEM) and resupply/support vehicles. In 2004, U.S. Station development efforts will near completion, with the delivery of a six-crew capability on orbit.

INTERNATIONAL PARTNERS

The work of NASA's other international partners on the ISS program is proceeding well and according to plan. All of the partners have stated their commitment to do whatever possible to help Russia fulfill its obligations to the ISS program and to ensure that the program remains on track.

NASA is also working aggressively with all of its partners to ensure that all ISS components are fully Y2K compliant. When I attended the historic launch of Zarya from Baikonur on November 20, 1998, I had the opportunity to meet with the head of each partner agency on the Year 2000 issue. Each agency gave an in-depth presentation on their work to ensure full Y2K compliance, and reiterated the commitment to achieve compliance early this year. Although I have received Y2K assurances from each international partner, I do, however, remain concerned about the health and welfare of their critical infrastructure (e.g. power, telecommunications), and how it may potentially affect ISS activity. As described above, our business continuity/contingency plans are intended to ensure an acceptable level of NASA functions in the event of failures of external infrastructure in any of the partner countries.

The various international components of the ISS are progressing nicely. The Canadian Space Station Remote Manipulator System, or "Robotic Arm," will be shipped to Kennedy Space Center in April, after stringent testing. The European Laboratory development is on schedule and NASA is continuing discussions with the European Space Agency (ESA) about the possibility of ESA providing critical crew rescue vehicle components. The second Multi-Purpose Logistics Module (MPLM), built by Italy, is scheduled for delivery to Kennedy Space Center in August. The Japanese Experiment Module and Centrifuge Accommodations Module (CAM) development is on schedule. Finally, the Brazilian Space Agency has selected its prime contractor and is proceeding with its hardware contributions.

RESEARCH UTILIZATION

We are continuing to make progress on ISS research planning and facilities development. However, because of schedule delays and the need to bolster development reserves, we have slowed the development of research equipment. Assuming that the Service Module is launched by September 1999, we estimate that the Russian-driven delay to the assembly sequence already has slipped utilization flights on average 6–8 months. The research funding for ISS is still growing and will, in fact, double by fiscal year 2001 over fiscal year 1998 levels, but the rate of growth is slower than previously planned. As a result, some funding for research facility development has been rephased from fiscal year 2000–2003 into fiscal year 2004 and beyond.

We are focused on developing most of the permanent research facilities, while leaving adequate margin in the research utilization budgets for some investigation-specific hardware. Our approach is to: protect research facility hardware deployment and schedules; maintain multi-use hardware schedules (EXPRESS Racks and Pallets, Window Observation Research Facility); maintain planned flight investigation buildup rate to the maximum extent possible; fund research utilization (experiment unique hardware and support), sub-rack integration at approximately 70 percent of that previously planned; and fund payload operations and integration (analytical integration, operations facilities, training) at approximately 85 percent of that previously planned. The ISS program will continue to emphasize the early research program by utilizing recently added Shuttle logistics flights, accelerating the Human Research Facility, and adding two EXPRESS racks to assembly flights 5A.1 and 6A in fiscal year 2000.

ISS COMMERCIALIZATION

We were pleased with the passage of the Commercial Space Act of 1998 (Public Law 105–303). This visionary step will serve the American people well by demonstrating our government's commitment to the economic development of space. NASA is dedicated to continuing its leadership in this important area. In conjunction with the Act, we released our draft Commercial Development Plan for the International Space Station last November. The ISS represents a platform in space of unprecedented capability. We envision that it will become a seed for emerging commercial activity in the coming decade and we are moving ahead to ensure this outcome.

Our goal is to serve as a marketplace foundation and stimulate a national economy for space products and service in low-Earth orbit, where both demand and supply area dominated by the private sector. In partnership with the private sector, we plan to initiate a series of pathfinder activities that could lead to businesses with profitable operations over the long run and that become self-sustaining without public funding. One area we are examining closely is the provision of ISS resupply and servicing by multiple commercial competitors. Our draft Commercial Development Plan provides a summary of both our overall strategy and potential tactics we intend to pursue in the coming years. It will also benefit from a private sector review, now underway, and the independent market studies and cost analyses which we have recently initiated. We look forward to reporting our progress as we open the path for 21st century economic expansion in space.

X-38 AND CRV

The Crew Return Vehicle (CRV) will provide a seven-person crew return capability for the ISS, beginning no earlier than 2004. The Space Transportation Architecture Studies (STAS) are assessing the role of systems that provide not only return, but also delivery of humans to orbit in a range of potential future architectures. Based on the STAS architecture concepts, NASA is evaluating the potential of a CRV to evolve to serving a dual-purpose role, or evolve to a Crew Transfer Vehicle (CTV) that can deliver and return humans. NASA will finalize the CRV requirements and issue a draft Request for Proposals (FP) for comment before finalizing the plan for the CRV. The results of the STAS and the potential role of a CRV/CTV in potential future architectures will be integrated into the final CRV plan.

Space Shuttle

The Space Shuttle Program successfully completed its four assigned flights in fiscal year 1998. Fiscal year 1999 began successfully with STS-95 in October, the mission on which Senator John Glenn returned to flight. Most recently, STS-88 opened a new era for the Space Shuttle—support of the assembly operations for the International Space Station. No longer just a research platform, the Shuttle is now fulfilling its original objectives, as the workhorse that will carry equipment, supplies

and the personnel required to assemble the International Space Station during the next several years.

During 1998, the Super Lightweight Tank was successfully flight demonstrated, increasing payload capacity to ISS by over 7000 lbs. The SSME Block IIA improvements, which improved the reliability on ascent, clearly demonstrate that NASA's investment in safety and supportability initiatives have dramatically improved the performance and reliability of the fleet.

In 1998, the Space Shuttle Programs principal operational contract, the Space Flight Operations Contract (SFOC), now in its third year, made great strides. All of the Phase I contracts have been successfully incorporated and the first of the Phase II production contracts, the Solid Rocket Booster project, transitioned to SFOC in July 1998. The External Tank project is scheduled to move under SFOC in fiscal year 2000. The smooth transition of other projects to the SFOC is expected to occur as major development activities are completed.

This year, the Shuttle will support ISS logistics and assembly flights and a number of research objectives. In addition to setting the stage to begin ISS utilization, the Shuttle Program is prepared to launch the Advanced X-ray Facility (AXAF), now called Chandra, a Hubble Space Telescope repair mission, and the Shuttle Radar Topography mission (SRTM) for the National Imagery and Mapping Agency (NIMA).

When the Orbiter Atlantis returns to flight later this year, after its recently completed Orbiter Maintenance Down Period and installation of major modifications, it will take advantage of numerous other upgrades. Examples are:

- The Multifunction Electronic Display System (MEDS), a state-of-the-art integrated display system used in the cockpit of the orbiter. Pioneered by NASA and in use as the standard for commercial and military aircraft the world over.
- The Micro-meteoroid and orbital debris (MMOD) protection system for the Orbiter radiators and wings, increases protection of the vehicle from the potential damage to critical systems while in orbit.
- Solid Rocket Booster aft skirt improvements reduce risk during initial seconds after main engine ignition.

NASA continues to place the highest priority on the safe launch, operation and return of the Space Shuttle and crew, while continuing to seek efficiencies in the Space Shuttle Program. The fiscal year 2000 budget of \$2,986.2 million will enable the system to successfully meet its goals: (1) fly safely; (2) meet the flight manifest serving diverse customers; (3) improve supportability; and (4) continuously improve the system. The Space Shuttle Program's fiscal year 2000 budget remains essentially constant, with a slight decrease of \$12 million from fiscal year 1999. We continue to seek efficiencies in the Space Shuttle Program. The Space Shuttle manifest currently reflects eight missions scheduled to fly during fiscal year 2000—an emergent HST servicing mission to replace science critical gyros and five ISS assembly flights and two ISS logistics missions.

Space Shuttle Operations (\$2,547.4 million) includes sustaining engineering, hardware production, ground processing, launch and landing, mission operations, flight crew operations, training, and logistics.

Funding for Safety and Performance Upgrades (\$438.8 million) provides for modifications and improvements to the flight elements and ground facilities including expansion of safety and operating margins. This budget also includes supportability and obsolescence mitigation efforts, which will be used to develop systems to combat obsolescence of vehicle and ground systems in order to maintain the program's viability well into the next century.

This budget will enable the enhancement of the Space Shuttle vehicle capabilities as well as the replacement of obsolete systems and components. We will address vendor loss, aging components, high repair cost of Shuttle-specific devices, and negative environmental impacts of some out-dated technologies.

The Space Shuttle continues to prove itself as the most versatile, robust, and reliable space vehicle in use today. Since 1992, Shuttle program costs have already decreased by about 37 percent (factoring in inflation), while significantly improving flight safety. As we continue to look for efficiencies, we will also look for opportunities to improve the system, including reducing the standard manifest time period and simplifying the payload review process to allow flexibility for the science community.

Consolidated Space Operations Contract (CSOC)

On September 25, 1998, NASA awarded the Consolidated Space Operations Contract (CSOC) to a team led by Lockheed Martin. This contract (base period of five years, and an option period of five years) began on January 1, 1999, when five current space operations contracts transitioned to CSOC. During the remainder of the CSOC program, 10 other existing space operations contracts will transition to

CSOC. The CSOC contract provides a new approach to space flight operations, consolidating and privatizing operations facilities under a single contract. Over the potential 10-year life of the contract, CSOC is expected to provide cost savings to the taxpayer of \$1.4B in the conduct of Space Communications and Mission Operations for NASA Missions.

The major features of the CSOC Integrated Operations Architecture (IOA) that define the implementation are:

- Consolidation of mission and data services;
- Application of architectural changes, based on commercially developed technology;
- Centralization & automation; and
- Conversion to commercial providers.

NASA has applied a 25 percent small business goal to the CSOC contract. Lockheed Martin and its teammates, Allied Signal and CSC, propose to meet this target and are in the process of implementing the necessary actions to meet the goal.

Inherent in the successful implementation of CSOC are reductions in the contractor work force supporting space operations at five NASA Centers over the 10-year period of performance. There will be initial reductions to the work force at the beginning of the CSOC program, and these reductions are currently being implemented. Following this transition, work force impact is, on average, slightly less than 100 jobs per year in total at all five NASA centers. The CSOC contractor team expects to absorb these out-year-staffing reductions based on natural attrition and reassignment of employees to other non-CSOC programs.

Life and Microgravity Sciences and Applications

NASA's Office of Life and Microgravity Sciences and Applications (OLMSA) is eagerly looking forward to the remarkable new opportunities that will be available on the ISS. Our ISS Phase I Program and scientific experiments on Spacelab gave us tremendous insight into the possibilities as well as the challenges we will encounter as the ISS becomes fully operational.

Our past successes provide the foundation upon which future research will be based. In fiscal year 1998, NASA supported a total of 850 ongoing, peer-reviewed investigations. Preliminary analysis suggests that the commercial cost share investment with NASA in space products and service development for fiscal year 1998 was approximately \$45M. Twenty-one new industry partners joined OLMSA's Commercial Space Centers. The organizational merger of our basic science and commercial research elements is beginning to show synergies and efficiencies as the two groups work together to solve common problems and to use common hardware.

We look forward to increased commercial applications of NASA research. Understanding the structure of a virus is key to understanding its behavior. Dr. Alex MacPherson published a structure of the satellite tobacco mosaic virus at far greater resolution (1.8 Angstrom) than has ever been published before. Mosaic virus crystals grown in space increased by a factor of four over crystals grown on the ground. Basic discoveries in this field may hold great potential for supporting near-term commercial applications. For example, Biocryst Pharmaceuticals, Inc. and Johnson & Johnson have agreed to collaborate on the development of a drug (neuraminidase) to treat influenza. BioCryst used data from protein crystals grown on Earth and in space to develop four lead product candidates that have performed strongly in pre-clinical trials against both influenza A and B.

NASA flight research in protein crystal growth has established a hypothesis to account for the increases in purity found in space grown crystals. Crystals grown in space are believed to be surrounded by a diffusion-zone that acts as a filter to remove impurities. The resulting pure solution accounts, in part, for the higher structural resolution. This unique zone surrounding the space crystals is prevented by convection when these crystals are grown on the ground.

We had two exciting science flights last year. The Neurolab Mission in April 1998, a NASA contribution to the "Decade of the Brain," helped to expand understanding of how the nervous system develops, functions in, and adapts to a microgravity environment. We performed 26 peer-reviewed investigations and collected a wide range of physiological and behavior data in-flight and post-flight. STS-95, in October 1998, flew a SpaceHab module dedicated to multidisciplinary research. This mission marked the first space flight collaboration between NASA and the National Institute on Aging. It carried 26 commercial research experiments sponsored through NASA's Commercial Space Centers. Senator John Glenn's involvement highlighted health care and healthy aging. The wealth of scientific data accumulated during this flight will help validate apparent symptomatic similarities between the effects of space flight and aging.

In fiscal year 1999, preparation for use of the ISS will continue. In order to maximize return on the ISS investment, we will continue to build up and maintain a community of over 900 experienced principal investigators. We are committed to continue this buildup in fiscal year 2000. The Commercial Space Centers plan to add 9 new industry affiliates and 10 new university affiliates in 1999. To enhance science and technology development activities in an era of constrained budgets, NASA continues to leverage resources through partnerships and cooperative ventures.

The fiscal year 2000 budget request for OLMSA, \$256.2 million, will support a variety of activities on ISS, the Space Shuttle, and on the ground. Early in the assembly phase of the ISS, research will concentrate on small-scale investigations, an approach that has been successfully demonstrated on both the Space Shuttle and on the Russian Mir space station. We will study the environment, habitability, and safety. To help maintain NASA's research communities during the ISS build-up, NASA plans to add a SpaceHab research mission (STS-107) in early fiscal year 2001. Increased Shuttle middeck locker opportunities using both the utilization and assembly flights have been part of ISS planning. In addition, we are developing a plan for a stand-by research mission which can be inserted into the Shuttle Manifest should the opportunity arise.

Research opportunities aboard the ISS will start in earnest with the arrival of the crew and the Human Research Facility (HRF) in early 2000. The HRF will help us understand the basic mechanisms of adaptation to microgravity and help develop and validate countermeasures to maintain crew health on orbit. NASA will continue to augment its efforts in validating countermeasures with research carried out by the National Space Biomedical Research Institute (NSBRI), and ground-based research and technology programs. One of the major concerns is the biological impact to the crews of the effects of radiation. NASA, through peer-reviewed research and in cooperation with organizations such as Loma Linda University, Brookhaven National Laboratories, and NIH, is developing countermeasures to increase predictability of biological damage and lower risk to crew health.

We will continue to pursue innovative sensor technologies. We plan to create an Environmental Systems Commercial Space Center to foster commercial interest and participation in research and technology development for recycling air and water and monitoring the spacecraft cabin environment.

Gravitational Biology and Ecology flight experiments in fiscal year 2000 will provide information on the effects of microgravity on plant growth and development, and the effects of gravity on plant photosynthesis and respiration. Research will begin in evolutionary biology with participation of at least five research institutions. Flight research on the effects of microgravity on avian development will be carried out and research proposals on biologically inspired technologies will be implemented. Microgravity Research flight experiments in fiscal year 2000 in the area of colloid physics will help refine the technologies required for photonic devices used in optical communications and computing.

Space Science Enterprise

NASA's Space Science program is scientifically robust and more ambitious than ever. It is also more streamlined, effective, and cost-efficient to the U.S. taxpayer. Beginning with the launch of the Deep Space 1 mission on October 24, 1998, the Space Science Enterprise entered a nine-month period in which it will have ten launches. Six missions have already been launched successfully: DS-1; two Mars 1998 Surveyors and the piggyback DS-2 microprobes; four payloads on STS-95; the Submillimeter Wave Astronomy Satellite; and Stardust, a comet sample-return mission.

On March 4, 1999, the Wide Field Infrared Explorer (WIRE) was launched from Vandenberg Air Force Base. Unfortunately, shortly after launch, WIRE experienced technical problems that exhausted all of the cryogen used to keep the science instrument cold. The mission will not be able to deliver any science. However, we hope to recover some of the WIRE science with SIRTf and SOFIA. In April, we will launch the Tomographic Experiment using Radiative Recombinative Ionospheric Extreme Ultra-Violet and Radio Sources (TERRIERS) spacecraft. In late May, we will launch the Far Ultraviolet Spectroscopic Explorer (FUSE) aboard a Delta rocket. In recent months, technical problems with circuit boards identical to those in AXAF, recently renamed Chandra X-ray Observatory, were discovered in a non-NASA satellite. Testing of the circuit boards on the Chandra observatory was conducted and a number of faulty circuit boards were replaced. Chandra has been shipped to the Kennedy Space Center and will be launched July 9, 1999 aboard STS-93.

But this intense launch schedule is only part of the story, because the existing Space Science programs and missions continue to deliver a wealth of new scientific data and insight.

Results from the Mars Global Surveyor (MGS) and Mars Pathfinder spacecraft show mineralogical and topographic evidence confirming earlier indications that Mars had abundant water and thermal activity in its early history. Measurements from the spectrometer aboard MGS show a remarkable accumulation of the mineral hematite, well-crystallized grains of ferric oxide that typically originate from thermal activity and standing bodies of water. Measurements by the Mars Orbiter Laser Altimeter (MOLA) aboard MGS are providing striking new views of Mars' north pole and the processes that have shaped it. MOLA data reveal that the 750-mile-diameter polar ice cap has a maximum thickness of 1.8 miles. The cap is cut by canyons and troughs that scientists believe were carved by wind and evaporation of ice.

Closer to home, the Discovery program's Lunar Prospector spacecraft has provided further indications of water ice at the Moon's poles, which remains under scientific debate. The spacecraft has recently entered a lower lunar orbit for even more precise mapping activities. Although its orbital capture has been delayed by about a year, the Near Earth Asteroid Rendezvous mission performed a swingby of its target asteroid, Eros, adding to our still small inventory of in-situ data on small bodies.

Further out in the Solar System, the Galileo spacecraft continues to provide insights into the mysteries of Jupiter and its moons. Last year, I reported that Galileo found very strong evidence of a subsurface liquid ocean on the Jovian moon Europa. Recent data from Galileo suggest that Callisto, another moon of Jupiter, may also have a liquid ocean under its icy, cratered crust. The common evidence for past or present liquid water on Mars, Europa, and Callisto provides a key initial step in our Origins program. Galileo images have also shown how Jupiter's intricate, swirling ring system is formed by dust kicked up as interplanetary meteoroids smash into the giant planet's four small inner moons.

The Hubble Space Telescope (HST) continued its impressive performance. This year, Hubble observations made a watershed event in astronomy—the first potential direct image of a planet outside our solar system—another key initial step for Origins. A “long exposure” infrared image taken with the NICMOS camera has allowed astronomers to peer into a previously unseen realm of the universe and uncover the faintest galaxies ever seen. The Hubble Space Telescope has brought us unprecedented new science discoveries and continues to revolutionize our understanding of the universe. However, in January 1999 HST lost the use a third, redundant gyroscope. This has caused us to plan an accelerated Hubble servicing mission in October of this year to replace the gyroscopes and several other items which were planned for the 2000 Hubble servicing mission.

Last year we confirmed the existence of a special class of neutron stars, now dubbed “magnetars.” Magnetars are dense balls of super-heavy matter, no larger than a city, but weighing more than the Sun. They have the greatest magnetic field known in the Universe, so intense that it powers a steady glow of X-rays from the star's surface, often punctuated by brief, intense gamma-ray flashes, and occasionally by cataclysmic flares like the one observed on August 27, 1998. Our own star provided surprises as the Solar and Heliospheric Observatory (SOHO) team dramatically recovered from what was thought to be a lost mission, and obtained the first evidence of long-theorized quakes on the surface of the Sun. Another important first for NASA Space Science is the ongoing demonstration of ion main propulsion and other new technologies on the Deep Space 1 technology validation spacecraft.

We have learned some fascinating new things about our own star, the Sun, as well. Last May, the first images from NASA's Transition Region and Coronal Explorer spacecraft revealed activity in the solar atmosphere in stunning detail and included the first detailed observations of a magnetic energy release, called a magnetic reconnection. Less than a month later, SOHO, a NASA/European Space Agency mission, revealed a rare celestial spectacle: two comets plunging into the Sun's atmosphere in close succession. In July, scientists confirmed for the first time that solar flares produce seismic waves in the Sun's interior that resemble those created by earthquakes. (Enough energy was released from that quake to power the United States for 20 years at its current level of consumption.)

This year has certainly been impressive, but we are very excited about what is ahead as well. The proposed budget of \$2.197 billion, an increase of \$77 million over last year's budget, continues to support a strong and well balanced Space Science program that will allow us to carry on research of the Sun, the Solar System, and the Universe. It maintains support for the Origins Initiative to search for planets around other stars, to study galaxies and stars as they are born, and to look for evidence of life elsewhere in the solar system and the universe. The fiscal year 2000 budget also maintains support for a multitude of ongoing missions.

The budget request features five new items in the Space Science Enterprise. Two new program elements are funded in the Mars Surveyor program beginning in fiscal year 2000: Mars Network and Micromissions. Mars Network will develop communications capability to provide a substantial increase in bandwidth and connectivity from Mars to Earth, thus greatly improving the scientific and educational return for this ongoing program. Mars Micromissions will provide low-cost capability for delivering small payloads, including telecommunications elements of the Mars network. Competitively selected Micromissions will deliver up to a 50-kg science payload to Mars to collect high-priority scientific data. The first planned Mars Micromission is the "Mars Airplane," which will commemorate the 100th anniversary the Wright brothers' historic first flight in 2003.

Also in the fiscal year 2000 request, the Cross-Enterprise Technology program budget is augmented to include funding for three initiatives: Self-Sustaining Robotic Networks; Gossamer Spacecraft; and Next Decade Planning. Self-Sustaining Robotic Networks will build on the success of Mars Pathfinder. This initiative's goal is to extend ongoing advances in spacecraft automation and miniaturization technologies to produce self-tasking, self-repairing mobile robots for permanent, "virtual presence" planetary science and exploration outposts in challenging environments. The Gossamer Spacecraft initiative provides additional funding to develop and demonstrate the deployment, control, and utility of ultra-lightweight deployable structures. These structures can be used as sun shields, ultra-large telescopes, solar arrays, antennas, or solar sails, and will revolutionize a wide variety of missions, including those of other agencies such as NOAA and the Air Force. Next Decade Planning will support an improved, Agency-wide planning process to develop and refine concepts and technologies for a robust menu of potential future civil space programs.

As we continue to explore our Universe, we bring scientific benefit not only to the space science community, but to America's taxpayers and citizens of the world. Our Space Science program is exciting and relevant, as attested to by numerous front-page stories and magazine covers, and by World Wide Web interest in this field in the past few years. NASA has made countless scientific discoveries and advances over its 40-year history, but stay tuned—there is much more to come.

Earth Science Enterprise

Since its creation in 1958, NASA has been studying the Earth and its changing environment by observing the atmosphere, oceans, and land, and their influence on climate and weather. The perspective afforded since the beginning of the space age planted a growing seed of knowledge—we now understand that the key to gaining a better understanding of the global environment is exploring how the Earth's systems of air, land, water, and life interact with each other. This approach, called Earth System Science, integrates fields like meteorology, oceanography, biology, geology, and atmospheric sciences.

The Earth Science Enterprise continued to make great progress through 1998. We have recently revealed evidence to suggest that the 1997–98 El Nino event may have been a major contributor to the average global sea level rising about eight-tenths of an inch before it returned to normal levels, according to scientists studying TOPEX/Poseidon satellite measurements of sea surface height. While NASA can accurately measure global sea level rise today, we really need a decade or more of sustained research before we can say with certainty whether there is a definitive link between sea level variation and climate change. The SeaWiFS instrument on Orbview-2, a commercial satellite launched in 1997, is providing data on ocean biological productivity for NASA research, and the firm is marketing these same data to the commercial fishing, oil, and shipping industries. The data are being procured by NASA as a "data buy" from the commercial supplier.

NASA has also begun to measure rainfall in the tropics and sub-tropics. Approximately two-thirds of the global rainfall occurs within the tropics, directly influencing our day-to-day weather, according to scientists studying measurements of sea surface height from the US/French TOPEX/Poseidon mission. The Tropical Rainfall Measuring Mission (TRMM), a joint endeavor with Japan which was launched in 1997, is for the first time delivering accurate measurements of precipitation over the global tropical oceans, a critical indicator of climate patterns over the whole world.

Polar regions also have a major influence on moderating the Earth's climate. Until the fall of 1997, Antarctica, a region the size of Canada and Alaska combined, had never been fully mapped at high spatial resolutions. The Antarctic Mapping Mission (AMM) is accomplishing this mapping using data from the Canadian Radarsat satellite in which NASA is a partner.

While 1998 was an outstanding year for Earth Science results, missions launched in 1999 and beyond promise to increase our fundamental understanding of the Earth system. We have 30 Earth Science launches scheduled over the next five

years. The President's budget request for Earth Science for fiscal year 2000 is \$1.459 billion.

The Earth Observing System (EOS), the largest element of NASA's Earth Science Enterprise (\$663.2 Million for fiscal year 2000), is a program of multiple spacecraft designed to provide measurements of the key, multi-disciplinary parameters needed to understand global climate change. The first EOS spacecraft—EOS AM-1 and Landsat-7—represent 2 of the 8 missions the Earth Science Enterprise will launch this year. These missions, plus the EOS PM-1 and Chemistry-1 missions, will help achieve the fundamental EOS measurements, which will begin our understanding of the Earth system. PM-1 and Chemistry-1 remain on track for launch in 2000 and 2002, respectively. The EOS program also includes several small spacecraft such as the U.S.-French TOPEX/Poseidon follow-on mission known as Jason-1, QuikScat, Ice, Cloud and Land Elevation Satellite (ICESAT), Solstice, and the Active Cavity Radiometer Irradiance Monitor (ACRIM) satellite.

The Earth Probes program (\$138.2 Million for fiscal year 2000) addresses specific, highly focused Earth science questions that are new or complementary with other parts of NASA's Earth Science enterprise. It also has the flexibility to take advantage of new opportunities in international cooperation or technical innovation. Currently approved Earth Probes include the Total Ozone Mapping Spectrometer-EP and the Earth System Science Pathfinder missions (the Vegetation Canopy Lidar and the Gravity Recovery and Climate Experiment). A new US/French ESSP mission called PICASSO-CENA was selected in December 1998 to study the Earth's atmosphere in tandem with the EOS-PM-1 satellite.

A parallel series of New Millennium program missions is being developed to validate advanced technology for future Earth Science spacecraft. The Earth Orbiter-1 mission will demonstrate an advanced land imaging system with a hyperspectral and multispectral capability starting in 1999. The Space-Readiness Coherent Lidar Experiment will fly in the cargo bay of a Space Shuttle in 2001 to test whether a space-based sensor can accurately measure atmospheric winds from the surface to a height of ten miles. Atmospheric winds determine the transport of energy and chemical constituents across the Earth—hence an important parameter for weather prediction. Recognizing the high value of ocean winds data, we have rapidly developed a replacement mission for the failed NSCAT mission called QuikScat, which was ready for launch in November 1998—only 18 months after the loss of NSCAT. Safety concerns with the QuikScat's launch vehicle will push the launch into the spring of 1999. We are also purchasing ocean wind vector data during this interim period between NSCAT and QuikScat.

The EOS Data Information System (EOSDIS \$231.5 Million for fiscal year 2000) has been serving thousands of users by providing available data and information from NASA-sponsored programs since September 1995. EOSDIS will operate the EOS spacecraft, and acquire and distribute the basic data gathered by them. An essential element of EOSDIS, the Flight Operations Segment (FOS) was to provide command and control of EOS spacecraft including the upcoming launch of EOS-AM-1. FOS experienced serious schedule and performance problems throughout 1998, which resulted in replacement of an essential element of FOS with a commercial, off-the-shelf system developed by Raytheon. This new system has enabled EOSDIS to progress toward the goal of meeting all ESE mission needs from now through 2002. Command and control of the EOS-AM-1 mission is currently on schedule for meeting the July 1999 launch date. In addition, EOSDIS is also on track to support operations of the PM-1 (12/00), ICESat (7/01) and Chemistry (11/02) spacecraft.

The Triana mission is an Earth observation spacecraft to be located at the Earth-Sun LaGrange-1 point providing a near-term real time, continuous high definition color view of the full Sun-lit disc of the Earth. This mission will carry three major scientific experiments to make the first direct measurements of the solar radiant power reflected by the Earth, to make global aerosol and ozone measurements, and to observe solar wind. A selection was made in October 1998 for the Scripps Institution of Oceanography to conduct the Triana mission with the Goddard Space Flight Center. Launch is scheduled for December 2000.

Along with basic Earth Science research, we also conduct Applications Research to help universities and State & local governments apply remote sensing data and science to practical problems. We have established five Regional Earth Science Applications Centers (RESACs) to target efforts on specific regional issues. The Commercial Remote Sensing Program (CRSP) at the Stennis Space Center works with industry to extend the utility of ESE's science data within the broader U.S. economy. Through partnerships with CRSP, companies gain assistance in product development and in validation of new remote sensing instruments.

In 1992, CRSP, along with KPMG Peat Marwick, performed a study that valued the remote sensing and geospatial market at \$850 million annually, using airborne platforms. In 1998, due to NASA's strides in Earth Observations satellite R&D and corporate commitments, the market was valued at \$2 billion. With the anticipated operations of commercial, space-based, high-resolution systems, low-cost positioning data from GPS, enhanced internet access to data and value-added information, underpinned by low-cost, high-performance work stations, industry is projecting a conservative estimate of \$4 billion in private investment by 2005.

CRSP's data buy program has been active and robust. In September 1998, NASA awarded five contracts for Phase II of the \$50 million Scientific Data Purchase. NASA is developing plans for the next data buy as the commercial remote sensing market matures. Also last year, NASA's CRSP entered into a five-year Joint Sponsored Research Agreement with Mississippi for the purpose of developing commercial remote sensing through collaborative research and public-private partnerships. This year, CRSP will establish at least 75 commercial partnerships in "value-added" remote sensing product development, an increase from 37 in fiscal year 1997. In addition, CRSP will establish at least 20 agreements with industry in support of other federal agency needs. In fiscal year 2000, the CRSP will focus Earth Observing Commercial Applications Program (EOCAP) joint commercial applications research to develop 20 new-market commercial products.

The Earth Science Enterprise balances funding across observations, research and data analysis, applications and commercial remote sensing, information systems, and advanced satellite technologies to ensure the Nation has the tools to answer scientific questions about the Earth, and to put these answers to work for the benefit of society. Earth science is science in the national interest, and NASA is committed to its success.

Aero-Space Technology Enterprise

The Aero-Space Technology Enterprise is working in an exciting and challenging time as we revolutionize the science and technology that powers U.S. civil aeronautics and space transportation. Last year we presented to you an Enterprise program focused on three "Pillars" for success—Global Civil Aviation, Revolutionary Technology Leaps, and Access to Space—and a set of ten goals to address current and future National needs. By developing high technical risk technologies, we contribute to aviation safety, increase air system capacity, enhance environmental compatibility, and open new opportunities in space. Within the past year this Enterprise has had to make some hard choices. Budget pressures, along with shifting industry and market conditions, made it impossible to pursue with excellence all our ambitions. Rather than spread the pain and do a little less of everything, we established a set of priorities among the goals, and are pursuing our top priorities as coordinated with our customers and stakeholders. Our priority goals are aviation safety, aviation systems capacity, next-generation design tools, ultra-efficient engine technology, general aviation, experimental aircraft and access to space. We have dramatically reduced our support to the high-speed civil transport and affordability goals, canceling the High Speed Research and Advanced Subsonic Technology Programs.

We have worked hard over the last year to take advantage of synergies between aeronautics and space transportation activities and are increasing funding in the latter. We have made significant progress in defining the contribution of our existing projects and programs to the goals. We believe these goals will help us better manage our research activities while fostering a better understanding of these activities for the American people. The President's proposed budget for fiscal year 2000 of \$1.0065 billion is focused on maximizing a return to our highest priority goals.

Aeronautics

We are proud of our past accomplishments in two focused programs, High Speed Research (HSR) and Advanced Subsonic Technology (AST). Although dramatic advances were made against the original HSR program goals, our industry partners indicated that product development would be significantly delayed, which led to the decision to terminate this program in fiscal year 1999. The need to refocus our technology efforts from industrial competitiveness issues to a broader, more public policy-oriented emphasis resulted in the decision to terminate the AST program at the end of fiscal year 1999.

The aeronautics budget request, \$620.1 million, enables us to pursue a new focused program, Aviation Safety, as our top aeronautics priority. As global GDP expands over the next decade by an annual rate of 3 to 4-percent, demand for air travel will dramatically increase—it is expected to triple within 20 years. Great strides

have been made over the last 40 years to make flying the safest of all major modes of transportation. However, even today's low accident rate is not good enough and if air traffic triples as predicted, this rate will be totally unacceptable. The national goal is to reduce the aircraft accident rate by a factor of five within 10 years, and by a factor of 10 within 20 years. In addition to accident rate reduction, we will work to decrease injuries and fatalities when accidents do occur. We are also working on aviation system technologies that could support pilots and air traffic controllers. Safety is also a top priority of the FAA. We are working closely with FAA, manufacturers and airlines to prioritize technology efforts and to ensure their rapid implementation in order to meet our aggressive safety goal. FAA is responsible for the operation and near-term research and development of the National Air Traffic System, while NASA conducts the longer-term, higher-risk research and development. Last October, we signed an MOA with the FAA to solidify our cooperation in this area.

Our fiscal year 2000 budget also support the Aviation Systems Capacity (ASC) Program, which builds on research we have conducted over the past few years in the Advanced Subsonic Technology program. Our goal in capacity is "while maintaining safety, triple the aviation system throughput, in all weather conditions, within 10 years." This is absolutely required if the aviation system is to keep up with demand and allow the predicted growth in air travel to occur. The ASC program is looking at modernization and improvements in the Air Traffic Management System and the introduction of new vehicle classes which can potentially reduce congestion. Efficient and flexible routing, scheduling and sequencing of aircraft in all weather conditions are critical to meeting capacity demands. As in safety, we are working closely with FAA on this program.

I am very excited about our work in experimental aircraft. On August 6, 1998, the solar-powered Pathfinder Remotely Piloted Aircraft broke its own world altitude record for a solar-powered aircraft by almost 10,000 feet, and established a world record for propeller driven aircraft of 80,201 feet. This flight was another step in meeting the challenge of flying a solar powered aircraft at 100,000 feet. In another first, an international cooperative project with the Russian Central Institute of Aviation Motors achieved the first extended supersonic combustion in flight using a scramjet flown to Mach 6. The X-43 (HYPER-X) research vehicle, which is an air-breathing, dual-mode scramjet-powered plane capable of speeds up to Mach 10, will be delivered this year and will have its first powered flight (to Mach 7) in fiscal year 2000. Experimental aircraft such as these are invaluable tools for exploring new concepts and for complementing and strengthening laboratory research. In the very demanding environment of flight, X-planes are used to test innovative, high-risk concepts, accelerating their development into design and technology applications.

We are pioneering a new safe and efficient general aviation air transportation system that will allow us to travel up to four times faster than we can by car from doorstep to destination, even if that doorstep or destination is a small community many miles from a large hub airport. To make this possible, NASA has been working and will continue to work on advances in propulsion and avionics that will make general aviation affordable and safe.

Our fiscal year 2000 budget includes the Ultra Efficient Engine Technology Program and REVCON, or revolutionary concepts. The Ultra Efficient Engine Technology Program will enable the next breakthroughs in propulsion systems that will spawn a new generation of high-performance, operationally efficient, economically viable and environmentally compatible U.S. aircraft. We will develop and demonstrate breakthrough technologies in propulsion component and high-temperature engine materials which can create future commercial and military propulsion systems which are simpler, achieve higher performance, and do less damage to the environment. REVCON is a process that will develop concepts that are a revolutionary departure from traditional approaches to aeronautical design. We will fully utilize the next-generation design tools we are developing to produce substantial benefits in concept development. REVCON will change fundamentally the way systems are designed and accelerate the transition of high-risk/high-payoff technology from the laboratory to flight.

Advanced Space Transportation Technology

The Advanced Space Transportation Technology program supports our "Access to Space" pillar. Our goal is to completely revitalize access to space by reducing launch costs dramatically over the next decade, increasing the safety and reliability of current and next generation launch vehicles, and establishing new plateaus of performance for in-space propulsion while reducing cost and weight. We are committed to developing technology that will reduce the payload cost to low-Earth orbit by an

order of magnitude, from \$10,000 to \$1,000 per pound, within 10 years. The budget request, \$254 million, fully supports this goal.

NASA's Reusable Launch Vehicle (RLV) Program includes both ground-based technology development and flight demonstrators (X-33, X-34, Future-X Pathfinder vehicles) to validate key component technologies, prove that the technologies can be integrated into a functional vehicle, and demonstrate the required operability to make low-cost access to space a reality. Once demonstrated, we expect that these technologies will be used by private industry to build next-generation launch vehicles that will meet government and commercial needs at dramatically reduced costs.

Early last year the X-33's first major flight component, the liquid oxygen tank, was placed in the vehicle's assembly structure. The X-33 launch site at Edwards Air Force Base is nearly complete. The technologies we are developing are risky, and development problems are not unexpected. In fact, the landing gear is the only piece of existing hardware on the X-33. All other components require advanced development. Recently, the X-33 program has experienced some manufacturing and technical problems that have led to a slip in the first flight to July 2000. We are working with the industry team to resolve these problems and expect no additional cost to the government. The X-34 also has experienced some manufacturing difficulties that will delay the first unpowered flight four months to September 1999; the first powered flight is currently scheduled for February 2000. We are confident that these problems will be overcome and these programs will provide valuable technology for application to future space launch vehicles.

In fiscal year 1999, we initiated the Future-X program which includes "Pathfinder" flight experiments for demonstrations of technologies which can further reduce the cost and increase the reliability of reusable space launch and orbital transportation systems. We are particularly pleased with the selection of the Advanced Technology Vehicle (ATV), the first contract award under Future-X. The ATV includes cost-sharing by industry and possibly the Air Force. We are working closely with the Air Force on this program to ensure it will meet defense as well as civil space needs. We are strengthening the links between the Advanced Space Transportation Program, which is a technology development program, and Future-X flight validation; we want to make more transparent the decision-making mechanism for determining if an ASTP technology truly requires flight validation in Future-X. ASTP will continue to push the state-of-the-art technologies that will be flown under the Future-X program if required for validation prior to implementation in commercial, DOD or civil transportation systems.

We have restructured the Small-Payload Focused Project (Bantam). Its goal is to develop and demonstrate unique technologies that will enable the development of a reusable launch system that will launch 200- to 300-pound payloads for \$1-to-\$1.5 million per flight by 2004/2005. The ground technology program, commercial market, and provider developments will support decisions on whether to pursue a Future-X flight demonstration of the most promising vehicle concept. Concepts currently under study include multi-stage rockets, air-breathing combined-cycle vehicles, magnetic levitation launch assist, and beamed-energy laser-powered vehicles—to name a few. In fiscal year 2000, the results of these technology demonstrations and system level analyses of multiple concepts will support concept down-selection. As we proceed with this program, we will periodically solicit proposals from industry to supply such a launch vehicle for this payload class and as with all NASA technology programs, industry will have access to the technology as we develop it.

Commercial Technology

Since its inception in 1958, NASA has been charged with ensuring that NASA-developed technology is transferred to the U.S. industrial community to improve its competitive position in world markets. The fiscal year 2000 budget request of \$132.5 million continues this important aspect of our mission. Our commercialization effort encompasses all technologies created at NASA centers by civil servants as well as innovations from NASA contractors. The technology commercialization program conducts a continuous inventory of newly developed NASA technologies, maintains an internet-based database of this inventory, assesses the commercial value of each technology, establishes R&D partnerships with industry for dual use of the technology, disseminates knowledge of these NASA technology opportunities to the private sector, and supports an efficient system for licensing NASA technologies to private companies. The amount requested for NASA commercialization efforts includes \$97.5 million to carry out the provisions of the Small Business Innovation Research (SBIR) Act, which requires a set-aside of 2.5 percent of NASA's total extramural R&D spending for small business research grants, along with an additional set-aside for the Small Business Technology Transfer (STTR) Program of 0.15 percent of NASA's total extramural R&D spending. The NASA SBIR program has contributed

to the U.S. economy by fostering the establishment and growth of over 1,100 small, high technology businesses.

CONCLUSION

Mr. Chairman, I am proud of NASA and I am pleased with this budget. It gives us the stability we need to continue the construction of the ISS and to conduct cutting-edge research in science and technology. There is no question that the ISS partnership will continue to face challenges. But if the successes of the last few months are any indication of our ability to jointly overcome difficulties and succeed, I look forward to the coming year with great enthusiasm. While we are building this magnificent international laboratory in space, we already are studying how we can make this facility a seed for commercial space activity for the early part of the next century, and for opening the space frontier for human activity beyond low-Earth orbit. Like the railroads, the Government will build it, and it will create entirely new opportunities for private enterprise. To get there, we will continue to fly the Shuttle safely while developing new technologies that could make space launch more affordable and reliable. We look forward to a robust competition for NASA's launch business among several providers in the next decade. We will not just be going to low-Earth orbit, as NASA will continue to push the frontiers of knowledge about our planet, our Solar System, and our Universe. Micro-rovers will look for signs of ancient life on Mars, and perhaps existing life on the moons of Jupiter and Saturn, while we continue to search for planets in nearby solar systems that could also harbor life today. This budget is the beginning of a new era in vehicle and mission design, as we create an Integrated Synthesis Environment that will dramatically lower costs and reduce development times, allowing us to do even more exciting science and technology.

NASA remains committed to providing the American taxpayer with the best possible space and aeronautics program in the world. Our accomplishments demonstrate we are capable of that. We are determined to continue that tradition. I truly believe the best is yet to come.

GREATLY REDUCED SHUTTLE COST

Senator BOND. Thank you, Dr. Goldin.

FLOOD PLANE MAPPING PROGRAM

Before I get into the questions I have prepared, it struck me when you mentioned disaster mitigation that our friends in FEMA, who also come within the jurisdiction of this subcommittee, have

been having tremendous problems trying to find the resources to do flood mapping and other things.

I trust you have been having discussions with James Lee Witt on the potential application of your capabilities to their needs?

Mr. GOLDIN. Yes, sir. We are standing by to support FEMA and we are working on a joint program right now, the planning for that program, to do that flood plain mapping.

Senator BOND. How long or to what extent do you think you can meet their needs?

Mr. GOLDIN. I think we could make a significant contribution in cutting their costs. Instead of using conventional techniques whenever you send people out into the field, by using our aircraft and spacecraft technologies, I think we could cut their costs significantly. We are in the process of performing the analysis to substantiate that right now.

Senator BOND. Any idea of how much that might cost?

Mr. GOLDIN. No. We are in that process now.

Senator BOND. Well look carefully because every dollar we have to give to them is probably a dollar that comes out of NASA.

Mr. GOLDIN. Oh, we will look very carefully, sir. [Laughter.]

Senator BOND. This is what I call the incentive means of assuring that we all work together.

As this goes forward, would you please do that.

Mr. GOLDIN. Dr. Ghassem Asrar can speak to this.

Dr. ASRAR. Good morning.

We have three pilot projects with the objective of identifying what are their requirements and what are the costs associated with them. We are also bringing the private sector in to work with us in a partnership because we want to make sure that once we demonstrate the utility of our technology, there is a means for FEMA to obtain those services routinely.

The pilot projects, two of them are on the West Coast, one is in the Midwest, and we are in the process of mapping them, combining the observations with the model to give them the decision-making tools that FEMA needs.

SETTING GOALS FOR THE CIVILIAN SPACE PROGRAM

Senator BOND. I appreciate that. That will be of continued interest to this subcommittee and I would ask that you keep us advised on that.

I would like to ask a sort of general question about the setting of goals for the civilian space program. Does NASA have plans that either go to the White House and Congress, or does the White House set the plans, or do you get approval from Congress? To what extent does the scientific community have input—people and places like the National Academy of Sciences? I would like for you to address that in terms of the next major manned mission to be. What are your discussions that are going on? Are you looking at manned flight or even the establishment of a man based on Mars or the Moon?

How do you set those priorities? What are your long-term goals?

Mr. GOLDIN. First, let me say that we spend a lot of time consulting with all the people who have a vested interest in NASA. My staff spends a lot of time at the White House. I spend time going

to each of your offices. My staff talks to your staff. We have people who have outreached different groups in the country. We work very closely with the National Academy of Engineering, the National Academy of Sciences, and we integrate all that input. We do this routinely, day in and day out.

Senator BOND. We are very interested. But our knowledge is that of a mustard seed when it comes to these areas.

I hope that you are getting the National Academy of Engineering and the National Academy of Sciences to really help direct your work. The peer review scientific decisionmaking would be of most interest to me.

Mr. GOLDIN. I was just honored by being nominated—and I accepted—to the National Academy. I am a member of that organization now.

I cannot participate in my capacity as NASA Administrator, but I certainly am very sensitive to that. We, NASA, fund many, many studies at the National Academy.

There is one point I would like to make. We intend to get the Space Station done before we come back to this Congress and this administration and ask for more money for another human expedition beyond Earth orbit.

The administration has put \$10 million in this year's budget for future planning. As part of that, we intend to look to all of the scientific community, the Congress, the administration, and citizens groups to figure out what is the right thing to do for NASA next.

Over the next 2 years, we will be doing studies and share those studies with this committee and other committees of the Congress so that everyone knows what we are doing.

Senator BOND. What is the scientific community telling you would be the most productive use? Have you gotten any word back yet?

Mr. GOLDIN. There are many different opinions. But there seems to be an opinion swelling up which says instead of just having robotic missions and missions with people, we ought to be able to integrate the two and perhaps build things like robotic colonies in advance so that before we send people, we build up an infrastructure, rather than trying to put everything in one big vehicle and going off and doing it.

SPACE STATION OVERRUNS

Senator BOND. Let me talk now about the Space Station. The estimated cost has grown from \$17.4 billion to more than \$23.4 billion.

Depending upon how you look at it, the Space Station overruns are anywhere from \$6 billion to \$8.3 billion, depending on which estimates are correct. What have you learned that can be applied to the next major large space project or even any other government initiative in the scientific field?

What can we learn from these overruns?

Mr. GOLDIN. There are a couple of issues.

First, NASA has not built a major human space flight activity in over 25 years. That was a very big problem. In the space science area, and in the Earth Science area, we are able to do things many, many times.

One thing is clear: the engineering tools we have are inadequate. In this year's budget, we have a significant activity to develop better engineering tools. We have worked on this with the engineering community.

Senator BOND. What do you mean by engineering tools? Can you give us some idea of what you mean by that?

Mr. GOLDIN. Yes.

When we commit to a major new program, whether it is Boeing building the 777 or NASA building a Space Station, whether GM is building a car or General Electric is building a refrigerator, you commit roughly 90 percent of your money when you have about 10 percent design knowledge on building something new.

We intend to develop a set of tools that will allow us to completely simulate in virtual space the design, operation, and maintenance of these activities before you have to go and cut any hardware and commit money.

I feel this has been a major problem in engineering in this country.

Senator BOND. Well, NASP was out in the forefront of development. I saw the computer models for NASP. But that may not be a good example.

Mr. GOLDIN. NASP had the problem of not being able to predict how we could build materials that could handle the incredible heat load. For that reason, we were never able to make NASP work after spending some billions of dollars.

That is precisely the issue. They had tools that showed how it operated, but it did not simulate the physics of the details of the system and how you could build it up. That was the problem.

Senator BOND. Let me turn now to Senator Mikulski.

HUBBLE SPACE TELESCOPE

Senator MIKULSKI. Thank you, Mr. Chairman.

I would like to get right to the issues around the Hubble Telescope, the Space Telescope.

Dr. Goldin, could you tell us what is really now the status of the Hubble Space Telescope? We know, we understand that some of the gyroscopes are failing. You had wanted some help in an emergency supplemental now that you are going to be doing it differently.

Could you tell us the operational status of Hubble, number two, what you are going to do to correct it, and, number three, does this really extend the life of Hubble in a reliable way or has this just been one more contract failure at Hubble? You know, first it was the mirror; now the gyroscopes, I think three of them, have failed.

Mr. GOLDIN. Yes. Yes.

Senator MIKULSKI. Why don't you try to tell us the Hubble story and then the implication of the cost of fixing Hubble on the rest of the NASA budget?

Mr. GOLDIN. Okay.

First, so everyone knows what I am talking about, that [indicating] is the Hubble Space Telescope. It is about 30 feet long. Next to the Hubble Telescope [indicating] is a gyro. This piece [indicating] is so everyone would know about what a gyro looks like in size. If you look into this element here, you can see the wires that failed. They are 1/1000th an inch by 1/6000th an inch. There is a

white surface and over the white surface you will see two small wires. This gyroscope is the state of the art. You can buy no better in the world than this gyroscope. The Hubble has the most rigid requirements for stability, and this gyroscope tells us exactly where the Hubble is so that we can operate the control system.

At the present time, there are three operating gyros on the Hubble. Three of them have failed. We are very concerned that, if we lose one more gyro, we lose science on Hubble, which is perhaps one of the most productive scientific instruments that NASA has, if not one of the most productive instruments in the world. We cannot afford to lose the science on Hubble.

Senator MIKULSKI. I agree. But if three have failed, are you saying—what are you saying?

Mr. GOLDIN. Now let me tell you our understanding of that.

Senator MIKULSKI. I am not trying to finger-point here. I am trying to pin-point the problem. If we come back with the same gyroscopes, will then others fail again?

Hubble can only get so many rescue missions before the Congress tires of it.

Mr. GOLDIN. Yes. We have planned servicing missions to the Hubble. When we first went up and launched the Hubble, we had a series of gyroscopes on board and three of the six failed. Two failed for electronic reasons which were fixed. One failed because this little wire that you saw eventually wore out because it is immersed in what is called a viscous damping fluid.

We then replaced four of those gyroscopes on the first servicing mission and then they all lasted. The expected life of these gyros is about 12 years. So we thought we had the problem in hand. We did not have any failures, and when we went up for the second servicing mission, we did not replace them. Then they failed. We had three of them fail.

We are prepared to replace four to six gyros on this next mission. We believe we have good gyros. No one in industry is incompetent. This is the best technology available. There is one change being made to the gyros which pertains to the chemistry, by packing them instead of with an oxygen pressurant, which could eat up the wire, with an inert one.

Senator MIKULSKI. In my limited time, I don't need to know that kind of detail.

Mr. GOLDIN. Okay. In any case, we will replace these gyros. We will be going up in another 12 to 18 months and, at that time, we will assess whether we will keep those gyros or make another replacement so that we will not have to have an emergency mission.

Senator MIKULSKI. You are planning a Hubble servicing mission in October 1999, is that correct?

Mr. GOLDIN. Yes.

Senator MIKULSKI. That is to deliver six new gyros, is that right?

Mr. GOLDIN. Yes. Then we will also replace a computer and some other equipment which we checked out on the John Glenn flight.

Senator MIKULSKI. Now how long do you think this will extend the life of Hubble?

Mr. GOLDIN. We believe that these gyros have an expected lifetime of 6 to 12 years.

Senator MIKULSKI. And what is the expected life of Hubble?

Mr. GOLDIN. Hubble, if we continue to service it, will be good perhaps to the end of the first decade of the next century.

Senator MIKULSKI. So it is worth the investment to make these repairs?

Mr. GOLDIN. It is among our highest priority to make these repairs.

SERVICING MISSION COST FOR HUBBLE

Senator MIKULSKI. Now how much will this servicing mission cost and how will this impact on the rest of the NASA budget?

Mr. GOLDIN. The servicing mission will cost about \$75 million in fiscal year 1999 and fiscal year 2000, and when we replace all of the equipment for the Shuttle, to replace the equipment we used, the total cost will be about \$136.6 million through 2003.

Of that, \$26.3 million is for the science package; \$26.3 million is for operational activity; and \$84 million is to replace the expendable pieces of the Shuttle equipment.

We intend, for fiscal year 1999, to absorb within our existing budgets in the Human Space Flight Account, \$45.5 million, which is what we need for fiscal year 1999 to get this going.

We are presently working with the administration to see where we might reprogram in fiscal year 2000 through fiscal year 2003.

Senator MIKULSKI. Dr. Goldin, as you know, we need to have the Hubble repaired for all the reasons you talked about—its scientific accomplishment, it will be a good investment to keep an existing program going that is bringing us a tremendous amount of scientific knowledge. However, you said that the budget is lean. Therefore, this is now a new \$75 million hit that was unexpected and unanticipated. Therefore, we look at the Hubble and, therefore, look at how we are going to work this appropriation and how we work with the administration who, essentially, I know said to you “eat it.” I mean, that is what they said. You are trying to swallow it while we are trying to do other things.

My question to you is will there be negative consequences on other programs that we need to take into consideration as we work both with you and the administration and among ourselves?

Mr. GOLDIN. There is no doubt that there will be negative impact on other programs. Our budget has come down for 6 years and we have to do things. The only way we could fix it is by not doing something else. That is the level of discussion we are having with the administration.

Senator MIKULSKI. Do you now know what you will not do because of it?

Mr. GOLDIN. Not yet. But we will know before your markup and we are committed to getting you that data before your markup.

RUSSIAN REPORT

Senator MIKULSKI. I see that I have a yellow light. Hubble took a lot of time.

Could you tell us where we are now? You did this Russian report. As you know, we are very concerned about the continued unreliability of the Russians to deliver what they promised.

You then have to fund a redundancy program to support them. We asked for a report that said are there other ways where we

could honor our international relationship with them but essentially get a dollar's worth of guaranteed value for a guaranteed American taxpayer dollar. This is with full knowledge that it is the Soviet, the Russian, scientists that are competent, but the political and bureaucratic situation there is not as reliable as the Hubble gyroscopes.

Mr. GOLDIN. First let me say the reason the report was late was we wanted to be thorough. So we contacted a number of companies who had been doing business in Russia. We contacted 10 different elements of the Department of Defense and other activities.

We wanted to know how did they do business. There was one common theme: set a fixed set of requirements, negotiate a firm fixed price contract, have measurable milestones, and have the ability to do audits and traceability. That was the common theme that came out of all of it.

We then analyzed that data and proposed that this is the right way to go.

Should I keep going, Mr. Chairman? I see the red light.

Senator BOND. Please finish. Finish the answer because we are going to be back and forth on this subject.

Mr. GOLDIN. It is our assessment at the present time that this is the right way to do business. We have brought in Arthur Andersen to audit the work that we are doing. The GAO and the IG, has audited the approach we have been using with the Russians. So far we have an ability to trace when we send dollars there, to trace it through the system.

Senator MIKULSKI. Dr. Goldin, my time is up. I am trying to get a dollar's worth of value for a dollar's worth of taxpayer dollars and that we don't have to go to a redundancy system because we are already foraging for funds in important programs.

So where are we and where are we going?

If we want to go to Senator Burns and get back to me on this, that's fine. But I am continually frustrated by this Russian endeavor.

Mr. GOLDIN. That report dealt specifically with if we bought goods and services from Russia, how would we do it to assure taxpayer value. I believe we have answered that question and we can assure the taxpayers for every dollar spent that we are getting a dollar's value.

The broader question you are asking is how can we deal with a Russian Government that does not pay its bills to the Russian Space Agency. That is a broader question. That is a question of great concern to me. The Russian Space Agency, when they have been given dollars by their government, performs superbly.

Senator MIKULSKI. So we are still back to the political problem that we had some months ago?

Mr. GOLDIN. Yes. There will be a meeting next week between the Vice President and Mr. Primakov. This will be the only significant subject that I have to bring up at that meeting, about the ability of the Russian Government to do what it says it is going to do.

Senator MIKULSKI. I know my time is up.

Will you then really press firmly?

Mr. GOLDIN. Oh, yes.

Senator MIKULSKI. I don't want to take any more of the Senator's time.

Senator BOND. We will come back to it. We want to come back to that subject.

I want to give Senator Burns an opportunity to get in here, too.

Senator BURNS. Thank you, Mr. Chairman. I just have a couple of comments.

I think Senator Mikulski has pretty well covered this. There is still a lot of concern about the Russian situation.

I just want to bring the committee's attention to a couple of areas which I think are very important.

PREPARED STATEMENT

By the way, I have a statement and, if I may, I would put that into the record.

Senator BOND. Without objection, we would be happy to have it. Thank you.

[The statement follows:]

PREPARED STATEMENT OF SENATOR CONRAD BURNS

Thank you Mr. Chairman, I would like to begin by saying that NASA has been the Administration's shining star in this decade and I am very confident in saying Dan Goldin is the reason for that success.

I think very highly of the Administrator's abilities. I also find it difficult to believe that year after year NASA is punished for its abilities to save American tax dollars. The research conducted by NASA is research that has unbelievable returns and applications in the private sector. NASA has retained the mission of our federal government to conduct R&D to be disseminated to our nation's economy.

NASA's current budget request is \$87 million below the fiscal year 1999 appropriated level. Considering NASA's investment into the International Space Station (ISS), this is a substantial decrease in the agency's budget. Granted, the Space Station has hit its share of speed bumps. However, it is my opinion that the Space Station is back on the right track.

Mr. Chairman, I would like to encourage you to consider increasing NASA's budget and reaffirming Congressional support for NASA. A \$500 million dollar targeted increase in NASA's budget would be one of the best investments this nation could make.

NASA is an investment in America's future. Recently, a NASA astronaut volunteered to visit a couple of high schools in Montana. Students in Whitehall and Bozeman had an opportunity to visit with NASA astronaut Robert Curbeam and discuss his recent space shuttle mission.

These kids and communities are still talking about this visit. The impression Mr. Curbeam had on these children will not be forgotten soon. He is a very valuable asset to the nation's space program.

We cannot continue to penalize NASA for the agency's cost efficiency. Each time the agency reduces its costs, they find they are also reducing their budget levels. It's time to recognize that NASA's return on the dollar to the taxpayer is positive in terms of our federal budget.

I am also very supportive of Administrator Goldin's "three pillars of success":

First, Global Civil Aviation—The goals of this objective is to reduce the aircraft accident rate by a factor of five within 10 years, and a factor of 10 within 25 years.

Additionally, this research will reduce emissions and noise levels to give general aviation a place in the future of everyday transportation in our nation. That means commuting for many of us in rural states. I applaud Administrator Goldin for his work in this area.

Additionally, I would like to suggest that much of the work at the FAA in terms of general aviation may be better suited in NASA. Safe and affordable general aviation is an objective we need to continue to pursue.

In 1998, we did not have a major commercial passenger jet accident in our nation. However, major commercial aviation accident rates globally have been nearly constant over the past two decades. While the rate is very low, increasing traffic over the years has raised concerns in the potential for these accident rates increasing.

NASA's research and technology development will address accidents involving hazardous weather, controlled flight into terrain, human-error-caused accidents and incident, and mechanical or software malfunctions.

Pillar two: Revolutionary Technology Leaps.

NASA's vision to reduce airline travel time and increase the production of affordable general aviation aircraft will ensure the future of alternative travel methods in our future. Rather than driving into D.C. on a bottlenecked I-395 or Route 66, workers can safely commute in small, efficient planes.

NASA's third pillar for success is one I am certainly interested. Affordable access to space. The opportunity we have before us today in this field will save the taxpayer millions and reinvest those dollars into the nation's economy. NASA is best suited for R&D. Taking the operations expense out of NASA's budget and putting those funds toward hard R&D in cooperation with our nation's universities will be the best thing we can do for our nation.

This third pillar reduces the payload cost to low-Earth orbit from \$10,000 to \$1,000 per pound and does this within ten years. In Montana, we are very excited about the Future X program. The X-33 is scheduled to land in Montana on test flights from Edwards Air Force Base in California late next year.

The Future X program has been extremely successful—continuation of programs like X-33 and X-34 will result in further development in the private sector. I am awed by the technologies developed by NASA and later applied in the private sector. This is the definition of what our government is about—Research and Development.

Montanans are also very excited about the future of space launch development. We are convinced it is only a matter of time that the shift of space launch and landing operations move from NASA to the private sector. We have vast sparsely-populated areas in our state that are very conducive to space launch criteria. We are especially excited to work with both NASA and private sector aerospace companies to expose Montana's benefits as a viable spaceport state.

Lastly, I encourage the Administrator to continue his work in new propulsion technologies. The Ultra Efficient Engine Technology Program will create a new generation of high performance, operationally efficient and economical, reliable and environmentally compatible U.S. air and spacecraft.

I am confident in NASA's abilities and I would like to further explore the opportunity for NASA to take on an additional role in the area of general and commercial aviation. That is the direction we are headed—eventually, it is my vision to see NASA as the primary agency overseeing not only our nation's space activities, but also our nation's airspace activities.

Thank you, Mr. Chairman.

Senator BURNS. There are a certain amount of things that Americans have benefitted from with the space program that get very little attention. I think our work in civilian and international aviation is important.

I think I mentioned this to you, Mr. Administrator, the last time, that I would like to see some more propulsion work being done. I know our new airplane for high speed civilian application has been sort of put on hold. But I don't think we should be letting slide new engines and materials—in other words, in our propulsion work. I want to continue that and also what we are doing as far as learning things about our own Earth.

I think up in Montana you heard from some people when you were up there on a recent visit about how we can serve those people and the valuation of lands, forests, and this type of thing. It has great environmental overtones to it and would help us become better managers.

That is all I wanted to say, basically, because these two, here, will get the final appropriation. But I do not think this is a time we should start to cut back on R&D as far as what we are doing in space and what we are doing as far as space serves this country and this planet.

We do not hear much about that, but we know it is very, very significant. So we appreciate that.

I am just going to make the plea not only for our reusables but also for what we are doing with education and our R&D into the application to civilian and commercial aircraft here in this country and abroad.

I appreciate your good work.

I saw your good friend this morning. He is adjusting to the private sector very well.

That is all I have.

Senator BOND. Was there a question in that?

Senator BURNS. No, there was not a question. There was a statement.

Senator BOND. We appreciate very much your participation.

Senator BURNS. Ever since I got married I quit asking questions. [Laughter.]

Senator BURNS. I won't do that again. [Laughter.]

Senator BOND. Okay.

Senator BURNS. You will figure that out. Better stand up. Some of these are going over your head.

Senator BOND. Well, I have a hole in my glove. They are going just right straight through the webbing. [Laughter.]

RUSSIAN DELIVERY OF SPACE STATION HARDWARE AND SERVICES

I want to go back to some of the questions that Senator Mikulski began.

Considering the difficulty Russia has had funding the Service Module, do you think that Russia can make timely delivery of Space Station hardware and services? Why would you think that they can? If not, in any event, what are your contingency plans?

Mr. GOLDIN. First, let me say that there is a real value added technically for Russia. I leave the political issues to the foreign policy of this country. One of the major reasons we went forward with the Russians on the Space Station is we only have the Shuttle. We have a multi-\$10 billion investment that will be up in space and we wanted to have assured access to that. The Russians have the Proton, the Soyuz, and the Progress. To us, that was absolutely essential and still is essential. So in some way, shape, or form, we believe the Russians should be in the program.

Second, the Russians, when they have the money, they do perform. When we got them that \$60 million, it was the difference between day and night. As we speak, the Service Module is being packed, readied for shipment into the Baikonur Cosmodrome, and it should be shipped somewhere around April 12. At that time, we will send a team to Russia to go through the schedule on the launch preparations at Baikonur. At the present time, the Russians say they could launch by September 20. We think it is more realistic that they will launch by November. But, even at that, it fits within our capacity to accommodate it. It will also allow us to have a permanent presence by astronauts early next year. So we think we are on the right path.

Now, am I frustrated? I am darn frustrated. I come from a world where people do what they say they are going to do. It makes a tremendous disruption.

One of the other lessons we learned is I think we may have done better negotiating with the Russians because we treated the Rus-

sian culture like the American culture. Had we known up front, I think we would have done it a little bit differently in terms of our contingency planning.

MONIES PAID TO THE RUSSIAN SPACE AGENCY

Senator BOND. I want to get back to this. But one of the things that Senator Mikulski and I talked about last year that I believe you are doing is trying to find ways to get money to bypass what we would call the bureaucracy; to get money and put our cash right on the barrelhead, where the work is being done.

Now this \$60 million, is that one of your first monies?

Mr. GOLDIN. It was right on the money. That \$60 million made all the difference.

Senator BOND. To whom did you pay that?

Mr. GOLDIN. We paid it to the Russian Space Agency. But we did it with a firm fixed price contract, with very set milestones, with an auditing capability, and we gave them milestone payments. So they did not get paid until we saw results occurring.

This is what we learned in our discussions at the request of Senator Mikulski and a number of other members on how we should contract. It was a very fruitful contracting approach and it made a significant difference in getting results.

Senator BOND. Well, I'll tell you. Speaking of that \$60 million, we have heard some Russian officials say that with that \$60 million, we have purchased 25 percent of the research time. Others say we have purchased 75 percent of the research time.

What did we get?

Mr. GOLDIN. We got 4,000 hours of research time, which will allow us to do a significant increase in research as we are building the Space Station. We also got a significant amount of on-orbit storage, which is crucial for us to place critical spares and other equipment for servicing the system.

So we got \$60 million in value back for the \$60 million we paid to get this thing off dead center.

Senator BOND. All right.

As a bottom line, what is your estimate on how much more funding we are going to have to provide the Russians?

Mr. GOLDIN. We have \$100 million in the fiscal year 1999 budget. We initially had thoughts that we might put in \$150 million a year for the next 4 years into the out-year budgets.

But on second thought, we reflected and said this would be a disincentive for the Russian Government to pay their bills to the Russian Space Agency. So, in preparing the fiscal year 2000 plan, we just left \$100 million in fiscal year 1999 to give us some latitude should we need to make purchases. We will clearly monitor what is going on and if we do need additional funds, request it.

But putting the money down there, all it does is the Russians have a tendency to say the money is there and then we have to pay less money to the Russian Space Agency. We felt that would be very, very wrong.

Senator BOND. So we need to continue to figure out ways to make sure that that money goes to the Space Agency. Can we do that with any future payments?

Mr. GOLDIN. We are going to be very frugal in any future payment to get specific goods and services in return for the money that we spend in Russia.

Senator BOND. Be frugal versus is the money going to go to the Space Agency?

Senator MIKULSKI. That's the question.

Mr. GOLDIN. The answer is we believe we have a method for assuring that. We have audited that and we have records for the monies we sent. We trace the monies from bank to bank, to the agencies, to the people that get it. We go down on the floor. We have people in Russia watching how that money is spent.

Senator BOND. But are you sending it to the Russian Government and then following it? Or do you have a mechanism for sending it to the bank?

Senator MIKULSKI. Or agency?

Mr. GOLDIN. We don't send it to the Russian Government.

Senator BOND. That's a start.

Mr. GOLDIN. We send it to the Russian Space Agency.

Senator BOND. Okay. All right. So your future money will be going not to central government?

Mr. GOLDIN. Not to the Russian central government. It will go to the Russian Space Agency.

Senator MIKULSKI. If I might follow up, this is the crux of what we were trying to get at in our report.

So, instead of now it going government to government, we want to draw the distinction that it is going agency to agency.

Mr. GOLDIN. Agency to agency.

Senator MIKULSKI. Is this, then, new?

Mr. GOLDIN. It is not new. The other thing we do in specific cases is sometimes corporation to corporation.

Senator MIKULSKI. Is this new with the Russians?

Mr. GOLDIN. Is this new with the Russians?

Senator MIKULSKI. Yes.

Mr. GOLDIN. No.

Senator MIKULSKI. Then I don't get it. I thought the problem was that it was going to the government.

Mr. GOLDIN. There was desire a number of times to have it go to the Russian Government, and we have resisted those times.

Senator BOND. What happened? I thought the problem was that the money went to the Russian Government and never got to the Space Agency.

Senator MIKULSKI. That was my understanding, too, Mr. Chairman.

Mr. GOLDIN. No. We never sent money to the Russian Government.

Senator BOND. Well, you had two of us fooled.

Mr. GOLDIN. We resisted that. We resisted that. And, in fact, when we surveyed the other agencies in the Federal Government and other corporations on how we were doing it, we felt that we had the right approach to doing that.

Senator BOND. Well, I'll tell you.

Senator MIKULSKI. Why don't you continue with your questions, Mr. Chairman, and extend this if you wish. Your questions were mine on that issue.

Senator BOND. Well, I am about to finish up on the Russian side. I will then turn it back to you, Senator Mikulski.

I did want to say that Senator Hutchison has been detained on the floor. She is working on the supplemental appropriations, which is where Senator Mikulski and I ought to be. Senator Hutchison does obviously have a very deep interest in this whole area of operation, and she is going to be following up with post-hearing questions. I know that you were looking around. Normally, we would expect to see her here.

I guess my final question is this. Maybe we are just missing something, but the Russian Space Agency in some ways is the government. Where did we find the problems that money did not get to the scientists?

It seemed to me that the money was not getting down to the people who were doing the job. What happened there?

Mr. GOLDIN. First let me say that the Russian Space Agency is not like NASA. The companies, they own interest in the companies that they do business with. It is not like they give them contracts.

I know that there are some people from Russian industry who came to America and said we are not getting the money. That is where it came from. I know some of those gentlemen. Some of those gentlemen would love to get their hands on the money and we, NASA, are not interested in giving the money to those gentlemen because those gentlemen have not demonstrated the commitment we would like to see.

I think that is where it came from. There was a lot of self-interest of Russian corporations coming to America—

Senator MIKULSKI. I think I need a shot of vodka right now. [Laughter.]

Mr. GOLDIN. They'd come and they'd talk to members of Congress. They'd make statements that they cannot defend.

We were not pleased with some of the things they said because we did not agree with them.

Senator BOND. I might just ask, has the Inspector General looked at any of these things? Have you had any comments on this?

Ms. GROSS. We originally were looking at the monies following from the Johnson Space Center and how they would do it. But we do not have access rights into Russia. I am very interested to hear about these access rights because I do want to follow up on what access rights they are and who has them. I hope it is the Inspector General, among others, that has those rights.

Our exposure to that came more in the MIR setting, where we did a series of reviews, for the MIR. Part of the problem we had which impacted on the safety of the MIR missions for Americans had to do with payments by the Russian Government to its employees, or the RSA to its employees.

The issue was not so much about the American money, but it was more that the Russian Government was not keeping its commitments.

Senator BOND. Okay.

Mr. GOLDIN. What I am trying to say is with the money that we send, we track the goods and services we buy. I have the same problem that the Inspector General has, and I plan to discuss that with the delegation coming, that the Russian Government keeps

saying it is going to pay their people and then they don't pay their people. That has an impact on 16 countries that are working on the Station. That, in my mind, is the problem. The Russian employees of the Russian Space Agency and their contractors do not get paid at times. That is the issue. It is not American money—NASA money, I should say. There are other issues, but with the NASA money, we try to track it to the best of our ability so that we are sure we get value for it.

It is the Russian money that is not coming and it is this Russian money not coming that is creating the problems that we have.

Senator BOND. Senator Mikulski.

MEETING WITH PRIMAKOV

Senator MIKULSKI. This, then, takes me to another issue. I think the chairman has pursued this to the extent that we can do it here.

The meeting with Primakov is when, Dr. Goldin?

Mr. GOLDIN. It's next week.

Senator MIKULSKI. I would like to ask if you think appropriate in this setting what you intend to press at the meeting. Number two, I have another question related to the proliferation issue and what I would like to recommend that we press.

Mr. GOLDIN. The details of the discussion I think might be inappropriate, but as for the general concern, we have one specific concern. For the last few years, the Duma appropriates a budget for the Russian Space Agency and that budget does not get passed down in full value to the Russian Space Agency. When it does get passed down, it comes a half-year to 9 months late. It is very difficult for my counterpart in Russia to do adequate planning. That is the single biggest problem we have.

Senator MIKULSKI. So, therefore, the issue is not our money getting to the Space Agency, it is the question of their money getting to their Space Agency?

Mr. GOLDIN. That is what has caused all the problems, and caused us to undertake contingency plans. In this year's budget, the Administration has programmed \$600 million to spend in America to get contingencies against the Russians not performing.

The issue comes back to the Russian Government appropriating money and not having it passed on to the Russian Space Agency. That is our single biggest concern.

Senator MIKULSKI. What I am going to suggest is that the chairman and I write a joint letter to Vice President Gore to show a spirit of bipartisanship, asking that this also be pressed at the meeting so that it is clear that we are interested in essentially a partisan-free zone for you to also be further empowered to press this. I think it has very significant questions.

Let me now, therefore, then go to the proliferation.

Mr. GOLDIN. Before you come to proliferation, there is one point I again want to make which is a very important one. Every time the Russian Space Agency gets the resources, they have performed superbly.

Senator MIKULSKI. We understand that.

Mr. GOLDIN. They have the ability to do it. It is the government not supporting their own space program that is the problem.

RUSSIAN PROLIFERATION ACTIVITIES

Senator MIKULSKI. In January, the State Department sanctioned three more Russian entities for sending technology to Iran. I don't know if any of those entities are directly or indirectly involved in the Space Station endeavor. I find Mr. Primakov a very fascinating individual. He could be a very important personality in terms of our larger foreign policy, both in Iran and Iraq.

As a former KGB agent of the Eastern region, he, therefore, knows the leaders of those countries intimately—up close, and personal. He has then recycled himself through Gorbachev, Yeltsin, after and around Yeltsin and back to Yeltsin, and I believe he is a significant figure in Russian and global policy.

Therefore, are we going to be talking with Mr. Primakov at this meeting about enlisting their support—one, to make sure the Russians themselves are not participating in this proliferation, and, two, to get some assistance perhaps in these very troublesome areas of Iran and Iraq?

Mr. GOLDIN. We, NASA, are a civil space agency, and it is crucial for us that we work with other space agencies in other countries that abide by the rules of nonproliferation of weapons of mass destruction.

Senator MIKULSKI. That is why we went to Russia in the first place.

Mr. GOLDIN. It is.

Senator MIKULSKI. It's better for them to work with us on the Space Station than to be working with Iran or such countries.

Mr. GOLDIN. We constantly consult with the foreign community.

Senator MIKULSKI. Is this going to come up as part of the NASA deal? I mean, this was part of the NASA deal.

Mr. GOLDIN. We rely on the foreign affairs community within the government to advise us on what we should do. We await direction from the administration and the foreign service activity within that administration to give us guidance in this area.

Senator MIKULSKI. Then let me ask this question. The State Department sanctioned three more Russian entities for sending technology to Iran. Were those entities directly or indirectly involved with the space cooperation with the United States?

Mr. GOLDIN. To the best of my knowledge, none of those institutions was involved in NASA activity.

Senator MIKULSKI. Has NASA, as part of a civilian agency, been involved with the State Department, essentially been an advisor to the State Department, on how perhaps to help deal with the Russian proliferation activities?

Mr. GOLDIN. First, we always cooperate with the State Department.

Senator MIKULSKI. Cooperation is one thing. Being an advisor is another.

Mr. GOLDIN. We can't advise on proliferation. That is not our area. But we certainly can advise on the things we do and the fact that we cannot operate with agencies that are in this area.

I want to point out something. Every time I meet with Koptec, every time I meet with the Russian Ambassador, every time I meet

with a senior official of the Russian Government I tell them the following: NASA is a civil space agency.

Senator MIKULSKI. I appreciate all that. But the fact is that NASA is a civil space agency, but we are involved in a great deal of international effort. And for part of our international effort, one was a way of allies to participate in bold scientific endeavors. The other was to involve the Russians.

So these are not exactly sharp distinctions.

You—meaning NASA—have a great deal of experience because what does spread proliferation but the ability to launch. This is why we are having meetings today on China. This is why we are going to be having other meetings. It goes to the fact that other countries now have the capacity to launch.

We don't know what got leaked to China. We don't know what Russia is selling. At the same time, of course, presumably we do know—or I hope we know.

My question is because of your capacity, are you involved in being an advisor on how we can help the Russians stay between the white lines and not proliferate?

Mr. GOLDIN. I communicate with the highest levels of the foreign affairs community in this country.

Senator MIKULSKI. I don't know what that means. Are you talking about Secretary Albright? I mean, I go to the Baltimore community. That's different, between being at Jimmy's Diner and the Mayor.

Mr. GOLDIN. My staff attends all appropriate meetings that take place on the subject.

Senator MIKULSKI. Are we in a situation where in this conversation you don't want to be specific for reasons that are not cranking with the question?

Mr. GOLDIN. There are things I do not feel comfortable saying in this open environment that would be a problem.

Senator MIKULSKI. Then that is a better way than me to continue to try to pressure you.

My time is up. I have other questions, but I would return now to the chairman.

COMMERCIALIZING THE SPACE STATION

Senator BOND. I would want to open up another area—commercialization of space or commercializing the Space Station. That all sounds really great. But I am not sure everybody knows exactly what we mean.

When you talk about it as head of NASA, you talk about the commercial use of the Space Station or turning the keys over to the private sector.

Can you give us a sort of explanation of what you expect would happen and when it would happen?

Mr. GOLDIN. First, when I talk about commercialization, I don't talk about people who provide commercial services where NASA is the only customer. There are some entrepreneurs who do not understand that concept. It is not commercialization if NASA is the only customer.

We are interested in people who want to commercialize space where NASA is one of a multiplicity of customers and the overhead can then be amortized across a broader base.

There are people who come to me and say Mr. Goldin, all I need is the first \$100 million. Then I could send robots and astronauts to the moon. That is not commercialization because the first money ought to come from the commercial sector.

We are now looking at running a competition for nongovernment organizations to run the utilization of the utilization of the Space Station. We, NASA, would then work with that organization to purchase some of the utilization time. We would like to do that so there could be a broad base of companies spending money in addition to NASA. We don't know how successful that would be, but that is our first attempt on the Space Station. We are preparing the documents now. We are talking to the community about that subject. Our intent is that commercial activity be real commercial activity and not shuffling of Uncle Same's money from one pocket to another.

Senator BOND. I guess I am still not clear. I understand better what it is not. To what extent do you see commercial operations taking over and supplanting the efforts which this committee funds to assure space exploration?

Is there an extent to which some of your tasks now being performed with money that we appropriate to you will be performed by, more and more by the commercial sector on the basis of the profit potential that those would entail?

Mr. GOLDIN. We have set a goal of 30 percent for commercial usage of the utilization time on the Space Station and have indicated that, if there are more commercial pressures, we would cut back on our government time up to 50 percent or more.

I do not anticipate that that activity will kick in in less than 5 years. And then, once the Space Station is up and operating and once we could establish user costs and user fees, and schedule it, we will then be in a better condition. So for the next 5 years we don't see it.

However, right now, there are about \$45 million a year of commercial money going into utilization of activities that could be put on the Space Station. That is a far cry from the 30 percent I am talking about of the total utilization of the Space Station.

Senator BOND. I could assume that if the private sector were paying 35 percent, or were taking 30 percent of the utilization, they would pay their allocable share of that particular operation?

Mr. GOLDIN. I would hope so. Right now, I don't think we will have problems with the utilization of the Space Station. The biggest problem we will have is getting the costs of access to the Space Station down. I think that is the single biggest deterrent to commercial utilization of the Space Station.

It is \$10,000 a pound to get up there and that is a very stiff fee. Toward this end, we are working with a number of different launch vehicle suppliers to see if they could get lower cost access to that Space Station, which would then make it more commercially viable for people to use it.

SPACE STATION COMPLETION

Senator BOND. What is your current expected schedule for completion of the Space Station? How much slippage in both the schedule and the cost do you expect?

Are you comfortable with the numbers you can give us now?

Mr. GOLDIN. Well, I will tell you that we are keeping a very tight schedule because one of the other lessons we find is whenever we put in too much schedule reserve, it gets used up by our NASA employees and industrial partners and contractors. So we are holding a very tight schedule which says completion of development will occur in September of 2003. That is when we will put 6 people on board the International Space Station.

We have a 1 year assessment of how much slippage could occur. This is in rough agreement with the Chabrow report. So our best assessment today is we could slip about another year beyond that. That is the best knowledge we have at this point in time.

Senator BOND. What about costs?

Mr. GOLDIN. By the way, there is one other point. Assembly completion, which would be when we brought the habitation module up, and the centrifuge facility would be July, 2004. If you put that 1 year slip, it would take it to a year later.

The best estimate of development complete is \$22.1 billion to \$23.7 billion, and the assembly complete is \$23.4 billion to \$25.3 billion. Those are the best estimates we have to date of those numbers.

SPACE STATION OPERATION COST

Senator BOND. What about the operation costs after it is completed?

Mr. GOLDIN. The operation cost is estimated to be \$1.3 billion a year. And it is in 5 to 10 years from now that we hope to get commercial utilization of that Space Station. But it is not 100 percent of that. Our initial goal is 30 percent of that. That hinges on the ability to bring down the access costs to getting up there.

UPGRADES TO THE SHUTTLE OR REUSABLE LAUNCH VEHICLES

Senator BOND. I have a number of questions that we are going to submit for the record. There is one last one that I want to discuss here because it is of interest to me, as well as are all these others.

You at one point said you would make a decision by the end of the decade on whether to make a major upgrade to the Space Shuttle or to rely on the private sector to build a new, Reusable Launch Vehicle, like the Venture Star. Where are we on that timeframe? What is the status? What are you seeing? What do you project?

Mr. GOLDIN. As part of the 2001 budget process, we will have a firm position on it. Where do we stand now? When we started the Reusable Launch Vehicle Program, the leaders of the corporations working with us were very optimistic. They thought that by 2000 they would be ready to reduce the technical risk of developing that system and go commercial.

We now have been at it with two different companies, two different vehicles, and we think it is much tougher—we, NASA, and

the corporations. We also thought that if we flew successfully the X-33, that would retire enough of the risk.

When we talked to the financial community 3 and 4 years ago, before it was a reality there was a sense that that would be okay. We are hearing now that we will have to retire much more technical risk before the financial community is willing to take on the business risk. They don't want to take both of them on.

We think there is going to have to be some more technical risk reduction and that it will probably be another 3 to 4 years before we could really get at a hard decision. But in that, another wonderful thing is happening.

The people who have worked on the Shuttle for decades and felt no competition, and always handed us ever increasing cost estimates for making upgrades and making changes suddenly feel the heat of competition. I think this is wonderful. They are now acting, the USA Corporation is very serious, performing very well, and they are taking a look at upgrades that we could make to the Shuttle to keep it safe.

I also want to point out that we are spending a half billion dollars a year on Shuttle upgrades today and we have been continually improving the safety. We believe it will be very worthwhile over the next 2 to 4 years to continue upgrades to the shuttle—not multi-billion upgrades but upgrades measured in hundreds of millions of dollars, which are sensible things to do—and keep the spirit of competition going, keeping investment from the USA Corporation, from Lockheed-Martin and Boeing, in the different activities. I think the government will benefit from this.

In addition, there are new concepts coming to the marketplace and it gives other people an opportunity to compete.

So my sense is that we are going to conclude that we need another 2 to 4 years. Keep the competition going.

Senator BOND. How much are you going to be investing in the Shuttle in that period of time?

Mr. GOLDIN. Although the contractors might be interested in billions, we will be talking of hundreds of millions. Those hundreds of millions could do some very sensible things. Again, this has not been worked out with the administration, but I think some investments measured in hundreds of millions of dollars over a 3 to 4 year period could do some very significant safety upgrades to the Shuttle, very significant productivity upgrades to the Shuttle. It also keeps the competitive stress going.

But I do not think we should commit to a \$5 billion or \$10 billion liquid flyback booster at this time because we would then give one contractor an opportunity to think they have a sole source position and that would not be healthy for the agency or the country.

Senator BOND. Thank you very much, Dr. Goldin. I will submit the rest of my questions for the record.

Now I would like to turn to my ranking member for such time as she may require.

Y2K

Senator MIKULSKI. Thank you, Mr. Chairman. I know that we are in the final minutes before a very important vote.

First of all, Dr. Goldin, I would like to thank you and all of NASA on your hard work on the Y2K problem. Last year, when we had our appropriations hearing, GAO gave NASA a “D”, which, given the fact that you were one of the leading technology agencies, was distressing.

I understand that that report now gives you a “B”, which puts you far ahead of many of the other agencies. I know that was the result of a tremendous amount of determination and extra costs that the agency did. So I want to thank you for that.

Mr. GOLDIN. You helped inspire me, Senator.

Senator MIKULSKI. Oh, that makes me feel good, Dr. Goldin. [Laughter.]

HUBBLE FOLLOW-UP

There are two issues in writing that I would like to follow up on. One that we talked about was the follow-up on Hubble and the impact on other programs so that we have this information as we work on this—again, together with the administration and with you.

[The information follows:]

If NASA does not receive supplemental funding for the Hubble Servicing Mission 3A, the added mission will proceed as now planned and we will have to find the means to accommodate added requirements within our current funding level, most likely at the expense of other activities. We have not yet determined what would be cut to fund SM3A, but should that become a necessity, we will of course inform the committee in a timely manner. Consistent with Senate direction, we are preparing a comprehensive report regarding the HST accelerated servicing mission, which we hope to deliver on or about July 1.

SPACE HOPE INSTRUCTIONAL PROGRAM

Senator MIKULSKI. The other thing in writing is I note that there continues to be a program under discussion at Goddard called the Space Hope Instructional Program. That was to establish that information technology facility in Baltimore.

I still do not kind of know what it is, where it is, what does it mean. Does it mean dislocation of NASA employees and relocation? Could you give me in writing an actual description of the real program, not noble goals, in addition to noble goals. Also, number two is the impact on employees. In other words, I do not know where we are going with this, what the status of it is. Also, I understand it would involve possible relocation of Goddard employees to Baltimore. That often causes some rather cranky eruptions.

Mr. GOLDIN. I would be pleased to answer that for you.

Senator MIKULSKI. Thank you.

[The information follows:]

Background

NASA Goddard and its Maryland based contractor workforce face serious problems in attracting and retaining skilled Information Technology (IT) personnel. An analysis of this problem suggests an approach modeled after the very successful Focus Hope program in Detroit. This program includes elements similar to the recent and successful migration of space mission operations to Bowie State University as well as experience gained in the successful Minority University-Space Interdisciplinary Network Training Program. “Space Hope” would be a pilot information technology training program. The approach is to establish a broad public/private partnership with IT related businesses, academia and local community interests that draw upon the under utilized segment of our urban populations to address regional IT needs, as well as those of NASA. It offers core IT curricula instruction,

formulated by local industry partners, combined with on-the-job training in specific workforce skills. Baltimore, Maryland was identified as the pilot site because of its strong base of information related business, public/private sector interest, favorable community response, proximity to Goddard, and access to a trainable urban population with immediate employment needs.

Space Hope Status

Goddard initiated preliminary discussions with industry, civic and academic groups in the Baltimore area regarding the Space Hope concept and ultimately came into contact with the Greater Baltimore Alliance (GBA) which took an interest in coordinating a response to this problem. GBA identified various corporations in the Baltimore area as potential partners, who we understand are prepared to co-fund core curricula, fund their individual specialized training component, offer IT job placements and other support for such a training program. In addition, we believe an arrangement has been negotiated between GBA and one of our contractors to manage and implement the core instructional program. Goddard is evaluating implementation options and plans to make recommendations to NASA Headquarters.

Over the course of the past six months, Goddard Space Flight Center management has been preoccupied with an intensive activity to transition to the new Consolidated Space Operations Contract (CSOC). At the same time the Center has been dealing with several major on-orbit issues which caused Center management to review its overall strategy for mission operations, and to some degree reconsider aspects of the Space Hope program. However, Goddard management remains convinced that the Space Hope program could make a contribution to space operation needs, and therefore has started to refocus attention on this initiative. In the near future, Goddard plans to outline a definitive proposal that will serve as a basis for addressing this critical need in an affordable and sustainable manner.

Does it mean relocation for NASA employees?

Although we have not outlined a specific proposal for Space Hope, permanent relocation or reassignments are not contemplated.

FISCAL YEAR 2000 BUDGET FOR GODDARD SPACE FLIGHT CENTER

Senator MIKULSKI. Now let's go to the Goddard budget.

Goddard is scheduled to have \$2.4 billion and at the same time it has been instructed to develop two new starts—Triana and the University Class Earth System Science Mission, or UNESS.

Mr. GOLDIN. UNESS.

Senator MIKULSKI. Could you tell me if the fiscal year 2000 budget is adequate now for Goddard to conduct its operations? Again, we have been concerned about the impact on the Space Station and others. Also, does your budget allow you to begin these new projects or not?

Mr. GOLDIN. Yes, it does, and, in fact, the enthusiasm is contagious at Goddard for some of these new programs. They are adequately funded and they can do these programs.

Senator MIKULSKI. Do you believe that to be so?

Mr. GOLDIN. I believe that to be so. But if there is a concern, I will be talking to the center director, Al Diaz, after this hearing, and if there are any concerns that he expresses to me, I will also let you know.

Ghassem, would you like to say something on this?

Dr. ASRAR. Yes, Senator.

On the first subject, Triana, this is a mission of fixed value, where we have \$75 million. We competed that. Goddard is a partner and Scripps Institution of Oceanography is the lead institution for that. The budget for that is well laid out in our budget for 1999, 2000, 2001, and beyond.

The university class experiment that you referred to is a level of effort. We just started that. We have not actually announced it. We will announce it in the May timeframe.

We have not received the proposals yet.

Senator MIKULSKI. So it is just being developed?

Dr. ASRAR. It is in the stage of development, the early stage of development.

Senator MIKULSKI. Well, of course, we are very proud of Goddard and its Earth Science effort. We have been reading their outstanding work on the sun eruption issue. You know, with the Millennium coming, there is a lot of armageddon type fear in all kinds of categories.

So we look forward to hearing more about that. But, really, I think it goes to what Senator Bond was asking about, commercial activity, whether you talked about working with FEMA on flood mapping.

So much of what Goddard is doing—everybody sees the dazzling pictures of Hubble which are more than just pictures. There is real science information there and all of that.

But what I think is a message that we need to get out is, really, how the work of NASA is improving the day to day lives of the American people and even the world.

The more I read these reports I see what we could be doing in agriculture and flood prediction, helping agencies save money, and knowing that that could be value added. Once we have those maps, not only do they help local government, but this is a market for the private sector to buy and value add to for specific uses.

Senator BOND. Senator, if I may interrupt for just a minute, while we are worrying about armageddon, I am faced with a much more pressing problem. The Budget Committee is in markup and there is scheduled a series of votes.

Senator MIKULSKI. Why don't you go and permit me to finish up with my question.

Senator BOND. I am pleased to present you with the gavel.

Senator MIKULSKI. I will view this for now as just a loan. [Laughter.]

Senator BOND. It's a loan. You know, Rush Limbaugh has a brain on loan from God; you have a gavel just on loan from the Appropriations Committee.

Dr. Goldin and associates, thank you very much. If you all will excuse me, I am off to defend against some kind of evils, I know not yet what. [Laughter.]

Senator MIKULSKI [presiding]. Okay. We will be there. I am sure that we will have a full court press knowledge about this next week. The budget comes up next week and, as you know, this is why we are going into some of these issues.

When I was in the House, we helped do new product development in the Great Lakes area in terms of mapping and scientific information. The private sector then value added to that in very specific niche markets for maritime and other use.

What we are hoping is that even this information or knowledge that is being developed would be the same. I just see that in the flood mapping this would be an incredible endeavor. What we are trying to do with FEMA is to identify the areas that are so prone

to disaster that we essentially buy them out now. In some instances we have gone in and rehabilitated 12 times. You see?

That is where we see this work going.

Let me conclude my questions.

Mr. GOLDIN. May I give you a substantiation of what you have just said? In 1992, there was a \$750 million a year remote sensing business. As a result of the technologies developed by NASA-Goddard and used by the value added sector, that industry is now \$2 billion a year. It is projected to be \$4 billion a year by 2005 and \$10 billion a year by 2010.

That technology from Goddard in and of itself could be paying for two-thirds of the NASA budget.

SOLAR STEREO MISSION

Senator MIKULSKI. Personally, that is great to hear. In fact, it's fantastic to hear.

One of the reasons I chose to be on this subcommittee and why I am always so eager to hear what NASA is doing is it really does look at and has implications for the day to day needs of our own people, people of the world, and the long-range needs of our planet. So let me conclude with this.

I would like you to tell me what do we now know about the sun surges, or whatever the scientific term is? I want to know how NASA is going to celebrate the Millennium and what are you doing New Year's Eve? [Laughter.]

I know that James Lee Witt is at the Disaster Center, Shalala intends to be at HCFA to show Medicare is going out, so why don't you tell us about these sun surges and NASA's plans, as we turn the century mark, for how it intends to celebrate it. Then I want to know where you are going to be New Year's Eve.

This is not an invitation to come to a party, now. [Laughter.]

But if NASA is having one, it would probably be one of the best around—but not more fun than James Lee Witt's, I might add.

Mr. GOLDIN. I think it could be.

First, with regard to the sun, we have made some incredible discoveries about these coronal mass ejections which have a huge impact on things here on Earth. It disrupts power systems, it disrupts satellites, it creates all sorts of problems for space travelers.

We will be able to do a better job in protecting the health and safety of our astronauts by having a much earlier anticipation of when these events could occur.

The breakthrough in solar terrestrial physics in the last 6 months has been nothing short of breathtaking. There are a number of new programs which you have supported that will take it to the next step.

The Solar Stereo Mission is going to give us three dimensional images of these phenomena which will lead even to further understanding and benefit of how our sun works and how it affects our Earth. We thank you for the support for doing that.

Senator MIKULSKI. Will, through your work at NASA, we be able to give more predictive dates of when these surges or eruptions will occur?

Mr. GOLDIN. That is our intention. Now we have tens of minutes to an hours worth of anticipation and we hope to make that per-

haps a day or two. This would really give people time to plan. But I think that is a few years off in the science now.

NASA—THE MILLENNIUM

With regard to NASA, for the Millennium, we intend to give this Nation 15 additional payloads on orbit. In the last 25 years, we have never launched that many spacecraft. It is an unbelievable task that we have ahead of us this year. I think half of them are going to come from your center, at NASA-Goddard. It is an unbelievable task we are facing, but the NASA team is up to it.

As for myself, my wife and I are debating if we should go up to a mountain or should we go to New York City. We have not resolved that debate. I lean toward New York City.

Senator MIKULSKI. Well, New York City sometimes goes into orbit. [Laughter.]

Mr. GOLDIN. And you're welcome to come with us, Senator.

RANKING MINORITY CLOSING REMARKS

Senator MIKULSKI. Actually, I think I am going to be in Baltimore at a program called the Visionary Arts Museum, where there will be whole Millennium turn. It's right across from the sign center. I am going to be at a place that is visionary, scientific, futuristic.

This old century has brought us incredible scientific discovery. Some have created mass weapons of destruction. Then, at the same time, we have created massive, new scientific information that has saved lives and saved communities, and NASA has been part of it.

ADDITIONAL COMMITTEE QUESTIONS

We thank you for this hearing. We know that there will be a lot of homework to do between now and the appropriations. I wish you to thank all the people at NASA for helping bring us a long way on many of the issues at this time.

[The following questions were not asked at the hearing, but were submitted to the Department for response subsequent to the hearing:]

QUESTIONS SUBMITTED BY SENATOR BOND

SETTING NATIONAL SPACE GOALS—NASA'S MISSION

Question. Mr. Goldin, how do we as a nation set goals for the civilian space program? Does NASA develop a set of plans and then try to get approval from the White House and Congress, or does the White House set the plans, tell NASA what to do, and then you both try to get approval from Congress? How does that process happen?

For example, after the completion of the International Space Station, what do you expect the next major manned mission to be? Has this been discussed within NASA and what is the decision-making process for such a mission? In addition, is NASA looking at manned flights to Mars or the establishment of a manned base on Mars or the Moon. If so, have you looked at budgeting issues?

Answer. The sequence by which the Nation's goals in space are defined can vary, but consistently occurs within the framework of the Constitutional relationship between the Congress and the White House. The foundation of any goals enunciated by NASA and the White House is contained in U.S. law—the National Aeronautics and Space Act of 1958 (as amended, or "The Space Act") is the starting point. The Congress may pass other laws that might limit or stimulate the consideration of goals above and beyond what is already indicated by "The Space Act."

The White House periodically issues a National Space Policy, which is likely to elaborate on Congressional direction but may also reflect White House initiatives, and normally addresses policy for military and intelligence, as well as civilian, activities in space. The last four presidential administrations have each issued National Space Policy directives. These directives have been fairly consistent in their basic objectives and approaches toward reaching those objectives.

Within the legislative and policy framework, planning for the future of the U.S. civilian space program is, in almost all cases, done by NASA, in consultation with space program stakeholders, including the science communities, industry, other Federal agencies, and our international partners. NASA then seeks approval for its plans from the Administration. As the White House approves plans, NASA and the Administration then seek approval from the Congress. Both in current practice, and historically, this has been the way space program planning has been done in the great preponderance of cases. Occasionally, a US Presidential Administration or members of Congress will propose plans directly to NASA. In cases where this comes as a suggestion, NASA will investigate incorporation of the specific idea into current plans, and will either adopt, modify, or reject the proposal. In cases where an Administration or Congressional proposal comes in the form of a directive or a mandate, NASA then develops implementation plans to correspond with the directive, adjusting other plans and reallocating resources as necessary.

With the advent of the Government Performance Requirements Act and the establishment of an agency Strategic Plan, the processes described above have become more codified. NASA has used its strategic planning processes to establish a series of goals over a 25-year time frame, documenting them in the NASA Strategic Plan. In most cases, the goals and objectives for long-term time-frames are less specific than those in near-term time-frames. The Agency's strategic roadmaps provide a general framework within which the Agency can develop a greater level of planning detail for the out-years as current accomplishments, technology developments, and resource availability issues resolve themselves in the current time-frame.

NASA's Strategic Plan currently identifies "Conduct human missions to planetary and other bodies in our solar system" as a goal of the Human Exploration and Development of Space Enterprise in the 2010 to 2023 timeframe, following achievement of the Agency goals that will be met by the International Space Station. The specifics of what type of missions would best fulfill this long-term goal have not been determined. NASA has, of course, had multiple study efforts over the years that have examined the possibility of a human mission to Mars. NASA continues to study such possibilities, and we are also attempting to further improve our long-range planning efforts across the board. However, none of these preliminary study efforts has reached the point where specific budget considerations could be considered, except in as much as the Agency has conducted such efforts in recent years with a particular focus on ways to achieve various missions at low cost.

NATIONAL SPACE COUNCIL

Question. Mr. Goldin, when you first became head of NASA, there was a National Space Council at the White House to coordinate military, civil and commercial space policy. The Clinton Administration hasn't used that structure. Was the making of national space policy better or worse when the Space Council mechanism was used? Would you recommend that the Space Council be restored?

Answer. While the Clinton Administration has chosen to address space policy matters within the framework of a National Science and Technology Council rather than a National Space Council, it is not apparent that "the making of national space policy" is "better or worse" for it. Certainly the making of National policy in any arena is improved by the extent to which it responds to the entire National policy agenda, rather than asserting only the policy claims of special interest groups—however meritorious those claims.

There is very little that NASA does that does not have ramifications for many dimensions of the Nation's current well-being and its future. For example, the civil space program draws from, and contributes to, the vitality of our industries; the education and capabilities of our workforce; and the visionary aspirations of our citizens, young and old alike. Executive Branch discussions of space policy issues that occur within the framework of the National Science and Technology Council are more likely to reflect these and other dimensions. If I were to draw any distinction between the significance of the two Councils, it might be one of emphasis, but it is impossible to say whether one produced "better" or "worse" policy. The ultimate test of any policy is whether it served its ultimate objectives, and that judgment can only be made "in the long run," with all the benefits of hindsight.

MISSION DECISIONS

Question. What are the procedures by which missions are selected and budgets for those missions determined. Please provide a step-by-step overview of this process, including oversight review. Also, please provide a summary of the yearly review and oversight procedures for missions that are selected and budgeted.

Answer. The NASA Strategic Plan identifies the goals of each of the Enterprises and provides specific objectives for the near, mid and far term. Science missions aligned with these objectives are defined within the scope of the budget allocated to each Enterprise. Announcements of opportunity or similar announcements such as NASA research announcements that are provided to the science community and responses are peer reviewed to select the highest quality science instruments and investigations that can be accomplished within cost and schedule constraints. For major programs, oversight responsibilities are retained at NASA Headquarters. For those programs, an independent assessment is conducted by the Independent Program Assessment Office (IPAO) prior to Agency approval of the program. Agency approval must be granted prior to program transition from formulation into implementation.

During program implementation, oversight for major programs is executed by the NASA Program Management Council. In addition to receiving regular status reviews, the NASA Program Management Council also receives the report of an Independent Annual Review (IAR) team. The IPAO also executes the IARs. The IAR team reviews the status of the technical progress, the schedule, and costs to verify that the program is meeting its commitments. If cost and schedule thresholds are at risk, a Termination Review may be required to facilitate the Agency deliberations on terminating, rescoping, or continuing the program.

For projects or smaller missions, the responsibility for approval and oversight may be delegated to a Lead Center. The Lead Center will also utilize an independent assessment to inform their deliberations prior to approval of the project. Ongoing oversight will also be delegated to the Lead Center's Governing Program Management Council.

NATIONAL ACADEMY OF SCIENCES

Question. What role does the National Academy of Science play in setting goals and objectives for NASA? For example, how closely do you follow its recommendations on what space science programs to pursue?

Answer. NASA's science programs solicit National Research Council (NRC) guidance on scientific goals for their flight and ground research programs, generally on a decennial basis. During the past five years, the Office of Space Science has requested and received research strategy documents from the NRC's Space Studies Board on planetary exploration, solar and space physics, and astrophysics. In addition, every ten years the NRC prepares an integrated discipline-wide survey of priorities for astronomical research supported across the federal government. These products, based on research community consensus processes external to NASA, provide valuable guidance to OSS management in prioritizing missions and programs. NASA follows this research guidance where possible, subject to constraints of cost, technology, available infrastructure, risk, program balance, and national policy.

FULL COST ACCOUNTING

Question. What is the status of NASA's efforts to implement full cost accounting?

Answer. NASA continues to progress toward implementation of full cost management, budget and accounting practices. NASA's full cost initiative focuses on improved mission and administrative cost efficiencies by integrating full cost information into all key agency practices. During the past few years, NASA tested key full cost concepts, trained key staff, simulated full cost management practices, estimated and reported basic full cost information to external oversight authorities, developed full cost budget estimates and initiated full cost management activities at key Centers. NASA plans to continue to integrate key full cost practices into agency operations during the next few years. NASA plans to implement all full cost practices in conjunction with the implementation of its new standard integrated financial management (IFM) system in the next several years.

The overall objective of NASA's full cost initiative is to improve the way NASA achieves its mission by implementing new, improved management, budgeting, and accounting policies, practices, and procedures. In its simplest terms, the concept of full cost ties all Agency costs (including Civil Service personnel costs) to major activities. All costs must be associated with an activity, commonly referred to as a cost objective. Based on experience gained in earlier stages of the full cost initiative,

NASA plans to use “projects” as cost objectives for managing, budgeting, and accounting. In contrast to the current approach in which Civil Service personnel costs and certain other costs of an institutional nature are not tied to projects, under the full cost approach all costs will be associated with projects.

NASA has made significant progress in developing, testing and initiating full cost practices into agency operations during the past few years. NASA tested key full cost concepts at its Centers. NASA trained key staff on full cost practices. NASA simulated full cost management practices at the Center and agency levels. NASA successfully applied analytical accounting techniques and reported basic full cost information to external oversight authorities. NASA developed full cost budget estimates and used key indicators for internal budget deliberations. In addition, NASA initiated full cost management activities at key Centers.

NASA’s full cost initiative integrates a phased development and introduction of full cost practices in conjunction with NASA’s new, standard integrated financial management (IFM) system. NASA plans to continue to use cost finding techniques and to pursue related interim full cost practice improvements. In addition, NASA plans to operate all full cost practices in conjunction with the implementation of its planned new IFM system implementation during the coming years.

Question. What are the five most critical issues that face NASA in implementing full cost accounting and how has NASA addressed these issues?

Answer. NASA faces a variety of significant issues in implementing the full cost initiative. These issues include (1) restructuring NASA’s appropriations, (2) implementing required financial system capabilities, (3) training on management in a full cost environment, (4) applying new cost accounting principles in the NASA environment, and (5) obtaining and integrating agency “buy-in”. NASA continues to pursue the effective resolution of these issues.

Appropriations Restructure

NASA requires certain restructuring of its appropriations and related oversight to optimize the benefits of its full cost initiative. The integration and synergy of changes in each area (management, budgeting, and accounting) are critical to the strength and benefits of NASA’s full cost practices.

Full-cost accounting by itself, over time, would likely lead to gradual budget and management improvements. However, concurrent changes to full cost practices in the accounting, budgeting, and management areas can be expected to ensure that NASA optimizes improvements in each area, as soon as possible. To this end, NASA has pursued key budget changes as part of the full cost initiative. Furthermore, certain legislative provisions are being pursued to ensure that NASA achieves all of the key benefits of its full-cost practices, while NASA retains its long-standing ability to appropriately and efficiently assign/reassign its staff to achieve mission requirements.

As part of its fiscal year 2000 budget request NASA proposed that following language which was adopted by the House of Representatives and is under consideration by the Senate:

NASA shall develop a revised appropriation account structure for submission in fiscal year 2001 budget request consisting of the “Human Space Flight” account; the “Science, Aeronautics, and Technology” account; and the “Office of Inspector General” account. The accounts shall each include the planned full costs (direct and indirect costs) of NASA’s related activities and allow NASA to shift civil service salaries, benefits and support among accounts, as required, for the safe, timely, and successful accomplishment of NASA missions.

The eventual enactment of such appropriation language is critical to optimal full cost benefits.

Supporting Financial System Capabilities

The effective and efficient implementation of the full cost initiative in NASA requires key management system capabilities. NASA’s current financial systems are out-dated, are not standardized, and lack cost accounting capabilities. Without such capabilities, detailed cost accounting support becomes extremely labor intensive. Such labor is not, and is not expected to be available.

While certain after-the-fact cost finding techniques can be used to establish a minimal level of cost accounting capability for analytical purposes, such techniques cannot support NASA full-cost accounting, budgeting, and management in an operational setting. As a consequence, NASA has determined that the timely and efficient implementation of full-cost management in NASA requires new standard system capabilities. As noted above, NASA is currently implementing a new standard

IFM system that is expected to support completely full cost management, budgeting, and accounting through the timely production of consistent cost information. Because Agency-wide implementation of the IFM system is a lengthy process, NASA is also developing a strategy to pursue certain full cost practices, to the extent practical, without the new system with the expectation that the system will follow shortly thereafter, thereby supporting optimal long-term practices.

Training

Training in full cost management, budgeting, and accounting across NASA is required to achieve the key mission and administrative benefits envisioned under the full cost initiative. Technical training in budgeting and accounting is to be provided to financial/resource personnel. Further, training in managing on a full cost basis is needed, particularly for program and project managers.

To meet these needs, NASA has:

- Developed and maintained a written full cost initiative implementation guide that is available to all NASA staff;
- Held full cost briefings for all Headquarters and Center staff;
- Conducted exercises involving (1) re-casts of budgets into a full-cost basis and (2) development of estimates of the costs of program and projects on a full-cost basis, using cost finding techniques;
- Conducted an Agency-wide full cost management simulation exercise, focusing on the organizational structures and processes used to implement full cost practices.

Further, NASA will continue to include full cost practices as a part of all program and project management training and include full cost budgeting and accounting as part of the training segment of the IFM system implementation.

Applying Cost Accounting Principles within the NASA Environment

The basic concept of full costing is typically associated with the private sector and the economic imperative that mandates that all costs must be recovered to ensure economic survival. As such, the traditional accounting discussion of “absorption” or “full costing” typically focused on manufacturing operations and related product costing. In that regard, the approach involved accounting for the direct material and direct labor costs related to manufacturing a product and involved assigning a share of other indirect costs, such as maintenance, data processing, security, and general office costs, to the product. In this context, the cost objective was the product.

While the private sector has a long history of activity in the cost accounting area, the Federal government’s involvement only recently has evolved and been refined. In response to significant financial management legislation in recent years, a wide variety of concepts, techniques, and approaches have evolved. The challenge NASA faced was to adapt this emerging body of new Federal cost accounting knowledge to the NASA environment.

The NASA full-concept integrates several fundamental accounting, budgeting, and management improvements. The planned improvements include accounting for all NASA costs as direct costs, service costs, or general and administrative (G&A) costs, budgeting for all appropriate program/project (“project”) costs, and managing such “project” costs from a full cost perspective. The term “project” is used to represent NASA’s final cost objective.

Briefly stated, (1) direct costs are costs that can be obviously and/or physically linked to a particular project, (2) service costs are costs that cannot always be initially, readily and/or immediately linked to a project, but subsequently can be traced to a project (optimally based on service consumption) and (3) G&A costs are support costs that cannot be linked to a specific project in an economical manner. Such costs are typically allocated to cost objectives (or projects) on a reasonable, consistent manner.

All costs will continue to be controlled and managed within NASA. Under full-cost management, however, project managers (with the most direct mission responsibility and most intimate project knowledge) are expected to continue to control direct costs but are also expected to have greater influence over service costs and appropriate awareness of G&A costs. Project management control/influence is not unconstrained. At the same time, NASA Enterprise and Center management are expected to continue to guide expenditures related to Center capabilities consistent with strategic imperatives.

The introduction and integration of the basic private sector “absorption” practices has been a particular challenge in a government research and development (R&D) environment. NASA is addressing this challenge by adopting the private sector practices and continuing to train, test, modify and integrate applicable full cost practices into agency activities.

An additional challenge concerns comparisons of project cost estimates and actual costs at different time intervals. If a project were budgeted and funded using the customary NASA basis and subsequently were accounted for on a full cost basis, there would be a need to restate the original budgeted amounts into a full cost baseline in order to facilitate accurate comparisons. The conversion process will require careful estimates and approximations in order to support budget to actual cost comparisons.

Need for Broad-Scale Participation

In the development of the full cost initiative, an important issue was striking an appropriate balance between (1) broad-scale participation of NASA management in concept formulation, testing, and implementation and (2) efficient mechanisms for concept development, prototyping, testing, and implementation. Participation is vital to achieving “buy-in” at all levels; efficiency is needed to achieve timely accomplishments.

The approach developed involved an organizational structure geared to the specific tasks at hand. When tasks were completed, the organizational structure was disbanded. To illustrate, the following organizational structure was used to support the Agency-wide testing of the full cost initiative:

- Steering Group, composed of Senior Executives from representative Headquarters organizations and Centers;
- Policy Group, consisting of representatives of all Headquarters organizations and Centers (the Steering Group and Policy Group were basically the same groups that provided oversight during the concept and prototyping phases);
- Implementation Oversight Group, composed of all Center Chief Financial Officers (CFO’s) and representatives from the agency Enterprises;
- Issue Teams, ad hoc groups established to develop solutions to identified issues.

Upon completion of Agency-wide testing, the groups were disbanded. In the current implementation stage, NASA managers are expected to implement the full cost initiative within their areas of responsibility. In addition, key operational matters are being addressed through related Integrated Financial Management (IFM) system working groups and committees. Ongoing oversight is provided through existing agency communication mechanisms, including the agency CFO Council.

SPACE STATION

ISS OVERRUNS

Question. The estimated cost of the International Space Station (ISS) has grown from \$17.4 billion to more than \$23.4 billion. Why has the ISS program encountered such a large overrun—\$6 billion to \$8.3 billion depending on that of your current estimates are correct?

Answer. The growth in the ISS cost projections through the completion of assembly have increased for several reasons:

- Lengthened assembly launch schedule,
- Addition of new scope,
- Contractor overruns,
- Make-work changes, and
- Maintaining sufficient reserves.

Although the first element launch (FEL) was delayed only 8 months since the fiscal year 1994 budget (Mar–98 to Nov–98), the assembly sequence has stretched out 29 months. Assembly complete has shifted from Jun–02 to Nov–04 with the recently rebaselined assembly sequence (Rev-E). Although the lengthened assembly launch schedule has generally not caused increases in annual funding, it has resulted in planned operations and research funding for the lengthened time frame.

Much of the additional scope has been added to implement contingency plans related to potential Russian shortfalls. Both the ICM and a U.S. propulsion capability have been initiated as part of NASA’s contingency plan. A U.S. developed crew return vehicle (CRV) was added when analysis indicated that the Russian Soyuz would not meet the emergency return requirements for the 7-person crew planned for the duration of the station’s operations period. The addition of the U.S. CRV is estimated to increase funding about \$1 billion through fiscal year 2004.

Overruns by the prime contractor have also contributed to overall cost growth. Boeing’s current overrun estimate at completion is \$986 million.

Make-work changes, including impacts driven by accommodation of the Russian segment, have also contributed to the projected growth. To the extent that all these changes depleted reserves to a low level, NASA has increased funding estimates to ensure sufficient reserves.

Question. In what specific areas did NASA underestimate the cost and why did the underestimates occur?

Answer. The stretch-out of the assembly sequence has not contributed to increases in annual funding, but the impact runout cost is estimated to result in about \$3 billion of the projected cost growth included in the fiscal year 2000 budget estimates. The schedule delays affect operations and research activities already planned and estimated at a level of approximately \$115 million per month. Extension of the assembly sequence into this operations and research period is calculated by multiplying the months of schedule slip by the average monthly costs. This results in a total cost for the delay of assembly complete of \$3.3 billion for the full 29 months.

NASA is committed to minimizing the impact of the schedule problems and limiting program cost growth, while maintaining the integrity and robustness of the vehicle for the research opportunities it will provide for many years to come. U.S. hardware is being held to earlier delivery dates to avoid excessive contractor costs, while providing for increased integration, verification and testing activities to enhance performance on orbit. All hardware and schedules, both U.S. and partners', are closely monitored so that the agency can continue to plan and manage the program in an efficient and effective manner.

The contingency planning activities have increased the ISS annual funding levels. The implementation of contingency plans, while increasing annual funding levels, provides critical backup, and possible replacement capabilities, to Russian provided hardware. NASA has been proactive in contingency planning activities aimed at mitigating the potential loss of Russian-provided capabilities, including the initiation of development of U.S. propulsion capability. The acquisition of the Interim Control Module, development of a propulsion module, orbiter fuel interconnect modifications, and additional logistics carriers, and procurement of Russian goods and services, enhance U.S. segment autonomy and help maintain the assembly schedule. Funded within the Space Station account as part of the Russian Program Assurance (RPA) effort, these activities have increased the Space Station annual funding requirements by about \$1.2 billion between fiscal year 1997-2004.

The current estimate of overrun for the prime contract is \$986 million. Over 82 percent of the Prime development contract has already been completed and this is clearly exhibited by the quantity of flight hardware already delivered. This level of completion is resulting in a continued drop off in the development effort work force. Prime Contractor staffing levels are decreasing, with over 2000 employees having transitioned off the Program from peak development levels in fiscal year 1997. Still, the Program continues to be very concerned with Prime contractor cost management and we have budgeted reserves accordingly, having also initiated an internal review of cost management issues and concerns. We expect to implement improved procedures and processes in the very near term in a number of critical areas to manage the program's resources.

Question. What lessons have we learned that can be applied to the next large space project or for any large Governmental initiative like this?

Answer. When undertaking an unprecedented, multi-year, global project like the ISS, some lessons learned have emerged that may be of use to future programs:

- Not all risks are knowable. When pushing the technical boundaries in so many areas, difficulties and challenges will arise which cannot be foreseen. Nonetheless, in planning a project, they should be anticipated as best as possible.
- Preserve resources for unforeseen problems. When problems are known, they should be prudently addressed as quickly and economically as possible. When unknown problems emerge, as they are bound to, they will require resources.
- The global political and economic environment may change. The world is dynamic, and while not possible to predict what may change, such changes must be accommodated. To lead globally and gain from what other nations have to contribute requires flexibility.
- Integrated system analysis and testing capabilities are critical.
- Communications among domestic and international partners is critical.

TOTAL ISS COSTS

Question. NASA has indicated that the International Space Station program will grow from a total of \$17.9 billion to some \$23.4 billion at completion and likely significantly more. GAO has estimated a life-cycle cost for ISS through fiscal year 2012 of 95.6 billion. What is NASA's estimate for total costs, including operational costs, for the life cycle of the ISS? How does NASA plan to budget these costs?

Answer. NASA's fiscal year 2000 budget estimate through completion of assembly is \$23.4 billion, with a potential range to \$25.3 billion. NASA's estimate for a 10-

year operational period is \$13 billion. In addition, about \$10.2 billion was funded prior to fiscal year 1994 for the Freedom program.

GAO's estimate was based on the fiscal year 1999 budget. It included about \$64 billion that the GAO estimated as "station-related" including Shuttle-Mir flights, Shuttle assembly, research and operations flights, civil service support, research principle investigators. These activities are funded in other NASA program and project budgets.

NASA will continue to fund these activities in the appropriate program and project budgets. When a full cost approach is implemented for the NASA budget, some costs, like civil service, will be allocated to the ISS and other program budgets. Other costs, such as communication support, and agency and center general and administrative activities, will also be allocated to specific NASA programs.

RUSSIAN FUNDING PROBLEMS

Question. The current Space Station is the result of the redesign of the Space Station Freedom begun in fiscal year 1993. The inclusion of international partners (such as Russia, Japan, Canada, and the European Space Agency) was touted as a way to save time and money over the earlier Freedom program. In particular, Russian participation was to save \$2 billion and 18 months. Nevertheless, Russian funding problems are continuing in a crisis state and we understand that Russian funding problems are likely to impact the current schedule of assembly launches and hardware. In response to previous concerns with Russia's ability to provide the Service Module, NASA developed a contingency plan, which included the development of an interim control module.

What is the current status of Russian funding for its sections of the Space Station?

Answer. The 1999 Russian Federation budget provides approximately 2.5 billion rubles (\$114 million USD at current exchange rates) to RSA. Of that total, 1.1 billion rubles (approximately \$50 million USD) will be allocated to the ISS program and 600 million rubles (approximately \$27 million USD) to Mir operations through August 1999. RSA may receive additional revenue from off-budget sources, such as the sale planned by the Russian Government of frequency spectrum and additional excise taxes. NASA believes that the projected 1999 budget for RSA represents a significant shortfall in the funding required to fulfill RSA's obligations to the ISS program.

RSA believes they can achieve a late-1999 launch of the Service Module, provided that the fiscal year 1999 budget is disbursed in a timely fashion. However, the 1999 budget has yet to be disbursed in full, placing continued budgetary strains on RSA. RSA has received approximately 524 million rubles (approximately \$24 million USD) for ISS through May 1999.

Question. Considering the difficulty Russia has had funding the Service Module, do you believe Russia will make timely delivery of other Space Station hardware and Services? If so, why? If not, what are your contingency plans? What are the cost implications of those plans?

Answer. The Russian ISS program continues to struggle due to shortfalls in Russian Government funding for the Russian Space Agency (RSA). NASA is concerned that continued shortfalls in funding may threaten progress on Russian ISS elements beyond the Service Module, to include operation of the Service Module on-orbit and support of needed launch infrastructure. Continued shortfalls could result in delays in the program unless full Russian Government funding, or off-budget funds are received. Of particular concern is the development of follow-on Soyuz and Progress vehicles and the Science Power Platform.

In attempting to minimize U.S. cost growth, the ISS Program has taken the approach of incrementally buying down the level of Russian risk. NASA has laid out a comprehensive contingency plan that allows us to move the ISS Program forward, maintain the Russian partnership based upon their economic ability, and achieve greater U.S. backup capability over the next several years. The objectives of this plan are to contain U.S. cost growth, protect the ISS schedule, and maintain program stability, while providing backup capability in the event of further Russian shortfalls.

A key component of the ISS contingency plan is the buildup of U.S. capabilities to increase ISS robustness and provide contingency against possible Russian shortfalls. NASA has developed an Interim Control Module (ICM) to protect against a Service Module failure to achieve orbit, with a secondary focus to protect against Progress propellant resupply shortfalls. The ICM schedule supports a launch on need as early as 2000 and provides 1 to 3 years of ISS propulsive capability depending on its usage. Through innovative Shuttle flight planning, NASA has developed

an approach under which NASA can already offset a 30 percent shortfall in Progress vehicle propellant logistics, and the Agency is taking additional steps, such as the modification of the Orbiter fleet to enhance Shuttle reboost capability. Development of a permanent U.S. Propulsion Module is scheduled to be available in 2002–2003, providing full U.S. propulsive redundancy.

Additionally, the ISS contingency plan seeks schedule stability by working with the Russian Space Agency (RSA) to meet near-term objectives and to ensure reliable resupply and crew rescue capability to ISS. The broad operational capabilities that Russia has committed to provide for the ISS naturally places requirements upon the other ISS partners for systems integration. As a result, there are many Russian goods and services that are of great value to the U.S. for risk mitigation, operational effectiveness, capability enhancement and safety. These goods and services are outside of the initial ISS Partnership agreements because they have only been recently identified as assembly plans have matured and as we have begun preparing for crew operations and potential contingencies. The cost of procuring these goods from Russia is small in comparison to the cost of developing the same capability in the U.S. Each of the Russian goods that have been identified are key to meeting ISS schedule requirements.

The total level of funding for Russian contingencies through assembly complete (funded through the Russian Program Assurance budget line) is \$1.2 billion. This includes funding for last fall's \$60 million procurement of Russian research time and stowage, and \$100M identified for Russian goods and services procurements in 1999. It is possible that NASA may require some specific Russian goods or services to address currently unforeseen needs in the future, although additional funds are not budgeted in subsequent years.

NASA'S PURCHASE OF RUSSIAN RESEARCH TIME

Question. NASA recently transferred \$60 million in funding to Russia in exchange for all the research time (4,000) allocated to Russia during the assembly period. Nevertheless, I understand that a Russian official indicated that NASA had purchased between 25 percent and 75 percent of Russia's research time. What did we actually get for our \$60 million? Please identify what this research time will be used for?

Answer. NASA purchased 4,000 Russian crew hours, which essentially doubled the crewtime available for U.S. research during the assembly period. The availability of crewtime is a significant limiting constraint on the research program during the 3-person phase. This additional crewtime will be especially valuable for initiating, monitoring adjusting and servicing experiments and significantly advancing research productivity. The hours will be used to enhance early biotechnology, human physiology, gravitational biology and commercial product development activities. As crewtime increases, the productivity of the research program grows commensurately; because it enables a greater number of experiments to proceed for longer periods and at increased frequency, thus acquiring many more processed samples, or empirical data points. NASA plans to begin early ISS research activities with delivery of the Human Research Facility on flight 5A.1 (STS-102) and two EXPRESS Racks on flight 6A (STS-100). Ongoing utilization activities will be initiated with the first five utilization flights, all prior to the 6 person crew capability. NASA is confident that this Russian crewtime will be very valuable and fully utilized within the research program.

COMMERCIALIZATION OF THE ISS

Question. There is a lot of talk about "commercializing" the space station, but little agreement about exactly what that means. What do you, as the head of NASA, mean when you talk about commercial use of the space station or about "turning the keys over to the private sector" as you've said in the past? What is your time frame for the latter?

Answer. In 1998, the Committee played a pivotal role in the formulation and ultimate enactment of the Commercial Space Act (Public Law 105-303) which called for several reports relative to the potential for commercial opportunities with respect to the ISS. NASA responded with its Commercial Development Plan for the ISS. We have a vision of an expanding space program with private investment, international collaboration, and vigorous economic development. Since the Plan was released, NASA has begun to receive, for the first time, true entrepreneurial offers involving private investment in the ISS. We expect to announce the first agreements soon. These business ventures will unequivocally demonstrate our commitment to the economic development of space.

For almost 20 years, the same three barriers have impeded those seeking to develop commercial space products and services: pricing, process, and property protection. NASA pledged in the ISS Commercial Development Plan, to break down those barriers through our ISS pathfinder initiative, and it is beginning to work.

Pricing Policy

NASA's ISS pricing policy has been formulated using value-based pricing, with a marginal cost floor. The policy includes provisions to waive all, or part, of the marginal cost during the short run in order to stimulate private investment; it invokes full marginal cost in the long run in order to prevent Government subsidization of profitable enterprises. In addition, the policy includes a demonstration revenue reinvestment program that would permit NASA to ultimately recoup value in excess of marginal cost and apply it directly to the ISS economic development program. The Administration has agreed that this legislative authority could be instrumental to ISS commercialization, and NASA transmitted to the Congress on July 27, 1999, an Administration-sponsored legislative proposal for a "Space Station Commercial Development Demonstration Program." Implementation of this legislative initiative will dispel price uncertainty and create a new investment engine not dependent on annual appropriations to fuel its acceleration. Further, it will help free the Government from performing tasks that the private industry, with some Government assistance, can assume.

Process Reform

ISS entrepreneurial offers, involving significant private investment, are now receiving the special treatment they deserve at NASA. We have addressed the longstanding concerns that NASA have a single-point-of-entry for entrepreneurs by establishing a new Division for Space Utilization and Product Development at NASA Headquarters as well as an executive position of Special Assistant for Commercialization within the Office of the Administrator to ensure priority attention. NASA will no longer waste valuable human resources debating hypothetical business scenarios. If a commercial offer is real, the NASA response will be real.

Intellectual Property Protection

U.S. law provides NASA with a variety of measures to protect its own and other parties' intellectual property and proprietary data. In accordance with these laws, NASA has established policies and procedures to protect such property and data. Currently, NASA's General Counsel is completing a guide to explain to private industry in a clear and comprehensive manner how these laws and procedures, as well as ISS international agreements, apply to commercial activities on the ISS. NASA fully intends to uphold its commitment to protect the competitive position of U.S. industry and the economic growth of the Nation.

These reforms are essential, and all are in the final stages of completion. The enactment of Public Law 105-303 and NASA's announcement of intent have already stimulated private investment proposals that are under review. I am convinced that this momentum will build. In the future, we believe that a non-Government organization could undertake management of the ISS Utilization and Economic Development. NASA outlined this option in our ISS Commercial Development Plan, and a Task Group of the National Research Council is in the process of evaluating our reference model for such an organization. While this work proceeds, we have also initiated a trade study to identify the advantages and disadvantages of various options such as Government corporations, joint ventures, direct contracts, or cooperative agreements.

The 21st century holds the promise of an expanded presence both in Earth orbit and beyond. Through our collective efforts, we will be able to view horizons previously unseen by human eyes and invest in ventures unparalleled by prior human experience.

COST FOR THE CREW VEHICLE

Question. I understand that your current estimate for the Crew Return Vehicle, needed to bring crews home from space station in an emergency, is just over \$1 billion. Why is it so expensive?

Answer. Human safety continues to be of foremost importance in NASA's manned space programs. To ensure human safety requires high reliability of vehicles through painstaking design, parts screening, validation and testing of extremely complex interactive systems. The CRV is no exception. NASA chooses to set high goals and achieve them at minimum cost, but will not compromise prudent levels of human safety.

Providing redundancy of critical functions is a key design approach used to achieve high reliability and safety. Redundancy requires not only multiple like components which perform identical functions, but multiple, independent supporting resources. For example, a spacecraft guidance function requires not only multiple guidance system components such as gyroscopes and accelerometers, but also requires multiple, independent sources of electrical power, computer processing, and thermal cooling. This multiplicity of components capable of performing identical functions multiplies cost significantly. Additionally, complex and expensive computer code is required to “manage” the use of redundant systems, which entails fault detection, isolation and recovery.

A second major cost driver for manned space projects is NASA’s stringent requirements for testing and validation of human-rated systems. Testing and validation helps to verify that systems will function as intended in their real operational environment. This requires the use of test hardware and software for destructive and non-destructive testing, simulations of operational conditions and scenarios, and detailed analyses of test results that sometimes lead to expensive redesign.

Another area of expense not related to vehicle development and testing is operations. Operations include ground controller and crew training, logistics and maintenance, sustaining engineering, safety and mission assurance, and actual real-time mission operations support by ground controllers. Operations usually require extensive support personnel, hardware sparing and repair, and software maintenance for most of the operational life of a system or vehicle.

Most of NASA’s missions are anything but routine. Systems and vehicles typically have unique design and operational requirements. This leads to the need to develop new technologies and methods never before attempted. The CRV must remain attached to ISS in a dormant mode for up to three years, be ready to separate and fly home within three minutes of recognition of need, and fly without pilot assistance to a landing site of less than five miles radius in nine hours. NASA’s on-going X-38 “rapid prototype” project is providing the design and technology basis for the CRV.

The CRV will provide a shirtsleeve flight environment for a crew of seven—this is based on the crew size supportable aboard ISS. If a catastrophic event occurs aboard Station, or if the Space Shuttle is grounded for some reason, the CRV must have the capacity to evacuate the entire crew. The funding estimate in the fiscal year 2000 budget and runout is about \$880 million through fiscal year 2004 for design, development, test, and evaluation of four production vehicles and operations estimates of about \$161 million. Numerous independent assessment groups within and outside of NASA have reviewed the CRV project in its entirety. These groups are comprised of experienced specialists from all facets of spacecraft development and operations. They have concluded, without exception, that the CRV budget and schedule are ambitious but achievable.

NASA believes developing a manned spacecraft with the capabilities of the CRV at a cost of just over one billion dollars will set a low cost precedent upon which future human-rated projects will be judged. The ambitious cost target is being made possible by a non-traditional paradigm in which NASA performs a large part of the initial concept development and testing internally. Three atmospheric test vehicles and one space flight test vehicle are being designed and built for a cost of around \$90 million on the X-38 project. The CRV will benefit from knowledge gained through the X-38 vehicles and the results of multiple atmospheric flight tests and one (or two) space flight reentry tests.

After an extensive five month assessment by a panel of 25 specialists from industry and government, NASA’s Langley Research Center Independent Program Assessment Office concluded that the paradigm employed by the X-38/CRV Project could save over one billion dollars compared to traditional methods. NASA would have serious reservations about any proposals claiming to provide the ISS emergency crew return function at a cost lower than the current CRV budget.

CRV

Question. It has been suggested that you are delaying designing the CRV until the potential to design it as a Crew Transport Vehicle—able to take people into space as well as return them—has been fully evaluated. What decisions have you made about building a one-way CRV that later could be modified as a two way CTV? What are the cost and schedule trade-offs between building a two-way version from the beginning versus building a one-way version now and modifying it later?

Answer. Development of requirements and architectural studies on the CTV are on-going. These studies will assess the most effective approach to development, and

assess cost and schedule tradeoffs relative to a potential evolution from a CRV design. NASA has not made any decisions yet regarding the CTV.

CRV SCHEDULE

Question. You say that you're not certain you can get the Crew Return Vehicle ready by the end of 2003 as currently planned and therefore want to buy two Russian Soyuz vehicles in the case it is not ready. Why is that necessary? Why not simply maintain a three-man crew size until the CRV is ready? Is the CRV delay likely to be more than a few months? What is the urgency of increasing the space station crew size to six or seven?

Answer. NASA has identified funding for the procurement of one Soyuz, that, along with the Soyuz provided by the Russians, would provide two Soyuz on-orbit and allow emergency return of six crewmembers for a period of about six months.

The ability of ISS to perform effective research and experimentation is dependent on the crew size. The desire to maximize the research benefits of ISS leads NASA and its partners take full advantage of on-orbit time. NASA therefore plans to purchase at least one Soyuz craft that, along with the Soyuz provided by the Russians will allow emergency return of six crewmembers. If the ISS assembly sequence is delayed such that the CRV becomes available before ISS can accommodate six crew (that is, ahead of schedule relative to ISS need), the U.S. purchased Soyuz will be valuable as a contingency for other uses.

SPACE STATION SCHEDULE

Question. According to NASA, what is your current expected schedule for completion of the Space Station? How much slippage in schedule and cost do you expect?

Answer. NASA has conducted an assessment of the likely cost and schedule range for ISS, both for development complete (support for 6 crew) and assembly complete (support for 7 crew). The results of this assessment are summarized below. Minimum values are based on the Rev D assembly sequence that was the basis for the fiscal year 2000 submit. Maximum values are based on analytic estimates of delays up to 12 months to development complete, or 15 months to assembly complete. These potential slip scenarios do not envision significant increases to planned annual funding levels.

[Dollars in billions]

	Minimum schedule	Cost	Maximum schedule	Cost
Development Complete (6 crew)	¹ 09/03	\$22.1	09/04	\$23.7
Assembly Complete (7 crew)	¹ 07/04	23.4	10/05	25.3

¹ Assembly Sequence, Revision E reflects: Development complete at 05/04 and Assembly complete at 11/04 10.

DUPLICATION OF RUSSIAN ACTIVITIES

Question. NASA appears to view all activities performed by Russia for the ISS to be in the critical path and necessary for duplication. Provide a list of all activities that NASA intends to pursue that Russia is expected to complete, provide the cost estimates for each activity and the time frame for completion of each activity.

Answer. In December 1993, Russia was invited to join the ISS partnership, bringing a unique and unmatched experience in human space flight into the Program. Russian participation in the ISS Program allowed acceleration of the assembly timetable through their provision of propulsion, navigation and crew habitation capabilities. For instance: prior to Russia's entry into the program the assembly plan for achieving permanent crew habitation was September 2003, rather than March 2000 as it is currently scheduled. Russia stands second only to the U.S. in its contribution to the final assembly of the ISS, providing significant on-orbit capabilities. For this reason, despite a number of NASA actions to reduce reliance on Russia, ISS program cost and schedule stability is highly dependent on Russia's ability to deliver on their commitments. Several Russian elements, however, have independent uses that do not impact overall ISS operations.

A summary of significant Russian dependencies and the U.S. contingency strategy follows:

Propulsion

Russian partnership responsibilities have included propulsive guidance, navigation, and control since the inception of the International Space Station in 1994.

Initial Risk.—Loss of ISS attitude control or reboost capability resulting from a failure of the Service Module to reach orbit or from a shortfall in planned Progress resupply flights.

NASA Contingency Actions.—NASA has developed an Interim Control Module (ICM) to protect against a Service Module failure to achieve orbit, with a secondary focus to protect against Progress propellant resupply shortfalls. The ICM schedule supports a launch on need as early as 2000 and provides 1 to 3 years of ISS propulsive capability depending on its usage. NASA has developed an approach under which NASA can already offset a 30 percent shortfall in Progress vehicle propellant logistics, and the Agency is taking additional steps, such as the modification of the Orbiter fleet to enhance Shuttle reboost capability. The Orbiter fleet will be modified during scheduled Orbiter Maintenance Down periods, with fleet implementation completed by fiscal year 2003. Development of a permanent U.S. Propulsion Module is scheduled to conclude in 2002–2003, providing full U.S. propulsive redundancy.

Remaining Russian Reliance.—NASA ICM requires Russian Pressurized Dome and integration support to deploy should the Service Module fail to reach orbit. NASA Propulsion Module requires Russian built docking system and integration support.

Cost.—Approximately \$0.9B from Russian Program Assurance.

Command and Control

The NASA Flight Director, located at Mission Control Center-Houston (MCC-H), will always maintain the leadership role for commanding. However, ISS protocol is for Russian and U.S. control centers to determine and issue commands to their respective on-orbit segments. This methodology is not expected to change significantly over the life of ISS. The ISS command and control system is designed to allow both Russian and U.S. mission control centers to transmit data and commands to the ISS and between their respective on-orbit segments. Each partner's segment can also send commands and receive data from its computer system via the partner's control center and communication system.

Risk.—Until the arrival of the U.S. Lab, the Mission Control Center in Moscow (MCC-M) has the only capability for commanding the primary ISS systems. Although MCC-H gains the capability for commanding with the arrival of the U.S. Lab, GN&C and other critical Russian vehicle system expertise remains with MCC-M. Loss of our Russian partner for any reason, at any time places the remaining partners in a tenuous position. Unless Russian equipment, Russian FGB and Service Module technical knowledge, and Russian vehicle operational skills can be obtained, whatever Russian element exists at the time of a Russian departure may be assumed lost.

NASA Contingency Actions.—It was determined in 1996, with the concurrence of congressional leadership that the costs for a Russian command capability for FGB in Houston were outside of the ISS budget. NASA is considering purchase of Service Module Control Data and other operational items for risk mitigation and operational effectiveness. The purchase of Service Module ground procedure and control data will assist NASA's mission control to be able to back-up Russian operations and perform operations in the event of loss of Russian mission control. This would also help to increase joint ability to work together if off-nominal flight conditions arise. The Program is reconsidering implementation of a Russian command capability in Houston.

Remaining Russian Reliance.—The early U.S. communications systems implementation, which was not implemented as a Russian contingency, provides a very limited command, control and monitoring capability.

Cost.—\$TBD If purchased, Service Module data would be purchased within the confines of NASA's projected fiscal year 1999 \$100M purchase of Russian goods and services.

Crew Habitation

The Russian-provided Service Module provides environmental control and life support systems (ECLSS) and living quarters for three crew throughout the life of the ISS. There is also a requirement for a Russian Crew Return Vehicle for the life of the program, unless the U.S. determines to place two U.S. CRVs on-orbit.

Initial Risk.—The Service Module (SM) delivery schedule has slipped repeatedly due to Russian funding shortfalls. After launched, should Russia not support operations of the SM, the U.S. would be unable to maintain the SM without extensive technical insight and development of operational capabilities. Sustaining engineering and system spares development cannot be performed without extensive engineering knowledge of the vehicle. Soyuz crew vehicles are essential elements of the ISS prior to the arrival of the U.S. CRV. Without continued Soyuz availability, safe-

ty concerns would dictate that the ISS crew would need to be evacuated and permanent human presence postponed. Significant disruption in the assembly sequence would occur due to the unavailability of ISS-based EVA crews, causing postponement of assembly flights in lieu of logistics and reboost flights.

NASA Contingency Actions.—NASA's \$60M procurement of Russian Crew research hours and stowage provided funding stability for Service Module in fall 1998. NASA has planned for a \$100M (U.S. dollars) purchase of Russian goods and services for this fall subject to operating plan approval, which will maintain RSA funding stability. As a part of this purchase, NASA desires to purchase a Soyuz vehicle for U.S. CRV risk mitigation to effectively increase crew size and maintain the ability to perform effective research and experimentation. If the U. S. CRV becomes available before ISS can accommodate six crew (that is, ahead of schedule relative to ISS need), the U.S. purchased Soyuz will be valuable as a contingency for other uses.

Remaining Russian Reliance.—While it appears that RSA is receiving adequate funding to cover delivery of the SM, NASA remains concerned that funding may not be sufficient for Russian upgrades to their mission control center, ground stations, and associated communications systems. NASA is also concerned with the adequacy of Russian funding for Service Module, long-term Soyuz support, and spares.

Costs.—Approximately \$0.2 billion from Russian Program Assurance.

Logistical Dependencies

Partnership agreements call for the Russians to provide dry cargo and Russian segment propellant via the Progress cargo ship. One of the basic tenets of our agreements with the Russian Federation is the availability of a backup launch capability. Having choices of different launch vehicles available greatly diminishes the risks when dealing with unforeseen events.

Initial Risk.—Loss of this important Progress resupply function would amount to approximately two shuttle flights per year in addition to or in lieu of assembly flights. The only vehicles capable of providing fuel to the SM and FGB are the Russian Progress cargo ship and the European Space Agency (ESA) Automated Transfer Vehicle (ATV). A provision of the U.S. contingency plan allows for the ICM to be used as a backup for Progress flight deficiencies.

NASA Contingency Actions.—NASA actions to reduce propulsion dependencies have direct positive impact. In addition to the activities noted above, NASA has budgeted funds for logistics support to offset a reduction in the number of Progress vehicles. NASA's planned \$100 million procurement of goods and services would provide funding stability to maintain long-term production of Progress vehicles.

Remaining Russian Reliance.—Additional Shuttle flights will likely be required if RSA can not meet their commitments.

Cost.—Approximately \$0.1 billion from Russian Program Assurance.

SPACE SHUTTLE

SPACE SHUTTLE SAFETY

Question. Regarding the space shuttle, the Aerospace Safety Advisory Panel (ASAP) issued a report last month that raised serious questions about future shuttle safety. Three of them are particularly troubling:

1. Budget and personnel constraints on the hiring of engineers, scientists, and technical workers are moving NASA toward a crisis of losing the core competencies needed to conduct the Nation's space flight and aerospace programs in a safe and effective manner.

2. Shortfalls in workforce training within both NASA and USA [United Space Alliance], caused by downsizing and the related difficulty of hiring new people to fill skill shortages, can jeopardize otherwise safe operations.

The combined effect of workforce downsizing, the recent hiring freeze, and the SFOC [Space Flight Operations Contract] transition, especially at KSC [Kennedy Space Center], has raised the possibility that NASA senior managers in the future will lack the necessary hands-on technical knowledge and in-line experience to provide effective insight of operations.

These findings sound quite alarming. Should Congress be alarmed? What is your response to these findings?"

Answer. NASA has and will continue to take the appropriate actions to minimize the combined effects of budget reductions and downsizing. We will address each of the mentioned ASAP findings below.

With respect to item number one (Finding # 1 in the ASAP report), NASA has provided our human space flight Field Centers with the budgetary resources and administrative flexibility needed to strengthen their human resource capabilities. To

accomplish this we have allowed the OSF Centers to hire additional FTEs through the fiscal year 2000 budget process as follows: fiscal year 1999—153 FTE; fiscal year 2000—110 FTE; fiscal year 2001—103 FTE; fiscal year 2002—59; and fiscal year 2003—68 FTE. This relief has enabled the innovative use of temporary and extended term appointments, as well as increasing the number of permanent hires available to fill critical skill positions.

With respect to item number two (Finding #2 in the ASAP report), NASA continues to work with USA to review critical skills training and certification requirements and institute programs to ensure the full proficiency of the workforce and the safety of the products being released. The review for flight controllers, training instructors, and other key operating positions has already been completed. Training plans and certification requirements for critical positions have been documented. Training capacity for new employees, both NASA and contractor, was increased through intensive simulator training at a new USA “training academy.” In training and orientation programs, NASA emphasizes and will continue to emphasize the priority of safety and the responsibility of employees to voice their concerns about inadequate assurances of safe products.

With respect to item number three (Finding #3 in the ASAP report), NASA is intensifying and refocusing its efforts in training and in support of career development at all levels to ensure that future managers will possess the range of skills and experience required for effective insight of the SFOC.

At the operating level, NASA managers are instructed to take advantage of all opportunities to obtain operational experience including co-op assignments; direct observation or procedure review of critical tasks; management of Shuttle launch countdown, launch, and landing/recovery; etc. Additionally, employees are provided cross training and specialized training as needed and strongly encouraged to take advantage of program related training.

Recognizing that the key to developing future generations of senior managers is to provide hands-on experience, NASA is taking the action to provide broad training and hands-on operational and technical job assignments and opportunities for promising candidates for future senior management positions. Career broadening opportunities with Boeing, Newport News Shipbuilding, and USA have been implemented.

At the Agency planning level, the training budget has provided for an increase of 20 percent for the Office of Space Flight from fiscal year 1997 through fiscal year 2000. Current agency Program Operating Plan guidelines call for funding training at 2–3.25 percent of salary levels; levels that rival progressive private sector organizations.

These cumulative measures should ensure competent senior managers for NASA in the years to come.

MINIMUM NUMBER OF SHUTTLE FLIGHTS

Question. In the past, you have said that you need a minimum of 4–6 shuttle flights per year to ensure it can be operated safely and effectively. Is that still your estimate of the minimum number of shuttle flights needed each year?”

Answer. Changes in flight rate have not and will not adversely affect safety. NASA does not have a threshold number of annual flights required to maintain safety. We will not fly unless it is safe to do so.

Effective flight rate within any given year has varied dramatically during the course of the program. Both NASA and United Space Alliance (USA) have sound processes for vehicle turnaround and flight certification in place to maintain a robust and safe system. Some examples are:

- 1. Existing Certification of Flight Readiness process is rigorous and demanding
- 2. Testing requirements are well documented and controlled
- 3. Personnel qualification standards are high
- 4. The Human Space Flight Centers and the SFOC are ISO 9000 compliant
- 5. Full action simulations are used to maintain readiness at KSC and JSC

Payload availability rather than vehicle processing flow or mission preparation time have driven the recent (fiscal year 1998 and fiscal year 1999) Space Shuttle flight rate.

Reductions in flight rate affect the program’s efficient use of the workforce, not safety. The Space Shuttle program maintains a highly dedicated and motivated workforce of both civil servants and contractors. Additionally, there are checks and balances in the program structure and processes, as well as individual knowledge, which serve to stop work, as appropriate, should unusual occurrences arise.

Outside reviews by the Aerospace Safety Advisory Panel and the NASA Advisory Committee continue to emphasize NASA’s commitment to—Safety First.

SHUTTLE UPGRADES

Question. What is the status of needed upgrades to the Shuttle? Have you begun implementing the phase III upgrades? If not, when is that anticipated? What is the total expected cost of the phase III upgrades and what impact will that have on the expected safety and longevity of the Shuttle system?"

Shuttle Upgrades—Phase IV.—Will you proceed with the Phase IV upgrades only if you decide that a new reusable launch vehicle will not be available in the next 5 years or so? When will that decision be made? What would be included in the Phase IV upgrades if they did proceed, and how much will they cost?"

Liquid Fly-Back Booster.—What decision have you made about developing a Liquid Fly-Back Booster versus an upgraded version of the solid rocket booster now in use?"

Answer. NASA is prudently proceeding with necessary safety and mission supportability (phase II) upgrades. Approval of candidate upgrades is an on-going continuous improvement process. Specific measurable objectives are established, followed by an evaluation of potential candidate upgrades. The selection, approval and implementation process involves screening against goals and objectives as well as value/impact analysis. An upgrades control board reviews each candidate before incorporation into the annual upgrade plan.

Decisions on future Shuttle upgrades will be made as part of Administration decisions this fall on NASA's long-term integrated space transportation strategy.

The 1994 National Space Transportation Policy (NSTC-4) calls for "government and private sector decisions by the end of this decade on development of an operational, next-generation reusable launch system." To support these decisions, NASA is undertaking industry-led Space Transportation Architecture Studies to identify private sector options for reducing NASA's launch costs. These studies incorporate separate efforts being undertaken by NASA, DOD and industry including: Space Shuttle safety upgrades; X-33 and other NASA technology demonstrators (X-34, X-37, and X-38), the Evolved Expendable Launch Vehicle (EELV); existing and future commercial launch vehicles; and the Crew Return Vehicle for the International Space Station. As part of the fiscal year 2001 budget process, the Administration intends to use the results of these studies and inputs to develop a strategy that encompasses the decisions, some near-term and some far-term, required to meet an end-date goal of transitioning NASA to lower-cost, private-sector, space transportation. Decisions on future Shuttle upgrades will be made in the context of this overall strategy. Details will be provided in the fiscal year 2001 budget submit.

SPACE TRANSPORTATION ARCHITECTURE STUDY

Question. What are the results of your Space Transportation Architecture study?

Answer. The Space Transportation Architecture Study was conducted to how best to meet NASA's mission requirement through 2020 with increased safety and reliability and reduced cost. Industry participants identified a number of second generation Reusable Launch Vehicles (RLV) including both an upgraded Shuttle and new RLV's that could replace the existing Space Shuttle in the 2008–2010 time period. The results of the study were integrated into a space transportation architecture with roadmaps that identified a series of decisions required to select a follow-on system to the current Space Shuttle. The architecture consists of: a first generation RLV (Space Shuttle with necessary safety and obsolescence upgrades), a second generation RLV (a significantly upgraded Space Shuttle or new RLV with significantly improved safety, reliability, and reduced costs), and a third generation RLV (operational system beyond 2020 that will further improve system safety and lower cost).

In the near term, NASA will establish the requirements and selection criteria for a decision to proceed with the second generation RLV in 2004–2005. Over the next 5 years NASA will invest in space transportation technologies to reduce the risk for second generation RLV's and initiate longer term technology programs for third generation systems with significantly improved safety and reliability that approach the levels of commercial aircraft operations.

CONTRACT CONSOLIDATION—SPACE SHUTTLE

Question. In response to recommendations to consolidate activities, NASA, on September 26, 1996, signed a \$7 billion, 6-year contract with the United Space Alliance to manage the Space Shuttle operations. The contract consolidates 12 major existing contracts into one. It also includes two, 2-year extension options that could bring the potential value of the contract to \$12 billion over 12 years. Can you assess the success of the United Space Alliance contract in managing the Space Shuttle oper-

ations, including the impact on safety? What are the savings realized from consolidating the space shuttle contracts?"

Answer. United Space Alliance performance in managing their portion of Space Shuttle operations has been very good. Their overall performance as reflected in NASA award fee evaluations is very good. Their scores on safety performance have also been very good. There have been several initiatives on the part of United Space Alliance which have resulted in more efficient operations. Relative to fiscal year 1996 performance, United Space Alliance has reduced the cost of their operations by \$125 million per year (about 13 percent). At the same time civil service workforce reductions have occurred in those same areas resulting in \$40 million per year reductions. Some examples include consolidation of logistics operations in Florida. Flight hardware and ground processing hardware logistics are now provided by a single organization. This has led to cost savings as a result of more efficient operations. Another example is the Solid Rocket Booster contract, which was added to the Space Flight Operations Contract (SFOC) last year. United Space Alliance has decided to perform the Solid Rocket Booster work within their company. This offers the opportunity for more efficient workforce utilization in Florida between Solid Rocket Booster tasks and other flight hardware processing. This has also allowed the distribution of United Space Alliance overhead costs over a larger business base and eliminated the overheads from the Solid Rocket Booster contractor United Space Boosters Inc.

Safety of operations has been a major emphasis of both NASA and United Space Alliance. There have been numerous independent reviews to examine the safety implications of United Space Alliance management of operations. These include a review by the Aerospace Safety Advisory Panel and two reviews by the NASA Headquarters Safety Office. Each of these reviews has concluded that operations are safe at the present time.

PRIVATIZATION OR COMMERCIALIZATION OF THE SHUTTLE

Question. Where is NASA in its decision-making process regarding "privatization" or "commercialization" of the shuttle? How do you distinguish between the two concepts? If the shuttle is "commercialized," does that mean NASA no longer is involved in any aspect of its operation—it is just a user? If so, how many years will it be before that stage is reached? Will the astronauts of the future be private sector employees?"

Answer. Our definition of "privatization" is where the private sector is performing the vast majority of operations of the shuttle. However, in that scenario the federal government and NASA in particular is almost exclusively the customer of the shuttle missions. Therefore, NASA retains ownership of assets and most of the risks associated with shuttle flights are carried by NASA.

In the case of commercialization, significantly more ownership and risk would be assumed by the private sector and the federal government would be a customer. This is one option that is being considered in future launch studies (see answer to question 3).

SPACE AND EARTH SCIENCE

PRIORITIES

Question. One mission of the Space Science Enterprise is to "solve the mysteries of the universe." How does NASA establish priorities for the science needed to approach this mission? How will your Strategic Plan update contribute to the priority setting? How do you involve the space science community in that planning? To what degree do budget considerations constrain those priorities?"

Answer. Guidance on strategic science goals is obtained periodically from the National Research Council. This guidance is used by OSS's Space Science Advisory Committee, working with NASA headquarters program staff and scientific and technical staff at the field centers, to assemble a portfolio of possible future missions that will advance knowledge in our science mission areas. Thus, the research community plays key roles in both goal-setting and identification of implementation options. The portfolio is then analyzed by Headquarters management for technical and cost feasibility, probability of success, program balance, and policy considerations. The resulting provisional program, constrained to be achievable under prevailing budget projections, is documented in the enterprise strategic plan and circulated for additional comment to the research community before its main features are incorporated in the NASA strategic plan.

FOLLOW-UP MISSIONS

Question. What mechanisms do you have to follow-up on new discoveries about the nature of the universe such as the one made last year that its rate of expansion is accelerating? Is it possible to design space science missions to be more flexible in this context?

Answer. The Space Science Enterprise has a variety of missions, both ground-based and space-based, that enable us to make new discoveries and build upon past scientific revelations. Some of these missions, such as the Hubble Space Telescope and Chandra X-ray Observatory, are highly flexible in the types and targets of their observations, thus they have potential for a broad range of discovery. Other missions, particularly the smaller missions in the Explorer and Discovery programs, are more focused in scope, but they often produce results that allow very revealing comparative analyses with data gleaned from other NASA missions (as well as those pursued by NSF, academia, and other interested partners). Moreover, Explorer and Discovery missions are competitively selected on one-to-two-year cycles, utilizing external peer review; therefore, they enable the Agency to react to the latest discoveries and new ideas from the science community. So while we do have flexibility in the design and scope of some missions, it is the overall layout of the Space Science Enterprise, with its mix of large and small missions and its collaborative interaction with other science entities, that affords us overall flexibility.

In regard to your specific inquiry regarding the expansion of the universe discovery, we have a variety of mechanisms to follow up and enhance our initial findings. On the ground we have the Keck Interferometer and ground-based observatories involved in supernovae searches. In addition, we have many space-based missions including the Japanese/American venture ASCA, the Hubble Space Telescope, and the newest of NASA's Great Observatories, Chandra, launched on July 23, 1999. We continue to look forward to the new science insights this suite of instruments will provide.

INCREASES IN SPACE SCIENCE

Question. The Space Science budget is projected to increase from \$2.1 billion in the current fiscal year to almost \$2.9 billion in fiscal year 2004. This projected increase is somewhat larger than the one appearing in the fiscal year 1999 budget request and substantially larger than previous budget requests. What accounts for this emphasis on space science? How critical is each mission and what applications are expected to come out of these missions?

Answer. The emphasis on Space Science reflects Administration priorities, as outlined in the National Space Policy of September 1996 and other directives to NASA. The largest budget increases are planned for programs that address the question of whether life has existed or exists now elsewhere in the universe, including the search for planets around other stars and the study of Mars, Europa, and other locations in our solar system that are likely to have harbor extinct or extant life or the building blocks for life. These programs have broad support, not only within the Administration, but also in Congress, the science community, and the general public.

The budgeted growth also reflects the demonstrated ability of the Space Science Enterprise to deliver cost-effective programs that answer critical scientific questions while contributing to education and the public understanding of science through a highly effective and innovative Education and Public Outreach program. NASA's Space Science Enterprise gets results and brings those results directly to schoolchildren and the public.

Without attempting to define the term "critical", each mission in our current plan provides pieces of information that contribute to our overall understanding of the universe. In addition, many of our missions work together or build on one another to achieve a set of research goals by employing simultaneous observations, inter-related technology development tasks, and/or concomitant science objectives. Some of our missions even have limited windows of time for launch to a target, such as an outer planet in our solar system, that may not recur for years or even decades. Therefore, each mission is important for the achievement of our scientific goals.

Most of the non-Space Science applications that will arise from Space Science missions will be unforeseen. However, we expect to see important advances in the areas of advanced medical imaging and miniature biological sensors; JPL has established a joint program in biosensors with the National Cancer Institute to aid in technology transfer to medical applications. The forensic sciences will also benefit; GSFC and the National Institute of Justice have agreed to investigate applying miniaturized NASA instrument technology to portable instruments that could be used at crime scenes—starting with x-ray fluorescence developed for NEAR instruments—to identify gunshot residue. In addition, forensic scientists have interest in the Mars

sample return technology to preserve biological crime scene samples while awaiting trials (which sometimes drag on for years) as well as infrared sensors (NGST, etc.) for arson detection. Other applications are likely to arise in high tech manufacturing, which could benefit from the more precise metrology techniques being developed for NASA missions; and our robotic rover technology could help automate farming and nuclear plant cleanup efforts as was demonstrated recently.

USE OF ISS FOR SPACE SCIENCE

Question. Does the Space Science Enterprise have any plans to use the International Space Station as a platform for any of its research missions?

Answer. It is the policy of the Space Science Enterprise to treat the ISS as another platform that may be quite useful for certain space science missions, although it is not appropriate for instruments that require high fidelity pointing. The ISS will be allowed to compete on equal footing with all other platforms in our strategic planning process and within our various Explorer Program Announcements of Opportunities (AO). The limited number of ISS payload sites are allocated by the Space Station Utilization Board, which is comprised of the relevant Associate Administrators, and the Space Science Enterprise expects to use about 25 percent of the external attached payload sites. In order to meet the scheduled availability of those sites, they will be solicited explicitly as Missions-of-Opportunity in timely Explorer AO's, beginning with the Small Explorer (SMEX) AO to be released in late CY 1999.

SATELLITES

Question. You seem to have a great number of space science projects planned at the moment. Exactly how many space science satellites are you planning to launch in the next five years? What is their collective cost?

Are you requesting sufficient funds not just to build and launch these satellites, but to analyze the data from them?

Answer. An exact number of missions to be launched in the next five years cannot be given because several new Explorer and Discovery missions will be selected in the next year or two. Approximately 35 Space Science missions are planned for launch from August 1999 through July 2004. In addition, we will provide major components for about 5 foreign-led international collaborations. The U.S. budget for all of these missions, including sufficient funds for development, launch services, operations, and data analysis, is approximately \$5.5 billion.

SUCCESS RATE

Question. What is the success rate on your "faster, better, cheaper" satellites? You've had at least two total failures (Lewis and WIRE), another was canceled because of cost overruns (Clark), and an engine malfunction on NEAR meant it had to fly past its target and now must spend a year getting back to it. You've also had problems with the solar array on Mars Global Surveyor. Is there a common thread to these failures? Did the need to meet challenging schedules and stay within strict cost caps lead to these failures?

Answer.

Total faster/better/cheaper missions between 1995 to Present (20)

Successful missions (15)

XTE	DS-2
MPF	STARDUST
Lunar Prospector	POLAR
DS-1	SNOE
MCO	SWAS
FAST	MPL
ACE	FUSE
TRACE	

Missions with significant problems (3)

MGS (Solar array deployment damper utilization problem)
 NEAR (Engine controller S/W execution problem)
 TERRIERS (Attitude Control System S/W problem)

Failed missions (2)

HETE-1 (Launch Vehicle/Spacecraft separation problem)
 WIRE (Pyrotechnic circuit design problem)

The 3 spacecraft anomalies and two mission failures are all unrelated; there are no common threads to these problems.

The problems with MGS, NEAR, and TERRIERS are not mission catastrophic and we anticipate that all 3 will fully achieve their mission and science objectives.

The challenging schedules and stringent cost caps were not a factor in the 2 total mission failures nor were they a factor leading to the anomalies with MGS, NEAR, or TERRIERS.

No testing was deleted nor compromised in any way for any of the missions.

Success Rate—18/20 = 90 percent

It is important to note that two of the missions, Lewis and Clark, referred to in your question are NASA Earth Science missions, not Space Science missions.

In addition to the above data, as reported in the September 6 issue of Space News, an independent Aerospace Corporation study recently confirmed that NASA's "faster, better, cheaper" approach to science spacecraft design and development is paying off not only in terms of cost and schedule, but also in terms of science returned per dollar spent. The study finds that the cost effectiveness of NASA's "faster, better, cheaper" approach, as measured in number of operational instrument months per dollar spent, is about 50 percent better than NASA's old ways of doing business.

STUDY ON SMALLER, FASTER, CHEAPER, BETTER

Question. Last year we directed you to contract with the National Research Council for a study "across all space science and Earth science disciplines to identify missions that cannot be accomplished within the parameters imposed by the smaller, faster, cheaper better regimes." What is the status of that study?

Answer. The Office of Space Science and the Office of Earth Science have jointly requested this study by the Space Studies Board of the National Academy of Sciences. NASA's request asks the Space Studies Board for their views on: (1) the general criteria for assessing strengths and limitations of small, medium, and large missions in terms of scientific productivity; and (2) which science goals in our strategic plans will require the use of medium and large missions.

NASA understands that this study is already under way, and will be led by the Space Studies Board in collaboration with the Aeronautics and Space Engineering Board.

In addition to the National Research Council Study, we have also reviewed the objectives and accomplishments of application of the Faster, Better, Cheaper (FBC) approach with the NASA Advisory Council. Their recommendation was to identify the key attributes of FBC and how they have been applied within NASA, other government agencies and industry, and to focus on adopting an FBC approach that has broad application across the Agency. We have initiated an effort to establish an Agency-wide FBC approach that will provide guidelines for the entire range of NASA missions. This activity is planned for completion by the end of this calendar year.

DATA MORTUARIES

Question. To what extent is the data collected from the Space Science missions being utilized? Please quantify the amount of data used in research currently.

Answer. Science data acquired from NASA space missions are analyzed and interpreted, with results published in scientific journals, as well as being shared with the public through news media and other forums. The exciting science results and furtherance of our knowledge and understanding of the Universe from missions such as the Hubble Space Telescope, the Galileo mission to Jupiter and its moons, Mars Pathfinder, Mars Global Surveyor, Solar Heliospheric Observatory, etc. are the best witness to this.

NASA selects and funds principal investigators, via peer-reviewed competitions, to build the instruments flown on the missions, to process and analyze that data, and to archive the data products so that they can subsequently be accessible to the broader science community for analysis and interpretation. NASA also funds guest observers and investigators for its missions; they are also selected via peer-reviewed competitions to analyze and fully exploit the science data. In addition, NASA funds peer-reviewed research and analysis using data from the open archives, including data from missions no longer operating. All told this involves several hundred investigators.

The space science data archives open to the research community and general public contain over a million observations and data sets with a total volume greater than 35 terabytes. These data are available in several data centers across the country as organized by science discipline (HST Science Institute for Optical/UV; High

Energy Science Archive Center at Goddard; Planetary Data Nodes at 10 university sites; National Space Science Data Center at Goddard; Infrared Science Archive at Caltech, etc.). These archives are accessible via the Internet.

Utilization of these data continues to increase rapidly. A good indicator of this is the fact that the total volume of data being downloaded from even active mission archives such as HST for subsequent use by researchers, educators, and the general public far exceed the volume of data being ingested into the archive from the principal investigators. Overall there are nearly 4 million web accesses a month to space science data archives with approximately 25,000 observations or data sets downloaded or transferred in response to user requests. This represents approximately 750 gigabytes of data per month.

HUBBLE REPAIR MISSION

Question. How serious are the problems with the Hubble Space Telescope? How much of a priority is this "rescue" mission in October? Why wasn't the cost of these repairs and the mission budgeted for within Hubble reserves?

Answer. The loss of another of HST's remaining 3 functional gyros would result in the inability to perform science observations until a repair could be made. Maintaining HST's scientific productivity is an extremely high priority for Space Science. The HST program budgets sufficient contingency to cover "normal" problems, which we believe, is prudent. But the cost of this additional mission has more than exhausted available reserves.

Question. Assuming the failure of additional gyroscopes, what data will be lost if we do not send a Hubble repair mission in October? Please describe the potential data loss and quantify the impact on research.

Answer. In the event of further gyro failure on HST, all science operations will cease, although the observatory will be in no physical danger. The amount and quality of data lost will, of course, depend upon when a repair mission is sent to replace the failed gyros. If, hypothetically, such a repair mission follows about a year later, then an amount of data equal to about 15 percent of all that which has been obtained to date will be lost. Perhaps most seriously, however, will be the potential loss of serendipitous or unanticipated observations: rare events such as comets, planetary storms, or supernova explosions.

Question. How much will the Hubble rescue mission cost and where will the money come from? What other NASA programs will be adversely affected by shifting this funding into the Hubble mission?

Answer. The Hubble SM3A mission will cost the Office of Space Science approximately \$26M. We propose to resolve the impact of this unexpected cost during the fiscal year 2000 Operating Plan process.

Question. Please provide an accounting of reserves for all space and earth science programs and the priority of each of these missions or programs within NASA.

Answer. In the fiscal year 2000 President's Budget, total OSS reserves for are \$77.8M. The breakout of these funds is as follows:

[In million of dollars]

SIRTF	34.6
TIMED	1.3
Genesis	7.3
Contour	2.5
Mars 01 Orbiter/Lander	11.0
New Millennium	5.2
Chandra	4.6
HST O&S	11.3

The Space Science Enterprise has missions both operational and in planning in each of our four science themes. Our prioritization follows the balanced program presented in our published Strategic Plan. Space Science programs must compete with Earth Science, Human Exploration and Development of Space, and Aeronautics and Space Technology programs in terms of priority. Overall agency priority is established by the Administrator's office in conjunction with the Administration.

EOS PROGRAM

Question. What is the status of the EOS program?

Answer. The EOS program is proceeding as currently baselined both programmatically and technically.

Question. Are you still planning to launch the first EOS spacecraft this year?

Answer. Yes, the first EOS spacecraft, Terra (formerly AM-1), will be launched no earlier than November 1999.

Question. Have all the problems with EOSDIS been resolved?

Answer. All technical and programmatic problems associated with the EOSDIS have been resolved. The EOSDIS is currently successfully supporting pre-launch operations for the Terra spacecraft (formerly AM-1). Implementation of the EOSDIS to support flight operations and data archiving for the remaining mission (PM-1, ICESat, and CHEM-1) is also proceeding without incident.

EOSDIS is a multifaceted, state-of-the-art information system that will allow free and open access to the Earth Observing System (EOS) data archives to a diverse national and international user community. This community includes users from the public and private sectors, including research scientists, educators, students, users in public agencies responsible for operational applications such as weather forecasts and environmental monitoring, policy makers, and the public in general.

Since 1997, different components of EOSDIS have experienced certain difficulties.

—The Flight Operations System (FOS), the component that supports operation and control of satellites in orbit, experienced significant problems in March 1998 relating to stability and performance of the system.

—The Science Data Processing System (SDPS), the component that converts instrument measurements into geophysical parameters, experienced a schedule slip that threatened the readiness of the system to meet the EOS schedule.

—These technical problems were exacerbated by multiple restructurings of the EOS flight system, rapid changes to information technology and high job turnover rate (i.e., up to 30 percent annually) at the contractor level.

In 1998, NASA worked collaboratively with the contractor, Raytheon, and the EOSDIS user community to develop a plan that would refine the EOSDIS approach to meet a basic set of requirements. This plan, also known as Option A+, outlined the appropriate level of requirements needed to meet a fundamental set of requirements that support safe control and operation of satellites in orbit as well as allow efficient processing, archive, and distribution of the resulting data and information. The goal was to build a reliable development schedule while minimizing the remaining cost of implementing the EOSDIS.

Toward this goal, NASA decided to use a commercially available Flight Operations System (FOS) to support EOS Terra and follow-on satellites. Option A+ has reduced a number of the lower-priority requirements. These decisions helped us achieve cost and schedule goals. In addition, NASA and Raytheon infused new leadership and processes into the overall management of the system and into the day-to-day execution of procedures. The result is a functioning system that is supporting Landsat 7 data processing, archive and distribution, and is ready to support the launch, control and operation of EOS Terra.

Despite earlier problems, the Science Data Processing System (SDPS) and the Flight Operations Segment (FOS) are now ready to support EOS Terra later this year.

Full EOSDIS functionality for Terra is being phased to meet cost constraints and will not be complete until approximately 18 months after launch of the Terra spacecraft. This phased implementation assures that full functionality will be in place to support PM, CHEM, ICESat, and other EOS satellites in 2000 and beyond. It is important to reiterate that EOSDIS is presently supporting Landsat 7 data processing, archive and distribution, and is ready to support the launch, control and operation of EOS Terra.

While every attempt was made to scope the program within the available budget, an additional \$11.6 million was needed in fiscal year 1999 (already approved and implemented) and an additional \$30–50 million is needed in fiscal year 2000. The ECS contract is presently valued to cost \$868.6 million through completion. The transition to Option A+ in the ECS contract is presently being negotiated. While negotiations are not yet complete, we anticipate a renegotiated contract within the next two months. The final amount will be known once the restructuring of the Raytheon contract to reflect Option A+ is complete. These funds will better ensure implementation of EOSDIS for missions following Terra, within the level of requirements specified in Option A+.

It should be recognized that EOSDIS is providing nearly the same functionality for a budget that is less than originally proposed in 1996. The savings have been achieved by a more focused use of funds, reducing or eliminating requirements of limited value (principal result of Option A+), implementing the adaptive architecture to allow more economical processing of science data, and management and process changes to improve performance.

Question. What is the total projected life-cycle cost of the EOS program?

Answer. The EOS lifecycle cost through fiscal year 2004 for the first series measurements is \$10.0 billion. This amount is the funding needed to complete the initial set of EOS missions which include Terra, CHEM, PM-1, QuikScat, Landsat-7, and

Special spacecraft (e.g. IceSAT, Seawinds, Jason, SAGE III, ACRIM). Also included is the funding for technology infusion, science, algorithm development, and information systems necessary to support those missions. The development of the first series will be completed with the launch of the Chemistry spacecraft in December 2002. Operations of some of these missions will continue beyond the current budget projections, which extend to 2004. We are in the process of defining our implementation strategy for the follow-on measurements concentrating on shortening development time and the incorporation of instrument technology infusion.

The successful transition to the "faster, better, cheaper" approach to implementation of the program will allow a lower total cost for the EOS follow-on measurements. Our current estimate of the costs for follow-on missions through 2010 is in the range of \$5–5.5 billion. NASA's Earth Science program will continue to strive to reduce costs to the taxpayer and to provide policy relevant environmental information. We will do this through technology investments that reduce future mission costs, the leveraging of commercial resources and other federal resources, increased international partnerships, and the use of the International Space Station as an observing platform.

TOMS PROGRAM STATUS

Question. Has Russia definitely decided not to launch your next TOMS (Total Ozone Mapping Spectrometer) instrument next year as it had promised?

Answer. Russia definitely will not be launching the TOMS instrument next year. Russia has put a great deal of support into the SAGE mission and, consequently, has not been able to meet their goals for producing a second spacecraft for the TOMS instrument. Because Russia's future schedule is indefinite and NASA's science requirements preclude a lengthy development effort, a mutual agreement was reached to cancel cooperative agreement for the launch of a second instrument.

Question. How is your existing TOMS instrument holding out? Will it last until you can find an alternative spacecraft to host a new TOMS?

Answer. The TOMS instrument currently in orbit was launched on July 3, 1996 on the EP/TOMS spacecraft. The mission had a design lifetime of 2 years. The instrument is currently performing well. However, the spacecraft lost all of its reserve fuel last year due to an anomaly in the control system, and earlier this year the primary transmitter failed. The spacecraft is performing adequately on the backup systems, but it has very little redundancy left. Fortunately, the QuickTOMS mission has been selected as the alternative host to fly the TOMS Flight Model 5 instrument. There is a good chance that the TOMS/EP instrument will last at least until the launch of this instrument in the year 2000.

Question. How seriously would ozone research be impacted if we did not have a TOMS instrument in orbit?

Answer. TOMS is currently our only source for a total map of ozone, and our only reliable source for estimating global change in surface UV radiation. TOMS provides a continuous map of stratospheric ozone concentrations, clouds, and other constituents which are necessary to reliably estimate the UV radiation reaching the earth's surface. The continuous map that TOMS provides is being used in conjunction with the worldwide Dobson network (an international supported ground-based network used for ozone measurement and validation studies) to establish the observed changes in stratospheric ozone for the WMO/UNEP (World Meteorological Organization/United Nations Environmental Program) Ozone Assessments. These assessments in turn provide the science background for Montreal Protocol considerations. The Montreal Protocol has predicted that around the year 2000 the ozone loss in the stratosphere will begin a recovery process. The only way to verify this prediction is to obtain real-time measurements of ozone continuing through the first part of the century. Without a TOMS mission, the continuity of the ozone mapping would be lost and it would be extremely difficult to determine if the ozone layer is recovering as predicted by the models, and whether this recovery is having the expected effects on the surface UV radiation.

AERONAUTICS

TERMINATION OF HIGH SPEED RESEARCH

Question. You have requested termination of your high-speed research (HSR) program. This is the second time in the last 30 years that the United States has ended a research effort directed at development of technology for supersonic transport. What are you doing to ensure that if we start up such research again within the next few decades, we won't have to start over? Do you have sufficient resources to

archive the knowledge gained in the current program in such a way to make it readily useable if and when we start another HSR program?

Why didn't NASA propose to continue with HSR at a much reduced level rather than terminate it altogether?

Answer. Supersonic transport research is continuing at a lower level in NASA's aeronautics research and technology (R&T) base program. This level of effort activity will provide the basis for ramping up supersonic research activities should industry interest in a commercial supersonic transport revive.

Despite the cancellation of the HSR program, previous work in HSR can be leveraged to support new initiatives. Two areas in particular are being directly leveraged to continue work in fiscal year 2000: synthetic vision system (SVS) and propulsion technology. The SVS was being developed as part of the HSR program to give pilots forward vision without incurring a weight penalty on supersonic jetliners associated with the mechanisms needed to drop the noses of these aircraft. This display technology is being combined with other technologies in the Aviation Safety program to augment pilot vision in conditions of low visibility. The propulsion technology development in will be leveraged to support the Ultra-Efficient Engine Technology program. Technology from the HSR program and other programs will be used to reduce emissions of nitrogen oxides to meet a goal of 70 percent emissions reductions. Similarly, HSR technology development in the area of turbomachinery (fans, compressors and turbines) will be leveraged to develop methods to simplify engines by reducing the number of stages. The result will be improved engine efficiency leading to a 15 percent reduction in fuel use and similar reductions in CO₂. Also, high temperature engine materials development will be leveraged.

We are, also archiving the knowledge gained in the current program in such a way to make it readily useable at a future date. \$150 million in fiscal year 1999 will be allocated within HSR so that the efforts to date can be used in the future. Specifically, these funds will be used to (in priority order):

1. Archive technology development details and write summary documents of technology development including lessons learned and dispose of excess materials, equipment, and tooling.

2. Identify far-term (2025) High Speed Civil Transport (HSCT) economic and environmental requirements and make recommendations of technology paths to direct and/or complement future NASA programs.

3. Position HSR technology for transfer to industry near-term applications, IRAD investments and cooperative agreements.

4. For generic applications, complete tests of models already fabricated and complete development of engineering tools that can be fully documented by September 1999.

ULTRA-EFFICIENT ENGINE INITIATIVE

Question. What is the rationale behind the ultra-efficient engine initiative and how does it differ from comparable efforts in the advanced subsonic research program? Will the initiative carry on any of the research now being supported by the HSR or advance subsonic research programs?

Answer. The objective of the Ultra-Efficient Engine Technology (UEET) program is to address the most critical propulsion issues related to environmental emissions: performance and efficiency. The overall objective is to develop technology to enable a dramatic increase in turbine engine performance and efficiency while reducing the impact on the environment. High temperature turbomachinery components, materials and structures, and novel concepts for significantly improved propulsion airframe integration through advanced technology concepts will be addressed. The primary benefits to these technologies will be to improve efficiency and reduce emissions for a wide range of applications, civil and military.

UEET resources will be used to develop technology to the component level (combustors, fans, compressors and turbines). System level validation will be performed using DOD and/or industry test engines. We anticipate that 80 percent of the resources will be used in support of in-house research at NASA Centers. The remaining resources will be used on contracts with the two U.S. aircraft engine manufacturers to ensure technology transfer. Given the Agency's priorities, we believe the UEET program represents an appropriate balance.

The propulsion technology development in both AST and HSR will be leveraged to support the Ultra-Efficient Engine Technology program. In AST, the use of low emission combustors to reduce emissions of nitrogen oxides will be continued to meet a goal of 70 percent reduction in these emissions. Technology from the HSR program in this area will also be used to support this goal. Similarly, in both programs, technology development in the area of turbomachinery (fans, compressors

and turbines) will be leveraged to develop methods to simplify engines by reducing the number of stages. The result will be improved engine efficiency leading to a 15 percent reduction in fuel use and similar reductions in CO₂. Also, high temperature engine materials development will be leveraged.

In addition, the fiscal year 2000 budget initiates a new Aviation Systems Capacity program based on the Advanced Subsonic Transport program to address issues of crowding in the nation's air traffic system.

REUSABLE LAUNCH VEHICLES

RLV COSTS

Question. The budget projection for future space launch development grows dramatically between fiscal year 2001 and fiscal year 2004. We have been told that those funds constitute a placeholder for future, to-be-determined RLV commitments. If those commitments are not currently defined, how did you arrive at the amounts appearing in the out-year budget? What do you intend to do in fiscal year 2000 to clarify the picture?

Answer. NASA spends a substantial portion of its annual budget to meet its launch needs. To lower these costs, the 1994 National Space Transportation Policy (NSTC-4) calls for "government and private sector decisions by the end of this decade on development of an operational, next generation reusable launch system." NASA has set aside an outyear wedge of funding to support these decisions. NASA is also undertaking industry-led Space Transportation Architecture Studies to identify private sector options for reducing NASA's launch costs. These studies incorporate separate efforts being undertaken by NASA, DOD and industry including: Space Shuttle safety upgrades; X-33 and other NASA technology demonstrators (X-34, X-37, and X-38), the Evolved Expendable Launch Vehicle for the International Space Station. As part of the fiscal year 2001 budget process, the Administration intends to use the results of these studies and inputs to develop a strategy that encompasses the decisions, some near-term and some far-term, required to meet an end-date goal of transitioning all of NASA's launch requirements, including human space flight, to lower-cost, privately owned and operated space transportation systems. Decisions on future RLV funding, the transition from the Space Shuttle to privately owned and operated vehicles, private sector incentives, and related issues will be decided this fall in the context of this integrated space transportation strategy. Details will be provided in the fiscal year 2001 budget submit.

SHUTTLE VS. RLV

Question. Do you still anticipate being able to make a decision "at the end of the decade" as to whether to make a major upgrade to the space shuttle or to rely on the private sector to build a new reusable launch vehicle (RLV) like VentureStar?

Answer. NASA spends a substantial portion of its annual budget to meet its launch needs. To lower these costs, the 1994 National Space Transportation Policy (NSTC-4) calls for "government and private sector decisions by the end of this decade on development of an operational, next generation reusable launch system." NASA has set aside an outyear wedge of funding to support these decisions. NASA is also undertaking industry-led Space Transportation Architecture Studies to identify private sector options for reducing NASA's launch costs. These studies incorporate separate efforts being undertaken by NASA, DOD and industry including: Space Shuttle safety upgrades; X-33 and other NASA technology demonstrators (X-34, X-37, and X-38), the Evolved Expendable Launch Vehicle for the International Space Station. As part of the fiscal year 2001 budget process, the Administration intends to use the results of these studies and inputs to develop a strategy that encompasses the decisions, some near-term and some far-term, required to meet an end-date goal of transitioning all of NASA's launch requirements, including human space flight, to lower-cost, privately owned and operated space transportation systems. Decisions on future RLV funding, the transition from the Space Shuttle to privately owned and operated vehicles, private sector incentives, and related issues will be decided this fall in the context of this integrated space transportation strategy. Details will be provided in the fiscal year 2001 budget submit.

COST COMPARISON

Question. NASA's Reusable Launch Vehicle (RLV) program is designed to reduce the cost of space launches. What does NASA expect the launch and operations costs of a reusable launch vehicle to be compared to the launch and operation costs of the shuttle? Does NASA expect to support both a shuttle program and an oper-

ational Reusable Launch Vehicle program at the same time? If so, how and what are the cost projections?

Answer. NASA spends a substantial portion of its annual budget to meet its launch needs. To lower these costs, the 1994 National Space Transportation Policy (NSTC-4) calls for "government and private sector decisions by the end of this decade on development of an operational, next generation reusable launch system." NASA has set aside an outyear wedge of funding to support these decisions. NASA is also undertaking industry-led Space Transportation Architecture Studies to identify private sector options for reducing NASA's launch costs. These studies incorporate separate efforts being undertaken by NASA, DOD and industry including: Space Shuttle safety upgrades; X-33 and other NASA technology demonstrators (X-34, X-37, and X-38), the Evolved Expendable Launch Vehicle for the International Space Station. As part of the fiscal year 2001 budget process, the Administration intends to use the results of these studies and inputs to develop a strategy that encompasses the decisions, some near-term and some far-term, required to meet an end-date goal of transitioning all of NASA's launch requirements, including human space flight, to lower-cost, privately owned and operated space transportation systems. Decisions on future RLV funding, the transition from the Space Shuttle to privately owned and operated vehicles, private sector incentives, and related issues will be decided this fall in the context of this integrated space transportation strategy. Details will be provided in the fiscal year 2001 budget submit.

PRIVATE SECTOR INCENTIVES

Question. What incentives do you think would be needed to convince the private sector to fund an operational RLV? There has been some talk of federal loan guarantees. Is that necessary? What would be the budgetary impact of such a proposal?

Answer. NASA spends a substantial portion of its annual budget to meet its launch needs. To lower these costs, the 1994 National Space Transportation Policy (NSTC-4) calls for "government and private sector decisions by the end of this decade on development of an operational, next generation reusable launch system." NASA has set aside an outyear wedge of funding to support these decisions. NASA is also undertaking industry-led Space Transportation Architecture Studies to identify private sector options for reducing NASA's launch costs. These studies incorporate separate efforts being undertaken by NASA, DOD and industry including: Space Shuttle safety upgrades; X-33 and other NASA technology demonstrators (X-34, X-37, and X-38), the Evolved Expendable Launch Vehicle for the International Space Station. As part of the fiscal year 2001 budget process, the Administration intends to use the results of these studies and inputs to develop a strategy that encompasses the decisions, some near-term and some far-term, required to meet an end-date goal of transitioning all of NASA's launch requirements, including human space flight, to lower-cost, privately owned and operated space transportation systems. Decisions on future RLV funding, the transition from the Space Shuttle to privately owned and operated vehicles, private sector incentives, and related issues will be decided this fall in the context of this integrated space transportation strategy. Details will be provided in the fiscal year 2001 budget submit.

LIKELIHOOD OF SUCCESS

Question. How do you rate the likelihood that one or more of the private sector companies now developing their own RLVs will be successful-companies like Kistler, or Kelly, or Space Access? Are all of them arguing that they need federal loan guarantees or other government-based incentives to succeed?

Answer. Several start-up, entrepreneurial launch companies emerged in recent years that are developing or plan to develop new launch vehicles, mostly aimed at the commercial launch market using private sector sources of financing. We know that the fresh ideas and innovative approaches come from such entrepreneurial activities and hope that the companies that prove their systems reliable and cost competitive will be successful. Because each company's business plan is dependent on non-technical factors, such as launch market forecasts, NASA cannot rate the likelihood that one or more of these companies will be successful. NASA is taking steps, however, to support these new entrants and long-term competition in the U.S. launch market. First, several of these companies have been contracted as participants in the Space Transportation Architecture Studies mentioned in the above answer. NASA is also providing Space Act agreement resources to these companies, when requested, such as wind tunnel work, airborne testing, alternative engine designs, and NASA Center expertise. Finally, NASA is asking for industry comments on a potential future procurement of launch services on new, untested launch vehicles for those NASA payloads that can be risked on such vehicles. Because each

company has a different business plan with different market projections, financing techniques, and payback estimates, some companies are in favor of loan guarantees as a private sector incentive whereas others are not.

X-33 TECHNICAL PROBLEMS

Question. What are the technical problems that have slowed the X-33 program? Are more schedule threatening technical problems likely? Is single-stage-to-orbit technology simply too immature at this time?

Answer. The X-33 has suffered manufacturing difficulties with two of its many technologies: the composite liquid hydrogen fuel tank and the aerospike engine. We considered the composite cryogenic fuel tank to be the most significant technical challenge from the time that the program was initiated. The X-33's lifting body shape required that the tank geometry be complex, with each of the two composite LH₂ fuel tanks being assembled in a quad-lobe design. Each tank required four large lobe skins that were manufactured as sandwich structures with graphite epoxy inner and outer skins bonded to a phenolic honeycomb core (trade name "Corex"). The lobe skins were then bonded to four longerons (which were themselves composite woven "y" preforms) and to small and large Cee-shaped members (also woven preforms) which join the top and bottom of the lobe skins to the forward and aft bulkheads, respectively. The first serious difficulty was encountered when areas were found on the first composite tank where the lobe skin bonding to the longerons was inadequate. Repairs were made to the bonds, and manufacturing processes were found that prevented subsequent problems of this type. The next major tank problem involved debonding of an inner lobe skin to the core material on the first of a total of eight lobe skins. The history of the manufacturing process used for this particular lobe skin (the first) and for the second lobe skin slightly differed somewhat from that used on the remaining six lobe skins. Accordingly, a decision was made to manufacture replacement lobe skins to replace both of these skins. The other skins were carefully tested and bondline integrity was determined to be adequate. Manufacturing and assembly of both hydrogen tanks is now complete, and the starboard tank is now in cryogenic cycling and loads testing at NASA Marshall Space Flight Center (MSFC). Some leaks were discovered (as had been expected), but all leaks are repairable in the field. The left tank will follow the starboard tank into the same facility for similar testing while the starboard tank is being installed in the vehicle at Lockheed Martin Skunk Works in Palmdale.

Engineers at MSFC conducted the second pressure test on the composite tank by filling it completely with liquid hydrogen at -423 degrees Fahrenheit on September 21. One of the objectives of the test was to pinpoint seepage areas on the composite tank. When the tank was pressurized to 20m psi, as expected some hydrogen seepage was noted. Technicians are applying sealant or patchwork to affected areas before resuming pressure tests. The tank passed an earlier pressure test with liquid nitrogen and also a 5-psi helium leak test when it was shipped.

Similar patchwork was completed on the X-33's earlier five-foot composite test tank or the "Double D" tank. The five-foot tank has since successfully completed approximately 30 cryogenic cycles involving the filling, draining, and filling again of liquid hydrogen at pressure. As a result of the manufacturing difficulties encountered on these fuel tanks, we have a better understanding and insight into this critical technology area. This is consistent with the X-33 Program's overall goal of giving us the opportunity to develop and prove these cutting-edge, revolutionary technologies.

The linear aerospike engines also encountered manufacturing problems in three areas: the expansion ramps, the thrust "ladder" and the thrust cells. Bonding high-temperature steel alloy sheets onto a copper alloy (trade name "Narloy Z") core with machined cooling slots form the expansion ramps. Liquid hydrogen is circulated through the slots to regeneratively cool the ramps. Manufacturing the cores and brazing the facing sheets to the cores proved to be a time-consuming activity. The brazing process itself was slowed by competing with other applications (e.g., SSME nozzles) for the only available brazing furnace large enough for this purpose. The thrust ladders to which the thrust cells are attached proved to be a more challenging design and manufacturing task than anticipated. Originally the copper ramp was conceived as a passive thermal design, but multi-cell hot fire testing and subsequent analysis indicated that it is a more complicated thermal problem. The ramp had to be redesigned as an actively cooled structure, and this increased the manufacturing time. The thrust cells, which are also actively cooled, took longer than originally anticipated to manufacture. These problems have been overcome, but have delayed the engine delivery schedule. However, the first of the four engines being built under the X-33 program—a test engine—is currently in test at NASA

Stennis Space Center, Mississippi. The second engine, a flight unit, is nearing completion. Both flight engines will be delivered to Palmdale early next calendar year.

We are confident that the manufacturing difficulties, which have delayed the X-33 program, are all behind us. It also is important to note that these were manufacturing difficulties and not design problems. However, much work remains to be accomplished as the program has transitioned into its test and validation phase. The very purpose of the X-33 program is to do things that haven't previously been done to reduce the technology risk for future operational vehicles. The first fuel tank and first development engine are still in their respective test series. We cannot offer assurance that further difficulties will not be encountered during these critical tests, or in other areas, that will further delay the program. However, at the same time, we want to thoroughly test and validate these critical components before installing them in the X-33.

All of the difficulties that we have encountered to date have been successfully overcome. We are smarter today as a result of the problems that we faced. Accordingly, we do not believe that single-stage-to-orbit is too immature for proceeding with development of an operational RLV. We still have a lot of work ahead of us, and expect to learn a great deal from the remainder of the X-33 buildup stage and from the subsequent flight test program. However, our experiences to date lead us to believe SSTO is achievable with the United States' current technology base. Successful test flight of the X-33 next year will go a long way in proving this assertion.

X-34 TECHNICAL PROBLEMS

Question. What are the technical problems that have slowed the X-34 program? Are more schedule-threatening delays likely?

Answer. The X-34 has also suffered from manufacturing delays in its composite tanks and structures. More recently, the program has been impacted by an Air Force determination that extra series of environmental analyses are necessary to launch and land the X-34 at Holloman AFB.

PRIVATE INVESTMENT IN THE RLV PROGRAM

Question. Assuming private investment, creation of an operational space launch system derived from NASA's RLV program, such as the proposed Lockheed-Martin VentureStar, will require private firms to fund a follow-up development and construction program estimated to cost several billion dollars.

Given the large investment required and the Air Force's recent decision to fund the development two Evolved Expendable Launch Vehicles, are private firms willing to invest in development of the VentureStar?

Even though the NASA RLV programs were designed for private investment, does NASA foresee a need to provide funding, payload guarantees, loan guarantees, or other government subsidies for a follow-on development program to produce operational RLVs?

Answer. NASA spends a substantial portion of its annual budget to meet its launch needs. To lower these costs, the 1994 National Space Transportation Policy (NSTC-4) calls for "government and private sector decisions by the end of this decade on development of an operational, next generation reusable launch system." NASA has set aside an outyear wedge of funding to support these decisions. NASA is also undertaking industry-led Space Transportation Architecture Studies to identify private sector options for reducing NASA's launch costs. These studies incorporate separate efforts being undertaken by NASA, DOD and industry including: Space Shuttle safety upgrades; X-33 and other NASA technology demonstrators (X-34, X-37, and X-38), the Evolved Expendable Launch Vehicle for the International Space Station. As part of the fiscal year 2001 budget process, the Administration intends to use the results of these studies and inputs to develop a strategy that encompasses the decisions, some near-term and some far-term, required to meet an end-date goal of transitioning all of NASA's launch requirements, including human space flight, to lower-cost, privately owned and operated space transportation systems. Decisions on future RLV funding, the transition from the Space Shuttle to privately owned and operated vehicles, private sector incentives, and related issues will be decided this fall in the context of this integrated space transportation strategy. Details will be provided in the fiscal year 2001 budget submit.

AEROSPACE TEST FACILITIES

NASA AND DOD COOPERATION IN AEROSPACE INVESTMENT

Question. In June 1995, NASA and DOD agreed to identify cooperative actions that could lead to significant reductions in investments and cost of operations in major aerospace test facilities.

Have you identified any such actions and, if so, what has been the amount of savings so far?

Answer. In the 1995 timeframe, NASA and the DOD—under the auspices of the joint Aeronautics and Astronautics Coordinating Board (AACB)—formed several Integrated Product Teams (IPTs) to assess potential cooperative efforts in areas of mutual interest. These IPTs made numerous recommendations aimed at increasing the efficiency and effectiveness of NASA/DOD activities in research, operations, and management (including additional personnel exchanges).

In the area of aeronautical research and technology, the IPT activity has helped lead to increased coordination in several key research areas. For example, common military and civil turbine engine technology goals have been identified and responsive technology development activities were embodied within the complementary DOD, NASA and industry programs. The Department of Defense's Integrated High Performance Turbine Engine Technology (IHPTET) program is addressing technology responsive to the needs of DOD for military aviation superiority. This program has been closely coordinated with propulsion technology projects in NASA's Advanced Subsonic Technology and High Speed Research programs. Although these particular programs are being terminated in fiscal year 1999, NASA planning for its Ultra-Efficient Engine Technology (UEET) effort has been coordinated with DOD's IHPTET program and during implementation of UEET the coordination and transfer of technology will continue. The strongest collaboration between DOD and NASA will continue to be in the development of high temperature engine materials technology. Military and civil engines differ in the number of stages and configurations, typically the life and durability of military engines are less, but the underlying materials are similar.

In another example, NASA's Aviation Safety Program began in fiscal year 1999 and DOD had been involved in the NASA Safety Research initiative from the beginning. In response to the White House Commission on Aviation Safety and Security, NASA formed a team comprised of NASA, FAA, DOD, NWS and industry to define the highest priority research and technology investment areas to meet the national safety goal. DOD participated throughout the process to contribute and to ensure that there was no duplication of effort. Human factors, aging aircraft, and weather research are among the programs where DOD is contributing significantly to civil aviation safety. Each of the resulting NASA safety project managers has an identified DOD focal point to ensure close collaboration and sharing of information. NASA, FAA and DOD are currently defining a coordinated safety research program under the direction of the National Science Technology Council.

The AACB/IPT effort also resulted in the establishment of six NASA/DOD facility alliances, including the National Wind Tunnel Alliance (NWTa). (The creation of the NWTa was also spurred by the 1995 release of the President's National Science and Technology Council report entitled, "Goals for a National Partnership in Aeronautics Research and Technology." Among other findings, the report concluded that, "newer European wind tunnels focused on aircraft development testing are generally superior to comparable U.S. facilities in overall capability" and that, as a consequence, there had been increasing utilization of European facilities for U.S. commercial and military aircraft development testing. NASA and DOD shared several concerns regarding this practice, including facilities access and data security risks. There have been also been a number of other studies addressing these and related issues, i.e., the National Facility Study (1993), the NASA/DOD Cooperation Study (1996), and the DOD Aeronautical Test Facilities Assessment Study (1997).)

The NWTa as well as the Air Breathing Propulsion Test Facilities Alliance (ABPTFA) was established, therefore, to identify, study and implement measures to strengthen the national infrastructure of aerodynamic and air breathing propulsion test facilities that support NASA and DOD missions and the domestic aeronautics industry. The Alliance has been active in identifying and addressing several facility issues. For example, the NWTa formed a team to develop a common set of metrics for measuring facility performance, and has conducted a benchmarking analysis of a typical commercial test in both NASA and DOD tunnels. These types of "normalizing" activities are important pre-cursors to making comparative investment decisions, and have also led to a sharing of lessons-learned between the two organizations. The Alliance has also been successful in addressing specific investment deci-

sions. For example, the Air Force HyTech program determined that no existing NASA or DOD facility could meet the program's technical requirements. Review of the situation by members of the NWTa led to a decision to invest in a DOD facility, and not a NASA facility, as the most cost effective approach for the Nation.

In addition, NASA and DOD, under the auspices of the NWTa, are participating jointly in the planning and execution of wind tunnel test technology efforts. In particular, the Integrated Instrumentation and Testing Systems (IITS) element of NASA's information technology program is working closely with DOD with the objective of leveraging NASA and DOD funding in wind test technology development. This activity (roughly \$4M per year) is in its second year and both agencies are continuing to increase the integration of their test technology development efforts. Most recently, the Alliance has been working in concert with NASA's Core Capability Assessment to identify future DOD requirements for NASA facilities.

Based on the activities of the NWTa, NASA and DOD have proposed that the NWTa and ABPTA be combined and expanded into a National Aeronautical Test Alliance (NATA). NATA, once established, will provide strategic management of the Nation's aerodynamic, aerothermodynamic, and aeropulsion facilities in the areas of (1) capital investment planning; (2) test technology investment; (3) operations policies; and (4) business management. Day-to-day operations and management of NATA facilities, located at the Ames Research Center (NASA), the Arnold Engineering and Development Center (DOD/USAF), the Glenn Research Center (NASA), and the Langley Research Center (NASA), will remain the responsibility of the respective organizations. The NATA charter is currently under review by the DOD.

DOD SUBSIDY

Question. What activities does NASA conduct with DOD and how are the costs allocated? Does NASA subsidize any DOD or other agency activities? Please quantify.

Answer. NASA and DOD cooperatively plan and conduct many Aero-Space research activities that are pertinent to the objectives of both agencies. Generally, the terms of the cooperation are governed by a Memorandum of Understanding (MOU), Memorandum of Agreement (MOA), or InterAgency Agreement (IAA). For mutual-interest activities such as Aging Aircraft research, each agency pays its own costs and the results are shared. Another example is where the military service provides the wind tunnel model (of a generic configuration) or research flight hardware and NASA provides the testing and data reduction. For the Abrupt Wing Stall project, the F-18 configuration is of interest to the military but the NASA objective goes beyond that to examine the fundamental physical phenomenon. On the other hand, when a specific developmental aircraft is the subject, such as JSF, wind tunnel testing is done on a reimbursible basis.

Other activities, in which NASA and the DOD, DoE, FAA, or other agencies jointly participate, which would include Steering Committees, Partnership Councils, Technical Coordination Groups, and Executive Committees, generally involve only personnel costs, which are borne by the respective agency. NASA resources are not used to subsidize the DOD or any other agency.

NASA DOWNSIZING.

Question. What is the status of NASA's downsizing efforts at each NASA center? Has each center met its staffing reduction targets? If not, why not?

Answer. Thus far, each NASA Center has been able to meet or exceed the aggressive reduction targets established both internally and by the Administration and Congress. Furthermore, 7 out of 10 Centers have reached their outyear FTE targets ahead of schedule. These 7 Centers can now begin to replenish and rebalance the skills that were drained during the severe hiring constraints of the last 6 years. The remaining 3 Centers, JSC, KSC, and MSFC, still need to downsize further to meet their outyear targets as losses have not materialized as planned. (See attached chart for graphic depiction of outyear targets).

AGING PHYSICAL PLANTS

Question. Through the years NASA has built an extensive physical infrastructure at its centers located throughout the nation. During times of budget constraints, the physical plant of agencies is often neglected.

Does the agency have a plan to maintain the capability of its physical plant?

Answer. NASA completed an extensive Facility Investment Study in fiscal year 1997. In this study, we classified our facilities as mission direct, mission support, and center support. Each field center used a team of research and mission managers

to determine the capital repair deficiencies of its facilities in each category (from the perspective of high, moderate, and low risk). This study showed us that we had, indeed, been underinvesting in our facilities maintenance and revitalization.

NASA's physical infrastructure exceeds 5,000 buildings and other structures consisting of roughly 43 million square feet. These facilities average over 40 years in age with 7 million square feet at 60 years old and 3 million square feet up to 70 years old. To assure that the highest priority needs relative to accomplishment of NASA's Strategic Plan are addressed in future facility budgets, NASA is now in the closing phase of an agency-wide core capabilities study. This study will enable us to direct our limited facilities maintenance and revitalization dollars to only those facilities that will be needed from here on out. The results of this study will be available in time to incorporate into the fiscal year 2001 budget submission to OMB.

Question. How much is requested in fiscal year 2000 for such efforts and what are the future year projected costs?

Answer. NASA's fiscal year 2000 budget request includes \$141 million in Construction of Facilities (CoF) in fiscal year 2000 and \$140 million per year thereafter for revitalization of some critical facilities. Considering the potential risk of known facility deficiencies on Agency research and operations, the investment level is less than the amount recommended by the Facility Investment Study and significantly below what is needed to revitalize all of NASA's current facility inventory. The \$140 million, however, will mitigate the most critical facilities deficiencies and safety risks known to NASA at this time. The results of the core capability study will likely identify a greater need for facility revitalization investment. In the meantime, NASA centers plan to spend over \$200 million in non-CoF dollars annually for routine, day-to-day maintenance of the Agency's physical plant.

YEAR 2000 COMPUTER PROBLEM

Question. What is the status of NASA's Year 2000 computer problems?

Answer. As of April 30, 1999, NASA has essentially completed all Y2K repairs on mission-critical and non-mission-critical systems. We have one remaining mission-critical system that will complete implementation in June (we deferred SOHO Y2K repairs until the spacecraft was recovered) and one mission-critical system left to retire in August 1999. We have a modest amount of work that we will complete this summer for non-mission-critical systems, primarily in ensuring our desktop environments are Y2K compliant.

Meeting the Government-wide goals for Y2K work has required the most extensive "top down" and "bottom up" review of the Agency's information technology assets supporting missions, systems, and common infrastructure and facilities undertaken to date. No significant Agency asset has been untouched—we have tested and remediated (where necessary) our ground control systems, flight hardware and software supporting human and robotic programs, mission operations support systems, common infrastructure systems, and institutional systems. The results of this extensive Agency-wide effort is evidenced by the following:

- Repaired, replaced or retired 158 mission-critical systems and 350 non-mission-critical systems, representing thousands of complex hardware and software modules and components (including ground control systems, flight hardware and software, mission operations support, institutional systems).
- Validated over 6000 commercial products used on the Agency's supercomputing, mainframe, midrange, desktop, and network assets.
- Tested over 52,000 workstations and servers.
- Tested in-flight system software and hardware for NASA's wide range of spacecraft, satellites, instruments, and aircraft.
- Tested NASA's unique research and development infrastructure—hundreds of simulators including wind tunnels, testbeds, computational facilities, and propulsion and flight-test facilities.

While these accomplishments are significant, NASA is going beyond stated requirements to ensure we are ready for the new millennium. Throughout 1999, we will be conducting mission-specific end-to-end tests to demonstrate Y2K readiness. End-to-end tests will be conducted for the Space Shuttle Program; the International Space Station; and NASA's command, tracking, telemetry, and data services supporting all satellites and spacecraft. Major missions supporting the Space and Earth Science Enterprises are also conducting end-to-end tests throughout the summer to demonstrate Y2K readiness. We have also prepared plans that address operating contingencies for our missions, programs, and systems to ensure we are prepared for a Y2K-related failure of internal assets or national infrastructure. Our plans build on existing and proven flight rules, operations, disaster recovery, and contingency procedures.

Question. What about the impact on the numerous satellites, which are currently operational?

Answer. Satellite timers do not keep track of calendar dates, so there are no date dependent elements provided in most satellite or spacecraft hardware. However, NASA satellites do have many time-related functions in onboard flight software. These times related functions are necessary for many operational activities and include ephemeris processing, processing of stored commands, and other scheduled processes. The format of time used by flight software is not stored or processed as a calendar date, with days or years. Instead, onboard satellite times are kept via counters that begin to accrue time starting with a given event or epoch and are thus unaware of calendar perturbations. As the satellite data is received at the ground station via telemetry and processed by the ground systems, the relation between the onboard time and the "wall-clock" time is established. I would like to emphasize, however, that NASA has assessed and tested or validated that all flight software and hardware is Y2K compliant. As expected, no changes to flight software or hardware have been required.

I would like to use NASA's Hubble Space Telescope (Hubble) as an example to highlight actions we have taken to assure the health and safety of NASA spacecraft relative to Y2K. As you know, Hubble was launched in April 1990, and is one of NASA's great observatories of astronomical observations in space. Hubble provides an excellent illustration of how time is processed for spacecraft. All of the computers on board the observatory depend only on the Hubble onboard clock for time information. The Hubble onboard clock is a free running 125 millisecond counter that has been incrementing since launch. This clock does not contain any date information but expresses time using 32 bits. Rollover to zero occurs after 17.024 years (from launch) and will occur in the year 2007. Rollovers of stored command time occur approximately every 24 days and are routine. Embedded systems planned for installation during servicing missions are designed to be Y2K compliant. Time correlation to calendar date for all Hubble commands and telemetry (engineering and science data) is performed in the ground systems. As we have validated on all NASA spacecraft, the Y2K is not an issue for the Hubble onboard computers and embedded microprocessors.

Ground systems, the commercial utility infrastructure, the commercial telecommunications infrastructure, and NASA's data distribution systems on the ground do, however, use calendar dates and are potentially affected by Y2K. Let me address briefly how we have mitigated Y2K risks associated with each of these elements that are so critical to maintaining the health and safety of NASA spacecraft.

As part of NASA's ongoing Y2K assessment, we have identified Y2K problems for ground systems primarily in the areas of ground system operating systems, Commercial-off-the-Shelf (COTS) components, and mission-unique custom software. Ground systems do rely on calendar dates, for example, to include date and time labeling of received data and to make various operational events occur at specific dates and times. If the applications, computer operating systems, or computers do not recognize or interpret certain dates correctly, the systems may produce erroneous data, malfunction, or simply stop working.

NASA established a very aggressive Y2K program in August 1996. Our program is modeled on the General Accounting Office framework for Y2K awareness, assessment, renovation, validation, and implementation. We have established specific Agency-wide requirements and guidelines that have been consistently followed by all NASA Centers. As part of our initial assessment, we inspected software code and/or conducted preliminary testing for NASA systems to determine Y2K remediation requirements. We have renovated custom-developed code and made necessary COTS upgrades or replacements for supporting ground systems. As part of our validation phase, systems have been tested against specific Agency-wide test requirements and must be formally certified as Y2K compliant by a NASA employee. Consistent with our rigorous systems management practices, validated ground systems were run in parallel with operational non-Y2K compliant systems using "current time" operational data to ensure operational functions were not impacted by Y2K upgrades. Only after satisfactory operational and independent test team checkout were systems transitioned to operations.

In addition to these requirements, NASA missions have executed or will execute end-to-end Y2K test plans that include testing or simulation of critical mission functions supported by the instruments on board, the spacecraft itself, and the ground systems. While the testing details vary from mission to mission, testing involves setting the clock forward and rolling through the millennium roll-over and other key Y2K dates. For those missions to be launched in the latter part of 2000, Y2K compliance tests will be incorporated as a natural part of routine integration and acceptance testing. An example of an end-to-end test recently completed was the Space

Science/Deep Space Network test. For this test, we advanced the clocks to February 25, 2000, and tested the data flows from the Cassini spacecraft (a mission to explore Saturn) to the Deep Space Network-Goldstone Deep Space tracking station, through the Cassini test bed, and finally to two participating Cassini Principal Investigators. The Principal Investigators were at remote sites in Baltimore, Maryland, and the United Kingdom. The test accomplished all of its objectives and instilled confidence that NASA will not experience Y2K anomalies in tracking planetary spacecraft in the year 2000 and beyond.

Let me again use the Hubble Space Telescope as an example. The Hubble ground system actually consists of 36 mission-critical and 20 non-mission-critical computer systems, comprised mainly of COTS computer hardware and software, some government off-the-shelf software, and several million lines of applications software unique to Hubble. Each of these computer systems contains an internal clock with calendar date information. Correct time and calendar date capability is vitally important to Hubble mission-critical operations activities such as the execution of commands by the observatory; proper and accurate telescope pointing; communications between the observatory and the Space Telescope Operations Control Center; and time tagging of science data.

In early 1997, Hubble initiated a comprehensive and thorough effort spanning the operations, ground systems, and flight software to ensure operability in the year 2000 and beyond. All systems were assessed, remediated (where required), and rigorously tested. In addition, Hubble end-to-end tests were executed to independently verify Y2K compliance for all mission-critical systems. To conduct this test, we used a facility that replicates the Hubble electrical and electronics systems that is comprised of the actual flight spare components used for on-orbit servicing of the observatory. All final testing of any changes to flight hardware and software is conducted using this facility because it is the most faithful and highest fidelity replica of Hubble flight systems. During the end-to-end testing, all mission-critical ground system components and Y2K critical dates were exercised using a set of observation proposals, planned observations, and stored command loads to accurately simulate the full range of mission operations with the observatory. Based on these successful tests, Hubble was certified Y2K compliant in March 1999.

Another example I would like to share relates to NASA's Tracking and Data Relay Satellite System (TDRSS). TDRSS is a communication signal relay system that provides tracking and data acquisition services between low earth orbiting spacecraft and NASA/customer control center and data processing facilities. Customers which rely on TDRSS to deliver command and telemetry data include the Hubble Space Telescope, the Space Shuttle, the Compton Gamma Ray Observatory, Landsat, the International Space Station as well as other current and planned low earth orbiting satellites.

The TDRSS is comprised of a space and ground segment. The existing space segment was developed by TRW, and consists of six on-orbit satellites located in geosynchronous orbit. These spacecraft are vintage 1970's design that has a very primitive 8-bit processing capability that does not maintain or use a clock on-board the spacecraft. Instead, the ground station sends real-time commands to configure the spacecraft to support user services and to step the antennas to track both user spacecraft and the Ground Station at White Sands, NM.

Currently under development are three replenishment satellites that are being designed and built by Hughes Space and Communications. These satellites are based upon their standard HS601 series of satellites. The first of this series, TDRS-H, is presently undergoing factory test and integration. Although the launch is planned for the fall of 1999, the satellite will not be placed into operational service until after the century transition. Hughes has performed specific testing of the flight software on the three replenishment satellites to ensure that no problems exist with respect to Y2K.

The TDRSS ground segment is located in New Mexico and consists of two functionally identical ground terminals known collectively as the White Sands Complex. The communications traffic between low-earth orbiting satellites being supported by the TDRSS—uplink and downlink—pass through the White Sands facility. Work to remediate TDRSS ground systems is complete and verified to be Y2K compliant. In summary, the entire TDRSS—existing satellites, replenishment satellites, and ground systems—has been successfully verified to be Y2K compliant.

A technical problem similar to but not directly related to Y2K involves the US Space Command Global Positioning System (GPS). As I am sure you are aware, GPS is based on about two dozen satellites that orbit the Earth and send navigational signals. Two upcoming events may affect civil GPS users and government users of commercially procured receivers—GPS End of Week rollover and Y2K issues. GPS End of Week rollover happens every 20 years because GPS system time

counted in weeks started counting on January 6, 1980. At midnight between August 21 and 22, 1999 the GPS week will rollover from week 1023 to 0000. This could be interpreted as an invalid date in GPS receivers that were not designed to meet GPS specification. The Department of Defense is the service provider for GPS and has verified that all generations of GPS satellites and ground support systems are Y2K and End of Week rollover compliant. NASA has assessed the impact of this known problem with GPS receivers, and has replaced or upgraded a small number of GPS receivers where required, either for this GPS-unique problem, or due to Y2K reasons. We do not anticipate problems with GPS receivers on August 21, 1999 or on January 1, 2000.

NASA remains confident that the probability of a Y2K-related failure of NASA-controlled assets and systems is very low. We are, however, reliant on national and local infrastructure such as telecommunications and electrical power for spacecraft operations. All NASA missions routinely develop contingency plans to deal with the unexpected, including on-orbit anomalies. Each NASA Center has developed Y2K business continuity plans for NASA operating missions and supporting infrastructure that are based on these existing and proven plans. NASA's critical ground systems currently include provisions to mitigate the impact of short-term failures of the commercial power and telecommunications infrastructure which occur during day-to-day operations. Independent power sources such as batteries and generators exist to support continuing operations in the event of a commercial power failure. Diverse routing of communications traffic within our primary commercial telecommunications service provider and the capability to route data across other commercial telecommunications service providers exists to support continuing operations in the event of a commercial telecommunications failure. NASA plans have been used in actual utility outage conditions, systems failures, and recoveries. We know these plans work and believe that these contingencies will work during the Y2K rollover.

As an added precaution, NASA missions are implementing additional measures during important Y2K dates. Prior to the rollover, we will backup critical data and ensure that adequate storage exists to save data that may not be able to be processed in the event a Y2K problem is encountered. For the most part, missions will be put in a quiescent state, and we are evaluating strategies to minimize data gathering or scheduled operations activities. New orbital parameters may be uploaded just prior to the rollover to allow the mission to proceed with minimal ground contact during the first few days or hours of 2000. During the rollover weekend, we will have key operations staff at each NASA Center to monitor and support critical operations, and resolve and report any anomaly, Y2K or otherwise, through established operational procedures and management processes. In addition, we will have extra staff at each NASA Center to communicate frequent Y2K status of all NASA assets and systems to my Office at NASA Headquarters, both affirmations of positive status and problem reporting. To ensure a coordinated, well-planned, and appropriate response to any Y2K anomaly, priorities for problem resolution across missions are:

- Health and safety of the spacecraft
- Health and safety of the onboard instruments
- Real-time mission operations (command uplink and telemetry downlink)
- Non-real time mission operations including spacecraft system analysis, sequence
- Generation, and navigation
- Science data capture
- Science data product generation and archiving

The impact on NASA if there is a Y2K-related failure depends, of course, on the nature of the failure and the duration of the failure. Many of the possible failures would be inconvenient, but would not necessarily result in permanent loss of data. All NASA operating missions have standard operational procedures in place to handle ground contingencies, and would be placed in "safehold" status until the contingency was resolved. The likelihood of a Y2K failure causing damage to spacecraft or causing an extended period of downtime is considered to be very remote.

In summary, NASA believes it has taken aggressive steps to assure the safety and integrity of our spacecraft, satellites, and supporting ground systems and infrastructure. In addition, we have adequate plans in place to address operational anomalies due to Y2K problems, and we will continue to validate and refine these plans throughout the remainder of 1999. NASA is committed to ensuring that NASA's missions and programs move smoothly into the new millennium.

RUSSIAN MISSILE TECHNOLOGY TRANSFER PROBLEM

Question. A number of concerns have been raised about the possibility of and continuing risk that Russia is transferring sensitive missile technology to countries like Iran and Communist China.

This is critical and what steps is NASA taking to curtail such activity. For example, what is the scope of this problem? What specific steps is the Administration taking to modify Russian behavior?

Answer. Over the past three years, the Administration has placed nonproliferation at the top of the U.S.-Russian agenda and has pressed an intensive effort at the highest levels in the Russian government to prevent Russian entities from aiding Iran's missile program. President Clinton discussed this issue at length with Russian President Yeltsin and Prime Minister Stepashin at the G-8 Summit in Cologne in June of this year. The Vice President, also made this matter a major theme of his recent talks with Prime Minister Stepashin. Members of the Cabinet, including Secretary of State Albright and National Security Advisor Berger, all have active dialogues ongoing with their Russian counterparts about nonproliferation as part of the Administration's full court press on this issue. Further, the Department of State and National Security Council staff work closely with NASA and keep NASA apprised of nonproliferation developments as they relate to Russia.

This effort has achieved results. Russia has taken positive steps such as enacting a new export control law (signed by President Yeltsin at the end of July), instituting sweeping export control regulations (including "catch all" provisions), and investigating and stopping some activities of concern. Russia has not yet succeeded in completely cutting off the flow of sensitive materials and technology to Iran. Russian authorities, particularly those with responsibility for law enforcement and security matters, must now use these new tools to crack down on violators and to demonstrate that Russia's is building an effective export control system.

The Clinton Administration continues to mount a strong, high-level diplomatic effort to urge action by the Government of Russia to end cooperation by Russian entities with the Iranian missile program. The key is to find the right mixture of carrots and sticks to convince entities that there are benefits from avoiding cooperation with Iran and to apply tough penalties against entities that engage in activities of proliferation concern.

In the last few months, U.S. and Russian experts have developed an action plan aimed at curtailing cooperation by Russian entities with Iran's missile program. The plan includes enhanced export control measures, including development on a priority basis of internal compliance offices at several entities of concern, and other transparency measures. U.S. and Russian experts have met several times in recent months to discuss implementation of these plans. We have also offered technical assistance to help Russian entities set up necessary export control regimes.

While NASA is not directly involved in these important discussions with the Russian Government on missile proliferation concerns, we are actively engaged with the Department of State and the National Security Council staff to ensure that we are vigorously supporting overall U.S. foreign policy and security objectives. NASA Administrator Goldin has frequently emphasized to Russian Space Agency (RSA) General Director Koptev and other senior Russian Government and industry officials the importance of adhering to Missile Technology Control Regime guidelines in their activities with other countries. In their interactions with RSA and its contractors at all levels, NASA officials emphasize that NASA fully supports and implements the U.S. Government's nonproliferation and security objectives.

Question. What guidance has the Administration given NASA and what role do you expect NASA to play relative to its relationship with Russia?

Answer. NASA will continue to adhere to the established U.S. Government export control guidelines and regulations in its dealings with Russia.

The International Space Station (ISS) is one of the most visible symbols of our engagement with Russia. It has created an opportunity for unprecedented interaction and cooperation with Russian government personnel, aerospace enterprises, and academic experts.

Moreover, continued Russian participation in the ISS serves one of our major nonproliferation objectives by ensuring that key Russian scientists, technicians and enterprises are productively engaged in programs that are mutually beneficial to the United States and Russia, instead of activities that give rise to proliferation concerns. U.S.-Russian cooperation in ISS helps provide legitimate alternatives to engaging in activities harmful to world peace and stability.

Question. What steps will NASA take if it is clear that Russian/Iran cooperation on technology transfer continues?

Answer. We share the concern of the Congress regarding Iran's efforts to acquire technology and expertise related to its WMD and missile programs. Hindering Iran's efforts is a top priority of the Administration's Iran policy and of our wider regional and nonproliferation policies. NASA is prepared to undertake whatever steps are deemed necessary by the Administration to address this potential concern.

CONTRACTING

FIXED COST VS. COST PLUS CONTRACTING

Question. Please describe the circumstances in which fixed cost contracting and cost plus contracting are used.

Answer. Two common types of Federal contracts are fixed-price contracts and cost reimbursement contracts. Federal Acquisition Regulation (FAR) 16.202-2 provides that:

A firm-fixed-price contract is suitable for acquiring commercial items (see FAR Parts 2 and 12) or for acquiring other supplies or services on the basis of reasonably definite functional or detailed specifications (see FAR Part 11) when the contracting officer can establish fair and reasonable prices at the outset, such as when—(a) There is adequate price competition; (b) There are reasonable price comparisons with prior purchases of the same or similar supplies or services made on a competitive basis or supported by valid cost or pricing data; (c) Available cost or pricing information permits realistic estimates of the probable costs of performance; or (d) Performance uncertainties can be identified and reasonable estimates of their cost impact can be made, and the contractor is willing to accept a firm fixed price representing assumption of the risks involved.

In addition to firm-fixed-price contracts, there are other types of fixed-price contracts that allow adjustment of the contract price based on inflationary indices or contractor performance, e.g., fixed-price-incentive contracts allow for adjusting the profit earned by the contractor and the final contract price based on a negotiated formula, or that contemplate redetermination of the contract price, e.g., when a fair and reasonable firm-fixed price cannot be negotiated for more than the initial period of contract performance.

Cost-reimbursement contracts (include cost-plus-fixed-fee contracts, cost-plus-award fee contracts, cost-plus-incentive-fee contracts) are suitable for use only when uncertainties involved in contract performance do not permit costs to be estimated with sufficient accuracy to use any type of fixed-price contract (FAR 16.301-2). For instance, a cost reimbursable contract typically would be used for research and development contracts, such as the development of a Space Shuttle.

NASA COMMENTS ON GAO REPORT ENTITLED "INFORMATION SECURITY: MANY NASA MISSION-CRITICAL SYSTEMS FACE SERIOUS RISKS"

NASA has reviewed the final GAO report and, as with the draft report, agrees with many of the findings and all of the recommendations. We find the final report to be very useful to the Agency. It reinforces the recommendations made by our recent Agencywide Information Technology (IT) Security review and provides additional recommendations which assist in better protecting NASA's IT assets. We reiterate our appreciation of the professional quality of the GAO review and the productive working relationship established between the auditors and NASA officials.

In our response to the draft report we expressed two concerns. The first was triggered by a statement in the Conclusions section of the report that, "NASA's mission-critical systems are vulnerable to unauthorized access and sabotage." We believed that this statement could have been misunderstood to mean that all of NASA's mission-critical systems at all of its Centers could be penetrated. We note that the final report was changed to, "Many of NASA's mission-critical systems are vulnerable to unauthorized access and sabotage * * *". We appreciate the change that was made. However, NASA does take extraordinary steps, not noted in the study, to protect certain systems and networks prior to events such as launches. We believe that these steps are very effective, but due to the increasing capabilities and motivation of those who would harm NASA, we are not complacent and continue to make improvements. NASA takes very seriously the GAO findings in the area of IT Security management, and we will correct our deficiencies. We agree that the Agency must manage IT Security more effectively, and by doing so will provide better protection for all of our mission-critical systems.

The second concern we expressed in our response to the draft report still exists in regard to the final report. Namely, that because the GAO audit, like any audit, is a snapshot in time, the reader may conclude that NASA is doing little to improve its IT Security posture. We are far from indifferent to IT Security which, after the

Year 2000 effort, is our highest IT priority. As a result, we are working diligently to implement the 33 recommendations made in our Agencywide IT Security review and each of the recommendations contained in the GAO report. GAO is correct that some of our recommendations will take up to 2 years to implement fully. That is largely because we are making fundamental improvements in the skills of both our civil service personnel and contractors. Suitable training curricula in some areas, for example, are just now becoming available. We believe the result will be worth the required investment in time and resources, and we are making that investment.

NASA is also taking near-term action to make the following improvements:

- In December 1998, we purchased Public Key Infrastructure (PKI) digital certificates for every NASA employee that will allow us to encrypt sensitive data, provide digital signature capabilities, and perform strong authentication. We are implementing the PKI capabilities Agencywide this fiscal year. We are the first civilian federal agency to pursue Agencywide PKI capability.
- This fiscal year, we have purchased and are now implementing Agencywide a common set of auditing and monitoring tools that will allow us to better monitor the security status of all our systems, better detect intruders, and, because the tools are common, better coordinate our response to attacks against multiple Centers.
- In October 1998, the NASA Administrator issued a letter to Center Directors reinforcing the policy concerning reporting of IT Security incidents to the NASA Automated Systems Incident Response Capability (NASIRC). Shortly thereafter, the NASA CIO provided additional, detailed guidance in this regard to the Center Directors. Incident reporting to NASIRC is improving as a result, but we continue to require better compliance in this area.
- We have successfully completed penetration testing of one of our Centers by another Center to allow us to determine, through testing much like GAO conducted at one NASA Center, the effectiveness of NASA's protection of its IT assets. We will use the lessons-learned from this year's experience to both better secure our systems and perform independent penetration tests in succeeding years.
- NASA's IT Security training plan has been approved and is being implemented. It includes training activities consistent with recommendations contained in the GAO report. As noted in the GAO report, in 1998 NASA developed a multimedia CD-ROM which we believe provides excellent IT Security awareness training. We have distributed the CD-ROM to all the Centers.
- NASA has completed the review process for its revised, detailed IT Security guidance, including final legal review, and is preparing it for signature by the Associate Deputy Administrator.
- We are conducting IT Security workshops on a regular basis so that the Center IT Security Managers, network engineering/operations personnel, and outsourceurs can exchange information and develop approaches to improving NASA's IT Security.
- The NASA Administrator issued a message to all employees in May 1999, entitled "The Safety of Information Technology Begins With You", stating that IT Security is part of the Agency's safety campaign and that " * * * I want to emphasize one area where we can and must improve: assuring that our computer systems and data are safe and secure."
- The NASA CIO issued a letter to all Center Directors in May 1999, giving direction on adherence to IT Security policy. The letter addressed IT Security plans, IT security training, auditing and monitoring tools, PKI rollout, assessing Center compliance with IT Security policy, NASA information made available through the Internet, and IT security incident reporting.
- The NASA CIO, as part of the Agency's security campaign, has visited and briefed two of our Centers on the need for IT Security and the requirement to adhere to the Agency's policies in that area. The Center Directors at the two Centers mandated attendance by all Center senior and line management, civil service and contractor, at the briefings. The NASA CIO will brief all Centers by the end of the fiscal year.
- The field Center involved in the GAO/NSA penetration test has made very good progress in repairing the vulnerabilities documented in the penetration test report. Most of the vulnerabilities have been repaired or dispositioned. The remaining vulnerabilities will be repaired by January 31, 2000. Completing repair of the remaining vulnerabilities earlier would introduce unacceptable risk to the missions which depend upon the affected systems.

NASA believes that the actions taken since the completion of the GAO audit and issuance of the draft report, those that are in process and planned as a result of our Agencywide review, and those initiated as a result of the GAO review will make

NASA a leading agency in IT Security. We acknowledge the timely assistance that GAO provided through the assessment documented in its final report.

Following is our detailed response to the specific recommendations provided in the GAO final report. Our response is generally the same as that to the draft report, with a status field added to indicate our progress since our comments on the draft report.

SPECIFIC RESPONSE TO GAO RECOMMENDATIONS

NASA concurs with all the recommendations of the GAO report. The table below provides our response for specific elements of the first high-level GAO recommendation: "We recommend that the NASA Administrator with support from NASA's CIO, implement an effective IT security program that is consistent across NASA's field centers and incorporates the following key elements:"

Recommendation	Con- cur?	Corrective actions	Projected timeframe for completion	Action status
<p>1. Assessing risks and evaluating needs which includes the following.</p> <p>a. Develop and instituting a review process to ensure that managers conduct complete risk assessments for all major systems prior to the systems becoming operational upon significant change, or at least every 3 years.</p> <p>b. Formally authorizing all systems before they become operational and at least every 3 years thereafter.</p>	Y	<p>During the last quarter of fiscal year 1998, we implemented, and the revised detailed IT Security guidance (NPG 2810) will reinforce the requirement for reporting of metrics in this area to the NASA IT Security Principal Center who presents the information to the NASA CIO. Metrics will be collected each quarter.</p> <p>In addition consistent with the NASA management model we will require Center Directors working through Center CIO's, to implement a review process to ensure that the risk assessment policy, as with all IT Security policies and procedures, is adhered to at their Centers.</p> <p>NPG 2810, when issued, will include this requirement. Metrics will be collected each quarter.</p>	<p>NPG 2810 issuance: July 30, 1999 Letter to Center Directors stating responsibilities in IT Security area: 3rd Quarter, fiscal year 1999.</p> <p>NPG 2810 issuance: July 30, 1999</p>	<p>All reviews of NPG 2810, including legal review completed. In preparation for signature by the Associate Deputy Administrator. Completed. Letter by NASA CIO to Center Directors issued May 12, 1999.</p> <p>All reviews of NPG 2810, including legal review, completed. In preparation for signature by the Associate Deputy Administrator.</p>
<p>2. Implementing policies and controls, which includes the following.</p>	Y			

<p>a. Streamlining the policies-making and standards-setting process for IT security so that guidance can be issued and modified promptly to address changes in threats and vulnerabilities introduced by rapidly evolving computer and telecommunication technologies.</p>		<p>Since NPG 2810 has taken longer to implement than we had planned, we have issued a number of management letters giving guidance in specific areas that required immediate attention. We will develop and implement a more streamlined process for IT Security guidance to supplement our existing policy process.</p>	<p>4th Quarter, fiscal year 1999</p>	<p>On track.</p>
<p>b. Developing and issuing guidance that specifies information that is appropriate for posting on public World Wide Web sites and distinguishes this from information that is sensitive and should be more closely controlled.</p>		<p>NASA will issue guidance in this area. Since one of NASA's primary missions is dissemination of knowledge to the American public, our policy must be carefully crafted to ensure that we are excluding, from World Wide Web posting, only that information that must be kept from public dissemination. We must take the time necessary to develop appropriate guidance consistent with our mission.</p>	<p>4th Quarter, fiscal year 1999</p>	<p>On track.</p>
<p>3. Developing and issuing guidance that identifies critical systems, including those involved in the command and control of orbiting spacecraft, that require strong user authentication.</p>	<p>Y</p>	<p>NPG 2810, when issued, will include this guidance. Consistent with OMB A-130 and NASA's approach to unclassified IT Security, guidance in this area will be based on risk assessments.</p>	<p>NPG 2810 issuance: July 30, 1999</p>	<p>All reviews of NPG 2810, including legal review, completed. In preparation for signature by the Associate Deputy Administrator.</p>

Recommendation	Con- cur?	Corrective actions	Projected timeframe for completion	Action status
<p>4. Monitoring compliance with policy and effectiveness of controls, which includes the following.</p> <p>a. Developing and implementing a management oversight process to periodically monitor and enforce field centers' compliance with agencywide policy.</p> <p>b. Ensuring that independent audits or reviews of systems' security controls are performed at least every 3 years and that identified weaknesses are expeditiously corrected.</p>	Y	<p>Consistent with the NASA management model, we will require Center Directors, working through Center CID's, to implement a review process to ensure that all IT Security policies and procedures, including those related to audits/reviews and correction of weaknesses, are adhered to at their Centers. Metrics will be collected each quarter and reported to the Principal Center for IT Security and to the NASA CIO to monitor Centers' compliance with Agencywide policy.</p>	<p>Letter to Center Directors stating responsibilities in IT Security area: 3rd Quarter, fiscal year 1999.</p>	<p>Completed. Letter by NASA CIO to Center Directors issued May 12, 1999.</p>
<p>5. Providing required computer security training, which includes the following.</p> <p>a. Developing and implementing a structured program for ensuring that NASA employees receive periodic training in computer security to provide them with the awareness, knowledge, and skills necessary to protect sensitive information and mission-critical systems.</p>	Y	<p>NASA's IT Security Training Plan has been approved and includes requirements for training consistent with GAO's recommendations.</p> <p>Our IT Security training approach includes two components: (1) end-use awareness and training, training for program/project managers in risk management (including risk analysis), and training for Center IT Security Managers; (2) training for civil service and contractor system/network administrators which we interpret to be GAO recommendation 5.c. The time-frame for this recommendation refers to the first component.</p>	<p>4th Quarter, fiscal year 2000 Intermediate milestones exist/under development for implementation of portions of the program and training percentages of users.</p>	<p>On track.</p>

<p>5. Providing required computer security training, which includes the following.</p> <p>b. Modifying relevant contracts to include provisions for ensuring that NASA contract personnel are similarly trained.</p> <p>c. Developing and implementing a program for certifying that NASA civil servants and contract employees are competent to discharge their IT security-related responsibilities.</p>	<p>Y</p>	<p>NASA's IT Security Training Plan has been approved and includes requirements for training consistent with GAO's recommendations.</p>	<p>Modification of existing contracts: 3rd Quarter, fiscal year 2000. Language for inclusion in new contracts to be developed in 4th Quarter, fiscal year 1999.</p> <p>All civil service and contractor system/network administrators: 3rd Quarter, fiscal year 2001.</p> <p>50 percent of all civil service system/network administrators: 4th Quarter, fiscal year 2000.</p>	<p>On track.</p> <p>On track.</p> <p>On track.</p>
<p>6. Coordinating responses to security incidents, which includes the following.</p> <p>a. Clarifying policy and procedures for mandatory reporting of security incidents to NASIRC.</p> <p>b. Strengthening the role of NASIRC in disseminating vulnerability information within NASA, analyzing threats in real time, and developing effective countermeasures for ongoing attacks.</p>	<p>Y</p>	<p>This action was completed via a letter from the NASA Administrator to the Center Directors in October 1998. A subsequent letter from the NASA CIO provided more details in this regard.</p> <p>This action is in progress as a result of our Agencywide IT Security Program Review. Improvements will be incremental with some aspects of the action in place before the completion date noted.</p>	<p>Clarification of policies is complete.</p> <p>Clarification of procedures will be provided in NPG 2810, when issued: July 30, 1999.</p> <p>4th Quarter, fiscal year 1999</p>	<p>Completed.</p> <p>All reviews of NPG 2810, including legal review, completed. In preparation for signature by the Associate Deputy Administrator.</p> <p>On track.</p>

The second high-level GAO recommendation is: "We also recommend that the NASA CIO review the specific vulnerabilities and suggested actions provided to field center officials at the conclusion of our penetration testing, determine and implement appropriate security countermeasures, and track the implementation and/or disposition of these actions".

The NASA CIO has reviewed the vulnerabilities and suggested actions GAO provided to field Center officials and has met with the field Center Director to discuss vulnerabilities and the need for corrective action. In addition, the field Center has conducted an extensive internal study of its IT Security and has issued a comprehensive report and set of recommendations for improvements.

The NASA CIO on June 18, 1999, conducted a review of the field Center's progress in tracking the resolution of vulnerabilities and recommendations noted in the GAO study. The NASA Acting Deputy CIO conducted a follow-up review on July 12, 1999. The field Center involved in the GAO/NSA penetration test has made very good progress in repairing the vulnerabilities documented in the penetration test report. Most of the vulnerabilities have been repaired or dispositioned. The remaining open vulnerabilities will be repaired by January 31, 2000. Completing repair of the remaining open vulnerabilities earlier would introduce unacceptable risk to the missions which depend upon the affected systems. The NASA CIO is tracking the implementation and/or disposition of the remaining actions.

LETTER FROM ROBERTA L. GROSS
NATIONAL AERONAUTICS AND SPACE ADMINISTRATION,
Washington, DC, October 18, 1999.

Hon. CHRISTOPHER S. BOND,
Chairman, Senate Committee on Appropriations Subcommittee,
Washington, DC.

Dear MR. CHAIRMAN: I am responding to written questions from you, regarding the March 18, 1999, hearing before the Senate Subcommittee on VA-HUD-Independent Agencies. I apologize for the late response. I did not receive a copy of your questions until October 6, 1999. The questions are set forth below. You specifically asked for an Inspector General assessment of the priority of the following NASA activities:

SECURITY ACTIONS

Question. In light of recent reports of spying of technology at DOE, what steps has NASA taken to ensure that sensitive NASA technology is not being transferred, even innocently, to a foreign country?

Answer. NASA has an active export control program but needs to establish additional internal controls to prevent unlawful technology transfer. In order to test the effectiveness of NASA's controls, we have initiated a series of audits and inspections. Our work has revealed that NASA has vulnerabilities to improper transfer of sensitive technologies. We recently published an audit on NASA's Control of Export-Controlled Technologies. We found that NASA has not identified all export-controlled technologies related to its major programs. NASA also does not maintain a catalog of classifications for transfers of export-controlled technologies in order to provide for consistency across the Centers. Also, Agency oversight of and training for personnel in the Export Control Program need improvement. Specifically, annual Agency audits of each Center's export control system were not adequately performed and NASA personnel lack training in controlling and documenting export-controlled technologies. As a result, NASA may not have adequate control over export-controlled technologies to preclude unauthorized or unlicensed transfers. The Agency was fully cooperative and responsive to our recommendations to correct deficiencies and improve controls.

We also found that NASA does not always observe some basic controls that could prevent unauthorized transfers of technology. For example, during a review at a NASA center, we found that foreign nationals were unescorted and were not properly identified as foreign visitors. We alerted the Center Director of that issue and he took action to correct the situation. I also reminded senior NASA management of the Agency's responsibilities in this regard. We are currently conducting an audit of contractor control of sensitive technologies and have found deficiencies in NASA's oversight and contractors' practices. The objectives of this audit, which is currently in progress, are to (1) evaluate whether major contractors have established adequate controls over NASA's sensitive technologies to preclude unauthorized or unlicensed transfers, and (2) assess government oversight of contractor processes for control of sensitive technologies. Based on our review to date, we plan to issue a report to rec-

ommend that the Agency improve controls and oversight. We are also performing an audit of the Management and Administration of International Agreements. The objectives of the audit are to (1) determine whether NASA's international agreements are properly executed and monitored, (2) appropriate clearances are obtained for foreign personnel with access to NASA facilities and information, and (3) controls over release of information are established. We will also be conducting an audit of deemed export¹ of NASA Information and Technology. Finally, we are beginning a review by a team of auditors and inspectors into NASA's Special Access Program to ensure integrity in security, procurement, and financial administration. I would be happy to brief your staff on the purpose and approaches of our ongoing work.

My Computer Crimes Division conducts criminal investigations concerning felonious intrusions into NASA computer systems. Through our assessments of these intrusions, we observe that NASA is at risk for loss of sensitive technologies. There are instances in which our investigators have found poorly administered systems, with improper configurations and current patches not applied. NASA too often lacks properly configured firewalls and dedicated skilled security staff. At some field locations, central direction is lacking and there is poor intrusion reporting both to NASA's incident response center and the Office of Inspector General (OIG) Computer Crimes Division.

Loss of sensitive technology may also occur during the process of excessing computers. My inspections staff has found that NASA has failed to adequately wipe excess computers clean of controlled or proprietary data. We have alerted the Agency to this problem over the last several years and continue to conduct spot-check inspections of the Agency's practices.

The Agency has taken steps to address many of these vulnerabilities. For example, the Chief Information Officers, along with security personnel, have addressed NASA centers on their responsibilities for network security and sensitive technologies. NASA has moved forward in its attempts at strong security through the use of a Public Key Infrastructure (PKI). NASA selected one vendor to meet its public key encryption requirements. However, the distribution and training of the PKI has been slow. Also, the NASA Administrator has requested the FBI conduct surveys at each of NASA's principle field centers to help assure that the Agency's counterintelligence and technology transfer postures are sufficient to face the security challenges of the future. The FBI plans to use the information obtained from these surveys to make recommendations on how the Agency can strengthen its counterintelligence programs, ensure consistent high standards at all centers, and effectively link the programs with intelligence and law enforcement communities. We provided the FBI with recent OIG reports that we believe will be helpful to their efforts. I also wrote to Neil Gallagher, Assistant Director, National Security Division (FBI), and offered to assist his staffing this assessment.

INTERNET PROTECTION

Question. What steps has NASA taken to ensure the integrity and protection of its computer systems and data banks?

Answer. NASA's missions and programs depend on properly managed information resources. Moreover, NASA is a significant investor in Information Technology (IT) (\$2.1 billion in fiscal year 1999). To streamline operations, NASA is consolidating and outsourcing various IT operations, including local area networks and desktop computers, mid-range computing, administrative mainframe computer operations, and supercomputing. Outsourcing may bring fiscal and administrative benefits, but it also increases risks because of dependency on the vendor for technological direction; IT security; vulnerability of strategic information to outsiders; and dependency on the viability of the vendor.

For the past three years, I have identified IT security as a material weakness of NASA for inclusion in the Agency's annual Federal Manager's Financial Integrity Act (FMFIA) Report. NASA, however, characterizes IT security only as a "significant concern." I also list IT security as one of the top ten challenges facing NASA management. This information has been shared with NASA's oversight and appropriation Chairs and Ranking Minority members, as well as Chairman Fred Thompson

¹ Any release of technology or source code subject to the Export Administration Regulation to foreign national is deemed to be an export to the home country or countries of the foreign national. This deemed export rule does not apply to persons lawfully admitted for permanent residence in the United States and does not apply to persons who are protected individuals under the Immigration and Naturalization Act (8 U.S.C. 1324b(a)(3)). Technology or software is "released" for export through: visual inspection by foreign nationals of U.S.-origin equipment and facilities; oral exchanges of information in the U.S. or abroad; or the application to situations abroad of personal knowledge or technical experience acquired in the U.S.

of the Senate Governmental Affairs Committee, Chairman Dan Burton of the House Committee on Government Reform and Oversight, and Representative Dick Armye, the House Majority Leader. The top ten management challenges are also shared with NASA and posted to the Internet (<http://www.hq.nasa.gov/office/oig/hq/reports.html> and look under “Memoranda and Letters—PDF.”).

Our concerns focus on the fragmentation of the IT security program, the lack of up-to-date policies and guidance, network physical and system security weaknesses, the lack of properly trained personnel, and lack of adequate threat analysis. In May 1998, the Acting Deputy Administrator, acknowledging significant IT security issues raised by the OIG, requested a review of NASA’s IT security program. The final report recognized numerous deficiencies. The Agency is committed to implementing a wide range of improvements but implementation is slow. Some no-cost and very low-cost steps can be taken but often are not (e.g., properly configuring networks and firewalls and applying current patches are inexpensive fixes.)

A synopsis of some of our work in these areas is enclosed as Enclosure 1. Also, a list of our planned work in these areas for fiscal year 2000 is also enclosed as Enclosure 2. I will be pleased to meet with you and your staff to discuss our work and assessments in these areas.

If you need additional information, or would like copies of any of the listed reports, please call me at (202) 358-1220.

Sincerely,

ROBERTA L. GROSS,
Inspector General.

ENCLOSURE 1

INFORMATION TECHNOLOGY—PRIOR WORK

Program area	Reports	Results
Audits	Disaster Recovery Planning at Marshall Space Flight Center’s Automated Data Processing Consolidation Center (IG-99-043).	The NASA Automated Data Processing Consolidation Center (NACC) has implemented a disaster recovery plan that includes most of the necessary provisions for emergency response, extended backup operations, and testing. However, improvements are needed in the areas of disaster recovery strategy, procedures, and training. The NACC is addressing the issues.
Audits	Ames Research Center’s (ARC’s) Numerical Aerospace Simulation (NAS) Facility Disaster Recovery Plan (IG-99-032).	The NAS Facility at ARC houses 30 to 40 percent of NASA’s supercomputing capability. The NAS does not have a management-approved disaster recovery plan that meets applicable federal and NASA requirements for emergency response procedures, extended backup operations, and testing. ARC is addressing the issues.
Audits	Disaster Recovery Planning at Kennedy Space Center (KSC) (IG-99-017).	NASA has established appropriate emergency response procedures for the Launch Processing System and the Shuttle Processing Data Management System. However, neither system has an extended backup capability to recover from a local disaster if the computer hardware is destroyed. KSC is addressing the issues.
Audits	Numerical Aerospace Simulation (NAS) Data Center Controls at Ames Research Center (ARC) (IG-99-010).	The overall management control structure for the NAS facility is inadequate in several areas including: physical and logical access controls; computer security controls; file retention and backup and recovery management controls; software change management controls; system accounting and file auditing controls; and risk assessments. ARC is addressing the issues.

INFORMATION TECHNOLOGY—PRIOR WORK—Continued

Program area	Reports	Results
Audits	Disaster Recovery Planning at the Jet Propulsion Laboratory (JPL) (IG-99-006).	The JPL disaster recovery plan needs improvements. The plan does not: identify the relative criticality of each application to the mission, identify when applications must be back in operation, or address the restoration of normal operations. JPL is addressing the issues.
Audits	Disaster Recovery Planning at the Johnson Space Center (JSC) (IG-99-005).	The Shuttle Software Production Facility (SPF) disaster recovery plan does not have a strategy or procedures in place for extended backup operations in the event of a disaster. The SPF application users have not developed contingency plans. JSC is addressing the issues.
Inspections	Assessment of the NASA Automated Systems Incident Response Capability (NASIRC) (G-99-007).	The Office of Inspector General (OIG) assessed the adequacy of NASA's incident reporting, response, handling, coordination, and information-sharing capabilities. The OIG found several weaknesses and vulnerabilities and made recommendations to NASA management to correct and improve deficiencies. NASA concurred with all OIG recommendations and identified an action plan to implement the recommendations.
Inspections	NASA's Implementation of a Public Key Infrastructure (PKI) (G-99-006).	The OIG reviewed the manner in which NASA was implementing PKI encryption solutions by selecting one vendor's products to meet key requirements. The OIG took exception to the selection process and dollar amounts paid for the PKI.
Inspections	Inspection of Kennedy Space Center Computer Hard Drives (G-99-003).	The OIG conducted an inspection of personal computer hard drives designated for transfer or excess. We discovered residual user data and copyrighted software on the hard drives sampled and determined that procedures were not being followed. We made recommendations to improve the implementation of data deletion procedures.
Inspections	Dryden Flight Research Center (Dryden) Network Intrusion—Lessons Learned (G-99-002).	We highlighted prudent steps that Dryden took overcoming an unauthorized network intrusion. We shared this report with NASA computer and security officials to communicate lessons learned from the Dryden experience.
Inspections	Flight Termination Systems (FTS) Assessment (G-98-011) CLASSIFIED.	The OIG conducted a review of NASA's use of FTS. We found that NASA's practices do not conform to national policy and decisions are not based on appropriate risk-based assessments. We made recommendations that NASA should comply with national and Agency guidance and to move to a more secure FTS. The Agency agreed to most of your recommendations and we are still discussing the remaining issues.
Audits	Data Center General Controls at Langley Research Center (LaRC) (IG-97-035).	System access privileges were not being removed in a timely manner. Physical access privileges to the data center were not reviewed and revalidated. Computer security plans were not prepared and system security reviews had not been performed. Based on our recommendations, LaRC corrected these problems.

INFORMATION TECHNOLOGY—PRIOR WORK—Continued

Program area	Reports	Results
Audits	Information Technology Capital Planning and Investment Control (IG-98-034).	The NASA information technology (IT) investment process does not satisfy Clinger-Cohen Act and OMB Circular A-130, Management of Federal Information Resources, requirements for post-implementation reviews of major, new, IT investments. NASA initiated process improvements which should satisfy the IT post-implementation review requirements.
Audits	Improved Controls Needed Over NASA's Supercomputing Inventory (IG-98-021).	NASA's CoSMO did not have an accurate inventory of NASA's supercomputers and supercomputing time purchased. NASA initiated responsive corrective actions.
Audits	Data Center General Controls at Marshall Space Flight Center (MSFC) (IG-97-039).	We found control weaknesses associated with the mainframe data center's physical security, environmental security, technical standards, computer security administration, and software change management. Based on our recommendations, MSFC corrected the weaknesses.
Audits	Physical Security at Ames Research Center (ARC's) Numerical Aerospace Simulation (NAS) Facility (IG-97-030).	The NAS computing facility did not have adequate backup or contingency procedures to deal with physical access control system failures. ARC corrected the problem.
Audits	Data Center General Controls at Johnson Space Center (JSC) (IG-98-005).	We found that physical access controls to the Shuttle Software Production Facility needed improvement. Additionally, the facility did not have an uninterruptable power supply (UPS) as a defense against power problems. JSC corrected the physical access problem and agreed to conduct a feasibility study and cost/benefit on the UPS.
Audits	Data Center General Controls at Goddard Space Flight Center (GSFC) (IG-98-006).	Physical access controls associated with the Hubble Telescope Data Operations Center (HTDOC) and the Hubble Telescope Servicing and Maintenance System facility (SAMS) were inadequate. Additionally, computer risk management plans had not been conducted as required. GSFC corrected these deficiencies.
Audits	Data Center General Controls at Jet Propulsion Laboratory (JPL) (IG-98-009).	Computer security implementation plans and reviews had not been developed or conducted for JPL's Institutional Business Systems (IBS) as required by JPL policy. Additionally, physical access controls to the IBS data center were in need of improvement. JPL corrected these deficiencies.
Audits	Data Center General Controls at Kennedy Space Center (KSC) (IG-98-018).	Procedures for monitoring unauthorized access attempts to the Shuttle Processing Data Management System were inadequate. KSC took corrective action.
Audits	Data Center General Controls at Lewis Research Center (LeRC) (IG-98-039).	The physical access control system used to protect LeRC's Research Analysis Center had not been certified as meeting security requirements. Physical access procedures to the facility were not adequate. LeRC is currently addressing these issues.

INFORMATION TECHNOLOGY—PRIOR WORK—Continued

Program area	Reports	Results
Audits	Disaster Recovery Planning at Goddard Space Flight Center (GSFC) (IG-98-036).	The Solar Heliospheric Observatory Mission Operations Center did not have computer contingency capabilities in place in the event of a disaster. Additionally, contingency plans for a data center associated with the Tropical Rainfall Measurement Mission were incomplete. Finally, computer risk assessments did not analyze the potential effects of losses caused by disasters. GSFC agreed to implement corrective actions by March 1999.

ENCLOSURE 2

INFORMATION TECHNOLOGY—PLANNED WORK—FISCAL YEAR 2000

Program area	Assignment	Focus
Audits	Deemed Export of NASA Information and Technology.	Determining whether NASA has appropriate policies and procedures in place to ensure that technology and information is not inadvertently exported to foreign nationals.
Audits	Review MVS/ESA OS/390 Operating System Integrity and Security.	Determination of whether the operating system environments for the Shuttle Software Production Facility and the NASA ADP Consolidation Center at Marshall Space Flight Center have been implemented to provide for an appropriate level of security and integrity.
Audits	UNIX Operating System Security at KSC (Carryover).	Determining whether Kennedy Space Center and the United Space Alliance have implemented and configured the UNIX operating system to provide an appropriate level of security and integrity.
Audits	UNIX Operating System Security at GSFC (Carryover).	Determining whether Goddard Space Flight Center has implemented and configured the UNIX operating system to provide an appropriate level of security and integrity.
Audits	General Controls at JSC's Mission Control Center (Carryover).	Evaluating the adequacy of physical access, environmental protection, and disaster recovery planning for JSC's Mission Control Center.
Audits	Implementation of Security Software at JSC's Shuttle Software Production Facility (Carryover).	Evaluating whether JSC and the United Space Alliance have appropriately implemented and configured logical security software to protect Shuttle Software Production Facility systems.
Audits	Windows NT Security and Integrity Controls at Headquarters (Carryover).	Evaluating whether Headquarters has implemented and configured selected NT servers to provide an appropriate level of logical security and interoperability for associated automated systems.
Audits	Implementation of the Clinger-Cohen Act (Carryover).	Examining policies and procedures concerning the duties and responsibilities of the Chief Information Officer relating to information resources management, information technology acquisition including the performance of IT programs, and maintenance of an IT architecture.
Audits	Presidential Decision Directive 63.	Evaluating whether NASA has developed and implemented a plan to protect the Agency's cyber assets consistent with the requirements of PDD-63.

INFORMATION TECHNOLOGY—PLANNED WORK—FISCAL YEAR 2000—Continued

Program area	Assignment	Focus
Audits	Certificate Management	Evaluating the adequacy and effectiveness of internal controls established for the Agency central Certification Authority located at Ames Research Center.
Audits	Information Technology Acquisitions.	Determining whether NASA and its contractors are complying with applicable IT acquisition requirements.
Audits	Telecommunications Management.	Evaluating whether NASA management controls are adequate regarding the use of telecommunication services, including voice, data, and video information technology.
Audits	Operating System Controls in Major NASA Information Systems.	Determining whether the operating system environment has been configured and implemented to provide for an appropriate level of security and integrity.
Audits	Database Controls in Major NASA Information Systems.	Determining whether database security and integrity controls have been adequately implemented in the major systems selected for audit.
Audits	Network Controls in Major NASA Information Systems.	Determining whether controls in the network environment are adequate to protect against unauthorized access and transmission risks.
Audits	Systems Development—Checkout and Launch Control System.	Evaluating control issues associated with: (1) project management; (2) systems requirements definitions; (3) security architecture and requirements; and (4) testing and implementation of application and system software.
Inspections	Use of COTS Software in Ground Systems.	Determining the cost, schedule, and operational impacts of using commercial-off-the-shelf (COTS) software in a ground system.
Inspections	Consolidated Space Operations Contract Security (Carryover).	To determine whether CSOC has anticipated potential threats and risks and has solicited program expertise from appropriate ITS and COMSEC experts.
Inspections	Computer Banner Inspection (Ongoing).	To determine if the requirement that banners be put on NASA computers is being followed.
Inspections	Status of Johnson Space Center Station Program Implementation of Communications Security (COMSEC) and Automated Information Security (AIS) Measures (Carryover).	To determine whether NASA management has accurately identified COMSEC and AIS requirements necessary for mission assurance and safe Space Station operations.
Inspections	Hard Drive 99: Clearing Controlled Information from Excessed Micro-computers (Ongoing).	To determine whether computers in the process of being excessed have been cleaned of all data and software.
Inspections	Information Technology Security (ITS) Staff Qualifications.	To determine the minimum training, qualifications, and experience necessary to perform ITS functions.
Inspections	NASA's Communications Security (COMSEC) Program.	To determine whether NASA's COMSEC program and its associated organizational structure are adequate to ensure compliance with nationally mandated COMSEC policy.
Inspections	NASA's Compliance with the National Policy on the Application of Communications Security to U.S. Civil and Commercial Space Systems.	To determine if adequate COMSEC procedures and safeguards have been planned and applied.

QUESTIONS SUBMITTED BY SENATOR SHELBY

Question. Mr. Goldin, I am pleased that we have a new director at the Marshall Space Flight Center. Art Stevenson is providing real leadership and has proven himself an effective advocate for a new space transportation system that can take the space program beyond the shuttle era. I believe we must focus now on the future, and I mean the future beyond the space station. We need to maintain our access to space after the shuttle wears out. Mr. Goldin, a new space transportation system requires a strong commitment from the NASA Administrator and the President. Do you think this country will see that kind of commitment in the near future?

Answer. NASA spends a substantial portion of its annual budget to meet its launch needs. To lower these costs, the 1994 National Space Transportation Policy (NSTC-4) calls for "government and private sector decisions by the end of this decade on development of an operational, next generation reusable launch system." NASA has set aside an outyear wedge of funding to support these decisions. NASA is also undertaking industry-led Space Transportation Architecture Studies to identify private sector options for reducing NASA's launch costs. These studies incorporate separate efforts being undertaken by NASA, DOD and industry including: Space Shuttle safety upgrades; X-33 and other NASA technology demonstrators (X-34, X-37, and X-38), the Evolved Expendable Launch Vehicle for the International Space Station. As part of the fiscal year 2001 budget process, the Administration intends to use the results of these studies and inputs to develop a strategy that encompasses the decisions, some near-term and some far-term, required to meet an end-date goal of transitioning all of NASA's launch requirements, including human space flight, to lower-cost, privately owned and operated space transportation systems. Decisions on future RLV funding, the transition from the Space Shuttle to privately owned and operated vehicles, private sector incentives, and related issues will be decided this fall in the context of this integrated space transportation strategy. Details will be provided in the fiscal year 2001 budget submit.

Question. Mr. Goldin, in your vision of the future, do you foresee a heavy launch vehicle for travel to planets such as Mars and beyond? What type of propulsion system do you envision for this vehicle?

Answer. Per Section 3(a) of the Civil Space Guidelines in the 1996 National Space Policy, "the International Space Station will support future decisions on the feasibility and desirability of conducting further human exploration activities." NASA's human space flight programs are dedicated to completing development of the International Space Station before considering in detail systems for potential future human missions.

Question. I realize the difficulty of trying to look a number of years into the future, but I think it is fair to ask what role you anticipate for the Marshall Space Flight Center in the development of new space transportation systems?

Answer. Marshall is NASA's lead Center for space transportation technology and will play a central role in undertaking the development and demonstration of technologies to support continued launch cost reductions for NASA and other launch system users.

Question. Mr. Goldin, like many others in this country who have an interest in seeing our space technology provide a boost to the commercial sector, I am concerned that we may be losing our commercial launch business to foreign competitors. As you look into your crystal ball, do you have a vision of how this nation can develop a viable and competitive low cost launch service to bring space launch business back to the United States?

Answer. All of today's launchers are either totally expendable or partially expendable. Such systems require large workforces spread all over the country for manufacturing, shipment, assembly, test, and launch preparation. On the international marketplace, our systems are competitive, but not dominant, in such an environment. NASA's vision is to transition our human space flight requirements to fully reusable, privately owned and operated launchers. By opening NASA's human space flight market to commercial launch vehicles and with such advanced systems we can change the nature of the competition. We will not have to maintain the large expensive factories for continuous manufacture, assembly, and test of vehicles. Rather, our industry will have a huge advantage because it will only have to turn around a fully reusable vehicle between flights. Without the need for manufacturing, shipping, and assembling a new vehicle each launch, our industry will have a huge cost advantage.

Question. Mr. Goldin, I am concerned that investment in space science research has been put on hold while NASA devotes its assets to completing the Space Sta-

tion. Do you share my view that we need to continue investment in space science research while we are building the Space Station?

Answer. The NASA Space Science Enterprise has a robust program spread across its four science themes: Astronomical Search for Origins and Planetary Systems, Solar System Exploration, Structure and Evolution of the Universe, and Sun-Earth Connection. The various programs in these themes have been extremely productive over the past few years, have yielded a wealth of new scientific discoveries, and have captured the imagination and interest of the American public and people around the world.

NASA definitely believes that it is vital to maintain a robust and diverse Space Science program, while continuing its commitment to constructing the International Space Station. In fact, this year, NASA submitted a budget request that included a modest increase in Space Science. The favorable Space Science funding included in the Senate-House Conference on H.R. 2684, the fiscal year 2000 VA-HUD-Independent Agencies Appropriations Act, maintains the health of NASA's Space Science program and its ability to deliver the exciting, world-class science that the American taxpayer has come to expect.

Question. Mr. Goldin, an area of your attention for some time has been in reducing the cost of going to orbit. Clearly this is an issue of national significance as we look toward the increased development and utilization of space. The DOD recently bought launch services from competing contractors rather than paying to develop and buy the launch vehicles themselves. Mr. Goldin, do you believe the next generation operational launch vehicle should be developed by the private sector or by the government?

Answer. In order to focus our resources on science, technology, and exploration, NASA must turn over routine launch operations to the commercial sector. With the shuttle we have taken a first step in this move with the Consolidated Space Operations Contract. Additionally, we compete all of our robotic missions in the U.S. commercial launch marketplace. Both of these experiences have brought NASA savings in money and workforce. We are working to converge NASA's human space flight launch requirements with the commercial launch marketplace so NASA can get lower cost access to space and our commercial providers will have a larger market to service.

The next generation operational launcher should be developed by the private sector in order to reap the benefits of this merging of NASA and commercial launch markets. However, NASA does have unique safety, reliability, and operational requirements, and we cannot jeopardize those requirements. Thus, while the launcher should be developed by the private sector, NASA may have to develop specific elements that satisfy our specific requirements. These might be a crew module, space taxi, or service modules for our unique requirements.

Question. Mr. Goldin, to your knowledge will any of the reusable launch vehicle concepts currently under consideration replace the Space Shuttle in the next ten years?

Answer. Our technology demonstration projects (X-33, X-34, X-37) have made immense progress. Depending on the continued success of these projects, we could see proven technology that could lead to a second generation Reusable Launch Vehicle within 10 years.

Question. If so, which ones and under what schedule?

Answer. NASA spends a substantial portion of its annual budget to meet its launch needs. To lower these costs, the 1994 National Space Transportation Policy (NSTC-4) calls for "government and private sector decisions by the end of this decade on development of an operational, next generation reusable launch system." NASA has set aside an outyear wedge of funding to support these decisions. NASA is also undertaking industry-led Space Transportation Architecture Studies to identify private sector options for reducing NASA's launch costs. These studies incorporate separate efforts being undertaken by NASA, DOD and industry including: Space Shuttle safety upgrades; X-33 and other NASA technology demonstrators (X-34, X-37, and X-38), the Evolved Expendable Launch Vehicle for the International Space Station. As part of the fiscal year 2001 budget process, the Administration intends to use the results of these studies and inputs to develop a strategy that encompasses the decisions, some near-term and some far-term, required to meet an end-date goal of transitioning all of NASA's launch requirements, including human space flight, to lower-cost, privately owned and operated space transportation systems. Decisions on future RLV funding, the transition from the Space Shuttle to privately owned and operated vehicles, private sector incentives, and related issues will be decided this fall in the context of this integrated space transportation strategy. Details will be provided in the fiscal year 2001 budget submit.

Question. If not, what is NASA doing to maintain and upgrade the Shuttle to ensure the nation's investment is protected and human space access assured?

Answer. In the interim, NASA will continue to make the safety upgrades necessary to keep the Space Shuttle safe and reliable.

QUESTIONS SUBMITTED BY SENATOR CRAIG

EDUCATION

Question. There is currently much interest in education and how to improve it in our nation, especially in science, math, engineering, and technology-related fields. NASA has expertise in a number of these fields, and NASA projects capture the imagination of students. What is NASA's role in the effort to improve education in those areas critical to the U.S. maintaining its technological advantage, and how is that role expected to develop in the future?

Answer. NASA is a mission Agency and uses its inspiring mission, unique world-class facilities, close working relationship with the research and development community, and specialized workforce to contribute to education improvement. Educational Excellence has been established as one of five national priorities to which NASA makes a significant contribution. Communicating knowledge to the educational community is embedded as a crosscutting process in all of NASA's work.

There are three primary leadership strategies that are key components of NASA's role in educational improvement. These are: 1. Contribute to educational excellence by making a positive contribution to the goals of the educational community; 2. Develop alliances with key external constituencies to define, expand, and leverage our impact; and 3. Involve the educational community in the NASA mission.

For the future, we have identified seven improvement initiatives. These are:

1. *Focus and Coordinate State-Based Efforts.*—NASA's national Education Program is in one sense composed of 50 individual State programs. The reform of mathematics, science, technology, and geography in K–12 schools is inextricably linked to each State's higher education system and the States' agendas for economic development. Central to our State-based focus is the need for NASA to understand the State education agendas and place emphasis on coordinating our assets in a given State toward meeting that State's needs. By continuing existing and establishing new alliances, NASA seeks to connect NASA Principal Investigators, NASA-trained teachers, existing NASA education resources (for example, Educator Resource Centers and Space Grant Consortia), and commercial contractors with the State education leadership to determine how these assets may best be utilized within the State.

2. *Enhance Instructional Products and Dissemination.*—NASA missions produce new data, images, and information that may be effectively included in textbooks, curricula, and supplementary instructional products. Working with professional education associations, State and local education authorities, universities, private enterprise, and other organizations, we will collaborate to develop instructional products consistent with the national curriculum standards and/or State or local curriculum frameworks. These products will be developed in multiple formats, with emphasis on innovative applications of educational technology and interactive strategies.

3. *Improve Education Program Integration and Coordination.*—The NASA Education Program consists of many parts, which, when working together as a whole, can make a significant and positive contribution to the education community. The Implementation Plan is designed to ensure that the design, coordination, and implementation of NASA's numerous educational projects, programs, and activities achieve this vision of a single, unified Education Program.

4. *Facilitate NASA Research in the Higher Education Community.*—Research relevant to NASA's four Strategic Enterprises is carried out primarily through NASA Strategic Enterprises, Field Centers, and the University community. However, some focused higher education programs are implemented by the Education Division and the Minority University Research and Education Division. Our goal is to streamline and focus these latter efforts so that they strongly support Agency research objectives as determined by the NASA Strategic Enterprises.

5. *Support Preservice Education.*—Various national reports indicate that there will be a shortage of K–12 science, mathematics, and technology teachers over the next 5 years. Concomitantly, institutions responsible for training the next generation of teachers are aligning their preservice programs with new certification requirements and public policy expectations. While NASA's existing inservice programs need to continue at their present level, it is important for us to focus on new opportunities to support initiatives in the preservice area. NASA's significant invest-

ments in research and development with institutions of higher education provide a unique asset to consider in identifying such opportunities.

6. *Target Informal Education.*—Museums, science and technology centers, and similar nonprofit education organizations support the formal education community and provide significant educational activities for learners of all ages. Most of these organizations are major community, regional, or national resources for science education. In addition, the informal education community has a tradition of presenting educational experiences using an inquiry, hands-on approach that is well aligned with the National Science Education Standards. We will work with and support these organizations.

7. *Implement NASA's Comprehensive Data Collection and Evaluation System.*—In carrying out our aerospace mission, NASA strives to involve students and educators as both participants and partners. In conforming to the federal Government Performance and Results Act of 1993, NASA is committed to evaluating the performance of its programs and activities in order to report to the Congress and Administration and to provide for continual improvement of such involvement of the educational community in its missions, research, development, and achievements. To that end, the NASA Education Division is developing the NASA Education Evaluation System which includes an on-line, Internet based system for entry and collection of data from participants and program managers; follow-up studies; and briefing and statistical presentation materials to be used for analysis and reporting.

Question. Half of the 20 EPSCoR states have never had a NASA grant. Idaho is one of the states which is eligible for NASA EPSCoR but which has never had an award. Our institutions believe that they are ready for an award and that they can develop expertise in a number of NASA research areas. Last year, Congress included \$10 million to ensure that all eligible states receive funding, yet NASA persisted in awarding only limited planning grants to some states. How do you see those participating at a minimal level becoming more competitive? What is your vision for the future of this program, which basically helps nearly 40 percent of the state become more involved in NASA research activities?

Answer. The \$5 million increase in NASA EPSCoR funding enabled NASA to develop and implement a Preparation Grant Program for all 20 NASA EPSCoR eligible states, including Idaho. The Preparation Grant program was established as an interim program to allow all states the opportunity to initiate contacts, promote collaborative research programs with NASA Centers/Enterprises, and begin research activities in areas of strategic importance to the Agency. The Preparation Grant program was designed to increase the competitiveness of the EPSCoR states in anticipation of the rollout of the new NASA EPSCoR program in fiscal year 2001. We have enclosed a copy of the March 1999 EPSCoR Report to Congress that further outlines our plans for the new EPSCoR program.

While the specific details of the new NASA EPSCoR program are still being developed, the program will require more direct connections and collaborations with NASA Centers than does the current NASA EPSCoR program.

Question. Researchers at the University of Idaho have expertise which should be of interest to NASA in a number of areas, including lightweight materials (titanium) and remote sensing, yet we have found it difficult to become involved in NASA research. As noted above, EPSCoR appears to offer only a limited opportunity to do so. What are you doing and can you do to broaden opportunities for all parts of the country to participate in NASA missions and objectives?

Answer. A number of NASA programs offer opportunities for states to become more involved in NASA missions and research activities.

1. *Research Opportunities.*—NASA supports a comprehensive website that offers links to NASA Offices and Centers, and current research opportunities. Information can be found at the following web site: <http://www.hq.nasa.gov/office/procurement/grants/#oss>

This is one of the best sources of information about areas of research that are important to NASA.

2. *Summer Faculty Fellowship Program.*—Each summer, NASA awards research fellowships to university faculty through the NASA/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program. This program was designed to stimulate an exchange of ideas between university faculties and NASA scientists and engineers. Selected participants in fields of science, engineering, math, and other disciplines spend approximately 10 weeks working with their professional peers on research projects at NASA facilities. Addition information about this program can be obtained from the Education Division, NASA Headquarters, Code FE, Washington, DC 20546.

Currently, at least one University of Idaho researcher is spending the summer at the Jet Propulsion Laboratory as part of the NASA/ASEE Summer Faculty Fellowship Program.

3. *Graduate Student Researchers Program.*—The Graduate Student Researchers Program (GSRP) cultivates additional research ties to the academic community and provides support to promising students pursuing advanced degrees in science and engineering in areas aligned with NASA's Strategic Enterprises and Field Centers. Additional information can be obtained from the Education Division, NASA Headquarters, Code FE, Washington, DC 20546

4. *Reduced Gravity Student Flight Opportunity Program.*—The reduced gravity student flight opportunity program is sponsored by NASA and administered by the Texas Space Grant Consortium. Through the Reduced Gravity program, teams of undergraduate students, working with university researchers, propose, design, fabricate, fly and assess a reduced-gravity experiment. The experiments are flown on NASA's KC-135 aircraft that can simulate zero gravity conditions for up to 25 seconds.

In 1998 Idaho had two teams selected to participate in the Reduced Gravity Program, and each has successfully flown experiments on the KC-135. The Spring, 1998 University of Idaho team was sponsored by a faculty member in the University of Idaho Department of Mechanical Engineering. The Fall, 1998 team, also from the University of Idaho, conducted research in the field of advanced materials entitled "Combustion Synthesis of Ceramic-Metal Composites in Microgravity" and was sponsored by the UI departments of Metallurgical Engineering, Chemical Engineering, and Electrical Engineering.

5. *NASA EPSCoR Preparation Grants.*—The long term goal of the NASA EPSCoR Program is to develop research infrastructure in areas of strategic interest to NASA within states that have historically been unsuccessful in competing nationally for NASA funds. In 1999 NASA introduced the NASA EPSCoR Preparation Grant program. Funding from this program can be used in part to support the travel of State researchers to NASA field centers to interact directly with NASA engineers and scientists.

In Idaho the 1999 NASA EPSCoR Preparation Grant program is currently funding the following projects:

Cluster Grants (\$25,000 each)

Electro-Optic Holography and Passive Vibration and Acoustic Suppression Systems—Jonathan Blotter (ISU), Tony Anderson (UI) and Michael Anderson (UI)—collaboration with Langley Research Center.

Intelligent Control of Nonlinear Dynamic Systems—Touraj Assefi (UI), Dean Edwards (UI), Joseph Feeley (UI), Desineni Naidu (ISU) and James Peterson (UI)—Collaboration with the Jet Propulsion Laboratory.

Catalytic Igniters for Clean-Burning, Flexible Fueled Aircraft Engines—Judi Steciak (UI), Dave McLroy (UI), Steve Beyerlein (UI), Don Blackketter (UI)—Collaboration with Ames Research Center.

Low Cost Synthesis of TiAl Base Intermetallic Compounds—Keith Prisbrey (UI), E. Baburaj (UI), S.B. Bhaduri (UI), S. Bhaduri (UI) and D. Bunnell (BSU)—Collaboration with Glenn Research Center.

Survivability of Computer Systems in Hostile Environments—Deb Frincke (UI), Jim Alves-Foss (UI), James Foster (UI), Jeff Harkins (UI)—Collaboration with NASA Ames Research Center.

Collaboration Development Grants (\$4,000 each)

Production of Alloys—Sam Froes (UI), V. J. Jabotinski (UI)—John Glenn Research Center—Collaboration with Glenn Research Center.

Parallel Computing—Amit Jain (BSU), John Lusth (BSU), Robert Sulanke (BSU).

Determination of Rates of Turbulent Diffusion—Solomon Leung (ISU) and G. E. Start (ISU)—Collaboration with Langley Research Center.

NMR Imaging and Planimetric Analysis of the Corpus Callosum Comparing Gifted Individuals with Control Groups—Tom McKean (UI) and Terry Armstrong (UI)—Collaboration with Ames Research Center.

Development of Micropower Devices and Power Management Networks for Systems on a Chip for Space Applications—Siddhartha Duttgupta (BSU), J. R. Ferguson (BSU), S. B. Bhaduri (UI), N. I. Rafla (BSU), S. A. Parke (BSU), and S. Ahmed-Zaid (BSU)—Collaboration with the Jet Propulsion Laboratory.

6. *NASA Space Grant College and Fellowship Program.*—The National Space Grant College and Fellowship Program was authorized by Congress in 1988 to utilize the nation's universities to help maintain the United State's capabilities in aerospace science and technology. In the area of research the objective of the Space

Grant program is to establish and maintain a national network of universities with interests and capabilities in aeronautics, space, and related fields, to encourage cooperative programs among universities, aerospace industry, and federal, state, and local governments, and to encourage interdisciplinary training, research, and public-service programs related to aerospace.

As you can see, Idaho has participated in and benefited from many of these programs. In particular, over the past four years Idaho has been represented at NASA Headquarters by two Space Grant Fellows. Both Fellows are faculty members at the University of Idaho and have had significant involvement NASA's Education programs, specifically the NASA Space Grant College and Fellowship Program and NASA EPSCoR.

Currently Dr. David Atkinson is the Space Grant Fellow in residence at NASA Headquarters, working primarily on the redesign of the NASA EPSCoR Program.

We would be happy to further discuss these opportunities with members of your staff or the Idaho higher education community at an appropriate time.

SUBCOMMITTEE RECESS

Senator MIKULSKI. This subcommittee stands in recess until Tuesday, at 9:30, when we will be listening to the National Science Foundation and the Office of the Science Advisor to the President.

Mr. GOLDIN. Thank you.

[Whereupon, at 11:02 a.m., Thursday, March 18, the subcommittee recessed, to reconvene at 9:30 a.m., Tuesday, March 23.]

**DEPARTMENTS OF VETERANS AFFAIRS AND
HOUSING AND URBAN DEVELOPMENT AND
INDEPENDENT AGENCIES APPROPRIATIONS
FOR FISCAL YEAR 2000**

TUESDAY, MARCH 23, 1999

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, DC.

The subcommittee met at 9:35 a.m., in room SD-192, Dirksen Senate Office Building, Hon. Christopher S. Bond (chairman) presiding.

Present: Senators Bond, Burns, and Mikulski.

EXECUTIVE OFFICE OF THE PRESIDENT

OFFICE OF SCIENCE AND TECHNOLOGY POLICY

STATEMENT OF NEAL LANE, DIRECTOR

NATIONAL SCIENCE FOUNDATION

STATEMENT OF RITA COLWELL, PH.D., DIRECTOR

**ACCOMPANIED BY EAMON M. KELLY, PH.D., CHAIRMAN, NATIONAL
SCIENCE BOARD**

OPENING STATEMENT OF CHRISTOPHER S. BOND

Senator BOND. Good morning. The hearing of the Subcommittee on VA, HUD and Independent Agencies will come to order.

The subcommittee meets today to review the fiscal year 2000 budget request of the Office of Science and Technology Policy and the National Science Foundation. We welcome back former NSF Director, Dr. Neal Lane, now the President's Science Advisor and Director of OSTP. And it is a pleasure to welcome the new Director of the National Science Foundation, Dr. Rita Colwell. We are very pleased to have you with us. And we also thank Dr. Eamon Kelly, Chairman of the National Science Board, for joining us today.

This is certainly one of the most distinguished scientific panels that we will have the opportunity in this committee, or perhaps any other, to listen to. So we are looking forward to the testimony this morning.

We are happy to have the three of you here today, and we feel quite fortunate to have your expertise and perspective on the funding needs and priorities of NSF, as well as your views on the role of OSTP in formulating the science and research and development

priorities of the Federal Government. I am very pleased to convene the hearing this morning on the Office of Science and Technology Policy and the National Science Foundation. Under both Senator Mikulski's leadership and mine, this subcommittee has been, we would like to think, a strong supporter of a Federal commitment and our role in the Nation's scientific endeavors.

I believe we all agree that research and development is a positive and critical investment for the economic and intellectual growth and well-being of our Nation. I have to say this is one of the most exciting areas that we have to deal with. And certainly the work that is being done ought to be of great interest to all Americans who want to see us continue to make progress in the 21st century.

First, I commend the continuing efforts of OSTP to provide policy leadership on the important issues facing the scientific community. And, at the same time, I commend NSF for pushing the boundaries of scientific research, and acting as the catalyst for new and exciting cutting-edge research.

It is almost in its 50th year for NSF. And during that time, it has been responsible for numerous important scientific advances across many disciplines, ranging from information technology to biology. Science Magazine recently noted that NSF-supported research projects led to two of the most important scientific advances in 1998.

One of those projects helps us better understand the origins of the universe. Specifically, NSF-supported researchers discovered that the expansion of the universe is actually speeding up instead of slowing down, as previously thought. The other research project uncovered new information about circadian rhythms, or internal clocks, which helps us better understand how genes function and react to the environment. This sort of information can be potentially applied to health care research. And I am hoping it will explain why an 18-year-old son of mine just cannot get out of bed on Saturday morning before 11 o'clock.

NSF has also been a major driver of connecting high-speed computer networks to our educational institutions, which has been an area of interest to this subcommittee. I applaud NSF's recent efforts to fund new high-speed network connections. With these recent awards, institutions in every State, including those in remote areas such as Alaska and Hawaii, will be connected to the Internet. And on this committee, we think it is a really good idea to connect Alaska and Hawaii. It makes a lot of sense as far as we are concerned.

As chair of this subcommittee, I will be particularly interested in exploring the Federal investment in biotechnology, particularly as it applies to the agricultural sector. I believe it is imperative for us to maintain the long-term sustainability and competitiveness of U.S. agriculture. And I strongly believe that plant genome research is vital to this effort.

One example of the potential benefits of plant genome research is work being performed in my home State at the University of Missouri. Researchers at the University are looking at the gene selection in maize, and linking new information to a maize genome database. The benefits of this research will improve crop yields, reduce fertilizer requirements and produce better quality food.

And, just incidentally, I was visiting some of the medical researchers, who were dealing with diseases affecting children. And they found that soybeans provided apparently some very beneficial treatment to children suffering from cystic fibrosis. And we hope when we get the genome mapped, we will be able to identify what it is that makes the soybean apparently a beneficial treatment for cystic fibrosis. So there are many exciting things going on there. And I know Dr. Colwell had the opportunity to visit the University a couple of weeks ago. And I want to learn more about your trip. And I thank you for coming. And I was certainly pleased to have Dr. Lane visit a couple of years ago.

I am very pleased that the administration is proposing a \$5 million increase for the plant genome program. I think it is a good start. I know that I can count on both OSTP and the National Science Foundation to provide even greater support in this important area. Both agencies have requested additional funding for fiscal year 2000. OSTP's budget request totals \$5.2 million, and increase of \$175,000 over last year's enacted level. NSF's budget request for fiscal year 2000 is \$3.92 billion, a \$250 million, or 7 percent, increase over the fiscal year 1999 enacted level.

I recognize that we are not far enough along in the budget process to have an allocation for this subcommittee, so it is premature for us to discuss absolute levels of funding that may be available for our science initiatives and efforts. Nevertheless, I must tell you, the reality is that this will be a very difficult year for the subcommittee.

As I have told other agencies that have come before us, we have major funding needs, ranging from medical care for veterans to housing for low-income Americans, and disaster relief through the Federal Emergency Management Agency. We also know that under the budget caps established under the Balanced Budget Act, the Federal Government will have some \$29 billion less to spend for discretionary activities in fiscal year 2000 than what was available this past year.

Our purpose today is to discuss the funding priorities of the Nation's scientific endeavors and how these priorities are reflected in OSTP and NSF's fiscal year 2000 budget request. The centerpiece of the President's R&D budget is a six-agency information technology initiative, dubbed Information Technology for the 21st century, or IT². We have not exactly figured out how the IT² worked in, but I will work on that.

The President is proposing \$366 million for the IT² initiative in fiscal year 2000. He has also proposed to tap the NSF as the lead agency for the effort and, within the NSF budget, has asked for \$146 million in additional funding. Although the goals of this initiative may be laudable, I have some questions about it.

First, I need to understand how IT² fits into the overall Federal information technology framework, and particularly how this initiative differs from other information technology efforts, such as last year's theme of Knowledge and Distributed Intelligence, and existing programs such as the High Performance Computing and Communications, or HPCC, program, the Next Generation Internet, or NGI, initiative. Both HPCC and NGI are heavily supported already

by NSF and other Federal agencies, and would receive significant funding for fiscal year 2000 under the President's budget.

Second, I am interested in learning how NSF and the administration, with OSTP as its lead, will manage this major initiative. IT² seems to envision long-term, multi-researcher, large-sized grants, while the traditional NSF work has been with short-term, single-researcher, small-sized grants. That leads me to ask: Does NSF have the internal capacity to administer this kind of initiative, especially one that is more complex than what NSF has traditionally funded? I would be interested to hear how OSTP plans to oversee this initiative, as well.

Last, I would like to know how committed the agencies and the scientific community are to the initiative. The President's 5-year budget flat-funds NSF, and raises some serious questions about its commitment over the long term to IT² and NSF. The President's special panel recommended a Strategic Information Technology Initiative, pointing out that while IT² is a vital first step, further increased and continued oversight are needed to remedy the shortfall in long-term research investments that have accrued.

Unfortunately, with the tight budgets our subcommittee is facing, there will be some very difficult choices. And I would be interested in hearing how the administration plans to deal with these realities. I am interested in the implementation of the Results Act, which requires agencies to think strategically about their goals and to measure performance against the goals they have set. We have to be responsible for the Federal dollars that we have.

And I have one further issue concerning the subcommittee, which is the disparity in Federal research and development funding between large and small institutions. A recent NSF survey found that the top 50 recipients of university-based research received about 60 percent of all available Federal R&D funds. Many of them also received significant Federal resources to manage large research and development centers.

I support the work of these large and successful institutions, but we have to find better ways to invest scarce Federal dollars throughout the country so that all areas of America can prosper. I do not want to see just the rich keep getting richer, even though other areas are being shortchanged.

I recognize and congratulate NSF's attempts to address the problem with EPSCoR, but its funding is minimal compared to the budget of NSF. And I think that the initiatives are not enough. I look forward to working with you in addressing this problem.

I am now going to turn the microphone over to my distinguished ranking member, Senator Mikulski. And, with some trepidation, I will turn the gavel over to my colleague, Senator Burns.

Senator BURNS. What does that mean?

Senator BOND. That means I am nervous about it, Conrad.

Senator BURNS. Fear not.

Senator BOND. And I have to do a brief interview and I will return very shortly. As always, we accept your full written statement. We will look forward to having the summaries that you wish to provide us. And we will obviously have an opportunity in the question-and-answer part of the program to discuss these further.

So, with that, Senator Mikulski.

STATEMENT OF SENATOR BARBARA A. MIKULSKI

Senator MIKULSKI. Thank you very much, Mr. Chairman. My own remarks are going to be brief, so we can move quickly to the witnesses.

I want to, of course, welcome once again Dr. Neal Lane, now in his new position as the Science and Technology Advisor to the President. And a really warm and affectionate welcome to Dr. Rita Colwell, who was the lead at the University of Maryland in marine biotechnology.

Senator Burns, you might find it interesting that our relationship goes back to the mid-1980's. I was on the Merchant Marine and Fisheries Committee, and chaired the Oceanography Subcommittee. And we held a hearing on the oceans and its future in a very new, emerging field called marine biotech. And now here we are, a decade later, where the United States of America is really the lead in the world in terms of biotechnology. And, of course, we rival our intellectual competitors around the world in marine biotechnology. Dr. Colwell comes with strong administrative skills and excellent idea.

And, Dr. Kelly, of course, we are looking forward to hearing from you in terms of what the Science Board would advise us in terms of policy and direction and how we can set the priorities in our funding.

Dr. Lane and others in the scientific community are long familiar with my comments that I have always been concerned that the United States of America wins the Nobel Prize and that other nations win the markets. And that is why I have encouraged the National Science Foundation and other agencies to focus on strategic national interest—not to have winners and losers in industrial policy, but to see where we were going.

And I recall that there was a report called "Losing Ground," by the National Competitive Council, which outlined the 20 technologies that would drive the 21st century, and where the United States of America was. And, of course, we were leads in infotech at the time, long before the world, and also in biotech. Well, I want us to continue to stay up there. But in order to maximize our resources, I do believe that we will be effective through interagency cooperation. And this is why I am so excited to learn more about the President's initiative for the Infotech 2 initiative. Because it will be a multi-agency and then, ultimately, a multi-disciplinary approach between Department of Defense, Energy, NASA, NIH, and NOAA.

And, quite frankly, ladies and gentlemen of the panel and also in the audience, if I had my way on appropriations, we would have a separate subcommittee just on science and technology. Because it is what my dear colleague, Senator Bond, has said—while we are looking at the educational and work force needs of the future, we are also going to be foraging for how to change the very nature of public housing and meet our commitments to the veterans. And while we want to move ahead on your biodiversity initiative, or certainly consider it very carefully, we have EPA that, through this Congress, cannot even get its Superfund legislation authorized.

But the idea of interagency work really appeals to me. And what I want to hear is will the new initiative—are the funding request, number one, adequate? Number two, will we end up starving other programs that are already funded at a basic level, so that new initiatives, with glitz and promise, are not funded at the expense of those things that are part of our traditional must-do list? And then, what this will also mean in terms of work force readiness.

I really want America to come up with the new ideas that the private sector can develop into new products that create new jobs. But everywhere I travel in my State, and as we meet with national leaders, there is a work starvation, if you will, a work force deficit, in terms of people who are ready for the new economy. And of course I think everyone knows my own longstanding, life-long work about the concern about people who are always left out and left behind.

And I am concerned that as we move ahead into the dazzling future of information technology and how it will help even other science that, as Bill Gates says, we will create a digital divide between those who are either in it or those who are not. And I want to be sure that Americans are not left out or left behind, and that no group of Americans is left out or left behind.

So, we will be interested to see what that coordination means. And we will be able to ask more of those questions, and then, even specific things related to interagency coordination. Both NOAA and FEMA have talked about the need for new maps. FEMA wants to map the vulnerable areas of the United States, particularly in flood-prone areas. Dr. Colwell, you know what happened in western Maryland and the task force I have with Governor Glendening. But there are certain areas of our country—Missouri has faced it too—where because of flood-prone, we have already literally and figuratively, financially, and through engineering, bailed out communities, only to have them re-flooded again.

So FEMA came in, wants money to fund it, and we said, Well, cannot you get this from NASA? Then NOAA is going to also do mapping. And what we are saying is, Gee, we have got LANDSAT, we have got all this, are we creating data mortuaries or are we creating data opportunities? And how can there be cross-work, say NASA with FEMA, NASA with NOAA? Because those products, that mapping, you know the genius of the private sector, they will value-add it. They will be able to perhaps sell it. We have the Great Lakes model as an example.

We are looking at how to get more bang from our buck through interagency cooperation, meet compelling human need, fund the basic programs, and get ready for the future. So we are interested in hearing from your testimony on how we can do it.

So, with that, Mr. Chairman—Senator Burns is still holding the gavel, but I will yield the floor.

Senator BOND. Senator Burns, would you like to use the gavel?

Senator BURNS. I wonder, we walked through that whole thing over there, Senator Mikulski. Do you need some wolves? I am trying to sell wolves this morning.

Senator MIKULSKI. You have to know, Senator, I grew up in Baltimore, and there is a neighborhood called Fells Point. Now, the interesting thing about Baltimore is I represent more Nobel Prize

winner than Teddy Kennedy. But I also have more bars in it than Boston. So I know all about wolves. [Laughter.]

Senator BURNS. Do you want to trade? We balance it out. [Laughter.]

Senator MIKULSKI. Well, they are a little bit bigger than 3 feet, anyway.

STATEMENT OF SENATOR CONRAD BURNS

Senator BURNS. Thank you, Mr. Chairman. And I was listening with quite a bit of interest to Senator Mikulski's statement.

I want to review a few things as we work on this appropriation. Thank you, Drs. Lane, Colwell and Kelly, for coming this morning.

I want to talk about a little program that has been around a long time, and that is EPSCoR. It is between \$43 million and up to \$63 million, I suppose, that is divided among 18 States. And if there is a success story about a program that has come of age, it is this one. Let me tell you some exciting things that happened in my State, because EPSCoR allowed smaller States to invest in their R&D and their infrastructure in which to perform R&D.

And most of ours has been done in the area of dinosaurs, Senator Mikulski. Jack Horner, one of the leading researchers on dinosaurs and how they behaved and survived over 140 million years ago, is internationally known. And that is at Montana State University.

But also EPSCoR has helped to attract several other neuroscience researchers, who have researchers, who have created a Center on Computational Biology, and recently won the Integrated Graduate Education Research and Training Award from the NSF. Several young faculty, initially supported by EPSCoR, have gone on to be recognized around the world and have started new careers through those awards.

With EPSCoR funding, we have started an exciting program to examine life in the extreme thermal environments of Yellowstone Park. Not only can this research tell us about the origins of life, but also about how it may lead to new pharmaceuticals and new industrial chemicals. This is an especially exciting project.

I encourage you to make a special trip to Montana just to review what they have done. From beginning to end, I think you will agree with me that it has been sort of one of those things that we have gone into not knowing really what was ahead of us and found out that there is quite a lot. We did not know what was in those boiling pots or those hot pools and how it may sustain life under very, very difficult conditions.

In 1998, four students from Montana State University won the Goldwater Scholarships, America's premier undergraduate science award. Each was involved in MSU's undergraduate research programs supported by EPSCoR. So, if we are looking for a place where we get a lot of bang for the buck, it is this tiny, little program administered by NSF that has really done the job.

We have believed in that program from the very first. Montana and other rural States have been included in the VBNS connections program, also provided by EPSCoR supplement. High-speed Internet connectivity is critical to States with dispersed populations, like Montana. With these connections, we can be full partners in the re-

search community in the Nation and provide our students with full access to educational materials and opportunities.

Laser Products, in Bozeman, Montana, now employs over 200 people. And those industries have grown up around Bozeman because of the collaborations with MSU. These are contributing to economic prosperity in the community and also providing jobs for graduates. In fact, Bozeman is quickly becoming recognized as one of the Nation's emerging research regions.

So I am very proud of what EPSCoR has done. And just like I say, it is a tiny, tiny, little part of what you do, but it has had huge impacts on States like Montana, Wyoming, the EPSCoR States, which before had never gotten any recognition for the work they have done in research and development. And so I am very proud of how that program has grown. We have kept tight control on it. It is not that expensive. But the impact on smaller States has really been something. So, I thank you for that.

Mr. Chairman, that is the only statement I have. I welcome our guests today. And as Senator Mikulski was alluding to, we do have—over on the Commerce Committee, it was my privilege and honor to serve on Science and Technology and NASA, on the authorizing committee. So it has been really, really something to watch as we have taken these small products and have done great things. So I appreciate the opportunity of visiting with Dr. Lane. We have been friends a long time. And I do not think there is anybody in this country more dedicated to research and development and the well-being of our investment in those fields than the folks we have before us today.

I thank you, Mr. Chairman.

Senator BOND. Thank you, Senator Burns. I can tell you, it is a real pleasure for us to have someone with your expertise from the authorizing committee to be on this subcommittee with us. And I would certainly second your comments about Dr. Lane, Dr. Colwell and Dr. Kelly. And we look forward to hearing from them now.

We would ask that you try to summarize your statements in 10 minutes or less. You can take less if you wish. And we will make the full statements a part of the record.

Dr. Lane.

STATEMENT OF NEAL LANE

Dr. LANE. Thank you, Mr. Chairman, members of the committee. I am pleased to appear before you today. My written testimony describes the Office of Science and Technology Policy's, OSTP's, budget request for fiscal year 2000, and also provides some highlights of the national science and technology enterprise during 1998, and the administration's fiscal year 2000 R&D budget request. And I would ask that it be included for the record.

Senator BOND. Without objection, it will be.

Dr. LANE. I also wish to thank the committee for its strong support of science and technology, and NSF, which I have particularly appreciated during the time I have been privileged to serve as Director.

As you know, OSTP plays a vital role in leveraging the government's S&T investments for broad national goals. Support for such investments has traditionally been a matter of bipartisan agree-

ment. And I believe it is imperative that we build common ground to support a shared vision, the commitment to keep America the world's leader in science and technology.

OSTP has four main functions. We advise the President and other senior Administration officials about the impacts of science and technology on public policy and vice versa. We coordinate the work of the R&D agencies to ensure we get the biggest bang for the science and technology buck. We promote strategic partnerships among science and technology stakeholders—State and local government, industry, academia, and various international players. And we report on what we have learned through all these efforts. Last year, OSTP shepherded 11 multi-agency reports through the National Science and Technology Council, and seven reports and letter reports through the President's Committee of Advisors on Science and Technology.

An example that provides a sense of the breadth of OSTP's influence is our work on the Administration's Initiative on Information Technology for the 21st century. And, Mr. Chairman, IT² is a little confusing and we maybe overreached with that title, but the second "t" is the "t" in twenty-first.

Senator BOND. What is the second "i"? That is what bothers me.

Dr. LANE. We do not have a second "i." [Laughter.]

Senator BOND. Okay.

Dr. LANE. We just have one "i."

Senator BOND. Okay. [Laughter.]

Dr. LANE. The initiative, we believe, responds to a wake-up call from the congressionally chartered President's Information Technology Advisory Committee, known as PITAC. OSTP was instrumental in getting PITAC established. We also work closely with members of PITAC to make sure that its work was useful to the Federal agencies, while also challenging those agencies to think outside the box about their responsibilities and the possibilities for information technology research.

Once we had the recommendations from PITAC, OSTP pulled together the Federal agencies to develop a response. And we ultimately concluded that information technology is so important that we are proposing a new Federal R&D investment of \$366 million in fiscal year 2000, a 28-percent increase above and beyond our ongoing research programs.

Out of this total, Mr. Chairman, \$184 million—half of the initiative—comes through your subcommittee. To develop this initiative, we worked with the agencies to examine the existing information technology research programs—of which there are several—to determine just how we could leverage them for the best returns of this new investment, particularly responsive to this advisory committee's recommendations.

We decided to make these new investments in three major areas. First, about two-thirds of the new funding—\$228 million—will support long-term, fundamental research, aimed at fundamental advances in computing and communications.

The second element is \$123 million to support advanced computing infrastructure—the machines and the software and the capability—as a tool to facilitate important scientific and engineering discoveries of national interest. The resulting supercomputer infra-

structure will be orders of magnitude more powerful than that currently available to the civilian science community.

Third, \$15 million in new funding will greatly expand research into the social, economic and work force impacts of information technology, including the transformation of social institutions, the impact of legislation and regulation, electronic commerce, the barriers to information technology diffusion, and the effective use of technology in education. This element will emphasize finding ways to ensure that all Americans have the education they need to take advantage of the large numbers of high-wage jobs created in the new economy.

One area that highlights the importance of these three areas is our ongoing work on the human genome. By providing fundamental advances in computing, the initiative will enable progression from sequencing of the human genome all the way to the design of new drugs. It will also enhance our ability to address the important social issues that are raised by these breakthrough discoveries, such as genetic privacy.

IT is our largest R&D initiative for fiscal year 2000, but OSTP also played a critical role in developing coordinated interagency budgets and policies in the area of plant genome, food safety, emerging infectious disease, sustainable development, critical infrastructure protection, education research, and others.

I ask you today, Mr. Chairman, for your continued support of OSTP's role in coordinating science and technology policy for the executive branch and for our Nation at large. OSTP's budget request of \$5.2 million, and 40 FTE's, for fiscal year 2000 represents an increase of budget authority of less than 3.5 percent, and an increase of one person—one in the FTE level. These additional resources are essential to continue to provide the highest quality of work across our broad spectrum of responsibilities.

Mr. Chairman and members of the committee, I hope this brief overview, combined with my written statement, has conveyed to you the extent of this Administration's commitment to advancing science and technology in the national interest and the importance of OSTP's role in that enterprise. Regardless of party affiliation, in the end, we can all agree that investments in science and technology are investments in the Nation's future.

I look forward to achieving bipartisan support for a national science and technology strategy that will combine the resources of industry, academia and nonprofit organizations, and all levels of government to advance knowledge, to promote education, to strengthen institutions, and to develop human potential. I ask not only for your support for OSTP's fiscal year 2000 budget request, but I also want you to know how much I appreciate the long-standing bipartisan support of the committee for OSTP and for the science and technology research enterprise.

PREPARED STATEMENT

I will be happy to answer your questions. Thank you very much.
Senator BOND. Thank you, Dr. Lane.
[The statement follows:]

PREPARED STATEMENT OF NEAL LANE

Mr. Chairman, Members of the Committee, I am pleased to appear before you today to discuss the Office of Science and Technology Policy's (OSTP) budget request for fiscal year 2000.

I very much welcome, and am encouraged by the current efforts in Congress in support of science and technology (S&T) funding. As you know, funding for S&T, like funding for education, is a high leverage investment in our continued quest for peace and prosperity. Support for such investments has traditionally been a matter of bipartisan agreement. It is imperative that we build common ground in support of a shared vision—a commitment to keep America the world's leader in S&T.

As we approach the turn of the century, it seems appropriate to take stock of the Nation's S&T enterprise, and to look to the future—to the opportunities that lie ahead as well as the challenges that we face. The Information Age, driven by rapidly advancing S&T, is bringing changes to our society that are only beginning to unfold. Already, new communications technologies are transforming the way we work, where we work, and what we need to know to be successful in tomorrow's competitive environment. Six years ago, "Internet" was still a word known mostly to those in S&T. Today, this offspring of federal research activities is the backbone of a new industry and a window to a tremendous world of information for all segments of our society, from business executives to school children.

The rapid economic growth of other nations means a future with greatly expanded markets for U.S. goods and services. Our ability to move our ideas, our goods, and ourselves swiftly to any place on the planet, with the help of new technologies, enhances our ability to share in the growth of global wealth. On the other hand, the increasing availability of these same capabilities throughout the world also means greater competition; it means increasing pressures on our shared environment, health, and natural resources; and it means more diverse dangers to our security from threats such as terrorism and the spread of nuclear and other materials of mass destruction.

DRIVING ECONOMIC GROWTH AND IMPROVING QUALITY OF LIFE

Sustaining U.S. leadership in science and technology has been a cornerstone of President Clinton's economic and national security strategy. Investments in science and technology—both public and private—have driven economic growth and improvements in the quality of life in America for the last 200 years. They have generated new knowledge and new industries, created new jobs, ensured economic and national security, reduced pollution and increased energy efficiency, provided better and safer transportation, improved medical care, and increased living standards for the American people.

Our economy has never been more driven by science and technology than it is today. Over the past three years, information technology (IT) alone has accounted for more than one-third of America's economic growth. More than 7.4 million American's work in IT today—and those jobs pay, on average, sixty percent higher than the average job. Alan Greenspan recently stated that rapid technological change has greatly contributed to eight years of record peacetime expansion, and is one of the forces producing what he called "America's sparkling economic performance."

Investments in research and development are among the highest-payback investments a Nation can make. Over the past 50 years technological innovation has been responsible for as much as half of the nation's growth in productivity.¹

We see the fruits of this innovation every day. Many of the products and services we have come to depend on for our way of life in America—lasers, computers, magnetic resonance imaging (MRI), teflon and other advanced materials and composites, communications satellites, jet aircraft, microwave ovens, solar-electric cells, modems, semiconductors, storm windows, human insulin, and others—are the product of U.S. science support and technology policies.

These innovations also mean jobs and economic prosperity for America. They've built some of these key industries:

Computers and Communications.—A creative partnership among the Federal agencies, industry, and academia led to what has become the Internet, the backbone of a global electronic communication system. The Internet has driven the evolution of a \$590 billion domestic telecommunications and information technology industry, which supports millions of high-paying American jobs. In just the past 10 years, American employment in the computer and software industries has almost tripled. Market capitalization of the top five companies alone is over \$600 billion.

¹ Supporting and Development to Promote Economic Growth: The Federal Government's Role The Council of Economic Advisers, October 1995.

Biotechnology.—Discoveries in biology, food science, agriculture, genetics, and drugs upon which the private sector has been able to build and expand a world-class industry today support \$13.4 billion in annual sales and more than 150,000 American jobs.

Aerospace.—Aerospace leads all other industry sectors in net exports. The latest figures show the U.S. Aircraft industry shipped nearly \$40 billion worth of commercial aircraft and employed more than half a million people.

Environmental Technologies.—Almost unheard-of 10 years ago, more than 30,000 environmental technology and services businesses employ over 1.3 million Americans in high-growth, high-wage jobs. The environmental technology industry has annual sales over \$186 billion, a number that is expected to grow to \$214 billion by the year 2002.

Energy Efficiency.—Technology advances, developed in part through public-private partnerships, have cut refrigerator energy consumption from 1900 kWh/year in 1974 to an average today of less than 650 kWh/year, reducing consumer electricity costs by \$100/year per refrigerator. A partnership with the glass industry led to the development of the oxygen-fueled glass furnace, which in just 8 years has captured 30 percent of U.S. glass production and provides annual net energy savings of \$11 million. Geothermal heat pumps (GHP) reduce energy consumption by 63–72 percent compared to electric resistance heaters/standard air conditioners. Some 400,000 GHPs are now in use in the U.S., with estimated annual savings of \$120 million to \$160 million.

Every one of these industries has been built on federal investments in R&D, and they are not isolated occurrences. From satellites, to software, to superconductivity the government has supported—and must continue to support—exploratory research, experimentation and innovation that would be difficult, if not impossible, for individual companies or even whole industries to afford.

Recent Advances in Science and Technology

Over the past year there have been numerous scientific and technological advances, reminding us of how much there is yet to know, and of the potential of S&T to further enrich and improve our lives. It is important to note that federal funding was a key to virtually all of the scientific breakthroughs of 1998, which included:

- The accelerating universe.*—Evidence of a rapidly expanding universe and the resurrection of Einstein’s “cosmological constant”, has transformed our view of the universe and posed fundamental new questions for physics.
- Detailed workings of the cellular clock.*—A number of discoveries revealed the remarkable universality of the clock workings: across the tree of life, from bacteria to humans, clocks use oscillating levels of proteins in feedback loops to keep time. Even more remarkable, fruit flies and mice—separated by 700 million years of evolution—share the very same timekeeping proteins. By understanding the clock better, scientists can now begin to manipulate it, working on curing jet lag to brightening winter depression.
- Analyzing and comparing whole genomes.*—Researchers for the first time finished a complete sequence of a multicellular organism, as well as several feared microbes, bringing the total number of fully sequenced genomes to nearly two dozen. This year’s newly completed microbial genomes include those of some of humankind’s worst enemies: the bugs for syphilis, tuberculosis, and typhus, as well as a Chlamydia, which causes venereal disease and blindness. The genomes reveal proteins unique to these pathogens, molecules that may be targets for drug or vaccine development.
- A new look at space.*—This year scientists provided the first image of a planet outside our solar system; evidence of ice on the moon; measurements of the largest explosion since the Big Bang; detailed study of Mars; and images of sun quakes and matter being consumed by black holes.
- New insight into the nervous system.*—A landmark discovery reveals for the first time physical characterization of the membrane protein responsible for the selective movement of potassium into and out of cells. This finding provides new insight into understanding the workings of the nervous system.
- Evidence that neutrinos have mass.*—Research showed that the subatomic particles known as neutrinos, long assumed to lack both charge and mass, do indeed have mass.
- Quantum teleportation.*—Physicists boldly went where no one has gone before, turning teleportation at the quantum level into lab reality by teleporting quantum information from the nucleus of a carbon atom to that of a neighboring hydrogen atom. This transmission of information between ions lies at the heart of quantum computing, which offers the prospect of lightning-fast, superparallel calculations.

- Microchips make advances.*—Researchers created a DNA-processing micro-machine which may one day be able to sequence DNA. Researchers also developed a biochip that can screen a blood sample for cancer cells, bacteria, or other cell types and remove their DNA for analysis. Researchers are also using DNA chips themselves, where arrays of immobilized DNA snippets are used to search out small genetic variations in genes or to detect RNA messages from the genes turned on in cells. Such chips could one day screen for genetic disease.
- Cancer prevention and treatment.*—The war against cancer goes on, but physicians now have a few new weapons to fight with. Tamoxifen, an estrogen-like molecule, already in use as a breast cancer treatment, won approval for prevention in high-risk women, and researchers announced that the antibody Herceptin significantly slows the growth of metastatic breast cancer.
- Infections and autoimmune disorders.*—Scientists convincingly linked infections and autoimmune disorders, paving the way to better understanding and treatment of diseases such as diabetes and multiple sclerosis.
- Hydrogen.*—Scientists developed a device to turn water and sunlight into hydrogen. This simple new device holds great promise for producing a non-polluting fuel to run internal combustion engines. Fuel cells using hydrogen can be used to power vehicles, and provide heat and electricity for commercial and residential buildings.

President Clinton's Fiscal Year 2000 R&D Budget

The President and the Vice President remain unwavering in their support for science and technology as crucial investments in our future. They maintain that such investments enable our nation to compete aggressively in the global marketplace, protect our environment and manage our natural resources in a sustainable manner, safeguard our national security from emerging threats, and spur the technological innovation that has contributed so much to our economic prosperity and quality of life. They have brought the budget into balance. They have increased the investment in science and technology. We all, but especially our children and our grandchildren, will reap the rewards.

President Clinton has submitted a balanced budget request to Congress for fiscal year 2000. Despite the tight constraint on discretionary spending, fiscal year 2000 is the seventh year in a row that the President has proposed increased investments in civilian research and development—to a total of \$39.8 billion. Civilian R&D now constitutes 51 percent of the overall R&D budget of \$78.2 billion.

The fiscal year 2000 budget continues the important R&D trends established by this Administration. It boosts funding for basic research to \$18.2 billion, an increase of 4.2 percent (\$727 million) over fiscal year 1999. The budget also strengthens university-based research, which increases by \$353 million, and reflects an effort to re-establish an optimum balance between health care research and other scientific disciplines.

The 21st Century Research Fund continues to be the centerpiece of the President's R&D investment strategy. This year the Research Fund includes DOD basic and applied research programs, further evidence of the Administration's commitment to effective integration of the Nation's university-based research portfolio. The \$38 billion Research Fund grows by 3 percent in fiscal year 2000 and provides for overall stability and for growth in the highest priority research programs.

The proposed R&D investments will enable the S&T agencies to achieve the President's goals for science and technology: promote long-term economic growth that creates high-wage jobs; sustain a healthy, educated citizenry; harness information technology; improve environmental quality; enhance national security and global stability; and maintain world leadership in science, engineering, and mathematics. For example:

- National Institutes of Health (NIH).*—Keeping pace with the Administration's ambitious goal last year for progress in biomedical research, the budget includes a 2 percent (\$320 million) increase. These investments will allow continued progress on diabetes, brain disorders, cancer, genetic medicine, disease prevention strategies, and development of an AIDS vaccine.
- National Science Foundation (NSF).*—The budget provides \$3.92 billion (a 7 percent increase) for NSF's broad base of support to all fields of scientific study. The budget provides \$146 million for NSF to lead the Administration's Information Technology in the 21st Century (IT²) initiative and also increases funding for biocomplexity research on biological, physical, chemical, and social interactions in Earth's ecosystems.
- Department of Energy (DOE).*—The budget provides \$2.84 billion (a 6 percent increase) for basic science programs at DOE. The budget includes resources for basic research as well as continued support for construction and operation of

large scientific user facilities, including the Spallation Neutron Source. DOE's participation in IT² (\$70M in fiscal year 2000) will help to accelerate scientific discovery and research.

—*Department of Defense (DOD)*.—The budget provides \$1.1 billion in basic research, \$3 billion in applied research, and \$3.3 billion in advanced technology development. Research on counter-terrorism and on improvements in the safety and security of the Nation's physical infrastructure and information and communications systems receives a targeted increase.

—*National Aeronautics and Space Administration (NASA)*.—The budget provides \$2.48 billion for the International Space Station (an 8 percent increase). NASA's budget also includes \$2.2 billion for Space Science (a 4 percent increase over fiscal year 1999); and \$1.46 billion for Earth Science (a 3 percent increase).

—*Department of Agriculture (USDA)*.—The budget provides a 3.5 percent increase, \$837 million, for the Agricultural Research Service. The Cooperative State Research, Education and Extension Service National Research Initiative—which provides competitive grants in areas of national concern such as food safety, the environment, plant and animal research, and human nutrition—receives a 68 percent increase to a total of \$200 million. Funding for the Forest Service increases 19 percent to \$235 million in support of ecosystem and global change research.

—*Department of Commerce (DOC)*.—The budget includes \$918 million in the 21st Century Research Fund at DOC. It provides \$239 million (an 18 percent increase) for NIST's Advanced Technology Program to promote unique, rigorously competitive, cost-shared R&D partnerships. It also provides \$283 million to NOAA for research to support decisionmaking on climate change, air quality, and ozone depletion.

—*Department of the Interior (DOI)*.—The budget provides \$838 million (a 5 percent increase) to USGS for science that supports national resource and environmental decisionmaking. The budget also supports research and technical assistance on the scientific needs of land managers and local land use planners.

Interagency Initiatives

The budget increases investment in national priorities requiring multi-agency investments. For example:

—*High Performance Computing and Communications (HPCC) and the Information Technology Initiative (IT²)*.—The budget provides a total of \$1.8 billion for these programs. IT², which responds to the recommendations of the President's Information Technology Advisory Committee to increase funding for fundamental, long-term research, advanced applications, and research on the economic and social implications of information technology, is funded at \$366 million (a 28 percent increase) in fiscal year 2000.

—*Climate Change Technology Initiative*.—The budget provides a 34 percent increase for this initiative, which includes \$1.4 billion in R&D on energy efficiency, renewable energy, carbon sequestration, and improvements in nuclear and fossil technologies. The initiative also provides \$400 million in tax credits to stimulate adoption of energy efficiency technologies.

—*U.S. Global Change Research Program*.—The budget provides \$1.8 billion (a 6 percent increase) to observe, understand, predict, and assess the state of the Earth and how it changes in response to natural and human-induced forces.

—*Partnership for a New Generation of Vehicles (PNGV)*.—The budget provides \$264 million (a 10 percent increase) for this cost-shared, industry partnership. PNGV aims to develop affordable cars that achieve up to three times the fuel economy of comparable vehicles and meet all applicable emission and safety standards.

—*Education Research Initiative*.—The budget provides \$50 million (\$25 million at NSF and \$25 million at ED) to support large-scale, interdisciplinary research in three key areas: school readiness for learning reading and mathematics; K–3 learning in reading and mathematics; and education of PreK–12 teachers in mathematics, reading, and science.

Private Sector Stimulus

The budget provides \$2.4 billion to extend the Research and Experimentation (R&E) tax credit until June 30, 2000. The R&E credit helps stimulate additional private sector investment in research and development which encourages technological advancement, leading to higher productivity, and helping to generate new American jobs.

THE OSTP MISSION

In support of our Nation's science and technology priorities, OSTP has two primary responsibilities: advising the President on S&T; and providing leadership and coordination for our government's role in the national S&T enterprise.

In the 1950's, in response to Soviet advances, highlighted by the launch of Sputnik, President Eisenhower saw the need for expert S&T counsel, and he invited James Killian, then president of MIT, to Washington to serve as the head of the first President's Science Advisory Committee, an OSTP predecessor. Since then our Nation's Presidents have drawn on the expertise of our office for S&T policy advice, and I see this as a contribution that will continue to grow in value as the challenges we face become increasingly complex.

Within our agency, a small staff of professionals analyzes developments at the frontiers of scientific knowledge, and aids the President in shaping policy. OSTP also provides scientific and technical information and recommendations to the Vice President, the White House Offices, the Executive Branch Agencies, and to Congress.

A second responsibility of OSTP is to provide leadership and coordination across the Administration. OSTP plays this role for a range of Administration priorities, including national security and global stability, environment, science, and technology. The National Science and Technology Council (NSTC) has been an invaluable partner with OSTP in developing interagency evaluations and forging consensus on many crucial S&T issues.

OSTP Budget Request

I ask today for your continued support of OSTP's role in coordinating S&T policy for the Executive Branch and for our Nation at large. OSTP's budget request of \$5,201,000 for fiscal year 2000 represents an increase in budget authority of less than 3.5 percent and an increase of one in the FTE level from 39 in fiscal year 1999 to 40 in fiscal year 2000. This request will allow OSTP to fulfill its responsibilities in a White House that emphasizes the importance of science and technology in national and international affairs.

After freezing our requests at the fiscal year 1996 enacted level for two consecutive years, this increase is essential to continue to provide quality support to the President and information to the Congress. Since personnel costs constitute the largest portion of OSTP's budget, our fiscal year 2000 budget request reflects our commitment to operate more efficiently and cost-effectively without compromising the essential element of a top caliber science and technology agency—high quality personnel.

National Science and Technology Council

To meet the Administration's priority S&T goals we must combine the efforts and the expertise of multiple agencies. OSTP personnel support the work of the NSTC, a Cabinet-level Council that sponsors interagency initiatives to advance key S&T objectives.

Our distributed system of research funding also places a premium on coordination between complementary agency programs. The NSTC, now in its fifth year, is improving such coordination.

NSTC membership includes Cabinet Secretaries, heads of science and technology agencies, and key White House officials with significant S&T responsibilities. In the process of generating specific budgetary and policy recommendations, NSTC routinely reaches beyond the federal government to seek input from a wide spectrum of stakeholders in the public and private sectors.

An important objective of the NSTC is to guide individual agency budget priorities for R&D and to orient the S&T spending of each Federal mission agency toward achieving national goals. To meet this objective, the NSTC has established five goal-oriented committees, each of which is chaired jointly by a senior agency official and an OSTP Associate Director. These standing committees, along with ad hoc working groups within the NSTC, provide an effective forum to resolve cross-cutting issues such as the future role of the U.S. national laboratories, or providing a program guide to federally funded environment and natural resources (see Appendix A for a full list of NSTC generated reports from 1998.)

The President's Committee of Advisors on Science and Technology

As Assistant to the President for Science and Technology, the Director of OSTP co-chairs the President's Committee of Advisors on Science and Technology (PCAST) with John Young, former President and CEO of Hewlett-Packard Co. The PCAST, which consists of distinguished individuals from industry, education, and research institutions, and other non-governmental organizations, serves as the highest level

private sector advisory group for the President and the NSTC. (see Appendix B for a full list of PCAST generated reports from 1998.) President Clinton established the President's Committee of Advisors on Science and Technology (PCAST) at the same time that he established the NSTC to advise the President on matters involving S&T and to assist the NSTC in securing private sector involvement in its activities.

Mr. Chairman and Members of the Committee, I hope that this brief overview has conveyed to you the extent of this Administration's commitment to advancing S&T in the national interest. We are delighted that the fiscal discipline exercised over the past six years has put in reach the opportunity to place more emphasis on investments that can assure future economic progress, environmental protection, and other national priorities which depend so heavily on strong and sustained R&D.

Regardless of party affiliation, in the end we can all agree that investments in S&T are investments in our Nation's future. I look forward to achieving bipartisan support for a national S&T strategy that will combine the resources of industry, academia, non-profit organizations, and all levels of government to advance knowledge, promote education, strengthen institutions, and develop human potential.

I ask not only for your support for OSTP's fiscal year 2000 budget request, but also want you to know how much I appreciate the long-standing bipartisan support of the committee for OSTP and for the S&T research enterprise. I would be happy to answer any questions that you have.

APPENDIX B.—ACTIVITIES OF THE PRESIDENT'S COMMITTEE OF ADVISORS ON SCIENCE AND TECHNOLOGY (PCAST)

In 1998 PCAST provided the following reports:

Teaming With Life.—Investing in Science to Understand and Use America's Living Capital (June 1998). Over the last few decades, a new paradigm has emerged: Improving and protecting our environment is compatible with growing the nation's economy. As part of this paradigm, we have come to recognize the essential linkage between the economy and the environment. We now understand that the sustained bounty of our nation's lands and waters and of its native plant and animal communities is the natural capital on which our economy is founded. We also realize that a sound forward-looking economic strategy requires that we protect this natural capital, rather than damage it and then spend millions or billions of dollars attempting to recreate what nature has already given us. To protect our natural capital, our Nation's biodiversity and the ecosystems within which it thrives, we need to have an extensive and frequently updated environmental knowledge base. This knowledge base is required to evaluate alternative plans for managing biodiversity and ecosystems as we work to optimize the union between the environment and the economy. The report offers strategies as to how to amplify our knowledge that will allow us to accomplish these goals.

PCAST issued the following letter reports:

Letter Report on R&D Partnerships, released March 6, 1998, reviewed the effectiveness of Federal technology partnership programs based on three studies and noted areas for improving programmatic effectiveness and efficiency.

Letter Report on Global Cooperation to Develop and Commercialize Energy Technologies to Meet the Global Challenge of Climate Change, released May 15, 1998. The report advised that the issues of climate change presents the United States and the world with one of the greatest challenges of the 21st century. The report recommended development of a plan to address the challenge of global impact of human activities through technology and development of a global collaborative framework in greenhouse-gas reductions.

Letter Report on the Education Research Initiative, released June 8, 1998. The report advised that the quantity, quality, and organization of education research in this country need renewed attention. The report recommended that the fiscal year 1999 spending constitute an initial investment in building the methodological human, and institutional resources that will move the United States to a \$1.5 billion annual program of peer reviewed, politically independent, reliable, and cumulative research in education that draws on a broad base of expertise.

Letter Report on the fiscal year 2000 Budget, released November 4, 1998. The report urges the President to strongly support a broad S&T portfolio in the fiscal year 2000 budget. PCAST advised the President to continue to focus Federal resources on strengthening the U.S. research capacity through an approach such as the 21st Century Research Fund and to broaden this concept to encompass the basic research programs of the DOD.

Senator BOND. Dr. Colwell.

Dr. COLWELL. Mr. Chairman, Senator Mikulski and Senator Burns, I thank you for allowing me the opportunity to testify on the budget request for fiscal year 2000 for the National Science Foundation. This being my first appearance before this subcommittee, I also thank you for the very kind remarks.

Before I begin my presentation, I would like to turn to Dr. Kelly for the National Science Board's views on the NSF budget and a little bit of information about the current state of science and engineering in the United States.

Dr. Kelly.

Senator BOND. Dr. Kelly, thank you.

STATEMENT OF EAMON M. KELLY

Dr. KELLY. Thank you, Mr. Chairman.

Mr. Chairman, Ranking Member Mikulski, Senator Burns, I appreciate the opportunity to testify before you, and request that my written statement be entered into the record.

Senator BOND. Without objection.

Dr. KELLY. First, let me thank the subcommittee for its strong and consistent support of the National Science Foundation. Your continuing commitment to NSF programs and activities is vital to our Nation's future. Guided by the creative and energetic stewardship of my colleague, NSF Director Rita Colwell, your investment in NSF's research and education portfolio has been and will continue to be handsomely rewarded.

Second, on behalf of the National Science Board, I want to endorse the Foundation's request for \$3.95 billion for fiscal year 2000. The investment represented in this budget extends across the frontiers of science, engineering and technology, and reflects the Administration's strong commitment to fundamental research. Moreover, it reflects my personal conviction that scientific research is the keystone of our economy. NSF's support for research has a multiplier effect. It is the foundation for other investments, governmental and nongovernmental alike, in research.

It is worth noting that R&D funding patterns have changed substantially. Total national R&D funding has never been higher. It

now amounts to more than \$200 billion annually. However, long-term research investments, sponsored mainly by the Federal Government, have been steadily losing ground to short-term investments supported mainly by private industry. This decline is significant. Because, as the Council of Competitiveness points out in its recent report, "Going Global," and I quote: Investment in discovery research creates the seed corn for future innovation. Government at all levels is the mainstay of the Nation's investment in science and engineering research. Unquote.

The Council concluded that increased public investment in fundamental research and education is a vital need. Yet the long-term trends in national investment in research tell us we are underfunding fundamental research and, in the process, eating our seed corn.

In 1997, the Federal Government provided 30 percent of all R&D funds in the U.S., down from 60 percent three decades ago. Other numbers tell a similar story. Of the \$70 billion Federal investment in R&D, only \$17 billion goes to fundamental research.

Speaking as an economist, it is a fundamental economic error to underfund the basic research, either a total of \$17 billion or NSF's \$4 billion, that underpins much of our \$8.5 trillion economy. Even the \$17 billion level represents 2 one-thousandths of 1 percent of our total economic activity.

Clearly, the creation of knowledge has become a driver of our economy that we almost take for granted. Commercial and medical breakthroughs in understanding and product development, from terascale computing systems to genomics, to laser surgery, are all rooted in the support of past NSF research investments.

Today, four of the top 10 companies of the Fortune 500 are high-tech companies. None of these four was even in the Fortune 500 a decade ago.

Mr. Chairman, the payoffs flowing from our Nation's R&D system result from a balanced portfolio of research investments. Moreover, this system depends on the intertwining of research and education. So, while NSF investments spur the creation of new knowledge, they also help to educate the next generation of scientists and engineers.

As we look beyond this budget year, the National Science Board is committed to the same wise investments and priority-setting in science and technology that this committee seeks. We thank you for your support of the Nation's investment in research and education, especially at the National Science Foundation. And we look forward to working with you, Mr. Chairman, and the entire subcommittee, to help sustain the U.S. world leadership in science and engineering in the next century.

PREPARED STATEMENT

That completes my statement, Mr. Chairman, and I turn now back to Dr. Colwell.

[The statement follows:]

PREPARED STATEMENT OF DR. EAMON M. KELLY

Mr. Chairman, Ranking Member Mikulski, and members of the Subcommittee, I appreciate the opportunity to testify before you. I am Dr. Eamon Kelly, Chairman of the National Science Board and President Emeritus of Tulane University.

Since the founding of NSF in 1950, the National Science Board has exercised two roles that of a national policy body, and that of a governing board for the National Science Foundation (NSF). The latter role is similar to that of a corporate board of directors, but as a Federal entity we operate within the framework of policy guidance established by the Congress and the Administration.

The Board conducts an annual NSF long-range planning and budget review and approval to assure the health of the human, disciplinary, and infrastructure base for science and technology (S&T); to support new opportunities for the advancement of knowledge; and to make the process of priority-setting responsive to such opportunities.

I am here today first to thank the Subcommittee for its strong support of NSF. Your continuing commitment to NSF programs and activities in research and education is vital to our Nation's future.

Second, on behalf of the National Science Board, I want to express our strongest support for the Foundation's request for \$3.95 billion for fiscal year 2000. The investment represented in this budget extends across the frontiers of science, engineering, and technology and is part of the 21st Century Research Fund. It reflects the Administration's strong commitment to fundamental research.

Moreover, it reflects my personal conviction that research is the keystone of our economy. And NSF's support for research has a "multiplier effect": it is the foundation for other investments agency and nongovernmental alike—in research.

Three themes are priority-setters in the Foundation's budget proposal, which Director Colwell will elaborate:

- NSF has been designated the lead agency for a six-agency initiative on Information Technology for the Twenty-First Century (or "IT2");
- Biocomplexity in the Environment represents a set of coordinated activities in environmental science, engineering, and education; and
- Educating for the Future: A 21st Century Workforce seeks to improve access to quality educational opportunities from elementary through higher education.

As NSF's priorities suggest, science and engineering are becoming more international, multidisciplinary, and collaborative in character. These trends guide the National Science Board as well. As context for today's budget discussion, let me say a word about some recent NSB activities.

The Board is in the midst of a six-month examination of research, education, and assessment on the environment. A public hearing was held in Portland in January, a symposium in Los Angeles in February, and a town hall meeting earlier this month at NSF headquarters in Arlington. This process is assisting the Board to provide policy-level guidance for the NSF's environment portfolio.

The Board also recognizes the need for better understanding of the nature of the return on the entire Federal investment portfolio and for increased accountability for research investment choices by the agencies. The Government Performance and Results Act of 1993 requires that scientific investments, like all others, be subject to strategic planning and measurement of performance as a basis for resource allocation.

As part of its national policy role, the Board is responsible by law for a biennial compilation of "indicators of the state of science and engineering in the United States." Science and Engineering Indicators serves as the authoritative source of data on the health of the science and engineering research and education enterprise, presenting not only a domestic profile, but international comparisons as well.

Science and Engineering Indicators is a valuable analytical tool for policy professionals in all sectors and the Board in particular. As the demand for accountability has grown, Indicators data have become increasingly useful for characterizing key trends in the scope, quality, and vitality of U.S. research and education.

In the 1998 Indicators volume, the Board reported quantitative trends in U.S. science and engineering, concluding that "The Nation's S&E enterprise is undergoing changes in structure and priorities as we prepare to enter the next century." This is all too clear when we look at the national picture, for example:

- R&D funding patterns have changed substantially. The good news is that total national R&D funding has never been higher. It now amounts to more than \$200 billion annually.
- The not-so-good-news is that long-term R&D investments—sponsored mainly by the Federal government—have been steadily losing ground to short-term investments, sponsored mainly by private industry.

—In 1997, the Federal government provided 30 percent of all R&D funds in the U.S. A decade ago, the Federal share was 46 percent. Three decades ago, the federal share was 60 percent.

This decline is significant because, as the Council on Competitiveness points out in its September 1998 report, *Going Global*: “For the past 50 years, most, if not all, of the technological advances have been directly linked to improvements in fundamental understanding. Investment in discovery research creates the seed corn for future innovation. Government at all levels is the mainstay of the nation’s investment in science and engineering research. . . .”

The Council concluded that increased public investment in fundamental research and education is a vital need. Yet the trend is away from long-term research. It makes NSF investments in fundamental science and engineering more important than ever.

Speaking as an economist, Mr. Chairman, it would be a fundamental economic error to underfund the fundamental research that underpins much of our \$8.5 trillion economy.

The payoffs flowing from our Nation’s R&D system result from a balanced portfolio of research. At the same time, the U.S. S&T enterprise depends on the intertwining of research and education. NSF investments spur the creation of new knowledge across the disciplines of science and engineering, while helping to educate the next generation of scientists and engineers.

This creation of knowledge—especially at institutions of higher learning across the U.S.—has become one of the primary drivers of our economy. Commercial and medical breakthroughs in understanding and product development—from terascale computing systems to genomics to laser surgery—are rooted in the support of past fundamental research investments.

One only has to look at four of the top 10 companies of the Fortune 500 are high-tech companies. None of these four was even in the Fortune 500 a decade ago. Many grew from ideas nurtured by American universities. As Fed Chairman Alan Greenspan recently noted: “In a global environment in which prospects for economic growth now depend importantly on a country’s capacity to develop and apply new technologies, the research facilities of our universities are envied throughout the world * * *. The payoffs in terms of the flow of expertise, new products, and start-up companies, have been impressive.”

Future economic prosperity, gains in our standard of living and overall well-being are increasingly dependent on innovations that emerge, in often unpredictable ways, from a bedrock of Federal investments in science and technology.

One other area of recent NSB activity demonstrates both payoffs and continuing needs. The Board stated in its 1997 report on *The Federal Role in Science and Engineering Graduate and Postdoctoral Education*, that “The education of graduate and post-doctoral students in a discovery-rich university research environment is at the heart of the post-World War II compact between the Federal government and universities.” In the last fifty years, stresses on higher education institutions have increased and should be addressed in a comprehensive manner.

As the Board continues to examine these stresses, a major concern is the preparation of an increasingly diverse student body for the workforce of a global economy. That concern originates with the quality of education at the K–12 level.

The Board has considered the disturbing implications of the Third International Mathematics and Science Study, or TIMSS, which showed an alarming decline from 4th to 8th to 12th grade among U.S. students relative to their international peers.

Earlier this month, the Board released a report, “Preparing Our Children,” that will be of interest to this committee. I ask permission to submit a copy of the report for the record. The report calls on scientists and engineers to assist teachers and schools in preparing students for higher learning and the 21st century workplace.

For a mobile student population like ours, local schools are de facto a national resource. It is therefore a national imperative to improve, through local strategies, student achievement in mathematics and science. I would add that some of the most encouraging signs of educational improvement can be found in the cities supported by NSF’s Urban Systemic Initiatives program, notably Detroit, El Paso, and Memphis.

In closing, Mr. Chairman, I want to assure you that the National Science Board is committed to same wise investments and priority-setting in science and technology that this committee oversees. We thank you for your support of the Nation’s investment in research and education, especially at the National Science Foundation. But we clearly see unmet needs.

Today’s research opportunities are simply breathtaking. The amount and breadth of funding needed to exploit those opportunities motivates the National Science

Board's conviction to make the case not just for the NSF budget, but for the knowledge and products that will be returned to the Nation on this investment.

It is my personal pleasure to collaborate with NSF Director Rita Colwell in explaining to all our citizens the value of these long-term investments in research, education, and the future. Thank you.

BIOGRAPHICAL SKETCH OF EAMON M. KELLY

Eamon Michael Kelly was born in New York City and attended Columbia University from 1960 to 1965, where he earned the master and Ph.D. degrees in economics. Following graduation from Columbia, he joined the Penn State faculty at University Park, Pennsylvania.

In 1968, Kelly was appointed to U.S. government service by the President, serving as Director of Policy Formulation with the Economic Development Administration of the U.S. Department of Commerce. He was later named Special Assistant to the Administrator of the Small Business Administration, where he participated in planning and initiating the federal government's first minority economic development program. Kelly joined the Ford Foundation in 1969 and served as Officer-in-Charge for the Office of Social Development, the Foundation's largest domestic and civil rights division.

In 1977, Kelly served as a special consultant to the U.S. House of Representatives where he participated in drafting legislation that provided a \$1.7 billion guarantee to prevent the insolvency of New York City. Later that year he was appointed Special Assistant to the Secretary of the U.S. Department of Labor. In that position, he successfully directed a government-wide investigation of the Teamster's \$1.4 billion Central States Pension Fund and led negotiations resulting in the Fund being transferred to private management. After leaving the Labor Department, Kelly returned, at the request of the Secretary of Labor, to direct efforts that led to the end of a nationwide coal strike.

In 1981, he was chosen to serve as the 13th president of Tulane University. In July 1998, Kelly retired as president of the university. Currently, Kelly, whose area of specialized interest is international urban and rural development, holds the rank of professor in the departments of Economics, Latin American Studies, and International Health and Development at Tulane. He is also a founding member of the Payson Center for International Development and Technology Transfer.

Kelly is active on the boards of many professional, philanthropic, civic, and corporate organizations. In 1995, he was appointed by President Clinton to serve on the National Science Board (NSB), the governing body of the National Science Foundation, which sponsors scientific and engineering research, develops and sponsors educational programs, and helps guide national policy. In 1998, Kelly was elected chairman of the NSB.

Senator BOND. Thank you, Dr. Kelly.

We now turn back to Dr. Colwell, and start the clock anew.

STATEMENT OF RITA COLWELL

Dr. COLWELL. Thank you. Mr. Chairman, I do have a statement which I will summarize very briefly. With your permission, I ask that my full statement be part of the record.

Senator BOND. Without objection, it will be.

Dr. COLWELL. Thank you.

Mr. Chairman, Dr. Kelly has touched on some very important trends in fundamental R&D in recent National Science Board reports. Over the past 25 or so years, Federal research investments have steadily increased in nearly all fields. And that is good news. However, the overall mix of Federal investments in science and engineering has changed significantly and very dramatically, primarily through gains in the biomedical fields, at the expense of physical sciences and engineering. And the very sharp nature of the shift in funding toward the biomedical fields has taken a few people by surprise.

Now, I would be the first to tell you about the very exciting things that are happening in the biomedical field. Some of that

funding has gone to my own research. But I do know that society really cannot live by biomedical bread alone. This trend, in fact, concerns many in the medical sciences. NIH Director Harold Varmus discussed it in a speech last year. Dr. Varmus—and I think to his credit—addressed this directly, and talked about the dependence of biology and medicine on other fields of science.

So, this brings us to the fiscal year 2000 request for NSF and the need for increased investment in research and education. As you know, the NSF is the only agency whose mission covers research in all fields of science and engineering, as well as education at all levels—essentially from cradle to grave. We support the fundamental work that benefits the mission agencies, like NIH, right down the line. And so for this reason, it is important that NSF continue to support the investments that reach all fields, all disciplines. And that is the governing philosophy of our fiscal year 2000 request.

For this request, NSF is closing in on the \$4 billion milestone. The fiscal year 2000 request comes to \$3.95 billion, which represents about a 5.8-percent increase over the current level. And I think this is an outstanding request, given the constraints that you have already stressed, imposed by the discretionary spending caps. And the headliner in the budget is the new initiative in information technology. And the rationale, I think, is quite clear. As Internet growth has gone through the roof, IT has become the essential fuel for the Nation's economic engine.

And the numbers speak for themselves. The latest estimates show that IT has generated about a third of the recent growth in the U.S. economy. It now accounts for about 7.4 million jobs, and it pays wages that are about 60 percent higher than the private sector average.

And I think the challenge is to sustain this record of success. And so this has led to the government-wide initiative, the Information Technology for the 21st century, the IT². And across the government, as Dr. Lane has pointed out, IT² will total about \$366 million across six agencies.

Now, 60 percent of this will go to support university-based research. And I think that is the real win-win for our country. The academic research investment serves double duty. It armors and enables students with advanced IT skills. And Senator Mikulski has addressed the work force issue, which is critical.

This is more than just a national initiative. It is a national imperative. It is a classic example of a long-term investment in fundamental research that works for the common good—in fact, for the global good.

This same sense of imperative comes through in a second initiative presented in the request for NSF. And this one is in the area of biocomplexity. Biocomplexity is a multi-disciplinary approach to understanding our world's environment. For generations, scientists have studied parts of our environmental system—individual species, individual habitats—in isolation. Now it is time for a better understanding of how those parts function together as a whole, as Senator Mikulski has called for. One reason it is time to tackle this task is that we now have the ability, the technologies, to grasp the complexity of our environment.

And, finally science and math education remain a priority in this budget, as it must. Last year, we got the not very good news about how our schools compared to other nations. By 12th grade, our students are near the bottom. We can and we must do better. The request sustains our current base of innovative activities and plants a few new seeds as well.

PREPARED STATEMENT

Well, that covers the basics of the budget request. I would like to close by saying that, once again, over the past 25 years, we have seen a major realignment of the Federal research portfolio. And this makes it an ideal time to look ahead and to align our investment priorities with the needs and opportunities of tomorrow's information economy. I look forward to working with all of you to meet those needs and to strengthen our Nation's investment in the future.

Thank you.

[The statement follows:]

PREPARED STATEMENT OF RITA COLWELL

Mr. Chairman, Senator Mikulski, members of the Subcommittee, thank you for allowing me the opportunity to testify on the budget request for fiscal year 2000 for the National Science Foundation.

Before I turn to details of the NSF budget request, I'd like to say a few words about how NSF fits into the overall R&D environment of our country.

My good friend and colleague Dr. Eamon Kelly—Chairman of the National Science Board—has touched on some important trends in fundamental R&D in recent NSB reports. Let me mention one other long-term research trend that is causing concern among many in the science community.

NSF's Division of Science Resources Studies has taken a close look at the mix of Federal research funding across different fields of science and engineering.

First, some good news. Over the past 25-plus years, federal research investment research has increased significantly in most fields. Overall, federal research investments have grown about six-fold in current dollars since 1970.

However, the mix of investments has changed significantly and dramatically—primarily through gains in biomedical fields and declines in the shares for physical sciences and engineering.

—In 1970, the life sciences accounted for 29 percent of Federal research spending.

By 1997, their share had risen to 43 percent. Put another way, the share increased by half.

—Engineering, by contrast, saw its share decline by 12 percentage points over the same period, falling from 31 percent to 19 percent of the Federal research portfolio.

—The share going to the physical sciences dropped by more than 5 points—from 19 percent to 14 percent of the total portfolio.

The combination effect is just as significant. Engineering and the physical sciences—taken together—accounted for 50 percent of federal research spending in 1970.

That's down to 33 percent today—a drop from half of the total to just one third.

The sharp nature of the shift in funding toward the biomedical fields has taken more than a few people by surprise.

I'd be the first to tell you about the great things that are happening in biomedical fields. Some of that funding has gone to my own research. But, I also know that society cannot live by biomedical bread alone.

This trend in fact concerns many in the medical sciences. NIH Director Harold Varmus discussed it in a speech last year. Dr. Varmus, much to his credit, took the bull by the horns and talked about the dependence of biology and medicine on other fields of science. In his words: "Most of the revolutionary changes that have occurred in biology and medicine are rooted in new methods. Those, in turn, are usually rooted in fundamental discoveries in many different fields."

He then went on to cite laser surgery, CAT scans, fiber optic viewing, ECHO cardiology, and fetal sonograms as examples of these revolutionary advances.

This brings us to the fiscal year 2000 request for NSF, and the need for increased investment in research and education. NSF is the fulcrum for all of science and engineering.

NSF is the only agency whose mission covers research in all fields of science and engineering, as well as education at all levels—cradle to grave. We support the fundamental work that benefits the mission agencies right down the line.

For this reason, it is important that NSF continue to support investments that reach all fields and disciplines, which is the governing philosophy of our fiscal year 2000 request.

Let me turn now to the budget. NSF is fast closing in on a \$4 billion milestone.

The fiscal year 2000 request comes to \$3.95 billion, which represents a 5.8 percent increase over the current level. This is an outstanding request given the constraints imposed by the discretionary spending caps.

The Administration agreed with us when we said loudly and clearly that research investments deserve the highest priority. The positive response we got is reflected in an 8 percent increase for research project support.

The headliner in this budget is the new initiative in information technology. The rationale is clear.

As Internet growth has gone through the roof, IT has become the essential fuel for the nation's economic engine.

The numbers speak for themselves. The latest estimates show that IT has generated one-third of the recent growth in the U.S. economy. It now accounts for 7.4 million jobs * * * and it pays wages that are 60 percent higher than the private sector average. The challenge now is to sustain this record of success.

You may be familiar with the recent report by the President's Information Technology Advisory Committee—PITAC for short. PITAC concluded that federal support for long-term research on information technology has been "dangerously inadequate." In its words "support in most critical areas has been flat or declining for nearly a decade, while the importance of IT to our economy has increased dramatically."

This has led to the government-wide initiative: Information Technology for the 21st Century—IT² as it's called. Across the government, IT² will total \$366 million across six agencies.

60 percent of this will go to support university-based research. That's the real win-win for America. The academic research investment serves double duty, as it armors and enables students with advanced IT skills.

NSF is the lead agency for IT². This was recommended last fall by PITAC, and we are glad to accept this responsibility and challenge.

We'll be putting \$146 million into our part of IT², which will cover three sets of activities.

—First is fundamental IT research—at \$100 million. This will focus on a key assessment from PITAC's report.

For all of our ability to push the high-end in computing, no one really understands how all the pieces work together. The need right now is to improve both reliability and performance. We can achieve this by understanding how systems interact and gaining new knowledge of the working whole.

—The request also includes \$36 million for a terascale computing system. This will serve computer scientists and the entire science and engineering community.

—Finally, we'll take advantage of the fact that NSF's portfolio includes both the information sciences and the social, behavioral, and economic sciences. There is \$10 million for research on the societal, ethical, and workforce impacts of emerging technologies.

When people ask me, why NSF and the United States should invest in information technologies—and why now—I say it is an absolute must.

It's not a national initiative, it's a national imperative. It's a classic example of a long-term investment in fundamental research that works for the common good, in fact, for the global good.

IT² is an investment that will strengthen the entire research and education enterprise. It will deliver tools and capabilities that will benefit every field, every discipline, and every level of education.

When we bring faster computers to weather forecasting, we save lives, we protect buildings and crops, and more—by getting better advance warning of El Nino's, tornadoes, hurricanes, and other severe events. My own research on climate and infectious diseases (El Nino and cholera) has made this dramatically clear to me.

The possibilities are limitless. We tackle the toughest challenges in science and engineering, and we put high octane fuel in this great engine of job creation and growth.

This same sense of imperative comes through in a second initiative presented in the request. This one is in the area we call biocomplexity.

Biocomplexity is a multidisciplinary approach to understanding our world's environment. For generations, scientists have studied parts of our environmental system—individual species and habitats—in isolation. Now it is time for a better understanding of how those parts function together as a whole.

This will not be easy. Taken separately, these parts are very complex. Biocomplexity is about looking at phenomena, whether they be weather or proteins or human society, at many scales. Such a viewpoint will let us identify the principles and patterns that operate at multiple levels of organization in the earth's systems, and across time and space.

Because of our planet's biocomplexity, organisms and entire ecosystems in one region can be influenced dramatically by physical and chemical changes occurring thousands of miles away. For example, wildfires in the western U.S. affect fisheries half a world away. Mercury from very hot wildfires can be blown aloft by high level winds and fall into rivers and lakes far away. Fish consume food contaminated by the mercury, presenting a human health hazard.

This is just one aspect of biocomplexity. There are many more. Around the globe, scientists in many disciplines collect and analyze environmental data on the stability of the polar ice caps, the temperatures of tropical oceans, and the health of species, forests, lakes and rivers in the United States.

Biocomplexity is about combining these efforts in a comprehensive way. It is an ambitious concept, but one that could have enormous payoffs in the years ahead.

One payoff would be better environmental decision-making on the part of governments, industries and individuals. "Ecological forecasting"—as some call it—could have far-reaching benefits for agriculture and other industries dependent on changes in the environment.

Another payoff could be a better handling of the difficult problem of non-native or invasive species.

One reason it's time to tackle this task is that we now have the ability, the technologies, to grasp the complexity of our environment.

From computational algorithms to mathematical models, from remote sensing to new kinds of sensors, and of course to genome sequencing and the molecular basis of metabolism and heredity * * * the technologies have arrived, as have the opportunities in research.

Finally, science and math education remains a priority in this budget, as it must. Last year we got the not-so-good-news about how our schools compare to other nations.

By 12th grade, our students are near the bottom. We can and must do better. The request sustains our current base of innovative activities—and plants a few new seeds as well.

One of those promising seeds is the new Graduate Teaching Fellows program. The program may seem small at only \$7.5 million, but it is an important beginning with a potential impact well beyond the dollars. It will broaden graduate education, and boost the science, engineering, and technology content in K through 12 classrooms.

I'll just mention a few other highlights before closing.

The Plant Genome Research Program will continue to increase. Its funding will increase by \$5 million to a total of \$55 million.

This builds on an existing research base of \$20 million—bringing the total investment to \$75 million. This will provide the scientific underpinning in the future to improve nutritional content of our food crops, both in quality and yields.

A new start in the budget is the Network for Earthquake Engineering Simulation. We are providing \$8 million in fiscal year 2000 toward a total investment of \$82 million over the next five years. This is modeled after the highly successful nanofabrication network NSF began several years ago. This will lead to a national, fully-interconnected network of major earthquake research facilities.

Finally, we will be continuing investments in a number of major infrastructure projects. One is the modernization of the South Pole Station, which remains on schedule and on budget, thanks in large part to the forward funding provided by the subcommittee in past years.

That covers the basics of the budget. Let me conclude by adding that by its very timing, a budget for the first year of a new millennium takes on added significance.

That applies doubly so to NSF. The year 2000 marks the 50th Anniversary of the National Science Foundation.

Given the increase we have received in this very tight budget environment, it is clear that this is a "golden anniversary" investment. This is also an appropriate time to step back and think about the long-term importance of investments in science and engineering.

Unfortunately, our fast-paced world makes it hard for us to focus beyond today's problems and concerns. It's a challenge to make a case for investment in our children's future.

Thankfully, the VA/HUD subcommittee has taken a more long-term view, even though the payoffs from some basic research may come ten or twenty years from now.

You have consistently supported NSF's investments over the years in a bipartisan manner. For this, let me thank you again. I look forward to working with all of you to strengthen our nation's investment in the future as we approach the next millennium.

Thank you.

OVERALL FUNDING PRIORITIES

Senator BOND. Thank you very much, Dr. Colwell. I congratulate you on your ability to receive such strong support from the White House in your first budget request. But we need to talk a little reality and cold water here. We could be facing a very tight budget. And we really do not know just what the constraints will be.

In the worst-case scenario, assuming we are not able to provide any funding increase for NSF overall, what would you recommend in funding priorities? And then, what would you have to forego?

Dr. COLWELL. We would make every effort to pursue the Information Technology Initiative and Biocomplexity and Educating for the Future. These are priorities. They are critical. And what we would try to do is invest as best we could.

I think the biggest challenge that I face as the Director of NSF is to sustain and maintain our strength and leadership in the basic disciplines, while at the same time reaching out for the opportunities, the strategic opportunities.

PRIORITY OF INFORMATION TECHNOLOGY FUNDING

Senator BOND. Where would you cut if you pursued IT²?

Dr. COLWELL. Fortunately, the roots of IT² are embedded in the past initiatives—High-Performance Computing, the Second Generation Internet and the KDI—which have all been brought together to encompass the next evolutionary step. Being a biologist, I can see how this evolved quite nicely.

Senator BOND. So you could take that, you could shift the focus from those into your new IT²?

Dr. COLWELL. We would make every effort to keep Information Technology going.

PLANS FOR INFORMATION TECHNOLOGY

Senator BOND. Where does the Information Technology fit in with the KDI and the other things? Is that a logical extension? Is it going in a different direction? That is the thing I really have trouble understanding.

Dr. COLWELL. It is clearly a logical extension. Several years ago, the investment was made in High-Performance Computing to get the supercomputing together. Then partnerships were developed to bring computing to every part of the system. That is critical. And what the IT Initiative will allow us to do is to expand that further.

In fact, nominee Deputy Director Joe Berdognia and I have a commitment to go the last mile, to make sure that every part of the country is connected to the computing infrastructure and that science and engineering is brought to every part of the country.

The Internet has done that. The Next Generation Internet will allow even speedier communication and connection.

So all of this has built on each other. The KDI recognized, from the proposals coming in from the field, from the constituents, that there was a need to bring computing into biology, into chemistry, into behavioral and social and economic sciences. So that has been an evolutionary step. And now with our focus on information technology, we will be able to maintain our leadership and bring all of this from the past into a coherent whole.

Senator BOND. Dr. Lane, we do note some major shifts in the President's fiscal year 2000 budget and their research and development priorities, a shift toward more civilian R&D funding, and a much greater emphasis on information technology, which seems to be a departure from some of the past focus on health sciences. What is the rationale for the changes? And as the President's Science Advisor, what do you foresee in the near future in terms of Federal R&D policy, what direction is it going to go?

FUNDING NIH

Dr. LANE. Mr. Chairman, with regard to the funding that the President is requesting for biomedical research—NIH in particular—the request that the President has sent over for fiscal year 2000 is consistent with the plan that he presented last year for the outyears.

As you know, Mr. Chairman, I think the President requested just below the order of 8 percent for NIH for fiscal year 1999, but the Congress appropriated roughly twice that amount. And so the 2-percent request that the President sent over for NIH this time around puts the funding actually slightly above what the President had originally planned. So it in no way suggests that biomedical research is not a high priority. It remains a very high priority for the administration.

INFORMATION TECHNOLOGY

The Information Technology Initiative, as Dr. Colwell has indicated, is really a grassroots need that has been developing over a number of years. It crystallized, I think, in the recommendations of the President's Advisory Committee, that represents experts from universities and industry, who came together and said, Look, you do have to set priorities. Given that information technology is critically important to the economy of the Nation and to people's lives in so many different ways, having tripled the jobs available—we are talking about a \$600 billion piece of the overall economy—the Nation must remain at the cutting edge in information technology. And now, how do we do that?

Well, you do that by making an investment early on in the research that is going to guarantee you stay there 10–15 years down the road. And what the committee said was that the current programs are very important, and they do not question the wisdom of the past, it is just that we are not investing sufficient dollars in the fundamental, long-range questions—software, for example.

And so we need to add money to the Nation's R&D investment in information technology, and we need to do it in specific areas.

The committee laid those areas out and the initiative is responsive to those committee recommendations.

Senator BOND. Well, I would like to ask you and Dr. Colwell—I remain puzzled about what distinguishes this from the HPCC initiative and the NGI initiative. Last year you were telling us KDI was the greatest thing since sliced bread and canned beer. And we thought this was the wave of the future. And it seems that KDI has kind of dropped out of the scene. Is this IT² just the new flavor of the day? Are you just continuing along with the same thing and just gave it a new name? And has KDI disappeared and NGI? Are they all encompassed in this new IT²?

Dr. LANE. Mr. Chairman, the High-Performance Computing and Communication Initiative, of course, is a mature initiative. It was a very wise choice at the time, and it continues, as one can see in the budget. The purpose of that initiative was to make available the computing infrastructure to tackle very important problems in science and engineering. It has been very, very successful.

The NGI was to get the networking infrastructure out across the country that is needed for R&D and that ultimately gets picked up by the private sector and contributes to the economy. The explosion we have seen in e-commerce derives from the investment the Federal Government has made in networking all the way along—most recently in NGI, which was authorized in 1998.

So those two programs remain very important. What the President's Advisory Committee said is now you need to look 20 years down the road. Now you need to be sure that you are investing enough money in fundamental questions about software that are not being addressed right now. Right now we are talking about 150 million people or machines on the Internet all around the world. But what if you have 10 billion devices connected to the Internet, how do you deal with that?

We do not know the answer to that question. That is a very fundamental research question. But the numbers are, in fact, realistic. Because what we see down the road is all kinds of sensors—not just people interacting with one another, but sensors—on systems, on airplanes, in transportation systems, interacting through the Internet. We have to know how to handle those. That is a very basic research question. And the committee said: You need to do more to answer that question.

Senator BOND. Dr. Colwell, anything you want to add?

FUNDING BREAKDOWN WITHIN THE IT² INITIATIVE

Dr. COLWELL. Yes. I would like to add to that. The way the NSF will be spending the money is \$100 million will be in basic research in new computer languages, new ways of linking, let us say, 1,000 processors for higher-speed computing, databases. Senator Mikulski mentioned large databases. We need to interpolate those databases so that the information from atmospheric physics and atmospheric chemistry, along with ecological databases and also demographic databases—to bring the social aspect of it together—can help us to understand how the complexity of our planet really works. This will come from the new investment in software research that is very important.

Ten million dollars will go to understanding the human/computer interface. The fact is, when we walk into our homes now, we probably have minicomputers, tiny computers, doing a variety of things. Eventually these will be connected, so that we may be able to “talk to our coffeepot” and ask it to turn on. These are the kinds of things that are coming in the future.

And then, \$36 million would be for the system, to expand high computing capability, so that every part of the country—every part of the country—is tapped into this very-high-capacity computing. It is really a look into the future and very, very important.

Senator BOND. Well, Dr. Colwell, that is all very interesting, but please spare me from talking to my coffeepot. [Laughter.]

There are a lot of exciting things that I would like to do, but that is not one of them.

Dr. COLWELL. Okay. Thank you.

Senator BOND. Senator Mikulski.

FUNDING R&D

Senator MIKULSKI. Thank you, Mr. Chairman.

Dr. Lane, I want to ask a few questions about scientific funding and then go to both the new initiatives and yet NSF’s core program. When I came to the Senate and this committee, the way science, and particularly R&D, was funded was 65 percent went into defense and about 35 percent went into civilian. That was a decade-plus ago. What now is the proportion between the DOD R&D and then what goes to civilian? And has that increased substantially?

Dr. LANE. Senator Mikulski, I think for the first time the balance has shifted, that it is now 51 percent civilian R&D and 49 percent defense R&D. I believe that is correct.

Senator MIKULSKI. And a substantial amount of that—or, according to Dr. Colwell’s testimony—there has been an increase in the biomedical; is that correct?

Dr. LANE. That is correct, Senator.

DISTRIBUTION OF FUNDING ACROSS SCIENTIFIC DISCIPLINES

Senator MIKULSKI. Though NIH still is—well, let us see, when we started out, it was \$8 billion; it is approximately double now, over a decade, at \$15 billion. NASA has stayed steady state at \$13 billion. NSF has moved ahead just with what we have tried to do with modest incrementals, et cetera. So could you tell us where most of the money is going and how that works out?

And, Dr. Colwell, did you want to elaborate on that, and where we are falling behind and what we need to keep in mind?

Dr. COLWELL. Yes. What I think is a concern is the reduction in engineering and the physical sciences. We know, for example, that the advances in laser surgery for cataracts comes from basic research—chemistry, computer sciences, physics. We know that imaging—CAT scans and so forth—all traces back to basic research in physics and chemistry.

Now, what is happening of course is that physics and biology are converging, so that there is a great deal of physics to be contributed to.

Senator MIKULSKI. Well, it is not converging in the Congress—what I am trying to get at—as we looked at the funding of these programs and these old categories. So, would you say that that would give you—and when I say “you,” I mean jointly—

Dr. COLWELL. Yes, Senator. I think that we do need a balance in the physical/biological/behavioral sciences. This is a concern.

MAINTAINING U.S. LEADERSHIP IN THE FUTURE

Senator MIKULSKI. Well, this is an issue that is really—not to go into the details at this subcommittee—but it comes to—well, let me ask this question—you see, I believe, first, that the initiative to raise biomedical research, of which I have been one of the movers of that, is indeed a worthwhile endeavor. However, a lot of this is congressionally driven. And all of Congress knows what NIH does. Am I correct in that? But all of Congress does not know, nor necessarily support, what the other scientific agencies do.

For example, over at Commerce, no matter how able Secretary Daley is or his predecessors, even in the other party, nobody kind of gets NOAA. They certainly do not get NIST. And we can just look over there.

And in our own Congress, you have the Commerce Subcommittee, you have Labor, HHS, with all that they are dealing with, you have us. So, I believe that what we need and what the Congress needs is really not only a State of the Union Address, with bells and whistles and ruffles and flourishes, but really for the science community within the Federal Government, the leadership, really I think to present on a bipartisan basis and a bicameral basis where we need to go and where there are glide paths down which give one pause. Because it is in the practical engineering we solve—practical engineering helps us clean up those brownfields, helps us clean up those Superfund sites, waste water treatment and clean water.

We cannot have an EPA without engineering. Otherwise we are just like a regulatory agency with no tools. So that I think is something really to be considered for the administration. And I note that, with your crosscutting initiative here and the private sector councils, was really what we had worked to establish under President Bush and your predecessor. So this is something we have been working on for some time and I know talking about this.

But I think this country needs a millennium agenda. And I think we need a millennium agenda that both parties support, that all presidential candidates can embrace with fiscal prudence and so on. And I think there needs to be some type of presentations. Because I have got colleagues that are now scrambling to learn high tech.

Anyway, I could elaborate on this, but it is a source of great concern to me. And the synergistic and cumulative effect of that I think is also inspirational to our American people and to our young people who need to get into it. Because all of a sudden I think geek is becoming fashionable and geek is becoming profitable.

Dr. COLWELL. Senator, I could not agree with you more.

Senator MIKULSKI. Geeks are in. [Laughter.]

Dr. COLWELL. I really agree, because we are working at NSF to put together a list of what we call “unmet opportunities”. There are

things that we are not able to do because we are not able to explore in the directions that will maintain a highly competitive economy. In fact, a report from the Competitiveness Council was just published in Science Magazine this week that showed the United States has now dropped from first place in innovation, and Finland is ranked at the top, using a variety of measures, including international patents and that sort of thing.

So it is a great concern that we really maintain leadership and that we have a balanced portfolio and that we move in these directions.

AVAILABILITY OF INFORMATION ON SCIENCE IN THE FEDERAL
GOVERNMENT

Senator MIKULSKI. Let me ask this, because my own time is going and I have other questions that are a little bit more targeted. Is there a one-stop-shop book or booklet or something that says what every scientific agency does in the Federal Government?

Dr. LANE. Senator, there is a biannual report that OSTP puts out. And that report does in fact offer, in my view, a pretty good description of what each agency does, what the administration's priorities are, what the national program is, and then the role of each agency. But I think we should have a look at that and see whether it, in fact, satisfies the requirements that you lay out.

Let me also say that the President's Committee of Advisors on Science and Technology, PCAST, is right now in fact working on putting together particularly good examples to illustrate the impact of the Federal investment in science and technology on people's lives in order to get the story out and help everyone understand the points that you just articulated so clearly.

Investment in biomedical research is important. We do care about that.

Senator MIKULSKI. Absolutely. And I am for it. And we do not fund FDA. FDA is very skimpy. And, therefore, we are running into problems. And I am not so sure it is the regulatory environment.

Dr. LANE. My own view is that all of the agencies need an appropriate investment in R&D, including basic studies. But every agency cannot do all of the research that is necessary. So the inter-agency coordination that you talked about earlier is critically important. And that is done through the President's National Science and Technology Council. I think that does follow on to the FCCSET process that was begun under President Bush.

Senator MIKULSKI. Well, my time is up. I will come back to my more specific questions.

Senator BOND. Thank you, Senator Mikulski.

Senator Burns.

FUNDING FOR THE EXPERIMENTAL PROGRAM TO STIMULATE
COMPETITIVE RESEARCH

Senator BURNS. I have got just three areas. Thank you, Mr. Chairman.

I was sitting there listening, and said, Okay, we have got some redundancy that we should root out to save some dollars maybe and to maybe increase dollars in some areas. And then you come

back and say, Well, maybe that redundancy is okay, that every agency should be doing some things. I happen to think that we have got a little too much redundancy. I can see it. I can see it in FAA and NASA, some of those areas on R&D and engineering, but, nonetheless, we will deal with them later.

EPSCOR

I have a couple of concerns, Dr. Colwell. You did not ask for any more money in EPSCoR in your initial request. And I think we should. High-performance computing and high-speed networking are vital to rural areas. We have taken several steps to help our States, but connections remain costly. And I think we should be looking into that and maybe relieving some costs there, to where our rural areas can participate, especially in high-speed computing.

I know you are trying to include more researchers from the EPSCoR States on advisory and peer review committees, and I would suggest that we continue making some progress in that way.

And, Dr. Lane, I look forward to working with you on the Next Generation Internet. We think that is very important.

Those are areas where I have concerns in your request, which I think we can address. And I look forward to working with you on this appropriation. And I just commend you, and keep up your good work.

Dr. COLWELL. Thank you, Senator. I would like it to be a hallmark of my time at NSF that we brought science and engineering and technology to every part of the country. And we are looking at ways of moving to the next stage for EPSCoR. And we think that one direction might be strong partnerships with the States to leverage investments.

Senator BURNS. Those funds are meshed by State funds.

Dr. COLWELL. Yes.

Senator BURNS. And I think what I am concerned with is a little, when we get into allocating dollars out to institutions and this thing, I do not like the idea of the haves and the have-nots. And, of course, EPSCoR was designed to sort of spread that out across the country. Because I do not think all the brainpower in America is found between here and Boston. End of story.

I have got another appointment. [Laughter.]

Dr. COLWELL. Thank you, Senator.

Senator BURNS. And I thank you. Those are the areas of my concern, and I look forward to working with you on that.

Dr. COLWELL. Yes, sir. It will be a pleasure.

GEOGRAPHIC DISTRIBUTION OF FUNDING

Senator BOND. I share your concerns, Senator Burns. And I was going to follow up and ask, I would like Dr. Colwell and Dr. Kelly, as well as Dr. Lane, to address the question specifically. There is no more money in the budget, do you share the concern that Senator Burns and I have? Not that we are against the corridor between here and Boston. Would you address that question? And what specific steps can you take? What is happening?

FUNDING FOR EPSCOR

Dr. COLWELL. Well, actually, we are doing quite a lot. It does not appear in the line that says EPSCoR, but we are making every effort—for example, through the science and engineering centers—to link minority institutions. We are making a very strong effort in the IT Initiative to ensure that funding will also include other than the top 100 or the top 50 universities.

In fact, the trend—I did an analysis before I came here—and the trend is that more institutions are involved in research funding.

Senator BOND. And that will happen in IT²?

Dr. COLWELL. Yes. We are making a very strong effort.

DISTRIBUTION OF SUPPORT FOR PLANT GENOME RESEARCH

Senator BOND. And on Biocomplexity, will there be that opportunity as well?

Dr. COLWELL. Yes, indeed. As a matter of fact, I do think the plant genome has been an ideal demonstration of how we can use a large sum of money. We have 400 institutions involved. And we have been building on the strength of an institution—the University of Missouri. Many people do not know it, but historically the really exciting work in understanding genes was done by Louis Stadler and eventually also his son, David Stadler, working in Missouri. Through corn genetics, tomato genetics—agricultural research—they developed an understanding of just what a gene is and how transposons move genetic information around in the chromosome.

So we are building on that historical strength, including partnerships among many universities. This is the way to go—partnerships within the community and also partnerships among the agencies.

DISTRIBUTION OF R&D FUNDING ACROSS THE UNITED STATES

Senator BOND. Dr. Kelly, would you like to comment on the question of the smaller institutions, the area that Senator Burns raised?

Dr. KELLY. This has been discussed at the Board level fairly extensively. And I think the Board is committed to an effective distribution of our science and research funds across the United States. From my earlier comments, you know there is a strong belief that not only does science, engineering and technology have a tremendous impact on the quality of life, but it is key to economic development.

So, in terms of the economic development capacity of all of the different States, we see that science and engineering is a driver there. And therefore, the effective distribution of those funds is critical. And we support what the Director has just said in terms of the distribution of our intellectual firepower across the country.

However, part of the question you have with all of the various initiatives going on is the question of resource allocation. And right now we have dropped behind Germany, Japan and France in terms of the percentage of our R&D that is going into research—not just basic research, but research totally. As that develops—and, as you mentioned, information technology—that is going to become very

important both in terms of international as well as domestic competitiveness.

You know, Moore's Law that information technology productivity would double every 18 months started in 1980. Everybody thought it would last for 10 years. We are now projecting that Moore's Law will be maintained for another 15 years. So, the Information Technology Initiative is critical to our international competitiveness. And our proportion of resources going into research and development is declining. It is critical internationally and it is critical domestically. And it is critical for all of the States in the United States.

PLANT GENOME RESEARCH

Senator BOND. Dr. Colwell, to follow up on the plant genome research, as I indicated, we appreciate the support for it. You have had an opportunity to look at it. Where do you see the research going? And can you give us any thoughts from your own professional background as to the benefits or to the potential breakthroughs you see coming if you can move forward and progress on this initiative?

Dr. COLWELL. I think it is an extraordinary initiative—very, very important. And if it had not already been started, it is one that I would have started, because I think it is one of the top priorities for the country, especially for agriculture. I see some directions that we should be going in understanding the genomes of the pathogens that infest and affect wheat and corn and soybeans and also the genomes of the insects.

Because if we are going to devise a workable, sustainable, sensible method for improving agriculture, it is necessary to understand how these interact and how genes move amongst them. Thus, we need to progress in understanding the genetic basis of our productivity in agriculture.

BENEFITS AND DANGERS OF BIOTECHNOLOGY

Senator BOND. As I discussed with Dr. Colwell, I have a great example of the pathogens, a great testing laboratory in what I thought was going to be a chestnut orchard. But let me ask a broader question that is of concern to us. And I would welcome the comments of all of you.

We are seeing, even in the Midwest, growing concern about attacks on biotechnology generally. There are organized groups. There are very well-publicized individuals who, in my unprofessional opinion, are modern-day representatives of the Flat Earth Society, who think that any genetic engineering or biotechnology advances are bad. We know that in all of these things, whenever you are making progress, there have to be parameters.

And I also note, I believe the National Academy of Sciences has made this a sufficiently high priority to fund their own study on it. Because we have major newspapers, unfortunately, who are flogging the dangers without understanding the benefits.

Can you comment on the benefits versus the dangers, the best way of responding? How do we develop an accurate and adequate scientific response to the attacks that, frankly, have become widespread in Europe and are raising their heads throughout the

United States, as well? And I would like to have the comments of all of you on that.

Dr. COLWELL. This is a manifestation of the serious problems we have in science and math education. It is critical that we have public education, as well. And NSF will be focused on this.

In fact, one of the programs that we are launching—and it is a very exciting one—involves graduate students in elementary, middle and high schools. We have a program that just started which was going to be a pilot program, but the response was so positive we have gone ahead and gotten it started. And as part of our budget, it is only a modest amount—\$7.5 million.

The approach is to have a school system and the university, together as partners, propose an educational initiative, whereby graduates students receive a stipend and their tuition and fees are covered, but they will do their teaching in the elementary, middle and high schools under the pedagogical oversight of the expert teacher. In this way, it will bring content and excitement into the classroom, along with the mature experience of a teacher.

So these kinds of things are really very, very important in educating the public.

Now, with respect to biotechnology, I have been involved in that for a long time and I will try not to be too long-winded in this answer.

Senator BOND. It is extremely important, I think, to all of us.

Dr. COLWELL. I chaired the BSAC, the Biotechnology Science Advisory Committee for EPA for several years. And I have been on the NIH Policy Board for Biotechnology and also FDA.

I realized when I was on the FDA Food Committee, and the FLAVR-SAVR tomato was brought up for discussion, that it was very obvious that here a very tiny change that allowed just a deletion in the DNA, that allowed slow ripening naturally, was somehow viewed as being dangerous, when, in fact, the current method was to classically select tomatoes, for example, that would remain hard—sort of like golf balls, if you will—bring them into the supermarket and then spray them with chemicals to fast-ripen. And it seemed to me that there was a disconnect here in understanding that, in one instance, you were working with natural processes, and regulating them, and in the other you were more or less artificially treating the product.

So we have an educational problem that is absolutely critical and one that we have to address.

Senator BOND. Dr. Lane.

BIOTECHNOLOGY

Dr. LANE. If I may add a comment, Mr. Chairman. I certainly agree with Dr. Colwell's points here: it is fundamentally an educational issue. We also have similar issues in the area of human health and what we would do at the genetic level there.

But you made the point about the international side of this. There are many countries—many of them in Europe—that take a very strong view about biotechnology, and where the public attitude I think is, in fact, far less supportive of genetically engineered foods than has been the case in this country.

As you know, there is this biodiversity treaty that we have not yet put in place. And under that treaty is the Biosafety Protocol. And this last year, since we are not at the table to formally be a part of those discussions, we barely missed some serious problems that would have major implications for trade in the area of food because of restrictions that would be placed on our exports to other parts of the world of genetically engineered foods. This is a serious matter domestically, but also very serious in terms of international trade.

And I think it is very important in the future to try to ensure that the United States is at the table at those kinds of discussions. Because this is going to be of growing importance to our country. As you say, Mr. Chairman, it is a very important issue. It is both education, but it is also, in terms of international relations, a challenge to us.

Senator BOND. Dr. Kelly?

NEED FOR PUBLIC EDUCATION IN SCIENCE

Dr. KELLY. I would agree with everything that has been said, especially the emphasis on education. We really have not done as good a job as we could in terms of science and education in this country, starting with public education. We have seen some preliminary but very encouraging public education results, in terms of the statewide systemic initiatives and the urban systemic initiatives at NSF, in terms of the science and math education of public school children. But it is too early really to do full-scale evaluations of that. But it has been encouraging.

We also have the education of the—and the National Science Board has taken on as a specific task—public education in general. The Nation has really a very, very limited understanding of the impact of science on its quality of life as well as its economy.

As Dr. Lane said, from an international standpoint, it also has become a singular world. And we have developed an international task force to see how we can address the problems that Dr. Lane has described in terms of the international ramifications of science.

Finally, there are, especially in the life sciences, serious ethical questions that we have been discussing in terms of gene therapy. But that really is more in the life science than it is in the agricultural and biocomplexity areas. But these are issues that the Board is addressing. But the central one from our vantage point really is the public education issue.

Senator BOND. Senator Mikulski, if you do not mind, I want to just ask a follow-up, and then I will allow you to conduct your questions.

Senator MIKULSKI. Sure, why do not you go ahead. I think this is a very interesting conversation.

EDUCATING THE PUBLIC ON BIOTECHNOLOGY ISSUES

Senator BOND. I am very much worried. We talk about public education and getting the information into schools. That is vitally important, and I am concerned about the education. But we have a major public perception problem that is being, in many instances, spawned on the network news at night. And somebody has got to be there to give a sound scientific response. And I do not know the

responses. But we need somebody who is speaking up and saying, This is a legitimate concern; that is not a legitimate concern. This is a real danger; that is not a danger.

What is the right institution to do that? Where do we send these naysayers when they come—they come after us and they say, We do not believe you because you are elected politicians. That is probably not a bad assumption. But to whom do we refer them? What is the right locale to get this information, to get a sound scientific answer?

Dr. Lane?

Dr. LANE. Well, I think you mentioned the National Academy of Sciences on this. The Academy has come forward in many questions of this kind that are quite controversial in order to put the credibility of the scientists behind those answers.

But I actually think this is an area where credibility on the part of the public is going to come by hearing a consistent story from all sides that they trust, including government. So I think we have to speak out on this kind of scientific subject, but I also think the nongovernment side, which has much to lose if we continue to go down this road of misinformation, also has to speak up. And I think that is an area where we can do this in partnership.

Senator BOND. The NSF, is this something that you can provide us a script and step out in front of the cameras and lay out an appropriate scientific description of the benefits, the potential dangers and the necessary controls?

Dr. COLWELL. This is actually part of our educational effort. For example, we are providing funding to the American Society for Microbiology for a four-part series on microorganisms, to understand the fundamental basis of microbiology and the genetics of microorganisms, and how that has provided for the extraordinary explosion and revolution in the biosciences. Oregon Public Broadcasting has been the key television station that has been involved.

It is these kinds of presentations that are public service kinds of activities that are a very, very important part of the educational process to get that story, that message, in its full scientific veracity and authenticity, to the public.

Senator BOND. Thank you very much, Dr. Colwell.

I will submit the rest of my questions for the record.

I now turn the questioning over, and the gavel, to Senator Mikulski. I am going to have to leave for a meeting with the Attorney General here shortly. But I will allow you to run the meeting.

Senator MIKULSKI. Well, you know you have constitutional protections. [Laughter.]

And I will be there for you.

Senator BOND. I really appreciate that.

MANAGING PUBLIC FEARS RELATED TO SCIENCE

Senator MIKULSKI [presiding]. Thank you, Mr. Chairman.

I think the chairman—this is just by way of a comment, but then I am going to get to my questions—we raised this with FEMA. There were other issues that we have raised in hearings on terrorism, and also a recent one on bacteria-resistant disease that Dr. Frist had. And here is the point that I am saying. Very often we

have a bigger problem in managing the fear than we do in managing the problem.

And, Dr. Colwell, you remember when we had the terrible outbreak of *pfisteria* in our Maryland rivers, for which there was great pause and concern. And the media kept showing the same three dead fish that looked like they had been mutilated by an X file creature. And it was serious. And it was real. And we then had almost a rapid plummeting of the Maryland seafood industry and Maryland tourism, for which we then did not know.

Now, your Federal elected officials said we need scientific inquiry. And the day we announced that it was going to be done through responsible agencies, and CDC was going to come to see about public health consequences, where I said, you know, where there is a killer, you need a detective, and who is better than the medical sleuths. But just once the community heard that CDC was going to come, things calmed.

Now, the point I think that Senator Bond is making in all of this is there needs to be I think a realistic approach. There will be problems in the United States of America, some because of other countries, some because of other groups, some just because of accidents, some whatever. But we need to have, I think, a relationship that the administration needs to lead with the media, that on a volunteer basis, they do not exacerbate the fear.

That does not mean you do not report the news. That does not mean that you do not provide the public education and information. But just now that we have gone through a pretty rigorous hearing on Y2K, we are not only concerned about the functioning of the United States of America and the world, but we are worried about exacerbating the fear even now.

So, we are not going to go into it in this committee, but I think this is all part of an initiative. And I know my own time will go, but there has to be some voluntary code of conduct among the media, where they report the news, but they do not become participants in exacerbating the panic.

Dr. COLWELL. I agree with you. And part of the problem is the ignorance of the distribution of the organism. That is, the lack of information. We do not have—or we are just beginning to get—a fundamental understanding of the molecular composition of *pfisteria*. That is, what it is.

Senator MIKULSKI. They did not need a science lesson, though, Doctor. They did not need to know the molecular composition. What they needed to know was do not panic when you drank a glass of water in Bethesda.

Dr. COLWELL. Yes, I understand that. But, you see, we were not able to actually detect where it was. And we will be able to do that in the future—close the gap. But I understand your point and I agree with you. There needs to be a mechanism for bringing this information to allay the fears.

Senator MIKULSKI. No. I think that there has to be a White House summit on really a way that where there are issues that occur at a national level that could produce panic, that there is a voluntary—and I stress the word “voluntary”—code of conduct, where news and information is given to the American people, but

not also in a way that exacerbates hoarding, panic, evacuation. That is what I am talking about.

Dr. COLWELL. I agree. I agree with you. Indeed, it is a very, very powerful point.

FOOD SAFETY COUNCIL

Dr. LANE. Senator, let me also mention that the President has put in place a Food Safety Council, which I am pleased to co-chair with Secretary Glickman and Secretary Shalala. Of course, the focus is on ensuring that our Nation's food, which is the safest in the world, continues to be, and is even safer, and to recommend the steps to be taken to make it safer. But this issue that you raise relates to food safety—

Senator MIKULSKI. It is broader than a particular segment. It could be food. Then it could be the water. It could be an accidental chemical spill—an accidental chemical spill, not even a terrorist attack of a weapon of mass destruction.

Dr. LANE. I will raise the issue at the Council.

PREPARING TOMORROW'S WORK FORCE

Senator MIKULSKI. Let me come back to what my own questions are, because we are moving beyond this committee. And, of course, it points out that in the Senate we do not have a science committee. We have a series of committees that work on it.

Now, I want to talk about the President's initiatives and programs, but, first, I really want to talk about education. And what I so like about science and technology is that it has none of the traditional barriers. It does not matter if you are black or white. It does not matter if you are blind or cannot see. It does not matter if you are male or female. That, essentially, in the information technology world, there should be none of the old, often prejudicial, barriers that stop people from participating in the work force. It really should not matter anymore.

And this, to me, is one of the greatest opportunities that this coming century will be able to provide. And, again, I will reiterate that I am deeply concerned, though, that we are already beginning to segregate out. And it is usually on the basis of social class, and then race and ethnicity. So, the "same olds, same olds" are occurring for circumstances that are not necessarily the old bigotry barricades, but other barricades.

Now, my question is, one, generally for our country, what are the cross-cutting—you have cross-cutting on research—but what are the cross-cutting initiatives on literally I will call it work force readiness, not only at the elementary school, but, even more specifically also, if you could talk about the community college, which is often a gateway to higher education, particularly for new populations where no one has been to college? I have a great passion for the community college, and I think they might be overlooked or undervalued in this.

Could I just hear those thoughts, and then where they might fit into this appropriation?

Dr. COLWELL. Absolutely. As you know, the H-1B visa funds are targeted for scholarships. And we have allocated more than 70 percent to the 2-year community colleges and 4-year colleges, because

that is where the work force issue really is highlighted. And in every one of our science and engineering technology centers, we have a linkage with the minority institutions and other than the research I institutions.

Within every directorate there is an educational component in the major research funding that is given. That does not appear as part of the education budget, but it is there. It permeates all of the directorates. It is critical. And I am very pleased to say that the Assistant Directors for each of the seven directorates understand this. And so the focus on work force is a major one. In fact, \$10 million for the IT Initiative is focused on the interface and work force issues.

As you say, the IT Initiative is critical in many, many ways because—

Senator MIKULSKI. Let me rephrase this, because we will come back to the IT Initiative.

Dr. COLWELL. Okay.

Senator MIKULSKI. I know that we have the Urban Initiative.

Dr. COLWELL. Yes.

Senator MIKULSKI. We have had other initiatives. We have initiatives, et cetera. My question is, just as you have this really very exciting multi-agency approach on IT², is there a parallel one in education?

Dr. COLWELL. There are partnerships developing. As you know, the Department of Education—

Senator MIKULSKI. They are developing, but there is not one like existed here?

EDUCATION RESEARCH INITIATIVE

Dr. LANE. Well, there is, Senator, in the fiscal year 2000 budget, the Educational Research Initiative, between NSF and the Department of Education. This is the second year of the initiative and a request to double the funding. The initiatives purpose is to address issues of whether our kids are ready for school and, in particular, what can technologies do to ensure there are not the barriers that are in place right now, to help kids learn to read and help kids learn mathematics. So that is one example of an interagency education initiative.

EDUCATIONAL RESEARCH

Senator MIKULSKI. Well, do you feel that that has really got an “umph” to it—I mean, that it has energy, commitment and vitality? Or is it a lot of people meeting, processing and they will tell me that the process is the journey?

Dr. COLWELL. No, I think it is genuine. And let me say that one of the emphases that we will be placing in education will be on learning. I think we have spent a lot of time and money on teaching, but I think we need to do research on how children learn. And one of the partnerships we are developing is with NIH, where research has been done, and the Institute for Child Development. The NSF and NIH have a brain research program going. That kind of information can be brought to bear.

GRADUATE TEACHING FELLOWS IN K-12 EDUCATION

Senator MIKULSKI. Well, I think that all sounds very good in terms of the basic research. But probably one of the most interesting things I heard in all of this, this morning was the fact that graduate students and undergraduate students were going into the classroom. Because particularly at the elementary school, where their emphasis has been on basic reading, which we really need our teachers to be able to do, but they do not have degrees necessarily in biology or some of these new, advanced programs. How does that happen? Does somebody pay for them to do that?

Dr. COLWELL. Well, normally graduate students—who have teaching fellowships—would spend 20 hours a week as a lab instructor in the undergraduate classroom. But it seemed to us that this is an extraordinary capability that could be brought into the elementary, middle and high schools. So that 20 hours a week that would be spent in the undergraduate laboratory teaching can now be spent working with children in the elementary, middle and high schools. But the partnership is critical between the university and the—

Senator MIKULSKI. So it is like a teaching fellow program?

Dr. COLWELL. Yes, Senator.

Senator MIKULSKI. Do they go into middle schools?

Dr. COLWELL. Yes, Senator.

Senator MIKULSKI. Do the middle schools have a priority?

Dr. COLWELL. We have not set priorities. We have gotten a large number of responses, and we will see how that sorts out. But if it turns out that it needs to be—

Senator MIKULSKI. Well, Dr. Colwell, let me just say this, again, just to move along. I do not want to be prescriptive in terms of programs, but I would say this. All of the research indicates—all of the data we have, from the CDC and NIH, NIMH, and child development, et cetera, says this, that it is in the middle—that by the third grade, if you cannot read, you leave. And particularly the little boys already start to do their truancy and so on, and little girls start to kind of mentally drop out, but they hang in there.

Where little girls definitely start to drop out, if not intellectually, is in the middle school. That is where they decide they do not want to learn math. Or that is why they really begin an intellectual withdrawal, if not a truancy problem. Boys have a different variance of that, but, again, if they make it to the sixth grade, that is determinative of whether they go on to high school and what a lot of their focus is, also, in high school, where a high school related to vocational training would still need science and math.

So, again, I would really like you to explore the deployment where you are most needed, where children are making their most decisions. Children make decisions along the way, and a lot depends on what is happening in the classroom, because unfortunately the classroom is becoming their new home.

Dr. COLWELL. I accept your suggestion, and I am delighted—

INNOVATIONS FOR MIDDLE SCHOOL LEARNING

Senator MIKULSKI. And there is a great body of knowledge on that.

Now, I am going to go to one other point, which goes to your informal learning budget, and I will come back in terms of its adequacy. The Centers for Disease Control—and, again, the Drug Czar and Justice says—that children are most—you know, our old channel 11, “It’s 11 o’clock, do you know where your children are?”—most people know where their children are at 11:00; they do not know where they are from 3:00 to 8:00, or where they are gives them pause. It is the structured after-school activities. It is in the structured after-school activities where some of the biggest gains can be made.

Because to go to another great American, General Colin Powell said, in order for children to learn, they have to be involved with a caring adult, either in the home, the classroom or in some other activity. I visited a PAL program, some of these programs, in Baltimore. These structured after-school activities are where kids are learning computers. They are doing their homework. And they love it, because they are working on little projects and things like that.

And, again, if we are talking about deployment of defined resources, I think you need to go where you are most needed, not where the teaching fellows of the university thinks they should go. I think there should be guiding principles. And I would really encourage, then, conversations with not only the Department of Education, that has a great body of knowledge on this, but also CDC, Justice and so on. Because I think what we are talking about here is not only work force readiness, but it could be one of the sources of enormous prevention to either dropouts or not engaging in the basics that will take them to these new fields.

And they might not go on to be a Ph.D. at the University of Maryland, but we want them to be a lab tech at the University of Maryland. Or even if you are going into fire technology, I mean the construction industry, you know, we need lab techs, we need a multilevel work force. But all will be based on science, technology and a grasp of information technology.

So this is what I really urge you—really urge you—to really take a look at so that we maximize some of these new innovations and that we also then take a look at what our initiatives have produced—like the Urban Initiative and so on.

Dr. COLWELL. Believe me, Senator, I am resonant to what you are saying. In fact, that is part of the focus on learning. Because it is where and how you can have the most impact on children and their capacity to learn and to enable them to become productive citizens. Your suggestions are very well taken.

Senator MIKULSKI. See, there is already a body of knowledge of when young people make decisions.

Dr. COLWELL. Yes.

Senator MIKULSKI. And we can go on into that in another detail.

IMPORTANCE OF COMMUNITY COLLEGE

Dr. LANE. Madam Chair, let me also comment about the importance of community colleges. I think that is a very important observation. And the program that NSF and the Department of Education work together on with the community colleges has done an extraordinary amount I think to pull together those colleges, with the universities on the one hand and high schools on the other

hand, to try to remove those holes that the kids fall in at that critical stage. It is a different critical stage, but it is also very important to allowing people to get the education that give them the jobs that they deserve and that they need.

ADDRESSING FUTURE EDUCATION NEEDS

Senator MIKULSKI. I could go on about this, but they are questions that I would like to discuss with you privately because of the time of the hearing and so on. It is just a really straightforward one.

Just as our response to Sputnik and so on, which was a national emergency and a threat to the security of the United States, we passed something called the National Defense Act, which was really the building block of getting teachers ready to go into the classroom and people ready for the future. It served the Nation well.

And my question now is, on the brink of the new millennium, do we need a new version of that, like a Universal Digital Education Act? I am not saying what it should be. I would like to have your thoughts on it, to see about this. But, again, everything is going into piecemeal. But let us do that later.

Dr. COLWELL. Yes, I would love to do that.

ADEQUACY OF FUNDING FOR NSF PROGRAMS

Senator MIKULSKI. I would like to now just return to the President's initiative, which I find enormously exciting. And let me say this. As everyone knows, my whole strategic initiative idea—but this is what I was talking about—this is exactly what I was talking about—organizing around national goals and everybody being best at what they are most needed for and best at what they do. And this is exactly the conceptual framework. It was not industrial policy and winners and losers and everybody learning—it was not an occupational research program.

Now, let me, though, go before to the new initiative, this question. In the President's budget, do you feel that the existing programs are adequately funded, or are there some that are more spartan that you would like that we have to really ensure that are the core NSF funding in the directorates, as well as very important programs like EPSCoR, and also the academic research and facilities? I cannot go anywhere in Maryland to any higher education facility without being hustled for a building, a laboratory or laboratory equipment.

Dr. COLWELL. I understand very, very well.

Senator MIKULSKI. Yes. I mean, really.

Dr. COLWELL. Yes. We are very busy putting together, our 2001 budget, as we discuss here the 2000 budget. And the unmet opportunities that we have got to address in order to remain competitive, to have a vibrant work force, to have a very strong, successful educational system, are the kinds of things that we are considering.

And I would say that we have tried very, very hard in this budget to maintain balance. For example, I think the IT Initiative is critical for the social and behavioral sciences, because the databases that can now be mined through the IT Initiative are extraordinary. We are addressing some of this in the fiscal year 2000

budget because of the crossover into all the disciplines that the IT Initiative provides.

Even though it appears as a budget item in the computer and information science and engineering science budget, IT² really is an initiative within NSF that has been developed by discussions with all of the AD's, including participation—strong participation—by the math and physical sciences AD and the education AD. So that permeates throughout the agency. It is a very important cross-disciplinary initiative.

I should also say that it is a very powerful interagency initiative, because indeed, as the designated lead agency, we have been working with the other agencies.

Senator MIKULSKI. I am going to come back to that. But I asked you, do you have enough money to keep the other programs going at the level that they should?

Dr. COLWELL. Well, spartan, but yes.

Senator MIKULSKI. You are scrapping, but yes. But where are you scrapping?

Dr. COLWELL. I think that, as we said earlier—

Senator MIKULSKI. Because, I tell you, the scientists and your wonderful people who work at the Science Foundation and how this is also out in America—it is not an institute of science, it is a Foundation of Science—the only way you can attract and maintain people is “show me the money.”

Dr. COLWELL. Right.

Senator MIKULSKI. And if they think we go from one glitz and one glory to another—

Dr. COLWELL. I am concerned about the disproportionality in engineering, in the physical sciences—physics, math, chemistry, engineering. I am concerned about that.

Senator MIKULSKI. The ones that were outlined in your testimony?

Dr. COLWELL. Yes, Senator.

INCREASING NSF AWARD SIZE AND DURATION

Dr. KELLY. Senator, from a national perspective and policy standpoint, it relates to what I was talking about before, in terms of the general, overall funding for research in the country. And people do not like to talk about it because it is not attractive, it is not sexy. But the fact of the matter is, with the underfunding, the amount of the average NSF grant and the duration of the average NSF grant is much too low to create the kind of stability that will make for good science and for improving the science in the field. We also do not have appropriate equipment and facilities budgets for the institutions.

But those are—it is just a basic question right across the entire science, where, in the basis sciences, you do have that kind of underfunding and short-duration, low-amount grant, where most of our faculty spend most of their time developing proposals.

Dr. COLWELL. The average principal investigator-driven grant at NIH is about \$250,000. The average investigator-driven grant at NSF is about \$83,000.

OVERALL SCIENCE BUDGET

Dr. LANE. Madam Chairman, may I add a comment about the overall science budget?

I think that if you look at the President's fiscal year 2000 budget, he really submitted a very aggressive research budget, given the constraints on the fiscal year 2000 budget. He submitted a balanced budget. In fact, we have this wonderful situation of a surplus. The President has made clear that surplus is off the table until we deal with social security and medicare and other important issues. But it was a very good budget for science and technology. He would like to do more.

I think one way to think about the Federal investment in science and technology is to what extent are we failing to utilize the extraordinary talents and capabilities of the people who are out there, the young people who are going to be the next generation, but also the existing scientists—scientific and engineering researchers in the country?

My sense is we are significantly underutilizing this extraordinary resource. We are, in some sense squandering some of our earlier years' investment in higher education, because we have so many talented scientists who cannot get their funding from NSF and cannot get their funding from NIH just because the competition is so incredibly stiff. The grant sizes, we hear from all directions, are too small on the average. And there are many kinds of programs that simply do not exist at all. And the initiatives are there to try to help address those kinds of things.

So these initiatives are very important or the President would not be bringing them over here. But there is only so much money. And so something has to give.

VALUING HIGHER EDUCATION

Senator MIKULSKI. Well, that is exactly right, and this is in no way to throw water on the initiative. I happen to think the initiative is crucial. I like the fact that it is interdisciplinary and the fact that you have NIH, NASA, the Department of Energy, NOAA, and the Department of Defense involved. It is like uniquely American. You have Defense and NOAA, NIH working. This is really extraordinary. And each working, hopefully, on maintaining the national security interests of the United States.

So I am for it. But I do also worry about the basic sciences that essentially were outlined in your testimony. And I think it gives us pause about how we do the new initiatives, and yet are able to sustain the others at a level.

And I think we, again, with candor, when one thinks that a recent graduate from a land grant college in software engineering could make \$67,000 a year and no sweat, and being recruited with a subsidized lease for a BMW and all the other little Gucci things that—you know, Starbucks for life, vouchers, all of those kinds of things, and then you think of someone graduating, again, from the University of Maryland, or Hopkins, or the University of Missouri, and then that they are going to have to go through more debt to go for a master's and a doctorate, and then once they get it, forage for funds to pursue research. And if they are young, they have to

stand in line because—just like at NIH, there are senior people who tend to be able to also garner that.

So it is the young, the innovative, exactly what you said, Dr. Colwell, the innovation index. And so I worry about that. And I worry about how to recruit them and encourage them to go on for their advanced education and to do the type of research. And, at the same time, while they are working and feeling like a temp at many of our colleges—and many of our young people feel like temps at college—they are making \$38,000 a year, or something like that, and say “Why?” And I am not talking about where they would leave and go to law school and intellectual property or something; they leave and go into other science fields.

INFORMATION TECHNOLOGY INITIATIVE

Dr. LANE. Madam Chair, I think one thing that makes me feel particularly good about the Information Technology Initiative, even if it is in a tight budget, is that it indeed is going to impact virtually every area of scientist and engineering research and education. I cannot think of an initiative that is as far reaching in terms of the broad spectrum of scientific and research activities, but also in getting at some of these very important social work force issues.

There is no rule that says somehow our young people cannot have better jobs, more fulfilling jobs, happier and healthier lives than their parents did. That is what we all want to see. I think these kinds of technologies, if properly used and consistent with our societal values, are precisely the kind of things that are going to make people's lives better. So I feel very good about it and believe that it is going to provide precisely that incentive to get the best minds focused on such critically important national issues.

Senator MIKULSKI. I believe lives will be better. But, at the same time, if we are talking about learning at a community college, someone has got to be in that classroom. The question is, who is that somebody going to be? And maybe they do not worry about research, but how are they going to get into that classroom. And I think these are really big issues, particularly the education of the master's degree person, who often does find their way into the assistant and associate professor at community colleges or geographic areas that are sparsely populated that have a difficult time in recruiting.

So we have got to think about this and how we are going to encourage people to go on for their graduate degrees. Yes, the private sector is alluring, and I think it is wonderful, but there could not have been a NASDAQ without infotech. I mean we could go to Wall Street. We could go to the New York Stock Exchange. And what do we see at the New York Stock Exchange? Everybody at a computer.

Look at what the New York Stock Exchange did a few weeks ago. They had their own Y2K drills. It was phenomenal, with Wall Street really working several Saturdays in a row, everybody at their computers, making sure that the financial services will be fit for duty at the turn of the century.

But all of that exists because of information technology, not only science and savings lives and MRI's. At the same time, we need

people who are willing to go into scientific research and stay there. And we cannot undervalue them or underfund them. And the competition now is so great, I think that is one of your biggest challenges. That is one of your biggest challenges for minorities going on to higher education. Am I correct?

Dr. COLWELL. You are absolutely correct.

Senator MIKULSKI. I mean just the level of recruitment is phenomenal for the bachelor's degree. And I think it is great that, if you are the first in your family and you have got an engineering degree, you go back into that neighborhood and you can show that education does lead to prosperity, I think it is fantastic. But then I worry also about them going into science, advanced degrees in science research.

EDUCATION OF FOREIGN INDIVIDUALS IN THE UNITED STATES

Dr. LANE. Madam Chair, there is no more important issue for our country, I think. This discussion also underscores our very real dependence on foreign people coming to this country for their education and to stay. And thank God they did. Otherwise we would not be a leader in science and technology, I believe, at this time in our history.

But many of those young people are not going to come to the United States for their education in the future. The whole world is developing its educational system and its own niche in science and technology. We have got to find a way to ensure that all of our citizens from all communities, all cities, all family backgrounds are able to participate in this extraordinary career in science and technology. We have got to find a way to do that. And our administration is committed to making those efforts.

Senator MIKULSKI. I want to thank you for this hearing. As you can see, there is no end to the interest and certainly no end to the interest that Senator Bond has. You might note that there were not many colleagues here, but the President, as we spoke, was holding a 60-member briefing on the Kosovo situation. Many of our members—in fact, most of our members—were participating in that, on both sides of the aisle. And so do not view the attendance as an interest index. It was really because of the pressing emergency with the Kosovo situation.

I will conclude this hearing by saying that I think that there needs to be an education of the Congress itself about what the Federal agencies do, and then their synergistic and cumulative effect with one another.

ADDITIONAL COMMITTEE QUESTIONS

We want to thank you. We want to thank you for the ideas. We look forward to what happens on the budget debate, if we can operationalize these good intentions. And we look forward to working with you.

[The following questions were not asked at the hearing, but were submitted to the Agencies for response subsequent to the hearing:]

EXECUTIVE OFFICE OF THE PRESIDENT
OFFICE OF SCIENCE AND TECHNOLOGY POLICY
QUESTIONS SUBMITTED BY SENATOR BOND

PITAC REPORT

Question. I understand that the IT² initiative was developed in response to the President's Information Technology Advisory Committee (PITAC) report to the President. In addition to the panel's concerns about managing the initiative, the report also states that new modes of research support and new implementation strategies will be required. PITAC also recommended that the Federal government "must not subsidize activities left to the private sector."

Is the private sector investing in long-term, high-risk information technology research?

Answer. The IT sector has more than doubled its annual R&D investment over the past 10 years. But this private investment is largely focused on the near-term development needs of a intensely competitive marketplace—only 5 percent to 10 percent of industry's R&D expenditures go toward non-product research, and a substantial share of that investment is for applied, not fundamental, R&D. Industry recognizes that their investment is insufficient to cover many critical long-term research needs. In addition, the market rarely provides industry with incentives to make substantial investments in basic scientific and engineering knowledge, whether derived through application of advanced computing tools, as proposed by IT², or through other means of scientific discovery. In both cases, the compelling national interest to ensure adequate R&D investments justifies a continued and strengthened Federal role.

Question. Do you expect the private sector to be involved in the IT² initiative?

Answer. We anticipate that industry will compete to supply the high-end computing and communications infrastructure that will be procured under the advanced computing component of the initiative. This would not be possible without industry contributions (in-kind or cost share) to the research effort to build and operate the new infrastructure. Also, industry has a strong track record of partnering with government and academic researchers in order to speed the development of fundamental breakthroughs into commercial applications. A rather dramatic example of this is the collaboration between the Next Generation Internet's (NGI) research partners at universities, who are engaged in basic networking research, and the manufacturers of advanced network equipment, who contributed \$500 million in equipment for use in NGI partner testbeds. Clearly beneficial to both researchers and their industry partners, such collaboration also accelerates bringing the benefits of basic research to the economy.

Experience strongly indicates that these two kinds of industrial participation—vendors and industry partners—will carry over into IT² activities.

Question. How will NSF and OSTP determine which activities should be funded by the public and which ones should be best left to the private sector?

Answer. The research agenda outlined for the IT² initiative corresponds to the priority fundamental research areas—and specific research topics within those areas—identified by the President's Information Technology Advisory Committee (PITAC) as requiring increased and sustained Federal support. The IT² is a multi-agency effort. Although NSF and OSTP have leadership roles in coordinating the initiative, each participating agency will determine which research it will fund. Agency expertise and agency mission will be important determining factors in selecting research that contributes to the goals of the initiative.

IT² MANAGEMENT

Question. I would now like to discuss how the IT² initiative will be managed. NSF has been designated as the lead agency for this major initiative and I understand that OSTP will play a significant role in the oversight of its implementation. With five other agencies involved, managing this initiative will be a major challenge to NSF. Both the NSF Inspector General and the President's Information Technology Advisory Committee (PITAC) have raised this as a serious management challenge and recommended that NSF needed to ensure that adequate resources would be devoted to programmatic oversight. I also recall from last year's hearing that Dr. Lane expressed his concern about the Foundation being asked to take on larger challenges.

As Director of OSTP and Science Advisor to the President, do you still have the same concerns you expressed last year about NSF's capacity for taking on larger initiatives?

Answer. NSF has a sound track record of leadership in major multi-agency programs that support information technology R&D. It has maintained a leadership role within the High Performance Computing and Communications (HPCC) program since its inception in 1991. NSF also consistently has been one of the top funders of information technology research and infrastructure development supported through that program. Because the IT² initiative builds on past and ongoing R&D activities in the HPCC program, we currently are merging coordination of IT² and HPCC into an integrated management structure in which NSF will continue to have a leadership role. I am confident that NSF will continue to ably exercise its leadership in the integrated programs.

Question. Is the issue related to NSF's management resources been an area of discussion for the Administration? How is the Administration addressing this matter?

Answer. Although the NSF enjoys a leadership role in the planning and implementation of the IT², the initiative is a multi-agency effort. Therefore management of the initiative is being assured through mechanisms that draw on multi-agency resources and provide coordination across all participating agencies.

The IT² initiative will be coordinated through the NSTC as part of an integrated program that incorporates related ongoing Federal information technology R&D programs. A Senior Principals Group has been established to provide policy guidance and leadership. I chair that senior management team, whose members currently include the NSF Director, NASA Administrator, Under Secretary of Energy, Under Secretary of Commerce for Oceans and Atmosphere, NIH Director, Under Secretary of Defense for Acquisition and Technology, and senior OMB and NEC officials. Once the IT² and HPCC program have been merged, the Senior Principals Group may be expanded to include appropriate senior policy officials from other participating agencies.

An operational Working Group chaired by the NSF Assistant Director for Computer and Information Science and Engineering will coordinate research and infrastructure planning while promoting full and open competition policies. The Working Group includes members with ties to related ongoing multi-agency research programs. I have tasked the National Coordination Office (NCO) for Computing, Information and Communications R&D, which assures coordination of the HPCC programs, to support the Working Group during and after the transition to integrated coordination of IT² with the ongoing programs.

INDIRECT COSTS

Question. I want to raise some concerns about the amount of scarce federal R&D dollars that are not going directly to researchers—namely, indirect costs or overhead. I am concerned that the federal government pays a significant amount of money for indirect costs at universities and other research institutions. I am also troubled by the numerous examples of inappropriate or questionable charges for indirect costs that have been uncovered in recent years. This reinforces my fear that the federal government is not able to do as much oversight when costs are being defined as indirect rather than direct. And despite numerous attempts to contain indirect costs, a lot of funds are still being spent on non-research purposes.

Last year's NSF authorization act mandated an OSTP study and report to Congress on indirect costs. Can you please tell us about the progress of the study and your preliminary findings?

Lastly, what recommendations do you have regarding the payment of indirect costs?

Answer. Much attention has been focused in recent years on the indirect costs paid to universities for the conduct of research. These costs are a real and necessary part of the total costs of research, but it is in the interest of both the universities and the Federal government to ensure that these costs are not excessive.

OSTP is on schedule to deliver the indirect cost study to Congress as required by last year's NSF authorization bill. Our preliminary findings show that since 1991, universities have reduced indirect cost rates significantly. I look forward to forwarding the completed report to you later this year.

POLICY ISSUES AT OSTP

Question. I have read articles that indicate a growing interest in the field of nanotechnology. I also understand that the administration is reviewing this area and may recommend a major strategic initiative on nanotechnology similar to the information technology initiative.

Do you view nanotechnology as an emerging field of interest for the federal government? Are you indeed planning a major nanotechnology initiative for fiscal year 2000? If so, what funding amount are you projecting to propose in the budget and does this mean that the information technology initiative will not be a major emphasis next year?

Answer. Nanotechnology is a very exciting new realm of scientific discovery that has the potential to impact chemical processes, electronics, biology, information technology and advanced materials. I stated in my April 1, 1998 testimony to Congress that “* * * if I were asked for an area of science and engineering that will most likely produce breakthroughs of tomorrow, I would point to nanoscale science and engineering often called simply “nanotechnology * * *” Nanotechnology has the potential to be a very big economic engine for the 21st century. As such, the Administration has been coordinating an effort with key federal activities to assess where the federal government is currently investing in nanotechnology and where it might make sense to expand funding to put the United States in a competitive position to exploit discoveries that could emerge from nanotechnology research.

Question. Besides nanotechnology, what do you see as the primary issues facing OSTP over the next few years and what are the major science policy issues, as well as R&D funding priorities, that face the Nation over the next few years?

Answer. I have attached, for your information, a copy of a joint memo from OMB and OSTP prepared for the fiscal year 2000 budget process that highlights the Administration’s goals for science and technology, the principles that guide our investment decisions, and specific funding priorities. A similar memorandum is being prepared for fiscal year 2001, which I will be happy to share with the Committee when it is complete.

INFRASTRUCTURE

Question. Are there any particular federal programs or activities that are available to help research institutions with research infrastructure needs such as laboratory equipment, growth chambers, greenhouse space, modernization of existing laboratories and other necessities?

Answer. There are a few programs that are available, but they tend to be directed at research sponsored by particular agencies. For example, the NSF has a program for acquisition, renewal, and development of shared laboratory equipment, but its selection criteria requires the associated research be of the sort sponsored by NSF. NIH has a joint program with NSF for similar purposes, but to be eligible, investigators must be funded by both agencies. There is funding available for modernization of laboratories from NIH, but only for NIH sponsored activities. In general, most agencies provide some money for laboratory equipment for their sponsored researchers.

Question. Do you believe there is a substantial unmet need for infrastructure purposes? Do you have any cost estimates on these unmet needs?

Answer. Yes, there is a widespread need for such funds, both as regards research equipment and conventional infrastructure (refurbishments of buildings, roofs, sewers, etc.) across many agencies. There is no good estimate on research equipment needs, but the estimate on conventional infrastructure needs have been estimated in various reports to be higher than \$10B when looked at across all agencies. The 1998 NSF “Science and Engineering Indicators” estimates \$7B for unmet conventional infrastructure needs at universities and colleges and another \$1.4B in research equipment at those institutions.

Question. Do you have any suggestions on how we can meet these unmet needs?

Answer. The NSF report cited above and two reports from the National Research Council and the GAO have stated that as budgets have gotten tighter infrastructure fixes have been postponed so that operations could continue. Thus an obvious solution to modernize research equipment is increased funding. The solution to conventional infrastructure needs could also be met in that way, but there may be other solutions. In this latter case there may be a broader array of funding scenarios such as third party financing, GSA or private parties. We should add that one component of the indirect costs assessed on federal grants to research institutions addresses ongoing costs for maintenance and refurbishment of the infrastructure. In general, however, these charges do not provide the capital needed for major infrastructure development and renewal.

DEVELOPMENT OF IT²

Question. While the goals of the initiative seem worthy, I am concerned that this idea may have been driven by the White House and not something that was developed in response to the demands of the scientific community.

Can you describe how this proposal was generated and to what extent the scientific community was involved in its development?

Answer. The PITAC was established in February 1997, pursuant to Congressional authorization in the HPC Act of 1991. Over the past year, the PITAC has undertaken an evaluation of Federal research programs to support development of advanced information technology.

In a letter to the President in early June 1998, the PITAC urged that public investments in computer, communication, and other information technology research be significantly expanded to ensure an ever-increasing standard of living and quality of life for our people. Their findings were subsequently detailed in an Interim Report to the President, released in August 1998.

The President asked me to prepare a detailed plan that addressed the PITAC findings. Following the release of the PITAC interim report, I held a meeting of the principals from our key R&D agencies. I requested that they help me craft an initiative which not only strengthens our investment fundamental research, as recommended by the PITAC, but which also provides the strongest possible computational support for advancing applications in science and engineering. We convened an interagency working group to develop the initiative.

Throughout the fall, as the initiative took shape, we looked to the research community for guidance. This included soliciting feedback on the PITAC interim report and the appropriate Federal role to address its findings, through: briefings to the Congress; briefings to major scientific advisory boards (e.g., the National Science Board and the President's Committee of Advisors for Science and Technology); speeches and presentations to major national and international scientific associations (e.g., AAAS and NAS conferences, the Town Hall meeting at "SC98," an annual international supercomputing conference, meeting of the G-8 science ministers); and consultations with major computer industry leaders.

We also drew upon the results of a widely attended July 30-31 workshop, co-sponsored by DOE and NSF at the National Academy of Science, on the potential for a high-performance computing initiative to address large-scale scientific problems. DOE and NSF had already begun working with the scientific community to propose a program in this area, and those ideas were incorporated into the overall planning for an initiative.

Finally, we asked the PITAC to convene working panels to flesh out more detailed research agendas within the priority areas that they had identified.

QUESTIONS SUBMITTED BY SENATOR BURNS

Question. In helping put together the fiscal year 2000 request for the Next Generation Internet (NGI), how were decisions made as to which federal department or agency would have which responsibilities and how were responsibilities divided among the agencies?

Answer. NGI agency roles and activities are set forth in the NGI Implementation Plan issued in July 1997. These basic roles and activities remain unchanged in fiscal year 2000, although there have been some adjustments to milestones due to Congressional funding decisions for the fiscal year 1998 and fiscal year 1999.

Question. In putting together the fiscal year 2000 request for the NGI, was any consideration given to which parts of the proposal would be especially useful or applicable to rural/EPSCoR states and if so what are the results?

Answer. NGI is a research and development program to provide the technologies and applications required as foundations for the next generations of the Internet. Institutions with fundable research proposals must not be disadvantaged in competing for NGI awards merely because of their location. In fiscal year 2000, some NGI funds will continue to be used to help rural/EPSCoR institutions connect to the NSF's high speed network, the vBNS, which is part of the NGI testbed. NSF already has expanded the High Performance Connections program to cover all 50 states and has made 33 grants in 18 EPSCoR states.

Question. What portions of the fiscal year 2000 NGI program would be most helpful to rural states? Which parts of the NGI budget do you believe the rural states would be most competitive in?

Answer. Eventually, NGI research on wireless, hybrid, and satellite technologies may reduce the cost and improve the services available to all users including those in geographically remote areas. In the meantime, associated funding to expand the reach of the NSF's High Performance Connections program in rural states will greatly enhance opportunities for rural/EPSCoR institutions with fundable proposals to compete for NGI awards.

Institutions that will be most competitive for NGI awards will be those where research is emphasized and where there are fundable proposals in advanced networking research or applications. These qualifications are not necessarily linked with the geographic location of the institution.

In the annual review of the NGI which was submitted to Congress on April 28, the President's Information Technology Advisory Committee (PITAC) noted that the NGI program is not an infrastructure program, and therefore cannot directly address reach to rural, inner-city, minority, or small institutions. The PITAC has recommended that Congress consider additional funding for a program where the NGI research institutions act as aggregators and mentors for these institutions. Since this is an infrastructure issue, and not research, it is not covered by the NGI or the proposed Information Technology for the Twenty-First Century (IT²) initiative.

NATIONAL SCIENCE FOUNDATION
QUESTIONS SUBMITTED BY SENATOR BOND

COMMITMENT TO IT²

Question. The Administration's information technology initiative was proposed in response to the President's Information Technology Advisory Committee's (PITAC) recent report and recommendations. PITAC specifically recommends additional funding for information technology of \$4.743 billion over the fiscal year 2000–2004 period and over \$2 billion annually thereafter.

Is the Administration budgeting the PITAC-recommended amounts? If not, what exactly is the Administration budgeting for this program in the outyears?

Answer. The PITAC Report recommended a multi year funding plan. NSF believes that this is necessary to expeditiously realize the PITAC goals, recognizing that more than one year is needed to provide and maintain both the needed fundamental research and high-end computing capabilities in the outyears. Future year requests are dependent on the fiscal constraints that are in place at the time, and program plans by the participating agencies will be adjusted to meet their appropriated budgets.

Question. If the requested funding amounts are not provided for IT², will NSF use existing resources within its Computer and Information Science and Engineering account or other accounts such as the Integrative Activities account?

Answer. The planned IT² program is integrated with and expands upon ongoing research, adds new emphases, and changes the balance of ongoing activities. NSF plans to address the IT² initiative's priorities as closely as funding levels permit, even if it means reducing attention in some currently supported areas.

DEVELOPMENT OF IT²

Question. While the goals of the initiative seem worthy, I am concerned that this idea may have been driven by the White House and not something that was developed in response to demands of the scientific community.

Can you describe how this proposal was generated and to what extent the scientific community was involved in its development?

Answer. The science and engineering research community was actively involved in identifying needs and recommending research priorities for the IT² initiative. Prior to and early in the fiscal year 2000 budget development process, NSF funded studies to identify research opportunities and challenges, and how best to take advantage of the rapidly developing computational capabilities in high-end computing in cutting edge research. A series of workshops were held in which members of the external scientific and engineering community identified many important problem areas requiring attention and important scientific problems whose computational needs are not met by computational capabilities currently available to the general science and engineering research community. At roughly the same time, the Department of Energy (DOE) was developing a plan to implement high end computing for their mission related applications. In addition, a joint NSF/DOE workshop was held at the end of July 1998 to study these latter issues.

A significant outcome of all of these efforts was the identification of major research opportunities and needs in computer science and engineering. The President's Information Technology Advisory Committee (PITAC), working independently, drew many of the same conclusions. Specifically, these parallel activities noted that there was a pressing need for considerable expansion of federal investments in basic research, information and computing infrastructure, and the development of human resources if the nation's leadership in this field is to be maintained.

Consequently, several agencies joined together to develop a broad fiscal year 2000 response to the PITAC recommendations. Further planning for the IT² initiative has taken place through an intensive interactive process involving, among others, the President's Science Advisor and the National Science and Technology Council.

PITAC REPORT

Question. I understand that the IT² initiative was developed in response to the President's Information Technology Advisory Committee (PITAC) report to the President. In addition to the panel's concerns about managing the initiative, the report also states that new modes of research support and new implementation strategies will be required. PITAC also recommended that the Federal government "must not subsidize activities left to the private sector."

Is the private sector investing in long-term, high-risk information technology research? Why or why not? Do you expect the private sector to be involved in the IT² initiative (e.g., cost-sharing)?

Answer. In general, the private sector does not invest heavily in long-term fundamental research in information technology because of short term market pressure, the need to develop new products, the highly competitive nature of the industry, the high risks associated with long-term basic research, and an inability to exclusively capture the results of basic research. As a result, the federal government has been the principal source of funds for basic research in information technology. There is considerable evidence that this governmental investment in fundamental research on communications and computing technologies has led to U.S. domination in the information technology industry sector, and to the creation of multi-billion dollar industries.

NSF has a long-standing practice of partnering with industry in a variety of ways, including significant cost-sharing involving either direct funding or in-kind contributions. This practice will continue in IT² activities. Joint efforts may include participation in research centers and projects, prototyping and real world testing of advanced computers, training for industrial researchers in new high-end technologies, research sabbaticals, and training of graduate and post-doctoral students.

Question. How will NSF determine which activities should be funded by the public and which ones should be best left to the private sector?

Answer. NSF is the only Federal agency mandated to promote the health and vitality of research and education in science and engineering across all fields and disciplines. NSF emphasizes the initiation and support of basic scientific research and research fundamental to the engineering process. Past experience indicates that the majority of this research will be carried out at the nation's colleges and universities.

The determination of research priorities in information technology, as well as the other areas supported by the Foundation, will be based heavily upon advice received from experts in the relevant external academic, industrial and governmental research communities. One of the hallmarks of NSF is its merit review system. The Foundation relies on a system of merit review by independent experts to judge the quality and impact of research being considered for support. Community input on overall priorities is also received through a variety of mechanisms, such as informal discussions, workshops, special studies and Directorate Advisory Committees.

Research planning for IT² will be coordinated through a National Science and Technology Council interagency process in order to minimize overlap and duplication of effort among all the federal agencies involved. In addition, where appropriate, industrial scientists and engineers will take part in the review and evaluation of proposals not only to help assess scientific merit but also to help preclude the funding of proprietary research.

EVALUATING IT²

Question. The goals of the IT² initiative seem laudable, yet broad in some respects.

How will we be able to assess whether the program, if funded, has achieved its objectives? Would an audit and evaluation of the IT² initiative be undertaken by the executive branch or an external source?

Answer. Active monitoring and progress assessment are important elements of IT², both on the individual project and broad initiative scales. PITAC recommends that an annual review of the research programs be carried out to insure that the investment portfolio is properly balanced, comprehensive and well-coordinated. Such a review would be carried out under the NSTC, with high-level external advice provided by PITAC. In addition, progress under IT² would be part of Government Performance Results Act (GPR) reporting procedures. Impact evaluation over a longer time frame would be carried out through a commissioned independent study, similar

to the National Research Council evaluation of the HPCC initiative—the 1995 “Brooks-Sutherland Report”.

IT²—MANAGEMENT

Question. NSF has been designated as the lead agency for this major initiative and I understand that OSTP will play a significant role in the oversight of its implementation. With five other agencies involved, managing this initiative will be a major challenge to NSF. Both the NSF Inspector General and the President’s Information Technology Advisory Committee (PITAC) have raised this as a serious management challenge and recommended that NSF needed to ensure that adequate resources would be devoted to programmatic oversight. I also recall from last year’s hearing that Dr. Lane expressed his concern about the Foundation being asked to take on larger challenges.

First, please explain how NSF as the lead agency will manage this initiative from an interagency perspective. For example, will NSF direct NASA’s activities? How will NSF work with the other agencies to coordinate, set priorities, and implement the program?

Answer. NSF has been designated as the “lead” agency for this initiative in keeping with the President’s Information Technology Advisory Committee (PITAC) finding that basic research in information technology is critical to maintaining U.S. leadership in information technology. Each agency will be responsible for establishing the priorities required to carry out its mission. NSF’s role is to coordinate individual agency efforts so that they complement each other to meet the overarching goals of the IT² program. In addition, NSF is also responsible for maintaining the basic research emphasis in IT².

Management of the IT² initiative is coordinated through the National Science and Technology Council (NSTC). A Senior Principals Group has been established that includes the NSF Director, NASA Administrator, Under Secretary of Energy, Under Secretary of Commerce for Oceans and Atmosphere, NIH Director, Under Secretary of Defense for Acquisition and Technology, and senior OMB and NEC officials. This group assists in establishing overall priorities and ensuring balance in the national information technology portfolio. An operational working group, which meets weekly and is chaired by the NSF Assistant Director for Computer and Information Science and Engineering (CISE), coordinates research and infrastructure planning while promoting full and open competition policies. Subsidiary working groups organized around appropriate focus areas of IT² research and development will coordinate research activities, propose new initiatives, and address programmatic objectives related to their research focus areas.

Question. Second, does NSF have the staff resources and management structure to manage this effort in addition to its current workload? Have you discussed these management issues with the IG and will you ask the IG’s office to provide advice?

Answer. At present, the Foundation does not believe that it has sufficient staff resources to manage the increased level of activity resulting from the IT² initiative. Additional staff will be needed, with the number depending on the funding level and the proportions of the particular activities that are implemented, e.g., the type and number of research projects supported and the implementation of the terascale computing system.

We believe that, given the proper resources, NSF has the experience to successfully meet the management challenges listed by the Inspector General in the case of the IT² initiative. NSF is presently developing the internal management structure for the IT² initiative that draws upon prior Foundation experience in the selection and management of research carried out by individuals, teams, and centers, and interagency efforts in the High Performance Computing and Communications (HPCC) and the Next Generation Internet (NGI) programs. The Inspector General participates in policy discussions among senior management in which many of these issues are considered. NSF’s demonstrated ability to establish quality merit-reviewed research programs in coordination with other federal agencies, such as the NSF/EPA partnership, will help ensure quality management of this effort. We have also gained considerable experience from partnering with agencies such as the Defense Advanced Research Projects Agency (DARPA), the National Library of Medicine, NASA and the Library of Congress in the Foundation’s expanding digital libraries program. Other examples of NSF’s ability to establish a productive management structure include our management of networking research, building NSFNET, and focusing on new research challenges after the Internet was established.

PERFORMANCE MEASURES

Question. This subcommittee has been concerned about the Foundation's failure to provide a budget justification that meets the requirements of the Government Performance and Results Act. We believe that it is important for all NSF initiatives and programs to be identified with specific funding as well as quantifiable goals and milestones. The goal statements for much of the fiscal year 2000 performance plan—especially in the areas of research investments and training—appear to be as general and nonquantitative as last year.

How does NSF propose to comply with our concerns?

Answer. NSF has expressed its performance goals for results as descriptive standards under the Government Performance and Results Act (GPRA) option for use of the "alternative format". NSF's use of the alternative format, approved by the Office of Management and Budget, allows the agency to express its performance goals for results in descriptive terms, rather than in quantifiable and measurable form. The descriptive standards in NSF's Plan include definitions for "successful" or "minimally effective" performance outcomes. This is permissible under Section 1115.b.1.A of the Results Act. NSF's level of success in achieving these results-oriented goals will be determined through external assessment processes. This approach allows for a responsible and comprehensive assessment of the continuous flow of results from NSF-supported activities. These results will be highlighted in NSF's annual GPRA performance reports. Since both the substance and the timing of outcomes from NSF-supported activities are unpredictable, performance standards for the results of NSF's investments in research and education cannot be adequately expressed in quantified, annual performance goals. Further, the discrete alignment of program funds with specific performance goals is difficult to attain, because NSF investments generally work toward more than one of the performance goals simultaneously. Also, because research results are unpredictable in a given year, it is not possible to tie resources in a given year to outcomes obtained in the same year. Nevertheless, as we gain experience from application of the GPRA process, we will continue to seek techniques to more closely tie resources to the categories of investment presented in our performance plan.

MATH AND SCIENCE EDUCATION

Question. This month the National Science Board released a report on math and science education. I understand that this report and its recommendations are in response to the so-called "TIMSS" report that basically said our middle and high school students are not doing well in math and science education compared to their international counterparts.

How is NSF responding to the Board's report and recommendations? Are there any related IT² activities that will benefit science and math education at grades K–12?

Answer. The National Science Board (NSB) report underscores NSF's commitment to providing national leadership in K–12 science and mathematics education. Over the last decade, NSF has pursued a comprehensive strategy for developing standards-based curricula, instructional strategies, and assessments. To promote their implementation, NSF has created innovative strategies for reforming entire education systems (i.e., state, urban, rural, district levels). The NSB report also highlights the critical role of partnerships. Most of our programming requires meaningful collaborative working relationships with major stakeholders that bring the broad ownership critical to success. Current NSF priorities include: education research, teacher education, systemic reform, efforts promoting diversity in science and engineering, and applications of learning technology.

The NSB report focuses on two components of NSF's K–12 program portfolio critical to improving student performance—curriculum development and teacher education. NSF has supported the development of exemplary, comprehensive instructional materials that promote inquiry-based learning, are rigorous in content and age appropriate, and improve the education of all students. All curriculum materials embody the essential principles of the National Council on Teachers of Mathematics (NCTM) standards and the National Academy of Science (NAS) science standards. All supported materials now include embedded assessments to guide classroom instruction, and go through extensive pilot and field-testing. Standards-based, large-scale assessments are in demand by states and districts. We are focusing increased attention on development and implementation of these assessments since they are critical in strengthening science and mathematics education, as well as determining the effectiveness of NSF programming.

A growing body of evidence documents that teachers more knowledgeable in content and effective in teaching practice improve student performance. Our teacher

education programs—preservice and inservice—strengthen both content and pedagogy. We are developing new components within our teacher education programs, examining needs at different career stages—especially at the start of a teaching career when so many talented individuals are lost to the classroom—and strengthening the infrastructure necessary to train new generations of effective science and mathematics educators and administrators. We walk a fine line in this arena, balancing long-term and short-term needs.

As part of the IT² initiative, NSF will support research aimed at investigating pipeline issues that affect the participation of underrepresented populations (e.g., women, minorities) in these fields. In addition, NSF does support related activities in K–12 mathematics and technology education, including the National Science, Mathematics, Engineering, and Technology Education Digital Library (NSDL). Further, within the Computer and Information Science and Engineering (CISE) Directorate, a new initiative, Teaching Experiences for CISE Students, introduces graduate and upper-level undergraduates into K–12 learning environments.

The Senate VA–HUD Appropriations Committee has asked NSF to develop a strategic plan that can help address the deficiencies in U.S. student performance identified by TIMSS. We will share this plan with the Committee.

INDIRECT COSTS

Question. I want to raise some concerns about the number of scarce federal R&D dollars that are not going directly to researchers—namely, indirect costs or overhead. I am concerned that the federal government pays a significant amount of money for indirect costs at universities and other research institutions. I am also troubled by the numerous examples of inappropriate or questionable charges for indirect costs that have been uncovered in recent years. This reinforces my fear that the federal government is not able to do as much oversight when costs are being defined as indirect rather than direct. And despite numerous attempts to contain indirect costs, a lot of funds are still being spent on non-research related purposes.

Dr. Colwell, how much and what percentage of NSF dollars are going towards indirect costs? Please provide this data for the last 10 fiscal years. What sort of things are we paying for under the indirect cost heading? Lastly, what recommendations do you have regarding the payment of indirect costs?

Answer. The amount and percentage of NSF dollars which funded indirect costs for the last 10 fiscal years are shown in the table below:

Fiscal year	Indirect \$ (in millions)	Percent of total
1998	\$639	19.7
1997	\$668	21.2
1996	\$578	18.9
1995	\$527	16.9
1994	\$481	17.0
1993	\$456	17.6
1992	\$457	18.8
1991	\$414	17.9
1990	\$366	18.8
1989	\$342	19.1

Indirect costs, as defined in OMB Circular A–21 for colleges and universities, include the following cost categories: (1) facility costs such as depreciation and use allowances, interest on debt associated with certain buildings, equipment and capital improvements, operation and maintenance expenses, and library expenses; and (2) administrative costs such as general administration and general expenses, departmental administration, sponsored projects administration, and student administration and services. The percentage of indirect cost dollars to total dollars funded by NSF is significantly below the average indirect cost rate negotiated on a government wide basis (which is close to 50 percent of modified total direct costs).

NSF considers indirect costs legitimate costs of doing business. All research projects benefit from the expenses categorized as indirect costs. For example, research is conducted in buildings and laboratories that generate costs which should be shared by all users and beneficiaries of the facility. Indirect costs simply allocate these shared expenses to the appropriate research projects or users. In addition, some of the indirect costs incurred by research institutions are the direct result of their compliance with Federal mandates, e.g. environmental requirements.

The area of indirect costs, particularly those of colleges and universities, which are negotiated by the Department of Health and Human Services and the Office of Naval Research, has been studied and reviewed over the last decade by numerous groups. These studies have resulted in several major revisions to the cost principles, some of which NSF believes may have gone too far in limiting reimbursement of indirect costs. For example, OMB Circular A-21 currently places a 26 percent cap on administrative costs for educational institutions; this area may need to be re-evaluated as to its fairness relative to other research performers, such as non-profit organizations, and the effect it has had on the federal/university research partnership. Another example is the reclassification of certain personnel costs in A-21 as "Organized Research," which, by effectively lowering the institution's indirect cost rate, may have created disincentives for institutions to contribute effort to Federally supported research. This issue was noted in the recent report in response to the Presidential Review Directive on the Government-University Partnership. Except for those issues, NSF believes the cost principles are reasonable and suggests they be allowed to remain stable and constant for the foreseeable future.

MERIT REVIEW PROCESS

Question. Last December, the NSF Inspector General submitted a report to the Congress outlining the 10 most serious management challenges facing the Foundation. One of those challenges relates to the merit review process, which this subcommittee has also been concerned about. We have asked for an outside group to evaluate the impact of the new merit review criteria that NSF adopted at the start of this fiscal year.

What do you see as the most serious challenges facing the merit review system? How do you intend to broaden the representation of the panelists selected to review proposals?

Answer. Merit review is critical to the way NSF conducts business. NSF believes the merit review system is essential for maintaining high standards of excellence and accountability in the proposal decision process.

From NSF's perspective, the most serious challenges facing the merit review system are: (1) engaging the scientific community in the use of the new electronic system for submitting reviews, to ensure quality and consistent reviewer input; (2) reducing the burden on the reviewing community; and (3) reducing the complexity of a process which has become quite complicated due to potential conflicts of interest, as partnering and/or collaborations increase. Both NSF staff and the scientific community are receiving training in the use of the new electronic system.

NSF's policy on the selection of peer reviewers stresses the importance of wide representation—including characteristics such as geography, type of institution, and underrepresented groups. NSF's advisory system involves approximately 50,000 scientists and engineers a year, about 20 percent of whom have not previously served as a reviewer at NSF. NSF is constantly looking for and identifying new reviewers in the merit review process. Broadening the reviewer base is accomplished by having NSF staff identify potential new reviewers. This is best done by NSF staff meeting the potential reviewers at their institutions or at scientific meetings, and also by asking for recommendations from existing reviewers.

BIOCOMPLEXITY IN THE ENVIRONMENT

Question. Biocomplexity in the Environment has been described as a priority in the NSF budget request. In the past couple years, NSF emphasized a similar theme called "Life and Earth's Environment." The increased level and emphasis on Biocomplexity in the Environment also appears to be in contrast to the National Science Board's position of not establishing a National Institute for the Environment in NSF.

First, does the Biocomplexity priority mean that you will be revisiting the establishment of a National Institute for the Environment?

Answer. NSF is very much aware of the importance of a sound environment to the United States and to the world. NSF's initiative on Biocomplexity in the Environment seeks to enhance our understanding of the complex dynamics of environmental systems. It will facilitate interdisciplinary research that spans temporal and spatial scales, considers multiple levels of biological organization, crosses conceptual boundaries, uses and fosters the development of new technologies, and links research to societal application.

With respect to a National Institute for the Environment (NIE), NSF's report to Congress outlined our belief that the most appropriate way to implement the goals of the proposed NIE is through an interagency partnership coordinated by the National Science and Technology Council with significant NSF involvement in associ-

ated fundamental research and education activities. We continue to believe that this approach is the best way to advance the overall environmental research agenda and that the creation of a stand-alone NIE is not an effective means of achieving the proposed intellectual goals of an environmental institute.

Question. Second, are the activities under Life and Earth's Environment (LEE) now included in Biocomplexity in the Environment (BE)? To what extent is LEE different from BE? Please explain.

Answer. NSF activities formerly included in Life and Earth's Environment (LEE) are now included in Biocomplexity in the Environment (BE). However, BE goes beyond LEE, including the new biocomplexity initiative which emphasizes integrative and interdisciplinary work in environmental areas that capitalizes on the extraordinary advances in related technologies including genome sequencing, new computational algorithms and mathematical methods, sensors and monitoring devices, and remote sensing. The scope of Biocomplexity in the Environment includes both focused initiatives and core research programs aimed at fostering research on the complex interdependencies among the elements of specific environmental systems and the interactions of different types of systems. It reflects the evolution of NSF thinking about how NSF-supported research on the environment can best take advantage of opportunities provided by advances throughout science and engineering and, at the same time, be most valuable to the developing program of federal activities related to the environment.

GRADUATE EDUCATION SUPPORT

Question. The fiscal year 2000 budget request provides an increase for science and math education at the pre-college level, but a decrease at the undergraduate and graduate level. While I applaud the increased funding request for the pre-college level, it seems especially strange to reduce the graduate education budget when Congress just went through a major rewrite in the immigration area and increased the number of visas for foreign high tech workers due to a shortage in American trained workers.

What is the rationale for reducing support for graduate education?

Answer. Programs which benefit graduate education cut across the spectrum of activities within the Education and Human Resources (EHR) account. In fiscal year 2000, these programs are supported out of two Subactivities within EHR: (1) Graduate Education funds individual fellowships and research traineeships; and (2) Undergraduate Education funds the NSF Graduate Teaching Fellows in K-12 Education (GK-12), which involves both undergraduate and graduate education, and the National Science Mathematics, Engineering and Technology Education Digital Library (NSDL) initiatives. Summing all of these efforts, overall support for graduate level education actually increases by \$3.5 million.

Question. What is NSF going to do differently to address the needs of U.S. students at the K-12 level?

Answer. NSF continues to maintain a comprehensive portfolio of programs that address the needs of K-12 education, including systemic reform, instructional materials development, teacher education, and informal science education. New K-12 efforts include: (1) the NSF Graduate Teaching Fellows in K-12 Education, initiated as a prototype in fiscal year 1999, that supports graduate and advanced undergraduate SMET majors as content resources for teachers, and (2) the National Science, Mathematics, Engineering, and Technology Education Digital Library (NSDL) that will be a national resource for increasing the quality, quantity, and comprehensiveness of internet-based K-16 SMET education.

Several efforts explicitly address growing needs of the high-technology workplace. The Advanced Technological Education (ATE) program will continue to strengthen the science and mathematics preparation of the high technology workplace through large-scale Center efforts and special projects targeted at the secondary grades and community college levels. A number of these efforts link academic and industrial partners and, in fact, focus on information and communication technologies. In addition, NSF—with support from the H1-B Nonimmigrant Petitioner Fees collected under Title IV of the American Competitiveness and Workforce Improvement Act of 1998 (Public Law 105-277)—will provide scholarships to low-income individuals pursuing degrees in computer science, engineering, and mathematics; establish academic enrichment opportunities for K-12 students; and support systemic reform activities, especially for projects that seek to link K-12 reform with technical workforce development.

Question. Does NSF plan to collaborate with the Department of Education?

Answer. NSF and Department of Education (DoED) staff interact in programmatic areas of complementary interest. The agencies are currently collaborating on the

Interagency Education Research Initiative (IERI) that focuses on the use of information and computer technologies to promote improvements in the teaching and learning of mathematics, science, and reading. In addition, NSF is developing and field testing materials to train undergraduates who will receive DoED Work-Study support for tutoring students in middle-school mathematics. Among other recent collaborative efforts are projects to promote parent engagement in standards-based education, as well as jointly sponsored survey and analysis efforts under the Third International Mathematics and Science Study (TIMSS). DoED has also been supportive of the leveraging of its Eisenhower, Title I and Title II funds by NSF systemic reform and teacher education projects.

ANTARCTIC PROGRAM

Question. In fiscal year 1998, NSF initiated the modernization of the South Pole Station with an appropriation of \$70 million. The fiscal year 2000 request of \$5.4 million continues this work and we expect to spend \$127.9 million over the fiscal year 1998–2001 period. NSF is also requesting \$12 million to complete upgrades for its fleet of polar support aircraft.

First, how is the modernization of the South Pole Station going? What major challenges do you expect to face this year and expect to continue to face as the modernization progresses? I would especially be interested in the status of the major logistics support contract.

Answer. South Pole Station Modernization (SPSM) is currently on schedule and within budget. The acceleration of funding (\$70 million in fiscal year 1998 and \$39 million in fiscal year 1999) has made it possible to move up procurement of materials and construction of the Dark Sector Lab, a 3000 square foot building which will support astrophysics research. The accelerated funding will make it possible to combine previously separate procurements for major components—structural steel, wall panels, and other construction materials—into several large purchases instead of a greater number of smaller purchases. In addition to providing for consistency of materials for the station, simplifying long-term maintenance, this approach will likely result in saving procurement labor costs and inflation. Also, perhaps most importantly, the acceleration helps guard against possible procurement-associated delays in the future, and thus against schedule-driven cost increases.

Future challenges include the extreme weather conditions under which the project will be completed; the short period (100 days per year) for exterior construction; and the possible transition to a new support contractor. Uncertainties in the weather are mitigated by transporting as much material as possible during favorable weather. The shortened construction season is offset by scheduling exterior work during the austral summer (November through January) and subsequent interior work during the austral winter.

The major risk associated with the possible transition to a new contractor during South Pole Station Modernization is increased labor costs due to lost time as a result of a new contractor's lack of familiarity with the project or the unique requirements and conditions of working in Antarctica. This risk is mitigated by the following:

- Continuity.*—The design and review responsibilities are vested in separate architectural and design contractors. These responsibilities will not be affected by any contractor transition.
- Procurements.*—NSF is currently discussing with Antarctic Support Associates (ASA), the current contractor, a procurement option that would substantially accelerate (by two years) the procurements associated with SPSM. If this is determined to be feasible, a majority of the procurements will have been completed by the end of the possible transition between the old and new contractor.
- Contractor selection.*—The selection of a new contractor will be based on technical expertise and cost pricing to ensure that the contractor selected has the experience necessary to complete the project and that the cost will be reasonable.
- Phase-in period.*—The phase-in period provides 6-months for the old and new contractors to work together, on-site, in order to bring about a smooth transition. Several key NSF staff participated in the most recent contractor transition and will bring valuable experience to the next transition, if needed.
- Retention of experienced labor pool.*—It has been NSF's experience that when contractors change, a significant portion of personnel, from mid-management to skilled labor, is retained by the new contractor.
- Planning and oversight.*—All documentation, including designs, planning and project management software, and other project documents, belongs to NSF and would be available to a new contractor. NSF has been conducting quarterly

SPSM project audits during which ASA and NSF staff discuss engineering activity schedules, procurement and construction plans and schedules, cost accounting for the project, and other administrative matters. This ensures that NSF staff are as knowledgeable as ASA staff on the status of the project.

—*On-site management.*—During recent Antarctic summer seasons, NSF has placed several of its experienced managers at McMurdo Station and the South Pole to provide oversight and management, both for logistics and operations, and for facilities management. These managers have an average of nearly 20 years of Antarctic and construction management experience and are thoroughly familiar with the project.

A Request for Proposals (RFP) for recompetition of the Antarctic support contract was issued on September 14, 1998, and proposals submitted in response to the RFP are currently being evaluated. A contract will be awarded in October 1999.

Question. Second, with the Air National Guard in control this year, how are they doing?

Answer. The New York Air National Guard (NYANG) met all mission requirements this season and exceeded expectations with respect to delivery of materials for South Pole Station Modernization. NSF continues to work with NYANG on the management relationships among the various parties involved in providing support to the U.S. Antarctic Program. These relationships are important for the smooth operation of the program. NSF is also working closely with NYANG on developing procedures and training for remote field operations.

“FASTLANE”

Question. The IG has expressed concerns about NSF’s implementation of its electronic processing proposal and award information system called FastLane.

How is the implementation of FastLane progressing and what challenges do you face? To what extent are grantees having difficulties in implementing the new system?

Answer. The implementation of FastLane is progressing on schedule. As of February 1999, there are over 1,500 registered institutions. These institutions account for over 90 percent of the proposal and award activity at NSF. In fiscal year 1998 NSF received over 5,000 proposals, 21,000 proposal reviews, and 3,400 post-award administrative requests and notifications via FastLane, and FastLane was used to disburse 94 percent of NSF’s research budget. As of December 1998, over 85 percent of NSF’s grantees used FastLane to submit their Federal Cash Transaction Reports (which represents 95 percent of the dollar value of all active NSF awards).

We do, however, face a number of challenges as we continue to implement FastLane:

—*Electronic signatures.*—NSF is receiving many business transactions electronically, but there are documents that for legal reasons require a signature on paper. The resolution to this issue must be an inexpensive, rapid-response, widely available system. NSF is working as a participant with the Federal Commons project on pilot projects to satisfy this requirement.

—*Printing of proposals in color.*—The electronic submission of proposals (many of which contain color images) does not immediately eliminate the need for paper copies. Printing in color is both slow and expensive. To address this issue and be consistent with our long-term vision of eliminating the printing of proposals, NSF is exploring a variety of possible resolutions to this problem such as conducting a pilot with our reviewers in which we would only provide proposals to them electronically.

We think the research community is rapidly accepting the use of FastLane. Based on feedback we have received from our grantees, we believe that the primary difficulties our grantees have in implementing FastLane are:

—*Concern about Federal research funding agencies developing their own systems.*—As a member of the Federal Demonstration Partnership (FDP), NSF works with other Federal research funding agencies and member grantee organizations on a variety of issues. A common concern is that each agency will develop its own independent “FastLane-like” system, thus forcing the grantees to learn a variety of systems. In response to this concern, NSF is participating in the development of the “Federal Commons”, an internet-based electronic “commons” providing access to grant availability, status, award and other key grant administration functions that will be accessible to the entire federal grants community, including federal agencies, state and local governments, universities and other grant recipients and stakeholders. The Federal Commons is now in its early stages of planning, design, and development.

—*Internet response time.*—Depending on how a grantee is connected to the Internet (firewall architecture, Internet service provider, equipment speed, etc.), grantees may experience slow response times when using FastLane. Generally the response time is excellent in the morning, and then begins to deteriorate as activity increases. In the late afternoon (about 6:00 PM Eastern time), response time begins to improve again. Although the grantee's Internet connection is largely responsible for the response time that he/she experiences, NSF has made every effort to build a solid FastLane architecture to avoid contributing to the problem and we continue to look for ways to provide even better, faster access.

TRAVEL FUNDS

Question. The NSF Inspector General has expressed concerns about the lack of sufficient support for oversight by NSF program staff. One of the cited causes for this problem is the lack of sufficient travel resources. In your fiscal year 2000 request, \$1.2 million is being cut from your travel account yet you are requesting authority to use research and education funds for “award related travel.”

Are these changes designed to respond to the IG's concerns? How much total funds to you expect to allocate for travel? Please give us a breakdown in terms of how much you propose to spend out of your salaries and expenses “general operating” expenses and how much would come out of your other program accounts.

In regard to the \$1.2 million travel funds cut from your general operating expense category, are these funds being reallocated? If so, for what purposes?

Answer. The request to fund oversight and outreach travel in the research and education program accounts is designed to respond to the IG's concerns. Inspector General reports continue to cite the lack of travel funds for oversight of NSF awards as a major management challenge. If the request is approved, all award-related travel will be funded in the program accounts. Staff travel for training and participation in conferences will continue to be funded in the Salaries and Expenses (S&E) Account.

The increase of \$1 million in award-related travel is requested to maintain a reliable merit review process and to provide additional oversight to implement GPRA goals and new program initiatives.

Reallocated funds of \$1.2 million in the S&E account will be used to support planned investments in information infrastructure. The Foundation continues to make major investments in new technology to support improved business operations and to keep pace with an increasingly complex workload.

TRAVEL BY ACCOUNT

[In millions of dollars]

	Fiscal year	
	1999	2000

Education & Human Resources	2.4	3.0
Major Research Equipment	0.1	0.1
Total	12.0	13.0

OUTREACH EFFORTS

Question. I understand the NSF conducts regional outreach or grant seminars periodically. I think it is critical, especially for smaller institutions, to receive some sort of technical assistance training so that they are able to develop competitive research proposals of their own.

Do you have any outreach efforts planned for fiscal year 1999? Please describe these plans. Beyond those outreach efforts, what other steps is NSF taking to better inform and involve faculty and students about your programs?

Answer. NSF conducts a number of outreach efforts to assist all parts of the research and education communities. For example, NSF Regional Grant Conferences provide “outreach” information on proposal/grant requirements; the merit review process; policies and issues such as conflict of interest, cost sharing, etc.; NSF electronic initiatives such as the NSF FastLane System; as well as NSF's purpose, pro-

grams, budget trends and emphases. For the past several years, NSF has conducted two regional grants conferences annually, in conjunction with host universities. Attendees are principal investigators and research/sponsored project administrators, primarily from educational institutions. NSF regional conferences have been well received and the demand for such events continues.

In fiscal year 1999 NSF conducted two Regional Grants Conferences. In October 1998 a conference was hosted by the University of Kansas in Lawrence, Kansas. This was the first NSF Regional Grants Conference held in an Experimental Program to Stimulate Competitive Research (EPSCoR) designated State. Given the success of this conference, NSF plans to routinely incorporate visits to EPSCoR States in these outreach events. In March 1999 a second conference was held in Los Angeles, co-hosted by the University of Southern California, the California Institute of Technology, University of California, Los Angeles, and University of California, Santa Barbara. In fiscal year 2000, NSF plans to hold conferences at the Colorado School of Mines in October and at Louisiana State University in March.

NSF has also been actively engaged in other outreach activities. For example, in October 1999, NSF will host an all day training event at the Society for the Advancement of Chicanos and Native Americans in Science. We have also hosted "NSF Days" in connection with the last five annual meetings of the National Council of University Research Administrators (NCURA) which has a membership of approximately 800 institutions.

NSF also has an active information dissemination program to provide the latest information about funding opportunities, deadline dates, program contact information and award information. NSF relies on electronic dissemination as the principal method of distributing information about the agency. NSF's web site (<http://www.nsf.gov>) is accessed by about 9,000 visitors each weekday. Web-based systems such as the "Online Document System" and the "NSF E-Bulletin" let our community know about funding opportunities.

In addition, NSF has developed the "Custom News Service," a free subscription service that alerts subscribers to information of interest. Introduced in early 1997, the e-mail and web-based system allows subscribers to sign up for specific types of information (for example, news about new programs). This popular service has nearly 17,000 subscribers and has helped enormously with our outreach efforts.

NSF also conducts an expanded outreach initiative for EPSCoR states. In the last two years, more than 230 trips to EPSCoR states have been made by administrative and program officers from all around the Foundation. Generally, NSF program staff describe their program's requirements and make themselves available to researchers for advice and guidance. These visits are made in addition to the regular site visits for existing projects. The EPSCoR program also awarded a grant to the American Association for the Advancement of Science (AAAS) to assist EPSCoR institutions and researchers planning to submit proposals for the high performance computing and networking connections program at NSF. Working closely with NSF and EPSCoR state Project Directors, AAAS also conducts regional conferences where technical assistance is provided to individual researchers.

EARTHQUAKE ENGINEERING RESEARCH

Question. The fiscal year 2000 request includes \$7.7 million to start a new earthquake research activity called Network for Earthquake Engineering Simulation (NEES). NSF is estimating that the total cost will be \$81.9 million over a five-year period.

Will NSF bear the entire cost of creating and operating NEES or will cost-sharing from other entities be involved? If other sources of funds will be leveraged, please provide an estimate of the funding amounts and sources that you expect to receive these funds from.

Answer. NSF does not plan to require cost sharing by awardees during the creation of NEES. No support is anticipated from other agencies for NEES development and implementation. However, approximately 50 percent of operating costs will be supported by user fees.

Question. Please detail how these funds will be used for purposes such as new construction of facilities, equipment purchases, and infrastructure.

Answer. NSF plans to spend fiscal year 2000 funds on:

—*Developing the network that will link and integrate the various NEES facilities.*—The network will provide the capability to remotely operate and view experiments, to collaborate on research, to store and analyze data, and to perform simulations. Further planning has indicated that it would be most efficient to implement the network first to ensure a uniform platform for all facilities.

—*Selected Facilities.*—Fiscal year 2000 funds may be used to support facilities that can be brought on-line most quickly. This may include facilities requiring only minor upgrades and mobile or field facilities. Making support available for these facilities early in the project life allows NEES to provide benefits throughout the construction period.

Question. What sort of entities do you expect to operate and maintain NEES?

Answer. In fiscal year 2000–2004 while facilities are being constructed, each component of NEES will be operated by individual host institutions, which are expected to primarily be academic institutions. After this period, the entire network will be operated and maintained by a consortium of host institutions and users that has been selected through a competitive process.

Question. Who will have access to NEES?

Answer. Proposals to conduct experimental research at the NEES facilities will be accepted from all sectors of the earthquake engineering community. These proposals will be competitively evaluated by peer-review. It is expected that NEES will be accessed primarily by academic researchers. However, the results of NEES experiments will be available to a wide range of users. NSF expects the network to promote the development of research tools such as integrated databases and user-generated software and to be a major resource for government agencies—including the National Earthquake Hazards Reduction Program (NEHRP) agencies, the professional engineering community, hazard response managers, K–12 educators, and the general public.

INFRASTRUCTURE

Question. Are there any particular programs or activities at NSF that are available to help research institutions with research infrastructure needs such as laboratory equipment, growth chambers, greenhouse space, modernization of existing laboratories, and other necessities?

Do you believe that there is a substantial unmet need for infrastructure purposes? Do you have any cost estimates on these unmet needs?

Answer. NSF supports a variety of programs that help research institutions with the type of instrumentation needs you have described. For over a decade, NSF has annually invested approaching 10 percent of its research funds in instrument development and acquisition. In fiscal year 1998, this investment totaled nearly \$200 million.

In addition to supporting instrumentation on individual research and education grants, the Foundation supports instrumentation through more than 15 targeted programs. In fiscal year 1999, for instance, funds for instrumentation will be provided through programs including:

- Major Research Instrumentation (MRI). This program, supported at a level of \$50 million, is a large-scale instrumentation effort designed to improve the condition of scientific and engineering equipment for research and research training in our Nation's academic institutions. The MRI program allocates funds in the range of \$100,000 to \$2,000,000 for instrumentation that is not readily available from other NSF programs.
- Advanced Technological Education (ATE) program, initiated in 1995, which provides instructional equipment to technician education programs, principally in two-year colleges.
- HBCU Program, which was initiated in 1998 and supports instructional equipment within the context of curriculum and faculty development activities.
- Course, Curriculum and Laboratory Improvement program, which builds on the former Instrumentation and Laboratory Improvement program and provides support for instructional instrumentation.

It is clear that there is a substantial unmet need for infrastructure purposes. In 1992, an NSF survey asked the heads of 300 science departments and facilities in U.S. research colleges and universities for their single highest priority need for instrumentation. The requested items cost a total of more than \$1.2 billion. This need for instruments extends far beyond these research-intensive institutions into the teaching-intensive four-year colleges, community colleges, and K–12 school systems.

Despite efforts to address the issue, the pace of technological change implies a continuing need for revitalization of laboratories and instrumentation. A recent NSF workshop, *Information Technology: Its Impact on Undergraduate Education in Science, Mathematics, Engineering, and Technology* (NSF 98–82), found that both faculty and students will require high-speed connectivity to access educational innovations and broader information essential to a modern education, and gives an indication of the cost challenges posed by establishing and maintaining an information technology infrastructure for education.

QUESTIONS SUBMITTED BY SENATOR BURNS

Question. As you know, Montana is an EPSCoR state and EPSCoR has been very important to developing our state's research infrastructure and capabilities. I was disappointed that you did not recommend any increase in the budget for the EPSCoR program. Does this mean that developing a nationwide science R&D capability is not a high priority for NSF?

Answer. The commitment to developing science and engineering capabilities in all regions and states is a high priority for NSF, and NSF's budget request for EPSCoR for fiscal year 2000 reflects that priority. In addition to the \$48.4 million that is requested for the EPSCoR program itself, the program will leverage \$15 million from research programs across the Foundation to support meritorious projects. The co-funding effort between EPSCoR and NSF research programs enables EPSCoR researchers to participate more fully in NSF research activities. In the last two years, NSF has increased the level of co-funding from NSF research programs from approximately \$10 million to \$15 million.

Question. High performance computing and high-speed networking are vital to rural areas such as Montana. NSF has taken a number of steps to help our states but connections remain costly and we need to insure that our institutions are included in applications use of this infrastructure. What is NSF doing to address these issues?

Answer. Many academic institutions have questions regarding how and when to integrate advanced networking resources, including how to develop financial and technical plans to integrate these new technologies into their ongoing research and education activities. As a result, the Foundation has put into place additional support, outreach, and planning capabilities for such institutions. A special project funded by NSF will help institutions obtain technical information, planning assistance, and communications/networking analysis needed for integrating advanced networking functions into their operations.

More specifically, NSF is considering a series of planning workshops designed to enable:

- campus Chief Information Officers, researchers, and partners to provide advice on the nature of programs and requirements following the period of the vBNS cooperative agreement;
- institutions and regions to evaluate their readiness for advanced networking, and to plan and provide input regarding their related requirements; and
- the Partnerships in Advanced Computational Infrastructure and the leading edge supercomputing sites to evaluate and make recommendations regarding future networking resource needs, and means for enhancing education, outreach and training activities and broadening the spectrum of institutions involved.

NSF is also in the early stages of exploring how best to more deeply involve these institutions in collaborative research in universal libraries.

In addition to bringing computing and high speed networking connections to the EPSCoR states, NSF has undertaken two actions that will allow EPSCoR researchers to understand the potential uses of this infrastructure and to compete more effectively for awards that capitalize on earlier investments. First, the American Association for the Advancement of Science (AAAS) is assisting EPSCoR institutions and researchers who plan to submit proposals that will utilize the networking infrastructure. Working closely with NSF and EPSCoR state Project Directors, AAAS is conducting regional conferences that will provide technical assistance to individual researchers. In addition, NSF has expanded outreach efforts to EPSCoR states. In the last two years, program officers from NSF research directorates have made more than 230 trips to EPSCoR states to describe research opportunities and explain NSF policies and procedures that govern proposal submission.

Question. I know that NSF has been trying to include more researchers from EPSCoR States on advisory and peer review committees. What progress are you making?

Answer. Participation in NSF review and advisory panels provides familiarity with NSF programs, characteristics of successful proposals, and contacts across the national research community. In fiscal year 1996, the EPSCoR program distributed its first list of over 1,900 highly qualified EPSCoR scientists and engineers to NSF research programs with the objective of increasing their involvement in these important activities. By the end of fiscal year 1998, the most recent year for which NSF has complete data, a total of 385 EPSCoR scientists and engineers had been used by NSF programs as reviewers and panelists. This number is approximately 16 percent above the fiscal year 1996 benchmark.

QUESTIONS SUBMITTED BY SENATOR CRAIG

Question. As you know, Idaho participates in the Experimental Program to Stimulate Competitive Research (EPSCoR). This program has been very helpful to the state in developing its research capacity. We are making progress, but we need to make more. How can we expand EPSCoR in order to become competitive for some of the larger research and center grants at NSF?

Answer. NSF is undertaking a number of efforts to improve the competitiveness of EPSCoR states. In fiscal year 1998, NSF expanded outreach activities in EPSCoR states, increasing opportunities for NSF program staff to meet on-site with institutions, researchers, and administrators. These outreach visits provide information on funding opportunities across NSF research programs. EPSCoR states report that meeting directly with NSF staff provides important insights into the requirements for submitting proposals to NSF. Several EPSCoR states share Idaho's interest in the large-scale research and center grant programs and have asked relevant NSF staff to attend state EPSCoR meetings, make presentations, and/or meet with selected researchers. We strongly encourage those research faculty interested in becoming competitive for such awards to contact cognizant NSF program officers to request outreach activities; EPSCoR staff can assist in making appropriate contacts. To date, more than 230 program staff have participated in the EPSCoR outreach effort, including six outreach visits to Idaho.

Question. What steps can NSF take to insure that EPSCoR states such as Idaho participate fully in new NSF research initiatives?

Answer. In addition to numerous NSF outreach efforts, the American Association for the Advancement of Science (AAAS) has received an NSF award to assist EPSCoR states in increasing participation in new program initiatives at both NSF and other federal agencies. For example, AAAS conducted a workshop in Coeur d'Alene for individuals interested in applying to Small Business and Innovation Research (SBIR) programs administered out of a number of federal research and development (R&D) agencies. Following this workshop, AAAS provided technical assistance to Idaho small businesses to aid in preparation of their proposals. Currently, AAAS is planning a similar effort that will assist Idaho researchers in gaining an increased understanding of emerging opportunities in environmental science research.

Question. Telecommunications and networking are very important to the University of Idaho and other institutions in our state. The University has received a BNS award from NSF, which will allow it to connect to the high speed network. How can we ensure that our institutions will now participate in the research and applications for the high speed networks?

Answer. Many academic institutions have questions regarding how and when to integrate advanced networking resources. These institutions need to develop financial and technical plans to integrate these new technologies into their ongoing research and education activities. As a result, the Foundation has put into place additional support, outreach, and planning capabilities for such institutions. A project funded by NSF will help institutions to obtain technical information, planning assistance, and communications/networking analysis needed for integrating advanced networking functions into their operations.

More specifically, NSF is considering a series of planning workshops designed to enable:

- campus Chief Information Officers, researchers, and partners to provide advice on the nature of programs and requirements following the period of the vBNS cooperative agreement
- institutions and regions to evaluate their readiness for advanced networking, and to plan and provide input regarding their related requirements; and
- the Partnerships in Advanced Computational Infrastructure and the leading edge supercomputing sites to evaluate and make recommendations regarding future networking resource needs, and means for enhancing education, outreach and training activities and broadening the spectrum of institutions involved.

NSF is also in the early stages of exploring how best to more deeply involve these institutions in collaborative research in universal libraries.

In addition to bringing computing and high-speed networking connections to EPSCoR states, NSF has undertaken two actions to increase EPSCoR researchers' understanding of potential uses of this infrastructure and to strengthen their ability to compete effectively for awards. First, NSF has expanded its outreach efforts to EPSCoR states. Site visits by NSF program officers provide a good opportunity for EPSCoR researchers to talk to NSF program staff about potential networking applications. Second, the AAAS is assisting EPSCoR institutions and researchers who want to submit proposals utilizing the networking infrastructure that has been ex-

tended to EPSCoR institutions. Working closely with NSF and EPSCoR state Project Directors, AAAS has conducted regional conferences and provided technical assistance for individual researchers.

NATIONAL SCIENCE BOARD

QUESTIONS SUBMITTED BY SENATOR BOND

DEVELOPMENT OF IT²

Question. While the goals of the initiative seem worthy, I am concerned that this idea may have been driven by the White House and not something that was developed in response to demands of the scientific community. What are the

Board's views on IT²? What kind of feedback have you heard regarding this initiative?

Answer. Increasing the Federal investment in information technology, as proposed by the Administration, has received the support of the NSB in a resolution (NSB 98-212) passed on November 19, 1998. The Board thoroughly reviewed NSF's IT² proposal, was briefed by PITAC on its findings, and concluded that the proposed increase represents a solid investment in a rapidly changing area. In specific terms, Moore's Law holds that the productivity of computer information technology doubles every 18 months. That's been the rate since 1980. Projections suggest that this rate of growth will continue for another 15 years. Such a scientific record of productivity growth, combined with the prospects of continued change, was a critical element in the NSB discussions and resolution.

As for community feedback on the initiative, I can report that communications to Board members have been enthusiastic. In addition, witnesses before the Subcommittee on Basic Research, House Committee on Science March 16, 1999, expressed support for the initiative, with PITAC Co-chairman Ken Kennedy stating "Our initial response to the program is positive." Speaking at the National Research Council, former NSF Director Erich Bloch applauded the increased investment but urged that to be effective it must be sustained for the long term. And Stephen S. Wolff, of Cisco, strongly supported the principal findings and recommendations of the PITAC report, lauding the Administration's responsiveness in the form of the IT² initiative.

PERFORMANCE MEASURES

Question. This subcommittee has been concerned about the Foundation's failure to provide a budget justification that meets the requirements of the Government Performance and Results Act. We believe that it is important for all NSF initiatives and programs to be identified with specific funding as well as quantifiable goals and milestones. The goal statements for much of the fiscal year 2000 performance plan—especially in the areas of research investments and training—appear to be as general and nonquantitative as last year. What are the Board's views on our concerns?

Answer. The Board supports NSF reliance on quantitative and qualitative indicators as appropriate for capturing outcomes associated with basic research goals. For all parts of the NSF portfolio, quantitative performance measures are being developed where sensible. A Board committee reviewed the development of NSF's strategic and performance plans. It continues to work, through its Committee on Audit and Oversight (A&O) and in conjunction with NSF staff, to improve the quality of GPRA planning and review. I would note that the recent COSEPUP report, *Evaluating Federal Research Programs*, supports qualitative indicators as consistent with GPRA. This is reinforced by the finding from numerous studies that the long-term rate of return on investment in R&D exceeds 30 percent.

MATH AND SCIENCE EDUCATION

Question. This month the National Science Board released a report on math and science education. I understand that this report and its recommendations are in response to the so-called TIMSS report that basically said our middle and high school students are not doing as well in math and science education compared to their international counterparts. Would you please highlight the key findings and recommendations of the Board from this report?

Answer. Triggered by the disturbing TIMSS results, the National Science Board report, "Preparing Our Children: Math and Science Education in the National Interest" (NSB 99-31, March 3, 1999), outlines what can be done to improve math and science achievement. TIMSS helped us calibrate what our students were getting in the classroom relative to their age peers around the world. We learned that U.S.

textbooks, teachers, and the structure of the school day do not promote in-depth learning.

To reduce what the TIMSS analysis discerned—a diluted, “mile-wide” range of material taught at each grade—the Board report recommends local community action in the national interest to:

- Adopt rigorous content standards in math and science that reflect a consensus on skills and knowledge that guides classroom teaching and learning;
- Ensure that teachers are well-prepared in the subjects they ultimately teach; and
- Develop accountability mechanisms that tests students on what they are taught, teachers on the content that prepares students for admission to higher education and the workforce, and schools on their success in educating all students.

Above all, the Board report suggests how scientists and engineers, both individually and through their institutions, can assist in creating a more seamless K–16 system for the teaching and learning of math and science. Scientists and engineers represent a special resource for improving local schools, supporting teachers, and boosting student achievement.

BIOCOMPLEXITY IN THE ENVIRONMENT

Question. Biocomplexity in the Environment has been described as a priority in the NSF budget request. In the past couple years, NSF emphasized a similar theme called “Life and Earth’s Environment.” The increased level and emphasis on Biocomplexity in the Environment also appears to be in contrast to the National Science Board’s position of not establishing a National Institute for the Environment in NSF. Does the Biocomplexity priority mean that you will be revisiting the establishment of a National Institute for the Environment?

Answer. The Board carefully considered the NIE and expressed its views clearly in a resolution (NSB–98–65, March 1998). While the Board concluded that it would not be beneficial to establish an NIE, it concurred on the need for expanding research, education, and assessment on the environment. Consistent with this view, the Board created (NSB–98–161, August 1998) a Task Force on the Environment. Its purpose is twofold: to assist in defining the scope of the Foundation’s role in environmental research, education, and assessment, and in developing policy guidance that NSF will use in designing an appropriate portfolio of activities, consistent with the overall National Science and Technology Council strategy. The Task Force report will be submitted to the Board at its May 1999 meeting.

SUBCOMMITTEE RECESS

Senator MIKULSKI. This subcommittee stands recessed until April 15, when we will take testimony on the VA budget.

Thank you very much.

[Whereupon, at 11:30 a.m., Tuesday, March 23, the subcommittee was recessed, to reconvene subject to the call of the Chair.]

**DEPARTMENTS OF VETERANS AFFAIRS AND
HOUSING AND URBAN DEVELOPMENT AND
INDEPENDENT AGENCIES APPROPRIATIONS
FOR FISCAL YEAR 2000**

THURSDAY, APRIL 15, 1999

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, DC.

The subcommittee met at 9:33 a.m., in room SD-138, Dirksen Senate Office Building, Hon. Christopher S. Bond (chairman) presiding.

Present: Senators Bond, Burns, Craig, Hutchison, Mikulski, Leahy, and Harkin.

DEPARTMENT OF VETERANS AFFAIRS

STATEMENT OF HON. TOGO D. WEST, JR., SECRETARY

ACCOMPANIED BY:

**KENNETH W. KIZER, M.D., M.P.H., UNDER SECRETARY FOR
HEALTH, VETERANS HEALTH ADMINISTRATION
JOSEPH THOMPSON, UNDER SECRETARY FOR BENEFITS, VET-
ERANS BENEFITS ADMINISTRATION
ROGER RAPP, ACTING UNDER SECRETARY FOR MEMORIAL AF-
FAIRS, NATIONAL CEMETERY ADMINISTRATION
MARK CATLETT, DEPUTY ASSISTANT SECRETARY FOR BUDGET**

OPENING STATEMENT OF CHRISTOPHER S. BOND

Senator BOND. Good morning. The subcommittee will come to order.

Today we meet to consider the fiscal year 2000 budget request for the Department of Veterans Affairs. We welcome Secretary Togo West; Under Secretary for Health, Ken Kizer; Under Secretary for Benefits, Joe Thompson; Acting Under Secretary for the National Cemetery Administration, Roger Rapp; Deputy Assistant Secretary for Budget, Mark Catlett; and other VA officials here this morning.

VA's appropriation request totals \$42.5 billion, including \$23.3 billion in mandatory entitlements and \$19.2 billion in discretionary funds. Overall, discretionary spending for VA programs would be \$56 million below the current level under the request submitted to us by OMB.

The request includes \$17.68 billion, a freeze at the current level for medical care, research and other programs within the Veterans Health Administration.

The budget also includes \$912 million for general operating expenses, \$296 million for construction program, and \$97 million for the National Cemetery Administration.

At the outset, let me say that the budget situation that we face this year will be incredibly tough. The caps on discretionary spending are roughly \$30 billion below the fiscal 1999 level. And there is a general agreement on the need for significant additional resources for defense and education spending.

These priorities could further reduce the pot of funds remaining for other discretionary spending items. Unfortunately, the President's budget has made the situation more difficult by increasing spending by almost \$25 billion above the budget caps for various Administration priorities, raising expectations that we simply will be unable to fill.

Sadly, veterans programs were not among those priorities. Compared to many other departments and agencies, VA has fared quite poorly in the Administration's fiscal 2000 budget proposal.

Mr. Secretary, I have to say I am deeply troubled by the budget before us.

While many other programs are proposed for increases in the President's budget, VA would be held at current levels. While we are committed to maintaining the caps, you must set appropriate priorities within those caps.

VA medical care should be among the priorities. The Disabled American Veterans call the budget horribly inadequate, and I think they may not be far off the mark.

The conference agreement on the budget resolution, which is based on assumptions only, assumes an increase of \$1.7 billion for VA medical care. Unfortunately, that is not likely to wind up in terms of dollars available to us for the VA.

Unfortunately, given that these funds are not in the President's budget, and given that the caps represent a real cut below current levels, it will be extremely difficult for us in the Appropriations Committee to find the funds to come anywhere close to what is assumed in the budget resolution.

VA'S MEDICAL CARE PROGRAM

Today, we hope to ascertain with more precision what the needs are in the medical care program.

The Veterans Health Administration recently identified several new critical requirements such as treating veterans suffering from Hepatitis C with a new and very expensive treatment regimen; increasing the emphasis on alternatives to institutional long-term care, which is extremely important in view of the aging veteran population; and the provision of emergency services in non-VA hospitals; not to mention normal inflationary requests.

These requirements top \$1 billion, and most of them are really what we would consider must-do requirements, not discretionary items. Yet, there are no new funds in the President's budget to accommodate these needs. Further exacerbating the problem is the fact that the VA will have less carryover funds next year than it does in the current year.

VA was able to carry almost \$500 million in medical care cost recovery funds from fiscal year 1998 into fiscal year 1999, thus eas-

ing the budgetary situation. Yet, less than half of this amount is projected to carry into fiscal year 2000.

VA's budget is predicated on its ability to come up with at least \$1.1 billion in so-called management efficiencies. Yet, no details of these management efficiencies are provided in the budget. I am very much concerned about this objective and about the lack of detail.

Where are the management efficiencies going to come from? How many hospitals will close their in-patient services? How many additional consolidations will there be? Are these management efficiencies really going to result in better care to more veterans?

In this instance, I have to say: I am from Missouri, and you are going to have to show me.

One has to question whether the goals VA has set for itself are realistic. VA's budget assumes the reduction of about 8,500 FTEs. Last year, VA reduced 3,600 FTEs, but fell short of its own target by about 300 FTEs.

GAO, which submitted testimony today that I will refer to, tells us VA will also fall short of its 1999 target of 2,598 FTEs. The reason is simple: The staff reductions, particularly if they are accomplished through reductions in force, are tremendously difficult even if fully justified.

Despite the downward trend line for staff reductions, VA assumes it will achieve employment reductions more than three times greater than the 1999 estimate. GAO in today's testimony submitted for the record, indicates if the Department fails to meet its savings goals, "VA may need to use less desirable management actions, including large scale employee furloughs that could adversely affect veterans quality of care, especially waiting times."

GAO believes that the VA's transformation is losing momentum and that targets may not be met. Furloughs and other management actions which impact quality of care are not acceptable.

Let me be clear about one thing: I do have a great deal of confidence in the VA medical system. VHA has been engaged for the last three and a half years in a dramatic reorganization and has managed to provide care to more veterans with fewer resources. It discovered there were a lot of wasteful practices in the system and has sought to make better use of the resources at hand.

VA has been moving successfully toward meeting at least two components of the 30-20-10 initiative announced in the fiscal year 1998 budget to decrease per-patient cost by 30 percent and increase the number of patients by 20 percent, by the year 2002 from the 1997 level.

The changes VA has implemented have been remarkable, including a new emphasis on ambulatory services, which involved closing tens of thousands of unneeded in-patient beds and opening up hundreds of outpatient clinics; reducing unneeded administrative staff; establishing primary care case management teams; smarter procurement practices for pharmaceuticals and supplies; and merging the management of many medical facilities.

However, since VA has already implemented scores of major realignments including a reduction of about 18,000 personnel in the past few years, I am just not confident that there are significant opportunities for additional savings without jeopardizing the qual-

ity of care for veterans or—dare I say it—closing under-utilized facilities which VA has not proposed.

I understand, Mr. Secretary, you have vowed there will not be closures. GAO in its testimony says, “This decision seriously threatens the continued progressed of VA’s health system transformation.”

Mr. Secretary, your announcement was perplexing in view of the fact that according to GAO, VA is spending hundreds of millions of dollars operating unneeded VA buildings. These dollars can and should be put to better use for veterans. VA should not be about maintaining buildings, but about providing the best care for veterans.

I am also troubled about whether VA is making promises it cannot keep. Last year, VHA implemented an enrollment system as mandated by the 1996 eligibility reform law. VA chose to allow all veterans, not just the service-connected disabled and low income whom VA is mandated to care for, to sign up for care.

GAO projects that by the end of the year, there will be 4.4 million enrollees, while VA projects to provide care to only 3.6 million veterans.

While we know that not all enrollees will actually use VA medical services, each of them will be entitled to a full benefits package. And while we know the enrollment is only for one year, it creates an expectation that care will be available next year.

The other critical concern that we have in VA’s budget is its reliance on collections from third parties. VA’s budget is predicated on its ability to collect \$749 million in third part reimbursement and co-payments. Collections are to be the only source of increased revenues for VA.

Yet VA has consistently performed quite poorly in this area and probably will fall below its fiscal year 1999 budget target.

The Veterans Service Organizations, in their independent budget, said, “We have lost our faith in the ability of the VHA to collect an adequate amount to make up for any budget shortfalls or to even reach their goal.”

Improvements in this area are clearly essential, and VA ought to give strong consideration to privatizing or at least centralizing this function.

Other critical concerns in the medical care program include whether VA is adequately managing its affiliations with medical schools as it continues its transformation to an outpatient-based system of care; and whether VA is providing adequate support to its special care programs which are so fundamental to VA’s mission, such as spinal cord injury, blind rehabilitation and post-traumatic stress disorder.

VETERAN BENEFITS ADMINISTRATION

On the benefits side, VA’s budget includes an increase of roughly \$50 million for the Veterans Benefits Administration and would provide 440 additional staff in the compensation and pension program.

Additional resources are needed to address the unacceptable backlog of more than 400,000 pending claims and to improve the timeliness and quality of claims processing. While VBA recently

implemented a reorganization similar to that in the Veterans Health Administration, and has underway numerous initiatives aimed at improving the processing of veterans claims, there continues to be an unacceptable length of time to process original disability claims, and it is getting worse, not better.

VBA is lagging far behind its own target of 99 days to process rating-related claims this year, and it is taking more than 190 days to process an original disability claim. And apparently, next year's targets will not be met either. Forcing a veteran to wait more than six months for decisions on a claim is just not acceptable.

We understand there have been some improvements in the quality of claims processing and that you have deemed this a higher priority than timeliness. Clearly, making the right decision on a claim is critical, and this should be of equal if not greater importance than timeliness. But when only about two-thirds of the claims are adjudicated right the first time, there clearly is tremendous room for improvement here as well.

Mr. Secretary, the mission statement of the Veterans Benefit Administration is to provide benefits and services to veterans and their families in a responsive, timely and compassionate manner in recognition of their service to the nation.

I wonder, however, whether a sign which apparently hangs above the desk of an employee of the Washington, DC, Regional Office is more reflective of reality. I understand that that sign reads, "I can only please one person a day, and today ain't your day, and tomorrow isn't looking too good either."

VA claims that customer service is one of its top priorities; yet, according to a recent Washington Post article, a VA review of the Washington, DC, Regional Office found an abysmal state of affairs including a backlog of 10,000 pending cases, many of which were more than six months old. VBA's national objectives of timeliness, quality and customer service, apparently, have not filtered down to this regional office.

I am concerned, Mr. Secretary, despite all of the initiatives that are being undertaken, that the DCRO may not be just one bad apple but reflective of the system generally. This is extremely troubling.

OTHER CONCERNS IN VA'S BUDGET

Other concerns in the VA's budget include VA's decision to slash the state home construction program. This, in our view, is a cost-effective program with a proven record and a backlog of more than \$100 million in priority projects.

Before I close, I also need to say I am very disturbed about what has been reported to us as a pattern of questionable practices at the highest level of the Department. We are not going to go into specific details, but there have been allegations that have come to us from within the Department and elsewhere about waste, excessive travel expenditures, the hiring of limousines, chartered aircraft, lavish parties in honor of non-VA officials financed by the Representation Fund, and other actions which may not be illegal but certainly raise eyebrows.

We have a lot more important issues to discuss than these allegations, and we know the Inspector General is investigating them.

We have referred these to the Inspector General. I am troubled about what we have heard because there is a perception of abuse and morale problems that have been created.

That leads to questions about the commitment of the VA leadership to the mission of the Department. And we will await the review of the Inspector General as to whether there is any basis to these allegations.

We have asked the General Accounting Office to provide a written statement for the record, which I have referenced today, and which provides an excellent overview of some of the critical issues VA faces in its medical system.

I ask unanimous consent that it be included following Secretary West's testimony.

[Pause.]

Senator BOND. Hearing no objection, it will be so ordered.

I will now turn to my ranking member, Senator Mikulski, for her opening statement.

Senator.

STATEMENT OF BARBARA MIKULSKI

Senator MIKULSKI. Thank you very much, Mr. Chairman. And in the interest of time, I ask unanimous consent that my full statement be placed in the record.

Senator BOND. Without objection.

Senator MIKULSKI. Mr. Chairman, since the VA was founded, we have fought two World Wars, a Cold War, a Gulf War, and now our troops are engaged in both peacekeeping operations as well as a war in Yugoslavia.

And this really shows that the conflicts, new conflicts are producing a new generation of people who will be veterans with unique needs.

Today I want to say just simply that we have promised our veterans, our military that if they place themselves in harm's way, that we assure them, when they come back, a grateful nation will have a Veterans Administration that will help them have an education, be able to buy a home, and health care that is deemed necessary.

We want to make sure that promises made are promises kept. And as we look at the budget this year, we want to look at particularly the veterans organization—VA generally, but I believe, as always, focus on VA medical because it is one of our largest areas of spending.

VA set for its goal the 30–20–10 policy objectives, and we will be looking forward to a status report on the 30–20–10 objectives. In addition to that, we want to be sure that issues related to the management of VA are being addressed. I have been concerned for some time about our ability to recoup from third parties or other parties a payment for our medical care.

There are substantial questions that have come up about our ability to recoup essentially what we feel are bona fide areas of collection. VA collections are running behind projections, and there is a need for timely collections.

The medical care budget assumes \$740 million in private insurance collection for fiscal year 2000. This is a \$124 million increase

over 1999. And the GAO has expressed skepticism about the VA's ability to recoup this. This will be essential in terms of our ability to recoup to really be able do the services we want.

In addition to that, in the area of medical care, I hope through the questioning that we can talk about, of course, the unique needs of women and how that is being addressed, particularly in primary care facilities, and also long-term care.

VA is a cameo of what the entire private sector health is facing: The excess beds in acute care; the need to decentralize and make more efficient primary care; and then with people aging in this country, the issues for long-term care; and then how we would meet the needs of veterans through long-term care facilities and even innovative thinking like home health care and assisted living. And we welcome your thoughts on innovative approaches that would meet compelling human need and yet be cost effective.

Also, another area that I am concerned about is the long waiting time for disability benefits. And when I was chair, it took 180 days. We deemed that unacceptable. That was now—gee, Carrie, you were my staffer then—a decade ago, and we have reduced by 12 days. I understand it is 168 now.

At this rate, I am going to have to sign up to be Strom Thurmond's—

Senator BOND. It is 190.

Senator MIKULSKI. Either way, I am going to have to sign up as Strom Thurmond's protege if we are going to do this one day a year—[laughter] aAnd be able to reduce this. However, really, veterans should not have to be in long waiting lines for disability claims. And either we have too many rules, too many regs, or we do not have the modern technology to be able to process the claims in a timely way.

There are other issues that I would like to also raise, but let me say: We are very proud of the VA and that we are grateful for the facilities that are in Maryland. We have flagship institutions, our acute care facility in Baltimore that also does outstanding research. We have Fort Howard that has done an outstanding job in Perry Point that serves emotionally disturbed veterans or those with dementia.

The community-based outpatient clinics that have grown are also meeting needs.

And on another note, you know, I am a big believer in VA medical research because it is practical patient-care research. And what I like about VA medical research is it goes directly to practical patient care, but it also quickly moves into the civilian community. Like at University of Maryland, there is VA and it is staffed by professors and medicine from the University of Maryland.

My recent gall bladder surgery that was all over CNN—so much for medical privacy. [Laughter.]

But it was—the technique, that not only I but others have benefited from, this laparoscopic approach, was developed by Drs. Zucker and Bailey in Baltimore using an aging veteran population that had so many medical complications traditional surgery would have placed them further at risk.

That has now moved into the entire civilian population, saving lives, a quicker, faster return to private sector marketplace. And

this is the kind of way where we can just see what the VA is doing that benefits not only veterans but all of America.

So I look forward to pursuing these lines of questioning.

Thank you very much.

Senator BOND. Thank you very much, Senator Mikulski. We share your pride in the VA medical research. At the Truman VA in Columbia, we work very closely with the University of Missouri at Columbia.

Senator Mikulski did mention the GAO report. And for my colleagues who have not read it, I do commend it to your attention because it gives a broader perspective on some of the issues that we will be dealing with here today.

Senator Leahy, do you have an opening statement?

STATEMENT OF PATRICK LEAHY

Senator LEAHY. Thank you, Mr. Chairman. I will make it brief, because we are also having a markup in Judiciary, and I have to go to that.

I think it is clear VA is facing a financial crisis. The balanced budget agreement of 1997 has flatlined VA health care funding at a time when health care needs of aging veterans has never been greater.

Now, Mr. Secretary, you have been very good to meet with I think just about any member of Congress who has asked you to of either party. You know well the situation the Northern New England veterans are facing. You met with Senator Jeffords and myself and Congressman Sanders at some length on that. I do appreciate that.

We Vermonters appreciate the time and effort you have been giving to our particular situation, the VA Hospital in White River Junction. I still want you up there at some time, so we can show you that.

But, Dr. Kizer, I am so delighted you are coming on Monday. And I think that people are very much looking forward to that meeting. We will try to provide nice weather for you. If it is bad weather—remember, we are very close to New Hampshire, and sometimes the weather comes over to our side. [Laughter.]

But if it is good weather, it is all Vermont weather. [Laughter.]

I know the story of the problems we face in Vermont is being duplicated in a lot of the states around the country. I think—sometimes, I think of you as the fire fighter. You know, you get to the raging fire, you turn on the hose, and a little bit of water comes out. And then we say to you, “Why haven’t you put out the fire?”

We have—you need resources. I hear from veterans who have to wait months for medical appointments or have to travel long distances for care. VA doctors are telling me they are leaving the system, very good doctors that are trained well through the system, that we have a lot of time and effort invested in them. But they are leaving the system because they worry about the future viability of it and all.

But an anesthesiologist who left the VA, he was then hired by a private hospital and then was contracted back to the VA at twice his original salary, and that is—you know, that is not a way of doing it either.

I do not think the Administration's medical care request of \$17.3 billion is adequate. I hope that we can do something about that, we in Congress, and we can consider some of the areas outlined in the independent budget created by veteran service organizations.

Mr. Chairman, I know you and Senator Mikulski struggle with this each year, and I—if I had to figure out how you get that through, I would have probably even less hair than I have now, as I tear it out. [Laughter.]

I will leave, if I might, Mr. Chairman, some questions especially regarding computerized medical records and data control. I will leave those to be submitted for the record, if I might.

Senator BOND. Without objection.

Senator LEAHY. And I ask that my whole statement be put in there.

Senator BOND. Okay.

Senator LEAHY. But I did want to—I did want to express my appreciation of the Secretary's time—the amount of time he has spent with those of us who have concerns.

PREPARED STATEMENT

And I want to express my appreciation to you and to Senator Mikulski for the amount of time you have spent and the amount of time you have spent listening to individual members of this committee.

[The statement follows:]

PREPARED STATEMENT OF SENATOR LEAHY

Mr. Secretary, as we enter the new millennium, it seems clear to me that VA is facing a financial crisis. The Balanced Budget Agreement of 1997 has flat-lined VA health care funding at a time when the health-care needs of aging veterans have never been greater.

Mr. Secretary, you know well the situation that Northern New England veterans are facing. We in Vermont appreciate the time and the effort that you have been giving to our particular situation at the VA hospital in White River Junction. I still want to invite you to come visit us in the near future.

But I know that the story in Vermont is being duplicated in many states around the country. I cannot help but liken your situation to the fireman who turns on the hose only to find a trickle of water instead of a stream. I hear from veterans who have to wait months for medical appointments. I hear from veterans who have to travel long distances for care. I hear from VA doctors who are leaving the system because they are concerned about its future viability. In one case, I know of an anesthesiologist who left the VA, was hired by a private hospital, and then was contracted back by the VA at twice his original salary. I hope that is not indicative of VA's larger efforts to become more efficient.

I do think that the Administration's medical care request of \$17.3 billion is not adequate and I hope that we in Congress can consider areas of concern as outlined in the Independent Budget that was created by veterans service organizations.

Senator BOND. Thank you, Senator Leahy.

As is the practice in this committee, the record will be kept open for seven days for questions from other members of the committee or statements that they wish to add to the record.

And the statements that are—the questions that are submitted, we would appreciate, Mr. Secretary, you responding within five days, five working days if you can, for the record. We will, of course, welcome any additional statements or comments you wish to make.

Let me turn now to Senator Hutchison for any opening statement that she wishes to make.

STATEMENT OF SENATOR KAY BAILEY HUTCHISON

Senator HUTCHISON. Yes. Thank you, Mr. Chairman.

And I do want to say that I noted the distinguished ranking members story of her gall bladder surgery and was pleased that she did not emulate a distinguished former President by showing us her scar. [Laughter.]

Senator BOND. Now, I am out of that. You all can handle that. [Laughter.]

Senator MIKULSKI. Lyndon Johnson.

Senator BOND. Yes.

Senator HUTCHISON. Yes, it was. It was a great Texan, as you know. [Laughter.]

Let me say that I do appreciate the efforts that you are trying to make. And I know that many of your problems are a bigger veteran population and budgets that perhaps, you believe, do not meet the increase in your requests.

But I also want to say that when I see veterans who are—feel that they have not had the promises kept to them that were made to them, it makes me feel like sometimes we are doing new programs and new things for people that have not yet been able to experience these programs. And we are not fully keeping the promises that we have made to people who have already served.

And I would like to think that our priorities are not that skewed, that we do, in fact, keep the promises because so many of these people did serve, they have kept our country free and secure, and I want to make sure that we are a country that keeps its word, even though the people have already done their part.

So with that in mind, I want to say that I think there are some good things you are doing with your budget requests, and then I think there are some problem areas. So I hope that all of us will work together to make sure that we are keeping the promises that we make.

And I would say the biggest is medical care. The veterans expected to have good quality medical care. And I think we ought to be continuing to look for innovative ways to keep that promise. And as we have closed active duty medical facilities or downsized them, the veterans are the ones that have been squeezed out. So I think it is important that we keep as many of the veterans facilities as possible.

My state has almost 2 million veterans. And we have a very active state program. And one of the things that I appreciate that you are doing is sharing in costs where our state is adding to veterans medical care state facilities. You are contributing so that it is less cost for you than having to serve those people without state help, and it is also helpful to the state to have that encouragement.

So the extensions that you are doing in Floresville and Temple with state help, I think, is a good and innovative approach perhaps, which might be helpful in other states as well.

But our state is more veteran supportive than most states, as you know. So we are happy to make the contribution and it helps to have the federal donation to go with that.

But there is one—there are two particular areas in Texas that I want to leave as questions, and I am going to have to leave as some of my other colleagues are, but I would like to have answers. One is the veterans hospital in Kerrville about which Senator Gramm and I wrote to Dr. Kizer in February and the severe downsizing that we are looking at for that facility which serves 17,000 veterans for South Texas. So I hope that we will get a look at that and, hopefully, not see that kind of severe cut with that kind of service.

Second, Texas with its very large number of veterans is broken up into three veterans integrated service networks. The centers controlling these areas are outside the state, and many veterans have said they have a lot of difficulty in getting service through these out-of-state centers.

And I would leave the question with you for an answer on how we are going to improve the integration of these services and if there is any possibility that we could consolidate perhaps into one integrated service so that they would not have to go to separate places out of state where they do not feel that they are able to get as hands-on treatment.

So those are the specific questions that I would like to have written answers for, and in general I share my colleagues' concerns about the number of days that it takes to get medical care.

And I think we must be going in the wrong direction, and I hope that we will try to reverse that knowing, of course, that you do have severe budget constraints, but necessarily I think we have to put the priorities to keeping our word to these people.

Thank you.

Senator BOND. Thank you Senator Hutchison.

Senator Craig.

STATEMENT OF SENATOR LARRY CRAIG

Senator CRAIG. Mr. Chairman, thank you very much for the welcome and letting me spend a few moments sharing some concerns that are not unlike what you have heard from my colleagues.

Let me focus on the budget you have brought to us against our Boise VA Hospital and Center. And I do that—and I do it annually to try to see what current budgets do to ongoing operations in an area that I know something about, because this is a veterans hospital that I visit at least twice a year, and just came away from visiting with that hospital and its director and medical staff a few weeks ago.

So the thing that catches my eye most of all when we lay that facility against your budget are some of these figures. For example, the budget does not provide any money for about a 4.8 percent pay increase, inflationary increase, and the increases in the mandatory workloads.

What your budget does do to a facility that has already met the standards of downsizing and reshaping—and this is also a facility that has been building at our request, building a new outpatient facility, pharmaceutical facility, building a facility to expand another primary care team.

The budget will force a reduction in staff of 5 to 10 percent of the 1999 levels, and that is 2856 full-time employees, and elimi-

nate programs such as substance abuse, potentially, post-traumatic stress disorder, and long-term care.

Now, the reason these are important figures is because of this headline. Mr. Chairman, I want to put this in the record.

Senator BOND. Without objection, it will be so admitted.

Senator CRAIG. It says "600 Idaho Veterans Await Care," not "are not getting care," but are being put on a primary care list, saying—they come because they need help, "But we cannot give you help, so we will put you on a list. You just wait until we get to you," except, of course, for the very extreme cases.

I am not sure that I can figure any way of finding that acceptable. And yet, it is strange that we have modernized this facility. We have made—it is a regional facility by definition in that region of the country, serving almost all of Idaho—except the north end that goes toward Wallawalla—and part of Nevada, parts of eastern Oregon, clear to almost over to the Blue Mountains of Oregon.

So it is a very large facility, serving a regional population. And I am not sure what the numbers are as to that population base.

But we now have created a facility for a fourth primary care team and cut the budget at a time when we knew these demographics were turning on us because of our aging veterans population. And why we have done what we have done there at that facility to expand its capabilities, expecting that 70, 80-plus-year-old World War II vet to be soon coming—well, they are there, and they are standing in lines waiting.

I am not going to let that happen. I cannot let that happen. I do not think this committee is going to let that happen.

So we will work together because I appreciate your challenges. I am not disputing them in any sense of the word. And I am all for wringing out inefficiencies.

The last at least two budget cycles, and maybe three—and I have watched it happen because of my regular visits to that facility. I have watched the inefficiencies come out. I have watched the leaning up and the cleaning up of those staffs. And now, I see a waiting list growing. That is just not acceptable.

And so we will work together to see if we can resolve that because we must for the sake of that facility and all that it does, like others. It has a wonderful working relationship with the University of Washington Medical Center for geriatric care, and it is leading the region, if not the country, in a lot of marvelous work as was reflected by the Senator from Maryland as our VA hospitals and centers do.

But when I am faced with headlines and when I am faced with veterans who are standing in lines that produce those headlines that some 600 are now waiting to be served, then we have a problem. And I hope we can solve it.

Mr. Chairman, I have several questions that I would ask—I am going to have to go to another hearing. And I will submit those for the record. But those questions will be: Where are the efficiencies to come from, reflecting your budget and our cuts and our need to change?

And I have submitted for the record, of course, the news article that really speaks to the hub of the issue and is probably reflective of many centers around the country and how we monitor and han-

dle that situation because I want to go home after this budget cycle and say that—what I would really like to say is that we have put enough in the budget to establish the fourth primary care team as planned, as designed and built for because of the aging populations we knew were coming.

And that is not what we are saying, and that is not what this budget says. That is what I would like to say at the end, and that is what I am going to work for, Mr. Chairman.

Thank you very much.

Senator BOND. Thank you very much, Senator Craig. We will submit your questions for the record.

I would refer you to, as I have all members of the committee, the GAO report on where possible savings might be adopted.

Senator CRAIG. Yes.

Senator BOND. And also we have attempted in each year to provide more funds than requested in the President's budget, but there is still very, very extreme stress throughout the VA system.

With that, Mr. Secretary, we are ready for your testimony. We will, of course, have the full statement that you have submitted as part of the record, and would ask, if you could, to summarize for perhaps about ten minutes. And we will have some questions, orally. And then it appears that you will have a bounty of questions to answer for the record.

So, Mr. Secretary, welcome to the committee.

STATEMENT OF TOGO D. WEST, JR.

Mr. WEST. Thank you Mr. Chairman. You have already identified the members seated at the table with me.

Mr. Chairman, members of the committee, I thank you for the opportunity to appear before you to present and discuss the President's proposed budget for the Department of Veterans Affairs for fiscal year 2000.

The total budget authority is \$43.6 billion. It is devoted to continue to provide high-quality care and services for our veterans and their families. It is a commitment, as you have also pointed out, and other members of the committee, within the broad principles of fiscal responsibility to which both this body and this Administration are committed.

Statutory caps on spending have undeniably affected this budget request, as they have to a greater or lesser extent, for every other department or agency in the Executive Branch.

On the other hand, that discipline has, to the credit of both the Congress and the President, produced a level of economic performance that benefits veterans and Americans, I might also add, to the credit of Americans everywhere.

Nonetheless, the improvements that VA has accomplished in recent years and that we produce in this budget are based on our continued mission of providing the highest quality of care and service.

Our goal, Mr. Chairman and members of the committee, is to provide full enrollment of veterans for health care. And then to provide to those veterans the quality of treatment to which they are entitled.

Transformation, as has been noted several times by this subcommittee, of VA health care, that is the Veterans Health Administration, is well underway. And we are now beginning to turn our attention to the transformation of the benefits delivery system.

For veterans health care, the Veterans Health Administration's emphasis will continue to be to improve both its quality and its access; to continue to bring more health care to more veterans, closer to where they are and in circumstances that are conducive to the treatment they require.

The budget provides \$18.1 billion for health care, which includes \$749 million in medical collections, to support 174,420 FTE to provide medical care to eligible veterans. This is an increase, when added together, of \$200 million over the 1999 enacted amount. We plan to provide for 3.6 million patients, 54,000 more than in fiscal year 1999.

We intend to support more than 673,000 inpatient visits to VA medical centers and 40 million visits to outpatient clinics.

We are proposing \$50 million in additional funding for homeless veterans, \$40 million in health care, and \$10 million in mandatory transitional housing subsidies.

We are continuing our aggressive response to Hepatitis C infection among veterans by increasing the \$114 million set aside in 1999 to \$250 million in fiscal year 2000.

The budget also proposes to increase spending by \$106 million in VA's long-term care alternative programs, and offers continued support for our goal that has been mentioned several times here, to decrease the cost of caring for each patient by 30 percent from the 1997 baseline; to increase the number of patients treated by 20 percent; and to increase alternative sources of revenue to augment our budget by 10 percent of the direct appropriation.

This budget of \$316 million will support more than 2,104 high-priority research projects. This level of funding, Mr. Chairman and members of the committee, will maintain operations in VA medical research centers in the areas of Gulf War illness, diabetes, Parkinson's disease, spinal cord injury, prostate cancer, depression, environmental hazards, women's health issues, and VA rehabilitation centers.

We view this research effort as an opportunity to continue our focus on VA's core competencies and to insure that we maintain our leading edge in treating our veterans with special needs. We believe that by continuing to research illnesses associated with our veterans' experience in the Gulf War, for example, we will be better able to address their health care concerns, and we will also generate confidence in our commitment to that important veterans population.

Our research efforts on behalf of women veterans should move us forward in caring for a traditionally under-served population. The fact is, as more women serve in our military, they must be certain, they must be assured, that they, as veterans, will receive the same high-quality treatment our male veterans have long enjoyed. We intend to provide that certainty.

Last year, the Administration proposed a three-year demonstration program to collect reimbursement from Medicare for health care services provided to Medicare eligible veterans, upper income

veterans without compensable disabilities. We make that proposal again this year, Mr. Chairman. Beginning in fiscal year 2000, it is the Department of Veterans Affairs' top legislative priority.

Funding generated from this program is not included in our fiscal year 2000 budget proposal, however. If it is enacted, VA will accrue some additional revenues in fiscal year 2000.

I point out, that Medicare subvention is budget-neutral and adds no additional costs to the overall budget. It will allow us to bill Medicare at rates lower than those in the private sector and provide veterans with additional options in selecting high-quality health care.

Our current emphasis in the Veterans Benefits Administration is to ensure that we are on a path to improve our system, so that it ensures veterans that we are handling their claims quickly, and more importantly, that we are handling them correctly.

Our budget for the discretionary portion of VBA budget is some \$860 million, supporting 11,437 FTE. That amount represents a \$49.6 million increase over the 1999 budget, and an additional 164 FTE. With that increase, combined with transferring FTEs from other areas within VBA, we will be able to move 440 additional claims decisionmakers into the claims process in fiscal year 2000 for the purpose of bringing improvement to timeliness and quality of claims processing.

And we propose in this budget to invest \$30 million in information technology; a down-payment, if you will, to re-engineer our regional offices and move us toward an electronically based claims processing system; perhaps one of the single best promises of long-term permanent improvement in the timeliness and accuracy of processing.

We ask for \$21.6 billion to provide compensation, pension, and burial allowances for more than 3 million veterans and their families.

In fiscal year 1998, Mr. Chairman and members of the subcommittee, some 550,000 veterans died. That's a rate of approximately 1,500 a day. We are told by the estimates of the National Cemetery Administration that those numbers of deaths will increase until the year 2008, when they will peak.

We are responding to this continuing increase by building new national cemeteries, by extending the service life of existing cemeteries, and by encouraging states to build state veterans cemeteries.

The request this year for operating our cemeteries, \$97 million, is \$5 million more than the 1999 enacted level. It includes \$153,000 and 23 FTE for the activation of four new national cemeteries and their initial operation in Ohio, New York, Texas, and Illinois; more openings than at any other time in the history of the system.

With the opening of these four new cemeteries, we anticipate that 77 percent of the nation's veteran population will live within a reasonable distance of a veterans cemetery, reasonable distance being defined as roughly 75 to 80 miles.

In grants, we requested \$11 million for the state veterans cemeteries program. We have requested \$40 million for the state extended care program. We have requested \$31.6 million for the

homeless grant and per diem program, an increase of \$12 million over last year's budget. Of that latter amount, \$7 million will be targeted for grants and \$24 million will be for per diem.

Mr. Chairman, we believe that in delivering to you and to the committee, the fiscal year 2000 budget, it is a workable budget. Though, as you and others have pointed out, it is admittedly challenging. It is a budget that we intend will provide for continuing increases in access to primary health care for our veterans.

It is a budget that will continue to maintain the specialty programs our veterans rely on VA for which they know that VA can provide, when other medical facilities may not always be able to meet that need.

It is a budget that provides assurances that there will be improvements in claims processing, especially in accuracy, but we will not neglect timeliness, as well.

And it provides assurances that when our veterans' lives have ended, they will be treated honorably. They will find their final resting place, a place of honor, located within a reasonable distance of their families.

PREPARED STATEMENT

We believe these are worthy objectives, Mr. Chairman. We seek your support for this budget, and of this committee.

We are ready to answer your questions.

[The statement follows:]

PREPARED STATEMENT OF TOGO D. WEST, JR.

I. INTRODUCTORY REMARKS

Mr. Chairman and members of the Subcommittee, the President's budget for fiscal year 2000 reflects a sincere effort to meet the Nation's obligations to its veterans in a fiscally responsible way. There is no question that the statutory caps on spending, as agreed between the Administration and Congress, constrain the request for funding for this Department as they do for every other department and agency. On the other hand, it is also undeniable that this fiscal discipline has produced economic performance that benefits veterans as well as all other Americans.

Nonetheless, the accomplishments we have achieved and the improvements we propose with this budget represent strides in our mission of providing top-quality care and services. The transformation that is well underway in our health-care system, and just beginning in our benefits-delivery system, is powered by an absolute dedication to that mission. Fundamental change in our service-delivery systems is a prerequisite to dramatically improve performance.

This change in where and how we provide care and services is difficult and sometimes controversial. It has been and must continue to be accomplished in full consultation with veterans and other stakeholders. We have found that many of the health-care changes questioned a few years ago are now applauded as significant steps toward better care. Better access through Community Based Outpatient Clinics (CBOCs), primary care, and improved quality are results of the changes we have made. Approval of "Buy-Out" legislation and Medicare Subvention would better enable us to accomplish our mission. We expect the same transformation of our benefits-delivery system. Our comprehensive approach to benefits processing strives for accuracy and real-time information on the status of veterans' claims. Timeliness will get better when we process claims correctly the first time, and claimants' satisfaction with our system will improve as they are kept better informed throughout the process.

II. HIGHLIGHTS OF DEPARTMENT OF VETERANS AFFAIRS (VA) FISCAL YEAR 2000 BUDGET SUBMISSION

Our budget request builds on VA's previous accomplishments and positions us for the future. Here are some of the highlights of our request.

For the Veterans Health Administration (VHA)

The budget provides \$18.1 billion, including \$749 million in medical collections, to provide medical care to eligible veterans. VA will open 89 new outpatient clinics and treat 54,000 more patients in 2000 than in 1999, a 1.5 percent increase.

We are proposing \$50 million in additional funding to help homeless veterans, including \$40 million in medical care and \$10 million in mandatory transitional housing subsidies. We are asking for a \$136 million increase in VA's efforts to combat Hepatitis C and an increase of \$106 million in VA's long-term care alternative programs.

While not included in the budget, the Administration will continue to seek authorization of a pilot program whereby VA could receive reimbursement from Medicare for covered services provided to certain Medicare-eligible veterans. This program will help us to increase alternative revenues.

The budget includes a legislative proposal to authorize VA to cover the cost of out-of-network emergency care for enrolled veterans with compensable disabilities related to military service. This legislation would ensure that these veterans have access to emergency care when treatment in VA facilities is not an option.

For the Veterans Benefits Administration (VBA)

For benefits processing, the budget provides \$860 million, \$49 million more than the funding level enacted in 1999. This is a six percent increase and will ensure that compensation, pension, education, and housing benefits to veterans will continue to be delivered while we continue the process of reengineering the way we deliver benefits. Four hundred and forty FTE will be added to help us process disability claims more efficiently.

For the National Cemetery Administration (NCA)

The budget requests \$97 million, \$5 million more than the fiscal year 1999 enacted level, for the operations of the National Cemetery Administration. This increase will provide funding for the activation and first year operations of four new National Cemeteries.

In other areas (Construction, the Capital Asset Fund, and Smoking Cessation)

We are requesting new budget authority of \$296 million for the Department's construction programs. Our request provides funding for four major construction projects and provides resources for minor construction, a proposed new Capital Asset Fund, and grants for State veteran's nursing homes and cemeteries.

The Capital Asset Fund is a proposal that would authorize the establishment of a five-year pilot program allowing VA to sell, transfer, or exchange its excess properties and keep 90 percent of the proceeds. VA would then reinvest those proceeds into non-recurring capital needs to benefit veterans.

A significant portion of the money from the fund would be retained by the local area or network in which the property has been disposed. This proposal would also direct ten percent of the net proceeds from sales to local continuum of care for the homeless through the Department of Housing and Urban Development. That money would include assistance to local homeless veterans. We are asking for authority to spend \$10 million in fiscal year 2000 to fund the administrative start-up costs of the program.

We're also asking for \$56 million to establish smoking cessation programs for veterans who began to smoke during military service. This program will be designed to reach veterans throughout the country by using contractors.

III. IMPROVED VA STRATEGIC PLANNING PROCESSES

As a Department, we are placing greater focus on the outcome of our actions and policies. As we develop our long-term vision for the Department and our goals, we are placing greater emphasis on understanding the impact our programs have on veterans and their families. We believe this will help us to better link our resources to programs that benefit our veterans.

IV. ADDITIONAL INFORMATION

Mr. Chairman, those are the highlights of our fiscal year 2000 budget request. Let me now provide you with some additional details.

On VHA's Budget

In the area of health-care for veterans, our fiscal year 2000 request recognizes the dramatic changes that have occurred in the past four years. In that time, we have changed the organizational structure of the Veterans Health Administration. We have found new ways to help fund our medical programs. We have gotten rid of con-

flicting and confusing rules on eligibility. And we have changed the culture of VA health-care.

In addition, we have increased the number of veterans treated, improved the quality of our care, and improved customer satisfaction. At the same time, we have reduced the per-patient cost of providing care.

The goal of our Department is to provide world-class quality health-care to as many veterans as possible. We will continue to insure that taxpayers receive full value for the funds they entrust to us. Our resources will continue to be shifted from inpatient specialty care to primary care delivered on an outpatient basis.

VA has successfully organized a system of coordinated health-care delivery focused on continuous quality improvement that is patient-oriented, ambulatory care-based and results driven. We now treat patients in the most appropriate settings for their problems. Veterans have embraced the use of primary care providers and care teams for their health needs.

These strategies will assure the viability of the health-care system well into the next century. They will also prepare VA to continue to meet the diverse health-care needs of the veteran population. We believe that the new VA system should serve as a model for future integrated health-care systems, both public and private.

In 1998, our Department committed to the goals of reducing per-patient cost for health-care by 30 percent, serving 20 percent more veterans, and increasing alternative revenue sources to 10 percent of all Medical Care funding. VA is still committed to meeting these goals, while assuring that quality of care is maintained in our system.

VA is on track towards its long-range goals of 30/20/10. Compared to the 1997 baseline, we project the following results in fiscal year 2000: reduce per-patient cost by 18 percent, serve 16 percent more veterans, and increase non-appropriated funding to 5.1 percent of the Medical Care budget.

This will be accomplished in large measure by continuing to shift excess acute inpatient resources to expand and enhance outpatient care and other types of care in the most appropriate setting.

Medicare subvention would allow VA to collect funds from Medicare for health-care services provided to Medicare eligible, higher income veterans without compensable disabilities. Adoption of this demonstration program is VA's top legislative priority.

We urge you to work with us this year to ensure Congress passes a demonstration project as soon as possible.

We will not be able to obtain 10 percent of our funding from alternative revenue sources in the future if Congress does not pass the Medicare subvention pilot legislation. If this pilot proves successful in improving outcomes and lowering costs, our goal would be to open up VA reimbursement throughout the system. I ask for your support of the Administration's proposal in this area.

I have already highlighted some of the major aspects of VHA's \$18.1 billion budget. The \$106 million we requested for additional long-term care will allow us to expand our home and community-based care programs for our older veterans. The \$50 million for homeless programs will allow us to support 1,385 new community-based beds and treat 12,000 more homeless veterans.

VA is also proposing a change in appropriation language. It would provide for two-year spending availability for up to 5 percent of our resources, excluding those funds set aside due the required deferral of funds medical equipment.

We support this proposal because it promotes more rational spending decisions and recognizes the need for management flexibility during this period of significant change for VA health-care.

As I mentioned earlier, the Administration is requesting authorization of a new smoking-cessation program for any honorably discharged veteran who began smoking in the military. The program would be delivered by private providers on a per capita basis. Any veterans who began smoking in the military would be eligible for this new program, to the extent resources are available. The Administration will seek authorization of this program in the near future.

Once this program is authorized, the Administration will submit a budget amendment requesting an appropriation of \$56 million for this new activity. It is estimated that between 500,000 and 600,000 veterans would avail themselves of this valuable program over the next five years.

For Medical and Prosthetic Research, a total of \$316 million and 2,838 employees will support more than 2,100 high priority research projects to enhance the quality of health-care of the veteran population. This level of funding will allow us to maintain the operation of research centers in the areas of Gulf War veterans' illnesses, diabetes, Parkinson's disease, spinal cord injury, cancer, prostate disease, depres-

sion, environmental hazards, women's issues, as well as rehabilitation centers and Health Service Research and Development field programs.

In these areas, no other federally supported clinical or research entity can initiate or complete such critical and ambitious research activities on behalf of America's veterans. Our Department will continue to increase the amount of non-appropriated research funding we receive from the private and public sectors.

The Balanced Budget Act of 1997, Public Law 105-33, allows VA to retain all collections from third parties, copayments, per diems, and certain torts after June 30, 1997. These collections are deposited in the Medical Care Collections Fund and are available for transfer to the Medical Care appropriation. The funds remain available to VA until they are expended.

For fiscal year 2000, VA estimates that more than \$761 million will be collected through this effort and revenues will grow to over \$1.2 billion by 2004. To accomplish this growth, we are in the process of changing our billing rates to reasonable charges for inpatient and outpatient procedures; identifying more patients having insurance; and improving our debt collection efforts.

The Medical Administration and Miscellaneous Operating Expenses, or MAMOE, activity is requesting \$61.2 million in appropriations to fund 573 employees who will support VHA operations in fiscal year 2000. Transfers of \$415,000 and \$7.1 million in reimbursements will supplement these funds.

This request is somewhat different from past years in that it includes reimbursement authority for activities related to the Facilities Management Service-delivery Office. Facilities Management will begin to receive reimbursement from VHA, VBA and NCA for field-related project management.

This reimbursement will allow VA to use appropriated funds to hire additional staff in the areas of quality management and performance measurement. Capital policy activities will continue to be funded by the appropriation.

ON VBA'S BUDGET

For five years, I have traveled throughout this country, first as the Secretary of the Army and later as the Secretary of Veterans Affairs, talking with servicemembers and veterans. I never fail to hear from veterans about issues of veterans benefits. And, every veteran applying for benefits is concerned about the length and quality of the decision-making process. I am a lawyer, and my profession has a saying, "Justice delayed is Justice denied." This means that, in effect, for every day a decision is delayed, that benefit is, in fact, denied.

Yet, timeliness is not the only criteria. It is of no use to our veterans for us to process their claims with record speed if we get it wrong. Accuracy is also critical. The number of appeals and remands for additional information take up too much staff time, and, more importantly, too much of our veterans' time.

This budget emphasizes a commitment to restoring the Veterans Benefits Administration's credibility and trust. Through several leadership initiatives, VA seeks to reverse negative perceptions and make the goal of "world class customer service" a reality.

The Veterans Benefits Administration has developed four overall themes that it intends to address. These include: restoring VBA credibility and trust; achieving dramatic progress in improving performance; building knowledge regarding program outcomes; and establishing a rational resource acquisition and investment approach.

The Balanced Scorecard is VBA's centerpiece for establishing a clear process for setting strategic objectives and priorities and for measuring the progress they have achieved. VBA's fiscal year 2000 budget request is \$860 million and 11,437 full-time equivalent employees or FTE. This represents an increase of \$49 million and 164 FTE above the 1999 level. By combining this increase in the number of employees with positions available due to efficiencies in other areas, VBA will be able to increase its number of benefits adjudicators by 440.

Demographics indicate that many of our experienced employees will be retiring within the next five to eight years. In order to avoid a two to three year skill gap, which will exacerbate our service-delivery challenges, we must stabilize the Compensation and Pension workforce for the future by hiring and training additional resources immediately, before the actual losses occur.

Our compensation and pension objectives include working towards the goals of completing rating-related actions in 74 average processing days, completing non-rating actions in 17 average processing days, achieving 96 percent national accuracy rate for core adjudicative rating work, and attaining 90 percent overall satisfaction among veterans with the way claims are handled.

Besides the electronic claims processing pilot project I mentioned earlier, here are some other initiatives we are taking to meet these goals:

We have developed a multi-year initiative, which requires funding, for four comprehensive training, performance support, and certification systems for service-delivery positions. The four systems are for new rating specialists; veterans service representatives; advanced rating specialists; and decision-review officers.

We are currently developing formal partnership agreements with veterans service organizations, both at the national and local level. The partnership agreements will allow us to train service organization representatives to properly submit fully developed claims and will allow them to access VBA information systems. This will allow VBA employees to devote their time to decision-making, not claims development.

We are asking for funds to continue an initiative that will provide claims development, disability examinations, and rating decisions for service persons awaiting discharge from active duty. VA plans to have transition teams present at each of the 20 largest military separation points in the U.S. and to support, on a part-time basis, about 30 additional sites. This should allow VA to reach about 80 percent of all DOD separatees.

Our Systematic Technical Accuracy Review, or STAR, program will improve the accuracy of C&P claims processing by implementing a new national accuracy review program to provide current and diagnostic information about the accuracy of the work being produced at VA regional offices. We have requested funds for additional staffing, the creation of a database, and administrative expenses to aggressively implement this program.

VBA intends to merge Adjudication and Veterans Services Divisions in all of its regional offices. Through this program, called the "Conversion to Service Center" initiative, veterans will interact directly with the VA employees processing their claims. They will receive more specific information on their claims' status, and they will also know what evidence is needed for decisions and what they can do to expedite action.

Funds requested for the enhancement of education activities include providing for expanding imaging technology. Imaging technology now in use for claims processing in Atlanta and St. Louis will be extended to Muskogee and Buffalo throughout fiscal year 2000.

The budget request for the housing program assumes that, if it is cost effective, VA will join other Federal housing loan guaranty programs and eliminate the in-house home-loan property management and disposal activities of foreclosed homes by using discretionary authority current law grants the Department.

VBA will contract for an A-76 study in 1999 to ensure the most cost-effective approach for disposing of foreclosed properties. This study will include a comparative analysis of selling foreclosed properties for cash versus direct VA financing.

Funding has also been included in this budget to provide for financial accounting improvements the housing program needs. When completed, these improvements will enable the Loan Guaranty general ledger system to meet Federal Financial Management Integrity Act requirements. This is necessary in order for VA to achieve an unqualified audit opinion on their annual financial statements.

Administrative expenses to support the insurance program are made available from excess earnings from the National Service Life Insurance, United States Government Life Insurance and Veterans Special Life Insurance programs.

Also included for this program is a new initiative to promote insurance self-service. The insurance program has experienced significant success with its interactive voice response system. This initiative will be the next step in expanding veterans' direct access to their insurance records and benefits.

In this budget, we are requesting \$10 million to expand a current on-going pilot program on electronic claims processing. VBA is working with a consortium of five companies to develop an electronic work environment through imaging and other technologies. We expect to see improvements in customer service, processing timeliness and accuracy as a result. If successful, this demonstration project will pave the way for a significant reengineering of how claims are processed.

VA's benefits programs provide assistance to veterans in recognition of their service to their country and to aid their transition to civilian life. The Administration is requesting \$21.6 billion to support fiscal year 2000 compensation payments to 2.3 million veterans, 300,000 survivors and 633 children of Vietnam veterans who were born with spina bifida, and to support pension payments to 381,000 veterans and 268,000 survivors.

We propose to provide a cost-of-living adjustment, or COLA, based on the change in the Consumer Price Index, to all compensation beneficiaries, including spouses and children receiving dependency and indemnity compensation. The percentage of the COLA is currently estimated at 2.4 percent, which is the same percentage that will be provided, under current law, to veterans pension and Social Security recipi-

ents. The increase would be effective December 1, 1999, and would cost an estimated \$293 million during 2000.

If Congress approves, VA will pay full disability benefits to Filipino veterans residing in the United States who currently receive benefits at half the level that U.S. veterans receive. The cost of this legislation is estimated to be \$25 million over five years.

VA also proposes to charge a fee to lenders participating in VA's Home Loan Program. The fee would give VA the authority to charge lenders a fee of \$25 for each VA loan that is guaranteed. The fees would be earmarked for use in developing, maintaining, and enhancing a VA Loan Information System that would interact with the information systems used by lenders.

Also relating to benefits, an appropriation of \$1.5 billion is being requested for the Readjustment Benefits program. The money will provide education opportunities to veterans and eligible dependents and for various special assistance programs for disabled veterans.

Education benefits will be provided for about 450,000 trainees in fiscal year 2000 including 281,000 training under the Montgomery GI Bill. This request includes funds for the annual Consumer Price Index adjustment, which is estimated to be 1.8 percent effective October 1, 1999, for education programs.

On NCA's Budget

In fiscal year 1998, approximately 550,000 veterans died—nearly 1,500 a day. The National Cemetery Administration estimates that the annual number of veterans' deaths will peak in the year 2008 before beginning to decrease. NCA is preparing for this increase by building national cemeteries, extending the service life of existing cemeteries, and encouraging states to build state veterans cemeteries.

Our request for the NCA continues to position VA to meet these future requirements. The request includes funding and new employees to address the fiscal year 2000 growth in interment workloads at existing cemeteries, including anticipated growth at the new Tahoma National Cemetery. This cemetery will experience the accelerated workload increase typical of a new cemetery, which is far in excess of the annual growth rates of mature cemeteries.

It includes additional funding and FTE to continue the activation of the new Cleveland-area national cemetery, and for the first full year of operations at the new Abraham Lincoln National Cemetery near Chicago, the new Dallas/Ft. Worth National Cemetery, and the new Saratoga National Cemetery near Albany, NY.

It also includes funding to replace some cemetery equipment that has exceeded its useful life, for customer service initiatives, and to cover the increased cost of an integrated data communications project.

V. ADDITIONAL FUNDING REQUESTS

For General Administration

VA is asking for \$206 million in funding for the Office of the Secretary, six Assistant Secretaries and three VA-level staff offices. This request, along with \$4.7 million associated with credit reform funding, will provide a total resource level of \$210.7 million.

When compared to the original fiscal year 1999 appropriation, the fiscal year 2000 request is \$7 million higher. The budget authority, along with \$117 million in estimated reimbursements, will provide for an estimated total authority for obligations of \$323 million in fiscal year 2000. FTE will increase by 111 in fiscal year 2000 from the 1999 current estimate of 2,490. This increase occurs primarily in the reimbursable activities.

Here are some of the areas where we will use this increased funding and number of employees.

For the Board of Veterans' Appeals

We are requesting \$41.5 million in funding for the Board of Veterans' Appeals for fiscal year 2000. The Board's marked improvement in timeliness, increase in productivity, and reduction of the appeals backlog in fiscal years 1995 through 1998 exceeded our most optimistic expectations.

This level of funding will give us the opportunity to continue to improve our timeliness in this area. BVA and VBA have adopted a joint performance indicator that is a system-wide measure of how long it takes to resolve an appeal made by a veteran. In fiscal year 2000, we project that it will take an average of 545 days—45 fewer days than we anticipated it to take in 1999.

For the Office of Information and Technology

This is the first budget request since the reorganization of the Office of Financial Management that resulted in the information management function being moved to the newly created Office of Information and Technology.

VA's newly created Office of Information and Technology is requesting budget authority of \$21.3 million and an average employment of 217 to support VA Information Technology policy and program assistance, the VACO Campus Office Automation Platform and Local Area Network, and other efforts. The Austin Automation Center is separately supported by the Franchise Fund. Budget authority and \$43.1 million in net reimbursements will provide an estimated obligation availability of \$64.4 million in fiscal year 2000.

The Department is on schedule in meeting the Y2K challenge. In fiscal year 1999, we have met the timeframes for bringing all of our systems into production by March. This gives us nine months to address any remaining issues.

For the Office of Human Resources and Administration

The Office of Human Resources and Administration (HR&A) is requesting \$105.4 million in total obligation authority and an average employment figure of 806. The requested budget authority is \$48.7 million. Included in this figure is \$450,000 for program oversight of the arming of VA police officers.

The total figure for HR&A reimbursements is \$56.7 million. This includes \$28.3 million and 235 FTE for HR LINK\$ and \$27.7 million and 260 FTE for the Office of Resolution Management (ORM). In fiscal year 2000, the Department is again requesting that the operations of ORM and Office of Employment Discrimination Complaint Adjudication (OEDCA) located in the Office of the Secretary be funded through reimbursement from its customers.

In summary, a total appropriation of \$912.4 million is requested for the General Operating Expenses (GOE), \$706.4 for VBA and \$206 million for General Administration in fiscal year 2000. This funding level, combined with \$158.1 million of administrative costs associated with VA's credit programs, which are funded in the loan program accounts under credit reform provisions; \$10.7 million in reimbursements from the Compensation and Pensions account for costs associated with the implementation of the Omnibus Budget Reconciliation Act of 1990 as amended; and \$36.8 million from insurance funds' excess revenues, together with other reimbursable authority, will provide \$1.255 billion to support operations in the GOE account.

On the Office of the Inspector General's Budget

To support the Office of the Inspector General in fiscal year 2000, \$43.2 million and an average employment of 374 FTE are requested. This represents an increase of \$7.2 million and an increase of 12 FTE from the 1999 resource level. The increase in budget authority is primarily due to contracting out of financial audit functions and, increases associated with acquiring additional FTE. Contracting out the financial audit will free up 39 FTE. These actions will enable the OIG to staff new initiatives and focus on several priority audits and investigations.

VI. OTHER ISSUES

The VA Capital Investment Board

The Department formally established the VA Capital Investment Board (CIB) in July 1997 and produced the VA's first Capital Plan in 1999. The CIB's membership consists of top management from throughout the Department. The CIB was established primarily to ensure that all significant capital investments are based on sound business principles and also support the VA's strategic and performance goals.

Recognizing the need to enhance capital asset planning for fiscal year 2000, we have initiated a new capital investment planning process to improve the selection methodology for all significant capital assets, including construction, equipment, and information technology, in support of the budget request.

Capital investment proposals that meet specified thresholds (such as major construction projects, equipment, leases and information technology) are scored on how well the project application addresses the 20 sub-attributes of five major criteria.

The five major criteria are: One-VA Customer Service, Return on Taxpayer Investment, High Performing Work Force, Risk, and Comparison to Alternatives. The first three criteria relate to the Department's strategic goals, while the last two address improved business practices.

All significant capital investment proposals that are requested in the fiscal year 2000 budget have been scored and ranked by the board to ensure that they meet the VA's strategic goals and are sound investments.

The Department capital planning process will be continually refined in order to meet the constantly changing needs of the Department.

Major and Minor Construction

I am requesting new budget authority totaling \$60 million for the major construction program. The major construction request includes funding for a surgical suite project at Kansas City, MO; a spinal cord injury and rehabilitation project at Tampa, FL; a patient environment project at Murfreesboro, TN; and a facility rightsizing and gravesite development project at Leavenworth, KS. Additional funds are provided to remove asbestos from Department-owned buildings and to support advanced planning and design activities.

We are also requesting new budget authority totaling \$175 million for VA's minor construction program. The request will be used to make improvements to ambulatory care settings, patient environment, and VA's aging infrastructure. Funds are also requested for nursing home care, clinical improvements, correction of code deficiencies in existing facilities, and the elimination of fire and safety deficiencies.

Funds requested in the minor construction budget would also support VBA construction requirements and NCA gravesite development and improvements to existing National Cemetery Administration roads and buildings.

State Extended Care Facilities and State Veterans Cemeteries

The fiscal year 2000 request of \$40 million for the Grants for the Construction of State Extended Care Facilities will provide funding to assist States to establish new, or renovate existing nursing homes and domiciliaries; and the fiscal year 2000 request of \$11 million for the Grants for the Construction of State Veterans Cemeteries will provide funding to assist States to establish, expand, or improve State veterans cemeteries.

VII. CONCLUSION

Mr. Chairman, veterans from all periods of service should be satisfied that this budget is a budget that protects their interests and lives up to the nation's commitment to them.

I want to thank the members and staffs for your continued interest in our Department. I look forward to continuing to work with you on behalf of our nation's veterans and their families. We owe our veterans the best service we can provide.

[General Accounting Office, April 15, 1999]

PROGRESS AND CHALLENGES IN TRANSFORMING HEALTH CARE

(By Stephen P. Backhus)

Mr. Chairman and Members of the Subcommittee: We are pleased to contribute this statement for the record for the Subcommittee's deliberations on the fiscal year 2000 budget request for the Department of Veterans Affairs' (VA) health care system. In this request, VA is seeking a funding level of \$18.4 billion to serve 3.65 million veterans.

Between its establishment in 1946 and 1995, VA's health care system grew into our nation's largest direct provider of health care, serving veterans at over 600 locations nationwide. These included 181 locations where VA owned over 4,700 buildings and 18,000 acres of land. VA's system focused primarily on hospital care, using high technology and medical specialization.

VA's system, however, did not keep pace with such societal and industry changes as:

- a market-based restructuring of American healthcare, including the rise of managed care;
- a rapid growth in scientific and medical knowledge available to treat illnesses and injuries; and
- an overall aging of the veteran population, including declining numbers of potential system users and evolving medical needs.

In October 1995, VA began to transform its system from a hospital operator to a healthcare provider that relies on community-based, integrated networks of VA and non-VA providers to meet veterans' needs more efficiently and effectively. In January 1997, VA proposed a 5-year plan to operate within a fixed annual appropriation of \$17 billion through fiscal year 2002. To accomplish this, VA planned to reduce per patient costs by 30 percent, increase patients served by 20 percent, and reduce reliance on appropriations by 10 percent.

Since VA's transformation began, we have visited over 100 VA medical facilities and spoken with over 500 officials, as well as many veterans, including representatives of veteran service organizations. We also examined hundreds of documents, including VA's budget submissions and studies done by VA's Office of Inspector General and others. Based on the insights developed during these efforts, our statement today focuses on (1) VA's transformation progress to date, (2) challenges that remain to be confronted, and (3) the implications for VA's fiscal year 2000 budget.¹

In summary, VA's transformation continues to make significant progress. Over the last 3 years, VA has enhanced benefits and served 500,000 additional veterans, while realizing a nonappropriated revenue surplus of \$496 million that remains available for future use. This was accomplished primarily because VA's management initiatives reduced operating costs by almost \$1 billion. The most notable initiatives involved shifting veterans' care to appropriate settings and reengineering administrative and clinical processes.

This year, however, our work shows that VA's transformation appears to be losing momentum. VA, for example, has prolonged decisions concerning much needed restructuring of aged capital assets, including hospital closures, which could result in unnecessary expenditures of billions of dollars over the next several years. VA's transformation cannot be successfully completed until these and other critical challenges are adequately addressed.

In our view, VA's fiscal year 2000 budget is based on the unduly optimistic expectation that its ongoing transformation will generate needed efficiencies of \$1.4 billion in savings. VA assumes, for example, that employment reductions in fiscal year 2000 will be more than 3 times greater than expected fiscal year 1999 reductions. VA has not taken the underlying management actions—such as aggressively addressing all potential facility integrations and service consolidations—that appear necessary to make a threefold reduction possible. If VA had made such difficult decisions earlier, it might not need to realize this level of savings. Moreover, VA may ultimately need to use less desirable management actions, including large-scale employee furloughs, to operate within its proposed budget. Such actions could adversely affect all veterans' quality of care, especially waiting times. VA could avoid such undesirable outcomes for higher priority veterans if, as the Congress intended, VA uses its new enrollment process to manage access to VA health care services within available resources.

BACKGROUND

VA's health care system currently touches the lives of 15 percent of our nation's 25 million veterans. The rest rely on private insurance, other public programs, or their own resources to finance their health care needs.

VA uses hundreds of delivery locations to provide services such as primary care, specialized medical care, mental health, geriatrics, and extended care. In addition, VA supports medical education and research through its affiliation with 107 medical schools, and provides medical backup to the Department of Defense and other federal, state, or local agencies during national emergencies.

VA began its transformation by creating 22 regional offices to make basic budgetary, planning, and operating decisions for veterans living within defined geographical areas; VA's headquarters and over 150 large hospitals made such decisions previously. These offices oversee between 5 and 11 large hospitals, as well as many clinics or other delivery locations.

The primary focus of VA's transformation is to reduce reliance on large hospitals by developing local or regional networks that provide a continuum of care grounded in ambulatory settings. To encourage this transformation, VA implemented a new resources allocation process that bases funding decisions on user populations rather than facilities.

In addition, the Congress passed the Veterans Health Care Eligibility Reform Act of 1996, which furnished tools that VA said were key to a successful transformation and provided VA the means to develop its 5-year financial plan, including

- new eligibility rules which allow VA to treat veterans in the most appropriate setting;
- introduction of managed care principles, such as a uniform benefits package, which allows VA to provide a continuum of services, including preventive medicine; and

¹For 1996 and 1997 hearings of this subcommittee, we provided assessments of VA's transformation progress. See *VA Health Care: Opportunities to Increase Efficiency and Reduce Resource Needs* (GAO/T-HEHS-96-99, Mar. 8, 1996) and *VA Health Care: Assessment of VA's Fiscal year 1998 Budget Proposal* (GAO/T-HEHS-97-121, May 1, 1997).

—an expanded ability to purchase services from private providers and to generate revenue by selling excess services to nonveterans.

At that time, both the Congressional Budget Office and we concluded that such reforms could generate additional demand for services, primarily due to increased use of outpatient services. The Congressional Budget Office also estimated that rising utilization would, by extension, produce dramatic cost increases, potentially billions of dollars.

To address such concerns, the Eligibility Reform Act also required VA to implement a veterans' enrollment system to manage access in relation to available resources. It established seven priority categories, with the highest priorities given to veterans with service-connected disabilities.

Each year, VA is to enroll veterans in those priority categories for which there are sufficient resources to provide care that is timely and acceptable in quality. The act also requires VA to maintain capacity for veterans with special disabilities, including treatment for spinal cord injury, blindness, amputation, and mental illnesses.

At VA's request, the Congress also authorized VA to retain all collections from third parties (including recoveries from insurance companies and certain tort claims), copayments, and per diems, beginning July 1, 1997. VA is to deposit these collections in a Medical Care Collections Fund and use them to supplement appropriations to meet veterans' health care needs. VA may spend these funds in the year collected or any subsequent year.

VA HAS TAKEN MAJOR STEPS FORWARD IN ITS TRANSFORMATION

As part of the transformation, VA's networks have implemented hundreds of management initiatives that have significantly enhanced the efficiency and effectiveness of VA's health care system.² For example, during fiscal years 1996 through 1998, VA reduced inpatient workload by 38 percent and bed days of care per 1,000 veterans by 47 percent. This allowed over 20,000 hospital beds to be closed and numerous administrative and clinical services to be consolidated.

At the same time, VA used savings from its efficiencies to finance improvements in veterans' access to, and quality of, care. For example, VA served an additional 500,000 veterans, in part, by opening over 183 new community-based clinics, creating about 1,000 primary care teams, and purchasing specialty care from private providers. VA's performance indicators suggest that the quality of care is improving overall. Veterans' rating of ambulatory care quality has risen and the reported numbers of problems have fallen.

VA appears on track toward meeting its goals of reducing per-patient costs, serving more veterans, and increasing nonappropriated revenue sources by fiscal year 2002. Compared with its fiscal year 1997 baseline, VA projected and realized the results, shown in table 1, for fiscal year 1998 (year 1 of VA's 5-year plan).

TABLE 1.—VA'S 5-YEAR GOALS

[In percentages]

30–20–10 initiatives	VA fiscal year		
	1998		2002 Goal
	Results	Goal	
Reducing per patient costs	10	6	30
Serving more veterans	9	5	20
Increasing nonappropriated funding	4	4	10

More importantly, VA expects to have more resources available in fiscal year 1999 than its 5-year plan projected, as shown in table 2.

²VA Health Care: Status of Efforts to Improve Efficiency and Access (GAO/HEHS-98-48, Feb. 6, 1998).

TABLE 2: COMPARISON OF VA'S ESTIMATES FOR ITS FISCAL YEAR 1999 BUDGET

[In billions of dollars]

Funding	Fiscal year 1999	
	VA's 5-year plan's pro- jection (1/97)	VA's current estimate (1/99)
Appropriated	17.0	17.3
Other Sources	0.9	1.1
Total	17.9	18.4

Because of efficiency savings, VA needed to spend, in fiscal year 1998, only \$170 million of its medical care collections. This allowed VA to carry forward about \$496 million for use in fiscal year 1999.

VA's management initiatives that contributed to these dramatic results include:

- establishing primary care as the dominant delivery model;
- shifting medical care from inpatient to outpatient settings;
- consolidating administrative and clinical services; and
- establishing networks of VA and non-VA providers.

Establishing Primary Care As Dominant Delivery Model

VA established primary care case management to help ensure that patients are served in the most appropriate settings and resources are coordinated and best organized to address patients' specific medical conditions.

Before 1995, primary care providers managed less than 20 percent of VA's patients. Since then, VA has successfully oriented veterans to the principal concept of primary care. VA, for example, reports that close to 80 percent of veterans responding to its annual patient survey are aware that one provider or primary care team has responsibility for managing their medical care. This, in effect, relieves high-cost specialists from day-to-day patient management responsibilities.

To enhance primary care access, VA has established over 1,000 primary care teams at large medical facilities and opened over 183 community-based outpatient clinics. These clinics provide primary care closer to veterans' homes, especially those living in underserved, often remote, areas. Currently, VA has approved 272 community clinics to open in fiscal years 1999 and 2000 and expects to open about 200 more by fiscal year 2003.

Shifting Medical Care to Outpatient Settings

Advances in medical technology and practices, for example, have afforded VA significant opportunities to shift medical care to outpatient settings. Because of such new technologies as laser, endoscopic, and other less invasive surgical techniques, many surgeries are now performed in a doctor's office or outpatient clinic or require shorter lengths of stay when performed in hospitals.

In addition, changes in medical practice and the development of psychotherapeutic drugs to treat mental illness have led to fewer and shorter hospital admissions for psychiatric patients and to the deinstitutionalization of many long-term psychiatric patients.

VA has implemented management initiatives to identify patients who can be served more cost-effectively in alternatives to inpatient settings, including treatment of many chronically and catastrophically ill patients at home rather than in a hospital.

Before 1996, VA had no systemwide external preadmission screening program or other utilization review programs to ensure that patients are treated in the most appropriate settings. In that year, we recommended that VA develop such programs.³ Subsequently, VA implemented management initiatives to:

- review 100 percent of planned admissions to determine patients' appropriate level of care; and
- perform continuing stay reviews to determine the appropriateness of each additional day of hospitalization.

³VA Health Care: Opportunities for Service Delivery Efficiencies Within Existing Resources (GAO/HEHS-96-121, July 25, 1996).

During fiscal years 1996 through 1998, VA's inpatient workload declined 38 percent and bed days of care per 1,000 patients dropped by 47 percent. This allowed VA to close 20,000 hospital beds, a 40-percent reduction.

This decrease in inpatient usage has been matched by major increases in VA's outpatient care workload. During fiscal years 1996 through 1998, VA's outpatient visits increased 19 percent. Of note, VA performed over 90 percent of certain surgeries, including colonoscopies, arthroscopies, cystoscopies, breast biopsies, and cataract surgeries, on an ambulatory basis in fiscal year 1998.

Consolidating Administrative and Clinical Services

VA also has implemented a variety of initiatives that consolidated duplicate or underused services. VA, for example, integrated the management teams of two or more large medical facilities in 24 markets; this effort involved a total of 50 facilities. VA also consolidated many other administrative and clinical services at these facilities, which saved millions of dollars in unneeded operating costs.⁴

Based on our work, VA appears to have an opportunity to achieve even more significant savings by consolidating duplicate or underused services. This is because VA still operates 17 large medical facilities that compete with these newly integrated facilities in 10 markets, as well as operating 44 large facilities in 19 other markets that compete with each other to serve veterans.

Recently, we recommended, and VA agreed, that veterans' needs should be assessed in these 40 markets and steps taken to integrate, consolidate, or close unneeded services. This could result in billions of dollars in additional savings over the next 5 years that could be reinvested to improve veterans' access to high-quality care.⁵

Establishing Networks of VA and Non-VA Health Care Providers

VA has implemented important initiatives to establish integrated networks of VA and non-VA providers. VA has made the most progress by far in establishing new community-based clinics. Some notable progress, however, has been made purchasing inpatient care from private hospitals or military facilities, as well as developing joint ventures and sharing agreements with the Department of Defense.

About half of VA's new community clinics operated through contracts with non-VA providers during fiscal years 1996 through 1998. These clinics helped to reduce VA's costs and improve access because they are located closer to veterans' homes. VA expects these clinics primarily to refer veterans to VA facilities for specialized diagnostic procedures, treatment, or hospital admissions, although referrals may also be made to other non-VA providers.

In addition, some VA hospitals located in rural areas have contracted to provide inpatient care with non-VA hospitals. These initiatives, according to VA, have been successful from a cost-efficiency perspective and also have received high satisfaction scores from veterans.

At the close of fiscal year 1998, VA and the Department of Defense had negotiated almost 1,000 facility-level sharing agreements covering more than 10,000 services ranging from laundry, blood, and laboratory services to major medical and specialty care services. There are also four joint ventures under way for the construction and operation of medical facilities, with four additional agreements near completion.

We are currently reviewing these sharing agreements to assess the benefits for veterans, military members, and beneficiaries, as well as efficiency savings for VA. Recently, the Congressional Commission on Servicemembers and Veterans Transition Assistance reported that opportunities exist for greater sharing and partnering between VA and the Department of Defense. Of note, the Commission made several recommendations, including the development of a joint, clinically based formulary and joint procurement of future information technology.

FURTHER TRANSFORMATION PROGRESS WILL REQUIRE VA TO CONFRONT FORMIDABLE CHALLENGES

As VA's transformation proceeds through its fourth year, it now turns to face the most onerous challenges it has encountered to date. These include: closing unneeded hospitals, restructuring capital assets, restructuring VA's medical education role, maintaining capacity to serve special disabilities, improving resource allocations, improving revenue collections, and implementing an enrollment process.

⁴VA Health Care: *Lessons Learned From Medical Facility Integrations* (GAO/T-HEHS-97-184, July 24, 1997).

⁵VA Health Care: *Capital Asset Planning and Budgeting Need Improvement* (GAO/T-HEHS-99-83, March 10, 1999).

VA's failure to aggressively confront these challenges could result in the unnecessary expenditure of billions of dollars over the next several years.

Closing Unneeded Hospitals

The success of VA's strategies to transform its health care system—shifting inpatient care to more appropriate settings, establishing primary care in community clinics, and improving efficiency through staff reductions, service consolidations, and bed closures—has produced excess inpatient capacity at most VA hospitals. As VA's transformation continues, VA's need for a large number of full-service hospitals will continue to diminish, thereby challenging VA to make difficult decisions concerning hospital closures.

VA and the private sector have reacted very differently to declining inpatient workload. In the private sector, over 500 hospitals were closed as health care practices were transformed. As we have reported, VA instead has chosen to reduce operating beds at its hospitals or shift services such as inpatient surgery among hospitals.⁶ This approach often leaves VA operating only a small part of most hospitals' inpatient capacity.

VA demonstrated the feasibility of closing underused hospitals when it closed the Martinez, California, hospital because of earthquake concerns. VA replaced it with a modern outpatient clinic supplemented by existing VA inpatient locations and contract care, efficiently meeting veterans' needs in that market. VA reports that veterans' satisfaction with these changes is high, including satisfaction with quality of care.

At a March 1996 hearing before this Subcommittee, VA stated that it would look to close additional facilities; since then, VA in essence has closed four hospitals by shifting inpatient care to other VA locations or contracting with non-VA providers. In each location, VA continues to provide outpatient care as well as nursing home care in three locations.

Last year, we reported that VA could save \$20 million a year and care could be improved if veterans were served at one less location in Chicago.⁷ Veterans' benefits, for example, could be enhanced if VA used the savings to purchase primary care closer to veterans' homes. In response to our recommendation, VA agreed to initiate a market-based assessment of its health care delivery in the Chicago market. This market assessment is scheduled for completion soon.

VA is to be commended for its willingness to study how it could improve its efforts to meet veterans' needs in this market. The extent to which VA is committed to taking action on the basis of study findings remains uncertain, however. Last month, VA stated publicly that no additional hospitals will be closed in fiscal years 1999 or 2000. This decision seriously threatens the continued progress of VA's health system transformation.

Restructuring Capital Assets

VA's massive, aged infrastructure could be the biggest obstacle confronting VA's ongoing transformation efforts. VA's challenges in this arena are twofold: deciding how its assets should be restructured, given the dramatic shifts in VA's delivery practices, and determining how a restructuring can be financed in a timely manner.

VA spends a major part of its health care budget—about 1 out of every 4 health care dollars—to operate, maintain, and improve its facilities, generally referred to as the costs of asset ownership. Without a major restructuring, billions of dollars will be used in the operation of hundreds of unneeded VA buildings over the next few years.

VA's transformation has largely ignored this capital asset dilemma, as VA's plans call for assets to continue operating over the next 5 years essentially as they do today. Given VA's current and proposed budgets, it seems inevitable that VA's ownership of unneeded assets will eventually compromise veterans' health care services. On the other hand, restructuring its capital assets could reduce budget pressures or generate revenues that could be used to enhance veterans' health care benefits.

Recently, we recommended that VA's capital asset planning should be based on rigorous market analyses, a business tool that has produced positive results in the private sector.⁸ Such analyses include the determination of veterans' health care needs in a market, a comparison of life-cycle costs of asset ownership, and alter-

⁶ *VA Hospital: Issues and Challenges for the Future* (GAO/HEHS-98-32, Apr. 30, 1998).

⁷ *VA Health Care: Closing a Chicago Hospital Would Save Millions and Enhance Access to Services* (GAO/HEHS-98-64, Apr. 16, 1998) reports that asset operations and maintenance costs for four VA hospitals in Chicago generally represent about 25-35 percent of the hospital's operating budgets.

⁸ *VA Health Care: Capital Asset Planning and Budgeting Need Improvement* (GAO/T-HEHS-99-83, Mar. 10, 1999).

natives analysis to enable VA to evaluate options for meeting needs in the most cost-effective manner.

We identified 106 markets in which VA owns 4,700 buildings and 18,000 acres of land, which it uses to operate 181 major delivery locations. VA has agreed to conduct market analyses in the 40 markets where multiple VA facilities compete with each other to serve veterans (VA operates assets at 115 locations in these markets) as well as 66 markets served by a single VA location.

Until VA completes these market assessments, it will be challenged to make capital investment decisions to ensure that scarce resources are not invested in assets that VA will vacate in a few years. Recently, we recommended, and VA agreed, that more of its capital investment decisions—specifically minor construction and certain nonrecurring maintenance—should be subjected to more rigorous management review. Toward that end, VA plans to institute an improved investment decision-making process that involves top managers' review and approval, based on newly enhanced guidance and criteria for assessing the future of the affected asset within VA's ongoing transformation.

Once VA has developed an asset restructuring plan, it will be challenged to finance needed investments in a timely manner. Toward that end, VA proposes a 5-year demonstration that would allow it to sell, transfer, or exchange up to 30 excess or underutilized properties, deposit proceeds into a new Capital Asset Fund, and use the Fund to invest in more appropriate assets. This proposal is compelling because it would provide VA incentives to dispose of properties no longer needed to meet veterans' needs. VA asserts, and we agree, that disposals are currently a cumbersome and lengthy undertaking with limited benefits to VA, primarily because proceeds' use is limited to improving nursing homes.

RESTRUCTURING VA'S MEDICAL EDUCATION ROLE

Transforming VA's health care delivery system from an inpatient to an outpatient focus, increasing reliance on primary care, and integrating services in fewer hospitals require VA and medical schools to restructure their affiliation arrangements.

Since VA's medical education program began in 1946, 132 VA medical facilities have affiliated with 107 medical schools to provide training opportunities for medical students and residents. These agreements complicate VA's restructuring efforts, particularly integrating administrative and clinical services across two or more medical facilities.

VA assists in the training of health professionals for its own needs and for those of the nation through its partnerships with affiliated academic institutions. Each year, about 91,000 medical and other students receive some or all of their clinical training in VA facilities. In fiscal year 1999, VA expects to spend \$750 million for education and training of health professionals.

VA also assists in supporting medical research in connection with the provision of medical care and treatment to veterans. The affiliated medical schools are an integral part of VA's research effort. For fiscal year 1999, VA expects to spend \$682 million for research (\$316 million from the medical and prosthetic research appropriation and \$366 million in medical support from the medical care appropriation).

VA's successful transformation to a predominantly primary care model, with its consequent deemphasis of inpatient, specialty care, has direct implications on VA's education role. As previously discussed, VA's management initiatives have decreased inpatient usage by 38 percent and increased outpatient workload by 19 percent. This underscores a need to train more primary care physicians and fewer specialty physicians.

In light of these changes, VA established a Residency Realignment Review Committee and a Research Realignment Advisory Committee. In response to these committees' recommendations, VA set a goal to more equally divide resident training positions between specialty and primary care by 2002; previously, about 70 percent of residents were enrolled in specialty training and 30 percent in primary care. In doing this, VA plans to eliminate 250 specialty positions and shift another 750 to primary care. To date, VA appears on track toward meeting its goals.

As VA's transformation continues, its management initiatives should increasingly involve consolidating programs to eliminate redundancy among nearby VA facilities or the potential closing of facilities. This will, by necessity, increase the potential for conflict between medical schools' best interests and veterans' best interests.

Because VA provides a major source of medical training and research opportunities, medical schools clearly have a vested interest in VA hospitals staying open. As such, it will be difficult to achieve a proper balance between VA's primary mission—serving veterans' health care needs—and its secondary missions—supporting education and research. VA must take care to prevent stakeholders, such as medical

schools, from unduly influencing the ongoing transformation of its health care system.

At present, medical schools have concerns about potential consolidations of VA medical facilities. It seems inevitable that medical schools will need increasingly to share inpatient educational and research opportunities at a single VA facility. VA must work closely with medical schools to ensure that such restructuring is accomplished without compromising VA's efforts to improve its efficiency and effectiveness.

Maintaining Capacity to Serve Special Disabilities

VA is struggling in its efforts to address congressional concerns that it is not appropriately maintaining its level of certain high-cost specialized services as its transformation progresses.

The Congress required VA to ensure that its capacity to provide specialized treatment and rehabilitative services for veterans with certain disabling conditions is not reduced below October 1996 levels and that veterans with these conditions have reasonable access to care. The Congress identified four disabling conditions requiring specialized care: spinal cord dysfunction, blindness, amputation, and mental illness. For this requirement, VA defined mental illness to include only veterans with serious mental illness and included two additional conditions: traumatic brain injury and post-traumatic stress disorder.

VA cites a 2-percent increase in patients served as evidence that it is maintaining capacity to serve special disabilities. But this aggregate measure could mask potential adverse effects experienced by individual services and delivery locations. VA plans to develop outcome measures to reflect the overall capacity of its special disability services.

Last year, we noted that unclear service definitions and cumbersome data systems hindered VA's development of additional outcome measures. As a result, it is difficult to establish a baseline for comparison purposes, assess the accuracy of reporting at the local level, and reconcile differences among individual facilities, networks, and headquarters' data.⁹

To date, VA has designed functional measures for seriously mentally ill patients and patients with a primary diagnosis of substance abuse. VA, however, has generally not performed the program evaluations necessary to determine whether these are the most appropriate or sensitive measures for assessing responses to treatment and changes in health outcomes.

Until adequate outcome measures are available, VA continues to use its traditional process measurements, such as number of veterans served and resources expended, including dollars, staffing, and beds. These measures remain important indicators and should be continually reviewed.

Improving Resource Allocation

VA's new resource allocation system is improving the equity of resource allocations among networks. The system's promise for achieving equitable access may not be fulfilled, however, because of VA's inadequate oversight of how resources are allocated within networks and historical access inequities are addressed.

To improve equitable access to care, the Congress enacted legislation in 1996 requiring VA to develop a plan for equitably allocating resources to ensure that veterans with similar economic status and eligibility priority have similar access to VA health care, regardless of the region in which they live. In response, VA began implementing a new allocation process.

Previously, VA allocated resources directly to facilities on the basis of their budget for the previous year. VA's new process allocates funds to the 22 networks based on the number of veterans each serves. Networks, in turn, allocate resources to the facilities in their geographic area.

As we reported to you in September 1997, this new process is correcting longstanding regional funding imbalances that have impeded veterans' equitable access to services.¹⁰ Over the last 2 years, funding has shifted from the Northeast and Midwest to the southern and western regions where more veterans reside. Each network has increased the number of veterans it serves, albeit to varying degrees, and improved current users' access to care.¹¹ VA's management efficiencies were instrumental in achieving this outcome.

⁹VA Health Care: VA's Efforts to Maintain Services for Veterans With Special Disabilities (GAO/T-HEHS-98-220, July 23, 1998).

¹⁰VA Health Care: Resource Allocation Has Improved, but Better Oversight Is Needed (GAO/HEHS-97-178, Sep. 17, 1997).

¹¹VA Health Care: More Veterans Are Being Served, but Better Oversight Is Needed (GAO/HEHS-98-226, Aug. 28, 1998).

VA, however, maintains that networks should not use its new process to allocate resources to facilities and that they should, instead, develop allocation methods appropriate to local circumstances. Such resource allocations are the crucial link in VA's allocation strategy to convert resources to services.

In spite of this enormous challenge, VA has done little to ensure that networks achieve equitable allocations. VA says that it has not provided criteria for equitable allocation of resources within networks because developing such criteria would be contrary to its reengineering philosophy, which decentralizes authority and accountability for these allocations to the network directors. In addition, VA has not adequately reviewed the equity of networks' allocations or measured improvements in the equity of veterans' access to care.

Networks we analyzed have not incorporated criteria in their allocations to improve equity in spite of historical inequities they identified. As a result, in spite of the considerable effort VA has invested in its new resource allocation process, resources may not be equitably allocated in many markets.

Monitoring networks' progress in achieving equitable access to care represents a significant challenge. Today, VA does not know what progress, if any, is being made towards equitable access to care for our nation's veterans. This is because VA has neither developed indicators needed to do so nor included equity of access as a performance goal for network managers.

Developing and implementing such indicators will be a major challenge both technically and in obtaining stakeholders' agreement. Without establishing such indicators and monitoring them, however, VA can neither assure stakeholders that equity of veterans' access is improving nor take corrective actions, if needed, to improve resource allocations.

Improving Revenue Collections

VA faces a major challenge increasing its medical care collections from third parties and veterans, as well as reimbursement from sharing agreements with the Department of Defense.

VA's collections grew slightly between fiscal years 1997 (\$520 million) and 1998 (\$560 million). VA's 1998 collections were about 94 percent of its stated goal. For fiscal year 1999, VA set a goal of \$637.5 million. As of March 1999, collections are averaging about \$46 million a month, which appears sufficient to meet VA's goal, given that collections were historically higher during the last quarters of fiscal years 1997 and 1998. VA's fiscal year 2000 budget sets a goal of about \$762 million and VA expects collections to grow to more than \$1.2 billion by fiscal year 2004.

VA expects such growth for three reasons. First, VA assumes that changing its medical care billing rates to reasonable charges for inpatient and outpatient procedures will increase revenues. VA, however, has neither historical data nor experience to estimate the effect of reasonable charges on revenues.

Second, VA assumes that it will increase its revenues by identifying more insured patients. However, VA finds it very difficult to keep this information current because veterans are not required to tell VA if they have insurance or when changes occur in their insured status.

Third, VA plans to improve its debt collection improvement efforts to boost revenues. In 1998, VA's Inspector General cited uncollected debt as one of VA's significant management problems. To improve medical care debt collection, VA has efforts under way to more aggressively pursue insurance claims, including timely appeals of denied claims. For example, VA is using a centralized approach to monitor claims and is exploring ways to recover debts as an offset to veterans' federal income tax refunds.

Despite a large number of sharing agreements for services between VA and the Department of Defense, several barriers are likely to inhibit effective sharing or prevent new agreements from being reached. These barriers include conflicting agency guidelines, beneficiary perceptions about sharing, and incompatible or unreliable information systems. VA and Defense have recently embarked on a joint initiative to revitalize sharing efforts at the national level for certain critical services.

In its fiscal year 2000 budget, VA again asks the Congress to authorize VA's reimbursement from the Medicare Trust Fund for medical services it provides to Medicare-eligible veterans. VA seeks this authorization anticipating that Medicare reimbursement will become an important source of revenue.

If authorized, VA's efforts to realize such revenues, without adversely affecting veterans, could pose a daunting challenge. Since VA initially proposed receiving Medicare reimbursements, it implemented a new veterans' enrollment process that has significantly increased workload. As such, VA faces considerable uncertainty about its capacity to target another patient population. Doing so could place vet-

erans' access to care at risk if this increased workload forces VA to choose between serving veterans who have Medicare and those who do not.

Implementing an Enrollment Process

VA faces a significant challenge determining how many veterans to enroll, given the uncertainties surrounding new enrollees' medical needs and VA's available resources.

The Eligibility Reform Act of 1996 required VA to establish and operate a system of annual patient enrollment to manage access to VA health care services within available resources. VA began testing an enrollment process on October 1, 1997, prior to the mandated enrollment date of October 1, 1998. At that time, VA announced its decision to enroll all veterans that apply during fiscal year 1999, that is, for enrollment priorities 1 through 7. As of December 1998, VA enrolled about 3.9 million veterans, according to VA's budget office.

VA is also challenged to assess the impact of its fiscal year 1999 enrollment decision on veterans' health care delivery. VA, for example, lacks the baseline data needed to assess the impact of its fiscal year 1999 enrollment decision on the timeliness of veterans' medical care.

During the course of our ongoing review of VA's enrollment process, almost all of VA's network directors reported that enrollment has increased demand for services. About half cited a slight increase in the waiting times to schedule both primary and specialty care appointments. Over one-third noted that access to care for higher priority veterans (priority groups 1 to 4) has been adversely affected to some extent.

Finally, several directors commented that they are experiencing increased demand by veterans whose primary care is provided elsewhere but who obtain from VA the specialty care and services not covered by their private insurance or Medicare, such as pharmaceuticals, eyeglasses, and hearing aids.

VA is assessing the cost implications of its fiscal year 1999 enrollment decision. VA's data shows that, after the first 3 months of fiscal year 1999, about \$3.6 billion was spent meeting veterans' health care needs. Of this, about half was spent serving veterans in priority categories 1 to 4, and half was spent serving categories 5 to 7. Of note, veterans in category 5 accounted for about 46 percent of the \$3.6 billion.

VA plans to announce its fiscal year 2000 enrollment decision by August 1, 1999. VA, however, publicly stated last month a desire to enroll all veterans who apply and to serve all enrollees in fiscal year 2000. VA's current projections show that about 4.4 million veterans could be enrolled by the end of fiscal year 1999.

VA could find this to be quite challenging because, as the following section discusses, VA's fiscal year 2000 budget does not contain sufficient funding to maintain current service levels (3.6 million veterans), unless VA's transformation produces required savings.

VA FACES A BUDGET DILEMMA IN FISCAL YEAR 2000

VA will be severely challenged to serve all veterans seeking to enroll and maintain quality of care in fiscal year 2000 with an \$18.4 billion budget. This is primarily because VA's budget is based on an unduly optimistic assumption that VA's transformation will save \$1.4 billion in fiscal year 2000. VA's cost estimates also may be significantly understated, given the increased enrollments over the last 6 months and considerable uncertainties surrounding veterans' medical needs.

VA estimates that \$19.23 billion would be needed to maintain current service levels (3.6 million veterans) in fiscal year 2000, if no management efficiencies are realized. By contrast, VA estimates its fiscal year 1999 spending level to be \$18.36 billion. This \$870 million difference involves primarily payroll increases for existing employees, inflation, and other mandatory rate changes.

VA plans to use another \$525 million of its efficiency savings to enhance services. Of this, \$281 million will be used to: treat veterans with hepatitis C (\$135 million); enhance extended care services (\$106 million); and expand services for homeless veterans (\$40 million). In addition, VA proposes that \$244 million be used to expand its benefit package for certain veterans. VA requests congressional authorization to finance emergency care at non-VA facilities for veterans enrolled in priority categories 1 to 3. Currently, only certain veterans with special eligibility have such benefits.

To allow VA to operate within a proposed budget of \$18.4 billion, VA needs to achieve management efficiencies of \$1.4 billion. In general, VA estimates that initiatives could yield about \$514 million in personal services savings, essentially by reducing its employment level by 8,529 full-time equivalents.

This presents a formidable challenge, given that an employment reduction goal of 8,529 is significantly higher than the reduction of 3,606 that VA achieved in 1998 or the 2,518 that VA expects to achieve in 1999. Interestingly, VA had initially set

goals of 3,978 and 2,607 in its budget requests for fiscal years 1998 and 1999, respectively.

To achieve a personal services savings goal of \$514 million in fiscal year 2000, VA needs to achieve the 8,529 employment reduction before fiscal year 2000 starts, only 5 months from now. The longer VA needs to reach this goal during fiscal year 2000, the greater the number of employees that ultimately must be reduced (to meet its goal) because VA will have to spend some projected savings to pay salaries and benefits in fiscal year 2000.

VA estimates that the remaining \$876 million will be achieved through nonpersonal services savings. If VA is unable to meet its employment reduction goal, it will have to increase nonpersonal services savings beyond this target level. This, too, could prove challenging, given the rapid increases in nonpersonal costs, especially medications and prosthetics.

VA's budget did not specify the nature of the management initiatives. VA's networks, however, have identified over the past year a variety of efficiency initiatives, including additional facility integrations, bed closures, and service consolidations, which reflect necessary shifts in patient care delivery practices. In most cases, these changes will require reductions in force, as well as staffing adjustments through normal attrition, in order to better configure VA's workforce to meet VA's transformation objectives.

VA's networks are currently revising their plans to develop alternative ways to realize savings of \$1.4 billion in fiscal year 2000. At a recent congressional hearing, officials from three networks expressed concerns about their abilities to achieve required efficiency savings. They testified that their plans would likely include significant furloughs of workers, as well as curtailment of proposed service enhancements and delay of services when medically appropriate.

In addition, VA may need to save more than \$1.4 billion because veterans' demand for medical care, as well as the numbers of veterans demanding care, may be significantly higher than VA estimated at the time its fiscal year 2000 budget was developed.

VA's budget, for example, included \$135 million to expand treatment of veterans who have hepatitis C, based on an assumed prevalence rate of 5.5 percent among its veteran user population. VA data, based on a small, unscientific sample, suggests that this rate, and hence treatment costs, could be much higher. To better estimate costs, VA recently conducted a nationwide sample of veterans using VA facilities and expects results to be available shortly.

VA's budget also assumes that an additional 54,000 veterans will be served in fiscal year 2000, bringing the total served to 3.65 million. To date, 3.9 million veterans have enrolled, and VA currently estimates that 4.4 million could enroll by the end of fiscal year 1999.

VA's rapidly rising fiscal year 1999 enrollments could also increase VA's fiscal year 2000 efficiency savings requirements by \$200 million or more. This is because VA plans to carry forward \$216 million of fiscal year 1999 revenue collections to finance fiscal year 2000 health care costs. VA could be required to spend this potential surplus in fiscal year 1999 if newly enrolled veterans require greater-than-expected health care expenditures in fiscal year 1999.

CONCLUDING OBSERVATIONS

VA has made significant progress transforming its health care system but appears to have a long way to go before achieving its goal of operating integrated networks of VA and non-VA providers that efficiently and effectively serve veterans. VA needs to aggressively confront its pending challenges, especially capital asset and medical education restructuring, in order to maintain the impressive momentum generated during its transformation's initial years. Absent this, VA could waste billions of dollars to meet veterans' needs over the next several years.

Meeting veterans' medical needs within VA's proposed spending level will be problematic. To do so, VA needs to achieve significant management efficiencies, but has no clear sense of the true magnitude of its resource needs. To remedy this, VA needs answers to such critical questions as:

- How many veterans will enroll for VA health care in fiscal year 2000?
- How prevalent are enrolled veterans' high-cost medical needs, especially for hepatitis C?
- How many management efficiency savings will be realized in fiscal years 1999 and 2000?
- What will the Congress decide to do concerning VA's proposed benefit expansions?

VA's budget dilemma forces it to confront difficult choices concerning its fiscal year 2000 enrollment decision—namely, how many priority categories can be prudently enrolled, given the uncertainty of estimates of potential costs and available resources. VA's current data suggest that sufficient resources may not be available to serve veterans enrolling in all seven priority enrollment categories. VA's uncertainties become more manageable if VA enrolls veterans in the manner the Congress intended—namely, veterans in those priority categories for which there are sufficient resources to provide timely access to high-quality care.

We remain concerned about VA's ability to deal with such uncertainties, primarily because of VA's publicly stated desire to serve all veterans who apply for enrollment. If VA experiences significantly higher costs than it currently estimates or significantly lower efficiency savings, enrolling all veterans who apply could require VA to take actions, such as large-scale employee furloughs, that could adversely affect the quality of care for all veterans.

MEDICAL CARE MANAGEMENT EFFICIENCIES

Senator BOND. Thank you very much, Mr. Secretary.

VA expects to provide care to an additional 54,000 patients, while cutting net staffing by almost 7,000 next year. The budget says there will be \$1.14 billion in management efficiencies, an additional savings of \$244 million and 1,500 in FTE, if proposed legislation authorizing emergency room care is enacted.

What specific cuts to medical services, staff, and programs will be made to meet the \$1.14 billion target?

Mr. WEST. We have asked for our network directors and our medical center directors to respond with proposals as to how we will meet these. I think that Dr. Kizer is just beginning to receive those responses. When he has reviewed them, he will discuss them with me, but we do not have specific information at the moment.

I know the things that we expect they will do, but you asked for specific cuts. It is true that the change in acute beds is beginning to slow down, but by the same token, there are a number of continued facility combinations, facility mergers, that still remain to be done.

I noticed in the GAO report to which you referred earlier, the GAO identified some 40 markets in which we can look what GAO considers duplication of facilities, and we have had discussions about that. I believe some of that will be reflected, as well, in what Dr. Kizer will be receiving.

Yes, it is challenging, but I believe that we will develop the plans and that we will make them work.

MEDICAL CARE BUDGET FORMULATION

Senator BOND. One thing that worries me, Mr. Secretary, is there are two ways to go about things. One is to push down from the top and say you will do this. And the other is to go from the bottom up and say what kind of efficiencies we can make, and put those together to come up with a number.

When I build a budget, I like to find out from the ground up, where we can make the efficiencies and maybe establish slightly tougher targets. I am very much concerned that this budget proposal may cause some serious disruptions.

Number one, I would like to know when we will see the specifics. I might as well turn to Dr. Kizer, and ask for Dr. Kizer's view on whether we will be able to increase patient care without degradation in the quality, within this budget, and how we are going to

meet the new demands on the budget, such as Hepatitis C and long-term care enhancements with these proposed cuts.

Mr. WEST. Let me answer the first part of your question, if I might. And that is whether we are going to push down or have them bring their plans up. You are right. It is a tendency of all of us, well, of this person in leadership, to say, "Here is what you are going to do," but that is not the way we have structured this. This is not the way that VHA, under Dr. Kizer's leadership, has made its inroads in the last three years.

The plans will start at ground level, Mr. Chairman, and will come forward from medical center directors through network directors to Dr. Kizer, and eventually to me.

Senator BOND. Dr. Kizer.

Dr. KIZER. Well, it is certainly clear that the budget, as has been stated by all, presents many challenges to the marked improvements in quality of care that have been achieved in the recent years.

Specifically, in response to your question, the plans have come in. They are in the process of being reviewed. On initial review of the plans, there are elements or proposals that are not acceptable to, at least, this person. And so, we do expect to go back and forth with the networks. And hopefully, by the end of May, we will have the level of specificity and concreteness that you desire.

HEPATITIS C

Senator BOND. Let me go back to that Hepatitis C question. That is one that bothers me. Your budget assumes that there will be a 5.5 percent prevalence in the VA patient population of Hepatitis C. Some initial studies have suggested prevalency rates may be 10 to 20 percent.

Do you have any better information on it? And what happens if the rate is 10 to 15 percent, rather than 5.5 percent?

Dr. KIZER. I believe it is well known that there is a difference of opinion between the Department and OMB on the prevalence rate of Hepatitis C among veterans. And what was in the budget reflects OMB's position. We feel that the prevalence rate is higher than that.

At the current time, data that we have would suggest that the prevalence rate is probably in the range of 8 to 10 percent. On March 17, we did testing of some 26,000 blood samples that were obtained from throughout the country. And when one adjusts that for various factors, and recognizing that the analysis is not final, the seropositivity rate is about 8 percent. I think it is 7.8 percent, with the adjustments.

When you look at all of the testing that has been done so far this year, of the approximately 30,000 tests that have been done throughout the VA, the seropositivity rate of those is about 20 percent, recognizing many of those tests were done on individuals who were known to be at risk.

So, our best data, at this point, and recognizing this database continues to evolve, is that the lower level of the range is around 8 percent. And it may well be higher than that.

Now, the other thing, just to be complete is to recognize that the standard of treatment is rapidly evolving. And what is considered

standard treatment today, includes some testing as the length of tests and the length of treatment and other things are greater today than some months ago, which does increase the cost per patient for a treatment, as well.

Senator BOND. Thank you, Dr. Kizer. That is a bit disquieting. I turn to Senator Mikulski.

Senator MIKULSKI. If I could just follow up on the Hepatitis C issue for a moment. Eight to ten percent, could you tell us, Dr. Kizer, how that compares to rates in the general population? Is it higher there? And what is the etiology of such a high percentage at the veterans facilities?

Dr. KIZER. I can tell you two things with regard to comparability to the non-VA population. One is data that is available today, which is quite limited from the general population. That data suggests that in the general population, the rate is somewhere around 1.8 or 2 percent.

Senator MIKULSKI. I am sorry. I cannot hear that. What—

Dr. KIZER. However—

Senator BOND. 1.8.

Senator MIKULSKI. 1.8.

Dr. KIZER. 1.8 to 2 percent. However, I think one has to be cognizant that is very limited data. A growing concern from the limited amount of data that has become available from under-served populations, which suggests that the rate may be considerably higher in some sub-populations within the general overall population. There just has not been adequate testing done yet of the general population to know.

Senator MIKULSKI. What is the etiology at the Veterans—

Dr. KIZER. Clearly, within the veteran population this is age linked. The higher rates of seropositivity are found in Vietnam era veterans. Whether it was related to exposure to blood during combat in Vietnam or some of the other routes that are known to transmit the disease are not entirely clear, based on scientific data at the moment.

Senator MIKULSKI. Is this also from drug abuse?

Dr. KIZER. It can occur from either intravenous or injection drug use, or from intra nasal snorting of cocaine, using straws.

Senator MIKULSKI. Well, I think—I think this is of great interest to the committee, from essentially the standpoint of epidemiology. And we will not take our hearing today to go into the entire epidemiology, but really the routes of this either—whether it was combat exposure or in combat zone exposure or whether this also comes from abusive behavior at various other points, I think, would be of interest to the committee.

TWO-YEAR SPENDING AVAILABILITY FOR MEDICAL CARE

Let me move on, though, and—Secretary West, in your testimony there was an item on page five that goes down, that says—if you go to page five of your testimony, it says, “VA is proposing a change in appropriation language. It would provide for two-year spending availability for up to 5 percent of our resources, excluding those funds set aside due the required deferral of funds for medical equipment.”

Are you asking for a two-year appropriation? This is—this really caught my eye. What does that mean, operationally?

Mr. WEST. The easy answer is yes.

Senator MIKULSKI. Sir, would you pull the microphone a bit closer?

Mr. WEST. I am sorry. The quick answer is yes, as to that proportion, up to 5 percent of our resources. Yes, we are.

Senator MIKULSKI. So, you want a two-year appropriation for 95 percent of your resources.

Mr. WEST. No. No. I think it is up to 5 percent.

Senator MIKULSKI. Oh. I got it backwards.

Mr. WEST. Up to 5 percent.

Senator MIKULSKI. I thought you were asking for 95 percent.

Mr. WEST. No. Up to 5 percent—

Senator MIKULSKI. Actually, I—

Mr. WEST. Up to 5 percent—

Senator MIKULSKI. You know, I am somebody who is interested in a two-year budget; particularly for those things that are usual and customary expenditures, as compared to special needs or special populations.

So, you would want a 5 percent.

Mr. WEST. And it is not even 5 percent of the whole. It excludes those funds that are set aside due to the required deferral of funds for medical equipment.

Senator MIKULSKI. For medical equipment.

Mr. WEST. They would not be included in the universe from which we ask the 5 percent.

Senator MIKULSKI. Okay. Can you understand why I was a little—

Mr. WEST. I do. 95 percent is a lot.

CAPITAL ASSET FUND PROPOSAL

Senator MIKULSKI. I thought it was just—yes. Now, I would also like to go to the issue—there are many issues that were related to the GAO report. I know, within the GAO report, you received many excellent kudos, really, Dr. Kizer, on efforts to transform veterans health care. And I think we are well aware of those issues, but one of which was the capital asset planning, in which you have 4,700 buildings, 18,000 acres of land, et cetera.

Do you want to—we need to really get a hand on our assets. They are recommending some type of capital asset approach. Could you tell us what that would be?

Mr. WEST. Well, I am not very clear on the GAO's interpretation of it. What our approach—

Senator MIKULSKI. What you want to do, in terms of getting your hands on your capital assets—

Mr. WEST. Yes. Well, first of all, we propose to set up a capital asset fund. One of the points that the GAO report makes is it is their belief that there is no incentive for VA to look to the disposal of assets, as it were.

That gets said in a lot of government agencies. Our response to that—

Senator MIKULSKI. Just tell us what your plan is.

Mr. WEST. Well—

Senator MIKULSKI. What are you going to do with the capital asset fund? That is—that is a phrase.

Mr. WEST. Well, its purpose is to make it easier for us to dispose of assets, rather than going through the existing governmental requirements and then for VA to put that money into a fund which we can then use for our own activities.

Senator MIKULSKI. Well, I do not understand what it means that you do not have to go through what the government normally would do. What—

Mr. WEST. Well, disposal of a capital asset is, of course, a fairly lengthy process, to include, as I recall, several different statutes. One statute makes a capital asset available for the homeless program. Another one says we have to offer these to other agencies, then to state agencies, before we can finally get to the point of disposing of it for a price.

I presume that the capital asset fund idea would allow us—

Senator MIKULSKI. Well, Mr. Secretary—

Mr. WEST [continuing]. To go more quickly through the process.

Senator MIKULSKI [continuing]. First of all, I think—well, number one, we understand that the GAO report, plus your own administrative evaluation, says there needs to be a new contemporary approach to capital asset management.

Number two, we would want you to have flexibility.

Number three, however, we want to be careful that as you move to expedite this decision making process, that VA has very clear criteria. Number one, we do not want dumping in the community.

Number two, as an example, where we have Loch Raven Hospital, that was going to be closed for the new facility downtown, that we opened some years ago. They were going to put it up for highest and best use and a lot of the kind of GSA swagger cliches.

And what happened was, because it was an integrated neighborhood, Blockbusters came through and said, "Drug clinics are coming and so on." When we stopped that, recycled it for one primary care and then an extended care rehab, one, we stabilized the neighborhood around it, but we have to be careful then, that when we are moving to, we do not have unintended negative consequences to the community near it, what this process need.

And I know my time is up, but I want to just bring to your attention, Fort Howard. Fort Howard is an aging in place infrastructure that has served the long-term care needs of Marylanders, going back to even World War I. The dedication of your staff and ingenuity around asset management has kept an old building going. That building has to go.

We now want to look at what to do. You are on prime waterfront property. We are talking about a long-term care facility. We do not want Taj Mahal-ing. But should it be a combination of new thinking, assisted living, home health care, because it is in the zip codes of veterans aging in place?

So, we want you to be able to close down a building, where just to keep it going is so difficult, but have new thinking, in a way, either to recycle your—your land or—or if you are going to dispose it, there must be, as an old city council lady, what is the consequences to the neighborhood and how that is managed. It just cannot be dumping.

Mr. WEST. Well, we agree with a process of including the community in the decision making.

Senator MIKULSKI. Right. Now, I am going to—I know other members have it. I would like you—we are going to be briefed on the Fort Howard plan. And I would like you, sir—this could be a tool for innovation and new thinking. I would like you, sir, to personally stand sentry on the Fort Howard plan to make sure that we meet the needs of aging veterans; see where there can be innovation that is both compassionate and cost effective, and that we do not have any RIFs in the process. New buildings does not necessarily dump—changing buildings does not necessarily mean changing personnel.

Senator BOND. Thank you very much, Senator Mikulski. I would like to turn to Senator Burns.

STATISTICS ON VA FACILITIES AND EMPLOYMENT

Senator BURNS. Thank you, Mr. Chairman. Boy, this is my day today. I had the Forest Service down the hall. And it has been a dandy day.

Thank you for coming this morning, Mr. Secretary. And could you tell me how many hospitals we have in this country, veterans hospitals?

Mr. WEST. Well, the number we are using is 172. I say it that way; those are medical centers. The definitions, I notice are—

Senator BURNS. Well, how many—how many—

Mr. WEST. All right.

Senator BURNS. Then, let us—

Mr. WEST. 172.

Senator BURNS. Okay. Now, does that also count your clinics?

Mr. WEST. No, sir.

Senator BURNS. How many clinics?

Mr. WEST. If you combined clinics, outpatient clinics, are about 600, with another 89 outpatient clinics in the fiscal year 2000 budget.

Senator BURNS. Okay. And long-term care facilities, nursing facilities.

Mr. WEST. 132.

Senator BURNS. 132. Okay. How many employees do you have?

Mr. WEST. Something in the neighborhood of 180,000 fulltime equivalents, I would say.

Senator BURNS. 180,000.

Mr. WEST. And that is health care, which is about 90 percent of our total.

Senator BURNS. Yes.

Mr. WEST. Total.

Senator BURNS. 90 percent of that is health care.

Mr. WEST. No. The 180,000 is 90 percent of our total. That is health care. I thought that is what you wanted. Do you want the total for the department?

Senator BURNS. Yes.

Mr. WEST. 230,000 employees.

Senator BURNS. 230,000.

Mr. WEST. It changes.

Senator BURNS. How many veterans do we have—

Mr. WEST. I'm sorry.

Senator BURNS [continuing]. In those? How many people have you got in these facilities? Let us say, how many—

Mr. WEST. What is the population?

Senator BURNS. How many people have you got in those hospitals right now?

Mr. WEST. Let me just ask Dr. Kizer. Do you have a rough estimate of what our medical center and clinic population are together?

Senator BURNS. Well, and how many—and how many people are—are using the clinics?

Dr. KIZER. Last year, we provided care, both inpatient and outpatient care to 3.4 million individuals.

Senator BURNS. Now, how many—how many in the hospitals?

Dr. KIZER. Well, on any given day, there is 20,000, plus or minus.

Senator BURNS. 20,000. Well, that is all we are taking care of today. And that is what I am doing here now.

Dr. KIZER. Well, we have, right now, in the system, around 25,000 hospital beds, and we are running an occupancy rate of around 75–80 percent. So, somewhere, 20,000, 21,000, 22,000 on any given day.

Senator BURNS. How about—how about your clinics?

Dr. KIZER. I would have to defer to the actual number that is seen—

[The information follows:]

DAILY CENSUS INFORMATION

In fiscal year 1998, VHA provided outpatient care to 3.3 million patients, generating a total of 35 million outpatient visits.

Senator BURNS. How many people—how people—how many people have you got in the nursing homes and long-term?

Dr. KIZER. In the nursing homes there is approximately 15,000 beds. And they are running 90 to 95 percent occupancy rates.

Senator BURNS. So, you have got 14,000, about, in long-term.

Dr. KIZER. 13.5 thousand, roughly for VA nursing homes.

FUNDING FOR MONTANA

Senator BURNS. We increased the dollars last year in VA, but Montana took a hit for some reason or other. And they tell me it is because we—we opened a couple of clinics; one is Glasgow and one in Billings. And that—that money siphoned off dollars that usually went to Miles City or Fort Harrison. Is that a correct statement, do you know?

Mr. WEST. I will let Dr. Kizer answer it. I would say, it is not unusual as a part of the transformation of this system that beds in medical centers are reduced as we open outpatient clinics.

So—now that is my overall answer. Do you know the specific case of that one?

Dr. KIZER. I would have to defer, but it is not unreasonable that a certain amount of money, as you reallocate to a greater number of facilities, there would be some changes of what would go to individual facilities.

TELEMEDICINE

Senator BURNS. Well, we have got a little firestorm going on out there. And so far, we have not—we have not been able get too many folks' attention on this. And I am kind of concerned about it, especially when we have got 180,000 folks trying to take care of 34,000. And it looks like there should be some—you know, some help here, coming from somewhere. That does not sound too efficient to me, if it takes that many—that many folks.

I will tell you that this is the most inefficient way. I do not know how come we are not issuing ID cards and sending them to the local hospitals in the first place, instead of—where we have got to deal with distances out there. And we have done nothing, as far as telemedicine is concerned or anything. And I would like to—I would like to see some kind of telemedicine facilities put in—in these hospitals, especially in the west, where we have got to deal with distances.

If you are going to put outpatient clinics in areas, then I think they are going to have to be able to communicate, both on a diagnostic and health care—ongoing health care problems with whatever main facility that we are operating.

I do not see any of those things happening; those innovative things that can keep us out of these busses that pick folks up and cart them 180 miles, just to get their blood pressure checked. That does not make a lot of—that does not make a lot of sense to me.

I would like to just visit with you in my office one of these days, and we can go over some of those things. This is not the place for this, because that is sort of a parochial thing that we have got in the west, Mr. Secretary.

But this is what I am looking at, right here.

[Indicating.]

Mr. WEST. I think you make good points about the use of telemedicine and other inventive, forward-looking devices that would deal with that. And I think that has been a hallmark of what Dr. Kizer's folks have undertaken. I would be glad, personally, to visit with you.

Senator BURNS. If we could take a look at that and see if we cannot make that work in some way or other, because—but I am still concerned about this little figure about how many people we have got and the facilities we have got, and then how many people who are actually using the facility today.

Mr. WEST. As I would say, again, it is not unusual that hospital beds are turning into outpatient clinics. That is the way we have been able to bring health care closer to veterans.

Dr. KIZER. Senator, I think, for the record, at least, we should make a comparison between the efficiency or the inefficiency, if you will, of VA health care to Medicare. And if you consider the capitation rate of VA health care at about \$2,600 per person, and however efficient or inefficient that is, for a lesser scope of benefits and a product that does not have the same level of quality, Medicare is paying about \$5,600 a year. So, that gives you at least some sense of perspective and reference. And if you want to—

Senator BURNS. Well, I will not argue that figure with you. I am just—I am saying that you have a very, very strong argument.

That is a very strong point. And I happen to agree with you on that—on that point.

So, that—I just think people ought to understand, you know, where our figures are coming from, because if there is anything that is—that is really eating our lunch, it is—I think we are—I think, somewhere in your—Mr. Secretary, in your organization, I think we are little redundant in our R&D.

What are we doing in R&D in the Veterans, that they are not doing somewhere else? I want to—some way or other, I want to help the folks out at the Armed Forces Pathological. They want to renovate out at Walter Reed.

I want to help some of those folks do that, because there is a resource there that I think needs new facilities—but I want to—there are some things I want to do that actually contribute to the support of our Armed Forces, not only in the field, but also our veterans in the same way.

I think we are a little redundant in some areas. But we will talk about that. I would like to sit down and visit with you about that sometime. If you get—if you happen to squirrel off about 15 minutes sometime, why, I would like to sit down and visit.

Mr. WEST. I will do that.

Senator BOND. Thank you very much, Senator Burns.
Senator Harkin.

PERSONNEL REDUCTIONS AND CLOSING FACILITIES

Senator HARKIN. Thank you, Mr. Chairman.

Mr. Secretary and Mr. Chairman, I am sorry I am a little late, but I understand some of the opening comments had to do with the same concerns that I have, and that is the impact of the VA medical budget on the care of Iowa veterans.

I am really becoming more and more concerned about what is happening. Our local VA medical region officials have described a \$27 million shortfall in VA medical care funding for Iowa. And that is during a time of double-digit medical inflation and an aging veterans population, which I am going to get more into with you in a minute, and a flat budget request for the VA's hospitals. It is not a big surprise that we have this shortfall.

Last summer, the VA hospitals of central Iowa announced a reduction of some 94 of its hospital staff. Now, there are rumors that even more reductions are going to happen sometime soon.

With this current shortfall, the rumors are ringing even more true. And I am now hearing about the possibility of VA hospital shutdowns in Iowa. This could have a tremendous impact on veterans in our state.

And again, this \$27 million medical care shortfall in my state really makes these rumors real. Recently, Mr. Secretary, you were asked at a public forum here in Washington, DC, whether the current VA medical budget will result in facilities being closed around the country. And you responded, "Not on my watch."

I appreciate that strong statement of support. But does that statement also mean that VA facilities, whether in Iowa or elsewhere in the nation, will not also see substantial reductions in personnel or service? Does it extend to that, too, or is it just for shutdowns? And I am—

Mr. WEST. I think I have an obligation to avoid giving overly categorical statements at any time. I recall—I think this was probably one of the winter meetings. And I spoke fairly specifically.

I referred, first of all, to some rumors last year that we were closing vet centers. That is the issue to which I made the comment, "Not on my watch."

With respect to closures of medical centers, medical facilities, I believe what I have said, and if not, I say it now, we have no plans to close any medical centers in this current fiscal year. Indeed, as far along as we are, there will not be any closures. And I know of no plans to close any in fiscal year 2000.

With respect to your question on reductions, no, I do not make those categorical assurances. And I say this about the whole issue of how we reform the face of VA health care, as we continue what has been, now, a five-year program, to completely transform health care from medical center based to ambulatory care. That is what we were just talking about, turning hospital beds into clinic beds.

I am going to leave it to our medical center directors, our network directors, to offer up in their areas to Dr. Kizer their best estimate, in consultation with their communities; that is, veterans there, service organizations, other interested people in those communities, how best health care can continue to be reformed and improved; getting more health care to more veterans. And in that, I put no restrictions on them, on what they can send forward, and what can be heard.

So, my answer is: No closures in 1999. I know of no plans for closures in 2000. I put no restrictions on our planners, as to how they try to manage and send forward recommendations.

And as to staffing reductions, they are already part of our budget. We are doing reductions in 1999. They will contribute to the level we must reach in fiscal year 2000 budget. I have seen a number as high as 8,000; I heard one mention 7,000; in a base of some 220,000 employees in the Department of Veterans Affairs. But I do offer this: When we do them, they will not be budget driven. They will be driven for the purpose of improving health care.

How do I say that? As we learn that we can bring health care closer to veterans, in clinics that get closer to them, that very surely will mean there will be fewer beds in major medical centers.

Now, I may have missed the origin of your point. I do not remember whether you were asking me about clinics or medical centers, but the point is, there will continue to be changes in the way health care appears in our communities across the nation, as we continue to try to improve it.

IOWA CITY VAMC STUDY

Senator HARKIN. Well, we had a study done, with the University and with the Iowa City Veterans Medical Center in Iowa City, IA.

Mr. WEST. That is a medical center.

Senator HARKIN. You are familiar with that. Well, there was a study done as to whether they were going to close it and transfer the veterans to the university hospitals. Another study showed that the VA center would save \$16.6 million a year by closing its inpatient facilities, but would have to pay the university hospitals \$22.4 million to care for the patients.

So, it does not look like there would be any sense in closing that and shifting over the veterans.

Mr. WEST. Well, but I hear you also saying, at one point, closing the facility, and at another time, closing the inpatient facility. This has happened in other medical centers across the country, as we look for the best way to deliver health care there.

I do not know the specific plans there. Do you know the specific plans there?

Dr. KIZER. Yes. A decision was made not to move forward there. As you know, the Iowa Medical Center has had a reduced census—quite a low census—in the last couple of years. The study was done, comparing the costs. And the decision was made to retain the services at the VA, because it was significantly cheaper than buying it across the street.

Senator HARKIN. Yes.

Dr. KIZER. In other places, we have made the converse decision.

Mr. WEST. Well, we do not make these decisions lightly.

Senator HARKIN. Let me just get into that. My time is running out.

Mr. WEST. Sir.

PROVIDING HEALTH CARE IN RURAL AREAS

Senator HARKIN. We talk about reducing population base. And I have got a running argument with some people on that. I just want to make it clear that you are right. There is a bigger population base for veterans in some other states in the nation than in Iowa; Arizona, Florida. When some veterans retire; they go down there to live.

But what you have got to start looking at is not just base numbers, but also how old these veterans are and how poor they are and how sick they are. In Iowa a lot of people who have a little bit more money, may have moved to Arizona, they may have moved to Texas, or they have moved to Florida to retire.

And what is left behind are the poorest, and the sickest, and the oldest. And those cost more money. And I do not—I just say this to you with all due respect, I do not think the VA is looking at it in those terms. I just keep hearing about a population basis.

And I tell you, you have got to start factoring in that aspect, plus as my friend from Montana said, the rural areas, where they have to travel a great distance, where they do not have the facilities right around the corner, and where, because of the high incidence of near poverty—I will not say poverty, but near poverty, where these veterans are basically living on their social security checks and that is all.

They do not have the wherewithal to just jump in the car or have someone drive them, because they are too sick to drive to the University of Iowa or to Iowa City or to the Des Moines Veterans Hospital.

So, I just want your reassurance that you are going to start taking a look at not just population base, but age, income, and health problems, all combined in that veterans community.

Mr. WEST. Senator, we have done that and will be happy, if you want to sit down outside this forum to go through some of that data, but we actually have comparisons in the different areas.

I think the most difficult issue that we find in some parts of Iowa, as well as in Vermont and a number of other places in the rural areas, where you have a low population density, but you have elderly and sick veterans who need care, is how can they get to a clinic or medical center. And this is an issue that confronts not just veterans but rural health care everywhere. We are part of that, trying to figure how to do that.

As for Iowa veterans, the acuity and the functionality of the population, the age of the population, et cetera, those things have been looked at. And we would be happy to share some of that information with you.

[The information follows:]

PROVIDING HEALTH CARE IN RURAL AREAS

VA has initiated a survey instrument to assess the health status of our patients nationwide. This instrument takes into account such factors as the patient's age, degree of illness, and area of the country in which he/she lives. We have completed initial work on this health assessment in order to establish baseline data on users of VA care. Our plan is to now extend the health assessment to all enrollees of VA care over the next several years. The health survey will also include information on health behavior such as smoking, alcohol abuse, physical activity and diet. We believe the assessment is pertinent for resource allocation decisions and as outcomes of care. For your information, we are including a recent article from the American Journal of Medical Quality which describes in great detail the Veterans Health Study thus far.

[CLERK'S NOTE.—The article from the American Journal of Medical Quality, "Health Status in VA Patients: Results from the Veterans Health Study," can be found in the subcommittee's files.]

Senator HARKIN. Well, I appreciate that, because—just one last thing, Mr. Chairman. You have indulged me. I appreciate that.

IOWA COMMUNITY-BASED OUTPATIENT CLINICS

I understand that the Iowa Veterans Office has delayed the start of the new community-based outpatient clinics, the CBOCs, in Iowa. And again, Iowa is a rural state. And I am wondering why is that happening? And if you could look into that, I would sure appreciate it.

Thank you, Mr. Chairman.

[The information follows:]

CBOCs IN IOWA

Healthcare services to rural veterans in Iowa are provided through a variety of delivery sites and arrangements. Current active CBOCs in Iowa are located in Mason City, Waterloo, and Bettendorf, with primary care services provided in Dubuque through an extension of the Waterloo clinic (see below).

Implementation plans continue on schedule for June 1999 for an approved CBOC in Galesburg, IL. No additional Iowa CBOC business plans have been submitted for approval at this time. In addition to CBOCs, complementary strategies are being utilized to provide services to veterans in rural areas of Iowa:

- Health screening and enrollment activities continue throughout the Network with more than 150 clinic sessions so far in fiscal year 1999.
- Primary care services will be provided in the Dubuque area through a traveling team based at the Waterloo CBOC. This service will begin on a part time basis with additional time being allocated if workload levels increase. Currently, VA is exploring the possibility of a lease for space in Dubuque.
- Specialty care has been expanded to rural areas of Iowa via telemedicine, and telepsychiatry connections. Currently, connections for telemedicine exist between the Iowa Veterans Home in Marshalltown and all the Iowa VAMC facilities. Telepsychiatry connections exist at the Quad Cities, Mason City, and will soon be expanded to include Fort Dodge. This technology provides increased ac-

cess to specialty care follow-up services. Additional connections via the Iowa Communications Network (ICN) are being explored across the state.

Senator BOND. Thank you very much, Senator Harkin.

Mr. WEST. Mr. Chairman, can I just say one thing about this issue of what gets reduced and what gets closed?

We should not be making these decisions—and I think we are not, but we should not be making these decisions in a vacuum here in Washington. These are the kinds of things that require community discussion. Veterans, veterans service organizations, everyone who has a role, is discussing it before they even get here.

I think, sometimes—because I know many of our directors and network directors are doing that, but sometimes when they attempt to start a discussion, it gets everybody excited, and it is back here in Washington as a decision before it has even been talked through.

We will try to make sure that on any decisions like this, the community has a role in the planning before we get to making pronouncements here in Washington. I think that is very important.

ASSET DISPOSAL

Senator BOND. Thank you, Mr. Secretary. You know, as we look at these very difficult problems that you are facing, some great philosopher, and it might have been Dr. Kizer, said that VA should not be about maintaining buildings, but about providing the best care for veterans.

Whoever said it, I think, was right. And I agree with that. And you have got some tough choices. You said there are no plans for closing any facilities in 2000.

Yet, do you agree with the assessment of the General Accounting Office that hundreds of millions of dollars are spent each year, and they suggest that billions of dollars, over five years, are going to be used to maintain unneeded buildings, unless VA takes some significant steps to begin the process of getting rid of these unneeded buildings? Would you agree with the assessment? Is that a fair calculation by GAO?

Mr. WEST. Are you—

Senator BOND. Yes. You, sir, or to whom you ever would wish to—

Mr. WEST. I think Dr. Kizer might have something he wants to say about that. And I am inclined to let him go first, but let me just say this.

How can one quarrel with the observation or the conclusion that we spend a lot of money maintaining buildings? Of course we do.

How can one quarrel with the observation that a lot of them are old? Of course they are.

And I took a glance at the report this morning. They are right.

And how can one quarrel with the observation that if some of those buildings that are tremendously old and that are big and that we pay a lot of money for overhead are standing half empty, that that is not at least something for us to look at, as we consider the changing face of the delivery of health care to veterans.

We are not going to turn aside from that. But I am also not going to make pronouncements today that, "Hey, everybody, get ready for a wave of closures."

I expect Dr. Kizer and his people to look at all of those factors, as they decide in discussions with the community and with the veterans there what we are going to do; how best we can going to continue to give health care, and even improve it, in the years ahead.

Senator BOND. That is a fair assessment. But what we are looking at, in your budget, with the needs you have, the balance between closing unneeded buildings—it is either that or it appears likely that it is furloughs, RIFs, and other drastic personnel actions. And these are not happy choices.

So, I would like to hear the solution from Dr. Kizer.

Mr. WEST. Before he speaks, I want to say one thing about what you said, Mr. Chairman. Unneeded buildings. We must—

Senator BOND. That's what they—

Mr. WEST [continuing]. First determine that they are, indeed, unneeded.

Senator BOND. Well, that was GAO's assessment. That is why I asked you if you accept the premise.

Mr. WEST. Well, I do not accept that they are unneeded, because I do not know the specific buildings. That is what we expect our people to look at and to determine.

Senator BOND. Okay. All right. Dr. Kizer.

Dr. KIZER. This is always an interesting and scintillating discussion. And I would add just a couple of points.

It is hard to argue with the rapidity of technology development and how health care has changed as a result; that when you have an infrastructure in which the average age of one's buildings is 38 years old, and when 40 percent of them are more than 50 years old, that there is certain to be substantial inefficiencies built into those, because those buildings were designed for a type of care in an era when things were done very differently than they are done today.

The difficulty that you have, and it is a political difficulty, in that people view these buildings as the personification of health care, and this leap between understanding that we can provide better health care and more health care in alternative ways, is one that communities have a very hard time coming to grips with.

And one of the things that we have, although you may not have had a chance to review it, there is a proposal out for review and comment, as we speak, for Capital Asset Realignment Committees. That would involve VA headquarters mandating that each network set up these committees that would be composed of primarily non-VA people, representing the veterans constituency, as well as some other folks, using consultants, and to look through exactly what are the service demands; what is the infrastructure that we have; where are the incongruities or the mismatches between facilities and needs, whether it be geographic site or just a physical plant in a site that may be otherwise well, and to come up with some recommendations.

I believe that people in the local communities, if they are given the full information and some time to mull it over and they have confidence, they will end up making the right choices. And the folks actually can make the tough decisions about realignment of our capital assets that may be very difficult to make politically.

MARKET ASSESSMENT PROCESS

Senator BOND. I know how difficult it is.

Mr. Secretary, prior to your tenure, this committee got into a firefight over whether a new hospital was needed in northern California. And a market assessment was done. And following the recommendation that a new hospital was not appropriate, outpatient clinics were provided instead, saving tremendous amount of capital investment and operating costs.

And I believe this committee was vindicated by our obstinacy in refusing to approve funds for a new hospital, but it was based on a market assessment.

Is that process of market assessment appropriate? You have got nine markets where there are four or more facilities. And I have gotten into some trouble before mentioning them.

I will not start that fight again today, but is a market assessment process appropriate? What resources do you need to make such assessments?

Mr. WEST. Well, I do not have the answer to the second question, but the answer to the first is: Any tool that will inform us better about how well we are delivering care is useful. And if a market assessment will do that, and GAO thinks it does—and indeed, we have done market assessments before. It has been very successful.

Senator BOND. But do you agree that market assessments are—

Mr. WEST. Any tool. Any tool that will help us to understand better what we need to do to deliver better health care is not only acceptable, but desirable.

Senator BOND. Is there any other tool, what other tool are you going to use, beside market assessments?

Mr. WEST. Well, there are all sorts of surveys. We have even done market assessments before. I do not see how I can object to market assessments.

Dr. KIZER. That process that you refer to is an inherent part of the—what I mentioned before; the Capital Assets Realignment for Enhanced Services [CARES] committees.

Senator BOND. We have not received the copy of the directive for the record. We would be interested in seeing that.

Dr. KIZER. We will get that to you today. It is a draft directive that, before it was promulgated in final form, I wanted to send it out to our various stakeholders for them to comment on it and see if we could not make it better than our first iteration.

[The information follows:]

MARKET ASSESSMENTS

In recognition of VA's responsibility as a major land holding agency to provide prudent and cost-effective management of its extensive real estate portfolio, VA is taking a number of actions aimed at maximizing the functional contribution and reducing VA's overall cost of ownership associated with the over 22,000 acres and 140 million square feet of space under our control.

To align our physical infrastructure to more effectively support the current healthcare needs of the Department, we are in the process of implementing an improved strategic planning process. To provide oversight and direction for this planning, each VISN will establish a Capital Assets Realignment for Enhanced Services (CARES) Steering Committee including membership representing veterans, the state, our affiliates, and our various missions. The CARES committee will develop semi-annual plans aimed at realigning any imbalance between VA capital assets

and veterans needs. CARES plans will itemize historical, current and projected utilization and demand for healthcare services, describe current assets, and critically review the match of assets to the VISN's current and projected future demands. The plans will further consider alternatives to current service delivery modes, and will make recommendations as to proposed reuse or reconfiguration of capital assets to more efficiently provide services to veterans [see attached draft Directive].

The Department has submitted legislation to authorize the establishment of a new five-year pilot and Capital Asset fund to significantly improve its management capabilities by encouraging and streamlining the process of converting properties we no longer need into productive assets. This proposal would allow the VA to dispose of these properties (including land, structures or any equipment associated with the property) by sale, transfer, or exchange, and to reinvest the bulk of the proceeds in more appropriate capital to benefit veterans. The Administration has also requested \$10 million in appropriation to fund the administrative start-up costs of this new activity. Allowable deductions would include all costs of disposing of the asset such as site preparation, demolition, administrative expenses, etc. The pilot would raise the threshold for reporting disposals in an annual budget document from \$50,000 to an amount equal to the cost of a major medical facility project (currently \$4 million). For disposals under this threshold, a notice of intent would be provided to the local community and the congressional committees. Because of the resources that will directly benefit VA programs, the Department is moving quickly to establish procedures to implement this authority as an additional tool in our overall Asset Management program.

DRAFT

Department of Veterans Affairs VHA DIRECTIVE 99-XXX
 Veterans Health Administration
 Washington, DC 20420
 April X, 1999

VETERANS HEALTHCARE CAPITAL ASSETS REALIGNMENT FOR ENHANCED SERVICES
 (CARES) STEERING COMMITTEES

1. *Purpose.*—This Veterans Health Administration (VHA) Directive promulgates VHA policy regarding the establishment of Veterans Integrated Service Network (VISN) Capital Assets Realignment for Enhanced Services (CARES) Steering Committees and specific minimal requirements for their membership, reports, and plans.

2. *Background*

a. Since September 1995, the veterans healthcare system has undergone a profound transformation. Illustrative of the changes are the implementation of universal primary care, a major shift from inpatient to outpatient care, and marked improvement in a variety of performance indicators. Similarly, more than half of all acute care hospital beds have been closed, bed days of care per 1,000 patients have dropped 62 percent, the percent of surgery performed on an ambulatory basis has increased from a third to more than three-fourths of all cases, and the number of patients treated has increased over 20 percent. Likewise, more than 270 new community-based outpatient clinics (CBOCs) have been planned and/or sited, 50 VA medical centers have been merged into local integrated delivery systems, and inpatient acute care has been discontinued at several VA medical centers. Myriad other service consolidations or program changes have also been completed.

b. At present, VHA owns and/or operates an extensive inventory of capital assets located in all 50 states, Puerto Rico, the Virgin Islands, Guam and Samoa. These assets include over 22,000 acres of land, 4,700 buildings, and 140 million square feet of owned or leased space at over 1,200 locations. The replacement value of building supporting VA's healthcare mission is estimated at \$35 billion. The average of VHA facilities is about 38 years. Many of VHA facilities were acquired from the military and are not sited near veteran population centers. Likewise the physical infrastructure of VHA was developed at a time when the dominant method of care required inpatient admissions and relatively long lengths of stay. The standards to which these facilities were designed and constructed decades ago are, in many cases, no longer deemed appropriate or acceptable for modern healthcare.

c. In addition, the hospital or individual hospital service occupancy rates at many VA facilities today are less than needed for either efficient operation or optimal quality of care. This situation will likely worsen as current trends continue to shift more and more care to ambulatory and home settings. Perpetuating inefficient use of existing VA facilities diminishes the availability of funds that could be used to increase veteran access to care, to strengthen the service delivery capabilities of more functional VA facilities, or to otherwise enhance services for veterans.

d. As we now begin to peer into the 21st century, it is clear that new healthcare and information management technologies, combined with advances in genomics and other medical sciences, the aging of the veteran population, budget constraints, and other developments will continue to further transform the delivery of veterans healthcare.

3. *Policy.*—When visualizing VA healthcare in the 21st century, it is clear that in numerous locations, VA facilities and other capital assets are not well aligned with the location or needs of veterans. Therefore, it is imperative that each VISN begin a strategic planning process aimed at realigning imbalances or inequities between VA capital assets and veterans needs. The intent of such planning is to enhance services to veterans.

a. To be successful, this capital assets realignment for enhanced services planning process must be open and broadly inclusive of VA stakeholders and VA health plan users.

b. Likewise, to help ensure objectivity and impartiality of the process, assistance from knowledgeable outside and independent consultants is essential.

4. *Action.*—To accomplish the above noted goal, each VISN is hereby directed to convene a CARES Steering Committee by July 1, 1999. This committee shall submit to VHA Headquarters, Office of the Under Secretary for Health, a CARES Steering Committee initial report and plan by December 31, 1999, and every six months thereafter. At a minimum, the Committees' reports shall be linked to the VISN business plan and shall:

a. Review historical, current, and projected service utilization and demand for veterans healthcare services throughout the VISN and for each particular facility.

b. Describe current VISN capital assets, including all owned and leased properties/buildings and other relevant federal and/or state facilities (e.g., State Veterans Homes). This review shall include at least a description of each asset's geographic location, services provided and treatment capacity, age physical condition, convenience or access, availability of parking or public transportation, and need for renovation or repair.

c. Critically review the congruence or match between present VHA assets and the VISN's current and future projected demand for services.

d. Make recommendations for how VISN capital assets could be reconfigured or rearranged to better meet the demand for services.

e. Consider alternatives to current service delivery modes that might allow the VISN to enhance services to veterans and/or serve more veterans.

f. Membership of the CARES Steering Committee shall be selected by the VISN director and shall consist of at least the following:

- 1. a State Director of Veterans Affairs (or his/her representative);
 - 2. a director of a State Veterans Home (or his/her representative);
 - 3. three representatives from veterans service organizations or veterans advocacy groups;
 - 4. a dean of an affiliated medical school (or his/her representative);
 - 5. an Associate Chief of Staff for Research from a VA medical center;
 - 6. an Associate Chief of Staff for Education from a VA medical center;
 - 7. a representative from a state medical association;
 - 8. a representative from a state hospital association;
 - 9. a VA clinician knowledgeable about geriatrics/gerontology and long-term care;
- and
- 10. the VISN director and Clinical Manager, who will serve as Ex Officio members.

g. The chair, vice chair and other officers of the CARES Steering Committee shall be selected by majority vote of the membership.

h. The CARES Steering Committee shall establish operating rules and policies, and shall be given an operating budget by the VISN.

i. The VISN Director may chair the first and/or second meeting of the Steering Committee until a chair is elected.

5. *Resources.*—In developing its Capital Assets Realignment for Enhanced Services Strategic Committee plan, VISNs shall consider the "Criteria for Potential Alignment of VHA Facilities and Programs" dated September 1995, A Guidebook for VHA Medical Facility Integration (1998), and other relevant internal and external reference sources.

6. *Follow-up Responsibility.*—The Chief Network Officer (10N) is responsible for the contents of this directive.

7. *Recission.*—This VHA Directive expires January 31, 2005.

KENNETH W. KIZER, M.D., M.P.H.,
Under Secretary for Health.

Senator BOND. We will give you any ideas we have. Thank you.
Senator Mikulski.

Senator MIKULSKI. I would just like to give some observation on the—first of all, Dr. Kizer, I found your description of the local teams to be very informative, as well as the Secretary's comments.

Here is what I think: First of all, we are in the VA health care business. We are not in a VA real estate business. And I think the veterans will know that.

They have developed an attachment to facilities, because it has usually been very important in the community, strong volunteer base, both from veterans organizations, as well as community, but really, deep down, what they want is continuity of care. And they say they want VA to be in the health care business and less worried about the real estate business.

What I believe, because I do believe decisions must be made at the local level, though—but I do believe there needs to be national guidelines, national criteria, and national training of the people who will be organizing teams like that at the local level; and then oversight and supervision of the teams, so that you have the decision making, but you provide for local VA administrators, who will putting these teams together, because again, they have been in the VA administration business. They have not been in the real estate business.

And that is why I know Senator Bond was focusing on market assessment. And we would want the involvement of private sector or non-profit private sector in the local community; the State Economic Development Commission; in Baltimore, it might have been the Baltimore Economic Development that says, "This is—this is really the—what this asset is worth. These are other uses."

Perhaps—and I could go through a whole string of things; not creating destabilization, as well as that.

So, think about national guidelines, national criteria, and national training, oversight and supervision, and then truly not just saying Well, we are going to have a meeting with the veterans to see what they want to do.

That is important, but property is a very complex business for which there is specialties in that. So, that is one thing.

PROCESSING CLAIMS

Second, I would like to go, though, to the disability issue. And Mr. Secretary, could you tell us what is the current processing time for claims? And what is your goal? And how do you hope to achieve it?

Mr. WEST. For claims.

Senator MIKULSKI. Yes. How long does the average—from the time someone applies, what is the average length it takes to be adjudicated?

Mr. THOMPSON. Original compensation claim.

Senator MIKULSKI. Yes.

Mr. WEST. Speaking strictly about original compensation claims, Senator, that would be 198 days.

Senator MIKULSKI. I am sorry. I cannot hear you.

Mr. WEST. 198 days for original disability claims. All claims involving disabilities, of which original claims are a distinct minority, average 161 days.

Senator MIKULSKI. How could that time be reduced? And what is the goal, Mr. Secretary? We have heard these two numbers. What is your goal, sir, in terms of—

Mr. WEST. Well, in terms of time of processing, I have several goals, Senator.

First of all, when I arrived, we knew we had improved the time of processing, but I was told by my Under Secretary, Joe Thompson, as he put his new process in place in VBA, that the time of processing claims was going to lengthen for a bit, as we tried also to improve accuracy and other considerations as part of his balanced scorecard approach.

That has happened. He has put in his balanced scorecard approach. We are improving accuracy. And yes, we will try to improve timeliness, as well. But between now and, say, the end of this fiscal year, my goal is to continue to show improvement in accuracy, as well as beginning to make improvements in timeliness, as well.

I think one of the things that has happened to this department, in the past, is that we too quickly got ourselves anchored to a number of days by a certain time line.

PERFORMANCE STANDARD IN PROCESSING CLAIMS

Senator MIKULSKI. What is your performance standard, then?

Mr. WEST. If I could finish that thought. What it did was to create a problem that VBA has tried to overcome; that is throwing all your assets, all your people, and all your best thinking into just finishing fast.

Let me tell you what finishing fast can mean. It can mean that you put aside older claims. And you only treat the new ones coming in that are not too difficult. And so, you end up getting better numbers, but you are really not serving veterans better.

So, the first performance standard is servicing veterans better.

Senator MIKULSKI. What is the operational definition of that? What is the operational definition of serving veterans better? What is the operational definition of—

Mr. WEST. It is the effect of our balanced scorecard.

Mr. THOMPSON. If I might, to echo something the Secretary just mentioned, when we over-focus on speed, which we did as a department for a number of years, we start to trade off things; the accuracy of the decisions we made, the things that are not measured, and specifically phone calls.

We had higher than a 50 percent blocked call rate, which means more than half of all veterans who called us got a busy signal.

Mr. WEST. I hate to interrupt him, but you can improve the timeliness of claims if you turn off your phones and people stop answering them, and just do claims. And to some extent, that may have happened.

Go ahead.

Mr. THOMPSON. Appellate work, remands, fiduciary work; all of those things got put on the back burner, because we focused on one type of claim.

We have adopted the operational definition of a good job is saying, "You not only do it quickly, but you do it—you make the right call, you make the right decision."

As I mentioned last year, our error rate was 36 percent. We pay out billions of dollars in our programs—we are either doing a disservice to veterans or taxpayers or both when we make mistakes.

I am happy to say, although it is nothing to write home about just yet, we have reduced those by about a fourth. We have gone down from 36 to 27 percent in a year.

This is an enormously complex business. It takes years to train someone to do this job. To make adjustments in the error rates is a multi-tiered approach. It is not just simply pay more attention to what you are doing. As you mentioned, Senator, it has to do with technology. It has to do with over-complicated rules. It has to do with training. A host of issues.

We want to build this system so it is strong and is capable of delivering great service to veterans. We feel that the only way you can do that is by looking at how long it takes to do it; how accurate are you; what veterans think about it; and how efficient are you in the process.

We have established a system of measures that look at all of those things. It has taken some time to get that in place, but I am very comfortable that looking at the system, we are actually stronger than we were a year ago. I will admit that the cycle times are not good. I completely agree with your observation on that, but the system itself, from the base up, is stronger than it was.

Senator MIKULSKI. Well, there—the two basic tools, of course, are accuracy and timeliness. I mean, that is also the way they—one, the way the taxpayers would evaluate you, and second, the way the public would be.

But I feel I have been at this issue for a decade, both as chair and then ranking. Paul has a report there, where there was a GAO report in 1997. There was something in 1994. When—the NAPA report, et cetera. And we are always going to get there.

And the question is: When? How? What? Because—and when I visited VA in Baltimore, trying to do disability, they had, like, shelf upon shelf upon shelf of manual upon manual upon manual, all of which were quite cumbersome. And each case required pulling down four or five different manuals.

Certainly, there also needs to be an evaluation of the regulations, the decision making. I believe Dr. Kizer would say that there is even—since the original 1950 evaluation of what criteria went disability, et cetera. Technologies have changed. Certainly, if you can go in a hospital and you are out in one day, it does not mean you that you are still a—no patient. But disability has even been evaluated. Things that were once—just because it is chronic, does not mean that it is disabling.

I am not, again, in the rehab disability evaluation business, but there seems to me a way that we must really, by the end of this century, get our hand on this.

Mr. THOMPSON. I quite agree on the things you mentioned. The system itself was fundamentally weak and right across the board, whether you look at regulations—

RESOURCES NEEDED TO MEET GOALS

Senator MIKULSKI. Well, do you need more people? I know my time is up. Do you need more people?

Mr. THOMPSON. Yes, we do.

Senator MIKULSKI. What do you need?

Mr. THOMPSON. We have asked to move 440 people into the disability claims process. New hires, combined with transferring FTEs from other areas with VBA, will enable us to move 440 additional claims decisionmakers into the claims process.

Senator MIKULSKI. As I understand it, the Administration's budget calls for only a very modest increase in this area. Is that correct?

Mr. WEST. It calls for 164 new positions. Those new positions go directly to them. At the same time, as a result of some duties that are changing in VBA, they are getting a total of 440 claims decisionmakers. That will muscle it up.

But at the same time, Senator, I am not going to let our people say to the folks working for them, Abandon everything else you do in that office; just to get the days on those first claims shortened.

They must do the other things. For example, if they get it wrong, but get an answer out, they have still delayed the veteran getting what he is due on his claim.

We want the accuracy improved, because that deals with the most egregious problem, which is lengthy processes that go on and never end.

Senator MIKULSKI. Well, this—if I might, Mr. Chairman—
Senator BOND. Please.

WASHINGTON, DC, REGIONAL OFFICE

Senator MIKULSKI [continuing]. With your indulgence, follow up on the D.C. field office. I was very disturbed by the March—excuse me, the April 10 report by the Post that says the D.C. field office was in chaos. There was a backlog of 10,000 cases. The field office has 158 staff, down 250 of—down from, excuse me—down from—by 100, from five years ago.

Do you want to comment on this article? The 10,000 cases. These are in my Montgomery County, Prince George's County, and also the greater metropolitan area benefits.

Mr. WEST. I do want to comment. First of all, it is unacceptable. I mean, that is just the fact.

Senator MIKULSKI. What's unacceptable? The article or the D.C. field office?

Mr. WEST. No. There is nothing wrong with the article. The article is based on a report made by Under Secretary Thompson's team that went in there and reviewed it and wrote up their findings. It is our self-assessment. It identifies an unacceptable condition.

Under Secretary Thompson has several efforts underway. He has a team in place and a person on his immediate staff directly responsible for it. So, first and foremost, we found the situation. And we found it because of the new system he has put in place, whereby peers from other parts of that network went in and looked at it.

Senator MIKULSKI. Well, then, what is the plan? Now, that we have agreed that you found it and it is unacceptable, what, then, is the plan?

Mr. THOMPSON. First, to echo the Secretary, it is a serious situation there.

In the short-run, we will put the resources and the leadership in there to get control of the immediate workload situation. By this summer, we should have that under control.

Senator MIKULSKI. What does that mean? I mean, are you going to bring 500 people? Are you going to bring six people? Those are abstractions. What does—what are you really specifically talking about?

Mr. THOMPSON. Well, specifically we are—

Senator MIKULSKI. I do not mean to be terse, but I—

Mr. THOMPSON. That is fine.

Senator MIKULSKI [continuing]. Need specifics.

Mr. THOMPSON. We are bringing people in to help the regional office. We are also moving work out, temporarily, at this point, to Baltimore, Roanoke, other parts of the network, to help them bail the water out of the boat.

Senator MIKULSKI. How many people are you bringing in?

Mr. THOMPSON. We are only bringing in a handful to work in the regional office.

Senator MIKULSKI. What is a handful?

Mr. THOMPSON. About five or six and that includes managers, as well.

Senator MIKULSKI. So, the rest, then, will go on to overburden people in Baltimore, Roanoke, and so on.

Mr. THOMPSON. Well, there—

Senator MIKULSKI. You just said that when you go to solving one problem, another part collapses.

Mr. THOMPSON. The situation is this: Wherever we draw from, they need the resources. There are no flush places in the United States. Wherever we try to help, we are going to have to draw from someone who also needs the help. It is a matter of balancing priorities.

This system, in VBA has gone down farther than any of the operating lines in VA; 18 percent over the last few years, as the work has continued to build. It is important to understand that there are no magic solutions. It takes years for someone to learn the business. If I hire five people today, there—

PLANS TO SOLVE PROBLEMS AT WASHINGTON REGIONAL OFFICE

Senator MIKULSKI. I understand that. We have discussed that. Let us go to the plan here, sir.

Mr. THOMPSON. Okay. We will get the work under control this summer. In the long-term, there is a different problem and it is a chronic problem with that office. That office has traditionally served as the farm team for VA headquarters. What that means, specifically, is, as we have trained people in these very complex jobs, the temptation has been great to hire them away into VA headquarters and other areas of the government in Washington.

The grades in our regional office are not nearly as high as they are in headquarters facilities. There are probably more than 100

people in VA headquarters, who at some point in their careers, were at the Washington regional office.

Over the long haul, it is hard for them, despite——

Senator MIKULSKI. What are we——

Mr. THOMPSON [continuing]. All the other things.

Senator MIKULSKI. What are we going to do about it?

Mr. THOMPSON. That is what we are crafting now. I will be glad to sit down with you, as we decide what needs to be done.

Senator MIKULSKI. Do you now have a plan for that, sir?

Mr. THOMPSON. We have the short-term plan and we are working on the long-term solution.

Senator MIKULSKI. And what do you envision the long-term solution to be, Mr. Secretary?

Mr. WEST. It is not clear. I will have to wait and see. He has put in a team and he has a deputy on his staff directly in charge of it.

First, what we did was send in the team that told us what the story is. Now, we need a team to look at several options.

One of them, quite frankly, is to stop treating that office that way. This is no knock on the personnel in that office. The fact is, though, they are constantly retraining themselves, as their good people keep leaving.

And so, one thing to do is just allow them to grow and strengthen themselves.

Another might be to reform the mission of that office, entirely.

I do not announce that here today, but I am saying, as a long-range——

Senator MIKULSKI. You will evaluate it.

Mr. WEST. As a long-range solution, those are two of the key things to look at; to either allow them to exist there and not constantly be raided, as we need good and talented people in Central Office, so they can grow and mature. Second, we could reform their mission in some way, so that their workload is permanently assigned elsewhere. We need to work through that, Senator, before we decide which of those to do.

In the meantime, as a short-term effort, we are diverting some of that work. We are sending in a team to help those who are there with the remaining work.

Senator MIKULSKI. Well, I know that the Chairman will ask additional questions in this area. And let me say this: Number one, yes, I would like a report on the specifics of those short-term, long-term. And I know the Chairman does, as well.

In addition to that, as part of both dealing with the 10,000 case backlog there, my concern is that as you shift it to other offices in the region the temporary shift could become a permanent shift, or they themselves fall behind. I want to be sure that this truly is a short-term, time-limited one, and that the D.C. field office meet its responsibility to the constituency area to which it has been assigned, so that Roanoke does not collapse; Baltimore does not collapse; or wherever you are going, because you already said they are working under, at best, spartan circumstances or even skimpy, quite skimpy, circumstances. And I do not have the exact personnel numbers in those areas, but you know best.

[The information follows:]

PLANS TO SOLVE PROBLEMS AT WASHINGTON RO

We are providing a summary of the short-term actions we have undertaken to begin to bring the Washington Regional Office workload back under control. The more fundamental issues related to the long-term solution and the appropriate mission for the office are complex and will take additional time to resolve. We will provide the Chairman and Senator Mikulski with copies of our long term plans as they are developed.

SHORT-TERM ACTION PLAN—APRIL 1999

WASHINGTON REGIONAL OFFICE

Restructure Veterans Service Center

Recruit new Veterans Service Center Manager.

Recruit for critical positions to include: Assistant Service Center Manager, Master Rating Specialist and clerical personnel.

Define clear lines of responsibility and authority by establishing work assignments, job descriptions, and performance standards.

Establish the following operational elements with clear lines of responsibility and authority:

—2 Claims Servicing /Processing Groups

—1 Customer Service /Contact Group

—1 Claims Establishment /Mail Management Group

Centralize foreign cases to designated staff.

Stratify and assign work based on complexity level.

Mail and Folder Management

Place all mail under end product control.

Establish and strictly enforce a standard operating procedure that ensures all employees update both the Benefits Delivery Network and COVERS (Folder Tracking) systems as claims are processed.

Use experienced claims examiners to screen all authorization and rating work on the floor.

Other Actions

Detail the Veterans Service Center Manager from Oakland to evaluate and recommend changes to process.

Establish a Service Delivery Network Help Team to review and finalize all cases over six months old.

Broker claims requiring rating action to the Satellite Rating Activity in Huntington, WV and other regional offices.

Assign rating specialists to review the quality of requests for medical exams and make direct telephone inquiries in the event of deficient exams.

Establish an aggressive training plan for the Veterans Service Center.

Senator MIKULSKI. And as former Secretary of the Army, you know we need to really now be able to deploy, because this is a 9-1-1 situation. We do not want it to be a permanent situation.

So, having said that, Mr. Chairman, I know you have questions. Thank you.

Senator BOND. Thank you, Senator Mikulski. And I would note that Senator Mikulski's leadership on this has been consistent throughout. And she has strongly advocated for more personnel for VBA. And I believe since I have taken over as chair of this committee, we have added more people above the OMB budget request for VBA. So, this committee is concerned about the problem. And the ranking member and I are going to continue to review that.

I have about completed my questions for this hearing. I want to touch on two areas quickly. And then I will submit a number for the record.

Senator MIKULSKI. And so will I.

MEDICAL SCHOOL AFFILIATIONS

Senator BOND. And Senator Mikulski will, as well.

With respect to academic affiliations, VA plays a critical role in the education of medical students. And I think that has already been referred to today. There are about 9,000 residency positions through affiliations with 107 medical schools.

What impacts have there been on VA's affiliation over the past several years, as VA has closed thousands of acute care beds, reduced staffing, reallocated to ambulatory care? What is the VA doing to preserve those critical relationships with affiliated universities, at the same time transitioning to a more appropriate number of residents in specialized programs? And I would address that to Dr. Kizer, I believe.

Dr. KIZER. I believe we have strengthened those affiliations and actually have become a more valuable training resource than we were before, although some of the medical schools still do not understand that. We have shifted to provide venues of care that are more typical of what is going to be utilized in the 21st century, and we have provided the opportunities for both enhancing our care, but also provided training sites for the universities that are, in general, less replete with than we are.

MEDICAL STAFFING REDUCTIONS

Senator BOND. We have heard concerns expressed about some of that. We will share those individual concerns with you. And as we also look at research facilities, particularly in Columbia, MO laboratories, we will discuss later, but I guess the last and most important question, Mr. Secretary and Dr. Kizer, given the fact that VA did not meet its FTE reductions last year and will not do so this year, you have got a much higher goal for fiscal year 2000; 8,000 work-years. That is in the budget you submitted to us.

And it appears that to meet the goal, a lot of these FTEs need to be off the payroll by October 1. At least, that is according to GAO.

How are you going to get it done? Are you looking at significant furloughs? Obviously, this is RIFs, furloughs. Normal attrition is not going to get you there. This is something that we are very much concerned about and the impact it is going to have on care and provision of services. How are you going to get there?

Mr. WEST. Actually, before he answers, I would say normal attrition or attrition of some sort can be very helpful, if we make up our minds to do it. They have 35,000 employee turnovers every year. If only five of six spaces are filled, there will be an impact. Now, I do not propose that that is the way that will happen.

Second, I saw the GAO comment. I noticed, for example, that with respect to the medical affiliations that you asked about a minute ago, they seem to think that the medical schools will cause us not to do the things we need to do; because if we do, it dries up some of the training for their specialists.

Well, GAO also said that business about having to get all of these folks off the rolls at the outset of 2000. I do not think that is true. You certainly cannot wait until the end of 2000. And the earlier you do it, the sooner you get the savings.

Indeed, Dr. Kizer wrote me a memo a while back that said before we even start on 2000, make sure we do as much as we can in 1999. So—

Senator BOND. We have a copy of that memo, I think.

Mr. WEST. Third—

Senator BOND. That was interesting.

Mr. WEST. Third, you have buy-out legislation proposed by us now. I think it has just gotten up here. I hope so. That authority will be important to us as we do this.

So, yes, from my point of view—and I know you want to hear it from Dr. Kizer's point of view—it would be a stretch, but I do not think it is, by any means, impossible.

Senator BOND. Dr. Kizer.

Dr. KIZER. The challenge is a steep one. And I can assure you that your concern is probably much less than mine. But the—

Senator BOND. I do not doubt that. I will buy that.

Dr. KIZER. The other reality that we have to deal with is the longer that it takes to initiate these reductions, the deeper the cuts have to go. That is just the basic premise of federal government personnel rules. And so, there is a need to make those changes as rapidly as possible, to minimize what might be considered the uncontrolled aspects, that would develop if they get delayed into the next year.

Mr. WEST. I think the biggest complication of the whole effort is me, Mr. Chairman. Because when proposals for RIFs come up to me, I take my time on them. I want to make sure that they really are needed and that they will not effect care to our veterans. And so, I can process them quickly, when they are justified, and it will be tough, but if we have to, we can do that.

PROTOCOL FOR PROCESSING VHA ACTIONS

Senator BOND. Item six in Dr. Kizer's memo of February 8, said, "I therefore request that we quickly establish a protocol for rapidly processing requests or actions to right-size the VHA health care system."

Is that protocol ready? Has that been done?

Mr. WEST. Well, the protocol is simply that I have assigned somebody to go get the packages when Dr. Kizer has them ready, and get them directly to me as quickly as possible. That is what that is all about. It is: How can we make sure that when VHA releases its proposal to the Secretary, that the packages do not wander around for so long that by the time they get to me personally and that I act on them, that the results are useless to the managers in the field who have been waiting for them?

And the protocol is that I have assigned someone on my staff, directly, to shepherd them from the time they leave VHA to me.

[The information follows:]

PROTOCOL FOR PROCESSING VHA ACTIONS

The Deputy Chief of Staff has been assigned the responsibility of tracking and shepherding the RIF/Staffing Adjustment packets from the time VHA recommends approval, through the formal staffing process, until it reaches the Secretary for approval. A report on the status of reduction in force requirements is maintained to assure visibility and timely processing within the Headquarters.

ADDITIONAL COMMITTEE QUESTIONS

Senator BOND. It sounds like my favorite cartoon character of old, Walt Kelly's famous Pogo. We have met the enemy.

And we will count on you to deal with that.

[The following questions were not asked at the hearing, but were submitted to the Department for response subsequent to the hearing:]

QUESTIONS SUBMITTED BY SENATOR BOND

POTENTIAL STAFFING EFFICIENCIES THROUGH RESTRUCTURING

Question. VA expects to provide care to an additional 54,000 patients next year, while cutting staff by 6,949. The budget says there will be \$1.14 billion in “management efficiencies”—and additional “savings” of \$244 million and 1,580 FTE if proposed legislation authorizing emergency room care is enacted. What specific cuts to medical services, staff and programs will be made to meet the \$1.4 billion target?

Answer. In all budget years, facilities and VISNs are encouraged to continue efforts to identify potential staffing efficiencies through restructuring. Initiatives such as internal reorganizations, changes in missions and programs, elimination or reduction of services, consolidations of services or functions between two or more facilities, reallocation of workload, or redirection of staff and other resources, etc., occur at VA facilities across the system. This is a necessary part of sound, health care management that serves to improve the delivery of services to patients.

Intensified budget pressures will likely accelerate VHA’s re-engineering efforts, requiring greater cost savings. If VHA is to continue its efforts in maximizing efficiencies and quality, it must have the tools required to carry them out. We believe that we must use all the available mechanisms including normal attrition, early-out authority, budget authority, RIF and staffing adjustment authority, to re-engineer our workforce, since staffing accounts for about two-thirds of VHA expenditures.

Following the release of the President’s budget, the VHA networks were asked to develop plans addressing the management improvements necessary to achieve the significant savings required to operate within the proposed fiscal year 2000 budget. Those plans are currently being reviewed. In general, the plans show that we will need to continue to significantly reduce staffing and restructure our health care delivery methods. Staffing reductions would be achieved through attrition, buyouts, if approved by Congress, and, when necessary, reductions-in-force. Limitations on enrollment for lower priority veterans may also be examined. Several headquarters and field-based review teams are examining the network plans, and we will have a more complete national plan by the end of June. Finally, we will continue to reform our business processes (e.g., the purchase of medical and surgical supplies) to achieve efficiencies.

Question. Without knowing the specific cuts which are planned, how can we assess the adequacy of your budget?

Answer. Specific actions are being reviewed and a national plan should be completed sometime in June.

Question. Do you believe VA will be able to increase patient care without any degradation in the quality of care with the budget you propose?

Answer. No matter the budget level, we will ensure quality by carefully monitoring through a comprehensive performance management system. Despite flat budgets in the past, we have been able to increase the number of patients treated and outpatient visits, while simultaneously improving our quality of care performance and customer satisfaction. To become competitive in quality and service satisfaction, and to achieve necessary financial discipline, VHA has embarked on a more business-like approach to operations that forces us to take tough, but necessary actions. Our actions have resulted in significant efficiencies while we have concurrently achieved significant quality improvements.

Question. Do you agree with GAO’s assertion that VA’s transformation seems to have lost some of its momentum over the last 12 months?

Answer. The perceived loss of momentum reflects the expected maturation of many major VHA transformation initiatives. The early start-up phase was characterized by a flurry of escalating activities. Currently, the framework for VHA’s transformation has been established. Program officials are undergoing a period of refinements to streamline and improve upon what has gone before. During the third phase of change, quality transformation will be the defining characteristic. With few exceptions, external reviewers, including the Office of the Inspector General, the General Accounting Office and independent consultants, have consistently supported the organizational directions that VHA is pursuing.

Question. Given that VA did not meet its FTE reductions last year, and will not this year, do you really believe you can meet the fiscal year 2000 projections of about 8,000 workyears?

Answer. The challenge in meeting the management efficiencies set forth in this budget is a steep one. However, we have made significant progress in the past, and we have the energy to continue. As mentioned earlier, if VHA is to continue its efforts in maximizing efficiencies and quality, it must have the tools required to carry them out. We believe that we must use all the available mechanisms including normal attrition, early-out authority, budget authority, RIF and staffing adjustment authority, to re-engineer our workforce, since staffing accounts for about two-thirds of VHA expenditures.

Question. When will these FTEs need to be off the payroll by October 1, in order to realize sufficient savings? Why were the planned FTE reductions not met for fiscal year 1998 and fiscal year 1999?

Answer. To optimally achieve the desired savings, staff reductions would occur effective October 1, 1999. In fiscal year 1998 and fiscal year 1999, Congress provided additional funding that affected VHA's overall management strategy and allowed for the retention of staff above those levels budgeted. In addition, VHA was granted authorization to carry over Medical Care Collection Funds (MCCF) collections to support medical care operations.

VA'S REQUEST TO OMB

Question. I understand that VA's request to OMB was \$1.2 billion more than what is in the final President's budget. What specifically were the additional funds requested for, and why did the President deny VA's request?

Answer. The attached tables list VA's budget submission to OMB for budget authority. We respect your desire for information on the budget process, but must insist on the maintenance of open communication within the Executive Branch and my Department which requires confidentiality particularly on budget matters. If all written and oral communications made in the decision making process are subject to review and public examination, there would be an adverse effect on the candor in the opinions provided me in reaching decisions on budget matters.

¹ The mandatory program estimates were revised after the initial OMB submission by VA to reflect technical and economic assumption adjustments.

HEPATITIS C

Question. VA's budget estimates spending \$250 million to treat veterans with Hepatitis C. VA now believes the prevalence rate is closer to 8–10 percent. What is the total amount needed given the revised anticipated prevalence rate?

Answer. The \$250 million budget figure is based upon a prevalence rate of approximately 5.5 percent. On March 17, 1999, VA conducted a one-day national point prevalence testing activity to estimate the prevalence rate for VA patients who were having blood drawn and who agreed to be tested. This testing activity was not scientifically designed to accurately measure the prevalence in all veterans or in all VHA users. Rather, it was designed to be quick step that would verify and improve on the existing data. Anomalies in the data from this testing activity have been observed and analyzed. The measured prevalence, not considering obvious data inconsistencies, was 6.6 percent. Using 6.6 percent as a baseline, experts have estimated

the true prevalence to be 8–10 percent, at minimum, based on what is known of the inconsistencies in the data. Assuming an estimate of 8 percent, the expected rise in the cost will be between \$50 and \$100 million above the initial estimate.

Question. Why didn't VA do a better job sooner to estimate the prevalence rate?

Answer. The understanding of the true prevalence rates both inside and outside VA is not well documented. The VA initiative is the largest surveillance activity ever undertaken and required substantial planning and logistical coordination. No other entity has even begun to address prevalence or any other Hepatitis C-related activities as broadly or aggressively as VA.

Question. Will VA provide the treatment to all patients who would benefit?

Answer. VA will provide appropriate treatment to all patients for whom it is clinically appropriate and who wish to be treated.

ENROLLMENT

Question. Legislation enacted in 1996 required VA to create an enrollment system. Once enrolled, veterans are entitled to receive a full continuum of medical services. VA decided to allow all veterans—regardless of their income or disability status—to enroll. How many new veterans have enrolled for care who are not low-income or service-connected, and at what cost?

Answer. Priorities 6 and 7 include veterans who are not low-income or service-connected. Priority 6 veterans are mostly veterans receiving care for disorders associated with exposure to a toxic substance, radiation, or for disorders associated with service in the Gulf War or World War I and Mexican Border veterans, and compensable zero percent service-connected veterans. Priority 7 veterans are nonservice-connected veterans and zero percent non-compensable service-connected veterans with income and net worth above the statutory threshold and who agree to pay specified co-payments.

For these veterans, as of February 26, 1999, there were approximately 55,525 current enrollees in Priority 6, of which 6,281 were new to the VA system (not VA patients in fiscal year 1996—fiscal year 1998). Approximately 605,108 current enrollees are estimated to be Priority 7, which include 231,592 estimated to be enrollees new to the system. These estimates include an estimate of those veterans who currently have not been assigned a priority because they lack a current means test. Based on current data and trends, we expect 766,000 Priority 7 enrollees by the end of fiscal year 1999, 378,000 (or 49 percent) to be users. In estimating the costs for Priority 7 patients in fiscal year 1999, we applied the same relationship of part year to full year performance experienced in fiscal year 1998 to fiscal year 1999 year-to-date actuals. Through March 1998 we expended 44.1 percent of the full year, total fiscal year 1998 priority 7 costs (\$311 million of \$706 million). Applying that spending rate to \$349 million spending to date (through March 1999), results in an estimated cost of \$761 million for fiscal year 1999, an increase of \$85 million over fiscal year 1998.

Question. Why did you decide to allow all veterans to enroll when funds are so tight? Aren't you risking the quality of care and the ability to provide a full benefits package to those veterans who VA is mandated to provide care to (low-income and service-connected)?

Answer. Last year, before deciding to enroll veterans through all priorities, VA weighed all the available information and carefully considered the implications of the decision. It was VA's belief that VA could provide a comprehensive package of health care services to both mandatory and discretionary veterans seeking VA enrollment. VA projections last year of the expected number of fiscal year 1999 enrollees are very close (less than 1.5 percent variance) to the actual number who have applied for enrollment this year from both eligibility groups. The marginal cost of the Priority 7 enrollees, especially those who are new to the system, are quite low, with considerable offsets from copayment and third-party payments. Fiscal year 1999 data will be used to better predict cost and utilization of this group of veterans in the future.

Question. Are any networks having problems meeting the health care needs of veterans who have enrolled?

Answer. Appointment waiting times have increased in some specialty clinics, and in some areas new users wishing to get their primary care from the VHA are being put on waiting lists for a period of time before they are taken into the system. However, at this time the VHA is maintaining its ability to provide needed acute care to all veterans as medically indicated.

Question. Will VA be able to continue providing care next year to those enrolled individuals who are not low-income or service-connected next year under the budget you have requested? If so, will there be services denied to higher priority veterans?

Answer. VA will continue to utilize both an internal VA model and an external actuary model to make these projections. An integrated analysis will be provided to VA's senior management this summer in order to assess the level of enrollment that will be supportable for fiscal year 2000. Services within VA's defined comprehensive services package will not be denied to higher priority veterans.

ASSET RESTRUCTURING

Question. There may be a real opportunity for "savings" in the health care budget by improving VA's use of its capital assets and no longer operating and maintaining unneeded buildings. GAO states that "VA's asset planning indicates that billions of dollars might be used to operate hundreds of unneeded buildings over the next five years or more." Has VA developed an estimate of how much savings could be realized by excessing unneeded space and better asset management?

I understand a commitment was made by Dr. Garthwaite to the House Veterans Affairs Committee to conduct market assessments as GAO recommends. What is the cost and the timeframe involved?

Please describe the process VA will undertake to conduct these assessments, how VA will prioritize which assessments to conduct first, and how VA will involve the community and all stakeholders in these assessments to ensure the recommendations will be viable.

Answer. VA does not have an estimate of how much savings could be realized through improved capital asset planning and management. Based on the size of the portfolio, and the significant changes in health care that are shifting care away from hospitals to outpatient settings, we do, however, expect significant savings can be achieved. To align our physical infrastructure to more effectively support the current health care needs of the Department, we are in the process of implementing an improved strategic planning process. To provide oversight and direction for this planning, it is proposed that each VISN will establish a Capital Assets Realignment for Enhanced Services (CARES) Steering Committee, including membership representing veterans, the state, our affiliates, and our various missions. The CARES committee will develop semi-annual plans aimed at realigning any imbalance between VA capital assets and veterans needs. CARES plans will itemize historical, current and projected utilization and demand for health care services, describe current assets, and critically review the match of assets to the VISN's current and projected future demands. The plans will further consider alternatives to current service delivery modes, and will make recommendations as to proposed reuse or reconfiguration of capital assets to more efficiently provide services to veterans. Note that this proposal is currently out for review and comment.

Dr. Garthwaite agreed that we should conduct the market assessments that GAO recommended and recognized the need for outside consultant support in this effort. Within funding limits, and consistent with legislative requirements and our final CARES policy, we expect to assess all the multiple market areas identified by GAO. We have estimated that the total contracting support could cost from \$35-\$40 million. VA may also need to modify its major construction appropriation language in order to fund this contracting support.

MEDICAL CARE COST FUND

Question. VA's budget presumes an increase of \$124 million in collections from third-parties and co-payments, for a total of \$761 million. Unfortunately, VA's performance has consistently lagged behind its targets. Given performance to date in fiscal year 1999, I understand VA can expect to collect just over \$600 million, compared to its original estimate of \$677 million, a difference of \$77 million. What are the ramifications of failing to meet your target, and why is VA doing so poorly?

Answer. The collection plan is set prior to the beginning of the fiscal year, based on estimates contained in the President's budget. Many variables are considered in developing the plan and the values are determined by trending historical information and projecting forward, including anticipated workload and utilization. If collections continue at the current rate, the end-of-year projection for the MCCF fund is estimated at \$579.6 million, or approximately 91 percent of the fiscal year 1999 President's Budget estimate of \$637.5 million.

VA is continuing to improve on collections. Average daily collections for the month of March reached \$2.3 million per day, bringing the fiscal year-to-date collections to \$275.6 million. This represents a 7.5 percent increase over the same period for fiscal year 1998.

Historically, much of the MCCF goal is met during the final months of the fiscal year. Performance goals and key process measures have been set for each Network and are monitored on a monthly basis. Progress toward the MCCF goal is measured

as a part of each VISN Director's quarterly performance review. The signal has been clearly given to the VISN Directors that collections are a vital part of the Medical Care budget.

It is estimated that MCCF funds carried over from fiscal year 1998 and applied to medical care operations would offset any shortfall that may materialize in fiscal year 1999 MCCF collections. Given everything, it's disappointing to hear that VA's performance is characterized as poor. Last year, VA hit 94 percent of its target. By any other grading system that would be an "A", or excellent.

Question. According to a 1997 Coopers & Lybrand report of VA's cost recovery program, the private sector collects \$3.1 million per FTE, while VA collects \$151,000. Last year VA told us it was evaluating which functions could be effectively done by a contractor. What are the results of that evaluation? Given VA's performance in this area, doesn't it make sense to contract out?

Answer. VHA is currently using the services of a contractor, Trans World, for some collection activities. Trans World performs aggressive follow-up functions with insurance carriers for any VA medical center that needs assistance with follow-up collection activities. This contract has been made available to all facilities. At this time 68 facilities are using this contract.

The results of the Coopers & Lybrand study found that the issue of contracting out field-based revenue billing and collection functions is complex, and not easily addressed. There are many issues that need to be addressed prior to any additional contracting for this function, including the cost-effectiveness of:

- Contracting "back-end" functions only, (i.e., billing and collections) or entire revenue cycle (i.e., identification of insurance, coding, utilization review, and billing and collections).
- Contracting only third-party claims or 1st party debts, also (i.e., veterans' copays and per diems).
- Contracting by Network and holding the Network Director accountable, or contracting on a larger scale with national accountability.
- Whether to use VistA software or contractor provided software; if the latter, there are connectivity issues that must be addressed.
- Establishing measurable performance standards/parameters for data quality and coding and other front-end processing.
- Cost of contracting will be taken from collections and could be as much as 20 percent.

VHA has recently hired several contractors to perform audits and reviews of billing and collection functions, specifically targeting the comparison of medical record documentation with claims submitted to insurers. Results from these external reviews indicated that the medical record documentation and coding were less than optimal. VA's plan remains to contract for billing and collections. However, problems with documentation and coding of medical records must first be fixed. Actions being taken to address the issues of documentation and coding problems include the key elements of staff education and data validation. All medical centers are required to provide training on coding and documentation to clinical and coding staff, enabling VA to code both inpatient and outpatient records to meet Medicare standards. Medical Centers are being required to examine the encounter forms process, and establish a full-time compliance officer at each medical center. Each VISN Director is to establish a strong internal compliance program with internal audits to hold VISN and Medical Center management staff accountable for the data that is entered into the system.

Question. VA has cost recovery programs in each of its 172 hospitals, each employing its own methods with greatly varying degrees of success. If VA isn't going to contract out, doesn't it make sense to at least centralize functions to a few high performing hospitals? What are VA's plans to do so?

Answer. Each Network Director is responsible for the billing and collecting of third-party insurance and first-party copayments within the Network's medical centers. Some Directors have consolidated the billing and collection activities associated with third-party insurance to a consolidated collection site within their VISN. This was based upon VISN/medical center decisions in locations that had demonstrated best practice procedures for these functions. All medical centers electronically transmit the first party copayment information to the Consolidated Copayment Processing Center (CCPC) at the Austin Automation Center. Copayment statements are mass-produced and mailed from the CCPC to take advantage of high-speed printers and bulk mailing rates. In addition to the above consolidations, a national solution is being developed for electronic billing of health care payers using ANSI X12 and other national standards as mandated in the Health Insurance Portability and Accountability Act of 1996 (HIPAA). Electronic Data Interchange (EDI) will automate submission and receipt of billing, payment, and related information through com-

puter software modules to VA Integrated Billing and Accounts Receivables software packages.

ACCESS TO SPECIALIZED SERVICES

Question. In August 1998, GAO reported that in the two networks it reviewed (Bronx and Pittsburgh), overall access to VA care had improved but access to certain specific services decreased, such as spinal cord injury care and post-traumatic stress disorder. According to the veterans' Independent Budget, several specialized outpatient PTSD programs have been closed recently. Is access to specialized (and more expensive) care declining nationally as networks work to tighten their belts? What is being done to ensure that these critical programs are appropriately supported? What does VA do nationally to monitor the provision of these critical programs which are so important to veterans?

Answer. Although there may be localized reductions in access to some programs, access at the national level is improving in all programs, except for a slight increase in waiting time for admission to the Blind Rehabilitation program. Further, these improvements in access have been achieved despite increases in the number of patients being treated in these programs.

Regarding appropriate support for these programs, the Network Directors are aware of VA's expectations regarding the special disability programs, and they participate in the special monitoring and reporting requirements, as described below. In addition, we continue to maintain special national funding for prosthetics items across the system, and this is supplemented by additional local funding as needed.

VA monitors the provision of these programs by sending to VISN offices the mid-year and full-year workload and dollar expenditures for each program at each VA facility. VISNs are asked to validate these statistics and to explain any reductions from the 1996 levels, which are congressionally-mandated to be (at least) maintained. Since April 1997, VA has issued a congressionally-mandated report detailing the results of its efforts to maintain capacity in these special disability programs.

Question. Are there performance measures for network directors to meet which directly address the need to protect specialized programs? If not, why not?

Answer. Yes, there are individual performance monitors established for the specialized programs listed in Public Law 104-262, Section 104. These specialized programs are spinal cord injury and disorder, blindness, amputations, serious mental illness, traumatic brain injury and post traumatic stress disorder. These monitors are included in the annual Report to Congress on Maintaining Capacity to Provide for the Specialized Treatment and Rehabilitative Needs of Disabled Veterans.

LONG TERM CARE

Question. According to the veterans' Independent Budget, on any given day 587,165 veterans are in need of long-term care services. VA provides only 10 percent of the estimated need. The number of veterans needing long-term care services is expected to grow by 13 percent over the next five years. What is VA's long-term care policy, and what are VA's plans to address this critical need?

Answer. VA has drafted a document, "A Strategic Plan for Long Term Care Provided by the Veterans Health Administration," which contains essential policy elements and action plans to address the long-term care needs of veterans. This draft VHA document is based on the recommendations of the Federal Advisory Committee on the Future of VA Long Term Care. The Draft Strategic Plan, which is attached, is circulating for stakeholders' comments.

A STRATEGIC PLAN FOR LONG TERM CARE PROVIDED BY THE VETERANS HEALTH ADMINISTRATION

INTRODUCTION

In serving America's veteran population, the Veterans Health Administration (VHA) is now confronted with a "demographic imperative" that the rest of American society will confront in another 15 to 20 years (i.e., a burgeoning population of elderly persons needing both acute and long-term healthcare services). Decisions that will eventually have to be made for the larger American public need to be made now for veterans.

The imminent need to provide a coherent and comprehensive approach to long-term care for veterans will severely strain the VA healthcare system and will require significant increased funding. In confronting this challenge it is important to remember that addressing this need is important both in its own right, and because it will provide critically important experience and knowledge that will be instructive

in addressing the long-term care needs of the even larger number of elderly Americans who will need such services in the not too distant future.

In fashioning a solution to the unmet long-term care needs of veterans it is important to understand that long-term care should no longer be viewed as something "extra" or an extravagant adjunct to acute healthcare. Instead, like acute care, long-term care should be viewed as a requisite part of the continuum of care that VHA provides.

Today, acute care and long-term care are both essential components of healthcare; they are merely different places along the continuum of care that should be available. This continuum of care has health promotion and disease prevention on one end and palliative or end-of-life care on the other end. And just as the services provided in hospitals have changed dramatically in the last decade, so has the role of the traditional nursing home in providing long-term care. Today, a comprehensive approach to long-term care certainly needs to include nursing home care, but also should include home care, assisted living, adult day healthcare, respite care, and other noninstitutional options. Indeed, the many different forms of both acute care and long-term care potentially available today create myriad venues of service delivery along the continuum of care.

The essentiality of providing both acute care and long-term care is recognized by the healthcare profession, families and patients. It is now time for health plans and for Congress to affirm and support this as well.

In November 1998, the Federal Advisory Committee on the Future of VA Long-Term Care, an expert group convened by the Under Secretary for Health, released its report entitled *VA Long-Term Care at the Crossroads* (Appendix A). The Committee, chaired by Dr. John Rowe, President and CEO of the Mt. Sinai-New York University Medical Center, recommended 24 measures to enhance VA's services to veterans in need of long-term care. Its overall conclusion was that long-term care must remain an integral part of the veterans healthcare system. The Veterans Health Administration concurs with this recommendation.

The Committee's report was widely reviewed and commented on by VHA stakeholders. Based on a review of those comments, the Report and VHA expert opinion, the following strategic action plan was prepared. This plan outlines specific actions necessary to implement the Crossroads recommendations. Taken together, this plan and the Report provide a comprehensive yet incremental approach to meeting the challenges of providing long-term care for the growing numbers of older, chronically ill veterans.

Important to note is that in this plan the term "long-term care" is defined by patient needs and not by programs. "Long-term care" as used in this plan refers to the sustained care needs of older, chronically ill and disabled patients. The "long-term care patient" has on-going need for services; however, the intensity and the nature of specific services that are required will wax and wane over time. The continuing need for services in these patients is in contrast to the patient who requires such care episodically or for brief periods of time. The particular focus of this strategic plan, therefore, is on the "long-term care patient" whose functional abilities necessitate varying but ongoing care.

Each Strategic Action Plan detailed below contains 3 parts: (1) The Federal Advisory Committee's Recommendation; (2) Stakeholders Comments, if any; and (3) the VHA recommended Action Plan to implement or otherwise actualize the recommendations.

STRATEGIC ACTIONS

DEFINING LONG-TERM CARE

Strategic Action I

1. *Report Recommendation.*—VA should maximize network flexibility in developing and restructuring its long-term care services within broad national policies.

2. *Stakeholders Comments.*—None.

3. *Action Plan*

A. Long-term care will be defined in VHA by the continuing care needs of the person, as determined by their functional status. A VHA work group will develop the criteria for use of this definition by August 1999.

B. Existing VHA policies will be reviewed, revised, rescinded, and/or replaced as necessary to support the objectives outlined in the Crossroads Report. New policies will be developed when necessary.

C. Each network will be responsible for providing long-term care services which are appropriate to the individual needs of each enrolled veteran and which are de-

fined in the basic benefit package. Separate policies will address the provision of nursing home care.

D. Each network will specifically address long-term care in its annual strategic plan.

PERFORMANCE MEASURES

Strategic Action II

1. *Report Recommendation.*—VA must create a series of financial incentives and performance measures to ensure that adequate access to long-term care services is provided to veterans.

2. *Stakeholders Comments.*—None.

3. *Action Plan*

A. VHA will incorporate measurement of the provision and quality of long-term care services into its performance measurement system. New performance measures that include non-VA and VA-provided long-term care will be implemented in fiscal year 2000.

B. The Geriatrics and Extended Care Strategic Healthcare Group (GEC/SHG) and the Performance Measures Work Group have been tasked with developing these performance measures.

LONG-TERM CARE PLANNING

Strategic Action III

1. *Report Recommendation.*—Long-Term Care Planning Model offers an objective measure of service needs. The Department should continue to refine this population-based Planning Model, using the latest available data.

2. *Stakeholders Comments.*—Comments indicated general support for the use of the Long-Term Care Planning Model. Some reviewers suggested that the model was not sensitive to ethnic and social differences, which could affect utilization.

3. *Action Plan.*—A. The GEC/SHG and the Office of Policy and Planning will provide the networks with annual long-term care need projections (for both institutional and home- and community-based care) using the recently developed Long-Term Care Planning Model. The model will be run with the latest available utilization and demographic information from the National Medical Expenditure Survey. The next Long-Term Care Planning Model report will be provided by June 1999.

Strategic Action IV

1. *Report Recommendation.*—To meet the needs of veterans who are eligible for and use VA for their healthcare needs, planning for long-term care should be based on Category A veterans.

2. *Stakeholders Comments.*—Comments show agreement that long-term care planning should be based on the Category A veteran population. There was interest in also running the Long-Term Care Planning Model using the total veteran population. This was in order to be prepared and anticipate veteran interest in accessing VHA long-term care since enrollment categories may change from year to year.

3. *Action Plan*

A. The GEC/SHG and VHA's Office of Policy and Planning will provide the report described in Strategic Action IV for the Category A (Priority Groups 1–6) veteran population.

B. Additional modeling for Category C (Priority Group 7) veterans will include an analysis of co-payments, coinsurance and insurance for long-term care. If feasible, such coverage will be initiated.

C. Networks will use data from the Long-term Care Planning Model for strategic planning for its Category A veteran population.

HOME AND COMMUNITY BASED CARE

Strategic Action V

1. *Report Recommendation.*—VA should retain its core of VA-operated long-term care services while improving access and efficiency of operations. Most new demands for care should be met through non-institutional services, contracting, and, where available, State Veterans Homes.

2. *Stakeholders Comments.*—Comments indicated general support for increased use of non-institutional services, contracting and State Veterans Home use to address a planned increase in the demand for long-term care services.

3. *Action Plan*

A. The GEC/SHG will continue to maintain its on-line long-term care service inventory by network. Each network will assure that the inventory is accurate and up-to-date.

B. Each network will include in its strategic plan the number and type of long-term care services directly operated or paid for by VA, using uniform measures of utilization. The GEC/SHG will promulgate these uniform measures by August 1999.

C. Each network will form a team of community institutional and non-institutional providers, State Directors of Veterans Affairs and/or State Veterans Home Directors to advise the network on the provision of long-term care services.

D. The GEC/SHG will produce an annual report for the Under Secretary for Health describing changes, if any, in VHA's long-term care services.

E. In order to build capacity to provide the full array of long-term care services, VHA will continue working toward resolution of multiple payer and coordination of benefits issues. Additionally, issues related to investment and program development and expansion will be resolved.

Strategic Action VI

1. *Report Recommendation.*—VA should expand options and services for home- and community-based care, making these services the preferred placement site, when clinically appropriate, for veterans needing long-term care. The service mix should be based on the care needs of the veteran population and the availability of services in local communities.

2. *Stakeholders Comments.*—None.

3. *Action Plan.*—A. VHA will provide home- and community-based services (H&CBC) as defined in the Basic Benefits Package to all enrolled veterans as appropriate to their needs. The strategy document entitled "Improving and Expanding Home and Community Based Care" (Appendix B) will provide policy guidance for network planning.

Strategic Action VII

1. *Report Recommendation.*—VA should increase its investment in home- and community-based care from 2.5 percent to 7.5 percent of VA healthcare budget.

2. *Stakeholders Comments.*—Comments indicated concern that the increase in investment of home- and community-based services could not be achieved by simply shifting funds currently available to the networks.

3. *Action Plan*

A. VHA proposed a \$106 million increase in the fiscal year 2000 budget for home- and community-based long-term care. Similar increases will be proposed for the next 4 years.

B. VHA will earmark \$30 million per year over the next 4 fiscal years for new and innovative models that expand H&CBC, with emphasis on community provider partnerships.

C. VHA will develop methodologies for tracking cost and utilization of H&CBC services used by long-term care patients.

D. VHA will track the quality and cost of contract care separately from VHA-operated care, for comparative purposes.

E. VHA will maintain primary care responsibility for patients receiving VHA contracted services. Funding to support additional staff, as required, will be sought.

Strategic Action VIII

1. *Report Recommendation.*—Within VA long-term care spending, the proportion of home- and community-based care and enriched housing should double—to 35 percent of total long-term care expenditures.

2. *Stakeholders Comments.*—Comments indicated concern that the increase in spending for home- and community-based services and facilitated residential living could not be achieved by simply shifting funds currently available to the networks.

3. *Action Plan*

A. See Strategic Action VII, Action Plan 3.A.

B. Budget initiatives will be developed for Facilitated Residential Living for the fiscal year 2001 budget cycle. Legislative action will be necessary to allow for payment for selected facilitated residential living programs (See Strategic Action XVI in the legislative sections).

NURSING HOME CARE

Strategic Action IX

1. *Report Recommendation.*—VA needs to maintain its three nursing home programs. Home- and community-based services cannot substitute for nursing home care for most of the veteran population. VA should use its own hospital-based nurs-

ing home beds to provide care to post-acute patients, patients who cannot be cared for in other nursing home programs, and those patients who can be cared for more efficiently in VA Nursing Homes (VANHs).

2. *Stakeholders Comments.*—Comments indicated support for maintaining the three nursing home programs and using the VHA hospital-based nursing home beds for post-acute or complex patients, or those patients who require skilled nursing care or are difficult to place in a community nursing home.

3. *Action Plan*

A. A VHA work group will develop a policy to encourage the use of VANH beds for sub-acute and short-term post-acute care for future admission of those patients who cannot return home immediately after hospitalization. This work will be completed by June 1999.

B. A major role of State Veterans Homes will be to support the long-term care needs of those veterans with sustained care needs beyond short-term and post-acute care.

C. Because of the great need for dementia care for veterans, the dementia care programs within VANHs must continue to be supported, especially where comparable programs do not exist in the community.

Strategic Action X

1. *Report Recommendation.*—VA should implement and enhance existing national policies on Community Nursing Home (CNH) placement. Length of CNH placements should be based on patient care needs, not fiscal goals.

2. *Stakeholders Comments.*—Comments indicated support for the length of CNH placements based on patient care needs. Comments also suggested a desire for clear guidance on CNH placements.

3. *Action Plan.*—A. A VHA work group will develop a policy on CNH placement, based on patient needs rather than a “one size fits all” approach to contract length. This work will build upon existing network-based efforts and will be completed by June 1999.

Strategic Action XI

1. *Report Recommendation.*—In fiscal year 1997, 12.3 percent of veterans in VANHs had lengths of stay in excess of one year. VA should take necessary steps to ensure that VANH patients who no longer require hospital-based nursing home care are properly transitioned into home- and community-based care programs. Patients who require nursing home care, and have received care for more than 1,000 days, and desire to remain in the nursing home, should be allowed to remain in the VANH.

2. *Stakeholders Comments.*—Comments revealed agreement that there is an obligation to patients who have resided in VANHs for long periods of time and are still in need of skilled nursing care. Some comments suggested the 1,000 day criteria proposed for keeping patients was arbitrary or inappropriate and instead the decision should be left up to the VAMC or VANH care team.

3. *Action Plan.*—A. VHA will promulgate a policy to allow residents of VANHs who have continuing care needs and who have had stays exceeding 1,000 days to remain as permanent residents if they chose to do so. A work group will formulate this policy by July 1999.

Strategic Action XII

1. *Report Recommendation.*—In an era of limited budgetary resources, VA should not seek funding for any new nursing home beds, except for approved projects that are justified by objective standards that include a measure of community capacity and national policy goals. Renovation projects that affect the number of beds also should be rejustified. Renovation projects that affect patient privacy and life safety issues should receive first priority.

2. *Stakeholders Comments.*—Comments indicated that a minority of reviewers thought additional VHA nursing home beds may be needed to accommodate the projected increased demand in long-term care, and this recommendation was overly restrictive.

3. *Action Plan*

A. Options for a redesigned State Home construction grant prioritization methodology will be advanced by April 1999. This effort will seek to maximize investment in new nursing home construction for veteran patients with sustained long-term care needs.

B. Enhanced Use Leasing will be encouraged to support private sector nursing home construction that will benefit veteran patients.

C. Construction of VANHs will be considered only when acceptable community or State Home resources are not available or replacement of an existing VA facility is justified by the objective standards referenced above.

COORDINATION OF CARE

Strategic Action XIII

1. *Report Recommendation.*—VA should implement its plans for the Resident Assessment Instrument/Minimum Data Set (RAI/MDS) without delay.

2. *Stakeholders Comments.*—Comments indicated concerns that appropriate technology (hardware, software, information linkages) was not in place to support this initiative.

3. *Action Plan*

A. VHA will continue its implementation of the computerized version of the RAI/MDS, commencing with VANHs in fiscal year 1999 and extending the system to long-term care patients in other settings as MDS-based instruments become available for home care, post acute care, etc.

B. VHA will continue its implementation of planned capture of long-term care contract workload in VISTA (Veterans Health Information Systems and Technology Architecture).

Strategic Action XIV

1. *Report Recommendation.*—VA should establish system-wide care coordination processes based on a comprehensive assessment of patients requiring long-term care services. A standardized core assessment, upon which VISNs or facilities can add criteria to meet individual objectives or target improvements, should be the baseline. VA should reassign and train existing staff to implement such processes.

2. *Stakeholders Comments.*—None.

3. *Action Plan*

A. A VHA work group will define an evidence-based standardized core assessment for evaluation of all enrolled patients referred for long-term care services by December 1999.

B. Existing Geriatric Evaluation Management (GEM) teams will provide the foundation for implementing such processes.

C. The RAI/MDS when fully implemented will be used to assess the continuing care needs of long-term care patients.

LEGISLATIVE ACTION

Strategic Action XV

1. *Report Recommendation.*—VA should seek legislative authority to broaden respite care in 38 U.S.C. 1720B, to include its provision in all long-term care settings.

2. *Stakeholders Comments.*—Comments indicated support for this provision but also concerns regarding adequate funding for this expansion.

3. *Action Plan.*—A. The GEC/SHG will initiate a request for new legislative authority for in-home respite care to be submitted in the next legislative cycle.

Strategic Action XVI

1. *Report Recommendation.*—VA should seek legislative authority to allow for the payment of assisted living/residential care under 38 U.S.C. 1730.

2. *Stakeholders Comments.*—Comments indicated support for this provision but also concerns regarding adequate funding for this new service.

3. *Action Plan.*—A. The GEC/SHG will initiate a request for new legislative authority for payment or co-payment of facilitated residential living (assisted living) for eligible veterans.

Strategic Action XVII

1. *Report Recommendation.*—VA should seek legislative authority to include a limited, 100 days/patient/year nursing home benefit following a period of VA hospitalization under 38 U.S.C. 1710 and 1720, notwithstanding current nursing home rules and policies.

2. *Stakeholders Comments.*—Comments indicated differences of opinion regarding this benefit. Although most reviewers agreed that nursing home care should be an integral part of the veterans health benefits package, many were concerned with the significant increase in costs that may be associated with this initiative. Other reviewers were concerned that this benefit could be counter-productive in trying to shift more long-term care to non-institutional alternatives.

3. *Action Plan*

A. The GEC/SHG will initiate a request for new legislative authority to be submitted in the next legislative cycle for this limited Medicare-like benefit. The proposal will include increase cost estimates associated with implementation of this benefit.

B. The GEC/SHG, the Office of Policy and Planning and/or the Management Decision Resource Center will complete a study to investigate implementation of a more expansive nursing home benefit, including analysis of rationale, options and cost. The funding options will include a separate long-term care "trust", insurance payments and co-payments. Results of this study will be used in proposed legislative initiatives for subsequent legislative cycles.

RESEARCH

Strategic Action XVIII

1. *Report Recommendation.*—At least 5 percent of VA's research appropriation should support health services and other research, such as rehabilitation, related to long-term care issues. Priorities for this research are:

Testing the effectiveness of VA long-term care programs and services, using cost and clinical outcomes that can be compared to the private sector;

Examining the effectiveness of clinical interventions, using long-term care services, in the treatment and management of veterans with psychiatric disorders. Non-pharmacological as well as pharmacological interventions should be included;

Comparing the effectiveness of post-acute care provided by VA to the private sector; and

Exploring the effectiveness of providing acute care services in the home.

2. *Stakeholders Comments.*—None.

3. *Action Plan*

A. The Office of Research and Development (ORD) will continue to evaluate the proportion of research devoted to long-term care, in coordination with GEC/SHG. ORD will report on its findings annually to the Under Secretary for Health.

B. Requests For Application specific to health services and rehabilitation research in long-term care should be developed and issued within six months. Priority will be given to long-term care issues noted above.

EDUCATIONAL ACTIVITIES

Strategic Action XIX

1. *Report Recommendation.*—Additional educational efforts and other collaborative ventures between long-term care and mental health program staffs are strongly encouraged.

2. *Stakeholders Comments.*—None.

3. *Action Plan.*—A. VHA will develop programs and training that encourage coordinated care for patients with both long-term care and mental health needs so that such patients receive care appropriate to all of their needs (e.g., the collaborative work of the Gero-Psychiatric Task Force and the Mental Health/Geriatric/Primary Care National Training Program).

Strategic Action XX

1. *Report Recommendation.*—VA should continue its leadership role in the training of physicians and associated health professions in geriatrics and long-term care. VA also should continue to utilize its expertise at GRECC and other VA sites to train VA staff in areas such as care coordination for complex patients. VA training should be supported by long-term care environments that can adequately prepare trainees for future practice.

2. *Stakeholders Comments.*—None.

3. *Action Plan*

A. VHA will initiate support for a new geriatric leadership training program in Academic Year 2000–2001.

B. VHA will continue to expand the GRECC program until there is at least one GRECC in every network by 2002. The GRECCs will continue to provide leadership in clinical care, research and training for care of frail elderly veterans.

STRATEGIC SUGGESTIONS

Strategic Idea I. Access to Care

1. *Idea.*—VA should adopt a performance measure for Access to Care which rewards networks for: Increasing their share of long-term care services to the national VA average; or maintaining their share of long-term care services, if that share is above the national average.

2. *Stakeholder Comments.*—None.

3. *Action Plan*

A. A long-term care access measure will be implemented through Strategic Action II (page 4).

B. Further refinements for measuring access to H&CBC services will be made as the capability of VISTA permits.

Strategic Idea II. Cost/Price

1. *Idea.*—VA should adopt a performance measure for Cost/Price which rewards networks for lowering the average cost of long-term care patients by 5 percent per year. This measure should be used only in conjunction with meeting the access measure above.

2. *Stakeholders Comments.*—None.

3. *Action Plan*

A. This idea is, in essence, incorporated into already established VHA goals (30–20–10 target) for reducing the cost of care. The expansion of alternatives to nursing home care will provide more opportunities for not only treating veterans in the most appropriate long-term care setting but also reducing the total cost per patient through careful care coordination.

B. The GEC/SHG will continue to monitor and report per patient costs for long-term care.

Strategic Idea III. Quality/Functional Status

1. *Idea.*—VA should develop a composite Long-Term Care Quality Index using evidence-based indicators that are realistic and measurable.

2. *Stakeholders Comments.*—None.

3. *Action Plan*

A. A Nursing Home Quality Index will be piloted in fiscal year 1999.

B. Data from the automated RAI/MDS will be used to monitor nursing home quality beginning in fiscal year 2000.

C. The RAI/MDS, or similar instrument, will be expanded to H&CBC services in fiscal year 2001.

Strategic Idea IV. Patient Satisfaction

Idea.—VA's National Customer Feedback Center should develop reliable patient satisfaction measures for veterans using long-term care services, including those in institutional settings. This program should be a high priority, and once developed, must be operated on a routine basis.

2. *Stakeholders Comments.*—None.

3. *Action Plan*

A. The GEC/SHG and the Office of Quality and Performance will continue to work with the VA National Customer Feedback Center on the technical issues intrinsic to assessing service satisfaction in elderly, debilitated and/or cognitively impaired patients.

B. Proposed patient satisfaction performance measures will be referred to the Performance Measures Work Group for approval and inclusion in VHA's performance monitoring system.

[CLERK'S NOTE.—The article "VA Long-Term Care At The Crossroads," report of the Federal Advisory Committee on the Future of VA Long-Term Care, dated June 1998 can be found in the subcommittee's files.]

VHA DIRECTIVE 98–022

NATIONAL HOME AND COMMUNITY-BASED CARE STRATEGY

1. PURPOSE

This Veterans Health Administration (VHA) Directive articulates national VHA policy and establishes a national VHA strategy that will provide the context for expanding and developing home and community-based care within each Veterans Integrated Service Network (VISN) to respond to the healthcare needs of enrolled veterans.

2. BACKGROUND

a. Home and community-based care is a vital component of an integrated healthcare delivery system. Both the healthcare industry, in general, and VHA, in particular, are placing greater emphasis on outpatient and community-based care rather than traditional inpatient care. Between 1988 and 1996 Medicare spending on home care grew from \$2 to \$18 billion, and the number of home healthcare agen-

cies increased from 5800 to 9000. A recent American Medical Association survey reported that for every patient in a nursing home, there are three more severely impaired patients cared for in their own homes. An estimated 20 percent of patients over age 65 have functional impairments with related home care needs, and 44 percent of all patients discharged from the hospital by primary care physicians require post-hospital medical or nursing care that cannot be provided in the home by family or friends alone.

b. In 1996, 173,000 veterans needed non-institutional home and community-based care on any given day. The Department of Veterans Affairs (VA) estimates that number will increase to 180,000 by 2005. Of the 173,000 veterans needing this level of care last year, 75,000 were Category "A" veterans. In 1996, VA met the home and community-based care needs of 8,300 Category "A" veterans daily, or 11 percent of those in need of care. The aging and disabled veteran population, with its prevalence of complex chronic illness, is creating a new balance between acute care needs and chronic, long-term healthcare care needs. New eligibility rules make it possible and necessary for VA to respond to the increasing demand for home and community-based services. The shift from episodic treatment of illness to managing the healthcare needs of an enrolled population of veterans will require innovative approaches to care. Home and community-based services must be integrated with primary, secondary and tertiary care in such a way that reliable, comprehensive healthcare is provided to veterans in an individualized, seamless, coordinated manner across settings and among providers.

c. The VHA can build on its unique experience and expertise in providing interdisciplinary, long-term home-based care to seriously chronically ill veterans as it expands home and community-based care. VA Home-Based Primary Care (HBPC) can provide a strong base for developing and coordinating an array of services for both long-term chronically ill veterans and those needing short term home care services. The VA can provide national leadership in this critical area of healthcare by developing an innovative, flexible approach to home and community-based care that is fully integrated into the healthcare system and uses resources efficiently and effectively to meet the needs of an aging and chronically ill population.

3. POLICY

a. *Objectives.*—The specific objectives of this policy are to:

- (1) Provide the most appropriate care to veterans in the most appropriate setting to achieve optimal health outcomes and quality of life.
- (2) Assure that a comprehensive array of high quality healthcare services are available in the community to facilitate early discharge from acute care settings, prevent avoidable hospitalizations and reduce unscheduled emergency care visits.
- (3) Provide services that improve and maintain functional capacity so that the veteran may continue community-based living.
- (4) Ensure that access to care is appropriate and timely.
- (5) Provide for continuity of care over time and across settings by appropriately integrating an array of home and community-based services into the coordinated continuum of care provided by each VISN.
- (6) Promote innovation in developing new models and approaches to home and community-based care, incorporating evaluation and research as integral components of program change.
- (7) Assure accessibility, reliability and quality of all services, whether provided directly by VA or through arrangements with community providers.
- (8) Provide compassionate, humane care that includes the patient and family in making informed decisions regarding the use of home and community-based services.

b. *Policy Elements.*—This policy addresses:

- (1) The array of services included in a comprehensive home and community-based care strategy.
- (2) Programs that deliver these services, including VA programs, non-VA programs, and new models of care.
- (3) Organizational structures and processes necessary for providing coordinated, integrated and efficient home and community-based care.
- (4) The strategic planning process.

c. *Array of Services.*—The flexible use of an array of coordinated services is necessary to assure that veterans receive the most appropriate care in the most appropriate setting to achieve optimal health outcomes and quality of life. A comprehensive home and community-based care strategy should include access to the following services:

- (1) In-home care, including all of the following services:

- (a) Short-term, post-acute, and rehabilitation services.
 - (b) Long-term chronic care.
 - (c) Palliative and end-of-life care.
 - (d) High-tech care, including infusion therapy.
 - (e) Respiratory therapy and ventilator maintenance.
 - (f) Mental health and psychiatric care.
 - (g) Personal care and homemaker services.
 - (h) Prosthetic services.
 - (2) Respite care services.
 - (3) Adult day healthcare services.
 - (4) Other community-based services (e.g., transportation, home delivered meals, telephone support, senior center programs, friendly visitors, assisted living, etc.).
- d. *Programs That Deliver These Services.*—Services may be delivered directly by VA or through arrangements with non-VA community providers. The coordination and integration of a “package” of locally available services is often essential to assure timely, equitable access to the array of services necessary to successfully manage the care of veterans in the community. The following list of programs reflects both existing programs and new models that are being developed; it is not intended to be an all-inclusive list of mandated programs (see App. A for definitions).
- (1) In-home Programs
 - (a) VA Home-Based Primary Care (HBPC);
 - (b) VA Spinal Cord Injury (SCI) HBPC;
 - (c) Medicare-Certified Home Health Agencies;
 - (e) Fee-Basis Home Care;
 - (f) Hospice (VA Hospice, Medicare-Certified Hospice, Community Volunteer Hospice);
 - (g) VA Homemaker/Home Health Aid Program (H/HHA); and
 - (h) Other community programs (e.g., those provided through Department of Rehabilitation Services, County Health Departments, Area Agencies on Aging, Department of Health and Human Services).
 - (2) Respite Care
 - (a) VA Respite Program,
 - (b) Hospice Respite Care, and
 - (c) Community Respite Care Programs.
 - (3) Adult Day Healthcare
 - (a) VA Adult Day Healthcare Programs,
 - (b) Contracted Adult Day Healthcare, and
 - (c) State Veterans Home Adult Day Healthcare.
 - (4) Innovative Models, Demonstrations and Pilots
 - (a) Program of All-inclusive Care for the Elderly (PACE).
 - (b) MediCaring.
 - (c) In-home respite.
 - (d) Disease management models.
 - (e) Enriched housing, assisted living, and community residential care.
 - (f) Social health maintenance organizations.
 - (g) Disability management models.
 - (h) Prevention of secondary complication models.
 - (i) Specialty primary care models.
 - (j) Rural disabilities projects (Montana and Arkansas).
 - (k) Telemedicine initiatives.
 - (l) VA initiated innovations and demonstrations such as: Care and Assistance for Rural Elders (CARE) in VISN 7, and Patient Access to Community Health (PATCH) in VISN 15, Teleheart CHF Management Program in VISN 8, and Vets Helping Vets in VISN 8.
- e. *Organizational Structures and Processes.*—In order to provide reliability and continuity of care for eligible veterans over time and across settings, a sound infrastructure is essential. Organizational structures and processes must be put in place that promote the philosophy and practice of individualized, comprehensive, integrated home and community-based care. Necessary organizational processes include the following:
- (1) Assessment and Referral
 - (a) A coordinated referral process based on standardized assessment of patient needs, including functional status;
 - (b) A coordinated referral process that is linked to discharge planning and continuity of care planning;
 - (c) Defined criteria for access to available services and programs; and
 - (d) A process that assures timeliness of referrals.
 - (2) Care Coordination

- (a) Care management within the context of primary care teams and specialty care teams that also deliver primary care.
- (b) Care management and/or coordination across settings and programs.
- (c) Twenty-four hour, 7-day-a-week access to services and coordination of care.
- (d) Patient and family participation in healthcare decisions.
- (e) Streamlined care management that avoids duplication of care management functions.
- (3) Evaluation and Accountability
 - (a) A process for determining the responsible provider and defining accountability when the patient is receiving services from more than one provider or program.
 - (b) Ongoing monitoring of functional status, quality of life, and other patient outcomes using standardized measures.
 - (c) Ongoing monitoring of customer satisfaction using standardized measures.
 - (d) Standards for and/or evaluation of services provided by non-VA providers.
 - (e) System-wide, state-of-the-art home care outcome measures.
 - (f) Performance standards (e.g., same-day service for durable medical equipment).
 - (g) Ongoing, real-time measures for continuous quality improvement of programs and services.
 - (h) Comparison of VA care with that provided by non-VA programs in the community.
- (4) Research
 - (a) Support for demonstration projects for new and innovative projects and strategies, including an evaluation component;
 - (b) Identification of best practices, through literature reviews, case examples, existing data, primary data collection; and
 - (c) Identification of state-of-the-art assessment and outcome measurement tools
- (5) Information Systems
 - (a) Identification of which patients receive which services;
 - (b) Monitoring utilization of services across the entire continuum of care;
 - (c) Providing process and structure information (e.g. staff mix, patient acuity, components of service provision);
 - (d) Monitoring outcomes;
 - (e) Providing cost data; and
 - (f) Providing access to patient care data across sites of care.
- f. *Strategic Planning Process.*—System-wide strategic planning for home and community-based care is essential at all levels. The strategic planning process should include:
 - (1) Identifying the strengths and weaknesses of existing programs relative to needs of the veteran population through a population-based planning model.
 - (2) Identifying the need for program expansion, development of new programs, modification of existing programs, and the potential for piloting innovative models.
 - (3) Identifying the strengths and weaknesses of relationships with community providers and developing a strategy for partnerships, sharing, and coordination of services with non-VA providers.
 - (4) Considering local and regional home care service contracts and purchase agreements.
 - (5) Achieving more efficient utilization of resources (e.g., through flexible scheduling, using state-of-the-art technology, telemedicine applications, adequate clerical support and communications equipment).
 - (6) Including representatives of VA home and community-based care programs, as well as experts from other areas and external stakeholders, in the strategic planning process (e.g., developing network based home and community-based care work and advisory groups).
 - (7) Fully integrating home and community-based services with inpatient, outpatient and ambulatory care programs and services within the context of primary care.
 - (8) Promoting access to and coordination with ancillary services such as laboratory, radiology, pharmacy and durable medical equipment.
 - (9) Collecting cost and utilization data across settings to begin to be able to compare aggregate costs for patients receiving different kinds of care and services.

4. ACTION

- a. VISNs will develop, implement and regularly review strategic and tactical plans for expanding home and community-based services, including the allocation of adequate personnel, equipment and other resources.
- b. The Geriatrics and Extended Care Strategic Healthcare Group will provide guidance, consultation and dissemination of information.

c. The Geriatrics and Extended Care Strategic Healthcare Group will support VISN and local leadership in all aspects of improving the provision of home and community-based care.

d. Health Services Research and Development, through the Chief Research and Development Officer, will support the evaluation of outcomes and cost-effectiveness of new models of providing home and community-based care.

f. The Office of the Chief Information Officer (19) will ensure that national data systems support home and community-based services.

5. REFERENCES

None.

6. FOLLOW-UP RESPONSIBILITY

The Office of Extended care (114) is responsible for the contents of this Directive.

7. RESCISSION

This VHA Directive expires on April 1, 2003.

ATTACHMENT A

DEFINITIONS

1. *Home-Based Primary Care (HBPC)*.—A designated HBPC is a program providing primary healthcare, delivered by an interdisciplinary team of VA staff, to functionally dependent, homebound patients. Services include medical care, nursing care and education, rehabilitation, nutritional counseling, and social work.

a. HBPC manages: long-term care patients with multiple, complex medical problems requiring prolonged intervention to maintain status and retard decline; terminally ill patients, and as resources permit, certain patients with relatively short-term problems who need skilled, high-tech health services, home training or home adaptation.

b. Medications, supplies, medical equipment, and assistance with home improvements and structural alterations are provided. Caregiver support and training are provided. Bereavement care is offered to survivors of deceased patients for up to 6 months. At affiliated medical centers, HBPC provides comprehensive training in primary care of long-term patients to medical residents, geriatric fellows and allied health professionals.

2. *Medicare-certified Home Health Agencies*.—Medicare pays for intermittent skilled nursing care, home health aide services, physical therapy, occupational therapy, speech therapy, medical social work services and durable medical equipment (with a 20 percent co-payment). Services must be provided by a Medicare-certified agency. To qualify for home care under Medicare, a patient must have at least one skilled need. Without the continuing presence of a skilled need, supportive services such as home health aide visits cease. Most Medicare home care is for relatively short-term post-acute care. However, some chronically ill recipients can receive care for long periods, i.e., those with indwelling catheters, blind diabetics, psychiatric patients requiring intramuscular medications.

3. *Fee Basis Home Care*.—The Veterans Health Administration (VHA) authorizes payment for medically necessary, skilled home care services for eligible beneficiaries on a fee for service basis. Nursing, physical therapy, occupational therapy, speech therapy, and social work are examples of allowable services. Fee Basis, except for patients in need of bowel and bladder care, does not pay for home health aide visits. The Department of Veterans Affairs (VA) Clinic of Jurisdiction pays a per visit rate to the community home health agency providing care. It is possible to establish a preferred provider or negotiated rate with a community agency. The total cost of Fee Basis care for any patient cannot exceed the cost that would have been incurred if the veteran were treated in a contract nursing home during one month.

4. *Homemaker/Home Health Aide (H/HHA) Program*.—The program provides homemaker/home health aide visits to eligible beneficiaries using Contract Nursing Home funds. Expenditures for a veteran may not exceed 65 percent of the average nursing home per diem rate. Veterans enrolled in this program must be in receipt of primary healthcare from VA and will meet program criteria including the need for nursing home care.

5. *Hospice*.—Medicare, many state Medicaid programs, and some private insurance plans offer a hospice benefit to their beneficiaries. Beneficiaries waive curative treatment options in favor of palliative services: comfort care, counseling, and supportive home care visits for terminally ill individuals and their families. The pa-

tient's physician certifies an expected life expectancy of less than 6 months. Hospice provides skilled nursing, home health aide, social work, and chaplain visits. Medications for the terminal condition, durable medical equipment, and supplies are furnished. Bereavement counseling is provided to survivors of deceased patients.

6. *Adult Day Healthcare Program (ADHC).*—ADHC is a therapeutically oriented outpatient day program that provides health maintenance and rehabilitative services to frail elderly persons in a congregate setting. ADHC is provided in a protective setting during part of a day but less than 24-hour care. Individualized programs of care are delivered by health professionals and support staff, with an emphasis on helping participants and their caregivers to develop the knowledge and skills necessary to manage care requirements in the home. Its predominant focus is a therapeutic one, directed at persons with disabling conditions and medical disorders, thus distinguishing ADHC from social day care.

7. *Respite Care.*—Respite care is a program which provides veterans with hospital or nursing home care on a short-term basis to give the caregiver a period of relief or respite from the physical and emotional burdens associated with furnishing daily care to chronically ill and disabled persons. Respite care is planned in advance for the benefit of the caregiver rather than being incidental to the provision of necessary medical care of the patient. Respite care enables the caregiver to continue in the caregiving capacity and permits the veteran to continue to live at home.

Question. Does VA have sufficient long-term capacity?

Answer. Every indicator of supply and demand for long-term care shows that VA will have sufficient capacity to meet the needs of veterans who use the VA health care system. This scenario assumes that VA will expand home- and community-based care services, contract for long-term care services, and increase the use of State Veterans Homes, where available.

Question. The recent report on long-term care, commissioned by Dr. Kizer, found that new demand for long-term care should be met primarily through non-institutional services and contracts. VA's budget proposes an increase of \$106 million for extended care program enhancements. Is this adequate to meet the recommendations contained in the long-term care commission's report? What is being done specifically to implement the recommendations of the commission?

Answer. The budget reflects a first year investment toward the recommendation of the Federal Advisory Committee on the Future of VA Long-Term Care on tripling the investment in home- and community-based care over a 5-year period.

The recommendations in the Committee's report, VA Long-Term Care at the Crossroads, have been studied by VA long-term care staff and the senior leadership of VHA. Comments on the Crossroads Report have been sought from VHA stakeholders and integrated into a VHA plan. Currently, the draft Strategic Plan is circulating for review and comment. This Plan will implement the Committee's recommendations. As noted above, a copy of the draft Strategic Plan is attached.

Question. What will VA do to make more equitable access to long-term care services?

Answer. VA will improve access to long-term care by providing incentives to networks to provide more long-term care services. VA will also enhance its admission and discharge policies for VA and Community Nursing Home Care. These changes will improve access and fairness.

In the draft Strategic Plan, improved access is discussed on pages 3, 7 through 9, and 14. Pages 3 and 14 outline the action plan for performance measures on access to long-term care services. Pages 7 through 9 discuss improvements in the admission and discharge planning processes in nursing home care.

Question. What measures are being taken to ensure quality of care in VHA long-term care programs, especially for those referred to community facilities and programs?

Answer. VHA staff monitors the quality of care received for all long-term care patients, regardless of setting. For care provided off-campus, by non-VA staff, the best developed measures of quality care are found in the Community Nursing Home Program (CNH). In CNH, VA relies on a three-pronged approach to care monitoring. First, VHA staff visits the veterans in CNHs on a monthly basis. This presence sends important, positive messages to the nursing home staff and the veterans, regarding VHA's approach to caring and watching. Second, VHA uses on-line data from the Health Care Financing Administration (HCFA) to assess the quality of the nursing homes under contract. These data allow VHA staff to compare one nursing home to another over a period of time. Third, VHA staff reviews every re-hospitalization from CNHs. This review focuses on poor quality care as the reason for the patient's return to the hospital.

This approach to monitoring veterans' care highlights VA's commitment to quality long-term care. It is timely, patient-focused and incorporates information from a variety of sources.

VETERANS EQUITABLE RESOURCE ALLOCATION (VERA)

Question. In a recent report, GAO found that the two networks it reviewed had no specific criteria for allocating their resources within the network to ensure equity. GAO's testimony today says "VA has neither provided criteria for equitable allocation of resources within networks, adequately reviewed the equity of allocations, nor measured improvements in equity of veterans' access to care." Why? How would you assess the success of VERA in achieving real equity of access?

Answer. The VA philosophy concerning network allocations to facilities is to continue balancing oversight with flexibility. VA does not want to dictate how each network should fulfill its responsibilities, and we believe that this philosophy has been effective in network implementation. Nevertheless, in fiscal year 1999, VA added a criterion in the "network allocation principles directive" that stated the equity of resource allocations to facilities should be achieved, but the directive does not prescribe how this should be done. That is, VA continues to allow networks the flexibility they need to meet local needs. Although the GAO report states that headquarters did not review the network allocations methodologies and equity of allocations in the past, VA has in fact completed these reviews. VA will continue to review the network allocation plans and methodologies to assure equitable resource allocation within networks.

VERA equitably allocates funds across networks and was created to support VA's goals of:

- Treating the greatest number of veterans having the highest priority for health care.
- Allocating funds fairly according to the number of veterans having the highest priority for health care.
- Recognizing the special health care needs of veterans.
- Creating an understandable funding allocation system that results in having a reasonably predictable budget.
- Aligning resource allocation policies to the best practices in health care.
- Improving the accountability in expenditures for research and education support.
- Complying with the congressional mandate.

VERA achieves these objectives and, at the same time, strikes a balance between simplifying resource allocation and recognizing the complexities of the veterans' health care system. VERA equitably distributes funds across networks according to the number of veterans actually served by VA and promotes efficiency gains through the use of national prices. The VERA system was developed in response to a congressional mandate in Public Law 104-204. Independent reviews by the General Accounting Office and Price Waterhouse Coopers, LLP have validated the model as meeting the intent of Congress. Price Waterhouse Coopers, LLP found that VERA equitably distributes funds across networks and that VERA focuses funding on the highest priority veterans using the VA health care system. VA achieves equity of access because funding is based on high priority veterans through the VERA Basic Care workload measure, which includes Category A veterans only, and the Complex Care workload, which provides significantly higher resources for patients with special or long-term needs.

Question. GAO also raised concerns as to whether VA headquarters had adequate, timely data to ensure effective oversight.

Answer. Collecting timely, accurate, and meaningful data from VHA's national databases is critical to the decision making process. The availability of this information directly supports the performance measurement, outcome assessment, and oversight activities of VHA. In addition, data quality is integral to VHA's efforts to provide excellence in health care and figures prominently in Dr. Kizer's Journey for Change and related documents.

In order to improve the timeliness and availability of information, VHA issued Change 2 to Directive 96-079 (Closeout of the Veterans Health Administration Corporate Data Files) on March 5, 1999. This directive changed the file closeout dates of all patient treatment information to provide more timely data for the Veterans Equitable Resource Allocation (VERA) system, health care planning and statistical purposes, and for the Secretary of Veterans Affairs' Annual Report to Congress.

A comprehensive overview of key VHA data quality issues was instituted in early fiscal year 1999. As part of this effort, a VHA steering committee conducted a Data

Quality Summit in December 1998. The summit participants recommended six initiatives to address data quality in VHA. They are:

- Form a Data Quality Council to Provide Leadership
- Define a Standards Process
- Define and Implement Local Accountability for Data
- Establish On-going Employee Education, Training, and Communication
- Programs for VHA Data Users
- Provide Patients with Access to their Data

Workgroups have been formed to address each initiative, and all workgroups have met to determine priority items on which to focus. These efforts provide a foundation for VHA's continuing process to improve the quality, availability, and accuracy of information that supports the decision process.

In order to provide a VISN-level management tool, the VHA Decision Support System (DSS) Steering Committee has just completed a test of four national measures. Based on the outcome of these tests, recommendations regarding standardization and data quality will be forwarded to the National Leadership Board for its consideration on May 18, 1999.

Question. What oversight functions does VHA currently conduct, and what is VA doing to improve its oversight of the field, and in particular improve its data collection systems so that VA can monitor changes in access to care?

Answer. Public Law 104-262 required, among other things, that VA maintain its capacity to treat certain classes of specially-disabled veterans. VA produces an annual Capacity Report, for which numerous access measures were developed and are reported on. The Capacity Report calls specific attention to changes in access to care.

Currently, VHA assesses waiting times for primary care clinic appointments in annual patient feedback surveys, and the results are shared with the field. Plans are underway to expand monitoring to include the length of time it takes to obtain a specialty clinic appointment. Interest in such a measure is driven by concerns that the increase in access due to additional community-based clinics, along with the increased efficiencies of primary care, will raise the demand for specialty clinic care. If the demand for specialty clinic care, indeed, does increase, one would expect to see increases in the time it takes to obtain an appointment. VHA is currently developing requisite software capability that will capture data on specialty clinic waiting time.

As indicated earlier, the file closeout dates were changed for all patient treatment information to provide more timely data. In addition, data quality is likely to improve in response to the initiatives undertaken in response to the Data Quality Summit described previously.

Question. Why doesn't VA have a performance measure for network directors that directly addresses the need to improve equity of access?

Answer. Equity of access means different things to different people-patients and stakeholders alike; there needs to be a better understanding of what this term entails and what are the expectations. For example, some view equity of access as meaning that all health care services should be available at all VA facilities. Others feel that all care should be available to patients via VA or contract services, and still others believe that equity translates to geographic distance or time involved in accessing care. Fundamentally, however, VHA's reorganization into VISNs was part of an effort to empower local management (i.e., VISN Directors) to determine the extent of services required and requested by patients as well as the amount of resources allocated to these services. Each VISN has improved that by virtue of establishing CBOCs. Each of the 22 VISNs has established at least three CBOCs and the total number of CBOCs approved between March 1995 and January 1999 is 272; these actions affirm VHA's commitment to improving equity of access, as defined by geographic points of availability.

QUALITY MANAGEMENT

Question. Concerns also have been raised about the lack of guidelines put out to the field in the area of quality management. The IG has recommended a national set of QM guidelines as there is a great deal of variation in individual hospitals in their approach to quality management. Will VA follow these recommendations? If so, when?

Answer. We concurred with the IG recommendation regarding establishing quality management guidance for use at all VHA operating levels. The Office of Performance and Quality will establish a process that will include a work group of senior Headquarters and field quality management specialists to recommend the specific scope of content that should be included in the guidance and to suggest the most

effective ways to expedite field access to the guidance. Following approval of the work group's recommendations, a detailed action plan for development and implementation of a field reference tool, including completion timelines, will be initiated. The process will be underway in this fiscal year.

ACADEMIC AFFILIATIONS

Question. VA plays a critical role in the education of medical students. Since 1946 VA has had affiliations with medical schools, and currently supports about 9,000 residency positions through affiliations with 107 medical schools. VA has eliminated 560 subspecialty medical resident positions in the last two years, consistent with recommendation of a residency review realignment commission. What has been VA's strategy with respect to deciding where (e.g. which particular hospitals) to eliminate these positions, and what effect have these reductions had on VA's relationship with its affiliates?

Answer. VISN targets for residency realignment were developed based on the Residency Realignment Review Committee's (RRRC) recommendations. Goals were based on the historical allocation of resident positions among facilities and projected RRRC Categories I-IV rates applied to each VISN. In September 1996, each VISN was notified of its realignment goals for medical resident positions for Academic Year 1997-1998 and beyond. Each VISN was asked to develop a plan for medical resident allocations that took into account the goals and objectives for VHA's realignment of graduate medical education set forth by the RRRC. Networks were asked to make their plans based upon a review of the respective VISN health care delivery plans, the historical allocation among facilities and relationships with academic affiliates, and the specific goals for distribution between generalists and specialists positions.

Each Network Director convened a Network Education Committee made up of representatives of VHA and academic affiliates that advised the Network Director on residency allocations within the VISN. These discussions led to the creation of new generalist residency positions where they best served VHA and affiliates training programs and a pruning process for the most vulnerable residency programs.

VHA's change strategy has emphasized alignment of excellent patient care with training of future health professionals. In this regard, VHA has provided important leadership for its academic partners during these times of great change that affects all of health care. The future health care environment will be very different from today's. In implementing the additional 50 percent reduction in specialty positions this year, the challenge was to downsize specialty programs while concomitantly developing additional primary care training opportunities. We view this challenge as an opportunity to both improve the health care of veterans and the education of future physicians.

Not surprisingly, changes in VHA's training strategies have produced understandable anxiety and resistance from some of our affiliates. The response of individual medical centers has been heterogeneous. In the aggregate, though, I believe that VHA has been sensitive to the effect of its changes, and that we have appropriately tried to engage stakeholders in the academic, accrediting, and broader health care community. Indeed, given the implications of the wide ranging changes in the nation's health care enterprise, we are committed to seeking and exploring advice from all willing and credible sources as this process goes forward.

Question. VA has less than 11,000 acute care beds in operation today compared to 35,000 ten years ago. How can VA continue to support residency programs in 125 hospitals with a third as many beds?

Answer. Across the U.S. health care system, major changes have occurred in the last decade that have resulted in substantial portions of patient care shifting from inpatient hospital settings to care delivered in an outpatient environment. Likewise, VA has made great strides in these same directions through a number of re-engineering efforts that have resulted in decreasing the total number of acute care beds, decreasing the bed-days of care per 1,000 patients, and increasing the percentage of surgeries performed in outpatient settings.

Concomitant with the shifts VA has made to the ambulatory care treatment environment, VA has increased the total number of patients receiving care, increased the number of ambulatory visits, and instituted systems to measure improvements in the quality of care veteran patients receive. VA has implemented a universal system of primary care for VA patients and opened over 200 new community-based outpatient clinics to improve access to care. VA's reengineering efforts have resulted in a more efficient health care delivery system that is able to provide quality care to a larger group of patients.

Medical schools are posed with the challenge of training students and residents for the workplace reality of their future professional lives. Consequently, academic affiliates and VA are working together to develop effective methods for care and teaching in the ambulatory setting. Examples of VA's leadership include the Primary Specialist Program where over 60 percent of all medical specialty and psychiatry residents who receive training in VA participate. This new training strategy emphasizes access, continuity, and comprehensive care for their seriously ill patients with emphasis on ambulatory care. In another initiative, VA recently received a grant of \$985,000 from the Robert Wood Johnson foundation to develop new curricula for internal medicine residents who care for patients near the end of life. This project emphasizes training in the ambulatory setting, including VA clinics, hospice and the home. This project will provide leadership in 30 of our academically affiliated settings, thus having an impact on fully one quarter of the nation's medical schools. A third example is the VA Quality Scholars Program which will develop criteria for physicians training in the important area of quality improvement in health care.

Question. How many acute care beds are needed in a hospital for a strong residency program?

Answer. There is no minimum number of beds required for a strong residency program.

VA/DOD SHARING

Question. The recent report of the Congressional Commission on Servicemembers and Veterans Transition Assistance recommends a much greater level of sharing of health care resources between VA and DOD. The budget estimates that a total of just \$73 million will be shared. Aren't there greater opportunities to share services with the DOD, and make better use of resources in doing so, such as joint purchasing of supplies and pharmaceuticals?

Answer. The \$73 million sharing figure significantly understates the actual amount of sharing going on between VA and DOD health care facilities. Much VA-DOD sharing is done on a barter or exchange basis with little or no money changing hands. One reason for this is that, unlike VA facilities, DOD medical treatment facilities (MTFs) do not retain sharing revenues. It is therefore in their interest to receive services in kind as payment. Similarly, savings generated from joint purchasing are not reflected in sharing estimates. VA is actively pursuing all opportunities to share services with DOD facilities and their TRICARE contractors, as well as facilitate savings in the procurement of pharmaceuticals and medical surgical supplies. Currently, over 120 VA medical centers have agreements to treat TRICARE beneficiaries through agreements with DOD's TRICARE contractors.

Question. What barriers do you face in increasing the level of sharing?

Answer. The VA-DOD sharing law (38 U.S.C., section 8111) is a model of flexibility. It permits sharing between VA and DOD facilities of any health care resource provided that the primary beneficiaries of the facility providing the care are not adversely affected. No changes to that authority are required, although we are proposing that, in the future, sharing revenues be deposited in the Medical Care Collection Fund. The ability to retain the proceeds from sharing earned in prior years will promote efficiency and increased use of this authority.

DOD's migration to TRICARE has caused VA some difficulty in adapting to an unfamiliar billing and collecting system. VA's conversion to "reasonable charges" for third-party billing should promote greater consistency and, ultimately, with training, more efficient TRICARE billing in VA. There is currently an issue with DOD facilities concerning whether recent TRICARE contracts, which include active duty personnel, somehow limit the use of traditional VA-DOD sharing arrangements (between MTFs and VA health care facilities). We hope this will soon be resolved, and that beneficial sharing arrangements directly between VA and DOD health care facilities can be preserved and expanded.

Question. What specifically will be done to implement the commission's recommendations in this area?

Answer. The commission's recommendations are sweeping and remain under review. While VA's implementation plans are not yet complete, we are proceeding, along with DOD, to implement a number of initiatives that correspond to commission proposals. For example, DOD and VA have agreed on policy to consolidate the DOD separation physical exam with VA's disability evaluation physical; are working together to achieve seamless care for repatriated POWs; and, are jointly surveying veterans and military populations to better meet beneficiary needs and expectations in the delivery of health care. The VA Under Secretary for Health and DOD's Assistant Secretary for Health Affairs meet regularly with their top advisors to facili-

tate increased sharing of specialized treatment services; promote more effective and efficient procurement of pharmaceuticals, supplies, and equipment; develop a standard computer based patient record; and integrate clinical practice guidelines for disease treatment.

CONGRESSIONAL COMMISSION ON SERVICEMEMBERS AND VETERANS TRANSITION
ASSISTANCE

Question. What is the Department's position on the recommendations on Montgomery GI Bill enhancements and each of the major recommendations contained in the Commission's report? Will the Administration propose legislation to implement some or all of the recommendations?

Answer. The Department is currently in the process of finalizing its comments on the Commission's report. When that is done, we will provide the Subcommittee with a complete copy of our response.

We would anticipate that in areas where the Administration agrees with the Commission and that legislation is required for implementation of the recommendation, that a legislative proposal would be forthcoming. It should be noted that not all of the Commission's recommendations were directed toward VA. Some of the recommendations were directed to the Department of Defense or the Department of Labor.

COMMUNITY BASED OUTPATIENT CLINICS

Question. VA has been given approval for hundreds of outpatient clinics in the past few years to improve access to care. How many CBOCs have been activated and how many more will open in fiscal year 1999 and fiscal year 2000?

Answer. Between March 1995 and January 1999, 272 CBOCs have been approved, of which 183 are currently operational (treating patients). Recent information suggests that approximately another 77 CBOCs will open by the end of fiscal year 1999. All but one or two of the remaining 12 are expected to open by the end of fiscal year 2000. Those one or two were part of a strategic business plan which documented a sequential opening of clinics; therefore, they are on schedule for their openings. Additionally, there are a number of additional CBOCs that have been proposed for the remainder of fiscal year 1999 and into fiscal year 2000.

Question. What is the total amount of funding being devoted to CBOCs in fiscal year 1999 and fiscal year 2000? Are they sufficiently funded?

Answer. Of the 272 CBOCs approved between March 1995 and January 1999, 183 are currently operational, with all but a couple of the remaining 89 projected to be open during fiscal year 2000. The combined actual and projected annual recurring budget for these 272 CBOCs is approximately \$174 million. Additional proposals for CBOCs continue to be submitted; therefore, additional dollars will be devoted to CBOCs in fiscal year 2000. Again, no additional resources can be requested to support the establishment of CBOCs; the resources are to come from within the VISN. To date, there is no indication that the CBOCs are not receiving appropriate and adequate funding from their VISNs.

Question. Are any CBOCs oversubscribed, and if so, what is being done to address the problem?

Answer. To date, there have been no reports of VISNs not being able to accommodate any patients presenting themselves to a CBOC for care.

Question. Is the opening of any CBOCs being delayed owing to budget difficulties?

Answer. There have been some delayed openings due to issues such as contract problems, recruitment problems, and location of appropriate space. There is no indication that budget issues have or will cause significant delays in CBOCs becoming operational in fiscal year 1999. The establishment of CBOCs is dependent upon veteran medical needs and resource decisions made at the VISN level.

Question. What quality of care indicators or monitors have been established for CBOCs?

Answer. A key element of the CBOC proposals is that evaluation/monitoring mechanisms be in place for the parent facility and VISN to assure that the clinic is meeting its goals and objectives. In addition, VHA top management has requested a VHA Health Services Research & Development (HSR&D) study to evaluate the performance of those CBOCs that are operational and to recommend some standard national criteria that could be used to evaluate all CBOCs. This study is well underway and should be completed, with recommendations from VHA on national evaluation criteria, by the end of fiscal year 1999. The development of national criteria will not preclude VISNs and parent facilities from continuing to monitor certain things that are important to them and specific to their clinics.

VETERANS BENEFITS ADMINISTRATION

Question. VA's efforts to improve the timeliness of claims processing have deteriorated in the last year, and are not projected to improve significantly in the near term. It took an average of 168 days to process an original compensation claim in 1998, compared to 133 days the year before. Currently it is taking about 193 days. VA's own survey found that only 60 percent of veterans were satisfied with the way their claims were handled. When can we expect to see significant improvements in timeliness, quality, and customer service?

Answer. We recognize that the challenge to improve claims processing timeliness has increased. Some of the performance drivers which have impacted claims processing timeliness are discussed in the following paragraphs.

Workload Management

We have adopted a balanced scorecard approach emphasizing accuracy, customer satisfaction, employee development, processing timeliness, and unit cost. The balanced scorecard will focus the entire organization upon its vision and the results it needs to achieve to be successful.

We have shifted our emphasis from processing timeliness to accuracy. Improvement in technical accuracy is the number one priority for the Compensation and Pension Program. This priority is reflected on the VBA Balanced Scorecard with accuracy weighted the heaviest of the five measured performance categories.

Because of concerns about our high error rate, we have asked our employees to do a closer review of their award documents. We have also asked them to write better decisions which are understandable to our claimants and which can be sustained through the appellate process.

We have shifted our focus from working newer cases and have asked our employees to process the older claims to ensure that they continue to move through the system.

Increased Difficulty and Complexity of the Workload

Our decision makers have been faced with significant changes in the body of law governing the compensation and pension programs. Decision makers who now rate cases must do so increasingly by case law rather than a static body of regulations—a more difficult and time consuming process. The process of evaluating claims using a combination of regulations and precedent decisions is much more complex, and requires additional research time.

The impact of adjudicating Gulf War veterans' compensation claims has exacerbated our already significant backlog. Decisions for these claims are labor intensive and are completed at the expense of other claims. We have struggled with the issue of service connection for undiagnosed illness because this is contrary to the way we traditionally adjudicate service connection. VBA has dedicated resources to several efforts to ensure that Gulf War veterans are properly evaluated.

Changed Organizational Structure

The transition into the first phase of our reengineered environment has required stations to undertake a major cultural and organizational shift as they blend Adjudication and Veterans Service Divisions into Veterans Service Centers.

This reengineered environment requires extensive cross-training of personnel. As employees have been pulled away from claims processing and customer service activities to undergo training, there has been a degradation in service to our veterans.

Data Integrity

VBA has asked its managers to review operating practices, workflow, data entry methods, and management reports to ensure that all management reports are accurate. We have also asked them to promote a culture and an atmosphere where data integrity is of the highest degree possible.

Effective data management requires decision makers to spend more time on entering data and reviewing it for accuracy.

Although claims processing timeliness will continue to be a major challenge for us, we are beginning to achieve significant improvements in other areas. The following paragraphs highlight achievements thus far in fiscal year 1999.

Technical Accuracy.—In 1998, the Compensation and Pension baseline technical accuracy levels were 64 percent for Core Rating Work and 70 percent for Authorization Work. Based upon Statistical Technical Accuracy Reviews (STAR) conducted so far during fiscal year 1999, preliminary results show a 73 percent rate for Core Rating Work and 74 percent for Authorization Work.

Blocked Call Rate.—At the end of fiscal year 1998, our blocked call rate was 52 percent. Through March, the fiscal year 1999 blocked call rate is 39 percent. The

March 1998 blocked call rate was 57 percent compared to 17 percent for March 1999. Several ongoing initiatives in the area of telecommunications will also contribute to further improvements in the blocked call rate. We expect to be below our balanced scorecard fiscal year 1999 target of 30 percent by September 1999.

Pending Workload.—We have reduced the pending appellate workload. In fiscal year 1998, we had 102,834 appeals pending to be worked, and as of March 31, 1999 that number has been reduced to 101,184. We have also made progress in reducing the number of old remands (pending prior to 1996) from about 10,000 in fiscal year 1998, to 1,108 in fiscal year 1999.

Question. VA's budget indicates it will take 99 days to processing rating-related actions in fiscal year 1999. Is this estimate still accurate? If not, what is the 1999 estimate and 2000 estimate? When will VA meet its objective of 74 days, while also improving the quality of adjudication?

Answer. We are currently processing rating-related actions in an average of 161 days. We do not anticipate achieving 99 days as shown in the budget for this year. We are in the process of working with Service Delivery Networks (SDNs) to project where we will end this fiscal year for rating related actions. Once we update our fiscal year 1999 timeliness projection, we will be in a better position to establish a revised fiscal year 2000 target. As indicated above, we are already beginning to see some improvement in claims processing accuracy. Claims processing timeliness will continue to be a major challenge for us. The earliest we foresee attaining our 74-day timeliness objective in rating-related actions is fiscal year 2005.

Question. VA projects there will be 410,000 pending claims at the end of fiscal year 1999. The number of pending claims is not expected to change in fiscal year 2000. What do you believe is an acceptable level of pending claims and when will you reach that?

Answer. While "pending workload" is not one of our primary organizational measures on the Balanced Scorecard, it is a significant indicator of timeliness trends. Timeliness of processing clearly needs to improve and as one component of that improvement we will strive to reduce the pending workload to 350,000 claims by March of 2000.

Question. In 1998, VBA's accuracy rate for core rating work was only 64 percent. VBA projects to get to 81 percent by 2000. Do you believe today VBA can meet this goal? When will VBA meet its objective of accurately adjudicating claims 96 percent of the time.

Answer. In 1998, the Compensation and Pension baseline technical accuracy level for core-rating work was 64 percent. Improvement in technical accuracy is the number one priority for the Compensation and Pension Program. This priority is reflected on the VBA Balanced Scorecard with accuracy weighted the heaviest of the five measured performance categories. We are beginning to achieve improvement in this area. Based upon Statistical Technical Accuracy Reviews (STAR) conducted so far during fiscal year 1999, preliminary results show a 73 percent rate. We are encouraged by the preliminary results and expect to attain our 75 and 81 percent targets for fiscal year 1999 and 2000 respectively. We expect to reach our 96 percent goal by the end of fiscal year 2004.

CONSTRUCTION—MURFREESBORO

Question. GAO has raised questions about whether VA could pursue the \$12.7 million patient privacy project requested in the budget for Murfreesboro, TN. Given GAO's concerns, does VA continue to support this project for fiscal year 2000?

Answer. Although the payback period for the expected savings has not been quantified, VHA analysis of workload and mission for the Murfreesboro facility fully supports the beds included in the proposed project. Murfreesboro is the Network referral center for long-term mental health care and it receives patients from Nashville and Memphis. The facility currently has an authorized mental health bed level of 229, and the project proposes renovation of 120 beds. The project will enhance the proposed integration of Murfreesboro and Nashville. Integration planning has identified the Murfreesboro campus as the focal point for psychiatric services for the integration. The acute psychiatric care currently at Nashville is planned to be shifted to the Murfreesboro campus as part of the proposed integration.

Since, the percentage of veterans over age 65 will increase to an estimated 69 percent by 2008, this high percentage of elderly veterans will sustain bed utilization due to an increasing utilization of mental health services that comes with aging and loss of income at retirement. Murfreesboro VAMC currently has a mental health penetration rate of 0.53 percent, which is less than half of the national utilization rate for these services (1.68 percent). Provisions for patient privacy and handicapped

accessibility will allow the facility to improve access, in line with the national utilization rates.

The Murfreesboro project is consistent with VA's mission to provide care to veterans with identified special needs and with the assigned mission of the Murfreesboro VAMC. The primary goals and objectives of the project are to eliminate serious access and quality of care deficiencies, as reflected in accreditation and life/safety evaluations. In addressing these goals, VA has taken a conservative approach to bed projections and if these estimates are unexpectedly overstated, contingency plans have been established to use the beds for gero-psychiatric patients.

COLORECTAL SCREENINGS

Question. The Center for Disease Control and Prevention (CDC) has determined that colorectal cancer is the second leading cause of cancer-related death in the United States. Federal policy and guidelines call for the regular screening of all average-risk adults after 50 and older. The guidelines call for screenings that include yearly fecal occult blood tests (FOBT), and flexible sigmoidoscopy every five years for average risk patients. Federal policy and guidelines call for more intensive surveillance of the entire colon with colonoscopy for those at high risk.

What is the VA doing to ensure that the aging population of veterans are appropriately screened for colorectal cancer?

Answer. The United States Preventive Services Task Force Guide to Clinical Preventive Services (2nd Edition 1996) (USPSTF) calls for regular screening of average-risk adults age 50 and older for colon cancer using annual fecal occult blood testing (FOBT) or sigmoidoscopy. Since 1996, VHA has recommended that all average-risk veterans aged 50 years and older receive annual fecal occult blood testing (VHA 1108.1) This recommendation has been updated recently (draft update currently in VHA concurrence process, VHA 1120.2) stating that all average risk veterans aged 50 years and older should receive annual fecal occult blood testing or undergo sigmoidoscopy examination every 5 years.

Question. Is the VA following existing Federal policy and guidelines to ensure that those veterans of average or high risk are receiving the requisite colorectal screenings?

Answer. Yes. VA Policy matches existing USPSTF and the Agency for Health Care Policy and Research (AHCPR Publication No. 98-0033, May 1998) recommendations. In addition, VHA evaluates colorectal cancer screening rates among the veteran population in two ways: (a) Screening for colorectal cancer is a component of the VHA Office of Performance and Quality Prevention Index. This index tracks delivery of preventive services to veterans, and (b) VHA also surveys veterans to establish receipt of colorectal cancer screening via the Veterans Health Survey of the VHA National Center for Health Promotion and Disease Prevention. Furthermore, VA identifies veterans of average or high risk for colorectal cancer through assignment to a primary-care provider. The primary-care provider should ensure that all relevant preventive care strategies are available to the veteran including annual FOBT or periodic sigmoidoscopy for colorectal cancer. Veterans at high risk for colon cancer are referred to a gastroenterologist for regular endoscopic screening, diagnosis and management.

Question. Is the VA currently identifying veterans of average or high risk for colorectal cancer? By what process?

Answer. Yes, the VA is aggressively promoting colorectal cancer screening. Since September 11, 1991, VA policy requires screening veterans age 50 and older with annual FOBT. Since May 16, 1996, VA has required screening with either annual FOBT or flexible sigmoidoscopic examination.

Question. What is your estimate of the benefits to the veteran population to be derived from appropriate colorectal screenings (i.e., reduction in premature death, reductions in medical costs, increase in prevention and quality of care)?

Answer. The USPSTF and the AHCPR estimate the benefit of screening to be a 31-57 percent reduction in colorectal cancer mortality for the general population. Veterans can expect to enjoy similar benefits. To clarify this expectation, VHA is currently funding research—a cost-utility analysis—into colorectal cancer in veterans.

Question. What are the possible benefits to the U.S. population as a whole?

Answer. Veterans in the over 50 age group represent a significant portion of the U.S. population over age 50. VHA research and best practice models have the potential to benefit the population as a whole.

HEPATITIS C

Question. Given the increase in funding you are requesting in fiscal year 2000 for Hepatitis C screenings and treatment for veterans, what plans do you have for longitudinal studies to analyze the clinical course of Hepatitis C and identify the factors resulting in the progression from Hepatitis C to cirrhosis and liver cancer?

Answer. A three-part longitudinal study is under development. The first part will be a thorough study of the prevalence of HCV infection among veterans. The second part of the study will be an assessment of risk factors for HCV infection. This study will determine the importance of both traditional and non-traditional risk factors for infection in the veteran population. The third part of the study will explore the natural course of the progression of HCV infection to clinically important liver disease among veterans.

Question. With growing evidence of the relationship between HCV and the rising incidence of hepatocellular carcinoma, aren't longitudinal studies as a follow-up to HCV screenings and treatment essential in order to improve our understanding of the relationship between Hepatitis C and liver cancer?

Answer. Yes, longitudinal studies as a follow-up to HCV screenings are essential in order to improve our understanding of the relationship between Hepatitis C and liver disease, including cancer. This is why VA has developed the three-part effort just described.

Question. What portion of the requested increase for Hepatitis C screenings and treatment is dedicated to longitudinal studies of outcomes?

Answer. None of the earmarked budgeted dollars for HCV screening and treatment from Medical Care is dedicated to longitudinal studies of outcomes. VA Research plans to use appropriated Research funding, which is independent of the Medical Care request, for the proposed longitudinal study.

Question. Won't these longitudinal studies provide data useful in treating Hepatitis C and preventing liver cancer not only for veterans, but for the population as a whole?

Answer. Yes, the longitudinal studies should provide data useful in treating Hepatitis C and preventing associated liver cancer not only for veterans but also for the population as a whole.

ACID REFLUX AS A RISK FACTOR FOR CANCER OF THE ESOPHAGUS

Question. According to a recent New England Journal of Medicine article (N-Engl J Med 1999; 340: 825-832), there is a strong and probable causal relationship between gastroesophageal reflux and esophageal adenocarcinoma. The study found "The risk of esophageal adenocarcinoma was almost eight times as high among persons in whom heartburn, regurgitation, or both occurred at least once a week as among persons without these symptoms."

In fiscal year 1998 and fiscal year 1999, how much of the VA Medical Research budget was dedicated to studying the relationship between acid reflux and cancer of the esophagus? How much is requested for fiscal year 2000?

Answer. Gastroenterology represents a significant portion of VA's research portfolio. In fiscal year 1998, \$23 million was expended on 176 research projects related to diseases of the digestive tract. In that year VA funded one investigator-initiated project relevant to acid reflux and esophageal cancer for \$93,348. We would expect a similar level of investigator initiated research in fiscal year 1999 and fiscal year 2000.

Question. Given the growing evidence of the causal relationship between acid reflux and cancer of the esophagus, to what extent will VA Medical Research make this area of study more of a priority?

Answer. Cancer represents an area of high priority for the VA research. In fiscal year 1998 \$22 million, representing 8.1 percent of the VA's Research appropriation, was expended on cancer. Acid reflux induced esophageal cancer is a subset of this research effort and will benefit from the broader effort. VA will continue to fund scientifically meritorious proposals submitted by VA investigators studying cancer and esophageal reflux.

More importantly, perhaps, is research that eliminates or diminishes the occurrence or severity of acid reflux. As noted in the quoted New England Journal of Medicine article, "* * * the more frequent, more severe, and long lasting the symptoms of reflux, the greater the risk [of cancer]." VA research efforts are focused on successful treatment of reflux to reduce the frequency or severity of the problem. This strategy would result in the prevention of esophageal cancer or a dramatic reduction in risk for our veteran patients.

Accordingly, the VA completed the first ever randomized controlled trial comparing medical treatment with surgical treatment for severe gastroesophageal reflux

disease (GERD) in 1989 (\$1.7 million). Results showed that in men with complicated GERD, surgery is significantly more effective than symptomatic medical therapy or intensive medical therapy in relieving the symptoms and endoscopic signs of esophagitis for up to two years. While medical therapy is also effective, it is only to a lesser degree. Nearing completion in fiscal year 1999 is a multi-site clinical trial following up the earlier study (\$150,000). This study would establish the percentage of patients in the surgical group who still have effective control of their GERD symptoms, thus documenting the durability of the surgical intervention and the reduction of risk related to cancer.

Additionally, VA has recently approved another multi-site trial, entitled "A Double-blind, Randomized, Placebo-controlled Trial to Evaluate the Cost-effectiveness of Alternative Management Strategies in Patients with Dyspepsia." The goal of the study is to test whether giving antibiotic in combination with heartburn medication (Prilosec—an acid blocker) is better than giving heartburn medication alone. This study will involve 826 veteran patients from 15 VA medical centers over a 30-month period of time (\$7.4 million). Final disposition of this study is awaiting the availability of funds.

QUESTIONS SUBMITTED BY SENATOR BURNS

HEPATITIS C PROGRAM

Question. I am pleased that the VA budget request includes a substantial expenditure (\$135 million) for evaluation and treatment of veterans with the Hepatitis C virus. It is my understanding that a very substantial portion of the veterans' population may be infected with Hepatitis C. This is likely to be a challenge for many years. Can you please explain the VA's plan for testing and treating these patients and making available all promising approved treatments?

Answer. VA has emerged as the Nation's leader in the recognition, testing, and treatment of the Hepatitis C virus. VA's public health response to this emerging epidemic fully recognizes that treatment and containment of this virus is a long-term commitment. VA has already developed a systematic management approach that addresses current requirements and will respond to future developments. VA already has put in place treatment guidelines and protocols. In addition, VA has dedicated two "Centers of Excellence" and advanced a number of partnerships with private industry that will ensure that veterans receive the benefit of the most up to date and state-of-the-art research, service, and treatment.

Question. It is my understanding that there are several approved Hepatitis C treatments, each of which has complications and limited response rates, but some of which may be particularly appropriate for certain portions of the VA patient population. Can you assure me that the VA will make all FDA-licensed treatments available for VA Medical Centers so that doctors will be able to choose the most appropriate and cost effective therapy for each patient?

Answer. VA's treatment protocol is evidence-based. It will be adjusted by the outcome of clinical trials and when FDA has approved any new drugs.

QUESTIONS SUBMITTED BY SENATOR SHELBY

MEDICAL CARE NEEDS

Question. Secretary West, veterans in Alabama note that the VA is attempting to downsize and streamline its operations. However there is a concern that the medical care needs of our veterans, especially those of World War II (WW II), are not being met.

Does the President's budget deal realistically with the medical care needs of our veterans?

Answer. Yes. The underlying premise for this budget and others is, no matter the budget level, we will ensure quality first for our patients. We ensure this by carefully monitoring through a comprehensive performance management system. For example, despite flat budgets in the past (in terms of purchasing power), we were able to increase the number of patients treated and outpatient visits while simultaneously improving our quality of care performance and customer satisfaction. We know that fiscal year 2000 poses challenges that are steep, but if past accomplishments are an indicator for future success, our track record has been outstanding.

Question. How is the VA dealing with the increased medical care needs of the WW II veterans?

Answer. Every indicator of supply and demand for long-term care shows that VA will have sufficient capacity to meet the needs of World War II veterans who use the VA health care system. This scenario assumes that VA will expand home- and community-based care services, contract for long-term care services, and increase the use of State Veterans Homes, where available. The proposed \$106 million increase in home- and community-based care is not viewed as a one-time investment. Rather, the budget reflects the recommendation of the Federal Advisory Committee on the Future of VA Long-Term Care on tripling the investment in home- and community-based care over a 5-year period. VA will improve access to long-term care by providing incentives to networks to provide more long-term care services. VA will also enhance its admission and discharge policies for VA and Community Nursing Home Care. These changes will improve access and fairness. VHA staff monitors the quality of care received for all long-term care patients, regardless of setting.

Question. Secretary West, as you know there has been a process of integration and consolidation of services at Alabama's Tuskegee and Montgomery Veterans' Hospitals. I am concerned that the consolidation may have created travel hardships for veterans seeking outpatient treatment at the facilities. I am told that veterans travel to one of the facilities and many times must be transported to the other facility for their treatment.

Answer. The consolidation into the Central Alabama Veterans Health Care System (CAVHCS) was intended to improve the accessibility, quality, and efficiency of care delivered to veterans in south central Alabama and southwestern Georgia which have been traditionally served by the Tuskegee and Montgomery VA medical centers. Most CAVHCS outpatient care can be delivered by primary care physicians who are located at the East Campus (Tuskegee), the West Campus (Montgomery), the Columbus, Georgia Community Based Outpatient Clinic (CBOC), and most recently the Dothan, Alabama CBOC. Some specialty outpatient care is available at the East Campus and the West Campus, however, tertiary level specialty care is referred for the most part to the Birmingham VA medical center which serves as a referral point state-wide for veterans. Outpatient surgery is available only at the West campus because the veteran population in the CAVHCS service area will only support the critical mass needed for one program in order to maintain the necessary quality.

Question. Is it possible to have more comprehensive outpatient services at each facility so as to limit the travel hardship for our aging veterans?

Answer. The provision of more comprehensive outpatient services is dependent upon several factors such as:

- The availability of specialists and the costs of hiring those specialists as VA employees in sparsely populated areas.
- The availability of specialists in the community that may be willing to work part-time for the VA.
- The eligibility of veterans and the costs of fee basis care.
- The critical mass of veterans needing specialty care in sparsely populated areas.
- The availability of resources to duplicate scarce specialty services at several sites.

The needs of veterans living in rural areas of Alabama and Georgia mirror the needs of all citizens living in similar areas nationwide who must travel in order to access specialty medical care.

Question. In consolidation cases such as this, how does VA equitably allocate outpatient services between hospital facilities?

Answer. In the case of CAVHCS, the intent was to improve access to primary outpatient care, such as through the opening of the Dothan, Alabama CBOC, to build on the traditional strengths of the existing facilities, and consolidate at one location those services that could not, or should not, be maintained at multiple locations. The traditional strengths of the East Campus have been in the delivery of long-term, rehabilitative, and mental health care. Traditionally, the strengths of the West Campus have been the delivery of acute medical and surgical care. Because the critical mass (volume of patients) of surgical care needed was not sufficient to maintain quality in two locations, both inpatient and outpatient surgery were consolidated at the West Campus, which contained much better facilities, a more concentrated veteran population, and access to more surgeons.

Question. Secretary West, there is a concern among Alabama veterans about the ability of retired veterans and their spouses to utilize active duty military facilities for their medical care. Is there a policy within DOD and the VA regarding this issue?

Answer. Retirees and their beneficiaries under age 65 may enroll in TRICARE Prime (DOD's managed care HMO option) and receive care through a DOD health

care facility. Retirees are also veterans, and may enroll under current eligibility guidelines, to receive care from VA.

At those VA facilities that also serve as TRICARE providers, dual-eligible individuals (retirees under age 65) may be treated either as veterans or as TRICARE beneficiaries, depending on which option is to the retirees' advantage. For those veterans in priority levels (1) through (6), it is to their advantage to receive care as a veteran. For those in level (7), the decision must be made on an individual basis. VA cannot treat non-veteran family members except as TRICARE beneficiaries through sharing agreements with DOD's TRICARE managed care support contractors. In Alabama, only the Birmingham VAMC is a TRICARE provider.

QUESTIONS SUBMITTED BY SENATOR CRAIG

BOISE VA HOSPITAL

Question. Your department has claimed that the fiscal year 2000 budget is feasible, relying largely on creating new "efficiencies." The Boise VA Hospital is about as lean as it can get. Where are these efficiencies going to come from?

Answer. Additional efficiencies can and are being achieved at the Boise VA Medical Center and within VISN 20. These planned efficiency actions include further standardization of medical and prosthetic supplies with consolidated contracting for these supplies, consolidation of laboratory services, implementation of Medicare rates for purchased medical services and continued improvements in the delivery of medical services. It is the view of the Boise VA Medical Center and VISN 20 that these planned efficiencies will not cover the expected shortfall in the President's fiscal year 2000 budget. As a result, VISN 20 has chosen to address this issue through the adoption of a medical service area (MSA) concept. In this model, the Northern Alliance of VISN 20 (comprised of VA Medical Centers in Anchorage, Boise, Puget Sound, Spokane and Walla Walla) will serve as an integrated medical unit. Veterans in this area will obtain all their services within the MSA, with the exception of a few highly specialized procedures such as liver transplants. This may mean that veterans need to travel within the MSA for some tertiary services so that other services like primary care can be retained and provided on a more timely basis at the local level.

Following the release of the President's budget, the VHA networks were asked to develop plans addressing the management improvements necessary to achieve the significant savings required to operate within the proposed fiscal year 2000 budget. Those plans are currently being reviewed. Several headquarters and field-based review teams are examining the network plans, including VISN 20's, and we will have a more complete national plan by the end of June.

BOISE VA MEDICAL CENTER

Question. I would also like to submit for the record a copy of a news article from the Idaho Statesman. The article highlights the nearly 600 Idaho veterans who are awaiting care at the VA Medical Center in Boise. I think it is pretty clear that our obligation to our veterans to provide adequate medical care is not being met in Idaho.

I would like your comments on what you can do to help resolve this problem so that these 600 veterans do not have to wait any longer. I would also ask that you look into the situation in Boise, and report back to me in a prompt manner.

Answer. I will work with the leadership in VISN 20 to ensure "best practices" are in place in Boise and other facilities in VISN 20. This will insure that current resources are being utilized to an optimal capacity. VISN 20 has implemented new measures including an infusion of funds to reduce the waiting list at Boise and other VISN 20 facilities. In the meantime, we should point out that veterans on the waiting list in Boise and in other VISN 20 facilities may receive urgent or emergent care from the VA whenever they have a need for such services.

QUESTIONS SUBMITTED BY SENATOR HUTCHISON

KERRVILLE VA HOSPITAL

Question. Many veterans in South Texas are concerned about the Veterans Hospital in Kerrville, and I sent a letter to Dr. Kizer on February 11th about the Kerrville facility, yet have not received an answer. I would like to know what the specific long-term plans are for the South Texas Veterans Health Care System and the VA Kerrville Hospital?

Answer. There are currently no plans to close the Kerrville Division of the South Texas Veterans Health Care System. Current services provided at the Kerrville Division include 154 Extended Care Beds, 20 General Medicine and five Medical Intensive Care Beds, an active primary care program, and several outpatient specialty clinics. An earlier proposal to close the 20 General Medicine and five Medical Intensive Care Beds and replace them with ten Observation Beds has been placed on hold pending the fiscal year 2000 budget requirements.

INTEGRATION OF VISNS

Question. Texas is broken up into three Veterans Integrated Service Networks (VISN), with two of the centers controlling these areas from outside of the state, like Jackson, MS and Phoenix, AZ; which many veterans have complained have difficulty dealing with one another to provide service. How are we going to improve the integration of these systems, or as many feel, would it not work better if a state with a large veterans population like Texas fell under one network?

Answer. The 22 Veterans Integrated Service Networks were configured around historical VA patient referral patterns rather than State boundaries. Geography, travel distances, patient preferences and the availability of specialty referral services are major factors in VA's patient referral patterns. The facilities in West Texas (Amarillo, Big Spring and El Paso) have a predominant referral relationship with Albuquerque. Last year, 93 percent of patient referrals from these West Texas facilities were to facilities in VISN 18. Similarly, Houston has a significant referral relationship with several facilities in VISN 16. It provides many specialty services to VISN 16 veterans who are not from Texas.

Although the Texas facilities are in different VISNs, referrals are made as needed regardless of the VISN boundaries. The three VISNs that include Texas facilities have received very few complaints about referral issues or the configuration of the facilities by VISN.

TRANSFER OF LAND FOR NATIONAL CEMETERY

Question. With the majority of our WWII and Korean War veterans now in their 60s and older, there has been an increased interest in the space availability at the limited number of national cemeteries. In Texas there is no national cemetery in the Central Texas area, Waco, Temple, Killeen, and Austin. The closest cemeteries, which serve the needs of this increasingly large veterans population, are in Dallas and San Antonio. The U.S. Army at Fort Hood has stated that they would be willing to transfer land to the VA on the Fort Hood military installation for a national cemetery. Given the opportunity to acquire government land, the historical significance of the military base at Fort Hood, and the lack of a national cemetery within 100–150 miles of the Central Texas area, what plans are you making to utilize the offer made by Fort Hood and to service this community.

Answer. For the last decade, VA's basis for determining where to establish new national cemeteries has been the findings in two reports to Congress. One Report was completed in 1987 and a second in 1994. The reports identified areas in the country most in need of new national cemeteries based on concentrations of veteran population. The Central Texas area was not identified in either of these reports.

The VA is currently constructing four new national cemeteries in geographic areas that were identified in the 1987 and 1994 reports to Congress. These new cemeteries will be located in the Albany, New York; Chicago, Illinois; Dallas/Ft. Worth, Texas; and Cleveland, Ohio vicinities. This volume of construction is unprecedented in the history of the National Cemetery Administration (NCA) since its inception during the Civil War. After these four new cemeteries open later this year, VA will evaluate the potential establishment of additional new national cemeteries in the remaining geographic areas identified in the two reports. These remaining areas include, in alphabetical order: Atlanta, Georgia; Detroit, Michigan; Miami, Florida; Oklahoma City, Oklahoma; Pittsburgh, Pennsylvania; Sacramento, California; and St. Louis, Missouri.

The focus of our planning will be in those areas with the largest concentrations of veterans identified above. We recognize the burial needs of veterans in Central Texas. If land at Ft. Hood becomes available for a veterans' cemetery, it could be transferred to the State of Texas for the establishment of a state veterans cemetery. State veterans' cemeteries are a complement to our national cemeteries and are usually located by states in areas where there are not current plans for NCA to operate and maintain a national cemetery. The State Veterans Cemetery Grant Program funds one hundred percent of the cost of construction and for the cost of initial equipment when the cemetery is established. The States remain responsible for providing the land and for paying all costs related to operation and maintenance.

CONSTRUCTION OF FUTURE VETERANS' HOMES

Question. Many of the veterans in Texas are concerned about the availability of Veterans Homes in the future. The Texas Land Commissioner has said that the state is ready to provide land and state funding for the projects, if federal VA dollars come through. Will the VA be proposing any additional funding for the construction of future veterans homes?

Answer. Each budget cycle, there is a separate line item in VA's proposed appropriations package that includes "Construction Grants for State Extended Care Facilities." The State of Texas has submitted a total of 11 construction grant applications, each for a 160-bed nursing home facility in different regions of the State. The first two grants will be awarded shortly (in Temple and Floresville), with fiscal year 1999 funding set aside for two additional grants (in Bonham and Big Springs).

QUESTIONS SUBMITTED BY SENATOR KYL

HEPATITIS C

Question. I understand that because the VA budget is so tight, you plan to fund Hepatitis C activities with yet-to-be-identified efficiencies in other programs. So, clearly cost is an issue here. I understand that prices vary for different approved therapies. For example, one year of an interferon may cost from \$5,300 to \$8,800, whereas a combination therapy may cost from \$15,600 to \$17,200. How much does drug therapy cost for one Hepatitis C patient over a year?

Answer. The estimate for the drug therapy per month is \$1,100 or approximately \$13,200 per year (which excludes the cost of testing).

Question. Is that the cost that VA used in preparing your budget submission?

Answer. Yes.

Question. I understand there are significant clinical and economic differences among currently approved Hepatitis C treatments. The least expensive treatment has fewer side effects and is approved for treating patients who do not respond to initial therapy. What consideration did you give these factors in developing your budget submission and treatment plans?

Answer. Evidence-based treatment protocol recommends dual therapy as the standard of care; however, provision has been made in the protocol for those patients who either cannot tolerate dual therapy or are not clinically appropriate for dual therapy. Our veteran patients are provided the most up to date therapy possible and the treatment protocol is reviewed and updated on a regular basis as the science indicates the need. Our decision-making is based on the appropriate clinical indications.

QUESTIONS SUBMITTED BY SENATOR MIKULSKI

ALBUQUERQUE REGIONAL OFFICE

Question. Senator Bingaman investigated complaints by veterans and veterans organizations about the problems regarding claims processing being experienced at the Albuquerque regional VA office. I understand that you met with Senator Bingaman to discuss these problems and see what could be done to fix them. Could you outline for me what steps you have taken thus far, what initiatives or changes have been implemented, and what action items you may be planning for the future?

Answer. The following steps have been taken to improve claims processing timeliness at VARO Albuquerque:

The vacant Service Center Manager position has been recently filled. The new manager is scheduled to report to VARO Albuquerque May 10, 1999. The new manager has recently made a visit to the regional office and assessed the situation. Under his direction the implementation and execution of a Work in Progress review plan has been accomplished. The new plan is designed to provide better workload control.

Since February of this year the Albuquerque Regional Office has received assistance with the processing of over 450 cases from other regional offices. An additional 150 cases are currently being prepared to be sent out next week. Recently VBA installed video conferencing equipment at Albuquerque Regional Office to improve the office's ability to conduct video hearings with the Board of Veterans Appeals (BVA). This will provide better service to the New Mexico veterans by resulting in more timely hearings with BVA.

The following action items are planned:

The pursuit of a person to fill the Congressional Liaison position is continuing. The filling of this position will provide a direct point of contact for New Mexico's Congressional offices, as well as improving the timeliness, coordination and resolution of all congressional inquiries.

Recruitment of two additional service center employees will commence shortly. Authorization from VBA headquarters has been granted for these hires.

Albuquerque's Service Delivery Network leadership will be meeting the week of May 3, 1999. On the table for discussion will be the formulation of a help team to be detailed to the Albuquerque Regional Office.

BOARD OF VETERANS' APPEALS

Question. It takes an average of almost two years nationwide for an appeal to make it through the Board of Veterans' Appeals. Are there things that you could do or legislative assistance that you need to accelerate that process so that ALL veterans could obtain a more timely resolution to their claims?

Answer. VA is committed to reducing the time it takes for a veteran to receive a final decision on his or her appeal. Continuous improvement in appellate decision quality and timeliness has been the focus of much of BVA's budgetary and strategic planning in recent years. With the support received from the Administration, Congress and the veterans service organizations, BVA has markedly reduced the appeals backlog and improved its decision-making timeliness in fiscal years 1995 through 1998. BVA's traditional measure of timeliness is average response time. Average response time is an estimate of the time that it will take to decide all cases certified as ready for BVA review. BVA succeeded in reducing average response time from a fiscal year 1994 high of 781 days to 197 days by the end of fiscal year 1998.

The fiscal year 2000 budget reflects an important change in the way we view timeliness with respect to the VA appeals process. For the first time, BVA and VBA have adopted a timeliness performance measure that cuts across the two organizations' boundaries. This new timeliness measure, Appeals Resolution Time, measures the average length of time it takes the Department to process an appeal from the date a claimant files a Notice of Disagreement until that case is resolved, either through resolution at a VA field facility or by a final decision by the Board. Previously, most VA timeliness measures for claims and appeals processing focused on measuring various segments of time, based upon which organization was responsible for the various components of the overall processing cycle. These measures fail in the sense that they do not reflect the length of the process from an appellant's perspective, that is, from the day an appellant registers his or her dissatisfaction with a decision on a claim until the matter is finally decided. Not surprising, appellants are less interested in how long individual stages in the process take as they are about the length of the entire process. Appeals Resolution Time will provide appellants, elected officials, Departmental leadership, VBA and BVA management, and other interested parties a much more comprehensive and accurate answer to the question, "How long does the appeal process take?" Appeals Resolution Time is described in the Department Performance Plan component of the fiscal year 2000 Budget Submission as one of VA's key goals and performance measures.

VA's goal for fiscal year 2000 is to reduce Appeals Resolution Time to 545 days—a 20 percent reduction from the fiscal year 1998 level of 686 days. Our long-term strategic goal is to reduce Appeals Resolution Time to 365 days. The key to success in achieving these goals is for VBA and BVA to work closely together, looking beyond immediate organizational boundaries to seek more innovative, Departmental solutions to the problems associated with resolving appeals in the most timely manner.

CONTRACT SERVICES AND OUTREACH CLINICS IN NEW MEXICO

Question. What impact do you foresee that the President's budget request will have on contract services and outreach clinics in New Mexico and nationwide?

Answer. Following the release of the President's budget, the VHA networks were asked to develop plans addressing the management improvements necessary to achieve the significant savings required to operate within the proposed fiscal year 2000 budget. Those plans are currently being reviewed. Several headquarters and field-based review teams are examining the network plans, including VISN 18's, and we will have a more complete national plan by the end of June.

VA'S DC FIELD OFFICE

Question. A recent VA internal review, made public by a Washington Post article, found serious backlogs and a state of chaos at the DC field office. Although there is a backlog of almost 10,000 cases, the DC field office has only 158 staff, down from

almost 250 five years ago. VA has plans to distribute the outstanding claims to other field offices in the region to speed their processing.

Is the Washington Post article accurate?

Answer. The Washington Post article accurately described the workload situation. The office currently has 158 full time employees, down from 210 employees in October 1994.

Question. If so, why do these conditions exist in the DC field office?

Answer. The workload problems at the Washington Regional Office (WRO) have been escalating over the past few years due to a number of complex factors. The office had taken a very aggressive approach to merging the Adjudication and Veterans Services Divisions, in line with our Business Processing Reengineering vision for compensation and pension claims processing. Many hours were devoted to cross training employees, which reduced the time available to process claims and increased workload backlogs. WRO elected to participate in the Decision Review Officer Pilot, which focused resources on the appeals workload, but reduced the number of rating specialists available to process claims. The office prematurely moved to a team environment where teams were given responsibility for workload management without providing them with the proper training or ensuring that adequate controls and management systems remained in place. A large number of staff losses further degraded the office's ability to manage its workload and timely process claims.

WRO has a history of recurring difficulties similar to the current situation, although never quite as critical as the workload problems it now faces. It has always been difficult for WRO to work in the headquarters city and attract and retain top employees when the grade structures and opportunities for promotion are so much greater in VACO and other Federal agencies.

Question. What is your plan for handling the backlog of claims in the DC field office?

Answer. Our primary concern is obviously for the veterans who are awaiting decisions on their claims. Our immediate actions have focused on organizing the pending claims, associating all documentary evidence with those claims, and establishing the appropriate workload controls so that we can process these claims as expeditiously as possible. We brought in a highly skilled management team from the Oakland Regional Office to assist in this process. This team also provided some critical interim training support to the employees of the Washington Regional Office. A new Service Center Manager has now been appointed for the office, and we are recruiting to fill additional positions in order to further strengthen the management structure and increase the technical capabilities of the staff.

Some of the pending claims have already been transferred to other regional offices to be worked. We are developing a plan for further redistributing a significant portion of the pending workload to other regional offices for both development and rating action. Throughout the summer we will be bringing in "help teams" from across the country to screen and process claims. We will continue to call on the assistance of other regional offices until we have brought the pending workload down to a level which can be timely managed by the Washington Regional Office.

Question. Who will be in charge of correcting this problem?

Answer. The Office of Field Operations is the organizational element within the Veterans Benefits Administration responsible for the operations of the regional office field structure. That office is closely monitoring the Washington Regional Office situation and working directly with local management to implement the short term actions that will bring the workload back under control and to design the long term solution for the office that will best serve veterans.

The Washington Regional Office is part of Service Delivery Network 3, which also includes the Baltimore, Huntington, Roanoke, and Louisville Regional Offices. The Network shares in the responsibility for managing the workload at WRO and was instrumental in assessing the extent of the problems and laying out an initial course of action. The network will continue to provide assistance and support to WRO until the situation is resolved.

Question. What is your timetable for a solution?

Answer. The goal for WRO is to be in a position to maintain its workload without extraordinary assistance within 12-18 months.

Question. When can veterans who were, or are, served by the DC field office expect to see positive results?

Answer. With the actions we have already undertaken and the planned redistribution of many of the pending claims to other offices, veterans can expect to see positive results within a three to six month period. This is not to say, however, that all claims will be finalized during this period. Depending on the type of claim and the extent of evidentiary development required, the decision-making process could extend beyond the six month period.

In addition to increased attention to managing the claims process, we plan to implement the National Automated Response System at WRO in the near term. This system will assist in reducing the telephone waiting times that veterans experience when calling regarding the status of their claims.

Question. If the VA plan includes distributing these outstanding claims to other field offices, will this result in slower processing for other offices?

Answer. The work will be transferred to a sufficient number of offices so that the impact on the receiving stations will not be dramatic. The regional offices selected to assist will be those that can best handle the additional work with the least disruption to their own workloads.

Question. How long will this transfer of work last?

Answer. The WRO pending workload is being continuously monitored. As indicated in response to a previous question, we will continue to call on the assistance of other regional offices until we have brought the pending workload down to a level which can be timely managed by the Washington Regional Office.

Question. Is it possible that this will be a permanent shift of responsibility?

Answer. We have made no decisions on the long term solution for the Washington Regional Office. Our goal is to establish an effective organizational structure, implement the appropriate management systems and develop comprehensive training programs that will enable all employees to perform at their highest level of competence and ensure veterans' claims are properly developed and decisions timely made.

Question. How will this affect veterans who were, or are, served by the DC field office?

Answer. The transfer of a significant portion of the pending work to other offices is the most expeditious way of resolving the claims and bringing the workload at WRO back under control. We will be careful to notify all veterans whose claims are transferred and we will coordinate our actions to minimize the impact on claimants and their representatives. Any medical examinations required in order to process the claims will be scheduled in the local area.

VA'S DISPOSAL OF CAPITAL ASSETS

Question. What is VA's plan to dispose of excess capital assets?

Answer. VA is proposing a pilot program to significantly improve its management of capital resources by encouraging and streamlining the process of disposing of surplus government property. This proposal would allow VA to dispose of excess and underutilized property (including land, structures or any equipment associated with the property) by sale, transfer, or exchange, and use the proceeds to fund further disposal activities and other non-recurring capital needs. The pilot would be restricted to thirty dispositions over its life.

Proposed legislative changes include:

Establishing the Capital Asset Fund (CAF). Proceeds that VA retains (90 percent) from disposals, after deductions, will be deposited into the CAF to be used to fund additional disposal activities and other non-recurring capital needs. Allowable deductions would include all costs (administrative, demolition, etc.) of disposing of the asset. This fund will have a cap of \$50 million, with excess proceeds to be transferred to the minor construction program.

Raising the threshold of reporting disposals in an annual budget document from \$50,000 to an amount equal to or greater than the cost of a major medical facility project (currently \$4 million). VA would notify GSA of all approved disposals and this information would be entered into GSA's internal database. Property with an estimated value less than the value of the Major Medical Facility Project threshold (currently \$4 million) could be disposed of after notifying GSA, no other Federal agency has expressed an interest in paying fair market value for the property within 30 days of the notice, and then a Notice of Intent is placed in the real estate section of local newspapers. Properties valued in excess of the Major Medical Facility Project threshold would be described in the Congressional budget document for that fiscal year. In addition, GSA would offer the property to other Federal agencies. If after 30 calendar days, no other Federal agency expressed an interest in paying fair market value for the property, VA would be authorized to proceed with the disposal provided: (1) a public hearing is held in the local community where the disposal would occur; (2) the Secretary's intention to dispose of the property is published in the Federal Register; and, (3) the Committees on Veterans' Affairs are notified and 60 calendar days have elapsed. The Secretary would report in the yearly budget submitted to Congress on the disposals to be undertaken in that fiscal year that are valued in excess of the Major Medical Facility Project threshold, and also report on all completed disposals. For disposals in excess of this threshold, General

Services Administration (GSA) would be notified, a notice of intent would be published in the Federal Register and the Committees on Veterans' Affairs would also be notified. For disposals under this threshold, GSA would be notified and a notice of intent would be provided to the local community.

Requiring 10 percent of the proceeds to be transferred to the Department of Housing and Urban Development's (HUD) Homeless Assistance Grants Housing account.

Question. What process will be followed regarding the disposal of these assets?

Answer. VA Proposed Asset Disposal Pilot-Procedures and Process:

Offices with responsibility for real property assets (VHA, VBA, NCA) would perform surveys to determine excess or underutilized real property, and report proposals for disposal to the VA Capital Investment Board (VACIB).

VACIB will review proposals and forward its recommendations to the Secretary for approval.

For disposals less than \$4 million, GSA would be notified and no other Federal agency has expressed an interest in paying fair market value for the property within 30 days of the notice and a notice of intent would be placed in local papers.

For properties valued at greater than \$4 million:

1. GSA would be notified and if not other Federal agency has expressed an interest in paying fair market value for the property, VA would be authorized to proceed with the disposal.

2. The proposed disposal would be described in the Congressional Budget for the fiscal year.

3. A notice of the Secretary's intent will be placed in the Federal Register and local hearings would take place.

4. Congressional committees would be notified 60 calendar days prior to any disposal.

VA would notify GSA of all approved proposed disposals and would be authorized to perform disposal activities utilizing GSA's technical assistance when desired.

Ninety percent of the net proceeds of any sale, transfer or exchange would be deposited into CAF to fund future disposal activity, other non-recurring capital projects and augment funding for VA's homeless program. Ten percent of the net proceeds would be transferred to HUD's Homeless Assistance Grant Account.

Question. How will local communities who might be impacted by the disposal of these assets be involved in the process?

Answer. For disposals less than \$4 million, a notice of intent would be placed in local papers. For properties valued at greater than \$4 million, the proposed disposal would also be described in the Congressional budget, the Secretary's intention would be published in the Federal Register, and a public hearing would be conducted in the local community where the disposal would take place.

Question. What are VA's goals regarding capital asset disposal?

Answer. The goal of the disposal pilot is to improve the management of the VA's capital assets by providing incentives for the disposal of unneeded or underutilized VA real property. The pilot will also promote efficiencies, cost savings and generate income to supplement VA's capital programs. Currently little incentive exists for VA to dispose of its excess or underutilized property as it must first be offered (sometimes at little or no cost) to public and private organizations that do not directly benefit the veteran population. In addition, any proceeds that are retained by VA can only be used to construct nursing homes—not currently a high priority need.

The pilot promotes efficiency by enabling VA to redirect funds currently spent on maintenance and operating costs for underutilized property and instead use these funds to provide improved quality and access to services for veterans.

Another goal of the pilot is to generate income that will be utilized to supplement VA's capital programs in order to improve the VA's infrastructure, increase its information technology capabilities and provide better accommodations and services to the veteran.

Question. What is VA's timeline for the disposal of capital assets?

Answer. VA anticipates that the proposed process will represent a streamlining of the current one. However, the time frame required for completion of a disposal is heavily dependent on a number of factors including: the size and potential future uses of the property to be disposed of; the complexity of environmental study and/or restoration required prior to disposal; and the volatility of the real estate market in the surrounding community. While simpler asset disposal proposals may be completed within 12 months after they receive approval from the Secretary or are submitted to Congress, based on GSA and DOD experience, VA believes it may take 24 to 36 months to dispose of an asset under the most difficult conditions. The proposed pilot program is limited to 30 transactions over its five-year life.

Question. What criteria will be used to determine which capital assets should be disposed of?

Answer. VA anticipates a strategic planning process aimed at realigning imbalances or inequities between VA capital assets and veterans needs. While overall guidance and direction for this program is given at the headquarters level, much of this process will be undertaken at the regional level through each Veterans Integrated Service Network (VISN). The process provides for the creation of a Capital Assets Realignment for Enhanced Services (CARES) Steering Committees at each VISN whose responsibility is to undertake and complete a report which will be linked to that VISN's business plan. This report would include the following elements:

- A review of historical, current and projected service utilization and demand for veteran healthcare services throughout the VISN and its constituent medical facilities.
- A review of current VISN capital assets in terms of their ownership, location, services provided, physical condition, convenience of access, repair requirements and similar characteristics.
- A review of the congruence between current capital assets and the VISN's current and future projected demand for services.
- Consideration of alternatives to current service delivery modes that may enhance services to veterans.

VBA and NCA will follow similar internal processes, prior to reporting proposed disposals to the VA Capital Investment Board. In the context of capital asset planning, VA closely follows the principles in the OMB Capital Asset Programming Guide for any proposed capital investment or disposal in terms of analyzing each proposal in light of other alternatives.

Question. How will VA incorporate local flexibility with national standards regarding the disposal of capital assets?

Answer. As previously stated, while overall guidance and direction for this program is given at the headquarters level, much of this process will be undertaken at the regional level through each VISN. The process provides for the creation of Capital Assets Realignment for Enhanced Services (CARES) Steering Committees at each VISN whose responsibility is to undertake and complete a report which shall be linked to that VISN's business plan. These committees will include members representing veterans.

HEPATITIS C

Question. We understand that the VA plans to only use combination therapy to treat hepatitis C, but combination therapy is not approved for patients who have not responded to initial therapy. Another interferon therapy is FDA approved for treating all patients with Hepatitis C including those who do not respond to initial therapy. What therapy do you plan to offer veterans who are HCV positive and do not respond to initial treatment?

Answer. VA does not plan to use only dual therapy for hepatitis C infection (HCV). While combined interferon (IFN)-ribavirin treatment is associated with higher response rates, and is generally considered the most appropriate "standard" treatment, it may not be suitable for all patients as initial therapy. For example, ribavirin may cause a hemolytic anemia severe enough to require its discontinuation; this could make a patient with blood or heart disease a poor candidate for combination treatment. In addition, it is teratogenic and requires additional caution when considered for females of childbearing age. Moreover, side effects and treatment dropout rates are greater with dual versus single drug treatment. Thus, some HCV patients may be offered only interferon as initial therapy. However, combination therapy has not been used only as initial treatment; Davis et al. (NEJM 1998;339(21):1493-1499) demonstrated that IFN-ribavirin was superior to IFN retreatment for patients who had relapsed after initial IFN treatment. IFN alone is appropriate for use in patients who relapse following an adequate course of combined drugs.

The treatment guidelines address all of these concerns. We are aware that not everyone is suitable for dual therapy and our treatment protocol specifically addresses this. There is a special warning section on individuals of child-bearing age.

The development of the treatment protocol was done with the leading hepatologists in the Veterans Health Administration and based on the best clinically current information. According to the literature no single drug therapy has been demonstrated to meet or exceed dual therapy. There are some differences in response to various types of interferon. Each patient will be individually evaluated by his or her physician and appropriate therapy will be provided.

Question. Based on warnings in the label, HCV positive individuals who have cardiac, pulmonary, or renal related illnesses may not be good candidates for combina-

tion therapy, and women of childbearing age and their partners taking combination therapy must also take strict precautions to avoid the risk of pregnancy. What therapy will be made available to HCV positive veterans who may not be good candidates for combination therapy due to these risk factors?

Answer. Monotherapy with interferon (IFN) alone is appropriate treatment in those patients; it is covered in the treatment protocol. The Pharmacy Benefits Group decides which interferon products are placed on the national formulary. The clinicians review the literature and clinical trials to determine which drugs provide the best clinical benefit. This information is also gathered and reviewed by the Pharmacy Benefits Group to decide which drugs to place on the national formulary.

Question. I understand that the VA's projected HCV treatment costs are based on the cost of combination therapy. However, there is another approved interferon therapy that costs 50 percent less than combination therapy and may be more effective and/or safer in some patient populations. Have you considered how clinically appropriate use of interferon monotherapy will reduce the cost of your HCV treatment program?

Answer. We have not developed predictions of cost differences between dual (IFN-ribavirin) and monotherapy (IFN alone). Such projections would require knowledge, or estimates, of the proportion of HCV patients who had specific contraindications to the addition of ribavirin to IFN in treatment of their disease, or who would be likely to drop out of, or specifically defer dual drug therapy. We have no such reliable data available which would permit such assumptions nor does any exist for other populations. Moreover, if the higher response rates reported for dual therapy are substantiated in VA patients, the more costly initial therapy could be more than compensated by savings due to lower rates of relapse and progression of liver disease. The evidence-based treatment protocol currently recommends dual therapy as the standard of care, however, provision has been made in the protocol for those patients who either cannot tolerate dual therapy or are not clinically appropriate for dual therapy. Our veteran patients are provided the most up to date therapy possible, and the treatment protocol is reviewed and updated on a regular basis as the science indicates the need, and our decision-making is based on the appropriate clinical indications.

QUESTIONS SUBMITTED BY SENATOR HARKIN

HEPATITIS C

Question. I am pleased that the VA budget request includes a substantial expenditure for evaluation and treatment of veterans with the Hepatitis C virus. It is my understanding that a very large portion of the veterans' population may be infected with this disease. This is likely to be a serious health challenge for many years. Can you explain the VA's plan for testing and treating these patients and making available all promising treatments?

Answer. VA has emerged as the Nation's leader in the recognition, testing, and treatment of the Hepatitis C virus. VA's public health response to this emerging epidemic fully recognizes that treatment and containment of this virus is a long-term commitment. VA has already developed a systematic management approach that addresses current requirements and will respond to future developments. VA already has put in place treatment guidelines and protocols. In addition, VA has dedicated two "Centers of Excellence" and advanced a number of partnerships with private industry that will ensure that veterans receive the benefit of the most up to date and state-of-the-art research, service, and treatment.

Question. It is my understanding that there are several approved Hepatitis C treatments, each of which has complications and limited response rates, but some of which may be particularly appropriate for certain portions of the VA patient population. Can you assure me that the VA will make all FDA-licensed treatments available for VA Medical Centers so that doctors will be available to choose the most appropriate therapy for each patient?

Answer. VA's treatment protocol is evidence-based. It will be adjusted by the outcome of clinical trials and when FDA has approved any new drugs.

QUESTIONS SUBMITTED BY SENATOR LEAHY

DEPARTMENT OF VETERANS AFFAIRS AND DEPARTMENT OF DEFENSE-COMPUTERIZED
MEDICAL RECORD SYSTEMS

Question. In recent years I have pushed the Department of Defense to adopt new software tools that automate data capture and clinical guidance for servicemembers. These products promise to save funds by identifying servicemember medical problems and solutions continuously, while creating standardized patient data to better analyze how resources are being used. If systems incorporating these characteristics had been in place during Desert Storm, many of the medical problems experienced by veterans after that war would have been definitively traced to their causes.

I know you are working closely with the Department of Defense in developing a computerized medical record that will enhance the care of tomorrow's veterans and servicemen. I would like to make sure that your efforts are taking advantage of the progress that DOD has made recently.

Will you have someone brief me on the cooperative efforts between the two departments?

Answer. VA continues to work closely with the Department of Defense (DOD) on computerized medical record systems. Certainly, the most visible collaborative activity relates to the Government Computer-based Patient Record (GCPR) initiative, which derived, in large part, based on the data standardization problems that you referred to and that were identified since the Gulf War. This interagency project is focused on developing and implementing a framework to electronically move patient medical records between the VA, DOD, and the Indian Health Service (IHS). Members of the GCPR Project Management Team or the GCPR Executive Committee are prepared to brief you on this cooperative effort at your convenience.

HEPATITIS C

Question. I am pleased that the VA budget request includes a substantial expenditure (\$135 million) for evaluation and treatment of veterans with the Hepatitis C virus. It is my understanding that a very substantial portion of the veterans' population may be infected with Hepatitis C.

Can you please explain the VA's plan for testing and treating these patients?

Answer. VA has emerged as the Nation's leader in the recognition, testing, and treatment of the Hepatitis C virus. VA's public health response to this emerging epidemic fully recognizes that treatment and containment of this virus is a long-term commitment. VA has already developed a systematic management approach that addresses current requirements and will respond to future developments. VA already has put in place treatment guidelines and protocols. In addition, VA has dedicated two "Centers of Excellence" and advanced a number of partnerships with private industry that will ensure that veterans receive the benefit of the most up to date and state-of-the-art research, service, and treatment.

Question. Can you assure me that the VA will make all FDA-licensed treatments available so that doctors will be able to choose the most appropriate and cost effective therapy for each patient?

Answer. VA's treatment protocol is evidence-based. It will be adjusted by the outcome of clinical trials and when FDA has approved any new drugs.

SUBCOMMITTEE RECESS

Senator BOND. Mr. Secretary, gentlemen, it looks like a challenging year ahead. We appreciate the testimony and the discussions today. There will be more questions. And we look forward to continuing to work with you and thank you for your attendance.

Meeting is recessed.

[Whereupon, at 11:34 a.m., Thursday, April 15, the subcommittee was recessed, to reconvene subject to the call of the Chair.]

**DEPARTMENTS OF VETERANS AFFAIRS AND
HOUSING AND URBAN DEVELOPMENT AND
INDEPENDENT AGENCIES APPROPRIATIONS
FOR FISCAL YEAR 2000**

THURSDAY, APRIL 22, 1999

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, DC.

The subcommittee met at 9:30 a.m., in room SD-138, the Dirksen Senate Office Building, Hon. Christopher S. Bond (chairman) presiding.

Present: Senators Bond, Craig, Stevens, Mikulski, Leahy, Lautenberg, and Harkin.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

STATEMENT OF ANDREW CUOMO, SECRETARY

ACCOMPANIED BY:

SAUL RAMIREZ, DEPUTY SECRETARY
JON COWAN, CHIEF OF STAFF
GAIL LASTER, GENERAL COUNSEL
JACQUIE LAWING, DEPUTY CHIEF OF STAFF FOR POLICY AND PROGRAMS
RHODA GLICKMAN, DEPUTY CHIEF OF STAFF
HAL DeCELL, ASSISTANT SECRETARY FOR CONGRESSIONAL AND INTERGOVERNMENTAL RELATIONS
CARDELL COOPER, ASSISTANT SECRETARY FOR COMMUNITY PLANNING AND DEVELOPMENT
HAROLD LUCAS, ASSISTANT SECRETARY FOR PUBLIC AND INDIAN HOUSING
JACKIE JOHNSON, DEPUTY ASSISTANT SECRETARY FOR NATIVE AMERICAN PROGRAMS
WILLIAM P. APGAR, ASSISTANT SECRETARY FOR HOUSING—FEDERAL HOUSING COMMISSIONERS
IRA PEPPERCORN, DIRECTOR, OFFICE OF MULTIFAMILY HOUSING ASSISTANCE RESTRUCTURING
GEORGE ANDERSON, EXECUTIVE VICE PRESIDENT, GOVERNMENT NATIONAL MORTGAGE ASSOCIATION
XAVIER BRIGGS, DEPUTY ASSISTANT SECRETARY FOR RESEARCH, EVALUATION AND MONITORING
EVA PLAZA, ASSISTANT SECRETARY FOR FAIR HOUSING AND EQUAL OPPORTUNITY
DAVID GIBBONS, ACTING CHIEF FINANCIAL OFFICER
EDWARD KRAUS, DIRECTOR, ENFORCEMENT CENTER
DONALD J. LA VOY, DIRECTOR, REAL ESTATE ASSESSMENT CENTER

JOE SMITH, ACTING ASSISTANT SECRETARY FOR ADMINISTRATION
DAVID JACOBS, DIRECTOR, OFFICE OF LEAD HAZARD CONTROL
SUSAN GAFFNEY, INSPECTOR GENERAL

OPENING STATEMENT OF CHRISTOPHER S. BOND

Senator BOND. The Senate VA, HUD, and Independent Agencies Appropriations Subcommittee will come to order. Senator Mikulski is meeting with the ambassador from Poland this morning and asked that we go ahead and I will do so and ask her to make her opening statement when she concludes that very important meeting.

It is a pleasure to welcome Secretary Cuomo and our other guests from the Department of Housing and Urban Development who have joined us here today to testify on the President's fiscal year 2000 budget request for the Department of Housing and Urban Development. The President's budget request for HUD proposes \$28 billion for fiscal year 2000, which is an increase of some \$2.5 billion over the fiscal year 1999 appropriation of \$25.5 billion.

I must say at the outset, as I have had to say at each of the hearings we have had to date in this subcommittee, that this again will be a very difficult year in attempting to meet the funding requirements and the programs within the jurisdiction of this subcommittee.

The caps on domestic discretionary spending will compel domestic programs to absorb some \$23 billion in reductions, and the VA, HUD Appropriations Subcommittee, as one of the largest subcommittees within the Appropriations Committee, will have to absorb its fair share of domestic cuts. We hope that we will only have to absorb our fair share and not more.

As is often the case, the President's budget request for fiscal year 2000 has created unrealistic expectations by increasing spending by almost \$25 billion above the budget caps through a series of puts and takes that simply do not work or exist. In effect, he has proposed spending dollars that are not there.

When these phantom funds are squeezed out it will mean real and difficult cuts; therefore, much of the Subcommittee's work this year, including the budget review and funding of HUD programs, will have to be to prioritize our funding decisions to ensure that the principal programs within the subcommittee work effectively and efficiently.

RENEWAL OF EXPIRING SECTION 8 CONTRACTS

While there are many HUD issues that merit comprehensive discussion, I begin by touching on several specific issues that are important to me. First, Congress has made a commitment to fund fully all expiring section 8 contracts. Now, this is not glamorous, it is not sexy, it is not politically high profile, but it is a vitally important commitment.

It means that we are not going to abandon the low-income families, the elderly, and the disabled who depend on Federal housing assistance for decent, safe, and sanitary housing.

Within the next 10 years the financial reality is that by fully funding the expiring section 8 contracts on an annual basis the

Congress will need to appropriate some \$20 billion per year to renew all existing expiring section 8 contracts without any new incremental section 8 assistance.

Without that funding current residents will lose their section 8 assistance and the ability to afford their homes. So keeping low-income families with their children, keeping the elderly, and keeping the disabled in their homes will remain our top priority.

It is against this bleak financial setting that the request for additional incremental section 8 units must be viewed.

The VA-HUD fiscal year 1999 appropriations bill, at the insistence of the Administration, included 50,000 incremental section 8 vouchers at the cost of \$283 million in fiscal year 1999. This \$238 million cost will become an annual cost as these section 8 contracts expire. Again, this year, the HUD budget calls for an additional 100,000 incremental section 8 vouchers to meet low-income housing needs.

These 100,000 incremental vouchers will cost some \$578 million, which again will become a recurring annual cost if we continue to meet our commitment to fund fully all expiring section 8 contracts.

Let us put a human face on this. We have thousands of families and elderly individuals who face the potential loss of their homes if we do not provide sufficient resources to extend expiring section 8 contracts. We cannot kick these people out the back door because we are so eager to fund a new family coming in the front door.

That is what my priority is and will remain, taking care of the current residents of public and assisted housing, and only after this is done will we look to provide new commitments.

SECTION 8 INCREMENTAL ASSISTANCE

Mr. Secretary, I must also remind you of a discussion that we had last year during the VA-HUD fiscal year 1999 appropriations conference concerning the funding of section 8 incremental assistance.

During the meeting with Senator Mikulski, Congressman Lewis, Congressman Stokes, and me, you promised to find adequate funds to cover the full cost in fiscal year 2000 for the 50,000 incremental vouchers which we included in the fiscal year 1999 VA-HUD appropriations bill.

You said that you would cut programs if necessary, but that you would find adequate funding to cover the costs of new incremental section 8 assistance. This was a promise you made to me and to other members of the VA-HUD appropriations conference personally, and I am concerned that the President's fiscal year 2000 budget request for HUD does not live up to this promise.

I want to be clear on this, because I believe the President's fiscal year 2000 budget fails to provide the needed funding for the existing expiring section 8 contract, and instead it relies on an advanced appropriation of \$4.2 billion to be appropriated in fiscal year 2001. This would create an immediate shortfall of \$4.2 billion in fiscal year 2001 within the HUD budget, which this subcommittee will have to make up.

This policy essentially says to our elderly and other low-income tenants that HUD is promising a 1-year lease, but is only willing to provide the funds for a few months, and then hope that the rest

of the rent money is available later. That just does not work, and essentially bankrupts the system.

Even more unsettling is the fact that the Administration assumes flat funding for section 8 contract renewals over the next 9 years. If you have not looked at it, and I would ask those who are here who are interested in this to look at the multi-year projections.

The projections of OMB, reflecting the President's budget, assume only \$11.5 billion for expiring section 8 contracts for each fiscal year from 2001 through 2009. This means the Administration is not committed to funding all expiring section 8 contracts and begs the question as to what this means for the thousands of current residents who would be forced out of their homes.

In essence, we have two sets of books, one that looks good, but when you look at the real spending plan there is not the money there, and I am very worried about what that means. I believe in living up to our commitments, and if the budget cannot sustain additional incremental section 8 vouchers, then we ought to say that and prioritize our funding to preserve the housing assistance we currently have.

OPT-OUTS

Second, HUD is facing a housing crisis with the opt-out of a number of section 8 project-based multifamily housing developments. For example, according to the National Housing Trust, during 1998, 219 properties, with some 25,000 section 8 units, opted out of receiving Federal rent subsidies under the section 8 project-based market program. These were projects with expiring section 8 contracts with rents below the market rate. In these cases, HUD has refused to review the section 8 contracts at market.

In other words, the owners believed that they could get more rent for their properties if they did not have to rely on the existing section 8 rents for their housing stock.

Now, the Administration has a stated policy of opposing section 8 project-based assistance in favor of vouchers. Nevertheless, many of these projects are home to the elderly, or a scarce housing resource in an area in which there is little available, low-income, affordable housing.

It is just not acceptable to say we will give you a voucher. This often means that low-income families will not be able to afford the housing in their community, or there is no available housing in their community, or elderly people will need to venture out with their walkers, or, even more troubling, in their wheelchairs, to look for housing where none may exist. We, in Congress, I believe, have been clear that we need to preserve low-income elderly housing as well as low-income family housing in areas with low-vacancy rates.

I think we owe it to the communities, we owe it to our low-income families, we owe it to our elderly, and we owe it to our disabled citizens. While I believe HUD has the authority and resources to address this problem, HUD must make the commitment now to save this housing.

PROCUREMENT AND CONTRACTING REFORMS

On the right side, however, Mr. Secretary, I do want to compliment you on HUD's substantial progress in reforming the procurement and contracting procedures as reported by the National Academy of Public Administration [NAPA]. This is an area where we can jointly take pride in a significant accomplishment.

This reform grew out of Congressional concerns over HUD contracting and procurement procedures as the Department downsized, and as you know, it was the House and Senate Appropriations Committees that initially asked GAO and the HUD Inspector General to review and audit HUD's procedures for contracting, and then subsequently funded NAPA to complete the review and work with HUD on procurement reform.

Therefore, I am very pleased that HUD has taken our procurement concerns seriously and worked with NAPA to achieve what appears to be solid results. I congratulate you and the people of HUD on this significant step forward.

I hope HUD will continue to follow through on additional NAPA recommendations. HUD's implementation of NAPA's contracting and procurement recommendations are still only beginning steps in the context of HUD's larger problems, but I do believe these reforms are needed.

I am hopeful that HUD's efforts and procurement reform represent a larger commitment to a more comprehensive overhaul of how HUD does its business.

AUDIT FINDINGS

Also, I congratulate you on the first clean audit that HUD has received, but there is much work to be done. I remain disappointed that HUD again was designated in 1999 as a high-risk area by GAO, as it was in 1995 and 1997, the only agency ever designated as high risk on an agency-wide basis.

Further, the bad news is that the most recent audit of HUD's financial statements revealed 6 material weaknesses and 11 reportable conditions. This is one more material weakness and one more reportable condition than identified in last year's audit.

That is unacceptable, it undermines the confidence of the American people in the ability of the Federal Government to make a meaningful contribution to housing and community development policy.

Mr. Secretary, I know you are working hard to address HUD's problems; nevertheless, as long as the Department remains high risk I do not want to hear how you saved the Department from being dismantled. Frankly, this claim reminds me of claims about how certain financial institutions were too big to fail during the savings and loan fiasco. In HUD's case it may be both, too big to fail as well as too complex to be devolved. Nevertheless, as we move forward, I will be directing my staff to look at ways to enhance how HUD does its business, including the possibility of spinning off FHA as a separate institution, as a separate corporation, or as a government-sponsored enterprise.

HUD 2020 MANAGEMENT REFORM PLAN

I also continue to have concerns regarding a number of HUD program and management issues. In the first place, I remain concerned over HUD's implementation of the HUD 20-20 management reform plan, which is designed to rebuild the public trust in the Department through management and program reform in conjunction with the downsizing of the Department from 13,000 staff in 1992 to 9,300 currently.

We have discussed the need to maintain adequate staffing to ensure there is quality delivery of HUD program services, and I know you share my concerns that the success of each program must remain the primary goal of the Department.

Nevertheless, I am not convinced that the Department has achieved this goal. I have heard concerns about HUD's ability on processing applications and providing consistent program information to prospective clients. Where that is not done on a timely basis, as we have discussed, unreasonable delays can cost money and deals can collapse. While a number of these concerns are anecdotal, they are very real.

I am also concerned with the Community Builders program, which I initially understood to be a limited program to encourage a new generation of young professionals to invest their time and energy in housing and community development issues at the local level while helping to facilitate local decisionmaking on local housing and community development issues.

Instead I hear the program has ballooned to staffing of some 600 to 800 Community Builders out of a total HUD staff of 9,300 persons, or some 8 percent of all HUD staff. Moreover, I have heard reports that there is confusion over the role and authority of Community Builders in decision making as well as significant questions as to their qualifications and knowledge of HUD programs. This could really be a big problem if HUD's other staff are undermined while performing their jobs.

In addition, HUD's budget includes, according to GAO, some 19 new programs and initiatives, with funding of some \$731 million. As we have discussed, HUD needs to focus its efforts on its core programs rather than redirecting HUD staffing and expertise to new boutique programs and activities, especially since many of these programs and activities can be achieved at the discretion of state and localities under the existing authority of programs such as CDBG and HOME.

Because of recent downsizing and restructuring, HUD is vulnerable to poor management decisions, structural weaknesses, and deficiencies in its primary housing and community development programs. An overload of new activities and programs could substantially weaken the Department.

Thus, I believe we have to continue to consolidate HUD programs and activities to ensure that HUD's primary core programs, such as public housing, section 8, CDBG, HOME, homeless assistance, FHA mortgage insurance, and the disabled and elderly programs meet the needs of our citizens, especially those who are low and very low income.

I do not need to remind you that HUD, as a high risk area, is considered vulnerable to fraud, waste, abuse, and mismanagement, and the GAO, the HUD Inspector General, and the National Academy of Public Administrators have at various times identified substantial concerns with HUD's ability to administer its programs and meet its statutory requirements.

Moreover, many of these concerns still must be resolved, as we have discussed in the past, as a matter of fiscal responsibility. HUD is one of the nation's largest financial institutions, with sizeable commitments and obligations, managing more than \$400 billion worth of insured mortgages, \$485 billion in outstanding mortgage-backed securities, and \$180 billion in prior year's budget authority.

GAO REVIEWS

Now, the GAO and HUD IG were responsible for identifying the need for procurement reform; therefore, it was of great concern when it was reported to me that HUD has refused to allow GAO to review HUD programs, collect data, and talk to staff. I think that is unacceptable.

GAO is the eyes and the ears of Congress, and our ability to develop a meaningful HUD budget depends on GAO's ability to keep us fully informed on HUD programs and funding issues. I expect the Department to open its doors to GAO immediately, to extend to GAO every courtesy needed for its program and budget reviews.

To be blunt, Mr. Secretary, we have a mutual interest in making sure that HUD's housing and community development programs both work well and are financially responsible, and can only do this with your cooperation and with the cooperation of our agency and the GAO.

STATE/LOCAL DECISION-MAKING

Finally, I emphasize the continued need for the Department to redirect the responsibility of HUD programs and activities from the Federal Government to state and local decision-making. It is critical, because HUD does not have the staff, the expertise, or the resources to manage on a micromangement basis every program.

The success of housing and community development programs and initiatives reside at the state and local level, where other state, local, private, and non-profit resources can be leveraged to expand the availability of affordable housing and to create new economic initiatives. Most importantly, state and local housing and community development needs are best addressed through state and local decision-making.

We look forward to hearing your comments, but Mr. Secretary, first let me turn to the Members who are with me now. I turn first to Senator Leahy.

STATEMENT OF PATRICK LEAHY

Senator LEAHY. Thank you, Mr. Chairman.

The Chairman and I have been friends for many, many years and agree on far more things than we disagree on, but I would note that I see that the glass is more full than empty in this.

Mr. Secretary, I am delighted to have you here before us, and I too have some of the NATO and Kosovo things going on and will have to leave after this, but will leave questions for the record.

When you appeared before this committee as Secretary, I offered you congratulations and condolences at the same time, and you have told me on different occasions you were not quite sure which was more in keeping, but I felt then as I do now that you have brought more personal experience and more commitment to the Federal Homeless Assistance Programs than so many of your predecessors.

I also knew you were taking over the helm of a very large ship, sort of a super tanker, and everybody knew the ship was taking on water long before you were put at the helm from years of mis-handling and needed to be turned around. Big ships do not make tight turns. No matter how much you turn the wheel to change course it might not be enough.

I knew you had the experience, I knew you had the ideas to take charge and implement the reform plan for the agency, I knew it takes some time for the tanker to follow your lead.

You have put together what I believe is another strong budget for fiscal year 2000. I appreciate your efforts to address the affordable housing crisis by requesting 100,000 new vouchers for rental assistance. I am encouraged to see your continued commitment to the Home and CDBG programs. I believe they are two of the most effective programs available for financing housing and economic initiatives at the local level.

I also want to commend you for conducting the first ever physical inspection of all federally subsidized properties. That is over 4.5 million properties. It is about time that we took stock of our investment in affordable housing, it should have been done long before you came, and I commend you for taking the initiative when others said not to do that. That demonstrates that HUD does care. I hope this will promote a new attitude about Federal housing programs.

The Real Estate Assessment Center that you established demonstrates a fresh long-term commitment to the Federal investment in housing. Gone will be the days when projects were built and then just forgotten. I believe what you are doing is making sure the housing units remain affordable, but also remain liveable, two things that do not always occur together.

So many Secretaries before you touted how many thousands of units of housing are all over the country. You are probably going to be the first Secretary to say that you know the condition of those units, who are the good and bad landlords, and what repairs and enforcement are required, and that is very, very good. To paraphrase a person who lived many years in Vermont, Robert Frost, you have miles to go before you sleep.

We talked about the GAO watch list. HUD was on that watch list for several years before you became Secretary. It remains there, but I am encouraged by the steps you have taken to address the problems raised by GAO, and I think we should note that 2 days ago, the National Academy of Public Administration released a report that actually commended HUD for making substantial progress in the area of procurement reform, something that should be welcome news, but also reflects improvements made.

I have seen your personal commitment and knowledge of these programs on occasions when you have been in Vermont, and to a little state like ours, taking the time when you come there, you have given great, great encouragement to people who have not had much to encourage them before in life.

Even this past week, when I was there, I ran into a couple of people in downtown Burlington who told me how much their life had been affected by your words, your presence, and your programs there in Vermont.

A lot of work lies ahead for you and your staff, and I wanted to thank you for those efforts of yours and your leadership. There will be bumps in the road in the future, anybody coming to HUD knows that will happen. I am confident you are doing your best to ensure that HUD will turn the corner and enter the 21st Century in far better condition than it was in the past.

Mr. Chairman, as always, I will work with you on these programs, because I know you are very concerned about them. I will have questions for the record, and I apologize for having to leave.

Senator BOND. Thank you very much for being with us, Senator Leahy. We will add your questions, and as always we will keep the record open for both statements and questions by all members of the committee.

And, Mr. Secretary, we hope that you will take those into account and respond promptly to them.

Let me turn to Senator Craig.

STATEMENT OF SENATOR LARRY CRAIG

Senator CRAIG. Mr. Chairman, thank you very much. I will be brief. I came in late.

Mr. Secretary, welcome.

As we all know, in 1988 Congress passed and President Reagan signed into law amendments to the Fair Housing Act that included disability and family status. Now, these Fair Housing laws are important. We all recognize that, and I do not dispute the value of the Fair Housing Act to prevent housing discrimination. This is never a valid reason for discrimination against anyone.

When Congress passed the laws the intent was to increase the inventory of accessible housing for disabled citizens. I still support and believe in that goal, so I want to congratulate you this morning Mr. Secretary for HUD's recent decision to uphold those goals. I think that is extremely valuable.

I decided to rescind proposed rules that would have prevented the public housing authorities from receiving Federal funds. The funding was to have been cut off because of the unsubstantiated claims against the agencies. I am glad that you realized that this would be an extremely punitive measure that would have harmed local low-income communities, while at the same time penalizing the agencies without proof of wrongdoing.

So there are questions to be asked this morning, there are other concerns, but I did want to recognize that, Mr. Secretary, and thank you for that.

Mr. Chairman, I would ask that the bulk of my statement be made a part of the record—

Senator BOND. Without objection.

Senator CRAIG [continuing]. So we can turn to other colleagues and get to the questions. Thank you.

Senator BOND. Thank you very much.

Senator Lautenberg.

STATEMENT OF SENATOR FRANK LAUTENBERG

Senator LAUTENBERG. Thank you, Mr. Chairman. I first commend you for trying to stretch the inadequate resources that you have, but we do face a crisis in housing for the needy and for the poor in the years ahead.

Unfortunately, I can only stay here briefly, because of a conflict with a budget committee hearing, but I do want to speak for just a couple of minutes on two important subjects.

First, I want to thank Secretary Cuomo for taking on such a difficult task and doing it as well as you have. Bringing HUD's management and finances into the 21st Century is a job that many people have shied away from, but I am pleased that Secretary Cuomo had the courage to tackle HUD's problems, and I want to commend him and his staff for their hard work and congratulate him on the progress made so far.

Second, I want to take a couple of minutes to express my concern about the funding levels available in the fiscal year 2000 appropriations for critical programs like affordable housing and community development. The budget resolution that just passed would mandate an 11 percent budget cut for most discretionary programs in the year 2000, and that is what happens when you are pledged to budget caps while defense funding is increased and protecting some other programs, while other critical programs take unacceptable hits.

These budget cuts will get worse in ensuing years and require close to a 30 percent cut, 30 percent, in programs by the year 2004. I believe that budget cuts of this size are extreme, unsustainable, and crippling, and that is why I so strongly oppose the year 2000 budget resolution.

The Senate version of the majority's budget resolution recommended the elimination of the community development block grant program. The numbers in the conference report appear to confirm the elimination of CDBG as well, and that would be a devastating blow particularly to our cities.

We already have 2 million low-income Americans on waiting lists for housing assistance and over 5 million low-income Americans pay more than half of their income in rent or live in substandard housing. This problem will just get worse if we cannot fund HUD programs at the level requested by the President.

Our cities are struggling to survive while traffic congestion and gridlock increasingly eat away at the quality of life in our suburbs. We cannot just leave these cities and forget about them. We have to face these tough economic and social problems head on.

The budget does not help with these problems. It hurts them, and we do not provide the resources to save our cities; instead we give enormous and I think unneeded tax cuts to the wealthiest Americans.

The budget resolution does not give us much detail about where these massive budget cuts are going to come from. We will learn

the answers to this question during the appropriations process over the next few months, and I hope that we will not damage our cities and cut programs which benefit working Americans to satisfy our desire to give tax breaks.

I know the Chairman and the ranking member of the subcommittee care deeply about these programs. It has been evident with their hard work in the past. They will do their best under the difficult circumstances we face this year, and I look forward to working with Chairman Bond, Senator Mikulski, and my other colleagues to find the resources necessary to continue to fund the key programs within this subcommittee.

I thank you, Mr. Chairman.

Senator BOND. Thank you very much, Senator Lautenberg.

Now, Mr. Secretary, we will give you an opportunity to have your say.

STATEMENT OF ANDREW CUOMO

Secretary CUOMO. Thank you very much, Mr. Chairman, and thank you for having us here today.

With the Chairman's permission let me quickly introduce the HUD team who is here. We have the full team here, Mr. Chairman, so we could answer any questions that the committee might have. Let me also send my regards to Senator Lautenberg before he leaves, and Senator Leahy, and Senator Craig, good to see you, sir.

INTRODUCTION OF HUD STAFF

With me at the table, Mr. Chairman, to my right is Dave Gibbons, who is the acting Chief Financial Officer of the Department. To my left is Saul Ramirez, Deputy Secretary of the Department, and Bill Apgar, who is the FHA Commissioner.

With us is—and I would ask them to stand as I call their name—Gail Laster, who is the General Counsel of the Department; Jacquie Lawing, who is the Deputy Chief of Staff for Policy Programs; Rhoda Glickman, who is Deputy Chief of Staff; Hal DeCell, Assistant Secretary for Congressional Affairs; Cardell Cooper, Assistant Secretary Community Planning and Development; Harold Lucas, Assistant Secretary Public Housing; Jackie Johnson, Deputy Assistant Secretary for Native American Programs, the first Native American to ever hold that position; Ira Peppercorn, of OMHAR, Director of OMHAR; George Anderson, who is the Acting President of Ginnie Mae; Xavier Briggs, who is the Deputy Assistant Secretary Policy Development and Research; Eva Plaza who is the Assistant Secretary for Fair Housing; Susan Gaffney, who is the Inspector General; Edward Kraus, who is the Director of Enforcement Center; D.J. LaVoy, who is the Director of the Real Estate Assessment Center; Joseph Smith, Acting Assistant Secretary for Administration; Dave Jacobs, Director of the Office of Lead-Hazard Control; and Mark Kinsey, who is the head of OFHEO.

Senator BOND. We welcome all of our friends from HUD. How many people from HUD were not introduced, if you would hold up your hands? Is there anybody else?

Okay. We are delighted to welcome all of you, and thank you for coming.

Secretary CUOMO. Mr. Chairman, I am very excited by the possibilities for this year, because we believe that we can build on the progress and success of last year. Last year was a great year for the Department of Housing and Urban Development. It was the best budget we have had in a decade.

We actually passed a public housing reform bill, which showed the ability to proceed and put one foot in front of the other, which had not happened for some time. We got past the politics, we got past the stereotypes, and we actually got something done. With that as precedent, we hope to go forward this year.

Senator Leahy mentioned the glass full, glass empty analogy, and whether I should get congratulations or condolences for my position, and I take that with a grain of salt, obviously. At HUD, there is no doubt that we have very real challenges, as do most Federal departments, and there is no doubt that HUD has its share of critics for various reasons. Some people just do not want to see HUD doing what HUD is meant to do, and I do not think they will ever be satisfied, but there are also issues that HUD has to address, but I take heart, Mr. Chairman, in your opening statement.

I do not recall another opening statement that you have made that had a flip side, that had a right side, and was actually congratulating the Department for the good things that we have done.

Senator BOND. I have been waiting a long time to get that opportunity, Mr. Secretary. I am delighted we got there.

Secretary CUOMO. Well, I am glad we finally got there, Mr. Chairman, and I knew it would happen, and we got there together, and we want to build on that positivism, and I also point to the NAPA procurement and the clean audit as indicators of the overall success and progress we have made.

NEED FOR AFFORDABLE HOUSING

There are two basic points I would like to address quickly, and then we will get on with your questions, Mr. Chairman. For me, the bottom line of this hearing, and the Department, and this budget is, is there a need that we need to address in this Nation, and can HUD address that need? As you pointed out quite accurately, there is a very great need when it comes to housing in this Nation.

Actually, the cruel irony is, the need for affordable housing is at its highest point in history as we sit here this morning. It is almost counter-intuitive, the economy is so good, all the news is good, you almost have to take a break, at least I did, to understand that the need for affordable housing is at its highest point in history, \$5.3 million.

Actually, the strong economy is one of the reasons. The economy is so strong it is driving up the rents. Those who are on fixed income cannot reach the higher rents. One of the other reasons why we have such a need for affordable housing is we went out of the affordable housing business when we went to zero funding for section 8 vouchers.

I believe we are now paying for that hiatus, because when we stopped producing, we built up a backlog, and the backlog is now cresting, and as the Chairman pointed out, we have an impending crisis on the op-outs, the buildings that are now reaching the expi-

ration of the contract, the landlord has no further legal obligation to us, and the landlord can say, "I am taking my building and going to the private market."

You put those three factors together, strongest economy, the hiatus on the production of affordable housing, no new section 8 vouchers, opt-outs, and you have a housing crisis in this Nation.

SECTION 8 RENEWALS

I hear you, Mr. Chairman, when you say you are committed to renewing the vouchers and renewing public housing, and that you do not want to let someone in the back door only to have someone leave by the front door.

My point would be, Mr. Chairman, and I think the point of departure is, I believe we have to do both. We have to renew all the existing, but we also have to have more production. The waiting lists in this country are going crazy, literally.

The waiting time for public housing authorities has gone from 2 years to 3 years on the largest public housing authorities just in the past couple of years. The waiting time for section 8 has gone up to three-and-a-half years from 2 years. So this pent-up demand is having a real impact on real Americans.

Senator Mikulski's hometown city of Baltimore, the waiting time for public housing is up to 3 years. The waiting time for section 8 is up to 2 years. Kansas City, the same thing, waiting times for public housing is up to 3 years. For section 8, it is up to 7 years that people will wait for a section 8 certificate.

This is true all across the country. So I do not think we have a choice of continuing renewing or 100,000 new, I think we have to do both, and Mr. Chairman, I understand the constraints of the overall budget, but I think when it comes to this field, we just do not have that choice.

By the way, Mr. Chairman, 100,000 new vouchers is a drop in the bucket on the need, and all that does, in my opinion, is keep some of the pressure off the system, but if we go to zero vouchers again, we will increase the demand, increase the backlog, and make a bad situation worse.

We also have a need for economic development. One out of five cities has an unemployment rate which is higher than 50 percent of the national average. One out of five cities is shrinking and losing population since 1980. Cities all across the nation, especially medium-size cities, are crying out for help to keep jobs and keep their economic base, and they are looking for HUD to do that. So the need, Mr. Chairman, is undeniable.

MANAGEMENT REFORMS

The second question becomes: Can HUD meet the need? Is HUD part of the solution? While I have told the Chairman that I would not suggest by any stretch of the imagination that HUD has done all it needs to do in management. I would also say, Mr. Chairman, that we have made significant progress and we are part of the solution as opposed to part of the problem, and the chorus of objective, unbiased validators of that success is growing and growing.

Booze-Allen will attest to it. Price Waterhouse will attest to it. David Osbourne, the so-called "guru" of reinvention, will attest to it.

GAO kept us on the high-risk list, which is curious, Mr. Chairman. The House has asked the GAO for their definition of high risk that is a quantifiable formula. How do you determine high risk that cites HUD, but not Defense, not HHS? What quantifiable formula did they use? They have yet to produce the formula. They did say that whatever it is, we could not get off the list in 2 years, which is also peculiar to me. They said it was virtually impossible to have gotten off the high-risk list in 2 years.

Before we understand that significance of the term, I would like to know the definition of it, and I am waiting for that report, but GAO also went on to say, and I quote, "HUD is making significant changes and has made credible progress." That is from GAO.

NAPA, as you pointed out, said that the procurement process, which was long pointed to by critics of the Department as an Achilles heel, is significantly reformed, and we had the clean audit for the first time's in the Department's history, Mr. Chairman, and if I am not wrong, less than half of the Federal departments actually get a clean audit. So that is a real significant improvement.

I see the light. If I could have the Chairman's indulgence for just 2 more minutes.

Before we get caught up in the details of the HUD budget, and at HUD sometimes I believe the details become deceptive and we tend to lose the forest for the trees, not only has HUD's progress been organizational, as attested to by objective sources, but we have made real progress on the ground.

ACCOMPLISHMENTS AT HUD

The bottom line is this, Mr. Chairman, when you want to know what HUD has done, FHA last year did one million mortgages, which was close to a record, and returned \$1.5 billion to the treasury, more money than ever before. FHA is making money. FHA is making loans. FHA is making progress.

In fair housing, we are working to double the number of enforcement actions. We have brought an energy to fair housing that has resonated across the Nation.

In community planning and development, Mr. Chairman, your interest in economic development, we have done \$3.5 billion in economic development loans, and listen to this, not a single dollar taken from Uncle Sam's pocket for any default, \$3.5 billion and not a dollar taken from Uncle Sam's pocket for any default, about a 7 percent default rate, creating about 300,000 jobs.

In public housing, we've created first rating system ever. By the end of this year, we will have inspected all of HUD's properties for the first time, Mr. Chairman. We have a system where if public housing is not going to work, we can actually do something about it. So not only are we making great organizational changes, but they are having a real impact.

NEW INITIATIVES

In our budget this year, we have minimized the number of new initiatives. We can argue whether there are three, as we suggest.

GAO has a different way of counting; they count 19. But in my opinion, they require a minimum amount of manpower and time, and they are necessitated by the needs of the client, because if we are not doing what Kansas City says they need from us or Baltimore says they need from us, then we are not doing our job, and these are the minimum to do that.

I agree with the Chairman, I want to focus on the poor programs; that is where our investments are. We focused on the senior housing, which is the message we got from you last year, and to the extent we have "new initiatives," they focus on the economic development side primarily, with the President's plan for APIC, and a regional approach, which I believe are the bare minimum that we need to be responsive to the clientele.

In sum, Mr. Chairman, the Department has made progress. There is a different attitude and atmosphere about HUD. The Community Builders, which are only about 380 new employees on a work force of about 9,000; 380 were directly responsive to what I have heard from this committee, and everyone who I have talked to where they said get us some people at HUD who we can talk to.

We have a new attitude about waste, fraud, and abuse, because when the FBI came to HUD, with all due respect to all the other agencies that worked for all those years after scandals were going on, when the FBI teamed up with HUD, people understood it was a different day at HUD.

I am looking forward to building on the progress, building on last year, meeting the needs, and going forward together.

Thank you, and I look forward to the discussions, Mr. Chairman. [The statement follows:]

PREPARED STATEMENT OF ANDREW CUOMO

Chairman Bond, Ranking Member Mikulski, Members of the Subcommittee. Thank you for inviting me here today to discuss HUD's fiscal year 2000 Budget. If it pleases the Committee, I would like to enter my testimony for the record.

Mr. Chairman, last year when I presented HUD's budget to you, I told you that it represented the second step in a process that we had initiated to restore HUD's ability to fulfill our mission of empowering communities across America. Step One was to restore competence through reform, reinvention and renewal. Step Two was to expand opportunity, by creating jobs and new housing opportunities for low- and moderate income families.

Since then, working together with this Committee, we have made a great deal of progress in both of these areas. The fiscal year 2000 budget continues our efforts to restore the public's trust in this Department, and to open new doors of opportunity for people who are not yet benefiting from the current wave of national prosperity. I am convinced that HUD has the most important mission of any agency in the federal government—empowering communities to aid those most in need, to assist those who do not yet enjoy the full fruits of what this great country has to offer.

This year, HUD's budget request is \$28 billion. That represents a \$2.5 billion increase over the fiscal year 1999 level. It offers opportunity and security for millions of Americans. It builds on the strong foundation that we have built at the Department over the past two years—both on the budget side and the management side.

This budget builds on last year's strong bipartisan budget. Last year was truly a milestone for HUD: the first incremental vouchers in five years, expanded FHA loan limits, increases in virtually every major HUD program, and a historic public housing bill.

We could not have passed that budget without this Committee's support and commitment, Mr. Chairman. You were instrumental in making this happen, and we look forward to continued cooperation this year.

As both the last budget of this century and the first budget of the next century, this is an important budget for our nation's cities and rural communities. It rep-

resents a renewed vote of confidence by the President that HUD is on the right track, and that HUD is better positioned than ever to help communities take on the new challenges of the 21st century.

THE FOUNDATION—MANAGEMENT REFORM

Mr. Chairman, a budget is about more than dollars and cents. It's about the agency's ability to manage its funds. And on that front HUD has made extraordinary progress.

This budget is a direct result of the management reforms we have put in place over the past two years—restoring competence at HUD. As a result of Management 2020, begun two years ago, HUD is in a stronger position than ever to manage and implement this budget.

While the job is not yet done, HUD is increasingly recognized as a new model for government in the 21st century: a government that does more with less, a government that empowers communities through less regulation, fewer mandates, and better customer service.

We have now hired and trained our first two classes of more than 400 Community Builders. That means that our Public Trust Officers are now freed up to focus on ensuring that HUD funds are used effectively and in compliance with federal laws and regulations.

Some 335 properties have been referred to our new, independent Enforcement Center, under Ed Kraus, who came to us from the FBI. We have five satellite Enforcement Center offices that are now open and fully operational.

The new Real Estate Assessment Center, run by D.J. Lavoy, has completed over 13,500 inspections, averaging 150 a day. We're on track towards meeting our goal of inspecting all 45,000 apartment complexes in HUD's inventory by the end of the year 2000.

Through our Super Notice of Funds Availability (SuperNOFA), we have consolidated 40 separate competitive grant applications into one application—two months ahead of schedule. This is a first in HUD's history.

We have opened the first two HUD storefront offices—here in Washington and in Albuquerque, New Mexico—with another nine storefronts slated to open this fiscal year. The most visible evidence of management reform, the storefronts are easily accessible consumer-friendly service centers in downtown business districts, where people can walk in to get information about HUD programs and activities.

We opened HUD's new Section 8 Financial Management Center in Kansas City. The new Center consolidates the management of the Department's largest program—Section 8 rental assistance program. Previously, this function had been dispersed among dozens of field offices.

There is clearly more work to do. It will take time to fully implement all of our reforms, to turn around all of the problems that built up over time. But there is growing, independent evidence that these management reforms are making a difference.

Even the recent (January, 1999) General Accounting Office Report supports the work we are doing to reform the Department. While we were of course disappointed by GAO's continued finding of high risk, the GAO found that "HUD is making significant changes and has made credible progress since 1997 in laying the framework for improving the way the Department is managed. HUD's Secretary and leadership team have given top priority to addressing the Department's management deficiencies."

That is a vote of confidence in our efforts to reform HUD. Even more of an endorsement is the clean, or unqualified, audit that we just received from HUD's Office of the Inspector General—the first in HUD's history. The Inspector General stated that "the unqualified opinion represents a considerable achievement for HUD, and it further reflects continuing improvements in HUD's commitment and ability to properly account for funds entrusted to the department."

Since audited financial statements were first required by the 1990 Chief Financial Officers Act, HUD had received no opinion or, more recently, only qualified opinions. While we still have work to do, this new opinion is a validation of the work that has been done so far.

Another important measure of progress is our Y2K preparedness. In January, the House Committee on Government Oversight and Reform gave HUD an A-minus on this front—ahead of 18 other Federal agencies. I am also encouraged by this week's new report from the National Academy for Public Administration that concluded that HUD has substantially improved its contracting and procurement operations. And just yesterday we announced the results of the first comprehensive physical inspections of public housing around the nation.

Management 2020 is on track. A December, 1998 report from Price Waterhouse Coopers LLC found that “implementation of the Community builders, Enforcement Center, Procurement reform, Real Estate Assessment Center, Storefronts and Troubled Agency Recovery Center is well under way. Each project met all or substantially all of the critical milestones that HUD established for completion as of September 1.”

OUR PROGRAMS ARE ACHIEVING TANGIBLE RESULTS

HUD’s management reforms are being translated into real, tangible benefits for the American people. Look at some of the results we’re achieving in some of our key programs:

CDBG.—Each year, Community Development Block Grant funds go to 847 cities, 137 counties and another 3,000 small cities and counties. An Urban Institute Study found that CDBG is one of the largest sources of non-tax Federal assistance for the construction or rehabilitation of privately owned housing. The largest single use of CDBG money (30 percent) is housing rehabilitation, leveraging \$2.31 for every CDBG dollar. In our latest Report to Congress, we reported that for the three-year period 1994–1996, 641,000 housing units were developed or rehabilitated through CDBG.

During the same period three-year, CDBG economic development funds created approximately 445,000 jobs. We have also boosted the economic development impact of CDBG through the Section 108 Loan guarantee program—with some \$3.5 billion in commitments to 652 projects over the past six years, creating thousands of additional jobs. Most CDBG economic development goes to small businesses—more than half of all businesses assisted employ five or fewer persons. And jobs created with CDBG assistance meet basic tests of job quality: 89 percent of the jobs remain after four years; 96 percent are full-time jobs; 90 percent pay more than the minimum wage. And 32 percent are held by local residents.

HOPE VI.—HOPE VI is the most visible of our efforts to transform public housing, replacing obsolete high rises or outdated projects with new, livable communities. Over the seven-year history of the HOPE VI program, we have distributed a total of \$3.1 billion—\$540 million each year—for 104 projects in 28 states plus the District of Columbia and Puerto Rico. These funds have leveraged \$3.4 billion in additional funds.

But more than the overall numbers, we are making more effective use of these funds. In 1993, the average cost per unit was \$94,345. That dropped in 1998 to only \$74,700 per unit. The number of non-HOPE VI dollars leveraged has increased—from only 32 cents for every HOPE VI dollar in 1993 to \$2.28 per HOPE VI dollar in 1998.

Brownfields.—One of our newer initiatives, our Brownfields Redevelopment Initiative, is beginning to have an extraordinary impact in cities by returning contaminated land to good use. Last year we committed just \$25 million in direct grants to 23 communities. In addition to leveraging \$141 million in guaranteed loans, this initial outlay will generate another \$811 million in additional investments, creating an estimated 9,500 jobs.

Elderly housing.—We are proud of the track record of our elderly housing programs. Over the past two years our Section 202 program has funded 320 projects, for approximately \$900 million—creating some 12,500 new elderly housing units. Overall, the program has about 7,600 projects and serves 350,000 people. Also, over the past two years, through our Section 232 mortgage insurance program we have insured 334 nursing homes or assisted living facilities for \$2.4 billion. Another 440,000 elderly people live in public housing, approximately 400,000 receive housing vouchers or certificates, and another 100,000 elderly live in project-based Section 8 facilities.

Mr. Chairman, with these kinds of initiatives already in place and our management reforms underway, we are better positioned than ever to take on the new challenges of the 21st century—challenges addressed by this budget.

FISCAL YEAR 2000 BUDGET ADDRESSES FIVE MAJOR CHALLENGES

HUD’s fiscal year 2000 budget addresses five major challenges facing America: (1) ensuring that our communities remain economically competitive in the new global economy; (2) tackling the continuing crisis of affordable housing; (3) moving closer to One America; (4) finding regional solutions and creating sustainable communities; and (5) a addressing the aging of America.

COMPETING IN THE NEW GLOBAL ECONOMY

HUD's economic development mission has become more important than ever in the rapidly-changing global economy. By any measure, the nation is doing well. The numbers are compelling: eighteen million new jobs, the lowest peacetime unemployment in more than 40 years, a stock market that is off-the charts, the lowest inflation since the 1950s.

But the rising tide of opportunity has not yet lifted all communities. There are still too many places—in both our inner cities and rural areas—where jobs are scarce and poverty persists at levels well above the national average.

The good news is that, as the President said in the State of the Union Address: “Our greatest untapped markets are not overseas—they are right here at home. And we should go after them.”

Several HUD programs will help communities tap these markets, and, at the same time, help spread our prosperity to all corners of our nation. The goal of these programs is to ensure economic competitiveness of all communities by uncovering new markets, ensuring strong regional economies, tapping new sources of private capital, helping businesses grow and prosper in underserved communities, and expanding our effort to move people from welfare to work.

CDBG

CDBG is the most flexible federal aid to both cities and smaller rural communities. Contributing to vital community infrastructure, housing, and economic development, this year's request for the CDBG program is up \$25 million to \$4.775 billion. And formula funding that goes directly to entitlement communities and states will increase by \$130 million over 1999 enacted levels.

Community Empowerment Fund

Our proposed Community Empowerment Fund will boost capital for business investment and job creation in underserved inner city and rural areas. The CEF combines and streamlines two existing HUD programs: our existing Economic Development Initiative (EDI) grants program and with Section 108 guaranteed loans. We are requesting \$125 million in competitive EDI grants, which will leverage an estimated \$625 million in guaranteed private loans and support an estimated 100,000 new jobs. Overall, our budget seeks \$1.3 billion in loan guarantee authority under Section 108 of the Housing and Community Development Act.

We have established two priorities this year for these grants: Welfare-to-Work job creation and City-Suburb Business Connections that help central city firms tap into regional economies. Under a pilot to be launched later this year, we will also use the CEF to nurture a badly-needed secondary market for economic development loans.

America's Private Investment Companies (APICs)

The President has proposed a comprehensive New Markets initiative to bring business investment to underserved inner city and rural communities. HUD is requesting \$37 million to subsidize and secure \$1 billion in privately issued, federally-guaranteed loans, along with \$500 million in private equity commitments, to create for-profit venture capital funds known as America's Private Investment Companies (APICs). APICs will make much-needed private equity capital available to larger businesses that are expanding, or relocating, or joint venturing in inner cities and rural areas. APICs will be jointly administered jointly administered by HUD and the Small Business Administration.

Empowerment Zones

Empowerment Zones and Enterprise Communities have successfully combined tax credits with federal grants and loans, along with local resources to attract billions in private sector investment. Our fiscal year 2000 budget requests \$150 million for Empowerment Zones—\$105 million that will go to 15 recently-selected Round II urban Empowerment Zones, and another \$45 million for Strategic Planning Communities that placed 16th through 30th in the Round II competition. Our budget also requests funds for three related programs: to support additional, non-designated communities, to establish technical assistance partnerships, and to emphasize regional strategies that tie the zones to their regional economies and employ urban youth.

Youthbuild

Finally, we are requesting an increase in the highly successful Youthbuild program. In 1999, Youthbuild will serve between 5,000 and 6,000 disadvantaged youth,

who will—literally—will help rebuild their communities as they learn vital job skills. We are requesting an increase from \$43 million to \$75 million.

THE CONTINUING CRISIS OF AFFORDABLE HOUSING

At the core of HUD's mission is the charge to provide housing that is decent, safe and, affordable to all. Despite the longest peacetime economic expansion in the Nation's history, rents have soared in many regions with strong economies. In fact, an all-time high of 5.3 million households—12.5 million people—face the high rent burden known as "worst case" housing need. And worst case needs have grown especially fast among working families.

What's more, persistent gaps in homeownership remain for low- and moderate-income families and other under-served groups. With the nation's homeownership rate running at a record high of 66.3 percent, large gaps remain—cities lag behind suburbs, and underserved groups need increased access to mortgage credit. Special housing needs persist for homeless people, disabled people, and people living with HIV/AIDS. And as many as 600,000 individuals have no home at all on any given night.

To meet this challenge, our budget opens doors to affordable housing in three ways: First, by expanding affordable rental housing. Second, by expanding homeownership opportunities. And third, by meeting special housing needs.

Section 8 renewals and incremental vouchers

To expand rental housing, HUD is requesting \$10.6 billion in new budget authority to renew existing Section 8 contracts—covering 2.4 million rental units. We are also requesting 100,000 new vouchers to help address the tremendous need that remains.

A number of the proposed new vouchers have designated purposes: 25,000 will expand the pool of Welfare-to-Work vouchers; 18,000 will be for homeless persons, to ensure the availability of permanent housing solutions at the end of the Continuum of Care; and 15,000 will be targeted to extremely low-income elderly persons. Another 42,000 will be unencumbered and will be distributed to Public Housing Authorities to help the many families on the Section 8 waiting lists throughout the country.

Transforming Public Housing

We must continue our efforts to transform public housing. Last year the Congress enacted a historic public housing bill. This year, our budget requests a significant increase in public housing operating funds, from \$2.81 billion to \$3.0 billion. We are also proposing \$2.55 billion for the Capital Fund, a slight increase over last year's request. We are also requesting continued funding for HOPE VI, which allows communities to replace obsolete high rises with new, mixed-income, mixed-use livable communities and housing vouchers. We are also seeking continued funding for the Drug Elimination Grant Program (DEG) to reduce crime and restore safety in public housing.

HOME

The HOME program is a proven housing rehabilitation and production tool in both urban and rural America. We are requesting \$1.61 billion, a small increase over last year's level. This will provide more than 85,000 units of affordable housing for both owners and renters through a combination of new construction, rehabilitation, acquisition and tenant based-assistance.

Homeownership

We must redouble our efforts to expand homeownership. This year's State of the Cities report this year again identified homeownership gaps between whites and other groups—African-Americans, Hispanics and other minorities—as well as between cities and suburbs. As a result of the FHA loan limit increase approved last year by Congress, we are projecting expanded demand for FHA and therefore are requesting a \$10 billion boost in the FHA loan volume cap, and a \$50 billion increase in the Ginnie Mae guarantee limitation. Additional proposals to boost homeownership include continued funding for Housing Counseling and another round of Homeownership Zones.

Native American assistance

Native American housing needs will be served through the Indian Housing Block Grant Program, and the Indian Housing Loan Program. And, per Congress direction in last year's budget, we propose to address rural housing needs through the Rural Housing and Economic Development program. There we will focus on innovations that complement USDA's important work in rural housing.

Homelessness and Special Needs

Reducing homelessness is one of this Department's top priorities. In 1993, HUD initiated the Continuum of Care to provide a coordinated community approach to homeless assistance, with the goal of moving homeless persons from homelessness into jobs and permanent housing.

The Continuum of Care is working, leveraging many times the investment of Federal resources. For fiscal year 2000, we propose an increase of \$150 million, to \$1.12 billion. This increase, plus 18,000 new rental vouchers to create permanent housing solutions, will address the housing needs of the most vulnerable Americans—those making a transition from the streets back into homes and community life.

HUD is also proposing an increase of \$15 million in the Housing Opportunities for People with Aids program (HOPWA), to \$240 million. This increase is solely dictated by the increase in the number of cases and in the number of jurisdictions eligible for funding.

Elderly and the disabled

Our special needs programs also serve the elderly and disabled. We are proposing \$194 million for the Section 811 program serving persons with disabilities, matching last year's enacted level the same as last year. We also propose to increase the number of disabled persons served by increasing the portion of funds that may be used for vouchers from 25 percent to 50 percent. We are also proposing a total of \$747 million to fund programs that serve the nation's rapidly expanding growing elderly population. These elderly programs are discussed in more detail below.

Citizens Volunteer Housing Corps

We are also proposing a modest initiative—at \$5 million—to mobilize a corps of citizens through a new Citizens Volunteer Housing Corps to help reclaim and to rebuild abandoned and dilapidated housing in cities across the country. The Corps will tap into the spirit of civic pride and expand the stock of affordable housing, doing for existing housing what Habitat for Humanity and other groups now do in the arena of new home building.

MOVING CLOSER TO ONE AMERICA

For Despite the more than 30 years, of prohibition of discrimination in housing has been prohibited under law. Yet audits of discrimination in the rental and sales market show that an estimated over 2.5 million plus instances of discrimination still occur annually nationwide. Today's discrimination is often more subtle than it was in the past, but it is no less real and no less damaging to our social contract as a nation that values equality of opportunity for all. It might not always be overt as it has been in the past, but it is there. We will only reach "One America," in the President's words, when we all have equal housing opportunities.

Last year, President Clinton announced his commitment to doubling the number of fair housing enforcement actions by the year 2000. To help complete this effort, we propose to increase the Fair Housing Enforcement budget by 18 percent—to a total of \$47 million.

Our budget request provides for increased funding of both the Fair Housing Assistance Program (FHAP) and the Fair Housing Initiatives Program (FHIP). This request includes monies for innovative partnerships between public and nonprofit fair housing groups, as well as the second year of FHIP funding for a national audit of discrimination in housing rental and sales. This audit will create the first ever report card at both the national and local levels of the extent of discrimination against each of the Nation's major racial and ethnic groups.

REGIONAL SOLUTIONS AND SUSTAINABLE COMMUNITIES

Our communities face a number of threats to sustainable development, from uncontrolled growth to crime and drug abuse, from environmental hazards and a lack of energy efficiency in housing to blight and under-investment in vital community infrastructure. Many of these challenges call for cooperative regional solutions that span jurisdictional lines.

To address these challenges, the Administration has proposed a comprehensive Livable Communities initiative. This provides communities with new tools and resources to preserve green space, ease traffic congestion and pursue regional smart growth strategies.

Many HUD programs already support these goals. CDBG grants can be—and are being—used to support an array of activities to create safe and livable communities; HUD's Community 2020 mapping software allows communities to quickly match government resources with community needs, using state-of-the art geographic in-

formation system technology; and HOPE VI helps create sustainable, mixed used communities.

Regional Connections

In addition, we are proposing \$50 million in competitive Regional Connections grants as a key part of the Administration's livability initiative. These funds may be used by states, partnerships of local governments, businesses and civic groups to develop and pursue smarter growth strategies across traditional municipal lines. Without in any way mandating solutions or telling local communities what to choose, Regional Connections will define "smarter growth" to mean two things, broadly speaking: first, more compact development in new growth areas, and, second, coordinated reinvestment in already built-up and infrastructure-rich areas (usually cities and older suburbs). Smarter growth is not slow growth or no growth—but different growth, growth back in, growth in support of livable communities.

Brownfields

The Department is proposing to double the funding for the Brownfields Initiative to \$50 million in fiscal year 2000. This will accelerate the Administration's previous commitment to a four-year, \$100 million program.

Abandoned Buildings

Our Abandoned Buildings Initiative will turn "Brown Yards into Backyards" by addressing some of the primary sources of blight in our urban neighborhoods: abandoned apartment houses, single family homes, warehouses, and even office buildings. As part of the Administration's Better Quality of Life initiative, we are requesting \$50 million in competitive grants that will go to local governments to demolish blighted abandoned buildings as part of a comprehensive plan to redevelop properties for commercial or for residential use, while safeguarding historic buildings.

Lead Paint and PATH

We are also proposing continued funding for Lead-Based Paint Reduction and the Partnership for Advancing Technology in Housing (PATH), at the same levels as the fiscal year 1999 appropriation.

THE AGING OF AMERICA

The final challenge addressed by the HUD budget is the "Aging of America". Just as we are committed as a nation to saving Social Security, we must also ensure housing security for older Americans. HUD is proposing a total of \$747 million in fiscal year 2000—an increase of \$87 million—as well as changes in existing programs. These are aimed at both increasing the supply of housing for America's elderly, and improving the housing of those already receiving assistance.

We propose a comprehensive approach—a Continuum of Care—that will enable our seniors to both obtain decent housing and access the supportive services they need.

Healthy Homes for Seniors

This Continuum begins with helping seniors stay in their own homes. Elderly residents are often house-rich and cash-poor. To help them get the money they need to stay in their homes, HUD will expand and focus its Healthy Homes for Healthy Seniors Initiative on the needs of the elderly. Healthy Homes will allow seniors to convert the equity in their homes into rehabilitation and property improvement loans through HUD's reverse mortgage program.

Administrative changes

Because caring for our elders starts with the family, the Administration has proposed a \$1,000 long-term care tax credit to help families meet the costs of long-term care for their relatives. HUD will build on this proposal by allowing families who own apartments to rent them to family members under the Section 8 program while retaining appropriate safeguards against abuse.

Section 202

Finally, HUD will continue its commitment to the successful and popular Section 202 Housing for the Elderly program with \$660 million in fiscal year 2000. The funds in fiscal year 2000 will expand non-profit senior housing by an estimated 5,790 new rental units. We propose that \$100 million of the 202 funds will be used to convert some existing elderly housing to assisted living facilities, with additional services to help low-income frail elderly live as independently as possible.

Elderly housing vouchers

We are also requesting an additional \$87 million for 15,000 new vouchers for extremely low-income elderly, to be used in projects using the Low Income Housing Tax Credit. The Administration will shortly submit legislation to authorize these additional subsidies.

CONCLUSION

This is a reasonable, responsible and critically needed budget request that will serve America's communities well as they take on the challenges of the next century.

It addresses the needs of millions of Americans who, despite our great national prosperity, do not yet have the affordable housing they need or the economic opportunity to live in safety and security. Our budget brings together HUD's programs in innovative, integrated ways that will truly make a difference in people's lives and in the places they live.

Mr. Chairman, with this budget, along with our management reform efforts, I look forward to working with you and the Members of this Committee to make the goal of decent housing and a suitable living environment a reality for all Americans.

Senator BOND. Thank you, Mr. Secretary.

Because of scheduling conflicts, Senator Craig is going to have to leave to meet the British Prime Minister.

So let me turn the questioning over to you, Senator Craig.

IDAHO FAIR HOUSING COMPLAINTS

Senator CRAIG. Mr. Chairman, thank you for that courtesy.

I have one question of you, Mr. Secretary. There are others, but let me ask this one, because it is the one most perplexing in my State of Idaho right now.

You have mentioned fair housing and fair housing enforcement. Let me run you through a scenario that we are finding ourselves in conflict with right now in Idaho that is causing some real problems. In 1988, Congress passes the Fair Housing Act. In 1991, Fair Housing amendments go into effect.

In 1991, HUD publishes Fair Housing guidelines, makes points that they are not mandatory. In 1996, HUD releases manual with disclaimer that the regulations were not accurate or complete, and I have looked at the manual and it is printed right in there. In 1998, Idaho, the first 25 complaints filed by the Idaho Fair Housing Council. In 1999, an additional 52 complaints filed.

Here is the problem we have, one of our builders and property owners has settled, all the rest are fighting it, and they are fighting it on this premise, but when these were built there were no guidelines, or there were no specific guidelines, or there was no educational program, or an admission within the manual that they were not accurate or complete.

Now, based on a contract with the Idaho Fair Housing Council, they are out filing complaints and fines are being slapped on these builders. The builders are saying, "Wait a moment. Why do you not just come to us and show us the problem and we will correct it, instead of fining us, because we operated under the law, and the law was not clear?", and HUD admits it was not clear, and it is kind of like "We do not give a darn. We are going to enforce it."

We have a big problem in Idaho, and I am not very happy, because I know most of these builders, I have met with them, I have worked with them, and they said, if we have problems, we will correct them.

Interestingly enough, no one filed a complaint until you put a contract out and somebody needed a job, and that is how I am reacting, and we created an Idaho Fair Housing Council, and they went out around the state with a fine-toothed comb. Up until that time, by a very cautious and careful check on the part of my staff, there were no complaints.

Nobody had felt discriminated against, and in one instance where it occurred, it was corrected immediately so that there was full access. But none of our disabled people had felt they had been denied access.

Now, the initiative says we are going to walk through it with a fine-toothed comb, and our builders are saying, wait a moment, if you point it out, we will correct it, but do not come in here like a gestapo and slap us with complaints and fines and say we will meet you in court, because the builders are saying, fine, we will meet you in court, and when that happens, Mr. Secretary, it compounds the costs, and we have a lot of builders saying, why should we ever get involved again? If the government is going to do this, why should we get involved in constructing these kinds of facilities, if this is the relationship that is existing.

The reason that is of a concern to me, Mr. Secretary, is Idaho fortunately is one of those growth states. Our economy has been relatively robust. We do not have the inner-city problems that you face and have dealt with. What has happened in a robust growth economy is that property values go up, people of lesser means cannot find housing, because the housing prices price them out of the market, as people come in for the jobs and can afford to buy these houses and fix them up and improve them.

So we have a need, a need in Idaho for low-income housing, but we have a building community today that is saying, what the heck, if this is the relationship, we will have no relationship, because we can go out and build an apartment building and get a much greater return, and not have to worry about the hassle. There is the problem. How do we deal with it?

Secretary CUOMO. Well, Senator, first, two quick points, and then I will ask the Assistant Secretary if she has any specific information on this. I share the Senator's concern.

We are trying to attract private-sector builders to HUD programs, and many of them come dragging one foot, because they are a little afraid with dealing with government and getting involved with the regulations, et cetera, so we do not want to make the experience an uncomfortable one.

As the Senator poses it, I would agree with the Senator, that you cannot change the rules once the game has begun, and if HUD was unclear about the rules when they began the game, you cannot then come back and say, well, we have decided retroactively.

I would ask the Assistant Secretary if she has any specific information on this case.

Ms. PLAZA. Yes. I thank you, Mr. Secretary, and thank you, Senator.

First of all, let me make clear that the Fair Housing Act is administered fairly. Fairness is part of the game, and as part of the requirements in the Fair Housing Act, we are required to enter

into conciliation efforts with the builders or with any respondent that is being complained about under the Fair Housing Act.

The law has been in the books for 10 years, and there is some uncertainty, and as a result, we are going around the country, and specifically we have gone to the State of Idaho and Seattle, in that area, your area, to conduct many seminars on the requirements of the design manual and accessibility requirements.

We are not out to play "gotcha" at all, even though we are emphasizing enforcement under this Administration. I can tell you about a number of seminars that we have sponsored and many education efforts that we have sponsored in the State of Idaho.

I am familiar with the complaints. The Council that you mentioned, the Fair Housing group that you mentioned, is entitled to file these complaints when they find that certain buildings violate the Fair Housing Act.

We do not always take all of the complaints that are filed. Of those we do take, we look at them very, very carefully to determine whether we have jurisdiction, and then beyond that, we investigate the case, and we sometimes get the parties together and have the whole issue resolved through conciliation. We are not out to get any builders, we are not out to get any of the industry.

Senator CRAIG. Well, I thank you for that explanation. Two years since your initiative was aggressively started, 77 complaints. Now, that is big for Idaho. It may not be big for New York City or a large area, but that is very big for Idaho, and we have checked prior to that, none.

Now, that does not mean there were not problems, and I am not willing to say there were not, but I have checked this personally, because of the outcry from folks who are just simply saying, look, we are not being treated fairly here, if we had known the difference and it were clear.

Education is a part of that responsibility, and as I have said, I just checked last night before the hearing how many of these complaints have been settled. One in 2 years. The rest of them are on-going, and my builders say that they feel they are being mistreated, and they are going to fight it.

Now, many of them have gone on to correct the problem, because they did not want to deny anybody access, but they are going to fight out of principle, because the guidelines were not there, or it was not clear. So I hope you will take another look at this.

This is not good in a state that needs low-income housing, as I have explained, and the very builders that will build that are the builders that are walking away from it.

Secretary CUOMO. Senator, just so we are clear, because you raised two issues. One is we do fund Fair Housing groups who are charged with taking the law, and educating about it, and enforcing the law, and I think they do a good service, because many times people just do not know about this law. The second issue is that we are retroactively trying to enforce a law which was unclear, ambiguous, or did not exist at the time.

Senator CRAIG. It is the retroactivity that we are frustrated over.

Secretary CUOMO. Yes, and I can see the Senator's frustration there. I will look at it myself, and I agree with the Senator, if we

are retroactively enforcing a law which was unclear or ambiguous, we should not be doing that.

Senator CRAIG. But as you know, in those instances, a partnership works a lot better than a whip. Let us jointly correct this together for the sake of the people who need the service, instead of saying gotcha.

I know you say you are not doing that, but the fines that are levied and the frustrations that are out there cause our builders to think that way.

Ms. PLAZA. I can understand that.

Secretary CUOMO. We will look into it, Senator, and we will get back to you.

Senator CRAIG. I appreciate it.

Senator BOND. Thank you very much, Senator Craig. We are very pleased to be joined by the Chairman of the Full Committee. Is there anything that you wish to add?

Senator STEVENS. No.

FLAT FUNDING FOR SECTION 8 RENEWALS

Senator BOND. All right. You come at a very good time, because we are about to talk about one of the most difficult problems that we face in the appropriations process. I mentioned it in my opening statement. Mr. Secretary, as we discussed, the Office of Management and Budget is proposing flat funding of \$11.5 billion for section 8 contract renewals for the next 10 years.

That comes out of their comparison, and policy, and baseline. This means that low-income families, low-income disabled, and low-income elderly will be put in a position where they will lose their housing in the years to come. Just taking the year 2001, the next year, the Administration proposes \$11.5 billion for section 8 contract renewals.

Nevertheless, under the Administration's own estimates, it would require \$15.6 billion for section 8 renewals' existing contracts in 2001.

My question to you is: How many families will lose their homes if we stay with the OMB budget request of \$11.5 billion for fiscal year 2001?

Secretary CUOMO. Mr. Chairman, the OMB director has stated a number of times, unequivocally, that the Department's position and the Administration's position is that it is committed to renewing all vouchers that are there, period.

We share the same concern that the Chairman shares, that the last thing we want to do is not be able to renew a voucher, not be able to fund public housing, and the President himself is committed to that, I can tell you that on firsthand knowledge.

In terms of the out-year budgets, OMB will go on to explain that there are a number of contingencies that they are working through, primarily the one about the Social Security fix, and once that is accomplished, there could then be adjustments on other elements within the budget, but at the end of the day they are committed to funding all the section 8 certificates.

Senator BOND. Mr. Secretary, the reason I asked this question is because it has a great deal to do with the commitments we made in this current year. The problem, the challenge, the fact of life in

housing is the commitments we make this year have to be funded in future years, and we show the need, when you go out to fiscal year 2008, 2009, you get up to \$26 billion, \$27 billion.

Now, I do not know any Social Security fix or any Social Security change that is going to impact the requirements for renewing these section 8 certificates, nor do they change what the President has projected in his request for the future. How many families would have to be kicked out of housing if the budget for fiscal year 2001 is \$11.5 billion?

Secretary CUOMO. The position of OMB, Mr. Chairman, is that the contingency would never occur, that they are committed to making sure that all the vouchers are fully funded, all the expiring ones, as well as the additional ones that we are proposing.

Senator BOND. Mr. Secretary, are you telling me that they have two sets of books—

Secretary CUOMO. No.

Senator BOND [continuing]. One of them they presented to us and another one they mean?

Secretary CUOMO. No.

Senator BOND. This is the crux of the matter. Maybe Mr. Gibbons could tell me, how many families would we have to throw out if we had \$11.5 billion in 2001? Mr. Gibbons?

Mr. GIBBONS. I would have to go back and take a look at that and provide that for the record.

Senator BOND. I do not want it exact. You can do the figures. Tell me.

Mr. GIBBONS. Well, it would depend on what year, but by—

Senator BOND. Fiscal year 2001.

Mr. GIBBONS. It would be—

Senator BOND. 2001. We are looking at how many people on October 1, 2000, would be dumped on the streets. The Secretary—

Secretary CUOMO. None.

Senator BOND [continuing]. And I do not want to see that.

Secretary CUOMO. But Mr. Chairman—

Senator BOND. We are fighting an uphill battle.

Secretary CUOMO. Mr. Chairman, to be fair, almost without exception during my tenure at the Department the relevant budget discussion is always the immediate year on the table, and the out-years always vary. I remember out-years where we were almost zeroing out CBDG in the out-years, because there were many assumptions, and maybe it is just being the HUD Secretary, but I take it 1 year at a time, that is the relevant year that is in discussion, and the Administration has said unequivocally that in the out-years they are committed to finding the funding, which obviously, Mr. Chairman, has to be the position, because it is consistent with everything that we have done and everything that we are saying we want to do.

Senator BOND. But Mr. Secretary, we got relevant yeared this year. We put in 100,000 new incremental vouchers, and you and I agreed that those will be fully funded. They are not. This is the relevant year. This is the relevant year. We are \$4.2 billion short on—I mean on the 100,000 vouchers we did not have a full amount provided in the budget, because—

SENATE STAFF. We funded \$50,000 incremental—

Senator BOND. \$50,000 incremental.

SENATE STAFF [continuing]. But the HUD budget has pushed out \$4.2 billion, because there is not adequate funding.

Secretary CUOMO. Just to be clear here, Mr. Chairman, when you said in your opening statement that this year we fully fund all the vouchers within the President's budget, we said we would do that, and we did do that. This year they are fully funded, with 50,000 from last year, or 100,000, depending on how you count, but the incremental from last year and the additional we proposed this year are fully funded this year.

Senator BOND. But that is fully funding for these vouchers that carry over, have to be funded in fiscal year 2001.

Mr. GIBBONS. Maybe I can sort of address this. We are mixing two issues. With respect to the advanced appropriations, the point is not correct to say that we will be postponing the appropriation of \$4.2 billion into the year 2001. The proposal is that you would fully appropriate the entire \$11.5 billion in this budget.

That covers all renewals, including the incrementals from last year, plus the 100,000 that we are requesting for this year. It would fully fund those. What it says is, and it is a bit of a misnomer to call it an advanced appropriation, it says, having done that, we would delay the availability of \$4.2 billion of those funds until October 1, 2000.

Probably the best way to demonstrate this is perhaps by example. Suppose that a contract expires on April 1.

What the proposal would do is include immediately all the funds necessary to draw down and pay for that contract up through September 30, and then on October 1 the funds would be made immediately available without any future appropriation, or the period of October 1 through the next April, and then what the Administration's proposal is, is that is repeated every year.

Senator BOND. Well, the problem with that is, it puts us farther behind, because we have traditionally provided at least the full year of a contract. We are going to be in a position where we will then have only \$7.1 billion for expiring contracts in 2001, if you push it off.

Mr. GIBBONS. No. You are going to appropriate the entire \$11.5 billion, and that is important to emphasize, because to the recipient, to the owners, and to the tenant, this becomes a completely invisible process. Nothing changes. The terms of the contract do not change, the period of the contracts do not change.

The only thing that is happening here is we are making the funds available in the remaining part of the fiscal year 2000, and for the funds that will not be needed until the next fiscal year, they will be made available on the first day of the next fiscal year. In the past we have fully funded the contracts for the entire year, even though it crosses 2 fiscal years.

Senator BOND. Right. My point is that we are making commitments, as tough as this year's budget is, we are struggling to fund what we already have committed, and if we push off the \$4.2 billion to the next year, to fiscal year 2001, that is why I am asking, we will have more, significantly more, section 8 contracts expiring than we will be able to fund with the \$11.5 billion that is projected by the President's Office of Management and Budget.

Secretary CUOMO. Mr. Chairman, I think we are going past each other here. You would appropriate the full amount this year to renew all the expiring contracts. We would not draw down on the amount we need for next fiscal year until the next fiscal year, but you would have appropriated the full amount.

Mr. GIBBONS. Yes, that is absolutely correct; otherwise, we could not legally make a contract for a whole year, but the fact is that you will fully appropriate these funds.

Senator BOND. Yes, but we are having to appropriate it out of the 2001 funds.

Mr. GIBBONS. But you do the same thing next year and in each subsequent year, and if you look at the out-years, you can see that there is \$4.2 billion that is rolled each year, so you are basically doing this every year from now on, so the net effect is no change in the out-years. This has no impact on the availability of funds in the out-years.

Secretary CUOMO. Mr. Chairman, let me say it this way. What we have done for the first time is we have justified the period of the section 8 with the fiscal year. Instead of paying for a section 8 contract on its own annual basis, which may cross fiscal years, we only pay for the amount of that section 8 contract which is in that fiscal year, which goes to September 30.

Senator BOND. That is correct. When I came here we had funded the section 8 contracts on a multi-year basis, and we have taken on more and more responsibilities—

Secretary CUOMO. Yes.

Senator BOND [continuing]. And the problem is we are caught in not just crack, a chasm that is getting bigger, because these numbers get to be huge, and I just want to go—just so we can figure out how many section 8 are at risk, I would like to know how many section 8 contracts—would there be a shortfall? How many section 8 contracts would we not be able to fund in 2001 with the assumption of \$11.5 billion for fiscal year 2001?

Mr. GIBBONS. In 2001, we do not think that there would be any shortfall in 2001.

Secretary CUOMO. Just to stay with the Chairman's point, Mr. Chairman, I think what we, as you correctly stated, section 8 at one time were 10 years, and 5 years, and then that went down to 1 year—

Senator BOND. Now we are going down to part of a year.

Secretary CUOMO. Well, now what we have said is, basically, yes, we will only fund that amount of a section 8 voucher which we actually have to pay for in that fiscal year, and the amount of that voucher for the next fiscal year we will pay the next fiscal year, yes, but we are paying for the full price of that section 8 voucher this year. We would be deferring costs until next year the other way.

Senator BOND. Well, there is a difference between the budget authority and the outlays, and the outlays obviously are going to occur in 2001.

Secretary CUOMO. Yes.

Senator BOND. The budget authority you are putting the budget authority on a current basis, and saying you are only making the budget authority, but what I want to know is how many vouchers—

there is a difference of \$11.5 billion versus \$15.6 billion. That is \$4.1 billion in budget authority. If you are rolling that over into fiscal year 2001, then are you not short—you start to work with \$7.1 billion in 2001.

Secretary CUOMO. The outlays are actually the same. We are outlaying what we would outlay. The BA, we are only spending the BA this year that we need for this year and the BA for next year, starting September 30, from now on, would be paid next year. Then where do we get the BA in the out-year, that is where the Administration says they are committed to funding the BA.

Senator BOND. Yes, but I mean their projections make the totally unrealistic assumption that you can hold it at \$11.5 billion, and we all know, looking at the BA needs, that that figure is shooting up, and we are facing a train wreck. How many section 8 vouchers, full-year section 8 vouchers does \$4.1 billion fund?

Mr. GIBBONS. Well, vouchers run about \$6,000 a piece.

Senator BOND. Okay. So you have a paper and pencil there. I know you are quick on math. We will just sit here and wait. Mr. DeCell is back there, he always sends letters to me, Mr. DeCell is a wizard at math. Somebody just give me the figures.

Secretary CUOMO. Mr. Chairman, while they are doing that, I do not understand the contingency. If the Administration did not find the money in 2001.

Senator BOND. This is the budget. We are trying to figure out what commitments we can make this year that we can continue next year, because I am very much concerned, as I have pointed along. Mr. Gibbons, the number is?

Mr. GIBBONS. The \$4.2 billion continues to roll over, so next year's funding level for this program is still \$11.5 billion, even by the OMB estimate. It is not \$7.3 billion. It is \$11.5 billion this year and it is \$11.5 billion next year, and part of that \$11.5 billion is the roll-over of the \$4.2 billion. That occurs each and every year.

Senator BOND. Yes, but you have already rolled it over. You have already rolled it over in—

Mr. GIBBONS. You will roll it again. You would roll it again.

Senator BOND. You have already rolled it over to 2001.

Mr. GIBBONS. You keep rolling it every year.

Senator BOND. You rolled it over at \$11.5 billion, so actually you have taken advantage of that roll over. You were using up your cushion in 2000.

Mr. GIBBONS. You keep rolling it. Every year, if you look at the out-year estimates, every year shows about \$11.5 billion. Part of that is a roll-over of \$4.2 billion. So \$4.2 billion is fully funding those contracts every year.

It is a different issue as to whether—well, your first question was whether \$11.5 billion was enough, but the \$4.2 billion is in the budget every single year, so there will be no reason why those vouchers would not be renewed.

Senator BOND. Yes, but you have the \$4.2 billion, it is rolled over from 2000 to 2001, means that you cannot get another \$4.2 billion by—you had used up that \$4.2 billion when 2001 rolls around, so you have \$15.6 billion in expiring vouchers, and only \$11.5 billion. What is the number? How many section 8 certificates is that?

Mr. GIBBONS. That is a different question. It has nothing do with the \$4.2 billion, per se.

Senator BOND. No, but I would say it is a difference between what is recommended and the need. What is that? That is a different calculation. You are dividing \$6,000 into \$4.2 billion.

Mr. GIBBONS. That would be around 8,000 units.

Senator BOND. How many?

Mr. GIBBONS. It is 7,000 units.

Senator BOND. Seven thousand? No. No. You are losing a couple of zeros. If you divide 6,000 into \$4.2 billion—

Secretary CUOMO. Mr. Chairman, if you would like—

Senator BOND. No, no, this is simple. I mean we have to—can somebody do math? Can somebody do math? Six thousand goes into 4.2 billion a lot more than 7,000 times.

Secretary CUOMO. About 80,000.

Mr. GIBBONS. Seventy thousand.

Senator BOND. Try it again. This may be a problem. We may be—all right. How many times does \$6,000 go into \$4.2 billion? Seven sounds right. How many zeroes does it have? There is a voice in the back. Voice in the back.

Secretary CUOMO. 700,000.

Senator BOND. 700,000. Thank you very much. Okay. Seven-hundred-thousand vouchers are at issue here, and that is what we are worried about, that is why—we have 700,000 vouchers that are at risk under these long-term budget projections, and if we were to add more incremental vouchers, we would increase the number of existing vouchers at risk. That is my point, Mr. Secretary. We have not accounted for the needs of these expiring vouchers and the significant increase in budget authority needed to accommodate them.

Secretary CUOMO. Mr. Chairman, you have lost me along the way, because the \$4.2 billion, this economic adjustment for this year would continue every year on the out-years—

Senator BOND. Right.

Secretary CUOMO [continuing]. And, therefore, the \$4 billion, or whatever the number is, would never really come due, because you would continue to roll it forward, and the Administration has repeatedly said in the out-years they are committed to funding all expiring, and we also know that the out-year budgets are only projections that get modified, and we also know that this year, especially with the budget caps and the pressure we are under, and contingencies like Social Security out there, the bank on the out-years at this point I think would have too many variables to come up with any reasonable conclusion.

Senator BOND. As much as I enjoyed this, I am going to turn to my ranking member and the Senator from Iowa, but I would make the one simple point. You can further squeeze the BA requirements by rolling over the BA to the actual year that it will be expended, but you can only get the benefit of that roll over one time.

Secretary CUOMO. That is correct.

Senator BOND. If you get the benefit of it in 2000, you cannot get the benefit of it in 2001. That is where we hit the wall. That is the kind of question that you and we have to resolve before we make commitments for more programs that will be more expensive in out-years, and that is where we have to do the work. Maybe for

clarification and for such enlightenment I now turn to Senator Mikulski.

Welcome, Senator.

STATEMENT OF BARBARA MIKULSKI

Senator MIKULSKI. Thank you very much, Mr. Chairman, and I apologize both to you and Secretary Cuomo. I had to attend a very important NATO ceremony with the Polish Prime Minister and then attend the meeting with the Prime Minister of Great Britain, Tony Blair.

Mr. Chairman, in the interest of time I am just going to ask that my opening statement be included in the record—

Senator BOND. Without objection.

Senator MIKULSKI [continuing]. As if I were here on time.

Mr. Secretary, let me just go to some questions that I would like to focus on, and let me tell you what they would be. I would like to focus on HOPE VI, on housing for the elderly, and then also what success we might have seen from Brownfield's, or it is too early to tell. In the interest of time, and if it runs out, then perhaps we can go to a second round.

HOPE VI

HOPE VI, as we know it has probably been one of the single-most important tools to deal with the concentration of poverty in our high-rise public housing. However, now that we have had HOPE VI for several years now, I would like to ask you, number one, what success do you think we have had from this program, and give you then three questions.

My three questions really are: Number one, not only what have we accomplished on the policy objective side of HOPE VI, but as really the originator, I am concerned about the cost of HOPE VI. The projects seem to be very expensive, more expensive than if we essentially gave vouchers to the poor.

Number two, I am concerned about the fact that the demolition of the public housing, that all we have done is just take vertical concentrations of the poor and through the way that we have handled the moves of the people who are in it, just done horizontal concentrations of the poor, often destabilizing neighborhoods on the basis of social class, and then number three, there also seems to be an issue around the fact that there seems to be a small number of developers who are continually winning the HOPE VI contracts, and there are those that are concerned that we have essentially an oligopoly growing up of developers.

So tell me about the money. Tell me about, is HOPE VI really now becoming a hollow opportunity, that for all of that money we spread sieged neighborhoods, distressed neighborhoods, and all we are doing is creating more siege, rather than stability, and then also the competitive bid process.

Secretary CUOMO. Senator, thank you very much for the opportunity to talk about this. I am very excited about what we have done here and what the Senator has done by starting this HOPE VI. We are actually on to something I think for the first time in the history of public housing.

What HOPE VI said was, let us demolish the bad and rebuild the bad, which was the right intention and the right idea. One of HUD's problems was, we had no good way of really separating the good from the bad. We have now put a full system into place, where we were actually inspecting public housing.

The HOPE VI program basically said let us demolish the bad. HUD's first problem was, we did not have a good way of telling the good from the bad. We have since put in a full system in place, physical inspection, audits, full rating system for public housing for the first time ever. We just got the first sample back on the physical inspection. Eighty-seven percent of public housing was actually, once inspected, in good or excellent condition. These were by outside, private-sector contractors.

So we know what is good, we also know what is bad, and then HOPE VI says demolish the bad and rebuild. We will meet the goal of about 100,000 units we think by 2003, which was the initial goal of HOPE VI. On the cost of HOPE VI I share the Senator's concern—

CONCENTRATIONS OF POVERTY IN PUBLIC HOUSING

Senator MIKULSKI. Wait a minute, Mr. Secretary. The issue around HOPE VI was not the condition of the buildings, but the condition of the concentration of poverty in the buildings.

Secretary CUOMO. Yes. Yes.

Senator MIKULSKI. That is what I want you to focus on. Believe me, modernization, safety of architecture, but it was not the physical architecture that was so troubling that led to the HOPE VI, it was the concentrations of poverty.

Secretary CUOMO. Okay. Then let me get to the third point of the three-part question that the Senator asked; the concentration of poverty. I checked the numbers after our previous conversation, and you were right, Senator, my initial impression was actually wrong.

We do not now have a prohibition against the concentration of section 8 vouchers in the neighborhood, and I went back and checked after our conversation, and there is a logical misstep, in my opinion, upon our review.

We do have prohibitions against the concentration of public housing construction. You cannot go into a neighborhood that is overly concentrated, your term was saturated, and build more public housing.

We specifically say if a census tract has a high concentration of assisted households, you cannot go in and build more public housing, because we do not want to concentrate. We do not have that same requirement when it comes to section 8.

So you could bring in more section 8 tenant vouchers into a neighborhood, overload, saturate, overly concentrate a neighborhood with section 8 voucher holders, and it does not violate any HUD regulation or any HUD planning guideline, and that is what has been happening. I enjoyed the Senators analogy of the vertical/horizontal.

We went to deconcentrate, but in the effort to deconcentrate we may have just reconcentrated. This is only in the past couple of days, prompted by the Senator's conversation, but we are now

going to go back upon our review and come up with a regulation which mirrors the public housing regulation, the goal is not to re-concentrate a different neighborhood, and we would pass a regulation and put out a notice for comment, because there is going to be a lot to discuss here, but that says you cannot use section 8 tenant vouchers to overconcentrate an area, period, let alone in an effort to deconcentrate a previously concentrated area. I think that will get to exactly the Senator's point about what has been happening with the—

Senator MIKULSKI. Well, I want to be very clear on where I would like you to go. First of all, number one, we want to acknowledge that if someone has a section 8 voucher that in the United States of America they can go anywhere with that section 8.

Secretary CUOMO. Yes.

Senator MIKULSKI. So we want to affirm essentially the concept of individual freedom and mobility. Number two, we want to honor and respect all Fair Housing laws, so that whatever regulations come, we do not in any way inhibit individual choice and also our legal framework of fair housing.

Number three, we want to make sure it is not a hollow opportunity for the poor, that it is not a hollow opportunity for the poor.

Let me say this about HOPE VI. I would have thought that I did not have to prescribe every single thing in law for you, when I say you, I mean HUD, to think about the next steps. When we knew that a building was going to come down, the people were going to go somewhere. Obviously, nobody thought about that consequence. I did not think we had to be that prescriptive or micromanaged. Now that I am raising this issue, I am sure that there will be a consequence to that regulation.

So before you are quick to think that you are satisfying me, what I am looking for is opportunity for the poor, and that there is no Federal program that stabilizes neighborhoods, and that is what has been happening.

Either we have public housing, which concentrated poverty, we have private-sector apartment holders and inner-beltway communities that just took buckets and buckets of section 8 and created another form of public housing, but what did both the poor and the taxpayers who wanted to help the poor get for our money?

Now that we have raised this issue, which obviously had never been raised in HUD before, I want you to really focus on this, because I believe you agree on the same public policy objectives, but do not just come out with a quick reg to think you are going to satisfy me.

The question is: How can we make sure that the poor have hope and opportunity, and that we play a role in taking sieged neighborhoods and moving them into stability, not spreading siege to stress, and I am concerned that we are spreading siege to stressed neighborhoods and putting them into siege categories. I am using thematic language, and I do not want to be the prescriptive micromanager.

Now, I gather you are going to do a careful examination of this. Number two, you are going to come up with a strategy and a framework for regulatory change, again, meeting the test of fair housing.

When can we look forward to hearing your analysis and what you think you would like to do, in consultation with mayors, the National Association of Counties, civil rights groups, as well as grassroots community organizations?

Secretary CUOMO. Senator, I would like to have a paper to you first, and I would like to have that done within several weeks, because this is a complex issue.

Senator MIKULSKI. Very.

Secretary CUOMO. Just so you know, Senator, it is not that this was a concept that was totally missed. What has actually happened, and again, this is only on 2 day's conversation, but we could not tell you, because we did not have the technology a couple of years ago exactly where the vouchers were being used by census track.

We just did not know. We could stop the construction of public housing in a concentrated neighborhood, because we knew where the buildings were, but we did not know where the section 8 person was going with that voucher.

We now have improved the technology, we have improved our information. We can actually tell you now where all these section 8 vouchers are.

Senator MIKULSKI. Well, I appreciate that. Remember, when we started the conversations on HOPE VI, we wanted to eliminate what I called Zip Codes of pathology and create Zip Codes of opportunity. So let us hear now about the costs and also competitive bidding.

TOTAL DEVELOPMENT COSTS

Secretary CUOMO. I share the Senator's concern that the numbers on HOPE VI are apparently high on some projects, and we discussed this last year, and we have actually done quite a bit to reduce the costs, and for the first time we have cost limits. We have something called the TDC, Total Development Costs, where we say this is a cap, if you will, no how much we are willing to spend on the reconstruction of a unit.

One quick caveat, sometimes, Senator, these numbers are somewhat deceiving, because it is not apples and apples. You will hear numbers that it cost \$200,000 to build a HOPE VI unit. That may be technically correct, but it is misleading, because it is not apples and apples.

When you go to do HOPE VI, you have a very high deconstruction or demolition cost, because you have to take down the old building. You very often have a very high abatement cost for Brownfield's problems. You often are building community service centers, parks, et cetera, which get added to the cost of the housing, but really they are separate costs, they are community development costs rather than housing unit, per se, costs.

With that caveat and that stipulation, we have put in place for the first time total development costs. There are caps on how much we can spend. We did it in collaboration with our partners, our stakeholders.

Elinor Bacon, who is a Deputy Assistant Secretary, who has done a phenomenal job on this, is now working on the next level of cost control, which is what they call "soft costs," which will actually go

below the total cap and say we now want to talk about the attorney's costs, the accounting costs, the tenant costs, and we will come up with caps on those sub-costs, if you will.

On the number of developers we had a conversation from our first conversation, Elinor Bacon has a whole plan in place to reach out, to bring in more developers. We do not want to have a captive audience or a captive industry. We are working with a number of groups, Urban Institute, different building groups, AIA, APA, and we want to get as many private-sector developers as possible competing to drive down these costs, and we will.

Senator MIKULSKI. Well, thank you. I know that my time is up. The issue around the developers came to me through other people who raised this as a yellow flashing light. I am not sure who they are or what they are, but you should be aware that that was a concern, and like anyone else, a good set of requirements and competition always works in the marketplace. I will go to my senior housing in my second round.

Senator BOND. Thank you, Senator Mikulski.
Senator Harkin.

STATEMENT OF TOM HARKIN

Senator HARKIN. Thank you, Mr. Chairman. Mr. Chairman and Mr. Secretary, I want to just cover some things dealing with rural areas.

RURAL HOUSING AND ECONOMIC DEVELOPMENT

Mr. Chairman, last year this subcommittee provided a new initiative, which I thank you for, the \$25 million in rural housing, which you put out, of which \$4 million of that went to Iowa. Just last weekend I was out visiting some of these projects, the rural housing that had been built with this money, and, again, I want to thank you, Mr. Secretary, for what you have done with this, because your office in Kansas City has just been really great about pushing this program.

The money that we have gotten in Iowa has been leveraged up to five times, five times, with Fannie Mae Foundation, with local banks, I think with Farmer's Home Rural Development, and the Iowa Department of Economic Development. Five times.

So I was seeing some of this housing built in these small towns, so families that I have seen moving into these new houses with maybe as much as 60 percent of median income now becoming homeowners, and I have to tell you, to see the look on their faces, many times single mothers with two or three kids, they do not have much money and now they have a home that they can call their own. It is just an incredible thing that is going on out there.

I would like to invite you out there to take a look at it, because they are really doing good stuff out there. I do not know what they are doing in Missouri, or whatever, in other states, but I can just tell you in Iowa they have leveraged this money up to five times and it is doing a great thing.

So I just wanted to tell you that, and as the Department considers grant applications for the Office of Rural Housing and Economic Development I hope we will see a real priority for proposals that provide for home ownership in small towns, where they can

take this money that we allocated and really leverage it up. So I hope you take a look at what we have done in Iowa.

I do not know if we are unique. I have not been in other states, but it just seems to me they have done it, and they have done it in a short period of time. So whatever is happening out there, I hope you will take a look at it and give some priority to this in small towns. We need that housing out there.

Now, secondly, I was listening to your exchange with Senator Mikulski on section 8, we have a real—whatever problems you have in urban America, we have them in spades in rural America in section 8 housing, Senator Mikulski. Vouchers do not work too good in a small town, because you have a lot of these elderly people living in these small towns, they are in these section 8, they have no place to go. So a voucher just does not work for them.

We are losing a lot of the section 8 housing in Iowa. I have talked to some of these people. You have people who have been paying up to 40 percent, and these are people in their seventies. The only income they have is Social Security. They have nothing else. Eighty percent of the elderly people in Iowa exist only on Social Security, and the average Social Security check in Iowa is around \$700 a month. You go figure. They are paying up to 40 percent.

The housing, as opted out, I have talked to them, now they are up to 60 percent of their monthly income going to rent. They have no other place to go. You can give them all the vouchers you want, unless they move half-way across the state or go to Davenport, or Des Moines, or someplace like that, and then they are away from their kinfolks, their families, and stuff like that. So I really think and hope that you will do some real targeting, the projects. Now, I am not very cognizant of what is happening in some of the urban areas. I leave that to my friend and my colleague from Maryland, and others, but I can tell you about rural America, and these small towns, and somehow we have to start targeting in these areas. I do not know if you can do it administratively, I hope you can, and if you can comment on that I would sure appreciate that.

Secretary CUOMO. Yes. Senator, first, thank you for the words about the rural housing and economic development initiative, it is something we are very excited about. It is going very well in your state. We have a good team of what we call community builders out there who are people who work with the local governments, work with the state government, and that is working well.

The problem you point to, we discussed it earlier, we called it the opt out problem, it is, in my opinion, the housing crisis for this year. These are buildings which were under contract with the federal government—

Senator HARKIN. I understand.

Secretary CUOMO [continuing]. For about 20 years—

Senator HARKIN. I understand that.

Secretary CUOMO [continuing]. Different terms.

Senator HARKIN. I understand that.

Secretary CUOMO. The contracts are expiring, the owners are now saying we may opt-out of the program. They tend to be opting out of the program where they have better buildings, frankly,

where they can go on the market and make more money. Those are precisely the buildings we want to keep.

Our answer has been, "Well, do not worry, we will give the tenants a section 8 voucher, and they can go find an apartment," but that is not enough, frankly, because a lot of the tenants are elderly, they do not want to go out on the market and find an apartment, they cannot find an apartment for the rent that the section 8 voucher pays, and it is just a life crisis for them.

I think we have to go at it two ways. One is we need a systemic solution for these opt outs, where we can go to the table with these owners and say, I want to renegotiate, and where it is a good building that we want to keep in the inventory, we have to be in a position where we can negotiate with the owner and keep that building in the inventory, and figure out a way that we do not have to go through this every year, because this is such a tumult on the tenants.

We have a legal, or maybe a statute, or a regulation that on an annual basis the landlord is notifying all the tenants that their lease may be up at the end of the year, which just gets all the tenants in an uproar on an annual basis.

We need to be able to negotiate with the owner, we need to come up with a longer-term contract so we do not go through this every year, and we need to keep the good buildings in the inventory.

FAIR MARKET RENTS

At the same time, we have to make sure that the section 8 vouchers do work everywhere, and that they are paying an amount where you can actually get an apartment in those circumstances where you must.

This gets into something called the fair market rent, how much the voucher pays, and we are working through that now, but there are too many instances right now, frankly, where the section 8 voucher does not pay what it needs to pay to get an apartment in an area where we want the person to live.

Senator HARKIN. I appreciate that, and that is true. I know about the FMRs, but keep in mind, and this may be somewhat unique to Iowa, but I think it is true of a lot of the rural states. We have a disproportionate portion of elderly living in small towns.

They are in these section 8 houses, and they are pretty accessible for elderly, but if they get a voucher, even if they get the FMR, and they have to go to another place, usually those apartments are not that accessible, they have a lot of stairs, or upstairs someplace, that they are just not that accessible in small towns.

I mean you have to get out of your mind that we are in an urban area. These are these small, little towns. So they are just not really a kind of a place where these elderly people can go.

Maybe it is a little bit unique to Iowa. I do not know. We have the highest proportion of the elderly over the age of 80, and second only to Florida in over 65, so perhaps we are a little bit unique, but I can tell you that in these small towns, the FMRs just will not work either, you know, that 40 percent thing, where you are talking about giving them 40 percent of the fair market rent for the area like that.

In some cases it might work, but in a lot of these cases it just does not work. So I do not know, if you are going to be talking to section 8 landlords and getting them to renew their contracts, obviously, it is going to cost you some money.

You do not have a lot of money, so I am asking you to look at targeting, and to think about some things, Mr. Secretary, where you say, okay, let us look at areas where we have very low vacancy areas, we have rural elderly projects, in which there is little in the way of alternative or appropriate housing, and sort of build that into some kind of targeting. If you cannot do that administratively, I would like to know and maybe we ought to do something legislatively, if you cannot do it administratively.

Secretary CUOMO. I agree with the Senator's concerns 100 percent. Within the next couple of weeks, we are actually going to have a plan exactly on this problem, because as it is unfolding it is getting worse. I agree with the Senator's point about the targeting, and we do have to have some targeting. The elderly are in prime rural areas where there is not an alternative.

But we also have to be careful the way we do this, because this becomes a negotiation with the owners, and we cannot be in a position where the owners believe they have us over a barrel either, and we have no choice but to renew the contract, because then our negotiating position just went out the window, and we will wind up in a position where it is not a negotiation at all, it is one-sided, and we are going to have to pay whatever they demand, and we do not want to be in that position, also.

Senator HARKIN. I agree. I agree.

Secretary CUOMO. It is a tricky situation, but I hear what the Senator is saying 100 percent. We are aware of it. The Administration is aware of it, and we will have a full proposal that meets the needs nationwide, and the particular needs in your state.

Senator HARKIN. Thank you, Mr. Secretary.

Can I get one more in?

Senator BOND. Sure. Quick.

Senator HARKIN. Thank you, Mr. Chairman.

Senator BOND. It has not turned red yet.

HOUSING FOR THE DISABLED

Senator HARKIN. All right. Housing for the disabled. The disability community is very upset, Mr. Secretary, over the limited support for housing assistance. The need is very high. The funding has dropped considerably from its funding levels in the early 1990s for the 811 program.

The Consortium for Citizens with Disabilities did an analysis of the loss of housing for the disabled, because of the elderly only designation passed in 1992. They found considerable housing units being lost from 1993 to now. I understand that HUD is doing an inventory of the losses for assisted housing for the disabled.

You do not have to tell me now, but if you could just get to me the status of the study, and please have HUD take a look and make available to field offices and disability advocates the specified and specific assisted housing projects that have changed their tenant selection policies to not include the disabled.

I do not know what more can be done, but if you have any more ideas on what could be done to help the disability-oriented non-profit organizations, and there are some out there, to compete and administer these housing units in a quality fashion, what more can be done to help these non-profit organizations compete and administer these housing units in a quality fashion.

It has to do with, I am hearing from disabled groups saying that under the 811 program, because of the elderly-only, they are losing a lot of this, they have lost a lot of the assisted housing units. How many, we do not know. I hope you can do an inventory and tell us.

[The information follows:]

LOSS OF UNITS FOR THE DISABLED

The Department has designed a study which will examine the extent to which the privately-owned assisted stock serves the non-elderly disabled. It will also detail the way in which non-elderly people with disabilities access the assisted housing stock in 10 housing markets. The contract for the study is expected to be signed by the end of July 1999, with results available approximately one year later.

Senator HARKIN. And second, can you develop some better criteria or are you in the process of doing so to get these non-profit groups out there better able to compete and administer these?

Secretary CUOMO. Senator, we were in the midst of doing both. I will get to you the study of the numbers as soon as that is ready, but that should be ready almost imminently. I agree with the concern, I have met with the disabled groups. We have the 811 program, it is \$194 million. We proposed to continue the funding at \$194 million.

I would very much like to be able to say, Senator, we will put more money in the 811 program, but as the preceding conversation with the Chairman would suggest, I think he is trying to suggest to me that money is a little tight this year. I am starting to get that general hint.

Senator BOND. Mr. Secretary, I am glad we are kind of reaching that conclusion, and if you would, provide for Senator Harkin and us your full answer to that, we are faced with a vote coming up fairly shortly, and we are going to try to get in a couple more rounds, go as quickly as we can on this, but I do want to follow-up on Senator Harkin's question on the opt out.

OPT-OUTS

We appreciate the practical problems, but there have been some confusion over the authority and the ability of HUD to deal with the opt-out problems. I am a little confused about Mr. Apgar's testimony before the House Appropriations Committee. He did seem to indicate that the Department has the authority and funding through a tenant protection appropriation that could be used to resolve it, and I would appreciate knowing whether HUD has the authority to resolve the opt-outs, which are vitally important, particularly in rural communities with limited housing supply.

Is there authority in the appropriations account, or is there authority as part of the existing mark-to-market legislation, which really is the flip side of the opt-out problem. Do you need more authority? We have to get it resolved. You need authority one way or the other.

Secretary CUOMO. Mr. Chairman, thank you very much. You are right, this is the flip side of the mark-to-market crisis, if you will. If you remember, last year, and the year I was confirmed, the big crisis was the mark-to-market, and we had to address that.

We addressed that crisis, and now we are on to the next one, which is almost the flip side. As this is unfolding, Mr. Chairman, it is getting worse, and the pervasiveness of it is now starting to communicate itself.

Section 8, Senator, is normally an urban problem, inner cities. We are hearing from everyone all across the nation, and the number of landlords who are now considering opting-out, is increasing, my own theory is, as the economy is getting better.

Senator BOND. Mr. Secretary, let us move on to the authority issue.

Secretary CUOMO. Let me ask Commissioner Apgar if he would like to respond.

Senator BOND. Excuse me for interrupting. Can you do it?

Mr. APGAR. In the mark-to-market legislation it did provide our capacity to raise rents under certain circumstances, that is correct, but as the Secretary mentioned we need a comprehensive approach, otherwise, we will just get in a bad negotiating posture with the property owners.

We estimate that fully marking-up all the inventory to market across the board would require about \$600 million to \$800 million worth of research this year and every year out in the future. So obviously that is a non-starter.

We have to think about a way to target the resources toward the appropriate cases. We need to have other tools that we do not have authority for to complement this, for example, to take the tenant issue off the table by making sure that we have enhanced vouchers, so we are not debating whether or not we are going to be throwing tenants out or not, that we have the authority to give enhanced vouchers for residents everywhere.

We need to talk about this renewal issue, whether or not we can do something around the multi-year renewal without committing funds. So there are elements for which we have authority for and elements which we need authority for.

Senator BOND. Do you need additional legislative authority?

Secretary CUOMO. Yes.

Senator BOND. When will you provide it for us?

Secretary CUOMO. We are in the process of putting together a package and working on the House side with folks who have already put legislation forth.

Senator BOND. Okay. Let us know, would you please, because it is vitally important. If you need legislation, let us know.

Secretary CUOMO. We will.

[The information follows:]

OPT-OUTS

Market rents for certain properties.—Building on HUD's emergency actions, a longer-term program should be established to raise selected properties' rents to market. This program should include targeting criteria for which properties' rents will be increased and specific commitments that will be required from owners in return for increased rents. By extending the criteria and commitments embodied in HUD's

initiative to a full fiscal year, the Administration proposes to spend up to \$100 million for this purpose in fiscal year 2000.

Improve Section 8 renewals.—Recent changes in renewal policy have led to greater insecurity for residents and owners through frequent resident notifications and changing rules. Recognizing this, Congress provided for a single notification under a five-year contract that could replace the current annual notifications. HUD is using this provision as part of the five-year commitment required from owners under its emergency initiative. Extending this authority to allow a single notification prior to the expiration of a contract of any length would encourage longer-term preservation of affordable housing while removing the fear among residents caused by misleading notices each and every year. Second, renewal of Section 8 contracts could provide greater security to owners while reducing HUD's administrative burden. Currently, owners may be required to perform a study of comparable market rents each year at the renewal of the contract. A better alternative would be to allow an operating cost adjustment to be applied for four years, with a comparability study needed only every fifth year to ensure that rents remain in line with the local market.

Market returns for other properties.—While lifting Section 8 rents to market and providing more secure renewals can limit opt-outs of valuable affordable housing, these actions will have limited success in avoiding prepayments in properties that are important to preserve as project-based housing. Limiting prepayments is more difficult than limiting opt-outs because the subsidy level provided by the mortgages is fixed. Part of a potential solution could be a reexamination of current limits on rents, distributions and “excess income”, all of which were called for by statute at a time when subsidized rents were not linked to local markets. Now that Congress has realigned project-based Section 8 rents so they are driven by local market conditions, HUD could further this change by realigning rents, distributions and “excess income” more closely to market in HUD's other privately-owned project-based properties. These changes could be targeted to the best properties and none of them would require additional appropriations. Rents in Section 236 and 221(d)(3) properties could be capped at the market level (offset for the interest subsidy) instead of the current budget-based formula, although still limited to 30 percent of residents' incomes. Distributions could be revised to allow for recognition of project equity built up over time instead of remaining tied to the original equity contribution. And continuing a trend by Congress over recent years, “excess income” could be made available to the owners of certain 236 projects to better approach a true market return.

New resources and ownership.—Even when owners choose to remain in HUD's multifamily subsidy programs, there are cases when new ownership or resources are needed to preserve decent affordable housing. Whether for tax or other business reasons, owners may be effectively locked into ownership despite a waning interest in running the property. Or in markets where local rents are below what is needed to pay for recapitalization later in the project's life cycle, other forms of resources may be necessary outside of current rent and interest subsidies. Any effort to stop the loss of affordable housing should take account of these cases by encouraging the transfer of properties to more motivated owners, particularly tenant organizations and non-profits. One way to do this is through targeted increases in Section 8 rents to market for valuable properties in strong markets that would not otherwise be eligible but agree to a transfer to a tenant organization or non-profit. A second method would be to target federal subsidies to affordable multifamily properties that receive State and local contributions subsidizing a transfer or recapitalization. Finally, the current legislation guiding the disposition of properties foreclosed by HUD could be made permanent, including the option to transfer properties to resident organizations and non-profits with Up-Front Grants in negotiated sales.

More effective resident protection.—Even with a comprehensive proposal that includes all the suggested changes discussed, there will still be cases where owners choose to opt out. In these cases, HUD can better protect residents by offering “enhanced” vouchers that allow them to remain in their homes without substantial rent increases when an opt-out occurs. Any proposed solution should give HUD the authority to offer “enhanced” vouchers in all opt-outs at up to market rent levels. In addition, Congress could clarify the permissible increases in “enhanced” rent levels over time by allowing them to track reasonable increases after the first year.

Senator BOND. We will try first to get it through the authorizing side. If that fails, you know what happens. We would love to see it authorized.

Mr. Secretary, I mentioned a grave concern I had about GAO. GAO has told us that their staff cannot meet and talk with HUD people directly, that GAO is required to submit written questions on all issues rather than dialogue. As I mentioned, GAO is our eyes and ears. What is the problem, and can we get your commitment to get back working a normal relationship?

Secretary CUOMO. Mr. Chairman, I was not aware that we were not. I have no problem. I have not been informed. I will ask the Deputy Secretary, who does this on a day-to-day basis, if he has any ideas.

Mr. RAMIREZ. What we have done, Senator and Mr. Chairman, is that, quite frankly, with the different tasks that we have put at hand, the staff that we have available, we have asked GAO to help coordinate the work that they are asking for. It requires a great deal of time and manpower to respond to a lot of their requests.

We want to organize it and make it as expeditious as possible to compile the information that has been requested. What has happened is that when it comes down to specifically the concerns they have had as it relates to the budget, is that we would like to coordinate our responses on the budget through the CFO's office.

We have been more than willing to set up any sort of working schedule with the different program areas to be able to answer those questions, but to give you a recent example, just yesterday they called in and asked for two pages of information on work that they wanted to get out of the budget office from specific program areas, and they wanted to meet yesterday, and it is very hard to assemble the team of a half-a-dozen or a dozen individuals that actually have to deal with responding to the issues, because they were very program specific in that kind of short order.

We want to keep our working relationship a strong one, we appreciate the work that they do, and we want to work with them to coordinate a more effective way of getting that information—

Senator BOND. GAO does this all the time, they go around and ask lots of questions of lots of agencies, and this is the first time I have ever heard them really complain that they were getting stiffed. I would like to not worry about this problem.

I have a lot of other things to worry about, but if it is a problem you can bet I am going to be worrying about it, and you can either solve it at the Department, or you will solve it in my office. I really would be in a bad mood if we had to solve it in my office.

Secretary CUOMO. We do not want you in a bad mood, Mr. Chairman.

RENTAL SUBSIDY OVERPAYMENTS

Senator BOND. Rental subsidy overpayments. The HUD IG's financial statements found a number of material weaknesses. For example, HUD reported in 1997 that it spent \$18 billion to provide rent and operating subsidies to a variety of programs, but on the basis of data collected for 1996, HUD estimated it had provided

over \$900 million in overpayments, \$900 million, funds that could be used, for example, to fund all these other things. What has HUD done to reduce subsidy overpayments?

Secretary CUOMO. Mr. Chairman, I would ask FHA Commissioner Bill Appgar to respond.

Senator BOND. Please.

Mr. APGAR. Well, as you know, we are engaged, first, in a pilot effort to establish the capacity to do income matching where we use income records and other things to match to tenant income files to identify which situations that might exist in terms of overpaying. That has been successful, and now we are moving to a total income matching approach.

We have designated REAC, the Real Estate Assessment Center, our new data analysis agency to take over that responsibility, and they are literally matching millions of files of information to try to identify which particular vouchers, or project-based subsidies, or public housing residents may be mispaying their rent, and providing that information back to the authority.

There are some constraints on that process, because of our limited capacity to use and divulge the income tax records, but we are working within the confines of confidentiality to get the information so that the local housing authority and the residents can move their rent payment in line.

OBLIGATION AND MONITORING OF HUD FUNDS

Senator BOND. I am going to have a number of questions for the record. I will submit one that has been called to our attention about, it says, "As of September 30 of last year, HUD had unexpended balances totaling more than \$158 billion. About \$40 billion was unobligated, and \$114 billion was obligated, but not expended."

I am concerned about these very high balances. It seems to be the equivalent of about 6 years of budget authority, and I would appreciate for the record, and I will give you a fuller question for the record, how HUD monitors and oversees the funds to ensure they are obligated and expended as prescribed, because that seems like a huge number, and I would like to get to the bottom of that. I do not know if you have looked at that.

Secretary CUOMO. We have. I will get you that, Mr. Chairman, in detail; but just a general comment, in some ways it is the nature of our business. Many times, we often will award a certain amount of money and the organization, the city, the PHA then has to go find a site; then has to do architectural; and then has to break ground.

Sometimes there is even a lawsuit, believe it or not, in the midst somewhere. So it tends to be the nature of our business, but I will get you a thorough explanation.

EEOC COSTS

Senator BOND. One final question. As we all know the HUD IG is currently the subject of an EEOC investigation centering on the promotion of a staff member. It has come to my attention that the Department has contracted with outside counsel in a manner that is inconsistent with typical investigative practices for EEOC com-

plaints, and that there has been hundreds of thousands of dollars spent on it.

What are the normal costs associated with an EEOC complaint, and how much is being spent on this investigation?

Secretary CUOMO. Mr. Chairman, the Chairman I am sure knows that one of the things that the Department does is fair housing anti-discrimination work. We take that very seriously. A charge like this against a senior official we take very seriously, and we wanted to make sure that we practice what we preach.

Senator Craig was talking about our fair housing work, and how good we are at telling everybody do not discriminate. When we have a complaint in-house we want to make sure we are just as good as reviewing ourselves as we want to be at reviewing everyone else.

The matter is now in Federal court. I believe there is a Federal lawsuit, because the Department did not come to any conclusion, did not take action, and the aggrieved party has the right to go to Federal court, which they did exercise, and the matter is now in court, and will be resolved through the judicial process.

Senator BOND. Is it customary to spend several hundred thousand dollars on counsel to investigate other EEOC—

Secretary CUOMO. I do not know that that was the number, but I do not know that it is customary to have this type of complaint by this senior of an official against this senior official, especially when the Department has been as adamant as it has about racism and discrimination. So I do not think this is at all a typical situation, Mr. Chairman.

Senator BOND. I would appreciate knowing if there are any similar circumstances or any similar cases, how much it cost, how it was handled, any other officials. With that, let me turn the questioning back to Senator Mikulski.

[The information follows:]

COST OF EEOC COMPLAINT

The normal costs associated with the investigation of an EEO complaint, as well as the amounts of the contracts awarded to the law firms Williams & Connolly and Day, Berry & Howard for the specific EEO investigation at issue, are described in the report prepared for HUD by Donald Bucklin of Squire, Sanders & Dempsey. Copies of that report and its attached exhibits have been provided to the Committee under separate cover.

ELDERLY HOUSING

Senator MIKULSKI. Thank you, Mr. Chairman. In anticipation of a vote shortly, I just want to say to the Secretary, I am going to submit the rest of my questions for the record, but let me give you the framework for my questions on housing for the elderly.

As you know, I have persistently raised the issue that demography is destiny, and that we have senior housing that was built under the Carter Administration and in the early days of the Ford Administration. The seniors themselves are aging in place, and the buildings are getting old, and the question is, what is the public policy thrust in what we are going to do to help that particular population.

They are going from 60 and robust to 80, and many being frail elderly, different situation, with no continuum of care. Then, num-

ber two, really with the aging baby boomers coming online, how also are we—not all boomers have Cuisinarts, and 401Ks, and a variety of other things, they are poor, so the question is, what about them?

As you know, I asked for a report, it was delivered this week. We have not had a chance to review it, but let me give you three yellow flashing lights that I am going to respond to in your testimony.

You want to have something called Healthy Homes, help seniors stay in their homes. My experience is that that is often a platitude and not a program. That is in every program where I hear let us help people. That is not only at HUD, that is throughout social agencies. So I do not want platitudes, I want programs.

Second, your recommendation is to convert equity in their homes and to rehab and property. My flashing yellow light in that is one of the biggest senior scams has been reversed mortgage.

There is the bonafide reverse mortgage that has helped people for independence, but it has been fraught with scam, and our friends at Fannie Mae have been one of the leaders to make sure again that we know that where there is need, there is greed, and that often we go to scams run by scum. I do not want this to happen here. So I do not want platitudes, I want a program, and I do not want another senior scam.

Having then said that, it is how we are going to use tax credits. We are going to have more vouchers. There is what Senator Harkin has raised, \$87 million for your new vouchers. I really do not know if this is a program or essentially people forage through what is existing, try to come up with something new, and again, I am out of the placating me business, I want to be in the senior opportunity business, and the senior safety net business.

So we are going to raise questions with your initiative for which we have significant yellow flashing lights, and then perhaps we could work together to see what we can really do to address these problems in a way that is not more vouchers, complicated programs around tax credits, and oh, gee, we are going to keep them in their own home.

Poor people do not often have equity in homes. If your house is already going to a siege neighborhood, and you paid \$50,000 for it, it is now worth \$12,000. There is not a lot of equity there.

Secretary CUOMO. Senator, let me make one quick comment, and then I refer it over to the FHA commissioner. I know time is short, so I will keep it brief. You just received the report, I am aware, but you should also know that the basis of the work, there has been a lot of work that has gone on over the past year, a lot of consultation, and I believe this program that we have come up with is not a platitude at all, but it is a program.

You should also know the situation we find ourselves in at HUD time and time again is we cannot buy our way out of these problems. It could be very easy for me to say I will tell you the solution to senior housing, take the 202 program, bring it from \$600 million to \$7 billion. We do not have that luxury.

I also do not think that would be responsible. We have many different programs at HUD, and sometimes the truth is, bringing those fragmented programs into a systemic approach that actually

makes sense, we did that with the homeless programs and the continuum of care——

Senator MIKULSKI. Exactly right.

Secretary CUOMO [continuing]. And that is what we are trying to do with the senior programs.

Senator MIKULSKI. Well, rather than have everyone respond, let us look at the report, you know my yellow flashing lights——

Secretary CUOMO. Yes.

Senator MIKULSKI [continuing]. And then let us see, as we move forward, what we can do, again, for a safety net for seniors, why stewardship of taxpayers' funds, and that continuity of care just along what you said about the homeless program, and I think we could really do something exciting and beneficial. Thank you very much.

Secretary CUOMO. I think we can, Senator. Thank you.

Senator MIKULSKI. Mr. Chairman, that is it for me.

Senator BOND. Thank you, Senator Mikulski.

Senator Harkin, do you have——

PRIVATIZATION OF GNMA

Senator HARKIN. One short one, Mr. Chairman. Thank you.

I just want to talk a little bit about Ginnie Mae, there have been some proposals out there to privatize Ginnie Mae. It was suggested in the Senate budget resolution, and I am informed that while there might be a gain for the year 2000 of some \$2.5 million, that HUD would lose money every year thereafter. I do not have figures on that, but I understand it is quite a bit, and I expect that some of the targeted efforts by Ginnie Mae to promote housing would be lost, and I just want to know what your thoughts are on this issue. Do you have any figure on about how much HUD might lose in the future?

[The information follows:]

WOULD MONEY BE LOST IF GINNIE MAE WERE PRIVATIZED?

The answer has a couple of parts, one of which is relatively straight forward and the other more problematical.

The straight forward part of the response is that the Treasury loses the compound value of the net income foregone by not having Ginnie Mae. The average annual growth rate of Ginnie Mae's net income over the past 8 years (through 1998) was 9.5 percent. If we assume that that rate would prevail over the next 10 years, on average, then the Treasury would be giving up approximately 12 billion dollars in net income. Of course the offset would be tax revenues from a fully taxable entity and the price received from the sale of the Ginnie Mae franchise.

The more problematical part of the response is that a sale of Ginnie Mae would also likely affect the volume of loans to be insured or guaranteed by FHA, VA and RHS. A private Ginnie Mae would most likely be traded at a significant discount price to the current Ginnie Mae MBS because it would not likely have the full faith and credit guaranty of the U.S. Treasury. Moreover, over the initial formative years of the new "Ginnie Mae", there would not likely be a significant volume of securities issued (the old Ginnie Mae and the new Ginnie Mae securities would not trade on the same basis, i.e. they are not interchangeable) which would also serve to lower its price relative to current Ginnie Mae MBS. The lower prices of the new Ginnie Mae's have a twofold effect on lending to low- and moderate-income families, the primary beneficiaries of the Government mortgage insurance and guaranty programs. More time would be necessary to estimate this effect.

The first effect of lower Ginnie Mae prices is that the interest rate to potential FHA/VA/RHS borrowers is higher because interest rates and prices are inverse to each other. The higher interest rates on home loans necessitated by lower prices on the securities would disqualify a number of such borrowers at the margin. Families

and communities would not enjoy the benefits of home ownership and the Government would lose the premium income on the loans that would not be made.

The second effect of lower Ginnie Mae prices would be to encourage lenders to turn their attention to secondary market instruments that would yield relatively higher prices and, therefore, lower rates for their customers. They would follow this course of action because of competitive reasons—offer their customers the lowest rates possible on home loans—and because they seek the highest return on their capital in order to remain in business—higher prices, and increased customer base, mean more potential return. The alternative secondary market sources (i.e. the other GSEs) would not likely be of primary benefit to low and moderate income borrowers, especially first time buyers, since, today's market, the alternative sources tend to not place priority on FHA/VA/RHS lending or loans to borrowers that typically use FHA/VA/RHS.

Secretary CUOMO. Senator, I will get you the numbers, but I could not agree with you more, this would be a terrible mistake, this would be a fire sale tragedy, fiscal irresponsibility, in my opinion. Ginnie Mae makes about \$600 million this year, \$670 million—

Senator HARKIN. \$600 million, yes.

Secretary CUOMO [continuing]. \$674 million this year. They proposed selling it for like \$2.5 billion or \$2.8 billion. That would be very shortsighted, in my opinion, to take a recurring asset, just on the dollars and cents, you are making \$670 million, you settle for \$2.4 billion, \$2.8 billion, it is not an intelligent financial transaction, plus Ginnie Mae works amazingly well with FHA as part of this affordable housing system.

Why would you want to take Ginnie Mae out, disassemble the system that is working? FHA works. Ginnie Mae works. They are working better than ever before. They are doing more loans, they are making more money. We have so many things that are broken.

Why do we want to go to the one place that is working well by everyone's admission and fix what is not broken?

Senator HARKIN. Well, I appreciate that, and Mr. Chairman, I do know what your personal feelings are on this, but obviously you know what mine are now, but it just seems to me that, first of all, OMB is suggesting it, and we have the Senate budget resolution suggesting it, and I say a pox on both their houses on this one. I just do not understand how OMB could come up with that.

My staff tells me that the preliminary figures might be that HUD might lose somewhere in the neighborhood of maybe \$300 million to \$500 million, something like that. Anyway, it is extensive. So it just seemed to me very shortsighted for OMB to suggest that.

Thank you, Mr. Chairman.

Senator BOND. I can assure you that suggestions sometimes go into the budget resolution, and assumptions or suggestions from OMB do not necessarily drive the bus around here.

Senator HARKIN. I sure hope that is true on this one.

Senator BOND. We will take their views for what they are worth. Mr. Secretary, do you want to add—

Secretary CUOMO. Just as a point of clarification. On this one, I do not want to have OMB unfairly criticized. They originally thought of this idea, they thought again, and OMB is against the sale of Ginnie Mae.

Senator BOND. Oh, is that a fact now?

Secretary CUOMO. Yes, it is.

Senator BOND. Okay.
 Senator HARKIN. Good.

ADDITIONAL COMMITTEE QUESTIONS

Senator BOND. We have plenty of other things to worry about. We promised to submit some interesting and challenging questions for the record. Our colleagues may wish to have additional statements. We will keep the record open.

[The following questions were not asked at the hearing, but were submitted to the Department for response subsequent to the hearing:]

QUESTIONS SUBMITTED BY SENATOR BOND

SECTION 8 CONTRACT RENEWAL AND INCREMENTAL SECTION 8 ASSISTANCE

Question. As I discussed elsewhere, the HUD budget for fiscal year 2000 has raised expectations about providing additional section 8 housing assistance while implementing policies and long-term budget goals that will actually decrease the availability of housing for low-income families, including the elderly and disabled.

For example, the HUD fiscal year 2000 Budget proposes 100,000 new incremental vouchers for fiscal year 2000 while actually reducing substantially the level of funding needed in the future to preserve and support rental assistance for families that are currently assisted. In the first place, HUD has shifted the responsibility for paying for expiring fiscal year 2000 section 8 contracts by deferring \$4.2 billion until fiscal year 2001, despite the fact that the cost of expiring section 8 contracts will increase by some \$2 billion in additional funding needs in fiscal year 2001 to maintain existing section 8 contracts. In addition, OMB has decided to freeze the funding of rental assistance for section 8 contract renewals at \$11.5 billion for fiscal year 2001 and each year thereafter through fiscal year 2009. This would mean over 250,000 low-income families, including the elderly and disabled, will lose existing section 8 housing assistance under HUD's proposal. To put this in real terms, this also means for every new family HUD proposes to provide incremental housing assistance, HUD will be kicking some 2 to 3 families out the back door. How can you justify the HUD fiscal year 2000 budget when, as a practical matter, it removes housing resources from those who can least afford to lose it?

Answer. The Department's long standing policy has been to renew all existing section 8 contracts and the Department did not deviate from this policy in the fiscal year 2000 budget request. When the Department requested the \$4.2 billion in advance appropriation, the intention was to shift the date the funding is appropriated to the time the funding needs actually occur. With the advance appropriation, there is no need to change the expiration dates on contracts, and there will be absolutely no impact on either the tenants or the owners. The advance appropriation will not actually be scored under the rules of the Budget Enforcement Act until the start of the next fiscal year, on October 1, 2000. Because we are providing funding for a large portion of our section 8 renewals only through the last day of fiscal year 2000, as opposed to a full 12 months, we will need to be certain that funds to continue those contracts will be available the first day of fiscal year 2001.

It is true that OMB decided to freeze the funding of rental assistance for section 8 contracts in future years. This issue will be addressed during internal budget negotiation on the fiscal year 2001 Budget. OMB Director Lew has also stated that funds have been set aside within the Administration's total budget request to fully fund contract renewals and other programs once Congress and the Administration reach an agreement on Social Security.

Again, as mentioned before, if full funding for contract renewals is enacted as requested with advance appropriation or if the full amount needed is available in the beginning of fiscal year 2000, no one will be "kicked" out including the elderly or the disabled.

The 100,000 new incremental vouchers requested by the Department are desperately needed. As described in last year's Report to Congress on Worst Case Housing Needs, there are 5.3 million households with worst case needs. HUD's most recent report, *Waiting in Vain: an update on America's Rental Housing Crisis*, tells us that the waiting lists for public housing and Section 8 tenant-based assistance is growing and that the average time on the waiting list, before receiving assistance has increased. In the nation's largest cities, the wait can be as long as 5-10 years.

Among the causal factors are the loss of affordable housing stock—a drop of 1.3 million units or 19 percent between 1996 and 1998—and the lack of additional Federal support for affordable housing.

Question. Mr. Secretary, as you know, I support additional housing assistance, including section 8 assistance as part of a menu of flexible tools subject to local decision-making. However, because of budget constraints and the need to meet a number of national objectives in a number of agencies, I have had to make certain compromises that balance funding decisions in a fiscally responsible manner.

Nevertheless, as part of our discussion last year in adding 50,000 incremental vouchers, you promised to ensure that adequate funding would be provided to cover the cost of this incremental rental assistance in fiscally responsible manner. Nevertheless, the HUD fiscal year 2000 Budget now proposes an additional, 100,000 incremental vouchers at an annual cost of some \$585 million. In addition, the VA/HUD Appropriations Subcommittee has the responsibility to cover the cost of those 50,000 incremental vouchers as a recurring annual cost.

Again, I remind you that the costs of renewing expiring section 8 contracts continues to rise each year. For example, the cost of renewing section 8 expiring contracts in fiscal year 1999 is \$9.5 billion and will rise to an actual cost of \$13.6 billion in fiscal year 2000 and to \$15.6 billion in fiscal year 2001. How has HUD responsibly covered the cost of the fiscal year 1999 incremental vouchers and fiscal year 2000 proposed incremental vouchers, especially since HUD has used a budget gimmick of pushing off until fiscal year 2001 or that other programs, such as VA Medical, will have to cut to pay for these contracts. I always try to look ahead that overcharging my credit cards now. How do you plan to pay for these additional contracts in fiscal year 2001 (and to make it real assume flat funding for fiscal year 2001 at the President's budget level for HUD for fiscal year 2000 or at a funding level of \$11.5 billion)?

Answer. I can assure you that the cost of renewing 50,000 incremental units enacted in fiscal year 1999 is fully covered in fiscal year 2000. As stated earlier, the advance appropriation was requested to shift the date the funding is appropriated to the time the funding needs actually occur. The advance appropriation will not be scored under the rules of the Budget Enforcement Act until the start of the next fiscal year, on October 1, 2000. Neither the owners nor the tenants will feel the impact with this methodology change since there will be no change on the expiration dates on the contracts. Funding for contracts renewals in fiscal year 2001 and forward will be addressed again during internal budget negotiation on the fiscal year 2001 Budget. The 50,000 vouchers enacted in fiscal year 1999 and 100,000 vouchers requested in fiscal year 2001 will be covered in our fiscal year 2001 budget request. As Director Lew has stated that funds have been set aside within the Administration's total budget request to fully fund contract renewals and other programs once Congress and the Administration reach an agreement on Social Security.

SECTION 8 OPT-OUTS

Question. HUD has made a point of emphasizing its commitment to low-income families and the provision of affordable housing. Nevertheless, there are a number of section 8 project-based housing developments throughout the country that receive rents that are below market. Because of lost revenue, a number of owners are opting out of the section 8 program and raising rents beyond the financial ability of many residents. This is especially troubling where the projects are elderly or are located in areas where vacancy rates are low. For example, in 1998, 219 section 8 properties with some 25,488 units opted out of the section 8 program. HUD has done little to address this problem and, in fact, a number of HUD policies have exacerbated the loss of this housing and the displacement of low-income families, including the elderly and disabled. This is even more troubling since HUD has both the authority and funding available to renew these section 8 contracts. I am looking for a commitment from HUD to preserve this housing for low-income families and a time schedule reflective of the seriousness of this problem to the many families facing displacement. Also, please advise as to why HUD has not acted.

Answer. HUD has done and is doing all that is feasible with the legislative authority and funds that Congress has made available to this effort. For example, we have just issued instructions to our field offices for an Emergency Initiative to mark up to market project-based rents in developments we believe are most likely to opt-out. Our initiative is necessarily limited by the cost of such increased Section 8 rents and by the authorities available under existing law, but the Emergency Initiative is to prevent further losses in the assisted housing inventory pending Congressional action on the appropriations request for fiscal year 2000, and a package of legislative changes which are being formulated. The Budget request includes suffi-

cient funding for a broader program to stop opt-outs, as well as funding to permit expanded availability of enhanced vouchers to prevent displacement of families in circumstances where owners decline to renew.

In the final analysis, we believe that owners are opting-out for a number of reasons, many of which are outside of the Department's ability to address. HUD cannot unilaterally solve the opt-out problem. We must work in partnership with the Congress to address this important issue.

EEOC INVESTIGATION

Question. Mr. Secretary, as you know, Ms. Gaffney, the HUD IG, is currently the subject of an EEOC investigation centering on a complaint that Ms. Gaffney discriminated in the promotion of a minority staff. It has come to my attention that the Department has contracted with outside counsel in a manner inconsistent with typical investigative practices for EEOC complaints with the Department spending hundreds of thousands of dollars in hiring a number of law firms to handle the investigation. What are the normal costs associated with this type of complaint at HUD?

Answer. The normal costs associated with the investigation of an EEO complaint are described in the exhibits to the report prepared for HUD by Donald Bucklin of Squire, Sanders & Dempsey. Copies of that report and its attached exhibits are attached.

Question. How much has HUD spent and will spend on this investigation? Also what firms have been hired and what have each of these firms been hired to do?

Answer. The law firms Williams & Connolly and Day, Berry & Howard submitted a joint proposal in response to HUD's request for proposals for an EEO investigation and related legal services. The respective responsibilities of these firms and the amounts of their contracts is described in a report prepared for HUD by Donald Bucklin of Squire, Sanders & Dempsey. Copies of that report and its attached exhibits are attached.

Question. Finally, why did HUD feel it necessary to not follow the normal investigative procedures? Does this mean that the normal procedures are inadequate and that other parties in the EEOC process are receiving less justice?

Answer. The specific reasons for HUD's decision to select a new contract investigator for Mr. Newsome's complaint are detailed in a report prepared for HUD by Donald Bucklin of Squire, Sanders & Dempsey. A copy of that report and its attached exhibits are enclosed.

[CLERK'S NOTE.—The following report "HUD EEO Complaint IG-98-01: Review of HUD Actions Relating to the Investigation of the Newsome Allegations," prepared for HUD by Donald Bucklin of Squire, Sanders & Dempsey can be found in the subcommittee files.]

EEOC COMPLAINTS

Question. Please provide a breakdown of all EEOC complaints since January of 1993 by each HUD office, including the Office of the Inspector General, Office of the General Counsel and Office of the Secretary.

Answer. An EEO complaint inventory summary is attached.

TABLE I.—COMPLAINT INVENTORY SUMMARY
