. . .

# **Dynamic Malware Analysis <-> MAEC**

#### Process

- An API call is captured by the analysis engine and mapped to MAEC's enumeration of API calls.
- 2) The MAEC enumerated call is mapped to its corresponding action.
- 3) The MAEC defined action is mapped to a corresponding MAEC effect (as necessary), which is populated by the parameters of the call.
- 4) The MAEC effect is linked to a MAEC object (as necessary).
- 5) Any extra data output (e.g. file attributes, network capture, etc.) from the analysis engine is mapped to its corresponding object (as necessary).

# Test Case: CWSandbox Output -> MAEC

## **Raw CWSandbox Output**

# Sandbox -> MAEC Translator Overview

- Intended as a proof of concept for MAEC
- Currently implemented:

http://www.sunbeltsandbox.com

Sandnet/Vigilant (MITRE developed)\*

\*Not a translator - supports direct output of MAEC XML

## In development:

Anubis

http://anubis.iseclab.org

http://www.threatexpert.com

#### MAEC XML to OVAL XML Converter

- Extracts MAEC Objects (defined as being created by malware)
- Converts Objects into OVAL Representations
- Creates definitions and tests to check for the existence of these objects

#### Capabilities/Use cases

- When used with an OVAL interpreter, it permits the automated testing of the existence of malware artifacts on any host system
- Facilitates the interconnection of malware analysis and malware response

#### Currently supported artifacts:

- (Windows) Files/Directories/Named Pipes
- Registry Keys

# **Ongoing Collaboration**

#### IEEE ICSG Malware Working Group

- Developed Malware Metadata exchange schema to facilitate the sharing of sample data between AV product vendors
  - Attributes for AV classifications, source (URIs), object properties (file hashes, registry keys), boolean properties (isKernel, isPolymorphic)
- MAEC currently imports the IEEE ICSG Malware Metadata exchange schema
- In the future, the IEEE schema may import certain MAEC elements

#### Industry /Government

- Although non-standardized, there has been some related work in this realm done by industry and government
- We are actively collaborating with several companies on how to best leverage each other's efforts
- Likewise, we are planning on leveraging the work done by government in the anti-malware space

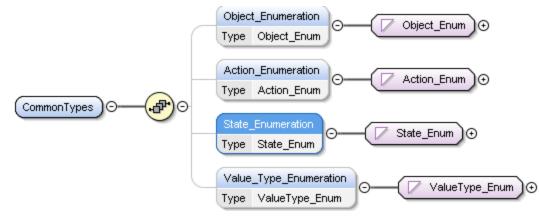

# **Emerging Collaboration**

#### Related MSM Efforts

- There is significant overlap between MAEC, CAPEC, and CEE in describing observed actions, objects, and states.
- As such, we're working on developing a common schematic structure of observables for use in these efforts:

#### Others

- Feature requests on Handshake group, discussion list
  - Anubis & ThreatExpert translators are being developed as a result of a user request
  - We encourage submission of any other such requests

# **MAEC Community: Discussion List**

#### Request to join: <u>http://maec.mitre.org/community/discussionlist.html</u>

# MAEC Community: MAEC Development Group on Handshake

- MITRE hosts a social networking collaboration environment: <u>https://handshake.mitre.org</u>
- Supplement to mailing list to facilitate collaborative schema development

# **Current Status**

#### Initial Schema Release

- V1.01 intended to cover host-based attributes obtained through dynamic analysis/sandboxes
- Soon to be released on public website
- Available immediately on Handshake group

#### Translator Tool Development Ongoing

- CWSandbox Translator released
- MAEC -> OVAL converter released
- Anubis, ThreatExpert translators forthcoming
- All tools are available on Handshake group

## Expand MAEC coverage of network attributes

- Possible focus: bots/botnets
- Create RDF/OWL ontology based on MAEC schema
- Revise schema to better support characterization of relationships between actions/behaviors
- Implement common observables schema
  - Based on MAEC/CAPEC/CEE collaboration
- Encourage and invite more participation in the development process
  - MAEC Website: <u>http://maec.mitre.org</u> (contains MAEC Discussion list sign-up)
  - MAEC Handshake Group

# **Summary**

- MAEC is attempting to address many of the issues that are integral to accurate and unambiguous communication about malware
- The adoption of MAEC will facilitate new methods of correlation and automation against malware
- MAEC is an open, collaborative effort. It needs expertise and input from various parties in order to be successful
