

## Data Table

Tables vary with complexity. Here is an example of row and header identification for a simple uniform table.

```
<table width = 66% border = 1 summary = "This table summarizes the
rates
for sending mail.">
<caption> Rate Table</caption>
<tr>
<th id= "header1"> Weight not over (lbs)</th>
<th id= "header2"> Rate Groups 1 and 2</th>
<th id= "header3"> Rate Groups 3 and 7</th>
<th id= "header4"> Rate Groups 4 and 6</th>
<th id= "header5"> Rate Group 5</th>
<th id= "header6"> Rate Group 8</th>
</tr>
<tr>
<td id= "row1"><center>0.5</center></td>
<td header= "row1 header2"><center> $20.00</center></td>
<td header= "row1 header3"><center> $24.00</center></td>
<td header= "row1 header4"><center> $29.00</center></td>
<td header= "row1 header5"><center> $40.00</center></td>
<td header= "row1 header6"><center> $60.00</center></td>
</tr>
<tr>
<td id= "row2"><center>1</center></td>
<td header= "row2 header2"><center> $31.00</center></td>
<td header= "row2 header3"><center> $34.00</center></td>
<td header= "row2 header4"><center> $41.00</center></td>
<td header= "row2 header5"><center> $51.00</center></td>
<td header= "row2 header6"><center> $72.00</center></td>
</tr>
<tr>
<td id="row3"><center>2</center></td>
<td header="row3 header2"><center> $31.00</center></td>
<td header= "row3 header3"><center> $34.00</center></td>
<td header= "row3 header4"><center> $41.00</center></td>
<td header= "row 3 header5"><center> $65.00</center></td>
<td header= "row 3 header6"><center> $87.00</center></td>
</tr>
</table>
```
