

Report on NIH Collaboration with Other HHS Agencies for FY 2007

Background

Dr. Kington forwards to the Secretary the Report on NIH Collaboration with Other HHS Agencies for FY 2007. This report is required under Section 403A(a) of the Public Health Service (PHS) Act (added to the PHS Act by Section 104 of the National Institutes of Health Reform Act of 2006)¹.

NIH's collaborative efforts with her sister agencies are a critical component of the HHS mission to protect the health of all Americans and provide essential human services, especially for those who are least able to help themselves. As the Nation's leading medical and behavioral research institution, NIH is dedicated to the pursuit of fundamental scientific knowledge about living systems and the application of that knowledge to improve people's health and reduce the burden of disease. Our collaborations with HHS agencies promote the translation of NIH's research to community health practice, coordinate a range of health programs and policies, enable better tracking of patient safety initiatives, and optimize agency efforts to reduce health disparities.

Many of these NIH/HHS collaborative efforts are longstanding – some launched more than 30 years ago. As an example, the Surveillance Epidemiology and End Results (SEER) Program began in 1975 and continues today. The SEER Program is a premier source for cancer statistics in the United States. The program is the only comprehensive source of population-based information that includes stage of cancer at the time of diagnosis and patient survival data. This collaboration with the Centers for Disease and Prevention (CDC) populates cancer data into 18 registries throughout the continental United States, Alaska and Hawaii².

Scope of Report

The NIH collaborated with 12 HHS agencies on 556 activities: 320 activities for which NIH did not provide funding and 236 activities funded with contributions from NIH totaling \$349,621,866 (Figure 1). The categories of collaborations include Committees/Meetings, Databases, Disease Registries, Health Surveys, Information Clearinghouses, Public Education Campaigns, Research Initiatives, Training Initiatives, and Workgroups/Workshops (Figure 2). There were a total of 236 funded and 320 non-funded collaborations. The non-funded collaborations rely chiefly on NIH's intellectual input, typically in the form of committees or meetings. Indeed, while almost half of all non-funded collaborations occur through committees/meetings, 52% of funded collaborations are through Research Initiatives [Figure 1; Table 1].

New NIH collaborations reported for FY 2007 include ten integrated program teams focused on emergency medical countermeasures for biologic and chemical threats through the Public Health Emergency Countermeasures Enterprise (PHEMCE)³; several organ donor research studies⁴; efforts to improve guideline development and implementation⁵; partnerships to address health disparities through improved databases along with behavioral and social science research for understanding and reducing disparities⁶.

The NIH continues to invest in ongoing activities across the spectrum of HHS sister agencies as evident in the individual collaborations listed in Table 1, with most of the NIH dollars funding collaborations with the CDC and FDA (Figure 3). Collaborations featuring comparative

effectiveness research include the Diabetes Prevention Program Outcomes Study (DPPOS)⁷, Treatment Options for Type 2 Diabetes in Adolescents and Youth (TODAY)⁸, the Long-term Oxygen Treatment Trial (LOTT)⁹, Clinical Trials to Prevent Breast Milk HIV Transmission from Mother to Child in Resource-Limited Countries¹⁰, and Nutritional Biochemistry in the Age-Related Eye Disease Study 2 (AREDS2)¹¹. Evidence-based medicine is promoted through the widely used “Ask Medline” web site¹² along with web-based simulations such as Cancer-SPACE, which enables community health centers to enhance cancer screening best practices. Some collaborations address multiple chronic conditions, such as the Enhancing Practice Improvement in Community-based Care for Prevention and Treatment of Drug Abuse or Co-occurring Drug Abuse and Mental Disorders¹³ and the meeting on “Drug Abuse and Risky Behaviors: The Evolving Dynamics of HIV/AIDS”¹⁴.

Intra-HHS collaborations can provide patients, policymakers, and other health care leaders with additional knowledge for making critical health care decisions. Examples that may impact the American public are collaborations with CMS to study islet transplants in Medicare beneficiaries¹⁵, to help prevent eye disease through a Medicare outreach public education campaign¹⁶, and to establish a national data system that collects, analyzes, and distributes information about end-stage renal disease (ESRD) in the United States¹⁷. Other intra-HHS highlights include the Best Pharmaceuticals for Children Act to improve pediatric drug therapeutics through preclinical and clinical testing, educational activities/studies with the CDC, AHRQ and FDA¹⁸.

Prospectus

Given the complexity of the process for translating a new basic scientific discovery into a readily accessible treatment for Americans, the NIH and its sister HHS agencies realize the strategic importance of collaborations. Apart from building the Nation’s health infrastructure, the intra-HHS collaborations target our most pressing diseases, including AIDS, emerging infectious disease, type 2 diabetes and obesity, autism and other mental disorders. Importantly, while many collaborations involve large amounts of funding, many others rely on the exchanges of ideas to deliver the best health care available to the American people. The NIH welcomes this opportunity to report to HHS on the vibrant nature of our FY 2007 collaborations within the Department. As our report details, many of these collaborations have been ongoing for over 30 years, however, NIH continues to form new collaborations when emerging issues and needs arise.

Figure 1: FY 2007 NIH COLLABORATIVE ACTIVITIES AND FUNDING CONTRIBUTIONS WITH HHS AGENCIES

NOTE: Reported collaborations and funding for activities with HHS agencies overlap within the NIH Institutes/Centers/OD Offices thereby exceeding the total combined collaborative submissions of 556 and funding level of \$ 349,621,866. The percents however, are based on the combined collaboration number of 1099 funded and non-funded activities between NIH and each HHS Agencies and rounded up.

Figure 2: FY 2007 NIH FUNDED COLLABORATIVE ACTIVITIES BY CATEGORY

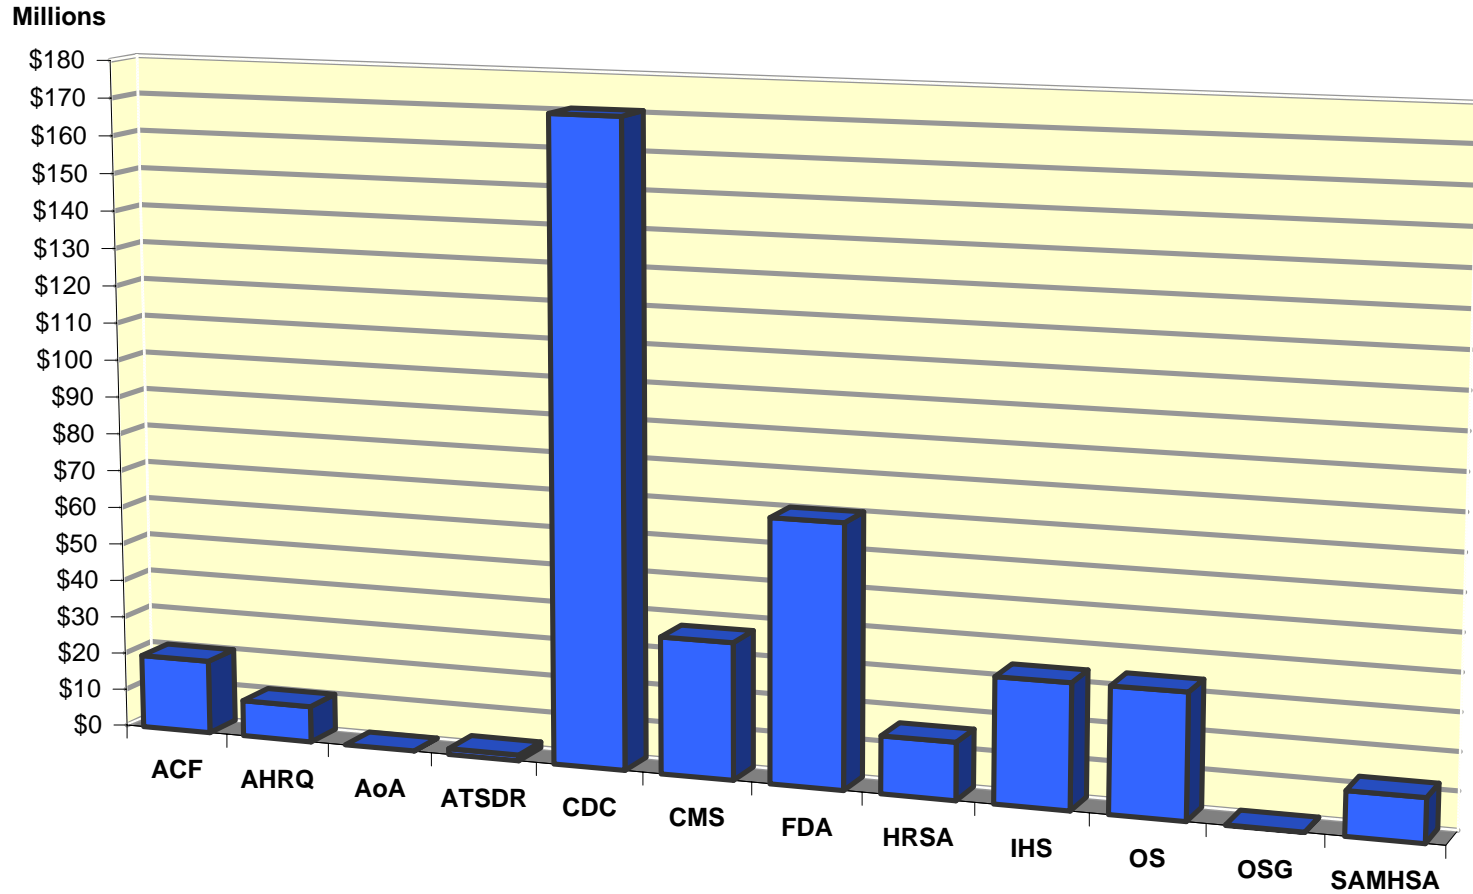

¹ Total NIH funding contributions for all categories combined totals \$349,621,866.

² Each funding percent represents the total NIH dollars contributed for a particular category divided by the total NIH dollars contributed for all 236 funded collaborations in FY 2007. The 320 non-funded collaborations are not included.

³ Other Collaborations include, but are not limited to, data service, data content, detailed personnel, logistical support, standards development, policy initiatives, and writing support.

Figure 3: FY 2007 NIH FUNDING CONTRIBUTIONS FOR COLLABORATIVE ACTIVITIES WITH HHS AGENCIES

The majority of the 236 funded NIH collaborations may involve more than one HHS agencies, so the funding level for each agency is not additive.
The total funding for FY 2007 is \$349,621,866.
