**National Institutes of Health  
FY 2013 Congressional Justification**

---

---

**2013 APPROPRIATIONS LANGUAGE**

---

---

**NATIONAL CANCER INSTITUTE**

For carrying out section 301 and title IV of the PHS Act with respect to cancer, [\$5,081,788,000] *\$5,068,864,000*, of which up to \$8,000,000 may be used for facilities repairs and improvements at the National Cancer Institute—Frederick Federally Funded Research and Development Center in Frederick, Maryland.

**NATIONAL HEART, LUNG, AND BLOOD INSTITUTE**

For carrying out section 301 and title IV of the PHS Act with respect to cardiovascular, lung, and blood diseases, and blood and blood products, [\$3,084,851,000] *\$3,076,067,000*.

**NATIONAL INSTITUTE OF DENTAL AND CRANIOFACIAL RESEARCH**

For carrying out section 301 and title IV of the PHS Act with respect to dental *and craniofacial* diseases, [\$411,488,000] *\$408,212,000*.

**NATIONAL INSTITUTE OF DIABETES AND DIGESTIVE AND KIDNEY DISEASES**

For carrying out section 301 and title IV of the PHS Act with respect to diabetes and digestive and kidney disease, [\$1,800,447,000] *\$1,792,107,000*.

**NATIONAL INSTITUTE OF NEUROLOGICAL DISORDERS AND STROKE**

For carrying out section 301 and title IV of the PHS Act with respect to neurological disorders and stroke, [\$1,629,445,000] *\$1,624,707,000*.

**NATIONAL INSTITUTE OF ALLERGY AND INFECTIOUS DISEASES**

For carrying out section 301 and title IV of the PHS Act with respect to allergy and infectious diseases, [\$4,499,215,000] *\$4,495,307,000*.

**NATIONAL INSTITUTE OF GENERAL MEDICAL SCIENCES**

For carrying out section 301 and title IV of the PHS Act with respect to general medical sciences, [\$2,434,637,000: Provided, That not less than \$276,480,000 is provided for the Institutional Development Awards Program] *\$2,378,835,000* .

**EUNICE KENNEDY SHRIVER NATIONAL INSTITUTE OF CHILD HEALTH AND HUMAN DEVELOPMENT**

For carrying out section 301 and title IV of the PHS Act with respect to child health and human development, [\$1,323,900,000] *\$1,320,600,000*.

**NATIONAL EYE INSTITUTE**

For carrying out section 301 and title IV of the PHS Act with respect to eye diseases and visual disorders, [\$704,043,000] *\$693,015,000*.

**NATIONAL INSTITUTE OF ENVIRONMENTAL HEALTH SCIENCES**

For carrying out section 301 and title IV of the PHS Act with respect to environmental health sciences, [\$686,869,000] *\$684,030,000*.

**NATIONAL INSTITUTE OF ENVIRONMENTAL HEALTH SCIENCES  
(Interior Appropriation)**

For necessary expenses for the National Institute of Environmental Health Sciences in carrying out activities set forth in section 311(a) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended, and section 126(g) of the Superfund Amendments and Reauthorization Act of 1986, [\$79,054,000] *\$78,928,000*.

**NATIONAL INSTITUTE ON AGING**

For carrying out section 301 and title IV of the PHS Act with respect to aging, [\$1,105,530,000] *\$1,102,650,000*.

**NATIONAL INSTITUTE OF ARTHRITIS AND MUSCULOSKELETAL AND SKIN DISEASES**

For carrying out section 301 and title IV of the PHS Act with respect to arthritis and musculoskeletal and skin diseases, [\$536,801,000] *\$535,610,000*.

**NATIONAL INSTITUTE ON DEAFNESS AND OTHER COMMUNICATION DISORDERS**

For carrying out section 301 and title IV of the PHS Act with respect to deafness and other communication disorders, [\$417,061,000] *\$417,297,000*.

**NATIONAL INSTITUTE OF NURSING RESEARCH**

For carrying out section 301 and title IV of the PHS Act with respect to nursing research, [\$145,043,000] *\$144,153,000*.

**NATIONAL INSTITUTE ON ALCOHOL ABUSE AND ALCOHOLISM**

For carrying out section 301 and title IV of the PHS Act with respect to alcohol abuse and alcoholism, [\$460,389,000] *\$457,104,000*.

**NATIONAL INSTITUTE ON DRUG ABUSE**

For carrying out section 301 and title IV of the PHS Act with respect to drug abuse, [\$1,055,362,000] *\$1,054,001,000*.

**NATIONAL INSTITUTE OF MENTAL HEALTH**

For carrying out section 301 and title IV of the PHS Act with respect to mental health, [\$1,483,068,000] *\$1479,204,000*.

**NATIONAL HUMAN GENOME RESEARCH INSTITUTE**

For carrying out section 301 and title IV of the PHS Act with respect to human genome research, [\$513,844,000] *\$511,370,000*.

**NATIONAL INSTITUTE OF BIOMEDICAL IMAGING AND BIOENGINEERING**

For carrying out section 301 and title IV of the PHS Act with respect to biomedical imaging and bioengineering research, [\$338,998,000] *\$336,896,000*.

**NATIONAL CENTER FOR COMPLEMENTARY AND ALTERNATIVE MEDICINE**

For carrying out section 301 and title IV of the PHS Act with respect to complementary and alternative medicine, [\$128,299,000] *\$127,930,000*.

**NATIONAL INSTITUTE ON MINORITY HEALTH AND HEALTH DISPARITIES**

For carrying out section 301 and title IV of the PHS Act with respect to minority health and health disparities research, [\$276,963,000] *\$279,389,000*.

**JOHN E. FOGARTY INTERNATIONAL CENTER**

For carrying out the activities of the John E. Fogarty International Center (described in subpart 2 of part E of title IV of the PHS Act), [\$69,754,000] *\$69,758,000*.

**NATIONAL LIBRARY OF MEDICINE**

For carrying out section 301 and title IV of the PHS Act with respect to health information communications, [\$338,278,000] *\$372,651,000*, of which \$4,000,000 shall be available until September 30, [2013] *2014*, for improvement of information systems: *Provided*, That in fiscal year [2012] *2013*, the National Library of Medicine may enter into personal services contracts

for the provision of services in facilities owned, operated, or constructed under the jurisdiction of the National Institutes of Health (referred to in this title as "NIH"): *Provided further*, That in addition to amounts provided herein, \$8,200,000 shall be available from amounts available under section 241 of the PHS Act to carry out the purposes of the National Information Center on Health Services Research and Health Care Technology established under section 478A of the PHS Act and related health services.

### **NATIONAL CENTER FOR ADVANCING TRANSLATIONAL SCIENCES**

For carrying out section 301 and title IV of the PHS Act with respect to translational sciences, [\$576,456,000] \$639,033,000: *Provided*, That up to [\$10,000,000] \$50,000,000 shall be available to implement section 402C of the PHS Act, relating to the Cures Acceleration Network [: *Provided further*, That funds appropriated may be used to support the reorganization and activities required to eliminate the National Center for Research Resources: *Provided further*, That the Director of the NIH shall ensure that, of all funds made available to Institute, Center, and Office of the Director accounts within "Department of Health and Human Services, National Institutes of Health", at least \$487,767,000 is provided to the Clinical and Translational Sciences Awards program].

### **OFFICE OF THE DIRECTOR (Including Transfer of Funds)**

For carrying out the responsibilities of the Office of the Director, NIH, [\$1,461,880,000] \$1,429,161,000, of which up to \$25,000,000 shall be used to carry out section [213] 212 of this Act: *Provided*, That funding shall be available for the purchase of not to exceed 29 passenger motor vehicles for replacement only: *Provided further*, That NIH is authorized to collect third party payments for the cost of clinical services that are incurred in NIH research facilities and that such payments shall be credited to the NIH Management Fund: *Provided further*, That all funds credited to the NIH Management Fund shall remain available for one fiscal year after the fiscal year in which they are deposited: [*Provided further*, That \$193,880,000 shall be available for continuation of the National Children's Study:] *Provided further*, That [\$545,962,000] \$544,930,000 shall be available for the Common Fund established under section 402A(c)(1) of the PHS Act: *Provided further*, That of the funds provided \$10,000 shall be for official reception and representation expenses when specifically approved by the Director of the NIH: *Provided further*, That the Office of AIDS Research within the Office of the Director of the NIH may spend up to \$8,000,000 to make grants for construction or renovation of facilities as provided for in section 2354(a)(5)(B) of the PHS Act: *Provided further*, That the Director may direct up to 1 percent of the total made available in this or any other Act to all National Institutes of Health appropriations to activities that the Director may so designate: *Provided further*, That no such appropriation shall be decreased by more than 1 percent by any such transfers and that the Congress is promptly notified of the transfer.

## **BUILDINGS AND FACILITIES**

For the study of, construction of, renovation of, and acquisition of equipment for, facilities of or used by NIH, including the acquisition of real property, [\$125, 581,000] *\$125,308,000* to remain available until [September 30, 2016] *expended*.

## GENERAL PROVISIONS

SEC. 203. None of the funds appropriated in this title] *Act for the National Institutes of Health, the Agency for Healthcare Research and Quality, and the Substance Abuse and Mental Health Services Administration* shall be used to pay the salary of an individual, through a grant or other extramural mechanism, at a rate in excess of Executive Level II.

SEC. [207] 206. The Director of the NIH, jointly with the Director of the Office of AIDS Research, may transfer up to 3 percent among institutes and centers from the total amounts identified by these two Directors as funding for research pertaining to the human immunodeficiency virus: *Provided*, that the Committees on Appropriations of the House of Representatives and the Senate are notified at least 15 days in advance of any transfer.

SEC. [208] 207. Of the amounts made available in this Act for NIH, the amount for research related to the human immunodeficiency virus, as jointly determined by the Director of] NIH and the Director of the Office of AIDS Research, shall be made available to the “Office of AIDS Research” account. The Director of the Office of AIDS Research shall transfer from such account amounts necessary to carry out section 2353(d)(3) of the PHS Act.

SEC. [213] 212. (a) **AUTHORITY.**—Notwithstanding any other provision of law, the Director of NIH (“Director”) may use funds available under section 402(b)(7) and 402(b)(12) of the PHS Act to enter into transactions (other than contracts, cooperative agreements, or grants) to carry out research identified pursuant to such section 402(b)(7) (pertaining to the Common Fund) or research and activities described in such section 402(b)(12).

(b) **PEER REVIEW.**—In entering into transactions under subsection (a), the Director may utilize such peer review procedures (including consultation with appropriate scientific experts) as the Director determines to be appropriate to obtain assessments of scientific and technical merit. Such procedures shall apply to such transactions in lieu of the peer review and advisory council review procedures that would otherwise be required under sections 301(a)(3), 405(b)(1)(B), 405(b)(2), 406(a)(3)(A), 492, and 494 of the PHS Act.

SEC. [216] 215. Not to exceed \$45,000,000 of funds appropriated by this Act to the institutes and centers of the National Institutes of Health may be used for alteration, repair, or improvement of facilities, as necessary for the proper and efficient conduct of the activities authorized herein, at not to exceed \$3,500,000 per project.

SEC. [217] 216. Of the amounts made available for NIH, 1 percent of the amount made available for National Research Service Awards (“NRSA”) shall be made available to the Administrator of the Health Resources and Services Administration to make NRSA awards for research in primary medical care to individuals affiliated with entities who have received grants or contracts under Section 747 of the PHS Act, and 1 percent of the amount made available for NRSA shall be made available to the Director of the Agency for Healthcare Research and Quality to make NRSA awards for health service research.

[SEC. 221. (a) **ESTABLISHMENT OF NATIONAL CENTER FOR ADVANCING TRANSLATIONAL SCIENCES; ELIMINATION OF NATIONAL CENTER FOR**

RESEARCH RESOURCES.—(1) IN GENERAL.—Subpart 1 of part E of title IV of the Public Health Service Act (42 U.S.C. 287 et seq.) is amended—(A) in the subpart heading, by striking “National Center for Research Resources” and inserting “National Center for Advancing Translational Sciences”; (B) by striking sections 480 and 481; and (C) by amending section 479 to read as follows: “**SEC. 479. NATIONAL CENTER FOR ADVANCING TRANSLATIONAL SCIENCES.** “(a) PURPOSE.—The purpose of the National Center for Advancing Translational Sciences (in this subpart referred to as the ‘Center’) is to advance translational sciences, including by—“(1) coordinating and developing resources that leverage basic research in support of translational science; and “(2) developing partnerships and working cooperatively to foster synergy in ways that do not create duplication, redundancy, and competition with industry activities. “(b) CLINICAL TRIAL ACTIVITIES.—“(1) IN GENERAL.—The Center may develop and provide infrastructure and resources for all phases of clinical trials research. Except as provided in paragraph (2), the Center may support clinical trials only through the end of phase IIA. “(2) EXCEPTION.—The Center may support clinical trial activities through the end of phase IIB for a treatment for a rare disease or condition (as defined in section 526 of the Federal Food, Drug, and Cosmetic Act) so long as— “(A) the Center gives public notice for a period of at least 120 days of the Center’s intention to support the clinical trial activities in phase IIB; “(B) no public or private organization provides credible written intent to the Center that the organization has timely plans to further the clinical trial activities or conduct clinical trials of a similar nature beyond phase IIA; and “(C) the Center ensures that support of the clinical trial activities in phase IIB will not increase the Federal Government’s liability beyond the award value of the Center’s support. “(c) ANNUAL REPORT.—The Center shall publish an annual report that, with respect to all research supported by the Center, includes a complete list of— “(1) the molecules being studied; H. R. 2055—302 “(2) clinical trial activities being conducted; “(3) the methods and tools in development; “(4) ongoing partnerships, including— “(A) the rationale for each partnership; “(B) the status of each partnership; “(C) the funding provided by the Center to other entities pursuant to each partnership, and “(D) the activities which have been transferred to industry pursuant to each partnership; and “(5) known research activity of other entities that is or will expand upon research activity of the Center.” (2) LIST OF INSTITUTES AND CENTERS.—Section 401(b)(21) of the Public Health Service Act (42 U.S.C. 281(b)(21)) is amended by striking “National Center for Research Resources” and inserting “National Center for Advancing Translational Sciences”.

(b) ASSIGNMENT OF CERTAIN FUNCTIONS OF FORMER NATIONAL CENTER FOR RESEARCH RESOURCES.—(1) BIOMEDICAL AND BEHAVIORAL RESEARCH FACILITIES.—Section 481A of the Public Health Service Act (42 U.S.C. 287a–2)— (A) is redesignated as section 404I and is moved to follow section 404H of such Act (42 U.S.C. 283j); and (B) is amended— (i) in subsection (a)(1), by striking “acting through the Director of the Center or the Director of the National Institute of Allergy and Infectious Diseases” and inserting “acting through the Office of the Director of NIH or the Director of the National Institute of Allergy and Infectious Diseases”; (ii) in subsections (c), (d), (e), and (f)(2), by striking “Director of the Center or the Director of the National Institute of Allergy and Infectious Diseases” each place it appears and inserting “Director of NIH, acting through the Office of the Director of NIH or the National Institute of Allergy and Infectious Diseases,”; (iii) in subsection (b)(2), by striking “Director of the Center” each place it appears and inserting “Director of NIH”; (iv) in subsections (b)(3)(A), (f)(1), and (g), by striking the comma at the end of

“Director of the Center,” each place it appears; (v) by striking “Director of the Center” each place it appears and inserting “Director of NIH, acting through the Office of the Director of NIH,”; (vi) in subsection (b)— (I) in paragraph (1)(A), by striking “within the Center”; and (II) in paragraph (2)— (aa) in subparagraph (A), by striking “and the advisory council established under section 480 (in this section referred to as the ‘Advisory Council’)” and inserting “and the Council of Councils established under section 402(l) (in this section referred to as the ‘Council’)”; and H. R. 2055—303 (bb) in subparagraphs (B), (C), and (D), by striking “Advisory” each place it appears; and (vii) in subsection (g), by striking “after consultation with the Advisory Council” and inserting “after consultation with the Council”. (2) CONSTRUCTION OF REGIONAL CENTERS FOR RESEARCH ON PRIMATES.—Section 481B of the Public Health Service Act (42 U.S.C. 287a–3)— (A) is redesignated as section 404J and is moved to follow section 404I, as redesignated by paragraph (1); and (B) in subsection (a), is amended— (i) by striking “by the National Center for Research Resources” and inserting “by the Director of NIH, acting through the Office of the Director of NIH,”; And (ii) by striking “481A” and inserting “404I”. (3) SANCTUARY SYSTEM FOR SURPLUS CHIMPANZEES.—Section 481C of the Public Health Service Act (42 U.S.C. 287a– 3a)— (A) is redesignated as section 404K and is moved to follow section 404J, as redesignated by paragraph (2); and (B) in subsection (d)(4)(A)(ii), is amended by striking “that is carried out by the National Center for Research Resources” and inserting “that is carried out by the Director of NIH, acting through the Office of the Director of NIH,”. (4) SHARED INSTRUMENTATION GRANT PROGRAM.—Section 305 of the Public Health Improvement Act (42 U.S.C. 287 note)— (A) is redesignated as section 404L of the Public Health Service Act and is moved to follow section 404K of that Act, as redesignated by paragraph (3); and (B) is amended— (i) by striking subsection (a) and redesignating subsections (b) and (c) as subsections (a) and (b), respectively; (ii) in subsection (a), as so redesignated, by striking “under the program described in subsection (a)” and inserting “under the Shared Instrumentation Grant Program”; (iii) by striking “Director of the National Center for Research Resources” each place it appears and inserting “Director of NIH, acting through the Office of the Director of NIH,”; and (iv) in subsection (b), as so redesignated— (I) by striking “in subsection (a)” and inserting “in subsection (a), the”; and (II) by striking “of the Public Health Service Act (42 U.S.C. 289a)”. (5) INSTITUTIONAL DEVELOPMENT AWARD PROGRAM.—Title IV of the Public Health Service Act (42 U.S.C. 281 et seq.) is amended— (A) in section 461, by striking the section heading and designation and all that follows through “The general purpose” and inserting the following: H. R. 2055—304 “**SEC. 461. NATIONAL INSTITUTE OF GENERAL MEDICAL SCIENCES.** “(a) GENERAL PURPOSE.—The general purpose”; (B) by moving subsection (g) of section 402 to the end of section 461, as amended, and redesignating that subsection as subsection (b); and (C) in section 461(b), as so redesignated— (i) by striking “(b)(1)(A) In the case of” and inserting the following: “(b) INSTITUTIONAL DEVELOPMENT AWARD PROGRAM.— “(1)(A) In the case of”; (ii) by moving two ems to the right— (I) subparagraphs (B) and (C) of paragraph (1); (II) clauses (i), (ii), and (iii) of such subparagraph (C); and (III) paragraph (2); and (iii) in paragraph (1)(A), by striking “acting through the Director of the National Center for Research Resources” and inserting “acting through the Director of the National Institute of General Medical Sciences”.

(c) ASSIGNMENT OF CERTAIN OFFICES AND FUNCTIONS TO NATIONAL CENTER FOR ADVANCING TRANSLATIONAL SCIENCES.—(1) CURES ACCELERATION NETWORK.—Section 402C of the Public Health Service Act (42 U.S.C.

282d)— (A) is redesignated as section 480 and is moved to follow section 479; (B) in subsection (b), is amended in the matter that precedes paragraph (1) by striking “within the Office of the Director of NIH” and inserting “within the Center”; (C) by striking “Director of NIH” each place it appears and inserting “Director of the Center”; and (D) in the headings of subsections (d)(4) and (d)(4)(B), by striking “DIRECTOR OF NIH” each place it appears and inserting “DIRECTOR OF THE CENTER”. (2) OFFICE OF RARE DISEASES.—Title IV of the Public Health Service Act (42 U.S.C. 281 et seq.) is amended— (A) in section 404F— (i) by redesignating such section as section 481 and moving such section to follow section 480, as redesignated by paragraph (1); (ii) in subsection (a)— (I) by striking “within the Office of the Director of NIH” and inserting “within the Center”; and (II) by striking “Director of NIH” and inserting “Director of the Center”; and (iii) in subsection (b)(1)(C), by striking “404G” and inserting “481A”; and (B) in section 401(c)(2)(A), by striking “the Office of Rare Diseases,”. (3) RARE DISEASE REGIONAL CENTERS OF EXCELLENCE.— Section 404G of the Public Health Service Act (42 U.S.C. 283i) is redesignated as section 481A and is moved to follow section 481, as redesignated by paragraph (2). (4) GENERAL CLINICAL RESEARCH CENTERS.—Section 481D of the Public Health Service Act (42 U.S.C. 287a–4)— (A) is redesignated as section 481B; and H. R. 2055—305 (B) in subsection (a), is amended by striking “Director of the National Center for Research Resources” and inserting “Director of the Center”.

(d) CONFORMING AMENDMENTS.—Title IV of the Public Health Service Act (42 U.S.C. 281 et seq.) is amended— (1) in section 402(b)(24) (42 U.S.C. 282(b)(24)), by striking “402C” and inserting “480”; (2) in section 404C(e)(3)(A) (42 U.S.C. 283e(e)(3)(A)), by striking “and the Director of the Center for Research Resources”; (3) in section 464z–3(i)(1) (42 U.S.C. 285t(i)(1))— (A) by striking “Director of National Institute for Research Resources” and inserting “Director of NIH”; (B) by striking “481(c)(3)” and inserting “404I(c)(2)”; And (C) by inserting “under such section” after “Institutions of Emerging Excellence”; (4) in section 499(c)(1)(E) (42 U.S.C. 290b(c)(1)(E)), by striking “section 402C” and inserting “section 480”.]

**National Institutes of Health  
FY 2013 Congressional Justification**

Language Analysis

Language Provision	Explanation
<p>National Institute of General Medical Sciences: [Provided that not less than \$276,480,00 is provided for the Institutional Development Awards program]</p>	<p>NIH requests that this provision be removed to provide NIH the flexibility to allocate funding based on scientific needs and opportunity.</p>
<p>National Library of Medicine: "... of which \$4,000,000 shall be available until September 30, [2013] 2014 for improvement of information systems; Provided, That in fiscal year [2012] 2013, the National Library of Medicine may enter into personal services contracts....."</p>	<p>Consistent with the FY 2012 bill, NIH is requesting availability of funds for two years.</p>
<p>National Institute of Dental and Craniofacial Research: ...with respect to dental <i>and craniofacial</i> diseases,...."</p>	<p>Section 212 of the Departments of Labor, Health and Human Services, and Education, and Related Agencies Appropriations Act, 1999 (as contained in section 101(f) of division A of P.L. 105-277) changed the name of NIDR to the National Institute of Dental and Craniofacial Research. Therefore, the insertion of "and craniofacial" will make this provision consistent with current law.</p>
<p>National Center for Advancing Translational Sciences: [ Provided further, That funds appropriated may be used to support the reorganization and activities required to eliminate the National Center for Research Resources: Provided further, That the Director of NIH shall ensure that, of all the funds made available to Institute, Center, and Office of the Director accounts within "Department of Health and Human Services, National Institutes of Health", at least \$487,767,000 is provided to the Clinical and Translational Sciences Awards program}</p>	<p>The first provision is no longer needed since the reorganization has taken place.</p> <p>NIH requests that the second provision be removed to provide NIH the flexibility to allocate funding based on scientific needs and opportunity.</p>

Language Provision	Explanation
Office of the Director: [Provided further, That \$193,880,000 shall be available for the continuation of the National Children’s Study;]	NIH requests that this provision be removed to provide NIH the flexibility to allocate funding based on scientific needs and opportunity. Funding requested for the National Children’s Study is identified within the Office of the Director Congressional Justification and does not need to be earmarked within appropriation bill language to be carried out.
Office of the Director: “Provided further, That the Director may direct up to 1 percent of the total made available in this or any other Act to all National Institutes of Health appropriations to activities that the Director may so designate: Provided further, That no such appropriation shall be decreased by more than 1 percent by any such transfers and that the Congress is promptly notified of the transfer:”	This provision provides clarity regarding the NIH Director’s ability to use 1 percent transfer authority.
Buildings and Facilities: ....”to remain available until [September 30, 2016] expended....”	Previous appropriations bills provided the appropriations for B&F on a “no-year” basis. The Consolidated Appropriations Act, 2012 (P.L. 112-74) changed “expended” to “September 30, 2016.” NIH proposes reverting back to the previous language to provide NIH maximum flexibility to administer these resource.

<sup>1</sup> Does not include comparability adjustments. Superfund and Type 1 diabetes are included except where indicated. Separate appropriation for Superfund Research activities at NIEHS beginning in FY 2001. Includes amounts authorized to the NIDDK for Type 1 diabetes research beginning with the FY 2002 Appropriation.

<sup>2</sup> Reflects: \$2,111,224,000 for HIV research in the NIH Office of AIDS Research.

<sup>3</sup> Reflects: a) \$2,244,987,000 appropriated to the ICs for HIV research, b) across-the-board reduction of \$8,666,000 and c) \$5,800,000 transferred to the DHHS.

<sup>4</sup> Reflects: \$2,535,672,000 appropriated to the ICs for HIV research and \$10.5 million appropriated from the Emergency Relief Fund, b) across-the-board reduction of \$9,273,000, c) rescissions for Labor/HHS (\$22,946,000) and government-wide (\$34,243,000) and d) transfer of \$100M to the Global Fund for HIV/AIDS, Malaria, and Tuberculosis.

<sup>5</sup> Excludes \$583,000 transferred to the Department of Homeland Security.

<sup>6</sup> Reflects: a) \$2,747,463,000 appropriated to the ICs for HIV research and NIH's share of across-the-board reduction of \$177,085,000, b) transfers of \$99,350,000 to the Global Fund for HIV/AIDS, Malaria, and Tuberculosis, and \$583,000 to the Department of Homeland Security.

<sup>7</sup> Reflects: a) \$2,850,581,000 appropriated to the ICs for HIV research, b) across-the-board reduction of \$165,459,000, c) Labor/HHS rescission of \$17,492,000, and d) transfer of \$149,115,000 to the Global Fund for HIV/AIDS, Malaria, and Tuberculosis.

<sup>8</sup> Reflects: a) \$2,920,551,000 appropriated to the ICs for HIV research, b) across-the-board reduction of \$229,390,000, b) Labor/HHS rescission of \$6,787,000, c) transfer of \$99,200,000 to the Global Fund for HIV/AIDS, Malaria, and Tuberculosis.

<sup>9</sup> Reflects: a) \$2,903,664,000 appropriated to the ICs for HIV research, b) NIH share of Government-wide rescission of \$287,356,000, and c) transfer of \$99,000,000 to the Global Fund for HIV/AIDS, Malaria, and Tuberculosis.

<sup>10</sup> Reflects funding levels approved by the Appropriations Committees.

<sup>11</sup> Reflects: a) \$2,905,802,000 appropriated to the ICs for HIV research, b) add-on for pay cost of \$18,087,000, c) transfer of \$99,000,000 to the Global Fund, and d) Supplemental Bill transfer of \$99,000,000.

<sup>12</sup> Reflects: a) \$2,928,345,000 appropriated to the ICs for HIV research, b) NIH share of the Government-wide rescission of \$520,929,000, c) transfer of \$294,759,000 to the Global Fund, and d) a supplemental appropriation of \$150,000,000.

<sup>13</sup> Excludes funding for Superfund Research activities for which the Appropriations Committee did not mark up a figure.

<sup>14</sup> Provided under P.L. 111-5.

<sup>15</sup> Reflects Labor/HHS appropriation of \$30,705,201,000; transfer of \$300,000,000 to Global AIDS funds; \$1,000,000 transfer from HHS for the Interagency Autism Coordinating Committee and Secretary's 1% transfer to HHS of \$4,587,000.

<sup>16</sup> Reflects: \$3,059,277,000 appropriated to the ICs for HIV research; \$998,000 transfer from HHS to the Interagency Autism Coordinating Committee.

<sup>17</sup> Reflects: \$3,074,921,000 appropriated to the ICs for HIV research; Omnibus Across-the-Board rescission of \$58,130,567 and the Secretary's transfer of \$8,726,791.

## Program Description and Accomplishments

NIH supports biomedical and behavioral research, with activities ranging from basic research, which explores the fundamental workings of biological systems and behavior, to studies that examine disease and treatments in clinical settings, to prevention and population-based analyses of health status and needs. The NIH mission also involves the collection, dissemination, and exchange of information in medicine and health. Since its formal establishment in 1930, when the construction of two buildings and the creation of a system of fellowships was authorized, NIH has evolved into its present day status as the largest source of funding for biomedical research in the world. NIH funding supports thousands of scientists in universities and other research institutions in every state across America and around the globe, and creates hundreds of thousands of high-quality jobs.

NIH is comprised of 27 Institutes and Centers (ICs) that support an extensive extramural research community, as well as a much smaller intramural research program on NIH's main campus and satellite facilities. While some of the ICs focus on specific diseases (e.g., cancer, diabetes), others concentrate on organ systems (e.g., heart, eye, kidney); some examine a stage of development (e.g., childhood, the aging population), or address overarching opportunities (e.g., deciphering the human genome, understanding cellular biology) and technologies (e.g., biomedical imaging). ICs support research and training through extramural activities and also conduct "in-house" science and training through intramural activities. One of the ICs, the National Library of Medicine, provides the world's largest medical library, including electronic information services that deliver trillions of bytes of data to millions of users— researchers and the general public—every day.

### *Extramural Research Program*

The extramural community is composed of over 300,000 non-Federal research personnel at over 2,500 institutions throughout the country and abroad. With NIH support, these investigators and their institutions conduct the majority of research that leads to improvements in the prevention, detection, diagnosis, and treatment of disease and disability. In tandem with the conduct of research, the extramural community also contributes to training the next generation of researchers, enhancing the skills and abilities of established investigators, and renewing the infrastructure for NIH-sponsored research. More than \$8 out of every \$10 appropriated to NIH flows out to the scientific community at large. NIH funds are awarded primarily as grants through a highly competitive, two-tiered independent peer-review process that ensures support of the most promising science and the most productive scientists. In FY 2011, NIH reviewed over 60,000 research project grant (RPG) applications.

### *Intramural Research Program (IRP)*

A much smaller fraction of NIH annual budget authority, approximately 10-11 percent, supports a core program of basic, translational, and clinical research activities at NIH's own facilities. The IRP is administered and staffed by NIH physicians and scientists. Approximately 1,200 principal investigators lead intramural research projects that involve more than 5,500 trainees ranging from high school students to postdoctoral and clinical fellows. This in-house research program includes the NIH Clinical Center—a world class resource—that provides scientific, clinical, and educational benefits to citizens of the United States and the world. NIH ensures that

the research conducted in its intramural laboratories is of the highest caliber by using a process in each IC that involves a board of scientific counselors, composed of external experts, that reviews the intramural programs and makes recommendations to the Institute Director.

The unique scientific environment within the IRP fosters high-risk, high-reward research. It is an environment conducive to research that cannot readily be funded or accomplished in traditional academia. This scientific system includes a vast and advanced infrastructure of shared resources, a broad range of expertise, and the world's largest clinical hospital. Characterized by relatively stable funding and intellectual freedom, this environment enables the pursuit of long-term research projects, and the ability to change directions quickly when the opportunity or need arises.

### *Organizational Initiatives and Reforms*

For FY 2012, NIH proposed and Congress funded the creation of a new National Center for Advancing Translational Sciences (NCATS) to strengthen the discipline of translational science and address the scientific and technical challenges in the development and effective utilization of diagnostics and therapeutics. The NCATS mission is to catalyze the development of innovative methods and technologies that will enhance the development, testing, and implementation of diagnostics and therapeutics across a wide range of human diseases and conditions. In doing so, NCATS will capitalize on significant scientific progress in fields such as genomics, biochemistry, and informatics. It will improve the processes of therapeutics and diagnostics development by experimenting with innovative approaches in an open-access model; choosing therapeutic projects to evaluate these innovative approaches; and promoting interactions among the private, public, and government sectors.

Establishing NCATS was budget neutral and consistent with a recommendation of the NIH Scientific Management Review Board (SMRB). The reorganization created the optimal infrastructure and environment to advance translational science by realigning several existing NIH programs previously located within the National Center for Research Resources (NCRR), the National Human Genome Research Institute (NHGRI), and the NIH Office of the Director (OD). Another component of NCATS is the new Cures Acceleration Network (CAN), which was authorized in 2010. The largest NCRR program, Clinical and Translational Science Awards, moved to NCATS, the remaining non-translational functions of the NCRR moved to the National Institute of General Medical Sciences (NIGMS), the National Institute of Biomedical Imaging and Bioengineering (NIBIB), the National Institute on Minority Health and Health Disparities (NIMHD), the National Heart, Lung, and Blood Institute (NHLBI), and the OD.

The SMRB also has made recommendations about the NIH Clinical Center and the organization of substance use, abuse, and addiction research at NIH. The Clinical Center recommendations, which focused on expanding its vision and role, streamlining its governance structure, and ensuring its fiscal viability and sustainability, are being reviewed and analyzed. The SMRB recommendation regarding the creation of a new institute to integrate relevant research portfolios on substance use, abuse, and addiction at NIH is under consideration for implementation in FY 2014.

## **Long Range NIH Research Contributions to Improvements in Health Care and Public Health: Selected Examples**

In the last 30 years, NIH biomedical research has yielded significant scientific discoveries that both extend lifespan and reduce illnesses in the U.S. and worldwide. Data from the National Long-term Care Survey shows that from 1982 to 2004, the age-standardized prevalence of reported chronic disability among American seniors (age 65 and older) dropped nearly 30 percent. A major component of this drop comes from improvements in prevention and treatment of heart attacks and strokes, including control of cholesterol levels and hypertension with pharmaceuticals, as well as improvements in materials and devices such as drug-eluting stents. NIH played a large role in creating these improvements. Other specific advances include treatment of arthritis with pharmaceuticals and joint replacements, early detection tools for cancer, and improvement in technologies, such as safe and effective outpatient cataract surgery.

Other examples of health improvements over the last several decades that largely originated from NIH-funded research are:

***Age-Related Macular Degeneration (AMD):*** Forty years ago there was little or nothing one could do to prevent or treat advanced AMD and blindness. Because of new treatments and procedures based on NIH research, 750,000 Americans who would have gone blind over the next five years instead will continue to have useful vision.

***Breast Cancer:*** The five-year survival rate for women diagnosed with breast cancer was 75 percent in the mid-1970s and mastectomy was the only surgical treatment option. Primarily because of NIH-supported research, genetic testing now allows for tailored, safer, and more efficient treatments for breast cancer and the five-year survival rate has risen to over 90 percent.

***Cervical Cancer:*** Cervical cancer is the fifth most deadly cancer in women. Due to groundbreaking NIH research, an FDA-approved vaccine now is available to prevent the development of 70 percent of cervical cancers.

***Colorectal Cancer:*** From 1974-76, in an NIH-sponsored study, the five-year survival rate for patients with colon and rectum cancer was 50 percent. In 2009, based on NIH-supported clinical trials using new diagnostics and treatments, a comparable patient group had a five-year survival rate of over 70 percent. Due in part to improved surgical techniques, 90 percent of colorectal cancers can now be surgically cured if detected early.

***Cochlear Implants:*** Because of NIH-supported research, profoundly deaf children that receive a cochlear implant within the first two years of life now have the same skills, opportunities, and potential as their hearing classmates. A cochlear implant can save close to \$1 million in services, special education, and adaptation related to a single child that is deaf before age three.

***Type 1 Diabetes:*** Fifty years ago, over 30 percent of patients died within 25 years of a diagnosis of type 1 diabetes and about 90 percent developed diabetic retinopathy. Today, due to tight blood glucose control, babies born to mothers with the disease have survival rates similar to the general

population, and heart disease, stroke, eye, kidney, and nerve disease in type 1 diabetics have all been reduced by over 50 percent.

***Hepatitis B:*** In the mid-1980s, hepatitis B infection caused untreatable and fatal liver disease and was among the top ten causes of death in the world. Due to intensive vaccination programs based on NIH research, the rate of acute hepatitis B in the U.S. has fallen by more than 80 percent and worldwide chronic hepatitis B levels also have fallen dramatically.

***HIV/AIDS:*** In the 1980s, the diagnosis of HIV infection was a virtual death sentence. Due to antiretroviral drugs, many of which were developed with NIH support, today an HIV-positive 20-year-old can be expected to reach the age of 70.

***Rheumatoid Arthritis:*** Rheumatoid arthritis is a progressive autoimmune disorder that causes pain, swelling, stiffness, and loss of function in the joints in about 1.3 million adults in the U.S. NIH-funded basic research led directly to the development of drugs that block the inflammatory cascade, providing treatment, rather than palliative care, to patients worldwide.

## **Science Advances**

NIH funded research leads to thousands of new findings every year. While it can take more time for new scientific and technological developments to translate into significant improvements in health, important scientific discoveries are made every day. These incremental advances are the building blocks on which further progress is made. Highlighted below are just a few of the many recent accomplishments from NIH research:

- Investigators recently reported the detection of a single metastatic cell from lung cancer among one billion normal blood cells. This could allow for early detection of tumor invasion into the bloodstream long before distant metastases are detected, improving the management and treatment of this devastating disease.
- In 2010, intramural researchers discovered that ketamine, an anesthetic medication, provides rapid and effective treatment for depressive symptoms among bipolar disorder patients. A 2011 study in mice has now identified the molecular players involved in the rapid antidepressant effects of ketamine, since the drug's side effects make it impractical for long-term use. The findings could lead to better, faster-acting antidepressant medications in the future.
- Toddlers with autism showed measurable and lasting improvements in social, cognitive and language skills after just six months of targeted, interpersonal behavioral intervention. The intervention provides autistic children with a scaffold for the development of social communication skills once they graduate from treatment.
- Researchers in an NIH-funded study were able to diagnose autism spectrum disorders (ASD) in children aged 1-3 years by tracking eye gaze patterns in response to a 1-minute video of computer screensavers next to images of dancing children. Diagnosis of ASD by 14 months of age is now a realistic possibility.

- Scientists have developed an automated test that can rapidly and accurately detect tuberculosis and drug-resistant TB bacteria in patients. This finding could pave the way for earlier diagnosis and more targeted treatment of this disease, which still is a leading cause of death in many countries of the world.
- An NIH-funded international study demonstrated that HIV-infected men and women can significantly reduce the risk of sexual transmission of HIV to an uninfected partner by lowering their viral load by taking antiretroviral medicines.
- Significant progress was made toward the development of a universal flu vaccine that would confer longer term protection against multiple influenza virus strains. NIAID-supported researchers have identified the regions of influenza viral proteins that remain unchanged among seasonal and pandemic strains. These findings will inform the development of influenza vaccines that might one day provide universal protection against the broad range of influenza strains. Such a universal influenza vaccine would make yearly flu shots a thing of the past and save thousands of lives while also preventing countless days of lost work.
- Scientists have devised an artificial human liver that, when implanted in mice, continues to make human proteins and break down certain drugs as the human liver would. The technique of “humanizing” an animal model for testing drug toxicity hopefully will lead to more accurate testing of potential medications as well as faster drug development.
- A cutting edge research tool called optogenetics now allows researchers to activate or suppress, with millisecond precision, cells in the brains of mouse models of human disease. Using optogenetics, researchers identified a brain circuit that directly regulates anxious behavior and could therefore be a promising therapeutic target for psychiatric diseases such as anxiety and depression.
- Scientists have developed a 3-D imaging method that uses both light and sound waves to spot fatty deposits within tissues. The technique holds promise for a non-invasive means to detect atherosclerosis and other disorders that involve fatty buildup.

### **Economic Benefits of NIH Research**

Although NIH’s core mission is to improve human health, in pursuit of that mission, the agency produces both immediate and enduring economic benefits that are of local, state, national, and indeed global significance. For example, documented study conducted by United for Medical Research (*An Economic Engine*) in 2010 estimated that NIH funding led to the creation of 487,900 quality jobs; produced \$68.035 billion in new economic activity and allowed 16 states to experience job growth of 10,000 jobs or more.

A published report, the *Economic Impact of the Human Genome Project*, prepared by the Battelle Technology Partnership Practice, estimated a stunning \$796 billion in economic benefits to the U.S. from the initial federal investment of \$3.8 billion in the Human Genome Project. That’s a 141 to 1 return on investment. In 2010 alone, human genome sequencing activities

generated \$67 billion in U.S. economic output, \$20 billion in personal income for Americans, and 310,000 U.S. jobs.

### **NIH Research Drives Innovation and Supports the Global Competitive Stature of the U.S.**

NIH research and discoveries have led to dramatic growth in the field of medical innovation. These industries innovate and compete by leveraging NIH research and knowledge. The medical innovation sector employs almost 1 million people and paid total wages of \$84 billion as of 2008; and exported \$90 billion of goods and services in 2010.<sup>1</sup>

But other countries are clearly gaining ground. On June 29, 2011, the European Commission proposed to increase spending on research and innovation by about 45 percent over the next seven years.<sup>2</sup> The proposal includes three main objectives: excelling in science, meeting “grand challenges,” and improving competitiveness.

Although NIH led the human genome project starting in 1990, successfully mapped the human genome by 2003, and continues to discover many causes of genetic diseases, China may soon take the lead in genome sequencing. At the end of this year, the Chinese genomics center in Shenzhen, BGI, will have the world’s largest next-generation sequencing capacity. It will surpass the DNA sequencing capacity of the entire U.S., representing a third of the world’s sequencing capacity, and be able to sequence an individual’s genes for less than \$10,000 U.S.<sup>3</sup>

**National Institutes of Health  
FY 2013 Congressional Justification**

**Funding History<sup>1</sup>**

2008	\$29,312,311,000
2008 Supp.	\$150,000,000
2009	\$30,545,098,000
2009 (ARRA)	\$10,400,000,000
2010	\$31,242,613,000
2011	\$30,935,000,000
2012	\$30,852,187,000
2013 PB	\$30,852,187,000

<sup>1</sup> Annual amount includes budget authority from: (1) Special Type 1 Diabetes Research program received via Treasury (mandatory); (2) Global HIV/AIDS program resources later transferred to U.S. Dept. of State; and (3) Superfund Research program derived from Interior Appropriations. Also includes (4) transfer-in dollars from HHS for NLM Program Evaluation and \$998,000 General Departmental Management (GDM) transfer for Interagency Autism Coordinating Committee for FY 2010 and FY 2011.

**National Institutes of Health  
FY 2013 Congressional Justification**

---

---

**Budget Request**

---

---

**Summary of the Request: Narrative<sup>4</sup>**

For FY 2013, NIH requests a program level of \$30.860 billion, which is flat from the FY 2012 Enacted level. NIH will invest in areas of the most extraordinary promise for biomedical research and continue to support the scientific workforce, working to recruit and retain the best and brightest from all of our nation's diverse populations, to tackle the major health challenges facing the Nation in the future. The Request advances NIH's highest priority activities within overall budgetary constraints.

**Research Project Grants:** Research project grants (RPGs) are the primary mechanism for funding of investigator-initiated biomedical research. These grants support new and experienced investigators in broad-based research programs. The use of RPGs as a mechanism of support covers the entire medical research continuum, from basic scientific research at the molecular and cellular levels to studies of human beings in both healthy and diseased states. Most grant applications originate with individual investigators who develop proposals for research in their area of interest. Research project grants awarded to institutions on behalf of a principal investigator support medical research activities in the areas of both the specific interests and competence of the principal investigators and in areas identified as high priority by the NIH Institutes and Centers (ICs).

NIH uses several RPG activities to support the best research applications from the most talented researchers. The most common, the traditional R01 grant, accounts for 63 percent of RPGs awarded and approximately 55 percent of competing RPG funding (FY 2011 data). The R01 supports a single project with a principal investigator or co-investigators. Another frequently used grant is the P01, a multi-project grant, which supports a variety of broad-based multi-disciplinary projects conducted by numerous investigators working on various aspects of a specific major research objective or theme.

**Budget Policy:** This high-priority mechanism would be funded at \$16.464 billion in FY 2013, a decrease of \$25.8 million, or 0.2 percent, from the FY 2012 Enacted level. NIH estimates that it will support 9,415 new and competing research project grants (RPGs) in FY 2013, an increase of 672 above FY 2012. The total number of RPGs is expected to be 35,888. NIH-wide, the average cost of a new and competing RPG in FY 2013 is estimated to be about \$431,000. In order to maximize resources in FY 2013 for investigator-initiated grants, and to continue to focus on resources for young, first-time researchers, NIH proposes to reduce non-competing RPGs by one percent from the FY 2012 level, and to negotiate the budgets of competing RPGs to avoid growth in the average award size (policy estimate of -1 percent). It will continue to follow policies that allow new investigators to receive grants at rates equal to those of established investigators. NIH will also establish a process for additional scrutiny and review by an Institute

---

<sup>4</sup> All referenced amounts reflect adjustments for comparability to FY 2013 for the elimination of the Global AIDS transfer and the establishment of NCATS in FY 2012.

or Center's Advisory Council of awards to any principal investigator with existing grants of \$1.5 million or more in total costs. Finally, NIH will no longer build in the inflationary increases that were included for planning purposes in the out-years of competing and non-competing awards.

**Research Centers:** Research center grants are awarded to institutions on behalf of a program director and a group of collaborating investigators to: (a) provide long-term support for leading-edge research; (b) conduct multi-disciplinary programs of biomedical research; and (c) develop research resources. The Research Centers program aims to integrate basic research with applied research and transfer activities; to promote research in the areas of clinical applications with an emphasis on intervention, including prototype development and refinement of products, techniques, processes, methods, and practices; to develop and maintain the biotechnology and research model resources needed by NIH-supported biomedical investigators for conducting research; and, to assist minority institutions in improving their research infrastructure.

Budget Policy: NIH proposes to decrease support for research centers to \$2.966 billion, a decrease of about \$64.3 million or 2.1 percent below the FY 2012 Enacted level. NIH will support 1,416 awards, 50 below FY 2012.

**Other Research:** NIH continues to support a variety of investigator-initiated activities through other types of research grants. Through the Research Careers program, NIH provides increased career opportunities in medical research to scientists of superior potential. The program provides support for young investigators who desire advanced development and scientists who need experience to qualify for senior positions. Other Research mechanisms include support for research initiatives in the cooperative clinical research sub-mechanism to encourage regionally-based clinical evaluations of methods of therapy and prevention strategies. Minority Biomedical Research Support Grants fund research that enriches the biomedical research environment at undergraduate institutions. Moreover, these grants strengthen the research training capabilities of minority faculty and students. Other Research also supports grants for: shared resources for grantee institutions; purchase of equipment; implementation of the Nanotechnology program; and conference grants to support investigator-initiated meetings, conferences or workshops to promote sharing of scientific knowledge and address specific issues.

Budget Policy: This mechanism's funding level would decrease by \$9.807 million compared to FY 2012 or 0.53 percent – to \$1.823 billion in FY 2013. The Budget will support 6,718 grants, a decrease of 36 awards, or 0.53 percent, below the FY 2012 Enacted level.

**Research Training:** The purpose of the Ruth L. Kirschstein National Research Service Awards (NRSA) program is to strengthen the Nation's corps of biomedical and behavioral research investigators. Through institutional awards and individual fellowships, NIH supports both basic and applied research training in the biomedical and behavioral sciences. Institutional awards provide the foundation for the manpower development effort by supporting the national capacity for excellent, up-to-date training in a variety of institutional settings. They enable NIH to aid institutions in maintaining vigorous and effective research training programs and, in particular, to support research training programs in areas of national need. Funds are awarded for predoctoral and postdoctoral stipends and for tuition where warranted, with an allocation to the institution to defray training-related expenses not

covered by tuition. NRSA's also include funds for travel, fees, indirect costs, and other expenses. Stipend levels constitute the largest portion of NRSA funding.

**Budget Policy:** NIH plans to fund Research Training at \$775.318 million, or 0.3 percent below the FY 2012 Enacted level. Continuing efforts to provide NRSA trainees with sufficient financial support, and improve NIH's ability to attract high-quality research investigators to the field of biomedical research, a two percent stipend increase is proposed for FY 2013. NRSA trainees currently receive stipends of about \$40,000 per year, far below the pay they could receive in alternative fields. NIH will support 16,361 Full-Time Training Positions (FTTPs) a decrease of 309 positions or 1.9 percent below the number of FTTP supported at the FY 2012 Enacted level.

**Research and Development Contracts:** NIH awards Research and Development (R&D) contracts to acquire specific products, services or studies from academic institutions and non-profit and commercial organizations. This mechanism also includes collaborative research efforts with other agencies, small business innovation research and architect-engineering services contracts.

**Budget Policy:** FY 2013 funding for this mechanism of \$3.076 billion would represent an increase of \$107.99 million, or 3.6 percent, above the FY 2012 Enacted level.

**Intramural Research:** Through the Intramural Research Program (IRP), NIH conducts basic and clinical research at its on-campus research facilities in Bethesda, Maryland, and at off-campus locations such as the Gerontology Research Center in Baltimore, Maryland; Research Triangle Park, North Carolina; the Rocky Mountain laboratories in Hamilton, Montana; and Phoenix, Arizona. Fundamental research performed by intramural scientists provides the basis upon which advances in medical and dental care are built. An important byproduct of this research productivity is the cadre of young physicians and basic scientists who are trained in the techniques and approaches of intramural scientists. Many of these young researchers become extramural and intramural investigators. A valuable and unique feature of the NIH IRP is the Clinical Research Center. This world-class national resource promotes translational research -- that is, the transference of scientific laboratory research into applications that benefit patient health and medical care. The "bench-to bedside" approach adopted in 1953, locates patient care units in close proximity to cutting-edge laboratories conducting related research, which facilitates interaction and collaboration among clinicians and researchers. Most importantly, patients and their families at the Clinical Center benefit from the signature elements of NIH, i.e. cutting-edge technologies, research programs, and compassionate care.

The IRP supports research being conducted at NIH by some of this nation's top scientists. This network of investigators is an integral part of the greater national research network devoted to advancing the knowledge needed to develop treatments, tests, and prevention strategies to benefit the public as quickly as possible. A strong intramural program at NIH complements and reinforces the work being carried out in the extramural biomedical research community.

**Budget Policy:** This mechanism would receive \$3.420 billion in FY 2013, an increase of \$20.9 million or 0.6 percent above the FY 2012 Enacted level. Also, NIH's intramural budget takes into account a projected federal pay raise of 0.5 percent beginning in FY 2013. Supporting NIH's intramural program is an essential component to achieve NIH's mission.

**Research Management and Support (RMS):** This mechanism supports many functions, including: scientific direction and management by NIH staff in the review, award, and performance monitoring of extramural awards (research grants, training awards, and research and development contracts); administrative and technical support for Congressionally-mandated review groups and advisory councils; liaison among NIH and Departmental components, as well as among applicants, grantees, advisory bodies, and special interest organizations; and monitoring of advances emerging from basic science laboratories to determine possible clinical applications for treatment and prevention. Management and administrative functions for each IC also are supported by this mechanism. Examples of such functions include: interpreting, analyzing, and implementing new legislation and administrative orders; formulating and executing IC budgets; performing management evaluation studies; determining manpower requirements; assessing the condition of both NIH and extramural grantee laboratory facilities and equipment; supporting prevention and education activities, including development of educational and informational materials for both the medical community and the general public; and providing the leadership and business functions for the ICs.

Budget Policy: RMS would be funded at \$1.535 billion in FY 2013, an increase of \$1.69 million, or 0.1 percent, above the FY 2012 Enacted level. The projected pay raise factor of 0.5 percent beginning in FY 2013 is also accounted for in the budget. Although NIH continues to develop and implement operational efficiencies, support for these functions is essential to enable NIH to manage the most promising extramural research and comply with all operational requirements.

**Office of the Director:** The Office of the Director (OD) provides leadership, coordination, and guidance in the formulation of policy and procedures related to biomedical research and research training programs. To provide this direction, the OD centrally coordinates NIH's extramural and intramural research activities; science policy and related social, ethical, and legal issues; technology transfer and intellectual property protection policies; health information dissemination and public education functions; legislative activities; and, oversight of the agency's stewardship of public funds.

OD encourages and fosters cross-Institute NIH research and research training efforts in the prevention and treatment of disease through program coordination offices that complement the efforts of the ICs. These offices focus on Acquired Immune Deficiency Syndrome (AIDS); women's health; disease prevention; science education; dietary supplements; rare diseases and disorders; and behavioral and social sciences research. While OD provides the overall direction, coordination and oversight of these programs, the ICs manage the actual research operations.

The OD request also includes the NIH Common Fund that supports cross-cutting, trans-NIH programs that require participation by at least two NIH ICs. The requirements for the Common Fund encourage collaboration across the ICs, while providing NIH with the flexibility to determine priorities for Common Fund support. As a result of the NCATS reorganization in FY 2012, the OD request also now includes the Office of Research Infrastructure Programs and the Science Education Partnership Awards.

Budget Policy: The proposed OD level of \$1.429 billion for FY 2013 represents a decrease of \$28.22 million from the FY 2012 Enacted level. The Office of Research Infrastructure Programs and Science Education Partnership Awards are proposed at \$303.98 million in FY 2013; the

Common Fund would receive \$544.93 million, which is the same as the FY 2012 Enacted Level.

**Buildings and Facilities:** The buildings and facilities (B&F) program is responsible for the design, construction, improvement, and major repair of clinical and laboratory buildings and supporting facilities essential to NIH's research mission. This account has two major elements: the design and construction of new facilities as well as, the continuing repair and improvement of existing facilities.

NIH recently updated its inventory of investments in sustainable resource use in accordance with Executive Order (E.O.) 13514, which was issued in October 2009. The inventory covers areas such as energy efficiency, conservation of water resources, and pollution prevention, including the use of environmentally compatible materials for use in the design, upgrade, and maintenance of NIH's buildings and facilities. Low cost changes have been identified. Some of these changes already have been implemented; additional changes are planned for FY 2012 and will be implemented over the next few years. Future improvements will require the development of strategies to meet the long-term objectives of the EO.

Budget Policy: This request would provide \$125.3 million for B&F—excluding \$8.0 million identified for construction or repair of facilities located in Frederick, Maryland and administered by the National Cancer Institute. The request is the same as the FY 2012 Enacted level. The funding would help maintain the condition of NIH's facilities infrastructure, to enable cutting-edge scientific research and promote the sustainable use of natural resources.

### **Explanation - Other Activities**

**Type 1 Diabetes:** A special funding program for research on Type 1 Diabetes (also known as Juvenile Diabetes) was established by law in 1998 and is supported through a mandatory appropriation.

Budget Policy: The request includes \$150 million for these activities which is equal to the FY 2012 Enacted level.

**Superfund:** NIH's contribution to the Superfund Program is to improve human health by addressing and preventing diseases and injuries associated with environmental contaminants. The Superfund Research Program (SRP) and the Worker Training Program (WTP) complement each other to create effective community and workplace public health interventions aimed at preventing harmful exposures.

Budget Policy: The request provides \$78.9 million for this account, which is the same as the FY 2012 Enacted level.

**Human Immunodeficiency Virus/ Acquired Immunodeficiency Syndrome (HIV/AIDS):** NIH supports an extensive portfolio of research within the National Institute of Allergy and Infectious Diseases (NIAID) and across the other 26 ICs. This research has helped to dramatically improve the lives of those living with AIDS and reduce the transmission of HIV both in the United States and globally. NIH will continue to support HIV/AIDS research to reduce the cost of treatment and develop more effective prevention tools.

Budget Policy: NIH will fund HIV/AIDS research at \$3.075 billion, which is the same as the FY 2012 Enacted level. In addition, NIH does not request \$300 million for the Global Fund to Fight HIV/AIDS, Tuberculosis and Malaria as it has done in past years, an amount that was transferred to the U.S. Department of State subsequent to appropriation. Instead, this funding is included in the Budget request for USAID.

**National Center for Biotechnology Information / Public Access:** The Budget includes \$35.7 million within to the National Library of Medicine's (NLM) budget request to allow the National Center for Biotechnology Information (NCBI) to meet the challenge of collecting, organizing, analyzing, and disseminating the deluge of data emanating from research in molecular biology and genomics. The additional funds will take the place of the funds that are now obtained from other NIH sources and transferred to NLM in the year of execution. Providing direct funding to NLM decreases administrative burden, increases transparency and enhances NCBI's ability to provide an integrated, genomic information resource for biomedical researchers at NIH and around the world.

**National Institutes of Health  
FY 2013 Congressional Justification**

**NIH Key Outcomes and Outputs Table**

<b>Measure</b>	<b>Year and Most Recent Result / Target for Recent Result / (Summary of Result)</b>	<b>FY 2012 Target</b>	<b>FY 2013 Target</b>	<b>FY 2013 Target  +/-FY 2012 Target</b>
SRO-1.4 By 2012, identify signatures of gene expression in peripheral tissues that are associated with alcohol-induced disorders. (Outcome)	<p>FY 2011: NIH researchers examined the effects on gene expression caused by gene variants that influence risk for alcohol dependence using lymphoblastoid cell lines (LCLs).</p> <p>Target: Identify gene expression profiles for one alcohol use disorder.</p> <p>(Target Met)</p>	Complete gene expression studies with peripheral tissues and identify signature gene expression profiles.		N/A
SRO-1.5 (RA) By 2012, develop a comprehensive IT platform that can facilitate evaluation of diverse behavioral interventions to promote health. (Outcome)	<p>FY 2012: Seven pilot tests of the Way to Health portal were conducted.</p> <p>Target: Conduct at least 1 pilot project to test the functionality of the IT platform.</p> <p>(Target Met)</p>	Conduct at least 1 pilot project to test the functionality of the IT platform.		N/A

Measure	Year and Most Recent Result / Target for Recent Result / (Summary of Result)	FY 2012 Target	FY 2013 Target	FY 2013 Target +/-FY 2012 Target
SRO-1.6 (RA) By 2012, present preliminary findings from the three-pronged approach to curtail the HIV pandemic. (Outcome)	<p>FY 2011: Researchers identified three new strategies to target residual HIV in treated patients.</p> <p>Target: Identify at least one new strategy to target residual HIV in treated patients.</p> <p>(Target Met)</p>	<p>Present preliminary findings from the three-pronged approach to curtail the HIV pandemic, which includes Test, Link to Care, Plus Treat (TLC-Plus) and Pre-Exposure Prophylaxis (PrEP) studies, and basic research to eliminate HIV reservoirs.</p>		N/A

<b>Measure</b>	<b>Year and Most Recent Result / Target for Recent Result / (Summary of Result)</b>	<b>FY 2012 Target</b>	<b>FY 2013 Target</b>	<b>FY 2013 Target +/-FY 2012 Target</b>
<p>SRO-1.7 (RA) By 2012, incorporate scientific human development concepts, in order to develop and rigorously test at least 2 childhood learning approaches that can be integrated into science, technology, engineering and mathematics (STEM) K-12 educational programs. (Outcome)</p>	<p>FY 2011: Completed data collection for a study of fine motor skills interventions to enhance math learning. Enrolled 100% of participants needed for another study learning math and science skills intervention in at-risk children aged 3-5.</p> <p>Target: Complete data collection for outcome measures for at least one study of STEM learning. Enroll 50% of participants needed for at least one additional study of STEM learning in at-risk children.</p> <p>(Target Met)</p>	<p>Complete testing of at least 2 childhood learning approaches for integration into science, technology, engineering and mathematics (STEM) K-12 educational programs.</p>		<p>N/A</p>

<b>Measure</b>	<b>Year and Most Recent Result / Target for Recent Result / (Summary of Result)</b>	<b>FY 2012 Target</b>	<b>FY 2013 Target</b>	<b>FY 2013 Target +/-FY 2012 Target</b>
<p>SRO-1.8 (RA) By 2012, identify three research findings that will advance understanding of the biological basis underlying the heterogeneity of autism spectrum disorder (ASD) and conduct initial testing of three treatment or service delivery strategies. (Outcome)</p>	<p>FY 2011: NIH researchers identified three approaches that could improve early detection and diagnosis of ASD - a neuroimaging technology to trace genes associated with language development and speech, neuroimaging to show differences in early brain development, and genomic analysis to identify genetic mutations associated with an increased risk of ASD.</p> <p>Target: Identify three research findings that will aid identification of risk factors and inform the early detection or diagnosis of ASD using research methods such as genomic analysis, neuroimaging, or behavioral screening.</p> <p>(Target Met)</p>	<p>Build upon research findings to advance understanding of the biological basis underlying the heterogeneity of autism spectrum disorder (ASD) and complete initial testing of three treatment or service delivery strategies.</p>		<p>N/A</p>

Measure	Year and Most Recent Result / Target for Recent Result / (Summary of Result)	FY 2012 Target	FY 2013 Target	FY 2013 Target +/-FY 2012 Target
SRO-2.1 By 2015, evaluate islet transplantation in combination with immune modulation strategies for the treatment of type 1 diabetes in clinical trials. (Outcome)	<p>FY 2011: Four pilot trials were reassessed for continuation. Based on safety, efficacy, and the ability to enroll patients, and enrollment was terminated in three studies. The fourth study was allowed to enroll 2 additional subjects.</p> <p>Target: Reassess four pilot trials for continuation based on the safety and ability to enroll.</p> <p>(Target Met)</p>	Complete data collection for Phase II studies.	Complete enrollment in CIT-07 (Phase III trial); continue to enroll in CIT-06 (Phase III trial).	N/A
SRO-2.5 By 2011, identify and evaluate 5 novel molecular-targeted interventions for cancer, and determine suitability for use in early phase clinical trials. (Outcome)	<p>FY 2011: NIH investigators evaluated 3 novel targeted cancer interventions using preclinical testing. Of the five novel targeted cancer interventions identified, two of these interventions are now being tested in early phase clinical trials for their use in humans.</p> <p>Target: Evaluate 3 novel targeted cancer interventions using preclinical testing.</p> <p>(Target Met)</p>			N/A

<b>Measure</b>	<b>Year and Most Recent Result / Target for Recent Result / (Summary of Result)</b>	<b>FY 2012 Target</b>	<b>FY 2013 Target</b>	<b>FY 2013 Target +/-FY 2012 Target</b>
<p>SRO-2.6 By 2011, develop one field deployable sensor device for use in human studies and develop one biomarker to characterize the impact of environmental exposures on biological pathways. (Outcome)</p>	<p>FY 2011: A wearable field deployable sensor was developed and validated in field tests. A tool has also been developed and tested for detecting biomarkers in human cells resulting from exposure to a range of environmental stressors.</p> <p>Target: Complete development of a field deployable sensor device and a biomarker to characterize the impact of environmental exposures on biological pathways suitable for initial application in human studies.</p> <p>(Target Met)</p>			N/A

<b>Measure</b>	<b>Year and Most Recent Result / Target for Recent Result / (Summary of Result)</b>	<b>FY 2012 Target</b>	<b>FY 2013 Target</b>	<b>FY 2013 Target +/-FY 2012 Target</b>
SRO-2.7 By 2011, complete clinical testing of one candidate medical countermeasure that could be used to diagnose or treat victims of a chemical terrorist attack or accident, and complete preclinical testing for two others. (Outcome)	<p>FY 2011: Completed testing of a simpler way to deliver a medical countermeasure for seizures in emergency settings, and conducted pre-clinical testing on antidotes for cyanide and organophosphorous poisons.</p> <p>Target: Identify one candidate medical countermeasure that could be used to diagnose or treat victims of a chemical terrorist attack or accident, and complete preclinical testing for two others.</p> <p>(Target Met)</p>			N/A

<b>Measure</b>	<b>Year and Most Recent Result / Target for Recent Result / (Summary of Result)</b>	<b>FY 2012 Target</b>	<b>FY 2013 Target</b>	<b>FY 2013 Target +/-FY 2012 Target</b>
<p>SRO-2.8 By 2013, advance two emerging new strategies for treating muscular dystrophy to the point of preparedness for clinical trials. (Outcome)</p>	<p>FY 2011: Effective protocols for gene delivery and immune suppression have been developed and have undergone preclinical testing.</p> <p>Target: Complete preclinical testing of an appropriate delivery protocol and an immune-suppression regimen for a gene therapy approach in MD patients.</p> <p>(Target Met)</p>	<p>Test an antisense oligonucleotide-based therapeutic strategy that could be applicable to multiple MD-causing mutations that require exon skipping.</p>	<p>Advance two emerging new strategies for treating muscular dystrophy to the point of preparedness for clinical trials.</p> <p>Test two new strategies for treating muscular dystrophy in preclinical models.</p>	<p>N/A</p>

<b>Measure</b>	<b>Year and Most Recent Result / Target for Recent Result / (Summary of Result)</b>	<b>FY 2012 Target</b>	<b>FY 2013 Target</b>	<b>FY 2013 Target +/-FY 2012 Target</b>
<p>SRO-2.9 By 2015, advance understanding of social determinants of health and health disparities using multilevel, transdisciplinary team science approaches by developing intervention models of how various factors affect individual health outcomes and their distribution in populations. (Outcome)</p>	<p>FY 2011: NIH developed new comprehensive training strategies and programs that focus on graduate students, post-doctoral candidates, junior faculty, as well as established investigators who wish to develop or refocus their careers on health disparities/inequities research. These training programs emphasize transdisciplinary science and multi-level approaches to address health disparities, and often have strong mentoring components.</p> <p>Target: Develop new comprehensive training strategies and programs for junior scientists that emphasize collaborative transdisciplinary team science approaches for addressing health disparities.</p> <p>(Target Met)</p>	<p>Build teams of transdisciplinary scientists, including those newly trained, to conduct cross-center analysis to understand and address health inequities.</p>	<p>Develop interventions directed at more than two factors (such as both individual level and social context) and more than just individual behavior change.</p>	<p>N/A</p>

Measure	Year and Most Recent Result / Target for Recent Result / (Summary of Result)	FY 2012 Target	FY 2013 Target	FY 2013 Target +/-FY 2012 Target
SRO-2.10 By 2014, identify three clinical candidate compounds for rare or neglected diseases. (Outcome)	<p>FY 2011: Lead compounds were selected for five rare or neglected diseases and will be studied in pre-clinical studies. The diseases for which lead compounds are being investigated are: Hereditary Inclusion Body Myopathy, a rare inherited adult-onset neuromuscular disorder; Niemann-Pick type C (NPC) disease, a rare inherited neurodegenerative disease; Schistosomiasis and Hookworm, two neglected parasitic diseases prevalent in developing countries; Sickle Cell Disease, a rare inherited blood disorder; and Chronic Lymphocytic Leukemia (CLL), a rare cancer.</p> <p>Target: Select rare disease lead compounds that will be further studied to assess for potential therapeutics.</p> <p>(Target Met)</p>	Begin pilot projects on the selected rare disease lead compound series to assess their capabilities as potential therapeutics.	Conduct safety and efficacy tests such as medicinal chemistry optimization, pharmacokinetics, pharmacodynamics, efficacy, stability, toxicity, and other related studies on promising compounds in conjunction with the initiation of regulatory efforts on the selected rare and neglected disease lead compound series.	N/A

Measure	Year and Most Recent Result / Target for Recent Result / (Summary of Result)	FY 2012 Target	FY 2013 Target	FY 2013 Target +/-FY 2012 Target
SRO-2.11 By 2016, conduct studies of young children to determine whether the plant estrogens in soy formula produce hormone-like effects. (Outcome)	<p>FY 2011: Researchers enrolled 123 mothers prenatally or at birth.&amp;nbsp;Sixty-six prenatal visits were completed as well as 97 birth visits and 89 2-week examinations.&amp;nbsp;However, only 12 toddlers were enrolled and completed 1-year evaluations.</p> <p>Target: Enroll 112 mothers prenatally or at birth. Complete 70 prenatal visits, 80 birth visits and 80 2-week examinations. Enroll 200 Toddlers and complete their 1-year evaluations.</p> <p>(Target Not Met)</p>	<p>Enroll an additional 112 mothers prenatally or at birth. Complete 70 prenatal visits, 80 birth visits and 80 2-week examinations. Enroll 200 Toddlers and complete their 1-year evaluations.</p>	<p>Complete 50 Infant Phase study visits. Enroll an additional 100 Toddlers and complete their 1-year evaluations.</p>	N/A

<b>Measure</b>	<b>Year and Most Recent Result / Target for Recent Result / (Summary of Result)</b>	<b>FY 2012 Target</b>	<b>FY 2013 Target</b>	<b>FY 2013 Target +/-FY 2012 Target</b>
<p>SRO-3.1 By 2013, identify at least one clinical intervention that will delay the progression, delay the onset, or prevent Alzheimer's disease (AD). (Outcome)</p>	<p>FY 2011: Researchers completed recruitment for the IVIg study.</p> <p>Target: Complete recruitment to a Phase III clinical trial of intravenous immunoglobulin (IVIg) for the treatment of mild to moderate AD.</p> <p>(Target Met)</p> <p>FY 2011: NIH established a phase III clinical trial of intravenous immunoglobulin (IVIg) for the treatment of mild to moderate Alzheimer's disease.</p> <p>Target: Start a phase III clinical trial based on existing Phase II clinical trials.</p> <p>(Target Exceeded)</p>	<p>Complete baseline imaging studies to facilitate analysis of the effects of IVIg on relevant biomarkers of AD.</p>	<p>Complete treatment phase for the IVIg study and analyze data.</p>	<p>N/A</p>

<b>Measure</b>	<b>Year and Most Recent Result / Target for Recent Result / (Summary of Result)</b>	<b>FY 2012 Target</b>	<b>FY 2013 Target</b>	<b>FY 2013 Target +/-FY 2012 Target</b>
<p>SRO-3.3 By 2012, determine the efficacy of using salivary diagnostics to monitor health and diagnose at least one systemic disease. (Outcome)</p>	<p>FY 2011: Researchers gathered 201 clinical samples from head and neck cancer patients, and 366 control samples.</p> <p>Target: Demonstrate the clinical value of the compact instrument by collecting and testing saliva samples from 80 patients with head or neck cancer against 120 control samples.</p> <p>(Target Exceeded)</p>	<p>Begin the data collection phase of clinical trials in Sjogren's syndrome and head and neck cancers so that diagnostic and therapeutic applications can be developed.</p>		<p>N/A</p>

<b>Measure</b>	<b>Year and Most Recent Result / Target for Recent Result / (Summary of Result)</b>	<b>FY 2012 Target</b>	<b>FY 2013 Target</b>	<b>FY 2013 Target +/-FY 2012 Target</b>
<p>SRO-3.4 By 2015, evaluate an HIV vaccine candidate in a test of concept (phase IIB) efficacy trial in order to move towards an HIV/AIDS vaccine. (Outcome)</p>	<p>FY 2011: Researchers developed two additional methodologies to evaluate the immune responses induced by candidate HIV vaccines using T-cell or B-cell assays.</p> <p>Target: Develop two additional methodologies to evaluate the immune responses induced by candidate HIV vaccines, in order to assess whether those responses correlate with the efficacy of HIV/AIDS vaccines in future Phase III clinical trials.</p> <p>(Target Met)</p>	<p>Develop one or more alternative macaque models that more accurately reflect human exposure and that can be used to determine the ability of candidate vaccines to provide protection against challenge viruses that are genetically distinct from the vaccine (i.e., a heterologous challenge).</p>	<p>Advance at least one promising candidate vaccine into a phase II trial.</p>	<p>N/A</p>

Measure	Year and Most Recent Result / Target for Recent Result / (Summary of Result)	FY 2012 Target	FY 2013 Target	FY 2013 Target +/-FY 2012 Target
SRO-3.5 By 2013, identify and characterize at least 2 human candidate genes that have been shown to influence risk for substance use disorders and risk for psychiatric disorders using high-risk family, twin, and special population studies. (Outcome)	<p>FY 2011: NIH researchers conducted functional studies of gene variants that are associated with increased risk for alcohol dependence through population-based research in European-Americans and African Americans.</p> <p>Target: Conduct functional studies of candidate genes in different populations.</p> <p>(Target Met)</p>	Initiate replication and refinement of genome wide association and functional analysis data.	Complete genome wide association and functional studies and identify potential genomic variants associated with risk for substance use and/or psychiatric disorders.	N/A
SRO-3.6 By 2012, develop and apply clinically one new imaging technique to enable tracking the mobility of stem cells within cardiovascular tissues. (Outcome and Efficiency)	<p>FY 2011: Preliminary results demonstrate that encapsulated MSCs remain highly viable in ischemic tissue.</p> <p>Target: Using a rat hind limb ischemia model, test the hypothesis that encapsulation increases MSC survival in a hypoxic environment.</p> <p>(Target Met)</p>	Develop and apply clinically one new imaging technique to enable tracking the mobility of stem cells within cardiovascular tissues.		N/A

<b>Measure</b>	<b>Year and Most Recent Result / Target for Recent Result / (Summary of Result)</b>	<b>FY 2012 Target</b>	<b>FY 2013 Target</b>	<b>FY 2013 Target +/-FY 2012 Target</b>
SRO-3.7 By 2019, develop at least two novel therapies for immune-mediated disease. (Outcome)	<p>FY 2011: Treatment in the study of rabbit and horse ATG was completed and identified that the horse ATG was superior.</p> <p>Target: Complete treatment in the study of rabbit and horse ATG in the treatment of severe aplastic anemia, and begin analysis.</p> <p>(Target Met)</p>	Complete data analysis of the study of rabbit and horse ATG in the treatment of severe aplastic anemia and publish results.	Conduct long-term follow-up of patients in the study of rabbit and horse ATG in the treatment of severe aplastic anemia, and conduct laboratory experiments to explore in greater detail pre- and post-therapy samples.	N/A
SRO-3.8 By 2017, determine the optimal tailored treatment regimen for patients with early stage breast cancer that maximizes the benefits of chemotherapy while minimizing the side-effects of unnecessary treatment. (Outcome)	<p>FY 2011: Central testing of hormone receptors was performed per amended protocol.</p> <p>Target: Perform central testing of hormone receptors per amended protocol.</p> <p>(Target Met)</p>	Complete hormone receptor scoring for 30% of all cases.	Complete hormone receptor scoring for 60% of all cases.	N/A

<b>Measure</b>	<b>Year and Most Recent Result / Target for Recent Result / (Summary of Result)</b>	<b>FY 2012 Target</b>	<b>FY 2013 Target</b>	<b>FY 2013 Target +/-FY 2012 Target</b>
SRO-3.9 By 2020, identify two molecular-targeted therapies for disorders of the immune system in children. (Outcome)	<p>FY 2011: NIH researchers completed recruitment of a cohort of well-characterized patients with systemic-onset juvenile idiopathic arthritis through an international consortium of investigators.</p> <p>Target: Complete phenotypic characterization of a patient cohort.</p> <p>(Target Met)</p>	Complete genetic, biochemical, or cellular studies aimed at identifying a molecular pathway underlying the disease in the patient cohort.	Identify at least one molecular pathway suitable for targeting in the patient cohort.	N/A
SRO-3.10 By 2017, advance two candidate medications for treatment of substance use disorders to clinical studies in humans. (Outcome)	<p>FY 2011: NIH researchers used rat and mouse models to study the effects of a new compound (a delta-opioid antagonist) on alcohol dependence.</p> <p>Target: Conduct preclinical studies on one candidate compound.</p> <p>(Target Met)</p>	Test one compound in proof-of-concept trials.	Conduct pharmacogenetic studies to identify genetic variations that influence treatment response to one compound.	N/A

Measure	Year and Most Recent Result / Target for Recent Result / (Summary of Result)	FY 2012 Target	FY 2013 Target	FY 2013 Target +/-FY 2012 Target
SRO-3.11 By 2015, advance the discovery of high need cures through the development of novel compounds, the repurposing of abandoned products, and innovations in the therapeutics discovery and development process. (Outcome)		Establish mechanisms to operationalize the Cures Acceleration Network.	Initiate research on the therapeutics discovery and development process and "high need cures" projects.	N/A
SRO-4.4 By 2011, identify or study additional genes involved in communication disorders in humans and animal models. (Outcome)	FY 2011: Scientists identified 9 new genetic loci that cause hearing loss, described 3 novel hearing-loss-related mutations in another gene, and identified a new gene important for hearing.  Target: Identify additional genes involved in communication disorders in humans and animal models.  (Target Met)			N/A

Measure	Year and Most Recent Result / Target for Recent Result / (Summary of Result)	FY 2012 Target	FY 2013 Target	FY 2013 Target +/-FY 2012 Target
SRO-4.5 By 2011, identify genetic and environmental factors which predispose to three complex diseases. (Outcome)	<p>FY 2011: Genome-wide association studies were completed for an additional 7 complex diseases: alcohol dependence, autism, chronic kidney disease, glaucoma, low birthweight, prostate cancer, and type 2 diabetes.</p> <p>Target: Identify genetic and environmental factors which predispose to three complex diseases.</p> <p>(Target Exceeded)</p>			N/A
SRO-4.6 (RA) By 2012, develop a technology to facilitate patient-controlled, secure image sharing between medical centers and at least one clinic operating in an underserved community. (Outcome)	<p>FY 2011: The medical image sharing project is up and running and planning is underway to extend the network to 15 other clinical sites and 8 research sites.</p> <p>Target: Demonstrate sharing of medical images among at least 4 different medical centers with different image storage systems.</p> <p>(Target Met)</p>	Complete need analysis surveys in underserved areas and based on these identified needs develop at least one feasibility test of technology to facilitate patient-controlled, secure image sharing between medical centers and a clinic operating in an underserved community.		N/A

Measure	Year and Most Recent Result / Target for Recent Result / (Summary of Result)	FY 2012 Target	FY 2013 Target	FY 2013 Target +/-FY 2012 Target
SRO-4.7 (RA) By 2011, evaluate at least one novel animal model of type 1 diabetes. (Outcome)	<p>FY 2011: One well-characterized pluripotent stem cell line derived from a patient with type 1 diabetes was established, and tested using standard biological assays.</p> <p>Target: At least one well-characterized pluripotent stem cell line derived from a patient with type 1 diabetes will be established. Cell line(s) will be assayed for pluripotency markers, differentiation potential, and characterization of chromosomal integrity.</p> <p>(Target Met)</p>			N/A

Measure	Year and Most Recent Result / Target for Recent Result / (Summary of Result)	FY 2012 Target	FY 2013 Target	FY 2013 Target +/-FY 2012 Target
SRO-4.8 (RA) By 2011, develop and/or test at least one strategy for improving end-of-life care or palliative care. (Outcome)	<p>FY 2011: One strategy for enhancing quality of life through improved end-of-life care and/or palliative care was tested. Researchers assessed the feasibility of an internet-based intervention to improve nurses' management of pain in children.</p> <p>Target: Complete development and/or testing of at least one strategy for enhancing quality of life through improved end-of-life care and/or palliative care.</p> <p>(Target Met)</p>			N/A
SRO-4.9 (RA) By 2011, enhance the capacity of researchers to investigate genetic causes of disease by DNA sequencing of participants in well-phenotyped cohorts. (Outcome)	<p>FY 2011: The groups involved in the DNA sequencing of participants in well-phenotyped cohorts have submitted their data to dbGaP.</p> <p>Target: Deposit results in the database (dbGaP) to enable further research and analysis.</p> <p>(Target Met)</p>			N/A

<b>Measure</b>	<b>Year and Most Recent Result / Target for Recent Result / (Summary of Result)</b>	<b>FY 2012 Target</b>	<b>FY 2013 Target</b>	<b>FY 2013 Target +/-FY 2012 Target</b>
SRO-4.10 (RA) By 2011, accelerate progress toward identifying relevant genomic alterations in 10 tumor types. (Outcome)	<p>FY 2011: NIH made significant progress in identifying relevant genomic alterations in tumors. TCGA characterized over 4,100 cases (above the target of 3000). However, due to difficulties getting some samples, only 4 tumor projects were completed. Projects for 8 more tumors are well underway. In addition, the TCGA has been expanded to include 20 new tumor types.</p> <p>Target: Complete identification of genomic alterations in 10 tumor types.</p> <p>(Target Not Met)</p>			N/A

<b>Measure</b>	<b>Year and Most Recent Result / Target for Recent Result / (Summary of Result)</b>	<b>FY 2012 Target</b>	<b>FY 2013 Target</b>	<b>FY 2013 Target +/-FY 2012 Target</b>
CBRR-4 By 2012, provide greater functionality and more streamlined processes in grants administration by continuing to develop the NIH electronic Research Administration (eRA) system. (Output and Efficiency)	FY 2011: Approximately 95% of all grant business transactions are being done electronically.  Target: Continue conversion of business processes: 95% of business processes being done electronically by FY 2011.  (Target Met)	Complete development of business processes to enable the electronic transmission of grant applications and awards.		N/A
CBRR-6.1 By 2011, construct or renovate 153 biomedical research facilities in order to build the capacity to conduct the proposed research. (Output)	FY 2011: One construction grant was completed on time.  Target: Complete 1 facility  (Target Met)			N/A
CBRR-6.2 By 2015 complete construction/commissioning of 15 biocontainment facilities to support biodefense and emerging infectious disease research needs, including research on Category A-C Priority agents and newly emerging infectious diseases. (Output)	FY 2011: The reviews were not completed because a construction site has not been selected.  Target: Conduct project programming and environmental review.  (Target Not Met)	Conduct design development.	Begin construction on final research facility.	N/A

<b>Measure</b>	<b>Year and Most Recent Result / Target for Recent Result / (Summary of Result)</b>	<b>FY 2012 Target</b>	<b>FY 2013 Target</b>	<b>FY 2013 Target +/-FY 2012 Target</b>
CBRR-8 By 2012, ensure that 100% of trainee appointment forms are processed electronically, to enhance program management. (Output)	FY 2011: 99.3% of trainee appointment forms were submitted electronically.  Target: Ensure that 75% of trainee appointment forms are processed electronically.  (Target Exceeded)	Ensure that 100% of trainee appointment forms are processed electronically.		N/A
CBRR-9 By 2011, achieve average annual cost savings of managing construction grants by expanding the use of electronic project management tools that enhance oversight and 20 year usage monitoring. (Output)	FY 2011: NIH continues to use electronic project management tools to achieve the lowest annual cost of managing construction grants.  Target: Maintain the process to achieve average annual cost of managing construction grants.  (Target Met)			N/A

<b>Measure</b>	<b>Year and Most Recent Result / Target for Recent Result / (Summary of Result)</b>	<b>FY 2012 Target</b>	<b>FY 2013 Target</b>	<b>FY 2013 Target +/-FY 2012 Target</b>
CBRR-10 By 2015, make freely available to researchers the results of 300 high-throughput biological assays screened against a library of 300,000 unique compounds, and the detailed information on the molecular probes that are developed through that screening process. (Outcome)	<p>FY 2011: NIH increased the assay deposition into PubMed to a rate greater than eight HTS assays per month, resulting in a total deposit of 103 assays.</p> <p>Target: Increase depositions of bioassays in PubChem to a rate of five (5) per month.</p> <p>(Target Exceeded)</p>	Deposit chemical structure and biological data for 200 new small molecule probes in PubChem.	Establish 400 primary biochemical, cell-based or protein-protein interaction assays that can be miniaturized and automated as high throughput screens in the Molecular Libraries Program (MLP) Portfolio.	N/A
CBRR-12 (Priority Goal) By 2012, reduce the fully loaded cost of sequencing a human genome to \$15,000. (Outcome and Efficiency)	<p>FY 2012: The current cost of a fully-loaded human genome was reduced to \$10,497.</p> <p>Target: Reduce the fully-loaded cost of sequencing a human genome to \$15,000.</p> <p>(Target Exceeded)</p>	Reduce the fully-loaded cost of sequencing a human genome to \$15,000.		N/A

POI-2 Utilize performance-based contracting (PBC). (ongoing) (Output)	<p>FY 2011: The NIH awarded 37% of eligible service contracting dollars employing the performance-based contracting principle, which was below the target of 47%.</p> <p>Target: Obligate the FY 2011 OMB/OFPP goal of eligible service contracting dollars to PBC.</p> <p>(Target Not Met)</p>	Obligate the FY 2012 OMB/OFPP goal of eligible service contracting dollars to PBC.	Obligate the FY 2013 OMB/OFPP goal of eligible service contracting dollars to PBC.	N/A
POI-6.1 Improve facility conditions in order to reach and maintain a Condition Index (CI) weighted average of 85 or above (CIwa $\geq$ 85). (Ongoing) (Output and Efficiency)	<p>FY 2011: The condition of the facilities in the portfolio reached a CIwa of 73.8 using the existing calculation methodology or 73.4 under the revised methodology.<sup>5</sup></p> <p>Target: CIwa = 73.8</p> <p>(Target Met)</p>	<p>CIwa = 75.9<sup>6</sup></p> <p>Previous Target: 76.3</p>	<p>CIwa = 78.9</p> <p>Previous Target 79.3</p>	N/A

<sup>5</sup>Every year, the Condition Index Sustainment and Improvement Plan (CISIP) is done in June and updated in August. The CISIP also includes figures for CIwa, but the CIwa data given in CISIP doesn't include parking structures whereas GPRA data had been including parking structures up until this report. This FY2011 CIwa represents the first time that the GPRA data hadn't included parking structures.

<sup>6</sup> NIH has revised the FY2012 and FY 2013 targets to reflect a change in the way the CI figure is calculated. The new calculation methodology enables NIH to provide consistent results across multiple facility condition reports.
