Quality Assessment of Drug Therapy

Charles E. Daniels, R.Ph., Ph.D. Pharmacist In Chief Professor of Clinical Pharmacy University of California San Diego, California

March 4, 2010

Patient Concerns

Drug-Drug interaction	70%
Wrong medicine	69%
Cost of treatment	69%
Complications from procedure	69%
Cost of prescription medicines	67%
Hospital acquired infection	49%

ASHP Survey: May 1 and 5, 2002

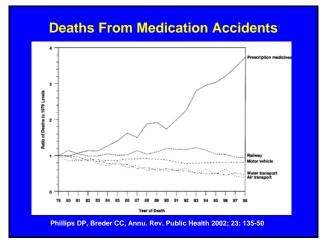

IOM Report: Preventing Medication Errors

IOM study estimated
 1.5 million preventable
 adverse medication
 events per year

 One medication error per patient per day

Committee on Identifying and Preventing Medication Errors, Philip Aspden, Julie Wolcott, J. Lyle Bootman, Linda R. Cronenwett, Editors Washington DC; National Academies Press; 2007.

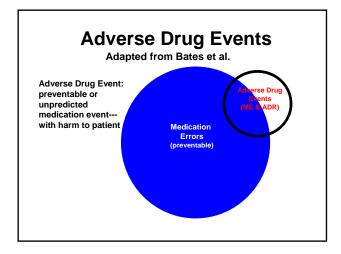

Drug Related Morbidity and Mortality Costs

Hospital	\$121 billio	on
Long Term Care	33 billio	on
Physician visits	14 billio	on
Emergency visits	5 billio	on
Added prescription	ns <u>3 billi</u>	<u>on</u>
Total	\$177 billio	on

Ernst, J Am Pharm Assn. 2001; 41:192-9 (Mar 200

Medication Use Quality

- Medication use process/system
- Organizational interests in med use
- Monitoring and improving med use quality & outcomes
- Identifying and reducing med errors

	Increased	Increased
	LOS	Cost
ADE	2.2	\$3,244
Preventable ADE	4.6	\$5,857

Incidence of Preventable Drug Related Admissions

- Meta-analysis of 15 studies (1980-99)
- 4.3% (2.5-19%) of all admissions were drug related
- >50% of drug related admissions are preventable

Ninterstein AG, Sauer BC, Hepler CD, Poole C Preventable Drug-Related Hospital Admission: <u>Ann Pharmacother</u> 2002; 36:1238-48

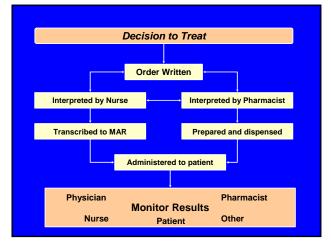

Impact of Preventable Drug Related Admissions

- 158 ADR related admissions over 11 months (24% life threatening)
- 67% inappropriate monitoring of therapy (80% lab abnormality)
- 26% drug-drug interactions
- 595 hospital days (6.1 day LOS)

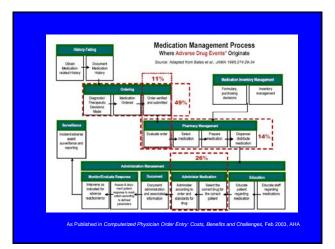

Medication Errors

Any preventable event that may cause or lead to inappropriate medication use or patient harm while medication is in the control of the health care professional, patient or consumer

> National Coordinating Council for Medication Error Reporting and Prevention

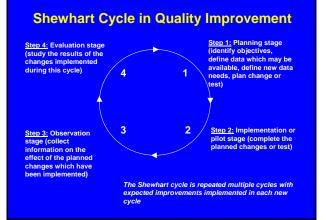

Medication Use Process

- Complex system
- Opportunities for error
- Impacts patient care and research

Process Improvement

- Focus on systems
- Data driven
- Iterative Cycle Concept

Organizational Interests

- · What to use
- When to use it
- · How to use it
- Is it cost-effective
- Will it be used safely

Pharmacy and Therapeutics Committee

Focus for medication related activities within a health care organization

P&T Committee Overview

- Medical Staff Committee
- Oversight of medication use in the organization
- Staff experts in the medication use process

P & T Committee Role

- Medication related policies
- Formulary drug selection and review
- Evaluate medication use and improve performance
- Educate

Medication Policy Issues

- Medication selection and quality
- Medication prescribing
- Medication administration

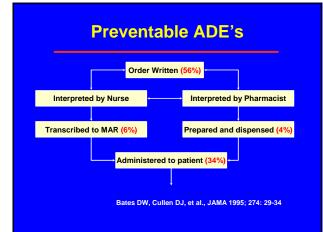

Formulary

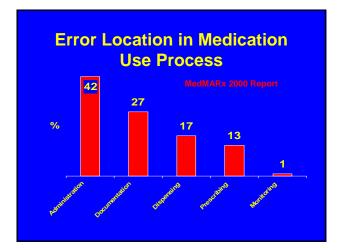

A continuously updated list of medications and related information representing the clinical judgement of physicians, pharmacists, and other experts...

Principles of a Sound Drug Formulary System, 2000

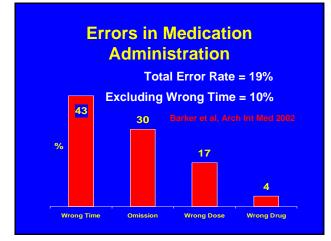

Drug Selection

- Safety
- Clinical Effectiveness
- Cost Impact

Errors in ICU Medication Administration

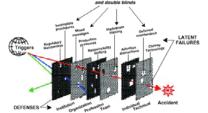

- Med Administration Errors (3.3%)
- Vasoactive Drugs (33%)
- Sedative / Analgesics (26%)
- Wrong Infusion Rate (40%)
- Pharmacist Involvement cited in low rate

MEDICATION ERROR DEATHS FDA Adverse Events Reporting System 1993-98

Error Type	%
Wrong dose	41
Wrong drug	16
Wrong route	9.5

Phillips J, Meam S, Brinker A, et al. Retrospective analysis of mortalities associated with medication errors. Am J Health-sys Pharm, 2001; 58:1835-41.

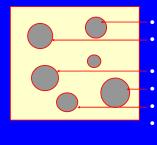

Reason J. Human Error. Cambridge, England: Cambridge Univ. Press; 1990

Proximal Causes of Medication Errors'

Lack of knowledge of the drug	Faulty dose checking
Lack of information about the patient	Infusion pump and parenteral delivery problems
Violation of rules	Inadequate monitoring
Slips and memory lapses	Drug stocking and delivery problems
Transcription errors	Preparation errors
Faulty checking of identification	Lack of standardization
Faulty interaction with other services	
* Adapted from Leape LL, et al. Systems JAMA 1995;274:35-43	analysis of adverse drug events.

Latent Medication System Errors

Latent Errors

- handwriting
 incomplete information
- order transcription
- unclear labeling
- high workloadetc

Workload and Outcomes

	IP Mortality	30-day Re-admit	LOS	Total Costs
Team admissions that day	1.09*		3.09*	2.31*
Average Census			-5.30*	-5.11*
*Significant M	ultivariate House S	Staff Effects		

Prescribing Errors by Medication Category

Antimicrobials	40%
Cardiovascular	18%
Gastrointestinal	7%
Narcotic analgesics	7%

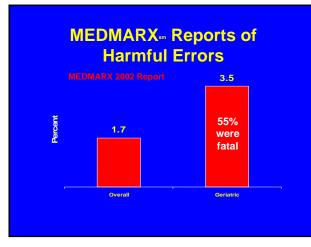

esar et al. JAMA, 1997

<section-header>

Specific Factors Related to Errors in Medication Prescribing

Decline in renal or hepatic function	13.9%
History of medication allergy	12.1%
Use of abbreviations	11.4%
Incorrect dose calculation	10.8%

Lesar et al. JAMA, 1997

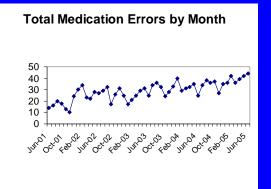

Safeguard Against Errors in High-Risk Drugs

- Build in System Redundancies
- Use Fail-Safes
- **Reduce Options**
- Use Forcing Functions
 Externalize or Centralize Error-prone Processes
- Store Medications Appropriately
- Screen New Products Standardize and Simplify
 Order Communication
- Limit Access
- Use Constraints
 Use Reminders
 Standardize Dosing
 Procedures Procedures
- Use Differentialization

* Adapted from Cohen MR, Kilo CM. High-Alert Medications: Safeguarding against errors. In Medication Errors. Washington: American Pharmaceutical Association; 1999

Use of High Level Data

- Shows interesting trends
- Better for global evaluation
- · No detail to work with

Pitfalls of High Level Data

- Cause unclear
- Potential false conclusions

Medication Errors by Quarter

Quarter

Broad-based Information Sources

- Near misses
- Patient specific events
- Aggregated hospital-wide occurrence data
- External medication error data
- Hospital quality improvement data
- Therapeutic trends & changes
- Hospital programatic information

Epidemiology of Medication Errors

- Collect the numbers
- Read between the lines
- Look for common threads
- Try to link together

Admission Order Medication Omissions

- Review of ongoing meds not ordered by MD at admission
- 53% of patients had at least 1 unintended discrepancy
- 37% had potential for harm

Cornish, Arch Intern Med 2005; 165:424-429

Admission Order Medication Omissions

Туре	Frequency
Omission	65
Dose	35
Frequency	24
Incorrect drug	16
Total	140

ornish, Arch Intern Med 2005; 165:424-429

IOM Recommendations on: Preventing Medication Errors

- Stronger consumer role (self-management)
- Enhance consumer information sources
- Complete patient-information & decision support tools
- Improved drug labeling
- Standardize drug-related health information technologies
- Broad research agenda on safe and appropriate med use with funding

Medication Use Evaluation

A performance improvement method that focuses on evaluating and improving medication-use processes with the goal of optimal patient outcomes

American Society of Health-System Pharmacists, 1996

Selection of MUE Projects

 known or suspected to cause adverse reactions or drug interactions

 affects large number of patients or medication is frequently prescribed

- potentially toxic or causes discomfort at normal doses
- under consideration for formulary retention, addition, or deletion
- expensive

 used in patients at high risk for adverse reactions

critical component of care for a specific disease, condition, or procedure
 most effective when used in a

specific way

 suboptimal use would have a negative effect on patient outcomes or system costs

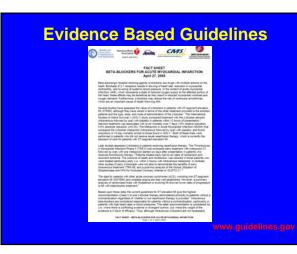

•Adapted from American Society of Health-System Pharmacists. ASHP guidelines on medication-use evaluation. Am J Health Syst Phar 1996;53:1953-5.

Review Category	Data Collection Model (s)	Typical Application	Comments
Retrospect	Data is collected for a fixed period which may be archival or accumulation of new patients for a fixed period of time	Data archive search for prescribing patterns of patients on seratonin antagonist antiemetic drugs	Supports large scale epidemiologic approach No active intervention to change medication use patterns occurs due to the post-hoc data collection process
Concurrent	Each new order generates an automatic review of previously approved criteria for use within a specified period of the initiation of therapy	Review of naloxone to investigate possible nosocomial adverse medication event	
	Laboratory or other monitoring criteria are reported for all patients on the drug Abnormal Laboratory or other monitoring criteria are reported for all patients on the drug on a regular basis	Digoxin monitoring based upon daily review of digoxin serum levels (49). Regular review of serum creatinine for patients on aminoglycosides	
Prospective	Each new order for the drug is evaluated for compliance with previously approved criteria for use. Variance to the criteria require intervention prior to initiation of therapy	Medication use guidelines (ketorolac) (50); Restricted antibiotics

Computerized Laboratory Alerts

- Flashing Computerized Alert for low Potassium
- Increased follow-up monitoring
- Increased K+ intervention rate
- Decreased hypokalemia at discharge

Paltiel, Arch Intern Med 2003; 163:200-204

Computerized Order Entry

- Taylor (Pediatrics, 2008)
- Feldstein (Arch Intern Med, 2006)
- Mekhjian (JAMIA, 2002)
- Nightingale (BMJ, 2000)
- Bates (JAMA, 1998; JAMIA, 1999)
- Raschke (JAMA, 1998)
- Claussen (Ann Intern Med, 1996)

Computer Facilitated Order Errors

- Computerized prescriber order entry error opportunities
- 22 types of errors facilitated by CPOE system
- Many can be corrected by investigation and improvement
 Kennel JAMA 2005 1197-1203

Computer Facilitated Errors

- 20% of MedMARx reports involved computer related interaction
- 71% did not reach patient
- 0.74% did actual harm
- Automated dispensing machines

MedMARx 5th Anniversary Data Report, 200

Simulation of Technology Impact

 Computer simulation of integrated medication use system

Concluded

- 1,226 days of excess hospitalization
- \$1.4 million associated costs

Drug Name Selection

- Lambert (Drug Safety, 2005)
- Lambert (AJHP, 1997)
- Lambert (Medical Care, 1999

Summary of Medication Use Quality Issues

- Complex process prone to error
- Drug use can be improved
- ADE risks can be reduced
