

## **NEW COHORT PERSONAL HISTORY**

The purpose of the Personal History Form is to assess information regarding weight, smoking, sleep, vision and hearing, family longevity and gynecological history for females. As with Medical History, any questions that were previously asked (from Baseline to Year 5) of the original cohort were also asked of the new cohort. The only new question that was asked of this cohort was regarding type of diet the individual was trying (if applicable). For more information on the other variables collected for record 58 refer to Personal History in the Longitudinal Data Documentation, note what year(s) the variables of interest were collected and refer to the Personal History documentation in the Manual of Operations for that particular year.
