LIST OF TABLES

Trends in Substance Abuse: 1993-1998

2.1	Admissions by primary substance of abuse: TEDS 1993-1998 Number and percent distribution	55
2.2	Admissions by alcohol/drug co-abuse: TEDS 1993-1998 Number and percent distribution	56
2.3	Primary alcohol admissions aged 12 and over by State: TEDS 1993-1998. Number and rate per 100,000 population	57
2.4	Primary heroin admissions aged 12 and over by State: TEDS 1993-1998. Number and rate per 100,000 population	59
2.5	Primary cocaine admissions aged 12 and over by State: TEDS 1993-1998. Number and rate per 100,000 population	61
2.6	Primary marijuana admissions aged 12 and over by State: TEDS 1993-1998. Number and rate per 100,000 population	63
2.7	Primary methamphetamine/amphetamine admissions aged 12 and over by State: TEDS 1993-1998. Number and rate per 100,000 population	65
2.8	Admissions by sex, race/ethnicity, and age: TEDS 1993-1998 and U.S. population 1998. Number and percent distribution	67
2.9	Admissions (age 18 and over) by employment status and education: TEDS 1993-1998 and U.S. population 1998. Percent distribution	68
	Characteristics of Admissions: 1998 (Minimum Data Set)	
3.1a	Admissions by primary substance of abuse, according to sex, race/ethnicity, and age: TEDS 1998. Percent distribution and average age at admission	69
3.1b	Admissions by sex, race/ethnicity, and age, according to primary substance of abuse: TEDS 1998. Percent distribution	71

LIST OF TABLES (CONTINUED)

3.2a	Admissions by primary substance of abuse, according to selected race/ethnicity/sex/age groups: TEDS 1998. Percent distribution	73
3.2b	Admissions by selected race/ethnicity/sex/age groups, according to primary substance of abuse: TEDS 1998. Percent distribution	77
3.3	Admissions by primary substance of abuse, according to substance use characteristics: TEDS 1998. Percent distribution	81
3.4	Admissions by primary substance of abuse, according to treatment characteristics: TEDS 1998. Percent distribution	83
3.5	Admissions age 18 and over by primary substance of abuse, according to employment status and education: TEDS 1998. Percent distribution	85
	Characteristics of Admissions: 1998 (Supplemental Data Set)	
3.6	Admissions by primary substance of abuse, according to client characteristics: TEDS 1998. Percent distribution	86
3.7	Admissions by primary substance of abuse, according to client economic characteristics: TEDS 1998. Percent distribution	88
3.8	Admissions by primary substance of abuse, according to treatment characteristics: TEDS 1998. Percent distribution	90
3.9	Admissions by primary, secondary, and tertiary detailed drug: TEDS 1998. Number and percent distribution	91
	State Data: 1993-1998	
4.1	State data system reporting characteristics: TEDS 1998	92
4.2	Annual admissions, transfers, and codependents by State: TEDS 1993-1998	96
4.3	Item percentage response rate by State: TEDS Minimum Data Set 1998	98

LIST OF TABLES (CONTINUED)

4.4	Item percentage response rate by State: TEDS Supplemental Data Set 1998	. 100
4.5	Annual admissions and admissions per 100,000 population by State: TEDS 1993-1998	. 102
4.6	Admissions by State, according to primary substance of abuse: TEDS 1998	. 104
4.7	Admissions per 100,000 population by State, according to primary substance of abuse: TEDS 1998	. 106
4.8	Admissions per 100,000 population (adjusted for sex, race/ethnicity, and age) by State, according to primary substance of abuse: TEDS 1998	. 108
	Topics of Special Interest	
5.1	Admissions aged 12-17 by primary substance of abuse: TEDS 1993-1998 Number and percent distribution	. 110
5.2a	Admissions aged 12-17 by primary substance of abuse, according to sex, race/ethnicity, age, and referral source: TEDS 1998. Percent distribution	. 111
5.2b	Admissions aged 12-17 by sex, race/ethnicity, age, and referral source, according to primary substance of abuse: TEDS 1998. Percent distribution	. 113
5.3	Heroin admissions by route of administration, age group, and characteristics of first treatment episode: TEDS 1993-1998. Number and percent distribution	. 115
5.4	Admissions by primary substance of abuse, according to additional substance abuse: TEDS 1998. Percent distribution	. 116
5.5	Substance abuse combinations by selected primary substance of abuse: TEDS 1998. Number and percent distribution	. 117

HIGHLIGHTS

This report presents results from the Treatment Episode Data Set (TEDS) for 1998, and trend data for 1993-1998. The report provides information on the demographic and substance abuse characteristics of the 1.5 million annual admissions to treatment for abuse of alcohol and drugs in facilities that report to individual State administrative data systems.

 Four substances accounted for 90 percent of all TEDS admissions in 1998: alcohol (47 percent), opiates (primarily heroin; 15 percent), cocaine (15 percent), and marijuana/hashish (13 percent).

Alcohol

- Alcohol accounted for almost half (47 percent) of all TEDS admissions in 1998. However, 43 percent of these admissions reported secondary drug abuse as well. The proportion of alcohol admissions declined from 1993 to 1998, driven by a decline in admissions for abuse of alcohol alone from 34 percent in 1993 to 26 percent in 1998.
- Alcohol admission rates were generally highest in the Pacific Northwest, North Central, and Northeast. In seven States, rates declined by 50-80 percent between 1993 and 1998. No States showed increases of more than 50 percent.

Heroin and Other Opiates

 The proportion of opiate admissions was equal to that for cocaine admissions in 1998. The proportion of admissions for primary opiate abuse

- increased from 13 percent in 1993 to 15 percent in 1998.
- Heroin admission rates were highest in the Pacific and Middle Atlantic States. However, rate increases over 1993-1998 were evident in a number of States. In 10 States, 1998 rates were at least double the rates reported in 1993. In another seven States, rates increased by 50-100 percent between 1993 and 1998.
- Most admissions for primary heroin abuse have been injectors of heroin. However, this proportion declined from 74 percent in 1993 to 67 percent in 1998, while the proportion of heroin admissions for inhalation increased from 23 percent in 1993 to 28 percent in 1998.
- Among heroin abusers experiencing a first treatment episode, the average duration of use was shorter for inhalers and smokers than for injectors (10 and 8 years, respectively, compared to 13 years).

Cocaine/Crack

- The proportion of cocaine admissions was equal to that for opiate admissions in 1998. The proportion of admissions for primary cocaine abuse declined from 18 percent in 1993 to 15 percent in 1998.
- Cocaine admission rates were generally highest in the Middle Atlantic and some Southern States. Trends indicated stable or declining admission rates for primary cocaine abuse. Rates declined by 25 percent or more between 1993

- and 1998 in 15 States, but increased by 25 percent or more in eight States.
- Smoked cocaine (crack) represented 73 percent of all primary cocaine admissions in 1998, a proportion that remained stable over the period 1993-1998.

Marijuana

- The proportion of admissions for primary marijuana almost doubled between 1993 and 1998, from 7 percent to 13 percent.
- Marijuana admission rates showed substantial increases across a large number of States. In 21 States, 1998 rates were at least double the rates reported in 1993. In another nine States, rates increased by 50-100 percent between 1993 and 1998.
- Marijuana admissions were generally male (77 percent), white (59 percent), and young (49 percent were under 20 years old).
- Marijuana use began at an early age among primary marijuana admissions—more than half (57 percent) had first used marijuana by the age of 14, and 92 percent by the age of 18.

Methamphetamine/Amphetamine and Other Stimulants

 The proportion of admissions for abuse of methamphetamine/amphetamine and other stimulants increased from 2 percent to 5 percent between 1993 and 1998

- Methamphetamine/amphetamine admissions showed an increase in admission rates, spreading east from the Pacific States into the Midwest. In 25 States, rates at least doubled between 1993 and 1998. In 10 of those States, rates increased 500 percent or more.
- Nineteen percent of methamphetamine/amphetamine admissions had used it by the age of 14, and just over half (53 percent) had used it by the age of 18.
- Methamphetamine/amphetamine admissions were predominantly white (80 percent). The next largest racial/ethnic group was persons of Mexican origin, at 8 percent. Females made up 47 percent of methamphetamine/amphetamine admissions.
- Methamphetamine/amphetamines were smoked, inhaled, or injected in similar proportions (32 percent, 31 percent, and 29 percent, respectively).

Inhalants

 Almost one-third (32 percent) of inhalant admissions had used inhalants by the age of 12, and another 26 percent by the age of 14.

CHAPTER 1

DESCRIPTION OF THE TREATMENT EPISODE DATA SET (TEDS)

Introduction

This report presents results from the Treatment Episode Data Set (TEDS) for 1998, and trend data for 1993-1998. The report provides information on the demographic and substance abuse characteristics of the 1.5 million annual admissions to treatment for abuse of alcohol and drugs in facilities that report to individual State administrative data systems. The Office of Applied Studies, Substance Abuse and Mental Health Services Administration (SAMHSA) coordinates and manages collection of TEDS data from the States.

The TEDS system comprises data on treatment admissions that are routinely collected by States in monitoring their individual substance abuse treatment systems. Selected data items from the individual State data files are converted to a standardized format consistent across States. These standardized data constitute TEDS.

TEDS consists of a Minimum Data Set collected by nearly all States, and a Supplemental Data Set collected by some States. The Minimum Data Set consists of 19 items that include:

- Demographic information
- Primary, secondary, and tertiary substances and their route of administration, frequency of use, and age at first use
- Source of referral to treatment
- Number of prior treatment episodes
- Service type, including planned use of methadone

The Supplemental Data Set consists of 15 items that include psychiatric, social, and economic measures.

Definitions and classifications used in the Minimum and Supplemental Data Sets are detailed in Appendix A.

Because the goal for TEDS is to collect information on entire treatment episodes, SAMHSA is expanding its data collection efforts to include discharge data. These data, when linked to admission data, will enable analyses of questions that cannot be answered with admissions data alone. A report from this system will be issued next year.

History

National-level data collection on admissions to substance abuse treatment was first mandated in 1972 under the Drug Abuse Office and Treatment Act, P.L. 92-255. This act initiated Federal funding for drug treatment and rehabilitation, and required reporting on clients entering drug (but not alcohol) abuse treatment. The Client-Oriented Data Acquisition Process (CODAP) was developed to collect admission and discharge data directly from federally-funded drug treatment programs. (Programs for treatment of alcohol abuse were not included.) Reporting was mandatory for all such programs, and data were collected using a standard form. CODAP included all clients in federally-funded programs regardless of individual funding source. Reports were

issued from 1973-1981 based on data from 1,800-2,000 programs, and including some 200,000 annual admissions

In 1981, collection of national-level data on admissions to substance abuse treatment was discontinued because of the introduction of the Alcohol and Drug Abuse and Mental Health Services (ADMS) Block Grant. The Block Grant transferred Federal funding from individual programs to the States for distribution, and included no data reporting requirement. Participation in CODAP became voluntary, and although several States submitted data through 1984, the data were in no way nationally representative.

In 1988, the Comprehensive Alcohol Abuse, Drug Abuse, and Mental Health Amendments (P.L. 100-690) established a revised Substance Abuse Prevention and Treatment (SAPT) Block Grant, and mandated Federal data collection on clients receiving substance abuse treatment. The Treatment Episode Data Set (TEDS) data collection effort represents the Federal response to this mandate. TEDS began in 1989 with the issue of three-year development grants to States.

TEDS in the Context of DASIS

TEDS is one of the three components of SAMHSA's Drug and Alcohol Services Information System (DASIS). The core of DASIS is the National Master Facility Inventory (NMFI), a continuously-updated comprehensive listing of all known substance abuse treatment facilities. The third component of DASIS is the Uniform Facility Data Set (UFDS) survey, an annual survey of the location, characteristics, and use of alcoholism and drug abuse treatment facilities. A unique ID number assigned to the NMFI facility is used in the collection of client-level data (TEDS) and facility-level data (UFDS) so that the three data sets can be linked. Together, they provide national- and State-level information on the

numbers and characteristics of individuals admitted to alcohol and drug treatment and describe the facilities that deliver care to those individuals

TEDS includes facilities that are licensed or certified by the State substance abuse agency to provide substance abuse treatment (or are administratively tracked for other reasons), and that are required by the States to provide TEDS client-level data.

Limitations of TEDS

TEDS, while comprising a significant proportion of all admissions to substance abuse treatment, does not include all such admissions. TEDS is a compilation of facility data from State administrative systems. The scope of facilities included in TEDS is affected by differences in State systems of licensure, certification, accreditation, and the disbursement of public funds. For example, some State substance abuse agencies regulate private facilities and individual practitioners, while others do not. In some States, hospital-based substance abuse treatment facilities are not licensed through the State substance abuse agencies track correctional facilities (State prisons and local jails), while others do not.

In general, facilities reporting TEDS data are those that receive State alcohol and/or drug agency funds (including Federal Block Grant funds) for the provision of alcohol and/or drug treatment services (see Chapter 4). Thus TEDS, while it does not comprise all admissions to substance abuse treatment, does include those admissions that constitute a burden on public funds. Most States are able to report all admissions to all eligible facilities, although some report only those admissions that were financed by public funds. States may report data from facilities that do not receive public funds, but generally do not because of the difficulty in obtaining data from these facilities. TEDS generally does not include

data on facilities operated by Federal agencies. These include the Bureau of Prisons, the Department of Defense, and the Veterans Administration. However, some facilities operated by the Indian Health Service are included.

The primary goal for TEDS is to monitor the characteristics of treatment episodes for substance abusers. Implicit in the concept of treatment is a planned, continuing treatment regimen. Thus TEDS does not attempt to include early intervention programs (considered as prevention programs). Crisis intervention facilities such as sobering-up stations and hospital emergency departments are generally not included in TEDS, although a State may opt to include such programs in its submissions to TEDS.

Interpretation of the Data

TEDS is an exceptionally large and powerful data set. Like all data sets, however, care must be taken that interpretation does not extend beyond the limitations of the data. Limitations fall into two broad categories: those related to the scope of the data collection system, and those related to the difficulties of aggregating data from the highly diverse State data collection systems. Limitations to be kept in mind while analyzing TEDS data include:

- TEDS is an admission-based system, and TEDS admissions do not represent individuals. An individual admitted to treatment twice within a calendar year would be counted as two admissions. Most States cannot, for reasons of confidentiality, identify clients with a unique ID assigned at the State level. Consequently TEDS is unable to follow individual clients through a sequence of treatment episodes.
- TEDS attempts to enumerate treatment episodes by distinguishing the initial admission of a client from his/her subsequent transfer to a dif-

ferent service type (for example, from residential treatment to outpatient) within a single continuous treatment episode. However, States differ greatly in their ability to identify transfers; some can distinguish transfers within providers but not across providers (see Chapter 4 and Table 4.1). Some admission records may in fact represent transfers, and therefore the number of admissions reported probably overestimates the number of treatment episodes.

- The number and client mix of TEDS admissions does not represent the total national demand for substance abuse treatment, nor the prevalence of substance abuse in the general population
- The primary, secondary, and tertiary substances of abuse reported to TEDS are those substances which led to the treatment episode, and not necessarily a complete enumeration of all drugs used at the time of admission.
- In reporting TEDS data, SAMHSA must balance timeliness of reporting with completeness of the data set. States rely on individual facilities to report in a timely manner. States then bundle the data and report them to SAMHSA at regular intervals. Admissions from facilities that report late to the States may appear in a later data submission to SAMHSA. Thus the number of admissions reported here for 1998 may be expected to increase by 5 percent or more as submissions of 1998 data continue. However, the additional submissions are unlikely to have a significant effect on the percentage distributions that are the basis of this report.
- States continually review the quality of their data processing. When systematic errors are identified, States may revise or replace historical TEDS data files. While this process represents

an improvement in the data system, the historical statistics in this report will differ slightly from those in earlier reports.

Considerations specific to this report include:

- The report includes admissions records that were received and processed by SAMHSA through March 31, 2000.
- The report focuses on treatment admissions for substance abusers. Thus admissions for treatment as a codependent of a substance abuser are excluded. Records for identifiable transfers within a single treatment episode are also excluded.
- Records with partially complete data have been retained. Where records include missing or invalid data for a specific variable, that record is excluded from tabulations of that variable. The total number of admissions on which a percentage distribution is based is reported in each table.
- Primary alcohol admissions are characterized as Alcohol only or Alcohol with secondary drug. Alcohol with secondary drug indicates a primary alcohol admission with a specified secondary or tertiary drug. All other alcohol admissions are classified as Alcohol only.

- Cocaine admissions are classified according to route of administration as *Smoked* and *Other* route. Smoked cocaine primarily represents crack or rock cocaine, but can also include cocaine hydrochloride (powder cocaine) when it is free-based. Non-smoked cocaine includes cocaine admissions where the route of administration is not reported, and thus the TEDS estimate of the proportion of admissions for smoked cocaine is conservative.
- Methamphetamine/amphetamine admissions include admissions for both methamphetamine and amphetamine, but are primarily for methamphetamine. Four States (Arkansas, Connecticut, Oregon, and Texas) do not distinguish between methamphetamine and amphetamine admissions. However, for the States that make this distinction, methamphetamine constitutes 94 percent of combined methamphetamine/amphetamine admissions.
- For this report, secondary and tertiary substances (as defined in Appendix A) are grouped together and referred to as secondary substances of abuse.

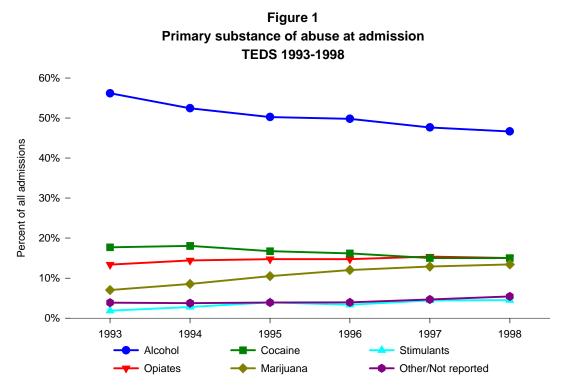

CHAPTER 2

OVERVIEW AND TRENDS: 1993-1998

Trend data are invaluable in monitoring changing patterns in substance abuse treatment admissions. These patterns reflect underlying changes in substance abuse in the population, and have important implications for resource allocation and program planning.

Trends in Primary Substance of Abuse

Table 2.1 and Figure 1. TEDS treatment admissions are dominated by four substances that together account for 90 percent of all TEDS admissions. These are alcohol, opiates (primarily heroin), cocaine, and marijuana/hashish.

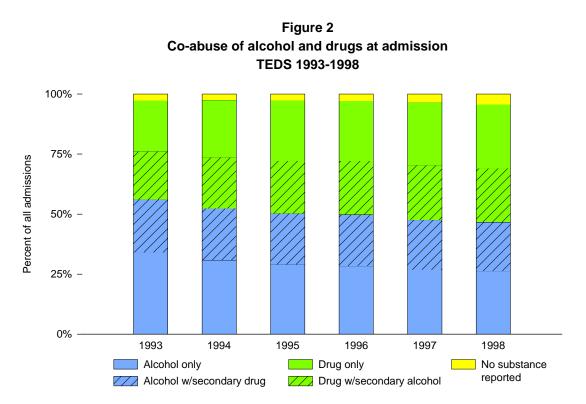

- Alcohol accounted for about half (47 percent) of all TEDS admissions in 1998. However, 43 percent of these admissions reported secondary drug abuse as well. The proportion of alcohol admissions declined from 1993-1998, driven by a decline in admissions for abuse of alcohol alone from 34 percent in 1993 to 26 percent in 1998.
- Proportions of *opiate* and *cocaine* admissions were equal in 1998. Changes in both opiate and cocaine admissions were found:
 - The proportion of admissions for primary *opiate* abuse increased from 13 percent in 1993 to 15 percent in 1998.
 - The proportion of admissions for primary cocaine abuse declined from 18 percent in 1993 to 15 percent in 1998. Smoked cocaine (crack) represented 73 percent of all primary cocaine admissions in 1998, a

- proportion that remained stable over the period 1993-1998.
- The proportion of admissions for primary marijuana almost doubled between 1993 and 1998, from 7 percent to 13 percent.
- The proportion of admissions for abuse of methamphetamine/amphetamine and other stimulants increased from 2 percent to 5 percent between 1993 and 1998.
- Admissions attributable to sedatives and tranquilizers represent a small and stable proportion of TEDS admissions (one-half of 1 percent).
- Abuse of hallucinogens, PCP, inhalants, and over-the-counter medications together accounted for 0.4 percent of TEDS admissions in 1998, a decline from 0.6 percent in 1993.

Trends in the Co-Abuse of Alcohol and Drugs

Table 2.2 and Figure 2. The concurrent abuse of alcohol and drugs is a significant problem. In 1998, 42 percent of all admissions reported problems with both alcohol and drugs. Twenty-two percent reported primary drug abuse with secondary alcohol abuse, and 20 percent reported primary alcohol abuse with secondary drug abuse.

Primary alcohol abuse declined from 57 percent of TEDS admissions in 1993 to 47 percent in 1998. Primary drug abuse increased from 41 percent in 1993 to 49 percent in 1998. This may reflect changing priorities in the treatment system rather than a change in substance abuse patterns. Limited resources and targeted programs may result in a shift of State funds from treatment of alcohol abusers to treatment of drug abusers.

Trends in Admission Rates by Primary Substance and State

Tables 2.3-2.7 and Figures 3-7 show changing patterns in State admission rates for selected substances from 1993-1998.

On the maps, shading for each substance is based on the 1993 admission rate for the total United States, and on the standard deviation from the mean of all 1993 State rates. Yellow indicates States whose rates ranged from the 1993 U.S. rate to one standard deviation above that rate. Orange indicates States whose rates were between one and two standard deviations above the 1993 U.S. rate. Red indicates States with rates more than two standard deviations above the 1993 U.S. rate. White indicates States for which no data were available.

- Alcohol admission rates were generally highest in the Pacific Northwest, North Central, and Northeast. In seven States, rates declined by 50-80 percent between 1993 and 1998. No States showed increases of more than 50 percent.
- Heroin admission rates were highest in the Pacific and Middle Atlantic States. However, rate increases over 1993-1998 were evident in a

- number of States. In ten States, 1998 rates were at least double the rates reported in 1993. In another seven States, rates increased by 50-100 percent between 1993 and 1998.
- Cocaine admission rates were generally highest in the Middle Atlantic and some Southern
 States. Trends indicated stable or declining admission rates for primary cocaine abuse. Rates
 declined by 25 percent or more between 1993
 and 1998 in 15 States, but increased by 25
 percent or more in eight States.
- Marijuana admission rates showed substantial increases across a large number of States. In 21 States, 1998 rates were at least double the rates reported in 1993. In another nine States, rates increased by 50-100 percent between 1993 and 1998.
- Methamphetamine/amphetamine admissions showed an increase in admission rates, spreading east from the Pacific States into the Midwest. In 25 States, rates at least doubled between 1993 and 1998. In ten of those States, rates increased 500 percent or more.

(per 100,000 population aged 12 and over)

Trends in Demographic Characteristics

Table 2.8. In TEDS, males represented 70 percent of admissions in 1998, a proportion that remained fairly stable from 1993-1998. The distribution of TEDS admissions by sex is different from that of the U.S. population, where about half the population is male.

Table 2.8 and Figure 8. Shifts in the age distribution of TEDS admissions have occurred since 1993. The proportion of those under 18 increased from 6 percent in 1993 to 10 percent in 1998. An increase

was also seen for persons aged 35-54 (from 36 percent in 1993 to 42 percent in 1998). The proportion of treatment admissions aged 25-34 declined from 39 percent in 1993 to 30 percent in 1998.

The age distribution of TEDS treatment admissions is different from that of the U.S. population. Some 87 percent of TEDS admissions in 1998 were between the ages of 18 and 54, compared to about 53 percent of the U.S. population.

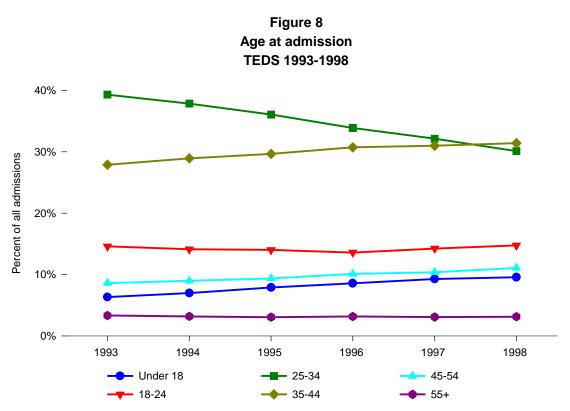

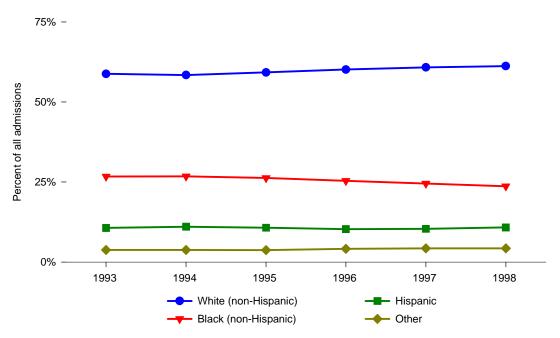

Table 2.8 and Figure 9. The racial/ethnic composition of TEDS admissions has remained fairly constant since 1993, at about 60 percent non-Hispanic white, 25 percent non-Hispanic black, 11 percent Hispanic, and 4 percent other groups.

The racial/ethnic composition of TEDS admissions is somewhat different from that of the U.S. popula-

tion. Non-Hispanic whites are the majority in both groups, but represented 61 percent of TEDS admissions in 1998, compared to 73 percent of the U.S. population. Non-Hispanic blacks represented 24 percent of TEDS admissions in 1998, and 12 percent of the U.S. population.

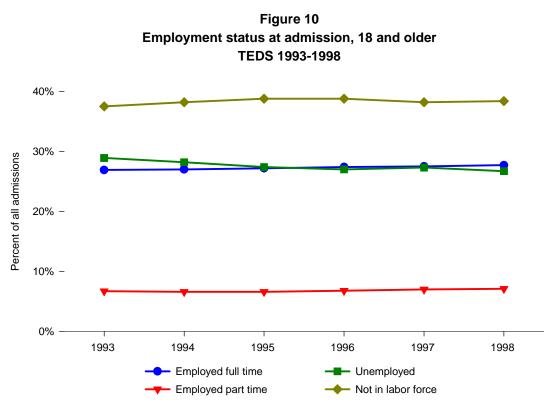

Figure 9
Race/ethnicity of admissions
TEDS 1993-1998

Trends in Socio-Economic Status

Table 2.9. TEDS admissions aged 18 and older are socio-economically disadvantaged compared to the U.S. population. This is evident in the unadjusted distributions of employment status and education. Because TEDS admissions are different demographically from the U.S. population, the table also shows distributions that have been statistically adjusted to provide a more valid comparison to the U.S. population. The adjusted distributions indicate an even greater disparity than do the unadjusted.

Table 2.9 and Figure 10. TEDS admissions aged 18 and over were much less likely to be employed than was the U.S. population. Sixty-five percent (71 percent adjusted) of TEDS admissions aged 18 and over were unemployed or not in the labor force in 1998, compared to 35 percent of the U.S. population. Only 28 percent (22 percent adjusted) were employed full-time, compared to 55 percent of the U.S. population. These proportions were relatively stable from 1993-1998.

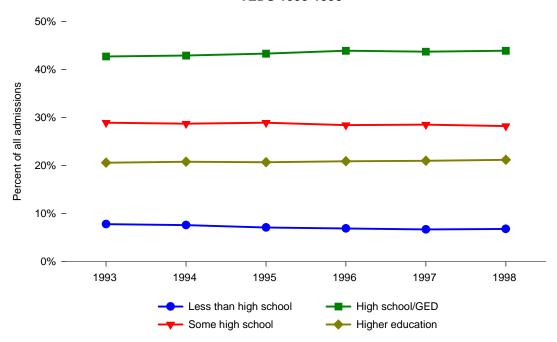

¹ The distributions have been adjusted for age, sex, and race/ethnicity to the U.S. population. In essence, this technique compares the distributions under the assumption that the TEDS population and the U.S. population had the same age, sex, and racial/ethnic characteristics.

Table 2.9 and Figure 11. TEDS admissions aged 18 and over generally had less education than the U.S. population. Thirty-five percent (33 percent adjusted) of TEDS admissions aged 18 and over had not completed high school, compared to 18 percent of the U.S. population. TEDS admissions

were also less likely to have received higher education Twenty-one percent (25 percent adjusted) of TEDS admissions aged 18 and over had attended school beyond high school, compared to 49 percent of the U.S. population. These proportions were relatively stable from 1993-1998.

Figure 11
Educational attainment at admission, 18 and older
TEDS 1993-1998

CHAPTER 3

CHARACTERISTICS OF ADMISSIONS: 1998

This chapter highlights important findings in the 1998 data. The tables include all items in the TEDS Minimum Data Set (Tables 3.1a-3.5) and Supplemental Data Set (Tables 3.6-3.9) for 1998. Data are tabulated as percentage distributions according to primary substance of abuse.

The Minimum Data Set consists of 19 items that include:

- Demographic information
- Primary, secondary, and tertiary substances and their route of administration, frequency of use, and age at first use
- Source of referral to treatment
- Number of prior treatment episodes
- Service type, including planned use of methadone.

The Supplemental Data Set consists of 15 items that include psychiatric, social, and economic measures.

Definitions and classifications used in the Minimum and Supplemental Data Sets are detailed in Appendix A.

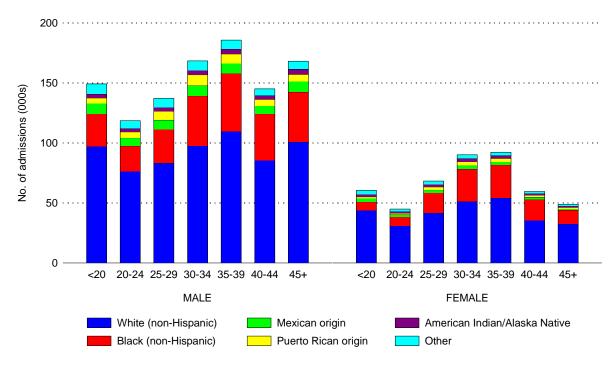

Not all States report all data items in the Minimum and Supplemental Data Sets. Most States report the Minimum Data Set for all or nearly all TEDS admissions. However, the items reported from the Supplemental Data Set vary greatly across States. Tables 4.3 and 4.4 indicate, by State, the item response rates for the Minimum and Supplemental Data Sets.

The stacked bar charts in this chapter represent counts of admissions for each primary substance of abuse by sex, age, and race/ethnicity. Admissions of Mexican and Puerto Rican origin made up 77 percent of Hispanic admissions. In the bar charts, these are shown separately. The category *Other* includes Hispanics not of Mexican or Puerto Rican origin, Asian/Pacific Islanders, and all others.

All Admissions

- White males made up 42 percent of all treatment admissions in 1998, followed by white females (19 percent), black males (16 percent), and black females (8 percent) (Table 3.2a).
- The number of admissions for both males and females was greatest for those aged 35-39 (Figure 12). However, the average age of TEDS admissions was 33 years (Table 3.1a).

Figure 12
All admissions
Admissions by sex, age, and race/ethnicity: TEDS 1998

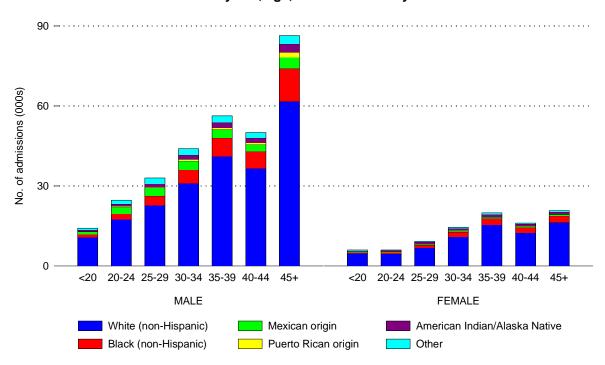

Alcohol Only

- Admissions for abuse of alcohol alone, with no secondary drug abuse, represented 26 percent of TEDS admissions in 1998 (Table 3.1b).
- Alcohol-only admissions tended to be male (77 percent) and white (73 percent), with white males making up 55 percent of all alcohol-only admissions (Tables 3.1a and 3.2a). Alcohol alone was the substance problem most likely to be reported by admissions aged 30 and older (Table 3.1b).
- Eighty-seven percent of alcohol-only admissions reported that they first became intoxicated be-

- fore age 21. About a third (32 percent) had first become intoxicated by age 14 (Table 3.3).
- Almost half (47 percent) of all alcohol-only admissions reported that this was their first admission to treatment (Table 3.3).
- The criminal justice system was responsible for referring 45 percent of alcohol-only admissions to treatment (Table 3.4).
- Almost half (48 percent) of alcohol-only admissions were employed (Table 3.5).

Figure 13
Alcohol only
Admissions by sex, age, and race/ethnicity: TEDS 1998

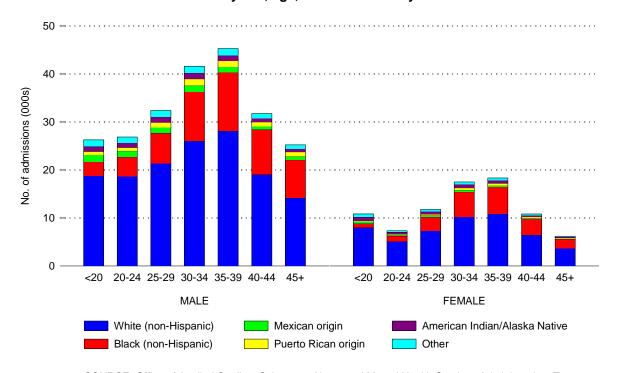

Alcohol with Secondary Drug Abuse

- Admissions for primary abuse of alcohol with secondary abuse of drugs represented 20 percent of TEDS admissions in 1998 (Table 3.1b).
- Admissions for abuse of alcohol with secondary drug abuse were less likely to be white than alcohol-only admissions (63 percent vs. 73 percent). The average age at admission was lower, at 33 years vs. 38 years (Table 3.1a).
- Ninety-four percent of admissions for alcohol with secondary drug abuse reported that they first became intoxicated before age 21. Over half (52 percent) had first become intoxicated by age 14, compared to 32 percent of alcoholonly admissions (Table 3.3).
- Marijuana was the substance most frequently reported as a secondary substance by alcohol admissions (61 percent). Cocaine (either smoked or by another route) was reported as a secondary substance by 47 percent (Table 5.4).
- Admissions for alcohol with secondary drug abuse were less likely to be in treatment for the first time than alcohol-only admissions (37 percent vs. 47 percent) (Table 3.3).
- Admissions for alcohol with secondary drug abuse were more likely to receive residential treatment than alcohol-only admissions (23 percent vs. 12 percent) (Table 3.4).

Figure 14

Alcohol with secondary drug abuse

Admissions by sex, age, and race/ethnicity: TEDS 1998

Heroin

- Heroin and other opiates were tied with cocaine as the leading illicit drugs responsible for treatment admissions in 1998, accounting for 15 percent of TEDS admissions (Table 3.1b).
 Ninety-three percent of opiate admissions were for heroin.
- Fifty-five percent of heroin admissions were aged 30-44, and 17 percent were aged 45 and over (Table 3.1a). Fifty percent of heroin admissions were white. Half (49 percent) of all admissions of persons of Puerto Rican origin were for primary heroin abuse (Table 3.1b).
- Injection was the most common route of administration for heroin (67 percent). How-

- ever, 28 percent reported inhalation as their usual route of administration (Table 3.3).
- Heroin admissions reported secondary abuse of non-smoked cocaine (26 percent) and alcohol (25 percent) (Table 5.4).
- Daily heroin use was reported by 82 percent of heroin admissions (Table 3.3).
- Most heroin admissions (79 percent) had been in treatment before the current episode, and 27 percent had been in treatment 5 or more times (Table 3.3).
- Methadone use was planned for 38 percent of primary heroin admissions (Table 3.4).

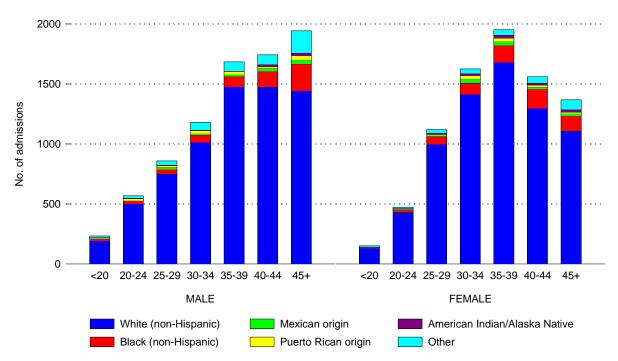

Figure 15
Heroin
Admissions by sex, age, and race/ethnicity: TEDS 1998

Other Opiates

- Opiates other than heroin accounted for one percent of TEDS admissions in 1998 (Table 3.1b). These drugs include non-prescription use of methadone, codeine, morphine, hydromorphone, meperidine, opium, and other drugs with morphine-like effects.
- Admissions for other opiates were 50 percent female and 84 percent white. Fifty-four percent were aged 35-49 (average age 37) (Table 3.1a).
- The most frequent route of administration was oral (77 percent) (Table 3.3).

- Thirty percent first used opiates other than heroin after age 30 (Table 3.3).
- Forty-two percent of admissions for opiates other than heroin reported no abuse of other substances (Table 5.4).
- Almost half (47 percent) of admissions for opiates other than heroin entered treatment through self-referral (Table 3.4).
- Methadone use as part of treatment was planned for 21 percent of admissions for opiates other than heroin (Table 3.4).

Figure 16
Other opiates
Admissions by sex, age, and race/ethnicity: TEDS 1998

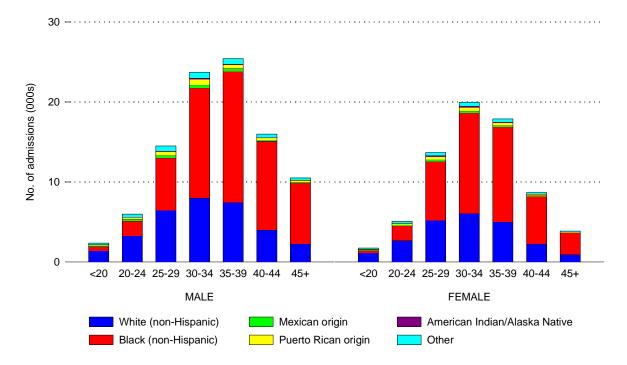

Smoked Cocaine (Crack)

- Cocaine (including both smoked and other routes of administration) was tied with opiates as the leading illicit drug responsible for treatment admissions in 1998, accounting for 15 percent of TEDS admissions. About threequarters (73 percent) of cocaine admissions were for smoked cocaine (crack) (Tables 3.1a and 3.1b).
- Smoked cocaine admissions were 59 percent black and 42 percent female, compared to 24 percent and 30 percent of all TEDS admissions (Table 3.1a).
- Smoked cocaine was the primary substance most frequently reported by black admissions

- (28 percent of black treatment admissions) (Table 3.1b).
- Sixty-one percent of smoked cocaine admissions did not use it until age 21 or later (Table 3.3).
- Smoked cocaine admissions reported secondary abuse of alcohol (58 percent) and marijuana (34 percent) (Table 5.4).
- Daily use was reported by 42 percent of smoked cocaine admissions (Table 3.3).
- Thirty percent of smoked cocaine admissions received residential treatment, compared to 18 percent of all TEDS admissions (Table 3.4).

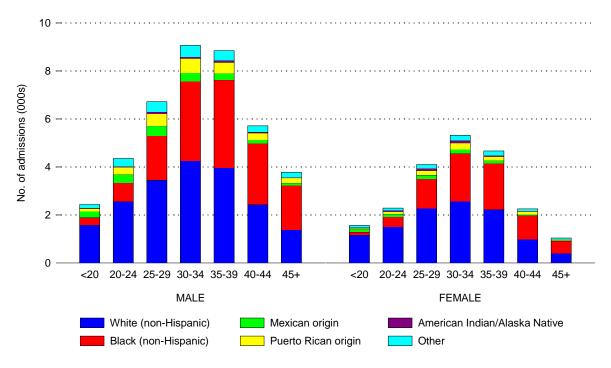

Figure 17
Smoked cocaine (crack)
Admissions by sex, age, and race/ethnicity: TEDS 1998

Non-Smoked Cocaine

- Non-smoked cocaine accounted for 4 percent of TEDS admissions in 1998 (Table 3.1b).
- About two-thirds (69 percent) of admissions for non-smoked cocaine reported inhalation as the route of administration (Table 3.3).
- Admissions for cocaine taken by routes other than smoking were more likely to be white and male than were smoked cocaine admissions— 50 percent of these admissions were white, and 66 percent were male (Table 3.1a).

Figure 18
Non-smoked cocaine
Admissions by sex, age, and race/ethnicity: TEDS 1998

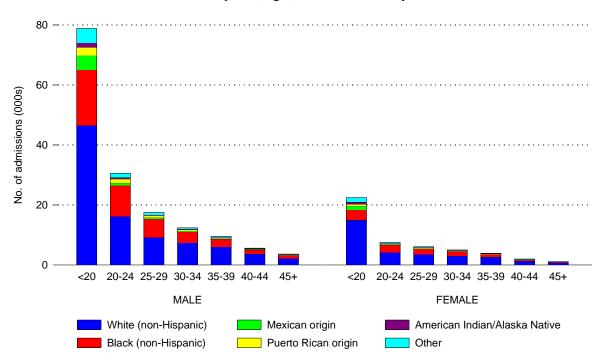

Marijuana/Hashish

- Primary marijuana abuse accounted for 13 percent of TEDS admissions in 1998 (Table 3.1b).
- Marijuana admissions were generally male, white, and young. More than three-quarters (77 percent) were male, 59 percent were white, and 49 percent were under 20 years old (Table 3.1a). Marijuana accounted for about half (48 percent) of all admissions for persons under 20 (Table 3.1b).
- Marijuana use began at an early age among primary marijuana admissions—more than half (57

- percent) had first used marijuana by the age of 14, and 92 percent by the age of 18 (Table 3.3).
- More than half (54 percent) of marijuana treatment admissions were referred through the criminal justice system (Table 3.4).
- Secondary abuse of alcohol was reported by 57 percent of admissions for primary marijuana abuse (Table 5.4).

Figure 19
Marijuana/hashish
Admissions by sex, age, and race/ethnicity: TEDS 1998

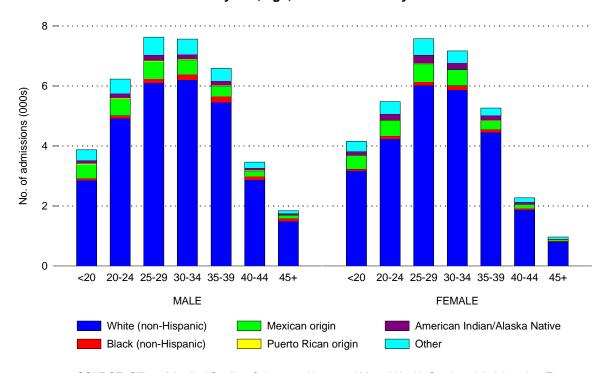

Methamphetamine/Amphetamine and Other Stimulants

- Methamphetamine/amphetamines and other stimulants were reported as the primary substance for 5 percent of 1998 TEDS admissions (Table 3.1b). Ninety-nine percent of all stimulant admissions were for methamphetamine or amphetamine. For the States that distinguish the two substances (four States—Arkansas, Connecticut, Oregon, and Texas—do not), methamphetamine represented 94 percent of combined methamphetamine/amphetamine admissions.
- Methamphetamine/amphetamine admissions were predominantly white (80 percent). The next largest racial/ethnic group was persons of Mexican origin, at 8 percent (Table 3.1a).

- Females made up 47 percent of methamphetamine/amphetamine admissions (Table 3.1a). Methamphetamine/amphetamine admissions peaked at age 25-34 for both males and females (Table 3.2a).
- Methamphetamine/amphetamines were smoked, inhaled, or injected in similar proportions (32 percent, 31 percent, and 29 percent, respectively) (Table 3.3).
- Nineteen percent of methamphetamine/amphetamine admissions had used it by the age of 14, and just over half (53 percent) had used it by the age of 18.

Figure 20
Methamphetamine/amphetamine and other stimulants
Admissions by sex, age, and race/ethnicity: TEDS 1998

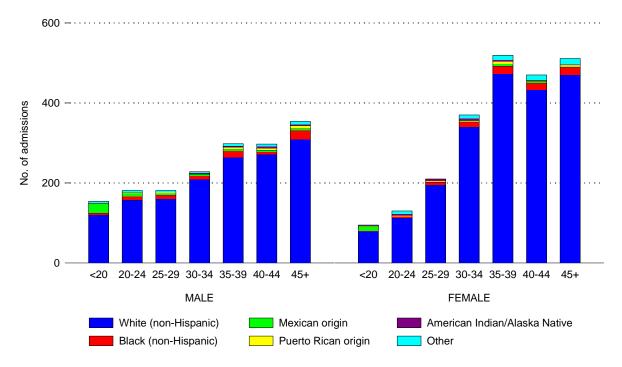

Tranquilizers

- Tranquilizers were reported as the primary substance by 0.3 percent of TEDS admissions (Table 3.1b).
- Admissions for abuse of tranquilizers tended to be female (58 percent) and white (90 percent). Sixty-one percent were aged 35 and older (Table 3.1a).
- Thirty-nine percent of tranquilizer admissions reported abuse of alcohol as well as tranquilizers. Eighteen percent reported abuse of marijuana/hashish, and 13 percent reported abuse of opiates other than heroin (Table 5.4).

- Among primary tranquilizer admissions, 62 percent reported daily use of tranquilizers (Table 3.3).
- About one-third (32 percent) of tranquilizer admissions first used tranquilizers after age 30 (Table 3.3).
- Tranquilizer admissions were less likely to receive outpatient treatment (55 percent), and more likely to receive detoxification (23 percent) or residential treatment (22 percent). These percentages for all TEDS admissions were 64, 18, and 18 percent, respectively (Table 3.4).

Figure 21
Tranquilizers
Admissions by sex, age, and race/ethnicity: TEDS 1998

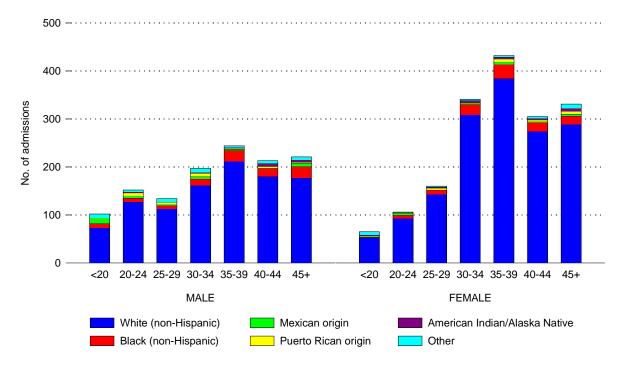

Sedatives

- Admissions for primary sedative abuse were responsible for 0.2 percent of TEDS admissions in 1998 (Table 3.1b).
- Sedative admissions showed patterns similar to those for abuse of tranquilizers. They tended to be female (58 percent), white (86 percent), and aged 30-44 years (58 percent) (Table 3.1a).
- Fifty-four percent of sedative admissions reported daily use of sedatives (Table 3.3).

- Thirty-four percent of sedative admissions reported abuse of alcohol as a secondary substance (Table 5.4).
- Twenty-seven percent of sedative admissions reported first use of sedatives after age 30 (Table 3.3).
- Almost one-third of sedative admissions who were 18 and over (31 percent) had more than 12 years of education (Table 3.4).

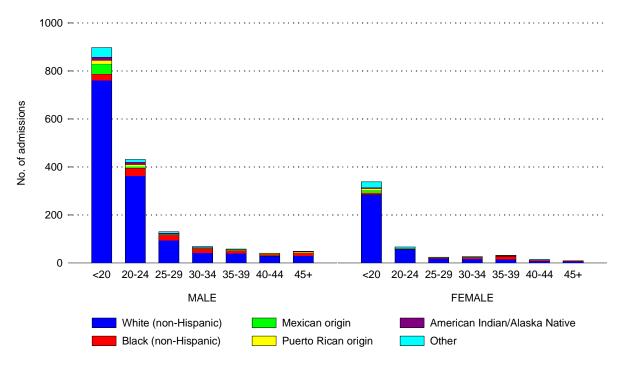

Figure 22 Sedatives Admissions by sex, age, and race/ethnicity: TEDS 1998

Hallucinogens

- Hallucinogens were responsible for 0.1 percent of TEDS admissions in 1998 (Table 3.1b). Hallucinogens include LSD, DMT, STP, mescaline, psilocybin, peyote, etc.
- Admissions for hallucinogen abuse occurred primarily among white males of high school and college age. Admissions were 76 percent male and 81 percent white. Fifty-one percent were between 15 and 19, and 23 percent were between 20 and 24 (Table 3.1a).
- Hallucinogen admissions were likely to abuse a range of substances—86 percent reported abuse of drugs other than hallucinogens. Marijuana/hashish and alcohol were most common (59 percent and 44 percent, respectively). Nonsmoked cocaine and methamphetamine/ amphetamine abuse were each reported by 12 percent (Table 5.4).
- Forty-one percent of hallucinogen admissions were referred through the criminal justice system (Table 3.4).

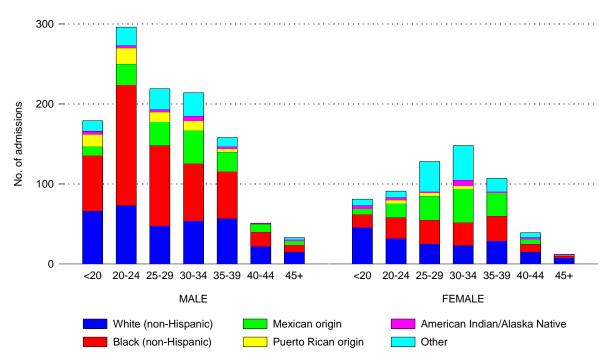

Figure 23
Hallucinogens
Admissions by sex, age, and race/ethnicity: TEDS 1998

Phencyclidine (PCP)

- Phencyclidine (PCP) was reported as a primary substance by 0.1 percent of TEDS admissions in 1998 (Table 3.1b).
- PCP admissions were approximately evenly split among non-Hispanic whites (29 percent), non-Hispanic blacks (36 percent), and Hispanics (28 percent) (Table 3.1a).
- PCP admissions for females peaked at age 30-34, but for males peaked 10 years earlier, at age 20-24 (Figure 24).
- Seventy-five percent of PCP admissions reported abuse of other substances. Alcohol was reported by 44 percent, marijuana/hashish by 31 percent, smoked cocaine by 12 percent, and non-smoked cocaine by 9 percent (Table 5.4).
- The usual route of administration for PCP was smoking, reported by 88 percent of admissions (Table 3.3).
- Fifty percent of PCP admissions were referred through the criminal justice system (Table 3.4).

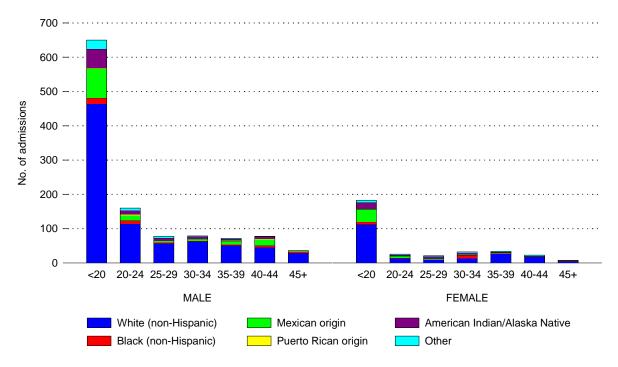

Figure 24
Phencyclidine (PCP)
Admissions by sex, age, and race/ethnicity: TEDS 1998

Inhalants

- Inhalants were reported as the primary substance of abuse by 0.1 percent of TEDS admissions (Table 3.1b). Inhalants include ether, glue, chloroform, nitrous oxide, gasoline, paint thinner, etc.
- Admissions for inhalant abuse were generally male (78 percent). While 69 percent of inhalant admissions were non-Hispanic white, the next most common racial/ethnic groups were persons of Mexican origin (13 percent) and American Indians (7 percent) (Table 3.1a).
- The predominant characteristic of inhalant admissions was youth—49 percent were under 18 (Table 3.1a).
- Almost one-third (32 percent) of inhalant admissions had used inhalants by the age of 12, and another 26 percent by the age of 14 (Table 3.3).
- About two-thirds of admissions for inhalant abuse reported abuse of other drugs as well, primarily alcohol (42 percent) and marijuana/ hashish (38 percent) (Table 5.4).

Figure 25 Inhalants Admissions by sex, age, and race/ethnicity: TEDS 1998

CHAPTER 4

STATE DATA: 1993-1998

TEDS aggregates data collected through the disparate data collection systems of the Single State Agencies (SSAs) for substance abuse treatment. States have cooperated with the Federal government in the data collection process, and substantial progress has been made toward developing a standardized data set. However, because each State system is unique, and each State has unique powers and mandates, significant differences exist among States. These differences are compounded by evolving health care payment systems.

State-to-State comparisons must be made with extreme caution. Table 4.1 presents key characteristics of State data collection systems for 1998. However, these characteristics can change as State substance abuse treatment systems change, and may be responsible for some year-to-year variation within States. Sources of apparent variation in State-to-State substance abuse patterns include:

• Completeness of reporting. Completeness of reporting at the cut-off date for preparation of this report varied from State to State. Future submissions of 1998 data are unlikely to affect the percentage distributions that are the basis of this report but may affect State-level counts and rates of admission. In addition, States review and improve their data collection and processing. Occasionally, States send revised data for earlier years to TEDS.

Figure 26 shows individual State admissions reporting patterns by month.

- Facilities included. Most States require facilities that receive State/public funding to report data to the State. 'State/public funding' generally refers to funding distributed by the SSA, but may also include funding distributed through another public agency. Some States require that additional categories (e.g., private facilities, methadone clinics, etc.) also report. In some States, other categories of facilities report voluntarily. See Table 4.1 for additional details.
- Clients included. Most States report data on all clients in a facility that is required to report to the State. However, some States report only those clients that receive State/public funds. See Table 4.1 for additional details.
- Admissions and transfers. Great variation is seen in the States' ability to identify and report client admissions and transfers. The goal for the TEDS system is to identify treatment episodes. Thus a change in service type or a change in provider, without an interruption in treatment, would ideally be categorized as a transfer. This requires, however, that clients be assigned unique IDs that can be linked across providers, and not all States are legally and/or technologically able to do this. About half of all States can identify transfers that occur when a client changes service type within the structure of a given provider. However, far fewer can identify a transfer that occurs when a client changes providers. Several States do not themselves track transfers, but report as transfers to TEDS those clients who are discharged and readmitted with-

in a specified time period (which may vary from State to State). See Table 4.1 for additional details. Annual counts of admissions, transfers, and codependents are shown in Table 4.2.

 Data items. Not all States report all data items in the Minimum and Supplemental Data Sets. Most States report the Minimum Data Set for all or nearly all TEDS admissions. However, the items reported from the Supplemental Data Set vary tremendously across States.

Tables 4.3 and 4.4 indicate, by State, the item response rates for the Minimum and Supplemental Data Sets.

- Treatment resources available. States differ widely in the amount of public funding available for substance abuse treatment, and in the constraints placed on the use of funds. States may be directed to target special populations such as pregnant women or adolescents. Where funds are limited, States may be compelled to exercise triage in admitting persons to treatment, admitting only those with the most 'severe' problems. In States with higher funding levels, a larger proportion of the population in need of treatment may be admitted, including the less severely impaired.
- Population sub-groups. States may include or exclude certain sectors of the treatment popu-

lation, and this relationship may change over time. For example, treatment programs based in the criminal justice system may or may not be administered through the State SSA. Detoxification facilities, which can generate large numbers of admissions, are not uniformly considered as treatment facilities.

The number of TEDS admissions reported in Texas declined significantly from 1995-1998. The most significant factor in this decline was that Texas stopped reporting its criminal justice system's substance abuse clients to TEDS in 1996. In addition, a reallocation of resources resulted in the closure of several detoxification units, facilities which typically generate large numbers of admissions.

Admissions in Iowa increased significantly in 1995 when Iowa began to include Medicaid clients in its data reporting system.

Tables 4.5-4.8 present numbers of admissions and admission rates by State. Rates are presented as crude rates per 100,000 population. However, to facilitate comparisons, rates adjusted for age, sex, and race/ethnicity are also presented. This technique is used to take into account the demographic variation across States. Interpretation of these tables and comparison across States should be made cautiously, and should take into account the many sources of variation detailed above.

Figure 26. Monthly admissions by State or jurisdiction: TEDS 1993-1998 (page 1 of 4)

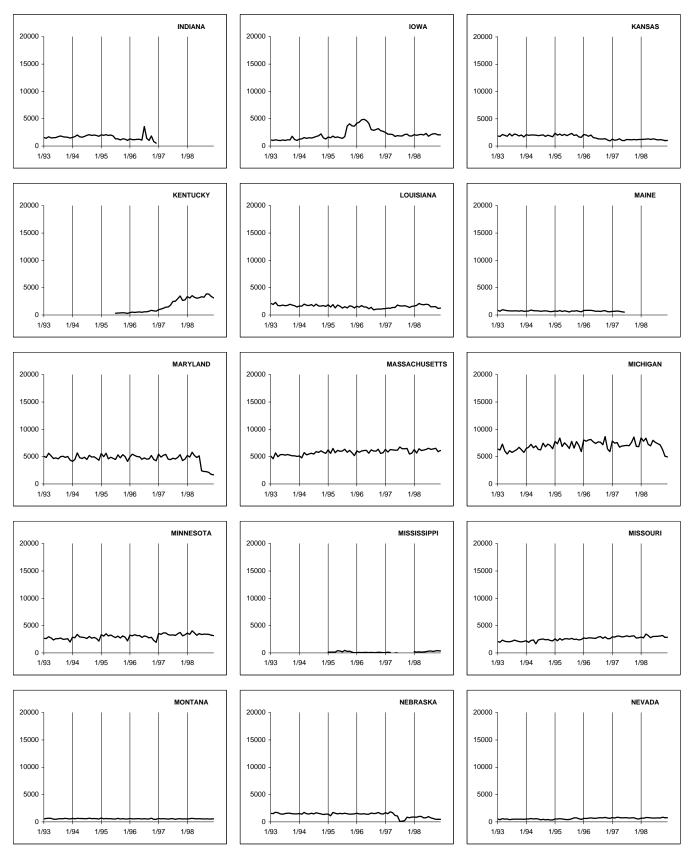

Figure 26. Monthly admissions by State or jurisdiction: TEDS 1993-1998 (page 3 of 4)

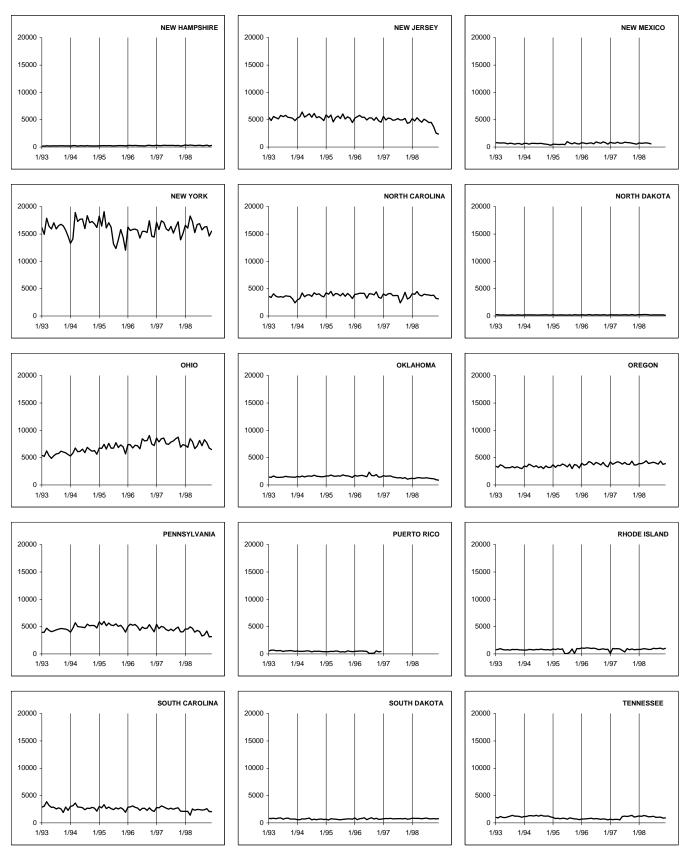

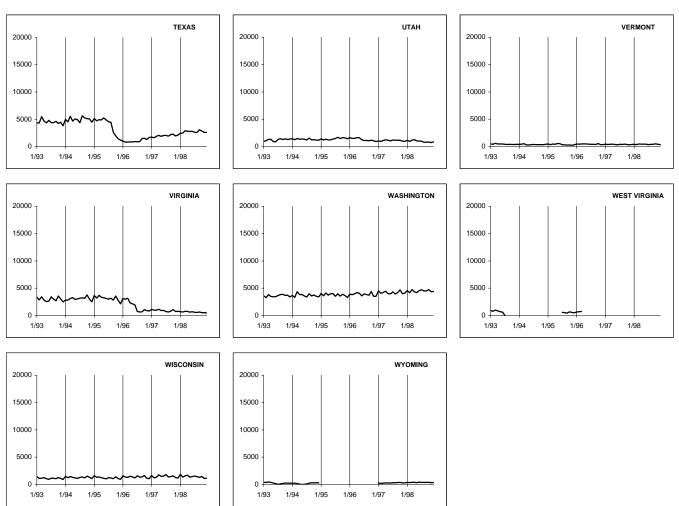

Figure 26. Monthly admissions by State or jurisdiction: TEDS 1993-1998 (page 4 of 4)

CHAPTER 5

TOPICS OF SPECIAL INTEREST

This chapter highlights topics that are of special interest.

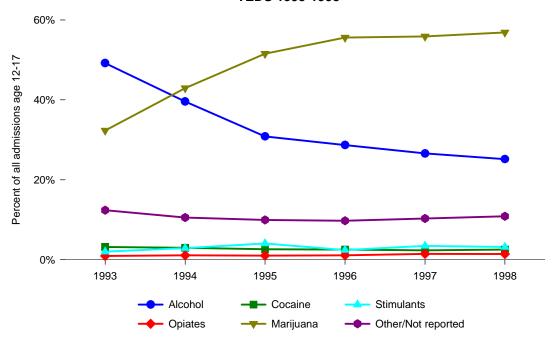

- Adolescent substance abuse is important not only because of the age of the abusers, but because of implications for future substance abuse and treatment need.
- Changes in the route of heroin administration are important because inhalation of heroin may appeal to a wider population than injection, and because inhalation can lead to injection.
- Multiple substance abuse is more common in the admissions population than is single-substance abuse, and needs to be better understood if it is to be addressed in treatment programs.
- Racial/ethnic sub-groups that are generally poorly represented in sample surveys can be analyzed in the TEDS data. Differences in substance abuse patterns may indicate cultural differences that should be addressed in structuring treatment programs.

Adolescent Substance Abuse

Table 5.1 and Figure 27. The number of adolescents (aged 12-17) admitted to substance abuse treatment rose 45 percent between 1993 and 1998. Admissions for marijuana abuse grew from 32 percent of adolescent admissions in 1993 to 57 percent in 1998, and accounted for most of the increase in adolescent admissions. While numbers were small, adolescent admissions for opiates and stimulants also increased substantially.

Tables 5.2a and 5.2b. Overall, 70 percent of adolescent admissions were male. However, this proportion was heavily influenced by marijuana admissions, where 76 percent were male. The male:female ratio was much closer for other substances. Almost half (47 percent) of adolescent admissions were through the criminal justice system. Seventeen percent were individual referrals, and 12 percent were referred through schools.

Figure 27
Primary substance of abuse at admission, age 12-17:
TEDS 1993-1998

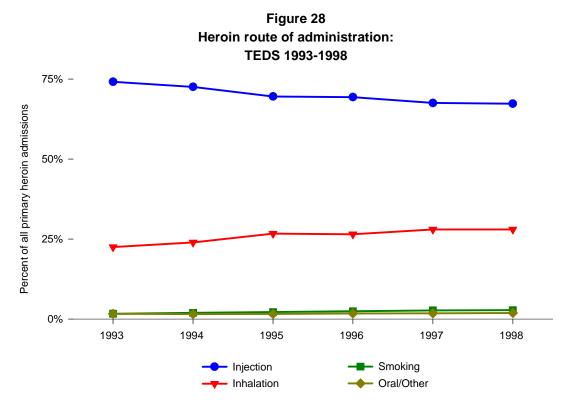

Heroin Admissions by Route of Administration

Table 5.3 and Figure 28. Most admissions for primary heroin abuse have been injectors of heroin. However, this proportion declined from 74 percent in 1993 to 67 percent in 1998. Most of the change is because of an increase in the proportion of admissions for heroin inhalation, from 23 percent in 1993 to 28 percent in 1998.

Admissions for heroin inhalation tend to be younger than for heroin injection—32 percent of 1998 admissions for inhalation were below age 30, compared to 25 percent for heroin injection. They are more likely to be experiencing a first treatment episode than are injectors (25 percent compared to 18 percent).

Among heroin abusers experiencing a first treatment episode, the average duration of use was shorter for inhalers and smokers than for injectors (10 and 8 years in 1998, respectively, compared to 13 years).

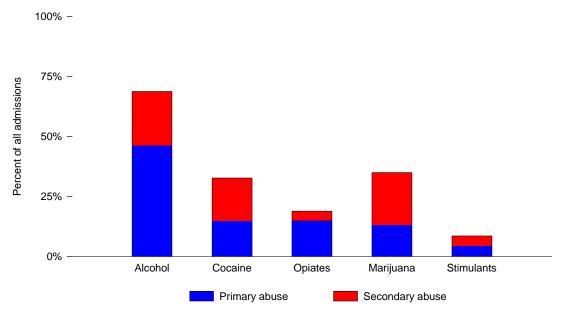

Multiple Substance Abuse

Table 5.4. Admission to treatment for abuse of multiple substances is common. Over half (53 percent) of all admissions reported abuse of at least one substance in addition to their primary substance. Alcohol was the most commonly reported substance, with 69 percent of all admissions reporting alcohol abuse. Marijuana and cocaine were each reported by about one-third of all admissions (35 percent and 33 percent, respectively), followed by opiates (19 percent) and stimulants (9 percent).

Table 5.5. This table details the most common substance combinations for selected primary substances. For example, for primary alcohol admissions, 57 percent reported using only alcohol, 15 percent reported using only alcohol and marijuana, and 8 percent reported using alcohol, cocaine, and marijuana (Figure 29).

Figure 29
Primary and secondary substance abuse: TEDS 1998

Population Racial/Ethnic Sub-Groups

Tables 3.1a, 3.1b, 3.2a, and 3.2b and Figures 30-39. Substance abuse patterns differed widely among racial/ethnic sub-groups. Alcohol was the predominant substance for all racial/ethnic groups, ranging from 34 percent of non-Hispanic black admissions to 73 percent of Alaskan Native admissions (Table 3.1b). The one exception was persons of Puerto Rican origin, where opiate admissions exceeded those for alcohol. Among non-Hispanic blacks, alcohol and cocaine were responsible for similar proportions of admissions (34 percent).

Among non-Hispanic whites (Figure 30), marijuana was the primary illicit substance for men (14 percent), followed by opiates (12 percent). For non-Hispanic white women, opiates were the primary illicit drug (16 percent), followed by cocaine (12 percent), marijuana (11 percent) and stimulants (9 percent).

Among non-Hispanic blacks (Figure 31), cocaine was the primary illicit substance for both men and women (29 percent and 43 percent, respectively). This was followed by marijuana for men (18 percent) and opiates for women (15 percent).

Among Hispanics, substance abuse patterns for drugs other than alcohol differed according to country of origin. Among persons of Mexican origin (Fig-

ure 33), opiates were the primary illicit substance for both men and women (26 percent and 30 percent, respectively). For men, this was followed by marijuana (13 percent). For women, it was followed by stimulants (16 percent). Stimulant abuse was higher among persons of Mexican origin than among other Hispanic groups. Among persons of Puerto Rican origin (Figure 34), opiates were the main substance at treatment admission for both men and women (49 percent each). This was followed by marijuana for men (12 percent) and cocaine for women (18 percent). Among persons of Cuban origin (Figure 35), cocaine was the predominant illicit substance for both men and women.

Over two-thirds (69 percent) of American Indians/ Alaska Natives entered treatment because of alcohol abuse (Figure 36). Marijuana was the primary illicit substance, responsible for 12 percent of male and 10 percent of female admissions. Four percent of men and 8 percent of women were admitted because of stimulant abuse.

Among Asian/Pacific Islanders (Figure 37), marijuana (22 percent) and stimulants (18 percent) were the primary illicit drugs, followed by opiates (14 percent) and cocaine (10 percent).

^{*} Less than 1 percent.

⁻⁻ Quantity is zero.

¹ Percent of admissions reporting a specified primary substance.

² Percent of admissions reporting a specified secondary substance.

³ Percent of admissions reporting a specified tertiary substance.

⁴ Percent of female admissions.

⁵ Percent of admissions reporting employment status as 'Not in labor force'.

⁶ Percent of admissions reporting referral source as 'Criminal justice system'.

APPENDIX A

TEDS DATA ELEMENTS

TEDS MINIMUM DATA SET

Missing values are coded as:

Unknown—The State collects this data item, but the record does not reflect an acceptable value. *Not collected*—The State does not collect this data item for submission to TEDS.

Client/codependent

A 'client' is a person who meets all of the following criteria:

- 1) Has an alcohol or drug related problem
- 2) Has completed the screening and intake process
- 3) Has been formally admitted for treatment or recovery service in an alcohol or drug treatment unit operated or funded by a State alcohol or State drug authority
- 4) Has his or her own client record.

A person is not a client if he or she has completed only a screening or intake process or has been placed on a waiting list.

A 'codependent' is a person who has no alcohol or drug abuse problem, but:

- 1) Is seeking services because of problems arising from his or her relationship with an alcohol or drug user
- 2) Has been formally admitted for service to a State-operated or State-funded treatment unit
- 3) Has his or her own client record or has a record within a primary client record.

Transaction type

Identifies whether a record is for an initial admission or a transfer/change in service.

For purposes of reporting to TEDS, a treatment episode is defined as that period of service(s) between the beginning of a treatment service for a drug or alcohol problem and the termination of services for the prescribed treatment plan.

When a client changes service, facility, program, or location during a treatment episode, the State sends a complete transfer record to TEDS.

Date of admission

The day when the client receives his or her first direct treatment or recovery service.

Type of service at admission

Describes the type of service the client received.

- Detoxification, 24-hour service, hospital inpatient—24 hour per day medical acute care services for detoxification for persons with severe medical complications associated with withdrawal
- Detoxification, 24-hour service, free-standing residential—24 hour per day services in non-hospital setting providing for safe withdrawal and transition to ongoing treatment
- Rehabilitation/residential, hospital (other than detoxification)—24 hour per day medical care in a hospital facility in conjunction with treatment services for alcohol and other drug abuse and dependency
- Rehabilitation/residential, short-term (30 days or fewer)—Typically 30 days or less of non-acute care in a setting with treatment services for alcohol and other drug abuse and dependency
- Rehabilitation/residential, long-term (more than 30 days)—Typically more than 30 days of non-acute care in a setting with treatment services for alcohol and other drug abuse and dependency; this may include transitional living arrangements such as halfway houses
- Ambulatory, intensive outpatient—At a minimum, the client must receive treatment lasting two or more hours per day three or more days per week
- Ambulatory, non-intensive outpatient—Ambulatory treatment services including individual, family, and/or group services; these may include pharmacological therapies
- Ambulatory, detoxification—Outpatient treatment services providing for safe withdrawal in an ambulatory setting (pharmacological or non-pharmacological)

Number of prior treatment episodes

Indicates the number of previous treatments the client has received in any drug or alcohol program. Changes in service for the same episode should *not* be counted as separate prior episodes.

None

1

2

3

5 or more

Principal source of referral

Describes the person or agency referring the client to the alcohol or drug abuse treatment program.

Individual (includes self-referral)—Includes the client, a family member, friend, or any other individual that would not be included in any of the following categories; includes self-referral due to pending DWI/DUI

Alcohol/drug abuse care provider—Any program, clinic, or other health care provider whose principal objective is treating clients with substance abuse problems, or a program whose activities are related to alcohol or other drug abuse prevention, education, or treatment

Other health care provider—A physician, psychiatrist, or other licensed health care professional; or general hospitals, psychiatric hospitals, mental health programs, or nursing homes

School (educational)—A school principal, counselor, or teacher; or student assistance program (SAP), the school system, or an educational agency

Employer/EAP—A supervisor or an employee counselor

Other community referral—Community and religious organizations or any Federal, State, or local agency that provides aid in the areas of poverty relief, unemployment, shelter, or social welfare. Self-help groups such as Alcoholics Anonymous (AA), Al-Anon, and Narcotics Anonymous (NA) are also included in this category. Defense attorneys are included in this category.

Court/criminal justice referral/DUI/DWI—Any police official, judge, prosecutor, probation officer, or other person affiliated with a Federal, State, or county judicial system. A referral by a court for DWI/DUI. Includes clients referred in lieu of or for deferred prosecution, or during pretrial release, or before or after official adjudication. Includes clients on pre-parole, pre-release, work or home furlough, or TASC. Client need not be officially designated as 'on parole'. Includes clients referred through civil commitment. Client referrals in this category are further defined in the Supplemental Data Set item Detailed criminal justice referral.

Date of birth

Client's date of birth.

Sex

Identifies client's sex.

Male

Female

Race

Specifies the client's race.

Alaskan Native (Aleut, Eskimo, Indian)—Origins in any of the original people of Alaska

American Indian (other than Alaskan Native)—Origins in any of the original people of North America and who maintain cultural identification through tribal affiliation or community recognition

Asian or Pacific Islander—Origins in any of the original people of the Far East, the Indian subcontinent, Southeast Asia, or the Pacific Islands

Black—Origins in any of the black racial groups of Africa

White—Caucasian with origins in any of the people of Europe (including Portugal), North Africa, or the Middle East Other—A default category for use in instances in which the client is not classified above or whose origin group, because of area custom, is regarded as a racial class distinct from the above categories.

Ethnicity

Identifies client's specific Hispanic origin, if any.

Puerto Rican—Of Puerto Rican origin, regardless of race

Mexican—Of Mexican origin, regardless of race

Cuban—Of Cuban origin, regardless of race

Other Hispanic—Of Central or South America or any other Spanish culture origin (including Spain), regardless of race Not of Hispanic origin

Education

Specifies the highest school grade the client has completed.

Employment status

Identifies the client's current employment status.

Full time—Working 35 hours or more each week; includes members of the uniformed services

Part time—Working fewer than 35 hours each week

Unemployed—Looking for work during the past 30 days, or on layoff from a job

Not in labor force—Not looking for work during the past 30 days or a homemaker, student, disabled, retired, or an inmate of an institution. Clients in this category are further defined in the Supplemental Data Set item Detailed Not in Labor Force.

Substance problem (primary, secondary, and tertiary)

These fields identify the client's primary, secondary, and tertiary substance problems.

None

Alcohol

Cocaine/crack

Marijuana/hashish—Includes THC and other cannabis sativa preparations

Heroin

Non-prescription methadone

Other opiates and synthetics—Includes codeine, Dilaudid, morphine, Demerol, opium, and any other drug with morphine-like effects

PCP—Phencyclidine

Hallucinogens—Includes hallucinogens, LSD, DMT, STP, mescaline, psilocybin, peyote, etc.

Methamphetamine

Other amphetamines—Includes Benzedrine, Dexedrine, Preludin, Ritalin, and any other amines and related drugs

Other stimulants—Includes non-amphetamine stimulants

Benzodiazepines—Includes diazepam, flurazepam, chlordiazepoxide, clorazepate, lorazepam, alprazolam, oxazepam, temazepam, prazepam, triazolam, clonazepam, halazepam, and other unspecified benzodiazepines

 $Other\ tranquilizers — Includes\ non-benzo diazepine\ tranquilizers$

Barbiturates—Includes phenobarbital, Seconal, Nembutal, etc.

Other sedatives or hypnotics—Includes non-barbiturate sedative/hypnotics, chloral hydrate, Placidyl, Doriden, etc.

Inhalants—Includes ether, glue, chloroform, nitrous oxide, gasoline, paint thinner, etc.

Over-the-counter medications—Includes aspirin, cough syrup, Sominex, and any other legally-obtained nonprescription medication

Other

Usual route of administration (of primary, secondary, and tertiary substances)

These fields identify the usual route of administration of the respective substances.

Oral
Smoking
Inhalation
Injection (intravenous or intramuscular)
Other

Frequency of use (of primary, secondary, and tertiary substances)

These fields identify the frequency of use of the respective substances.

No use in the past month 1-3 times in the past month 1-2 times in the past week 3-6 times in the past week Daily

Age at first use (of primary, secondary, and tertiary substances)

These fields identify the age of first use of the respective substances. If the substance is alcohol, the field identifies the age of first intoxication.

Use of methadone planned

Identifies whether methadone will be used as part of the treatment.

Yes No

TEDS SUPPLEMENTAL DATA SET

Pregnant at time of admission

Specifies whether the client was pregnant at the time of admission

Yes

No

Veteran status

Identifies whether the client has served in the uniform services. This category also includes veterans of the Coast Guard and Public Health Service.

Yes

No

Psychiatric problem in addition to alcohol or drug problem

Identifies whether the client has a psychiatric problem in addition to his or her alcohol or drug use problem.

Yes

No

DSM criteria diagnosis

The diagnosis of the substance abuse problem from the American Psychiatric Association's *Diagnostic and Statistical Manual of Mental Disorders*.

Marital status

Describes the client's marital status. The following categories are compatible with the U.S. Census.

Never married—Includes those whose only marriage was annulled

Now married—Includes those living together as married

Separated—Includes those separated legally or otherwise absent from spouse because of marital discord

Divorced

Widowed

Living arrangement

Specifies whether the client is homeless, living with parents or in a supervised setting, or living on his or her own.

Homeless—No fixed address; includes shelters

Dependent living—Dependent children and adults living in a supervised setting such as a halfway house orgroup home Independent living

Source of income/support

Identifies the client's principal source of financial support. For children under 18, this field indicates the parents' primary source of income/support.

Wages/salary
Public assistance
Retirement/pension
Disability
Other
None

Health insurance

Specifies the client's health insurance (if any). The insurance may or may not cover alcohol or drug treatment.

Private insurance
Blue Cross/Blue Shield
Medicare
Medicaid
Health maintenance organization (HMO)
Other (e.g., CHAMPUS)
None

Expected/actual source of payment

Identifies the primary source of payment for this treatment episode.

Self-pay
Blue Cross/Blue Shield
Medicare
Medicaid
Workman's Compensation
Other government payments
Other health insurance companies
No charge (free, charity, special research, or teaching)
Other

Detailed 'Not in labor force'

Gives more detailed information about those clients who are not in the labor force.

Homemaker
Student
Retired
Disabled
Inmate of institution (prison or institution that restrains a person, otherwise able, from the labor force)
Other
Not applicable

Detailed criminal justice referral

Gives more detailed information about those clients who are referred to treatment through contact with the criminal justice system.

State/Federal court

Formal adjudication process (other than State/Federal court)

Probation/parole

Other recognized legal entity
Diversionary program (e.g., TASC)

Prison
DUI/DWI
Other

Not applicable

Days waiting to enter treatment

Indicates the number of days from the first contact or request for service until the client was admitted and the first clinical service was provided.

Detailed drug code (primary, secondary, and tertiary)

These fields identify the client's specific drug problems, and have a direct relationship to the TEDS Minimum Data Set item *Substance problem*.

Alcohol Diazepam (Valium) Crack Flurazepam (Dalmane) Other cocaine Lorazepam (Ativan) Marijuana/hashish Triazolam (Halcion) Other benzodiazepines Heroin/morphine Methadone Meprobamate (Miltown) Codeine Other tranquilizers D-propoxyphene (Darvon) Phenobarbital

D-propoxyphene (Darvon)

Oxycodone (Percocet, Percodan)

Meperidine (Demerol)

Hydromorphone (Dilaudid)

Pentazocine (Talwin)

Phenobarbital

Secobarbital(amobarbital

Secobarbital (Seconal)

Ethchlorvynol (Placidyl)

Glutethimide (Doriden)

Other narcotic analgesics Methaqualone

PCP or PCP combinations Other non-barbiturate sedatives

LSD Other sedatives
Other hallucinogens Aerosols
