```

1 PROCEEDINGS MR. HORRIGAN: I hope my microphone is 2 3 on. 4 Well, thanks, everybody for being here 5 this morning. We are doing probably the 24th 6 workshop in the series of workshops that the FCC 7 is doing for the National Broadband Plan. My name is John Horrigan. I'm the director of Consumer 8 Research for the National Broadband Task Force. 9 10 What I'd like to do is just say a few brief remarks to set us up today. Then we'll get 11 12 to the meat of the program, which is our wonderful 13 group of panelists whom we thank for coming, some at some distance, to be with us today. 14 What I want to do is just for a moment 15 16 put this workshop and topic into context of the National Broadband Plan. With the National 17 Broadband Plan, we want to understand what is 18 19 driving adoption, what is driving deployment of 20 broadband networks, in order to develop a plan, which is due in February 2010, that analyzes the 21 mechanisms that will ensure widespread access to 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 broadband for all Americans at affordable prices. 2 More specifically, the development of 3 broadband, both the evolution of networks and 4 growth of adoption, is really shaped powerfully by users: Their ability to access a range of content 5 6 for communications, for creativity, and accessing digital content for all kinds of purposes. 7 Content from the entertainment industries 8 certainly plays a big part in this process, but it 9 is part of a user environment where people get 10 health care information, get health care services 11 12 delivered to them increasingly, engage with civic 13 information. So people, when they're online, are people who are recreating, being citizens, and 14 being health care consumers. 15 Today, though, we are looking at the 16 17 challenges to the creative industries brought about by widespread digital connectivity. We want 18 to discuss solutions. Undoubtedly, we're going to 19 20 debate what the right solutions are, and I hope touch on a few opportunities that are embedded in 21 broadband networks for the creative industries. 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

As we proceed today, the FCC will be listening 1 2 with an ear tuned to the National Broadband Plan 3 and its objective to bring widespread available 4 services to all Americans. 5 This particular workshop has attracted a 6 lot of interest. We probably would have had to 7 have two or three workshops to fit all the people who wanted to be participating, but it's great 8 that we have an audience both here and in 9 10 cyberspace to pose questions to the panelists. Before we get underway, I want to give a 11 12 moment to Michael Shapiro from the Patent and 13 Trademark Office, who would like to say a few remarks on behalf of PTO who has a stake in this 14 15 issue. So, Michael, we'll give you a chance to 16 grab this microphone. 17 MR. SHAPIRO: Thank you so much, John. 18 19 And thank you for this opportunity at this last 20 minute. I just come with a very brief message 21 from our new director of the Patent and Trademark 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 Office, who is the Undersecretary of Commerce for 2 Intellectual Property Policy, David Kappos. And 3 David asked me simply to kind of underscore his 4 keen interest and our department's keen interest 5 in the development of the National Broadband 6 Policy.

7 As we all know, the roll out of broadband networks arrives with a great promise of 8 benefiting consumers and creators and producers of 9 high-quality digital content. It also arrives 10 with a great peril, as we are all too familiar, of 11 12 accelerating unfortunate trends in digital piracy. 13 So, from our part, we want to be active participants in this interagency process, 14 clarifying intellectual property rules as we 15 understand them, and making a significant and 16 positive contribution. 17 So, thanks so much for this opportunity 18 to say these few words. 19 20 MR. HORRIGAN: Thank you very much, 21 Michael. Let's get underway. Before we do so, let me just lay out the ground rules. We are 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

going to start with the panelists going around 1 with five minute statements laying out their 2 3 points of view on the issues. That will be 4 followed by our distinguished group of agency 5 questioners to my immediate left: Kris Monteith 6 with the FCC, Phil Weiser from the Department of 7 Justice, and Susan DeSanti from the FTC. We will be taking questions following 8 all of the presentations. Questions can be 9 10 submitted in two ways: We have probably over 100 people in cyberspace watching a webcast of this 11 and they'll be able to e-mail in questions; and 12 13 those of you in the audience can find somebody who will be distributing cards and you can write down 14 your questions. 15 16 They will be submitted to me to pose to the panelists. Each panelist is going to have 17 five minutes, and we will -- rather than having me 18 read lengthy introductions, I will let you use the 19 20 packet that's been distributed to understand the 21 background of our distinguished panelists. 22 So, with no further ado, let me begin

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 with Dan Glickman for five minutes.

MR. GLICKMAN: Thank you, John. And I'd 2 3 also like to introduce Mr. Steve Weinstein, who is 4 here with me, who is a technologist, and he's the 5 head of a consortium of movie studios that have 6 been working in technical solutions in the area of 7 digital distribution. If you'll just raise your hand. If we get any real technical questions, 8 he's here to bail us out. So I just thought I 9 would refer to him. 10

I might start by saying that the 11 12 expansion of broadband can have an enormously 13 positive impact on the ability of consumers to access all sorts of content, particularly in the 14 entertainment worlds of film and television, and 15 will increase the audience dramatically for our 16 product. So we view this as a great positive. 17 18 But the Internet economy will not flourish if it is or becomes a lawless environment 19 20 where no distinction is made between lawful and 21 unlawful content and where the rights and protections of others are not respected and where 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

there are no rules of the road. The Internet must be a safe and secure environment where the protections and security provided in the offline world, whether it's retail or commerce or transportation, also exist in the online world as well.

7 Now, not only is this a consumer issue, but, quite frankly, it is critical for the future 8 of our industry, which employs about 2.5 million 9 people in all 50 states. And I have this economic 10 report which I would give you, which we did in 11 12 April, which talks about the economic significance 13 of the industry to this country. We're the only industry that has a positive balance of payment 14 surplus with every single country in the world we 15 16 do business. No other industry has that, film and 17 television and entertainment generally. And so it is critically important. 18

And it's also critically important,
these issues, economically as most movies do not
make their money back in the initial distribution,
but require DVD, home video, and legitimate

ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 Internet market and related aftermarkets to recoup their investment. And that's where we are most 2 3 vulnerable to piracy in this process. 4 Our main point here, not only to talk 5 about the value to consumers and the significance 6 economically to our industry, is that the FCC 7 should advise Congress through the Broadband Plan to support a policy that actively and strongly 8 encourages the best practices for online content 9 10 security and to ensure that technological innovation is encouraged and can be used as a part 11 12 of any effort to protect copyrighted material 13 online. The net result of failure in this area 14 is that a tidal wave of piracy on the Internet 15 16 will slow and impede the consumer experience and 17 thwart broadband development, which is directly inconsistent, I believe, with the Commission's 18 19 objectives. Broadband adoption and acceptability 20 is directly linked to the availability of compelling content -- content like good movies and 21 television shows and other forms of entertainment. 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

And these good entertainment products will drive a
 great deal of the reason why people will want this
 enhanced online experience.

4 I'm older probably than most of the 5 people in this room, but there was an old movie --6 old song called "Love and Marriage, go together 7 like a horse and carriage." At the end of that 8 song the line goes, "You can't have one without 9 the other."

That's true here. You can't have good 10 connections, good pipes, good delivery systems 11 12 that mean anything unless you have good content 13 that people like. And the reverse is true. All 14 the good content in the world don't mean much if you can't find a delivery system to pipe it 15 through. And you have to provide the incentives 16 for both to be able to continue their work. 17 Our industry is committed to provide 18 consumers many more choices online which others on 19 20 this panel will talk about. 21 I would like to mention a bit about the issue internationally, however. As you look for 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

other models for broadband deployment, the U.S.
 should lead by example and ensure property rights
 are an essential element to any plan.

4 Other countries are looking to us as to 5 what we're doing in this area and many are moving 6 ahead: The U.K., France, New Zealand, Taiwan. 7 And, of course, Korea moved ahead with a very rapid broadband plan. But I would point out that 8 because of a lack of protections on content, that 9 10 led to ubiquitous piracy on that universal broadband plan, which has basically led to the 11 12 industry leaving the DVD and home video market 13 entirely and has also hurt Korean films and the 14 Korean film industry as well.

Now, since then, they have begun to 15 adopt some graduated response and other programs 16 to deal with it, but Korea is a good example of 17 18 what happens to unrestricted broadband without reasonable protection of content in the process. 19 20 Existing technologies in this area are helpful, 21 but are rudimentary compared to the possible future developments to protect content and to 22

1 protect broadband.

2 Thus, it is critical that the Commission not stunt the development of dynamic Next 3 4 Generation technology models. 5 A positive response will mean that the 6 Internet as a whole will operate more efficiently 7 for consumers, giving consumers more choices for all sorts of content, increasing further 8 investment in this area, and inspiring innovation 9 10 and increasing broadband adoption by the people of this great country. 11 So, I thank you very much for allowing 12 13 me to make a few comments here. 14 MR. HORRIGAN: Thank you very much. Patrick? 15 MR. ROSS: Thank you, John. I'm glad to 16 be here today. I would echo, Dan, that we love 17 the idea of getting robust and affordable 18 19 broadband to all Americans. 20 I think the bottom line for the 21 Copyright Alliance is that we do feel there is a meaningful distinction between lawful and unlawful 22

1 Internet content. And I would quote the FCC chairman, Julius Genachowski. He said, "I do not 2 3 interpret the goals of Net neutrality as 4 preventing network operators from taking 5 reasonable steps to block unlawful content." 6 Now, you're hearing today from some of 7 my friends and colleagues: The MPAA, the Directors Guild of America, Paramount, the Writers 8 Guild of America. They're all Copyright Alliance 9 10 members, but our membership encompasses all creative efforts, the companies, unions, and 11 12 individuals in those. So we have business and 13 entertainment software. We have record labels and performing rights organizations and music 14 publishers. We have book, magazine, and newspaper 15 publishers; amateur and professional sports 16 leagues. We have member organizations and unions 17 in studio photography, in media photography, 18 school photography. 19 20 Actually, my daughter is getting her 21 high school freshman picture taken today, so I'm a little nervous for her. 22

1 But we have photo archivists and graphic artists. So all of them rely on intellectual 2 3 property rights for their livelihoods and the 4 inability to enforce those rights essentially 5 makes those rights meaningless. 6 Now, the International Intellectual 7 Property Alliance estimates that more than 43 percent of U.S. economic growth comes from these 8 industries. We're talking about \$1.5 trillion 9 10 annually, about 11 percent of U.S. GDP; nearly 12 million U.S. jobs. Those are important numbers. 11 12 But I'd like to speak a little bit about some of 13 the individual artists and creators that I work with through our One Voice grassroots network. 14 Individual artists and creators share 15 with their industry partners an appreciation for 16 the gifts of the digital revolution. But, 17 unfortunately, some of them also suffer from a 18 19 profound disrespect for their rights online by 20 some Internet users, particularly their rights to 21 reproduction, distribution, and importantly the right to create derivative works from their own 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 creativity.

When I speak to them, some of them also 2 3 have some confusion about the way Washington works 4 and whether anybody in this town actually 5 appreciates how important their rights are to 6 them. Now, no offense when I read the description 7 of this workshop. I did not see a lot of attention to individual artists and creators, but 8 I'm very pleased that we have a composer on the 9 panel with us today. And I'm very eager to hear 10 her story and hear how she's embracing new 11 12 technologies and using her rights as a copyright 13 owner to encourage all sorts of new forms of 14 creativity. Let me speak briefly about some of the 15 artists and creators that I've gotten to know. 16 There's Juliette Tworsey. 17 She's a singer-songwriter with an indie 18 band called FireBug. She embraces social 19 20 networking; she blogs. She streams her songs 21 online for free, but she is appalled that so many so-called music fans happily steal the works of 22

1 recording artists.

2 There's a Michigan author, Rowena 3 Cherry. She also social networks; she blogs. She 4 even hosts an Internet radio show. Yet she has to 5 spend a significant amount of her time that she 6 could be using writing, tracking down infringers, 7 playing Whac-a-Mole with people that are "sharing" her copyrighted novels online. 8 9 There's Leif Skoogfors. He's a 10 Pennsylvania media photographer. Like all professional photographers, he is enjoying the 11 benefits of easy, online, legal licensing of his 12 13 photographs. But he has also seen some of his photographs infringed hundreds of times online and 14 fails to understand why so little respect is 15 afforded to visual artists on the Internet. 16 Now, it's clear that there needs to be 17 from the perspective of policymakers a clear 18 distinction between legal and illegal conduct 19 20 online because failure to do so allows the illegal 21 to supplant new and innovative legal approaches. 22 Now, at the Copyright Alliance we've

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

been very pleased to see that policymakers seem to
get this critical point.

3 And I'd like to cycle back to the FCC 4 chairman if I could. You'll forgive me. I'm a 5 former reporter so I actually do believe in 6 accuracy and I want to read the quote to you. 7 "Illegal copyright infringement is a threat to our economy." This is a statement that 8 the FCC chairman gave to the Senate Commerce 9 Committee. "Illegal copyright infringement is a 10 threat to our economy with harm measured in the 11 12 billions of dollars representing lost wages and 13 lost jobs for American workers. It is a threat to 14 the creativity that our copyright laws are designed to protect and encourage and a threat to 15 a significant contributor to our economy and U.S. 16 Global competitiveness. It is vital that illegal 17 conduct be curtailed on the Internet. I do not 18 interpret the goals of Net neutrality as 19 20 preventing network operators from taking 21 reasonable steps to block unlawful content." 22 We at the Copyright Alliance could not

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

have worded that any better. I'd like to thank 1 2 you for your time. 3 MR. HORRIGAN: Thank you very much. 4 Michael Bracy with the Future of Music Coalition. 5 Thank you, Mike. 6 MR. BRACY: Thank you, John. And thanks 7 to you and your colleagues at the FCC for putting this on. 8 9 You know, I think the first point we want to make is it's so important that we've had 10 this -- a very lengthy, very extensive public 11 process to make sure that a lot of stakeholders 12 13 are involved in these debates, and we really 14 appreciate being invited today, and the process as a whole. 15 16 In many ways we think that the way you frame this workshop and the questions you're 17 asking today mirror the questions we've been 18 asking at the Future Music Coalition for 10 years. 19 20 And there are a lot of real challenges here, a lot 21 of real tricky questions. 22 We formed our organization in the year

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 2000 because we felt it was obvious that the 2 digital transformation of the music community was 3 going to create incredible opportunities and 4 significant challenges for musicians, particularly 5 the over 80 percent of works that come from the 6 Independent Music Community, where there have been 7 a lot of challenges for how they access -- these artists would access the market and find their 8 audiences. And I think what we've seen over the 9 10 last decade is that these are very, very difficult and very challenging debates. There are no easy 11 12 answers. The goal, though, that I think we all 13 share is the evolution and the vision of what we call a legitimate digital music marketplace. And 14 the question is how do we get there? 15 16 When the first file trading sites came 17 online, when Nabster first came online, we were 18 just a few months old, and our mantra then and 19 sort of one of our organizing thoughts now is that 20 the only antidote to an illegal Nabster is a legal 21 Nabster. And what we mean by that is that the way you're going to create this legitimate digital 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 music marketplace is through innovation, is 2 through basically giving consumers and giving 3 customers something to put their money into, 4 putting their energy and consumer money and 5 dollars into, and structures that will then flow 6 back through the music community. 7 And we also feel very strongly that it's very important to engage in some of the 8 opportunities for the federal government to weigh 9 10 in in either proactive ways or potentially challenges or problems we've seen through federal 11 12 action over the years. And, of course, we talked 13 specifically about the impact of the 1996 Telecom Act, and what that meant for the radio industry 14 just is one example. 15 So this is complicated. There are a lot 16 of things that go well beyond just music licensing 17 and pricing. We're looking at infrastructure 18 build-out. We're looking at a monopoly and 19 20 duopoly pricing in the broadband market. We're 21 looking at innovation in consumer electronics. We're looking at the development of new 22

applications and services. We're looking at
 spectrum allocation. We're looking at digital
 inclusion. We're looking at the shifting nature
 of the music, the very structure of the music
 industry.

6 These are all factors that come into 7 play, including tangential issues or issues that 8 feel tangential, like what do we do with the 9 terrestrial radio industry? There are a lot of 10 things to factor as we think about how do we 11 create this legitimate digital marketplace. 12 Again, there are no easy answers.

13 With that in mind, we have a couple of 14 ideas that we'd like to present to sort of frame our thinking in this workshop. The first is that 15 there clearly is a very significant public 16 interest in ensuring that there are economic 17 structures that allow creators to be compensated. 18 A healthy, vibrant music community is vital to our 19 20 economy. It's vital to our culture. And as the 21 music economy continues to evolve and some traditional jobs are threatened, new vocational 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

possibilities are emerging and will continue to emerge.

3 Second, we believe that ongoing 4 collaboration and innovation is the key to 5 development of this legitimate digital music 6 marketplace. Our friend Jim Griffin likes to say 7 purchasing music in this economy is now optional. We think that's true. We're not aware of a 8 workable scheme that prioritizes 9 government-mandated technology workarounds, like 10 content filtering (inaudible) operators, industry 11 overseers as a way of getting us to that goal. We 12 13 firmly believe the focus needs to be on 14 development of innovative solutions that encourage consumers to participate in legal licensed music 15 delivery platforms. 16 Third, it's real important to recognize 17 that we're just seeing how this new economy is 18 19 taking shape. Over the past few years we've seen 20 a vast array of legitimate licensed products and

22 Amazon Music Store, radio stations delivered via

21

services, things like Rhapsody, eMusic, iTunes,

ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

satellite and the web, streaming services like
 Spotify. We've heard of new brands: IPod,
 iPhone, Zune, Ebizis, Sonus, MySpace, Twitter,
 Guitar Hero Rock Band. We're just starting to see
 what this legitimate licensed marketplace is going
 to look like and how these new economic structures
 are going to flow money back to creators.

Now, we feel that a big part of the next 8 stage of this development is universal access to 9 10 competitive broadband marketplace. Combined with strong enforcement of Net neutrality principles, 11 12 we think that in many ways is going to bring more 13 consumers in the market. We think when there's less -- when consumers have to pay less money for 14 monthly access to broadband they'll have more 15 disposable income to put into the legitimate 16 marketplace. And we think that Net neutrality is 17 18 critical because, again, it's going to increase and continue the innovation for new services and 19 20 applications that are going to allow musicians the 21 ability to reach their fans. In whole, this will generate more revenue for artists and the music 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 community.

2 In closing, I just also want to express 3 my appreciation to Alex Shapiro for traveling from 4 Washington state. We think Alex is sort of 5 typical of dozens and dozens of artists and 6 composers who are taking their own personal time 7 and their energy to engage in these complicated policy debates. And we do think it's real 8 important that the Commission has invited her, and 9 we look forward to her testimony and being part of 10 the rest of this workshop. 11 12 Thanks so much. 13 MR. HORRIGAN: Thanks very much, 14 Michael. Kathy Garmezy from the Directors Guild of America. 15 16 Kathy. MS. GARMEZY: Thank you. Thank you for 17 inviting us to be here today. I know you've had 18 many sessions like this and put a lot into it, but 19 20 we think today is particularly meaningful because 21 it is, after all, the content that flows through the pipes that give it its value. 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 I'm here, as you said, speaking on behalf of the Directors Guild of America. And our 2 3 members are filmmakers from around the world, 4 those whose names you know well who make big 5 blockbusters and those who do smaller independent 6 films, as well as directors in television, news, 7 documentaries, new media, and any other audiovisual work with which you're familiar. But 8 the thing that unites them all, different though 9 10 they may be in the work they do, is both a great excitement and concern about the digital future. 11 12 I would guess that if I asked everyone 13 in this room right now to close your eyes and remember the first movie you ever saw, the first 14 movie that ever affected you, you would remember 15 16 it clearly and you could picture it in your memory even now. And that's what's meant by the "magic 17 of new movies." That magical experience and the 18 hard work, the long periods of time, talent, and 19 20 investment that it takes to bring it together, is 21 why we are not like everything else on the Internet. And let me be quick to say that is not 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 a value judgment about other things on the
2 Internet, but it is why our members' work is the
3 real and primary target of Internet theft. If it
4 weren't, there would not be an increasing number
5 of Internet sites which are growing in moneymaking
6 businesses whose sole purpose is dedicated to
7 selling films for free.

This debate is not about the sanctity of 8 Internet free expression. My members do not deny 9 10 the importance of the free and equal flow of ideas on the Internet, but they don't create what the 11 12 word "information" conjures up. In fact, the very 13 words "information" and "content" blur and obscure the reality of what is at stake. This is about 14 stealing films and other works recognized around 15 the world and loved by billions of people who want 16 to have them. It is about an American cultural 17 18 art form that our country seeded and grew starting 19 100 years ago and whether our country and our 20 government believe it should be protected. 21 This is not just about what you see on

21 This is not just about what you see on 22 the screen at the end. It is just as much about

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 what is required to bring it there. Creating a film from original concept to script-to-screen 2 3 takes years, calls for a myriad of unique talents: 4 Being able to put wonderful words on paper; being 5 able to become what you are not so that your 6 acting connects with people sitting in a darkened 7 theatre; knowing how to shoot a scene to capture the light; being able to create a time and place 8 and costume; and being able to take all of that 9 10 collaboration, the efforts of hundreds of people, and direct it into a vision onto the screen. It 11 12 also takes financial investment with great risk 13 and no prediction of whether there will be recoupment or success. 14 Our business is structured to make 15 filmmaking possible. This is not often known 16 17 outside our world: Artists are risk-takers just 18 like the financiers, and we share directly in the revenue that is generated from our work after it 19 20 is in the theatre because that work could not be

22 And that's true for everybody, and it is critical

made without our members and the other talent.

21

ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 to their survival and to the survival of their health and pension plans. Seventy percent of the 2 pension plan in DGA's case comes from downstream 3 4 revenue, and that's what's most vulnerable to 5 piracy.

6 Finally, let me say something I don't 7 think needs to be said, but I'm going to say it anyway, which is our members are not technophobes, 8 which often those who disagree with some of the 9 10 philosophy are called. The work they do is the very intersection of art and technology, and that 11 12 was true long before the Internet came into being. 13 Again, we understand the importance of an open and 14 fair Internet, but to us that does not mean that we believe everything on the Internet is equally 15 in need of protection or rather equally as 16 deserving of nonprotection. Just because someone 17 can easily download the sum of a life's work, we 18 don't believe that the right and the ability to do 19 20 that is somehow more valuable than the right that 21 belongs to the person who created it. 22

So what do we hope from your

1 deliberations? We hope you understand the huge 2 economic and culture value we're trying to protect 3 and that the decisions have worldwide 4 ramification. We hope you understand we are not a 5 narrow self-interest and there are millions of 6 people and billions of dollars at stake. We hope 7 you understand the uniqueness of what we create and how our industry makes it possible. Finally, 8 9 just as our president believes that good public 10 policy means a balancing of interests involved, so, too, do we believe that a digital future must 11 12 be found which works to the benefit of both film 13 artists and the consumer public who love their 14 work. After all, we're far from the first to 15 16 speak of intellectual property. In fact, in this country it was our Founding Fathers who thought 17 this right to create was so fundamental that it 18 19 was the only one created in the original U.S. Constitution. Our members are concerned about 20 21 what happens on the Internet because they know

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

what it takes to create that magic. And knowing

22

1 that, they see into the future and worry that that 2 magic will not be there for your children or 3 grandchildren.

4 MR. HORRIGAN: Thank you very much, 5 Kathy. We're going to turn now to Frederick 6 Huntsberry from Paramount. And I think we're 7 going to have a little bit of a show-and-tell in 8 addition to your statements, so I'm going to let 9 you do the show-and-tell and get our show going. 10 MR. HUNTSBERRY: You can stay there.

11 Thank you, John. And thank you to the FCC for 12 allowing Paramount to be here today. What I'd 13 like to do is have you look at the banner behind

14 you first. The banner represents the first three 15 weeks of the release of Star Trek, the Movie, that 16 was released on May 8th of this year. We have 17 tracked on this banner digital piracy worldwide 18 over those first three weeks.

If you look at the top of the banner you
 see different color codes. Each color represents
 a separate pirated video of the film.
 It was released, as I said, on May 8th.

ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314

1 We saw the first cam version available that was made in Russia on May 8th, that same day. That's 2 3 the red banner at the top. After that you see the 4 yellow banner. That was a copy that was made in 5 the Philippines. The third row is the Ukraine. 6 And the reason the Ukraine is of particular 7 importance is because the Ukrainian copy was a better quality image than the Russian cam. And 8 what we've discovered is the moment that a better 9 10 quality image of a version is available, demand -piracy demand will immediately shift to that 11 12 version. And then the green copy is a Spanish 13 one. And then we go to a German copy that was 14 made a week later. And then on May 15th, we have an American cam that was made. 15 16 On the bottom you see demand. We 17 actually see the number of downloads on peer-to-peer network sites. And we've also 18 19 color-coded it so you can see that the greatest 20 demand was for the Ukrainian cam, which goes back to the point I made earlier that quality drives 21 demand. By the end of 3 weeks, the number of 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 downloads had reached over 1.7 million, and I can tell you that as of today, the number of downloads 2 3 of that film is over 5 million worldwide. And 4 that's just file downloads. It does not include 5 streaming of the file. 6 Now I'd like to direct your attention to 7 the presentation behind me. Okay. 8 We're going to start with, as I said, the piracy propagation. But here we're showing 9 10 you now a chart of the top 100 Alexa websites. Alexa tracks unique views -- viewers on websites, 11 12 thousands of them worldwide. These are just the 13 top 100. Any one of the URLs that we have color-coded here are sites where you can either 14 locate or directly download pirated content from a 15 website. Roughly one-third of the top 100 now 16 17 give you that ability to do so. 18 What we've seen now that there's been a huge development shift in piracy -- if you go back 19 20 a few years it was strictly -- you know, you have 21 to be computer-literate as a user. Today, anyone can pirate a movie. A few years ago, it was a 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

lengthy download process. Today, it's converted into instant streaming. You are still -- you still have the ability to download today, but streaming, we find, is becoming the preferred method.

6 A few years ago, when you looked at one 7 of these websites you could clearly distinguish it from a legitimate website. In other words, you 8 could tell that it was a site where content was 9 being pirated. Today, these sites have actually 10 now a legitimate look and feel to the consumer, 11 12 which becomes extremely concerning in the wake of 13 identity theft and so forth.

I'm going to walk you through an example 14 now of what it was like a few years ago and still 15 16 today to actually download a movie through a 17 peer-to-peer website. This is a site where, you 18 know, that is clearly an illegal website. The 19 technology has been in existence now for a number 20 of years. We're going to type into the search 21 field at the top "Star Trek 2009." The site is called Mininova.com. Now the site gives back to 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 us actually 63 instances of Star Trek, the Movie. We then go and select one of those movies to 2 3 download. 4 Now, once the movie -- once we've 5 selected this movie, we need to have the Bit 6 Torrent software on our PC. So, you need to first 7 download that. And once that's been downloaded, you are able to actually download the Torrent --8 excuse me, the movie to your computer to then view 9 it later. 10 Now, the download process on 11 12 peer-to-peer can be a lengthy process. It can be 13 minutes sometimes, but also hours, and sometimes even over a day. So from a user experience 14 perspective, not the best necessarily. 15 16 Now we're going to walk you through the sort of latest technology. This is an example of 17 18 how easy it is to upload a file. We're on a site called Drop.io. At the top left we're now 19 20 inputting the name of the file that we want to 21 create on the Internet. We're going to call it "Box Drop." And then we're going to select the 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 file from our hard drive.

We're selecting in this case a file 2 3 called Cloverfield. This is the opening credits 4 of the movie Cloverfield. And then we say create 5 a drop. Now we're literally uploading the file 6 directly from our computer to the Internet. It's 7 extremely easy. We're loading it effectively to a cyberlocker, which is nothing more than an 8 electronic locker on the Internet that gives us a 9 specific URL address where that file is located. 10 We can now take that specific URL 11 12 address and we can Twitter and Facebook that 13 address to the world instantaneously. And then anybody who has that address can then access that 14 file that same time. 15 I want to draw your attention for a 16 minute on the right. We have Time Magazine, the 17 18 New York Times, and Mashable, who are giving comments about this website and I would say in a 19 20 constructive way; in other words, users can 21 actually upload, you know, files that are not illegitimate onto this website. The problem we 22

have today is that sites like this are used to
 actually house digital pirated content.

But obviously, by having these brands on
their site, they're giving this legitimate look to
the consumer.

So the file upload has finished. Now 6 we're going to show you how easy it is to actually 7 find the file and to view it. And to do this we 8 9 go -- the average consumer will do a search on Google. So we've decided in this case to go to 10 Google and to type in "watch movies online for 11 12 free." Hit enter. We come back with a bunch of 13 websites. We're going to go to the first one called Watch Movies Online. That's the first 14 result that actually comes up. before Hulu, which 15 16 is a legitimate site. On this site -- this is now 17 the site Watch Movies Online. And what I'd like to show you here is that on the top left, these 18 are films that have just been released within the 19 20 last couple of weeks -- the last two weekends. 21 And on the bottom we also have films that have 22 been -- where the DVD has not yet been released.

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 In this case we're going to select 9. That's the movie that was released last Friday. 2 3 So the movie has not even been in the theatres for 4 a week. What you see here, we're scrolling down 5 and you can see the various instances of this 6 movie that is now already available on various 7 other websites. And in this case we're going to select a website called zSHARE where the file is 8 located. 9 10 Now, before we actually hit Play, I want to show you on this website the advertising 11 12 banners. This is another thing that we find is 13 that a lot of these sites now have revenue models that are based on advertising and on subscription 14 models. You can also hear -- if you note above 15 16 the screen, you can Facebook this address to your friends. But what we can also do is we can then, 17

18

19

20

21

22

ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

instead of viewing it in a small window, we can

blow it up to a full screen mode. And here you

last Friday in theatres. As easy -- I mean,

have it. This is the movie that was just released

anybody can literally pull up this movie. And you

1 have to download no other software; it was just streaming directly from your computer. 2 3 Okay. This is an example of a site 4 called ZML.com. And again, I mentioned 5 legitimacy-looking. If you look on the bottom you 6 see "iPod-ready." It would indicate to the 7 consumer that this is something Apple endorsed, which it hasn't, obviously. So, this site is 8 offering the consumer to download a pirated film 9 to an iPod or simply to their hard drive or to 10 burn the disks. 11 And then finally, I also want to 12 13 demonstrate to you that it's become easy now to actually view these pirated films in your living 14 room on your living room TV. So, we have new 15 16 technology that's been introduced, legitimate technology. We have Apple that has introduced the 17 18 Apple TV, Sony with the BRAVIA TV, and LG. And residing on these legitimate platforms are also 19 20 legitimate third-party applications, such as Boxy 21 or Yahoo! widgets. However, these new user interface applications permit individuals to 22

program applications that can reside within that 1 2 that can access now the content that I just 3 demonstrated to you directly to your TV in your 4 living room. 5 And then we also would like to highlight 6 the fact that if you go back a few years you had 7 sort of secondary advertisers that were driving these business models. Now these are premium 8 advertisers and financial institutions. 9 10 Here you see an ad for Netflix on the right side. On the top you have TiVo, you have 11 Ann Taylor, Citibank. 12 13 This is an example of the subscription 14 models that are now readily available to be paid through PayPal, which is owned by eBay. 15 16 And here you have an especially good example of how the consumer is lured into giving 17 credit card information and personal data. We 18 discovered just in the last few days that this 19 20 site that shows on the bottom Hacker Safe, the 21 logo, which should indicate to the consumer that it is safe to use this site, inappropriately used 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 this logo. We contacted the company. The company 2 confirmed that there is no licensing arrangement 3 with this company in particular. 4 MR. HORRIGAN: You're going to have 5 about 30 more seconds. 6 MR. HUNTSBERRY: Okay. And we're just 7 about done. This is an example of a customer loyalty program. 8 9 The more that you can -- the more that 10 you upload files, the more points you earn, and 11 then you can earn things like USB webcam missile 12 launchers. Clearly, these are gifts that are 13 targeted at teenagers. And then finally, I want to make the 14 point that, you know, this industry embraces 15 broadband. We, you know, each one of the studios 16 17 has a separate distribution organization that is -- whose charge it is to go out and to enter into 18 19 licensing arrangements with broadband companies to 20 offer our films over broadband. In the case of Paramount, by the end of this year, we will 21 actually have 200 of these deals in place. We are 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

offering already 600 of our films for download and 1 200 for streaming. So it's something we totally 2 3 embrace. It's part of the growth of our business 4 going forward. 5 Thank you. 6 MR. HORRIGAN: Thank you very much. 7 We'll turn to Mike Carroll from American University. Thank you, Mike. 8 9 MR. CARROLL: Thanks. Thanks very much. 10 So, I think the elephant in the room here is that there are policy choices on the table. Nobody is 11 12 denying that intellectual property is an important 13 part of the U.S. Economy, but nobody is also denying that copyright law already provides the 14 content owners to my right with a set of rights to 15 16 control their content and to use technological 17 protection measures to wrap around that content. So, the law already -- all the talk of 18 respect for law, the law is there; the problem is 19 20 an enforcement problem. 21 And as I'm hearing it, the question is what job can the Commission do to help enforce 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 these intellectual property rights? And here we have to look at -- the question is are there 2 3 technological measures that can be used to protect 4 intellectual property? And the answer may be yes, 5 but the nature of technology is to operate on the 6 basis of standards, standards that don't 7 discriminate against good content and bad content. And so to the extent that technological 8 measures would be involved, that the Commission 9 10 would start mandating technological measures in one way or another, then it would not be the 11 12 Federal Communications Commission, but the Federal 13 Culture Commission that's being asked to protect one set of cultural producers in the country. But 14 there are a range of other cultural producers, 15 including Alex to my left, who rely on the 16 Internet for their basis for communicating with 17 18 their public. 19 And so the concern I want to register 20 here is that their voices get added to the table, 21 that all the amateur creators, professional

22 creators who are not members of the associations

ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

to my right, interactive users of broadband -- the video game industry isn't here. There's a range of other interactive media that is drawing the attention to folks.

5 And so to the extent that technology is 6 on the table as a question about what the 7 standards ought to be and standards don't discriminate between packets that are good or bad 8 -- it's a video file, then it's going to get 9 10 treated differently; it's a music file, it's going to get treated differently -- then we want all 11 12 video producers, all music producers to have a say 13 in that debate, not just -- unless this is the Federal Culture Commission and the view is that 14 the video files produced by the Directors Guild 15 and the MPAA are the files that count. 16 17 And so if we're really going to have a

democratic process about technology standards, then we need all of the producers who would be affected by technology to be -- have a voice in that process. Unless we want to say there's a difference between good content and bad content.

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 So, I'm also on the board of Creative 2 Commons. Our organization provides copyright 3 licenses to copyright creators who choose to 4 license their materials in a way that are open, 5 designed for sharing, designed for use on peer-to-6 peer networks because these creators understand 7 that peer-to- peer networks sometimes work as the vehicle for piracy; other times act as the vehicle 8 for music discovery or other kinds of marketing. 9 10 And again, the problem is these technologies can't be labeled good or bad. They have a variety of 11 12 uses, some of which are quite harmful, some of 13 which are quite beneficial. And so I would urge the Commission to take a regulatory modest view of 14 their approach. We can't predict the future. We 15 16 shouldn't predict the future. The only thing we 17 know from experience is that open platforms create 18 innovation that we never would have predicted. 19 So, there's a strong case for open networks 20 meanwhile working with rights owners to provide 21 them with the ability to enforce their rights without prejudicing those rights owners who want 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 the open networks, who want to be able to share. One other thing. The Internet we're 2 3 talking about right now is not going to be the 4 Internet any of us will be experiencing in the 5 next 5 or 10 years. As developments in cloud 6 computing and the power of these machines 7 increases, the challenges for controlling digital files will increase as you can not only break up 8 the file into multiple torrents, but you can break 9 10 up the tracker file into multiple torrents. And so I worry about the Whac-a-Mole 11 12 problem just getting more intense as we try to 13 chase down the digital copies as the digital copies get spread out into the cloud. 14 The good news there, though, might be 15 that more broadband could be the answer to the 16 challenges that broadband is currently posing to 17 18 these industries because as more of us have ready 19 broadband access wherever we go, then we may turn 20 to streaming in exchange for building our own 21 libraries. And streaming models, while also an unauthorized use of copyright works, are easier to 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

license. Right? So I have a choice. I can 1 2 listen to my iPod, my music collection, or I can 3 tune in Pandora, a licensed music service. I tune 4 in Pandora because I want to discover new music. 5 I want to watch TV. Do I want to turn on my 6 television or do I go to Hulu? I'm watching my 7 kids' behavior. My kids want Video on Demand and they go on the Internet to stream the media. So 8 streaming may well be the answer here because 9 there's a revenue model that can be built around 10 streaming that is different than the one for 11 12 peer-to-peer exchange. And so I'm actually 13 thinking broadband-on-the-go may be the solution 14 to some of the problem we're talking about. My time is up. Thank you. 15 MR. HORRIGAN: Thank you very much. 16 17 Alex Shapiro. MS. SHAPIRO: Thank you, John, and the 18 FCC for inviting me to participate. This is 19 20 wonderful. 21 My use of the Internet has significantly shaped the evolution of my career and has allowed 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 me to reach audiences around the world as I obtain 2 commissions, sell scores and recordings, all from 3 a fairly isolated outpost of San Juan Island from 4 Washington state.

5 The transformation of communication 6 technologies has been enormously empowering to 7 many artists and small business people like myself. No longer are gatekeepers, like record 8 labels, publishing companies, commercial radio, 9 10 and big box retail stores, solely responsible for how music and other forms of art are accessed and 11 12 distributed. In today's technology-enabled world, 13 artists themselves are free to connect with audiences, patrons, and peers from around the 14 world in an unprecedented way. Thanks to my 15 16 presence on social networking sites, blogs, many websites, I do business every week in several 17 18 countries at once, several continents. 19 From recordings and collaborations in 20 India, Australia, Germany, Bulgaria, to a 21 commission from the U.S. Army Concert Wind Band here in Virginia, clients who may never have known 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 about me before hear excerpts of my music on the 2 web and contact me out of the blue. One didn't 3 formerly expect to see commanders and majors 4 trolling for composers on MySpace, but apparently 5 things have changed.

6 All of this online interaction presents 7 an amazing opportunity for creators. That is, provided that they have sufficient access. It's 8 been said that 80 percent of success is just 9 10 showing up, but many Americans aren't able to show up at all due to a lack of quality, competitive 11 12 broadband in their communities. On my own street 13 on San Juan Island, I can't even get cable TV or satellite because of the trees and connection 14 problems. I feel lucky to have any degree of 15 Internet access at all. What makes so many like 16 me who live in rural areas -- what we all need is 17 18 higher Internet speeds and more connectivity. The 19 problem is not just for content creators, but for 20 anyone who depends on the web as a significant 21 means by which to do business. No one should be prevented from using what I deem to be the most 22

significant communications technology since the
printing press.

3 Unreliable connectivity is also a 4 problem for consumers. You can't run a successful 5 digital storefront if customers can't get to your 6 shop. Even in more urban areas people often have 7 no real choice for broadband providers, and what's available too often is overpriced and subpar, 8 particularly compared to international standards. 9 10 In addition to affordability and access, speed is crucial to making the online experience 11 more successful. The nature of music and video 12 13 files is that they require a lot of bandwidth to smoothly stream and download. And it's not a 14 stretch to say that America's global 15 competitiveness is tied to the quality of our 16 broadband service. 17 We must expand broadband connectivity so 18 more creators and consumers of culture outside of 19 20 cities can participate in this exchange of 21 creativity and capital. Additionally, there are

22 economic benefits to living in rural areas. They

ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 are almost less expensive than cities. I lived in Los Angeles for 24 years before moving up to 2 3 Friday Harbor, and I can tell you it now costs me 4 half as much to live as much. For many artists, 5 this is a significant bonus and can help to make 6 them more self-sufficient. 7 The Internet is Ground Zero for innovation and entrepreneurship. Currently, an 8 artist like myself is able to compete on a more or 9 10 less equal footing technologically with the biggest content providers on the planet. This is 11 12 just amazing. It really is. This is incredibly 13 important for those of us working in genres like contemporary concert music, classical music, jazz, 14 blue grass or other cultural forms that are 15 16 considered outside of the popular mainstream, both 17 in style, and, too often, in income generation. 18 In our highly consolidated (off mike) we consistently hear about broadcast media, like 19 20 terrestrial radio, dropping programming. 21 Classical radio stations are becoming more and more scarce, even in the biggest cities. In the 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

absence of radio exposure, artists like myself 1 depend on the Internet to reach audiences and 2 connect with others who help promote American art 3 4 and culture. Many industries that existed before 5 the Internet came along are now facing dramatic 6 changes due to longstanding business models. I 7 respect and understand the concerns of those in the mainstream content community about 8 monetization and the protection of intellectual 9 10 property rights. As the owner of many copyrights I share 11 12 their concerns, yet digital networks also present 13 incredible opportunity, which I believe should be 14 fostered and encouraged. Are there unsolved questions about how to implement sustainable 15 16 structures for compensation? Absolutely. We're 17 dealing with two separate issues: The achievement of a powerful tool -- the Internet -- and the need 18 19 to devise ways for creators and copyright owners 20 to be paid, regardless of the delivery format of 21 their content.

22

But we can't turn our backs on

1	potentially awarding innovations to protect
2	yesterdays' business models, especially when
3	paying customers are migrating to online
4	platforms. We should instead be thinking about
5	how to build even more monetizable structures for
6	lawful acquisition, whether it's via cloud-based
7	access or value-added downloads.
8	From mobile to desktop, access is
9	crucial to the establishment of a legitimate
10	digital music marketplace where listeners can find
11	what they want easily and creators are
12	compensated.
12 13	compensated. I strongly believe that other creators

13 14 15 16 17 18 19	I strongly believe that other creators should have the same opportunity I've had to touch people around the world with their music or with whatever expressive medium they prefer. I'm very glad to know the FCC is taking steps to determine how best to achieve competition and quality in the broadband marketplace. And as one creator who is

1 America.

2 Charles?

3 MR. SLOCUM: It's a great honor to be 4 here today. Thank you. I appreciate the FCC 5 holding these workshops, exploring the ways that 6 the vitality and creativity of an open Internet 7 can be preserved and yet the threat of piracy on 8 the Internet can be addressed.

9 I'm Charles Slocum. I'm the assistant executive director of the Writers Guild of 10 America, West. The WGA is a labor union 11 representing 8,000 writers of motion pictures, 12 13 television, radio, and Internet programming, 14 including entertainment, news, and documentaries. Piracy of online content is a problem. 15 Shoplifting a DVD is universally unacceptable, and 16 yet piracy online is thought trivial often. And 17 that has to change. We applaud the work of the 18 Copyright Alliance and the MPA and our other 19 20 colleagues in protecting copyrighted works which 21 often are written by our members. Indeed, our members benefit from deferred payments when 22

1 viewers revisit favorite programs. These payments are the lifeblood of individual writers facing the 2 3 fluctuations and uncertainties of the 4 entertainment industry. And on the Internet, 5 piracy threatens these payments. 6 But we differ a little bit with the MPA 7 and others on the exact solution to digital piracy. Content is why the Internet matters. The 8 open and free flow of content is the aspect of the 9 10 Internet that must be preserved. Piracy threatens the availability and viability of that content. 11 12 However, to meet that threat with a solution that 13 itself threatens the free flow of content is to prescribe a medicine worse than the illness. The 14 FCC should create careful and clear rules to allow 15 ISPs to police piracy, but with techniques that do 16 not infringe openness, do not create new barriers 17 18 to entry, and do not disadvantage independent producers as they compete for viewers with 19 20 billion-dollar conglomerates. 21 The demise of the financial interest and syndication rules led to an unprecedented and 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

regrettable consolidation of our nation's media outlets, but the Internet offers to open up distribution. A corporate conglomerate is no longer a necessary gatekeeper. Net neutrality is simply fencing for the Internet.

6 Already Writers Guild members have taken 7 to the Internet to distribute topnotch independent content to consumers. For example, WGA member 8 Joss Whedon created a series called Dr. Horrible. 9 10 This program went viral and Joss controlled the project from start to finish. That's vastly 11 12 different from his experience on Buffy the Vampire 13 Slayer and other programs that he's created with entertainment conglomerates. Dr. Horrible went 14 virable -- went viral because the Dr. Horrible 15 website was available, unimpeded, to any viewer 16 17 who sought it out. It also appears that Dr. 18 Horrible faced a manageable amount of piracy. 19 A basic step the FCC should take in 20 order to address piracy is to conduct a study of 21 the extent of pirated content online. The MPA claims 50 to 80 percent of Internet content is 22

illegal. Bernstein Research on Wall Street
 contends that's an urban legend. The FCC should
 bring concrete data to this policy process with
 its own studies.

5 We appreciate and share the sentiment of 6 Chairman Genachowski that Net neutrality and 7 copyright protection are not mutually exclusive. Internet freedom should not become a pirate's 8 9 holiday, but neither should anti-piracy techniques frustrate legal distribution and access to 10 content. Even well-intentioned attempts to root 11 12 out piracy may have the unintended consequence of 13 prioritizing certain web traffic at the expense of 14 other traffic. Deep-pocketed content owners will seek to buy a fast lane through piracy policing 15 software. Independent providers who can't afford 16 the same preclearance would be disadvantaged. 17 Consumers watching online video move to the next 18 option in seconds if the video does not start 19 20 quickly, play continuously, and have the expected 21 video quality. All content providers must have a level playing field in getting to that consumer. 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 Lastly, the Commission should require 2 ISPs to disclose their network management 3 practices. A user- friendly, plain English 4 clearinghouse for consumers to discover the 5 techniques their ISPs are using to manage traffic 6 would create transparency and empower the consumer 7 to make an informed choice of Internet provider. Preserving the openness of the Internet while 8 protecting the works of creative artists can be 9 done with better data, clear rules, and 10 transparency on the part of ISPs. 11 12 Thank you. 13 MR. HORRIGAN: Thank you very much. Last, but not least, Gigi Sohn. 14 MS. SOHN: Thanks, John. Thanks for 15 inviting me. It's great to see all my friends out 16 here. I know we're all friends out here in the 17 18 content industry and elsewhere. So, good morning to all of you. 19 20 When the Commission considers what role 21 content plays in the broadband ecosystem, it really has to keep in mind that content doesn't 22

just mean Hollywood's content. I think several 1 2 other people here have made that point. 3 Much of the content that drives 4 broadband adoption and consumption is 5 user-generated and uses copyrighted content for 6 purposes of parody, criticism, commentary, and 7 other lawful uses. So, the Commission really has to be careful and ensure that any measures to 8 protect content online not obstruct the free flow 9 of information and not violate the privacy of end 10 11 users. 12 Some in the entertainment industry would 13 like to see the Commission either require or permit automatic copyright filtering or so-called 14 graduated response -- what most people call three 15 strikes -- which allows an ISP to kick off a 16 subscriber after three allegations of copyright 17 18 infringement. 19 It's kind of interesting. I haven't 20 heard from my content industry friends the term 21 "filtering," and a number of people buttonholed me beforehand and said, well, we're not talking about 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 filtering. We're not talking about filtering. My response to that is look at the 2 3 record in the broadband inquiry that the FCC 4 started a number of years ago and also this 5 National Broadband Plan. There's a lot of talk 6 about filtering, a lot of talk about graduated 7 response. So, if people want to run away from it now, great. But it's on the record. 8 9 Now, before the Commission considers 10 going down the road to graduated response and filtering, it has to ask itself four questions. 11 First is where's the data? I really like what 12 13 Charles had to say. I'm really delighted that Chairman Genachowski has announced that this FCC 14 is going to be data-driven. We know that hasn't 15 always been the case in the past. But I must say, 16 on the other hand, U.S. copyright policy tends to 17 be faith-based and not data-driven. And while 18 nobody doubts that the Internet -- that 19 20 individuals use the Internet for infringement --21 and that is problematic; there's no doubt about that -- the industry's data on the extent of 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

illegal activity and the actual harm to the
 industry is suspect at best.

3 Now, Dan's going to beat me up, but we 4 have to recall the infamous LEK study which 5 claimed that 44 percent of all traffic on college 6 ISPs was infringing. Dan and the MPA were forced 7 to admit that the actual number was only 15 percent, and Educar, which represents higher 8 education, claimed it was just 3 percent. Content 9 10 industry studies assume that every illegally downloaded song or its movie equivalent is a lost 11 12 sale. I mean, that's a very impressive charge. 13 But how much money did Star Trek make? Do we really know that every single one of those illegal 14 downloads was a lost sale, that people didn't see 15 the movie and say, hey, I've really got to go see 16 this movie in the theatres? We need data. We 17 don't have that data. 18

19 To the contrary, there have been 20 independent studies indicating that users of P2P 21 networks buy more music than those that do not. 22 So I think it's time to get away from faith-based

1 policymaking and more into data-driven

2 policymaking.

22

3 Second question. What are the 4 unintended consequences of copyright filtering? 5 Copyright filtering is a blunt instrument. My 6 friends in the content industry who I met with 7 recently even admitted that to me. It cannot tell a lawful use of copyrighted material from an 8 unlawful one. While some in the content industry 9 claim that these filters are 98 percent accurate, 10 again, no empirical basis for that -- that's just, 11 12 you know, a hand-waving number -- that two percent 13 of legal blocked content could be a time-sensitive 14 civic speech. Ask John McCain, okay, who had his campaign video taken down from YouTube. 15 And there are other unintended 16 consequences of copyright filtering. First, it 17 alters the behavior of data networks, impeding the 18 operation of high latency applications and 19 20 compromising the privacy of Internet users. This, in turn, will discourage investment in those 21

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

applications and deter users from fully utilizing

1 their broadband connections.

Second, filtering will inevitably lead 2 3 to an encryption arms race, which will decrease 4 the efficiency and speed of the network. 5 Third, as we saw just a few months ago 6 in Iran, the core technology behind copyright 7 filtering can be used to censor political and other lawful speech, dirty words, violence. I 8 really urge my friends in the content industry to 9 10 really think about it. Think about what you're asking for. It may do you more harm than good. 11 Third. Third question. Does the 12 13 Commission have the authority to mandate copyright filters or three strikes? 14 No, it does not. I'm not going to 15 recount Public Knowledge's huge victory in the 16 Broadcast Flag case, although I just did. So any 17 copy protection mandate the FCC could devise here 18 would suffer the same fate. Others ask not for a 19 20 mandate, but for the FCC to declare that automatic 21 filtering is reasonable network management and, therefore, does not violate the FCC's four 22

1 broadband principles.

Let me be really clear here. Filtering is content management; it is not network management. And to the extent that filters block lawful content, they violate the FCC's four principles.

7 Fourth and final question. Are there other more narrowly tailored ways to limit 8 infringement online? Absolutely. Absolutely. 9 The best solution, in my opinion, is for copyright 10 holders to make their content widely available in 11 a form that allows for flexible use at a fair 12 13 price. Both Alex and Mike talked about all the business models that are out there. 14 Streaming, I agree with Mike, is 15 absolutely the future. And, you know, there's a 16 lot of success. Online downloads are going up. 17 18 Streaming is going up. There are some very, very positive signs that when you get your content out 19 20 there, people actually buy it. I think people do 21 want to buy content. They want it to be good quality. They want it to be a fair price. They 22

1 want to be able to watch DVDs they download on their television sets, not just their computers. 2 3 So if you make it available flexibly at 4 a fair price, people will buy it. Withholding 5 content or making it too expensive to obtain or 6 difficult to use in anticipation of perfect 7 protection -- which, by the way, is impossible as most people will admit -- only encourages people 8 to get that content illegally. 9 10 A second proven method for curbing infringement is when ISPs send warning notices to 11 12 alleged infringers. My good friend, Preston 13 Padden, made a presentation in February out in the Silicon Flatirons Conference in Colorado and said 14 that 80 percent of the time when people get 15 notices from ISPs saying "I know what you're 16 doing, stop it," they stop it. 17 And the law. The law is still there. 18 The law provides strong remedies. The DMCA, which 19 20 I usually hate, but sometimes now I like, provides 21 a framework by which an ISP must take down infringing content. And as always, the 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

entertainment industry has the ability to combat 1 unlawful sharing of content by cutting that 2 3 content off at the source by targeting large-scale 4 infringers, hard good counterfeiters, and others 5 who engage in unlawful activity online. 6 I'll agree -- I'll close by just 7 agreeing with Mike, is that the question is what do you do about the problem of piracy? And the 8 only solutions that I've seen proposed involve 9 very blunt instruments, very widespread 10 technological measures that really, I think, could 11 12 have a negative impact both on professional and 13 amateur content. 14 So I thank you again and I look forward to everybody's questions. 15 16 MR. HORRIGAN: Thanks very much. And we do now have about an hour -- a bit more -- for 17 18 Q&A. And what I'm going to do is take the moderator's prerogative and start off with one and 19 20 then move down the table with questioners from 21 other agencies. And I remind that the audience, both here and in cyberspace, that you can pose 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 questions that I will pass on to the panelists as 2 well.

3 The one thing I want to start out with 4 is I noted Dan Glickman's statement that the FCC 5 and the Broadband Plan should recommend to 6 Congress that it's okay for solutions to be 7 devised that deal with both security as well as using innovation to deal with some of these 8 copyright infringement issues. And then later on, 9 10 Mike Carroll said that the law is presently sufficient to address these kinds of issues using 11 both technological solutions as well. So I 12 13 thought to start us off I might try to (a) get a 14 clear sense of what you mean by the kinds of additional provisions that you may have in mind 15 that go beyond Mike's statement. And maybe Mike 16 could chip in to help resolve as what I saw as a 17 bit of a tension between the two remarks. 18 19 MR. GLICKMAN: Well, I think part of the 20 issue is that I think there are some who don't

21 trust the movement of technology to try to deal 22 with these problems. I mean, the fact of the

1 matter is that I'm gratified to hear Alex, particularly, and others talk about using these 2 3 new technologies to get their stuff online. I 4 think that's terrific and nobody wants to stop 5 that. But we also can use new technologies to 6 deal with the problem that is ubiquitous and we 7 shouldn't be afraid of that. And what I don't want to see is the FCC encouraging Congress to not 8 permit these technology developments at all. 9 10 That's crazy. The technology is moving a thousand different directions at one time, and we ought to 11 12 be open enough to see if we can develop sensible 13 technologies dealing with some of the problems that have been mentioned over here that can help 14 deal with these problems. We have no idea what 15 these technologies are going to look like in the 16 17 future. 18 I'd make one other point, too. As a

19 society, as a culture, we've always accepted the 20 fact that there is a difference between lawful and 21 unlawful. And what worries me with the ubiquity 22 of infringed stuff on the web is that we could be

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

opening the door to tolerate a whole vast culture of illegality by people who see this opportunity for good to begin an opportunity for perfidious action by which creators are not compensated for their work.

6 So, we shouldn't be afraid of exploring these new technologies. And I'm not going to deny 7 that some of them may -- you know, you take the 8 issue of filtering which you raised. Okay. I 9 10 don't know what filtering could look like in the future with more sophisticated ways to target it 11 12 better so that things in which Alex and others 13 would submit on the Internet wouldn't be covered by it, but let's not stop the development of the 14 potential to deal with vast amounts of illegal 15 16 content from going on the Internet. And what strikes me is that the attitude that technology 17 18 can improve in terms of use of the Internet, but that technology can't improve in terms of 19 20 protection of the Internet, that seems to be a 21 back way of looking at the issue.

MS. SOHN: Hey, John, I hope that my

22

ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 comments are not interpreted to mean that I think 2 the FCC should somehow prohibit the development of

3 technological protection measures. Absolutely 4 not. I'm just concerned -- I'm more concerned with a mandate that says you must use technology 5 6 or that permits the kind of technology that is a blunt instrument that prohibits both legal and 7 8 illegal content. This is where, you know, Dan, you and I and Pat and I -- Pat and I have had this 9 conversation -- we agree that, you know, there's 10 no place for unlawful content and Internet 11 neutrality. Okay? That's not my concern. 12 13 My concern is that when you use a blunt

instrument, then you block the legal stuff. And 14 some of that legal stuff -- I know that your stuff 15 is really important, no doubt, but some of that 16 17 legal stuff that's being blocked is critically 18 important and time-sensitive, as well. 19 MR. CARROLL: And if I can just jump in. 20 I think Dan is -- which technological innovation are we talking about, right? The DMCA 21

22 contemplates -- content owners went to Congress

ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

saying we want to develop and innovate new
 technologies that will protect our content. And
 those technologies have largely failed. Right?
 The Content Scrambling System does not adequately
 protect your members' content.

6 And so the question now -- and nobody is 7 arguing that you can't keep spending money in that arms race -- but the policy question is should you 8 now ask network providers, broadband providers, to 9 10 in some way bake in technologic technology there? And there "permit the technology," I think, is a 11 12 slippery term because these technologies depend on 13 standards. And the standards are measuring zeros and ones, and those standards are blunt 14 instruments, as Gigi said. And so the concern is 15 having lost the digital arms race on the file 16 level around each individual file, the move seems 17 to be to bake this technology into the network, 18 19 and that can have huge collateral consequences for 20 a range of other content providers. And of course, we're only talking about 21 22 one segment of broadband use at this panel. So

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 the concern is to solve this one problem because 2 the digital arms race has failed at the file level 3 can change the behavior of the entire network for 4 all the rest of the users. 5 MR. GLICKMAN: I just want to make sure 6 you understand to fight piracy is -- requires a 7 holistic comprehensive approach from education to enforcement, to getting at the camcord, which is 8 the movie theatres where most of this piracy 9 10 begins. It's a comprehensive amount of things, but we're dealing with technological issues now. 11 12 The Internet is a technological advance of 13 enormous proportions in the past and it would be crazy not to look at technological solutions to 14 keep unlawful material off the Internet. 15 MR. WEISER: I'm going to follow 16 quickly. First, both Mike and Dan. Dan, do you 17 18 think the Content Scrambling System has failed? Would -- do you agree to that? 19 20 MR. GLICKMAN: I don't agree with it, 21 but my technological guru here might want to comment. Steve? 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 MR. WEISER: And also, maybe before 2 Steve goes, Mike, what was your basis for saying 3 that, that the CSS Center has failed? Because 4 there are a lot of people today who don't know how 5 to rip DVDs and aren't ripping them. So I'm not 6 sure when you say "failed" what you're referring 7 to. 8 MS. SOHN: Of course it's illegal to 9 rip. MR. CARROLL: Well, the behavior that's 10 being complained about. Right? That these movies 11 are all on the Internet. So the Content 12 13 Scrambling System was the technological protection measure that was supposed to stop that, right? 14 But that's only --15 16 MR. GLICKMAN: That's not what -- what 17 Dan is saying is people are going to movie 18 theatres before it even gets to DVD. 19 MR. CARROLL: That's one source of the 20 movie. That's one source of the movies. Right? 21 But it's also once it's in the wild, once it's been -- once somebody has run DCSS, now you have 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 an open file. You put that up on a peer- to-peer network. Right? So I understand the reason that 2 3 we're getting the camcorders is that that's just 4 faster. Right? You have -- the CSS fails if the 5 content hasn't been made available until it gets 6 to DVD. But assume for a minute you got rid of 7 all the camcorders in the world, would you not have these movies on the Internet? Of course you 8 would. Somebody would use DCSS, rip the content, 9 10 and put it up on the peer-to-peer, and then we'd be talking about that. So it's failed in that 11 12 way. 13 MR. HORRIGAN: If Steve could just stand. Actually, a microphone would be helpful. 14 So come up. We want to make sure people in 15 16 cyberspace can hear the comment. 17 MR. WEINSTEIN: Yeah, I mean, DCSS has been -- there are products that allow you to rip 18 DVDs, but two things. One, to reiterate -- one, 19 20 this is four months -- three months before any DVD is out in the market of the cams. 21 So the cams is the first source of 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

material. In fact, you don't see any DVDs or
 screeners in that list up there on that chart on
 Star Trek.

4 The second thing is CSS is a friction. 5 Is there one case where you can get one copy out? 6 You'll always be able to do that. The question is 7 are you preventing the flow of illegal content even in, you know, in ripping DVDs? And you are. 8 CSS protects it at some level. All right. I 9 10 mean, you have to go out and buy certain products. And, in fact, in the Blu-ray world there's only 11 12 like one product in the world, maybe two that 13 actually can rip those Blu-ray disks.

So, yes, if you're looking for the 14 source of piracy, there are lots of ways to get 15 it. If you're looking for an individual consumer, 16 how they get content, one way they don't bother to 17 get content a lot anymore is rip DVDs. It turns 18 out to be easier to get it on the broadband 19 20 through streaming or downloading or peer-to-peer. 21 MR. ROSS: If I could follow up on this whole notion, because what we're hearing basically 22

is technologies aren't perfect that target piracy,
 so let's move on from that. Let's encourage
 business models. We heard a lot of talk about
 streaming maybe being the magic bullet.

5 I mentioned Juliette Tworsey and Rowena 6 Cherry and Leif Skoogfors. I have something in 7 common with them. Not an unusual name; I wish I did. But they recognize -- I'll steal "holistic" 8 as a word. The creative community is holistic. 9 We've heard a lot about music. We've heard a lot 10 about streaming. Juliette streams her music now, 11 12 but that's not a revenue stream for her. She's 13 doing that promotionally. I'm not sure who would 14 stream Rowena Cherry's novel and I'm not sure who would stream Leif Skoogfors' photographs. 15 16 So, we need to think bigger than the

17 narrow pockets that we think, and we need to think 18 about all creators and all ways to enforce, and we 19 need to keep our options open.

20 MR. HORRIGAN: Do we have other 21 questions? By the way, Patrick, I think it's okay

22 to steal words from an IP perspective.

1 MR. ROSS: Thank you. Yeah, I pirated a 2 friend of mine, so, you know. 3 MR. HORRIGAN: Kris. 4 MS. MONTEITH: Sure. I was just 5 interested from Alex, if you could talk a little 6 bit about how you protect your works online and if 7 you're aware of any instances where your works have been subject to piracy. 8 9 MS. SHAPIRO: Sure. Basically, my first 10 strategy always is since I post a great deal of my work -- that's how I do my business -- I only post 11 12 excerpts of my pieces. That's very key. Concert 13 music, my genre, is a long form genre for the most part. And even if it's a short solo piano piece 14 for five minutes, I'm still only going to give you 15 about two minutes of it to listen to. Presumably 16 you'll want to hear how it ends and you'll buy it. 17 18 So, what I've noticed online because, of course, I track with Google alerts, you know, every upload, 19 20 download, whatever is going on -- whether it's 21 associated with my name or my music -- what I notice is, yes, from around the world, a lot in 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 China, a lot of these uploading -- I mean, downloading -- free downloading sites carry my 2 3 stuff. But I think people are really disappointed 4 when they open the file and listen to it because 5 the music trails out just when it's getting good. 6 So, that's how I've been dealing with it and 7 that's how I encourage my peers to deal with it. I say to my colleagues don't -- if you can avoid 8 it, don't put up the entire file. 9 Now, that does not address when 10 commercial CDs, of which I'm on, what, over 20 of 11 12 them -- pieces of mine -- it does not address when 13 people rip those CDs. So I have no control over that, unfortunately. But creators who are active 14 on the Net certainly can control what they choose 15 to put up there, just like with photographs, 16 anything else that represents you. 17 MR. HORRIGAN: Phil? 18 19 MR. WEISER: So I have a few different 20 questions. Let me share off the one that Gigi 21 kind of talked about with respect to Preston's talk. And I've learned a lot from Preston in this 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 topic.

There is a powerful shaming norm, when 2 3 people get that notice and they're ashamed. And 4 so one question here is have you thought about and 5 what are strategies to develop that sense of 6 shaming, which is a less blunt instrument than 7 some of the ones that people were cautioning against, in particular college campuses in their 8 educative function. You know, I come from one 9 10 (inaudible). Are there things that can and should be done there that can develop a greater sense of 11 12 shame and respect for creative works that are 13 assured of some of the things that, you know, Gigi mentioned? I don't know if, Gigi, you want to 14 start first on this because you averted to it, but 15 that 80 percent figure when people know, you know 16 -- because I think the thing that people often say 17 is in the real space, you know, people would feel 18 ashamed to, like, go into a store and walk out 19 20 with, like, a soda. They just kind of know 21 they're not supposed to do that. But if they think no one is watching the Internet and they 22

1 think it's kind of okay, then the norms are more 2 tolerant.

3 Any thoughts on that front? 4 MS. SOHN: Well, I just have to say I 5 remember when you and I had lunch at Sam and 6 Harry's. I'm pointing to Preston. This was like 7 seven years ago and he said, you know, if people know that somebody knows what they're doing is 8 wrong, they will stop it. And that's -- I mean, 9 10 and I do encourage ISPs to cooperate and I have now for about seven or eight years with the 11 12 content providers. I don't think there should be 13 any mandate that they should do it, but I do think they have some responsibilities and that they 14 should cooperate with the content providers to 15 16 send these warning notices. Now, you know, if we want to start 17 talking about kicking them off the network, that's 18 an entirely different story, but I think, to me, 19

20 80 percent is a pretty good rate.

21 Now, let's get to the education part. I
22 think education is critically important, but it

1 has to be a balanced education. And, unfortunately, sometimes what I've seen from some 2 3 of the content industries is you cannot, you 4 cannot, you cannot, you cannot, you cannot, you 5 cannot. All right? Kathy mentioned the 6 Constitution and the, you know, Article 1, Section 7 7, which says Congress may -- not must -- you know, protect works of the mind. Okay? But 8 Congress there said "to promote the progress of 9 science and useful arts," and that means there's a 10 balance. All right? So copyright is not just you 11 12 cannot, you cannot, you cannot, you cannot. There 13 are some cases where you can, you can, you can, without asking permission of the copyright holder. 14 So, I think any education has to balance 15 those rights. And if it does not, people are just 16 going to say, pff, you know, don't tell me I 17 cannot. Tell me what I can do as well. So I'm 18 all for education. I believe that it's either the 19 20 American Library Association and/or the Electronic 21 Frontier Foundation have their own education. I encourage all copyright holders to do the same. I 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 think it's critically important.

And I do think shaming is meaningful and 2 3 pointing the finger and saying I know what you're 4 doing is wrong, but I also think equally as 5 important is getting the content out there. And I 6 saw, you know, Mr. Huntsberry's last slide which, 7 you know, showed all the ways it's getting out there, but it's got to get out there at a price 8 that people want to pay. Okay? 9

So, the first -- you know, I have to say 10 I haven't done recent research, so shame on me for 11 12 that, but, you know, the first DVD downloads that 13 were put out there -- I believe by Cinema Now and Movie Link -- it was like \$24.99 to download a DVD 14 on your hard drive, which you could not watch over 15 16 your television set and it didn't have any of the extras. That's a business model that's set up to 17 18 fail. In my opinion, you should be able to watch it over your television set and it should cost 19 20 less than the hard good because you didn't pay for 21 any packaging and you didn't pay for any distribution. So, getting at the right price 22

1 points and the right flexibility that meets consumers' expectations is going to be critical. 2 3 But I firmly believe that the average consumer, 4 the average individual, actually wants to pay. 5 They don't want to steal. 6 And by the way, I thought that movie up 7 there looked like crap, so. 8 MR. ROSS: I'd like to get back to your question if I could. 9 You know, I agree with Gigi that 10 education is important. I'm sorry she didn't 11 12 mention that we've created the Copyright Alliance Education Foundation. It's a 501(c)(3) charitable 13 14 foundation. We're currently seeking foundation support. I don't know that shame is a primary 15 message of the curricula that we're trying to 16 push. I would say we try to take a positive 17 approach. Gigi says you can't, you can't, you 18 can't. I'm not going to say that that isn't in 19 20 some of our materials. My philosophy is that we 21 need to say you can, you can, you can't. We need to encourage the Alexes of the world to feel 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

empowered, to recognize what copyright brings. We need to get all of us as consumers to recognize how much we want those creative works to be out there. Gigi mentioned, you know, the incentive

6 -- the progress clause in the Constitution. 7 That's absolutely right. We want to encourage the production of new creative works. We're 8 9 partnering with the Fairfax County School District. We have one of their executives on our 10 board. We're currently in discussions with other 11 12 schools. There are tens of thousands that have 13 received our materials. We're getting tremendous feedback, and we're encouraging the educators out 14 there to give us guidance as we revise and renew 15 curricula. And I would invite Gigi and her 16 colleagues to provide some constructive feedback 17 18 as well.

MR. HUNTSBERRY: I'd like to also just add one point on the pricing. I mean, the pricing today of films that you want to download or stream are below \$10. The other thing is regardless of

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 what the pricing is, ultimately no industry can 2 compete with free for theft. I mean, if something 3 is stolen and it's free on the Internet, you just 4 can't compete with it. It doesn't matter what 5 your price point is.

6 MS. SOHN: I'd like to also --7 MR. CARROLL: Can I just -- on that question -- we've heard this. Can someone explain 8 to me why there are all those iTunes downloads? I 9 mean, because all that music is available on 10 peer-to-peer networks. So why did anybody pay for 11 an iTunes download if it's available for free? 12 13 MS. SOHN: Why do people pay for bottled water? I mean, again, because you can't carry the 14 water cooler with you. All right? So if it's 15 well-priced, if it's good quality -- I'm sorry, 16 Fred. You know, that movie you showed looked like 17 18 garbage. I mean, that's not what movie buffs want to see. Okay? They want to see Star Trek in the 19 20 theatres. So if it's good quality, flexible use, 21 fair price, people will buy it. Will everybody buy it? Will there be people who want to screw 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

the, you know, Hollywood and the recording 1 industry and will download a million times? Yes. 2 3 Those people stink; they should be thrown in jail. 4 And I actually encourage the content -- I'm weird 5 that way -- I encourage the content industry to go 6 after people like that. 7 But, you know, you can compete with free. It's not going to be perfect. You're still 8 9 going to have people who steal from you. That's a fact of life. It's a sad fact of life. I think, 10 you know, let's go for, you know, good 11 12 technological protection measures that don't block 13 lawful use. But, you know, you can compete with free and you are competing with free today. 14 MS. GARMEZY: I'm a little confused. 15 16 Why are we debating whether our industry knows how to do good business models? We wouldn't be where 17 18 we were if we weren't dedicated to getting something to the public. The public is us. We 19 20 are the public. So I get a little confused when 21 the argument becomes you don't have a good business model and that's why people steal. 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

Obviously, we're all --1 2 MS. SOHN: I didn't say that. 3 MS. GARMEZY: But that's the 4 implication. The implication is that if somehow 5 our industry doesn't have a business model that it 6 immediately has grasped onto that is going to 7 completely work, then it's our fault that people are stealing? 8 9 MR. GLICKMAN: Can I just, Phil, go back 10 to your question? MR. WEISER: Please. 11 MR. GLICKMAN: First of all, in some 12 13 sense this is a generational issue because younger people are much more comfortable with this new 14 technology and they're using it quite 15 imaginatively. 16 But last year -- actually this past 17 year, we worked with Congress to pass amendments 18 to the Higher Education Act, which basically 19 20 requires universities in this country to deal with 21 this issue by setting up technologies which try to work with students both positively as well as from 22

1 an enforcement mechanism to deal with the issue of online -- or intranet in some cases --2 3 infringement issues. And so the Congress has gone 4 on record saying this is a problem. And a lot of 5 the problem starts at the kid level. 6 And so at the university level we have 7 many, dozens of universities in this country who are now working both positively to educate 8 positively, to provide legitimate hassle-free, 9 10 reasonably priced Internet services at the university level, but also to have enforcement 11 12 mechanisms if people engage in online behavior. 13 And some of that is terminating service because if there's total anonymity -- total anonymity for 14 wrongdoers, then they will continue to do wrong. 15 And so that's why the argument talking about 16 letting people know that they are infringing and 17 18 knowing that there are consequences for that is 19 all part of that strategy. But those 20 technological measures are now written into the 21 Higher Education Act. We're also working at the K thru 12 level as well because a big part of this 22

is people under the age of 25 have grown up with a 1 new medium which is wonderful, is comfortable, but 2 3 it's also very, very easy to steal. 4 MR. CARROLL: Can I jump in on that? 5 MR. HORRIGAN: Sure. 6 MR. CARROLL: Because I want to answer 7 Kathy's question. It's exactly the right question. Right? But those are business models 8 that were built around copyright law. Right? 9 10 Copyright law is public policy and those were business models that depended on one understanding 11 12 of the balance of control that that public policy 13 gave between creators and users. Now, what we hear is that that balance 14 provided by copyright law is insufficient to 15 sustain existing business models, and the request 16 is for additional public policy assistance for 17 those business models. And that's the debate, is 18 whether that's a legitimate public policy given 19 20 that it may have collateral consequences for lots 21 of other people. So then the question of revenue streams and user behavior becomes in play because 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

we're asking is it good public policy to add additional control on the content side in order to sustain business models at the expense of potential other creators and other users. And I think that's where we are.

6 But I just want to clarify that point 7 because it's -- no one is telling you how to run 8 your business, but when you come to the government 9 and ask for additional assistance in running your 10 business, then we all have a stake in that 11 conversation.

MS. SHAPIRO: I want to ask Frederick, I 12 13 think copyright protection can often be headed off at the pass by beating them to the punch. If 14 Paramount were to release on the very same day of 15 the theatre release, if you were to release a 16 high-quality DVD for a streaming download 17 18 available for \$3.00 or whatever -- you name the price -- wouldn't that put a major dent into 19 20 what's going on with these silly looking camcorder 21 releases, these streams? I think the public does want -- as Gigi said, they want quality. There is 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 no comparison to watching Star Trek, you know, like that to watching it in a movie theatre. And 2 3 then the middle ground is watching it on your 4 nice, big LCD TV in good quality, you know, on the 5 quality that you get from your Netflix video from 6 which you would benefit. Why can't they be 7 released at the same time so that you can jump in on that? 8

9 MR. HUNTSBERRY: Well, again, look, at 10 the end of the day -- it's a fair question, Alex. We look at windowing all the time. And, in fact, 11 12 if you look at the windows over the last few 13 years, they've already changed dramatically. In fact, you know, today in many cases you can get 14 the film day and date, VOD, and download with the 15 DVD. In fact, some of the studios, including us, 16 have made announcements about releasing already 17 18 prior to the DVD in an exclusive rental window. 19 Now, that's for DVD, but the point I'm making is 20 that looking at windows and now the change is 21 being evaluated all the time.

22 The point, though, you know, and to your

ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 point, even if we moved it to day and date, the problem we have is that, you know, once the film 2 3 is out it will get pirated. And if we do not 4 control piracy, we cannot compete against it, even 5 if we're going out day and date with the DVD 6 because it will be for free. A consumer will 7 always go for something that is absolutely for free if that's the alternative. 8 9 MS. SHAPIRO: But there is a big quality 10 difference. MR. HUNTSBERRY: See, you have to --11 12 yeah, you're right. But what you have to realize 13 is if we go day and date with the DVD, then to the point also that Michael made earlier, somebody 14 will rip the DVD that day and you will have a 15 perfect copy of that DVD image out that same day 16 17 and we cannot compete against that. 18 MR. HORRIGAN: Susan DeSanti, please. 19 MS. DeSANTI: Yes. I have a follow-up 20 question on the education point and the data 21 point. 22 I think it's very helpful to talk about,

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 you know, exactly what is the data on the piracy that exists. What data are your industries going 2 3 about collecting about consumer views on different 4 technological approaches? And what would they 5 consider to be acceptable? What kinds of consumer 6 surveys are you doing to try to determine where 7 any of these technologies might work in terms of consumer perceptions? 8

MR. GLICKMAN: First of all, there is 9 10 good data on losses for piracy. And contrary to what Gigi says, there's a 2007 study by the 11 Institute for Policy Innovation that concluded 12 13 that there would be about 150,000 additional new jobs created with a significant reduction in 14 digital and traditional hard goods piracy, 15 additional tax revenues generated; a 2005 study 16 that talked about losses in the multibillion 17 18 dollars in categories. And we'll get you all of that particular information. All the studios do 19 20 consumer focus groups and testing on what 21 consumers would like to do.

22 The best focus groups are, in fact,

ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 consumer purchases all the time. And the consumers are speaking out that they want 2 3 reasonably priced, hassle free methods of getting 4 the material. I agree with you there. 5 They also, I think, understand that they 6 have to pay for this as well. And so if we can 7 combine the strategies that we're talking about today, but underlying that strategy is a 8 recognition that it is not going to be for free 9 and that there are going to be technological 10 solutions to prevent piracy from occurring, our 11 12 judgment is that consumers will accept that. 13 MS. SOHN: Susan, if I could just 14 respond. I mean, Dan talked about the 2007 study talked about hard goods piracy. 15 MR. GLICKMAN: No, I said Internet and 16 hard goods, both. 17 MS. SOHN: There is no good -- okay, 18 Dan. But you don't have a study that can really 19 20 show what losses -- what the actual losses are due 21 to Internet piracy. What you do is you say that every download is equal to a lost sale and that's 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 absolutely false.

2 MR. GLICKMAN: No. No. MS. SOHN: That's absolutely false. You 3 4 don't have any good -- and frankly, Senator 5 Specter is still waiting for the methodology 6 underlying your LEK study. He asked you for that 7 three years ago. You still haven't given it to him. So let's see the methodology. Let's see 8 losses that are actually attributable to Internet 9 policy and not say, you know, well, we had a 10 billion downloads, therefore, we lost \$20 billion. 11 It's just -- that is not -- I'm not an economist, 12 13 but an economist could take apart something like that in about five minutes. 14 MS. DeSANTI: I don't want to spark 15 16 another controversy that has been going on for some time, but I was asking more about the 17 18 different types of technologies that you are considering using in the future. And Gigi 19 20 mentioned the example of a product that limited 21 your use. You couldn't use it, you couldn't take it from your computer and play it on your TV. How 22

1 do you anticipate educating consumers about those different types of technological restrictions that 2 3 you may be considering and what consumers may or 4 may no find acceptable? 5 MR. GLICKMAN: Well, I repeat these 6 terms: Hassle free, reasonably priced. Almost 7 everything I've seen -- and I've spoken with an awful lot of people who have done focus groups and 8 polling around the country on these issues -- say 9 10 that consumers will accept reasonable restrictions on the ubiquitous use of a product, particularly 11 12 if it's piracy- related, if the product is 13 reasonably priced and easy to use. 14 MR. WEISER: And they're disclosed. MR. GLICKMAN: Pardon? 15 MR. WEISER: And disclosed. 16 MR. GLICKMAN: And disclosed. 17 18 MS. DeSANTI: And disclosed. MR. WEISER: So consumers know about it. 19 20 I think Susan is saying sometimes consumers may 21 buy something with no awareness. The Sony BMG rootkit was sort of a very blatant example. 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 MR. GLICKMAN: Yeah, and again, Steve may have some ideas about the products that are 2 3 out there -- that are coming out there to deal 4 with those issues. But they're there. They're 5 coming in large quantities. 6 MR. ROSS: If I could add, the Federal 7 Trade Commission has a good track record in this area. They held a very compelling workshop in 8 Seattle earlier this year. 9 MS. SOHN: Yes. 10 MR. ROSS: I was asked to speak at that. 11 12 And I think one of the things that emerged there 13 were there were two or three examples where the 14 FTC stepped in. I think in one case they actually proceeded with something. In the other cases it 15 woke people up. But in all cases the problems 16 were solved, but they were isolated. And I think 17 18 there is a general consensus that emerged that 19 obviously disclosure is important. You want 20 consumers to understand what they get with a 21 certain price point. 22 I think there was some resistance to the

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 notion of trying to come up with some kind of 2 government mandate or disclosure that might lead 3 us down a dangerous road. But it seems to me --4 I'm very pleased with the Trade Commission's track 5 record here and with their ability to step in if 6 consumers are being harmed. 7 MS. DeSANTI: Well, I certainly agree with that, and I wasn't asking about any 8 standardized approach necessarily. But it seems 9 10 to me that the potential, at least what I seem to be hearing -- and maybe Steve Weiseman can speak 11 12 to this -- is that there are potentials for 13 different types of restrictions on how consumers use particular products. And to your education 14 point, there may be some consumer education that 15 16 needs to go -- needs to happen if that actually is the case so the consumers actually do understand 17 18 what it is that they're buying when they buy it. 19 MR. WEINSTEIN: Well, I mean, I think in 20 the last couple of years you've seen lots of 21 innovation. I mean, Gigi brought up, you know, the early days of Cinema Now and how much it cost. 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 But, I mean, the last year -- I mean, couple of years, you've seen Hulu, which has the rules, you 2 3 know, it says streaming. You know, a very 4 straightforward, watch it now. You've seen now 5 coming with Netflix and, you know, you can get a 6 subscription, I mean, which basically says you can 7 watch these movies, you know, on your TV set if you have, you know, like an Xbox or some of the 8 other devices. Amazon. I mean, a bunch of 9 10 companies have put out products which I think are relatively fairly clear in how they expect you to 11 12 use it in a digital way in a legal format. I 13 mean, I think, you know -- I don't think people 14 are that confused. You know, you might ask some of these 15 16 companies who have been offering these movies in all these different formats whether they are 17 18 getting a lot of pushback, but I think they're not. You've seen adoption of a lot of these 19 20 things, so, I mean -- so I think it's becoming 21 more straightforward to use it. 22

2 Unfortunately, as, you know, Frederick

ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 pointed out, sometimes the consumer is confused between, you know, whether they've gone to a legal 2 site offering these things versus, you know -- not 3 4 because -- you know, it's an international 5 problem. Right? I mean, content comes from 6 anywhere and the site looks perfect, and I think 7 consumers can get confused that way. But in terms of companies that we all know, they're offering, I 8 think, fairly clear models when they deliver that 9 10 content. MS. SOHN: I mean, Susan, I would agree. 11 12 I think there is a role for the FTC. I mean, I 13 actually -- I would be in favor of mandatory disclosure of DRM and what it does. 14 And the SONY rootkit debacle was a 15 perfect example of why that's necessary. I think 16 a lot of people don't know that you can't rip a 17 DVD to your iPod. All right? So I think that 18 kind of -- I actually think it would actually help 19 20 content owners because they can say, you know, you 21 can't use DCIS; that's illegal. That violates the DNCA if you use this to put it on your iPod. So I 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 think actually a disclosure requirement would be 2 good on both sides.

3 I also think that, you know, again, a 4 lot of these problems with some of these streaming 5 sites -- they're jurisdictional. Right? They're 6 in Romania. They're in the Ukraine. And that's 7 something that you go to the USTR to help settle. But to the extent that it's a U.S. company, that's 8 fraudulent and that's clearly within your 9 bailiwick to punish or fine companies like that 10 that fraudulently advertise that they're 11

12 legitimate.

13 MR. HORRIGAN: This goes to a question 14 that came from cyberspace or an element of this 15 discussion which is, as Frederick said, some of 16 those sites that look legit have advertising on 17 them that sort of add to their legitimate look. 18 And the question is if a significant part of the 19 business model of download sites has to do with

20 advertising by large corporations, isn't that 21 where the content providers need to put their 22 efforts by putting pressure on the advertisers?

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314

1 Do you care to comment on that? 2 MR. HUNTSBERRY: That's absolutely true, 3 John. We -- in fact, we're just in the beginning 4 phases right now of doing our research to 5 understand who the ad agencies are that are 6 actually driving this business model. Whether or 7 not there is a malice intent behind it, I can't tell you that today. So -- but our intent 8 absolutely is to reach out to these ad agencies, 9 to sit down with them, and, of course, also to the 10 advertisers who, you know, I would wager to say 11 12 are not even aware that their ads are being used 13 on these sites. MR. HORRIGAN: I can channel more 14 questions from the audience. I can entertain more 15 16 from our questioners. 17 Yes. If you want to come up and use the 18 microphone. 19 MS. YEMISI: Hello. My name is Olu 20 Yemisi and I'd like to address policing trademarks 21 and copyrights. I happen to produce programming with music, dance, as well as film. 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 And my question is why can't the government agencies act as polices to -- act as 2 3 police to shut down these different sites that are 4 repeat offenders whose sole purpose is to just 5 commit piracy on different people's work? 6 Because I keep hearing about filters and 7 how it will exclude certain people, but will there be a remedy to those people who happen to be 8 independent artists or independent producers, to 9 make sure that they're included? Is there a 10 number to say, oh, I've been excluded; please put 11 12 me back on because I'm legitimate? Or will we 13 just be floating in the sea of not being able to be accessed on the Internet? 14 I think that's a big issue. And when I 15 got my trademarks and copyrights, I read the area 16 of the website where it said that the government 17 will not police -- you have to police your own 18 intellectual property. And that is something that 19 20 probably needs to change. 21 MR. HORRIGAN: Do we have any comments to that? 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 MR. ROSS: Kudos to you for that 2 comment. And, you know, I hear this every day. 3 We keep hearing about the large 4 corporations and not wanting them. I mentioned 5 Rowena. I mean, she's a published author with a 6 large publishing house. Does the publishing house 7 have the resources to do the Whac-a-Mole? No, so she's doing it. So policymakers do need to keep 8 in mind that this isn't just about large companies 9 having ability to do things, but that there are 10 individuals, like Alex, who might actually want to 11 12 go after some of those CD things because maybe her 13 label is not doing it. She should have some kind of option to do that. 14 I am not a technologist. I am not going 15 to sit here and say how this should be done, but 16 I'd like those options to be available for you and 17 for others who, frankly, in this age do have to 18 take it into their own hands. 19 20 MR. GLICKMAN: The other thing -- if you 21 have -- some of these sites are actually big, massive, profit- generating worldwide sites, and 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 governments, at the prodding of copyright owners, 2 have taken action against sites that are engaged 3 in a rather large scheme to invade and infringe, 4 especially in Europe. But it is something that we 5 work with our own government on as well, 6 especially if they're involved in organized crime 7 or other kinds of criminal syndicate activities. MR. HORRIGAN: Other questions? I can 8 put another issue on the table. The notion -- at 9 10 least I heard this as a notion of measuring network traffic being a challenge of a 11 recommendation. I think it was Charles Slocum who 12 13 said that the FCC should try to determine, with better precision than apparently has been done in 14 the past, how much pirated content is really on 15 16 the Internet. And I wanted to pick up on that to 17 see a little bit more what you meant by that. 18 Dan mentioned surveys. Surveys are 19 useful for a certain purpose. It seems to me that 20 you're getting to the issue of really looking at 21 the network and almost understanding at a network science level what is going on with some of these 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

flows of potentially pirated content. Can you 1 expand on that a little bit and sort of lead us to 2 3 probably a different topic on the network science 4 and whether that needs to be better understood to 5 help understand these issues a little bit better? 6 MR. SLOCUM: Well, I'm not a 7 technologist either, so I can't go into too much detail about exactly what it would be, what should 8 be measured and exactly where in the technology 9 10 system it should be measured. But, you know, it's just struck us that we haven't seen any real 11 12 reliable information about exactly what the extent 13 of the piracy problem is; what the nature of it is. I mean, I'm struck by the fact that I think 14 this chart does not include any U.S. Piracy. 15 SPEAKER: It does. 16 MR. SLOCUM: It does? Okay. So -- at 17 18 the end it does. So what is the international dimension versus sites that are originating in the 19 20 U.S.? What's the scope of U.S. Law that could 21 address the piracy issue? Or is the problem outside the U.S. more? So, I mean, those are the 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 issues. I'm not the one to answer the "how." MR. BRACY: Let me jump on that if I 2 3 could, John. I'm not a scientist either, by any 4 stretch of the imagination. But we do agree very 5 strongly that there are some really important 6 questions that need to be asked right now and, 7 hopefully, we'll get some answers. What we see in the music community is, you know, finally we're at 8 9 a place where there is this whole range of legal licensed, you know, aboveboard alternatives for 10 how music consumers can access music. And what's 11 12 particularly exciting about it is that music fans 13 can access it through this variety of tools that were previously unthought. You can listen to 14 radio; you can do digital downloads; (inaudible) 15 subscription; you can do -- you know, basically 16 they're all aboveboard. And this has all happened 17 18 really in the last, you know, couple of years. I 19 mean, this is a very new development. 20 And so what we're interested in is 21 looking at the interconnection between these new

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

legal licensed alternatives. What we'd like to

22

see in terms of access to competitive broadband markets, more consumers have access to these technologies at a lower price point so they hypothetically have more disposable income to play in the real market.

6 And then I think Patrick's point is very 7 important, is the growing sense of awareness and accountability. You know, particularly for what 8 we see in the music community is we want music 9 10 fans to understand that this is not about P.Diddy and MTV Cribs; this is about the overwhelming 11 12 majority. I mean, you know, we talk a lot about 13 the musicians with no class. The idea that if you give a musician the deal where they can have 14 enough income from their work that they can pay a 15 mortgage, have health care for their kids, and get 16 on local radio, they'll take that deal. I mean, 17 this is generally what we're talking about in the 18 19 music community.

20 So, I think if you look at these
21 questions of what is happening in the illegal
22 marketplace, what is happening with increased

1 access to competitive broadband network, if you
2 have better education and awareness of the choices
3 that consumers need to make as music fans and
4 supporting that music ecosystem, we'll learn some
5 answers then about what the government could or
6 shouldn't do as we move forward.

7 MR. HUNTSBERRY: By the way, just one quick comment on the statistical information. We 8 can actually -- there are services out there that 9 10 can tell us for every website that houses pirated content, how much of the usage originated from the 11 12 United States versus Asia-Pacific and other 13 regions of the world. So that data is actually traceable. We can provide that. 14 MR. GLICKMAN: And I don't think it's a 15 bad idea to try to seek additional data on this 16 issue. I don't disagree with that. I think the 17 18 ISPs probably have a lot of this data internally. And I don't know how much of that they're willing 19

20 to share or not, but I think that's a reasonable
21 suggestion in this process.

I also want to make one other point.

ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1	The Rand Corporation did a study for us on
2	organized crime, particularly the syndicates,
3	worldwide syndicates, and how they impact this
4	issue and how they're involved in the top sites of
5	some of these large criminal conspiracies. And
6	they have a bunch of case studies there. We'll
7	get that to you because what it shows is the
8	amount of money being made in this business of
9	both Internet and hard goods piracy is greater
10	than it is in other traditional organized criminal
11	activities. And this is a worldwide phenomena.
12	MR. HORRIGAN: Do you have a question?
13	No? Another question from the audience. What
14	limitations or implications do copy protection
15	technical measures pose for digital devices?
16	MR. WEISER: Maybe I can rephrase or add
17	a little bit to it. This is building on a
18	question before, and one of the concerns is to
19	remix and reuse content in different sorts of
20	ways. There's concerns that in the digital world
21	there'll be a greater degree of content being
22	firmly locked down without an ability to exercise

ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

creativity that is so promising in the digital 1 world. And I guess the question is how can that 2 3 creativity be fostered, understood by consumers? 4 And is there a risk that we're going to 5 miss out on that opportunity? 6 MR. HORRIGAN: And just to build back on 7 this a little bit, I think the question also goes to could it somehow stifle innovation at the 8 device level or have unintended consequences on 9 innovation at the device level? So, maybe these 10 11 two things. 12 MR. WEISER: The trick is the type of 13 content people that you're here -- this may not fit as easily in your kind of experience. I mean, 14 I think people talk about, for example, you know, 15 newspapers or books, you know, that if you can't 16 take from digital to digital you may lose 17 18 something. 19 The case that involved DCSS was one 20 where essentially the argument was -- in that case 21 it was a DVD. Could you get some scene from Schindler's List that could be done, you know, in 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 a class project or something? How does that opportunity get developed in a way that's 2 consistent with your concerns? Are there people 3 4 thinking about it, et cetera? 5 MR. GLICKMAN: Give Steve a mike. 6 MR. WEINSTEIN: It's a good point. I 7 mean, I think that the use of, you know, there are, you know, some services that the industry is 8 offering, you know. I mean, Paramount had some 9 10 clips that they put up on Facebook to allow people to mix and match with them, and I think there are 11 12 other cases of, you know, various people. I mean, 13 we're very much at the infancy, I mean, of this. I mean -- and so I don't think -- you know, we're 14 not arguing that how can you get access to the 15 content because I think we'll all admit that you 16 basically can get the digital content if you want 17 it. I mean, I think as we go forward it's, you 18 know, how you end up using them. And I don't 19 20 think any of these technologies that we're looking 21 at are going to clamp that down and close that off as an option to being used. 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 I mean, you know, Gigi brought up the point of, you know, are we putting blunt 2 3 instruments -- are we trying to put blunt 4 instruments in place? And, I mean, we're in the 5 early days and some of these instruments, you 6 know, have in the past maybe been blunter than we 7 had hoped. But if you look at it, you know, there are a lot of UGC sites that are constantly looking 8 at all the content that's going up there. 9 And what they've done is you don't use 10 the blunt instrument; you kind of do it like a 11 12 vague -- you know, you say vaguely -- say, you 13 know what? This is the full movie. This is, you 14 know -- and this shouldn't be there. I mean, I think we're down on the edges when we're saying is 15 it 20 seconds or a minute or 5 minutes, 10 16 minutes? People, that's not what we're talking 17 18 about. We're trying to stop a large system. And I think, you know, the digital content will be out 19 20 there. I mean, I think we're just trying to 21 change behavior a little bit through education, inform people of what they're doing, and change it 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 a little bit, so.

2 MR. WEISER: (Inaudible) when you talk 3 about the user-generated content principles that I 4 know some have, you know, put out there as giving 5 guidance, both EFF and some group of companies. 6 MR. PADDEN: Yeah, last year several of 7 the entertainment companies together with several of the user- generated content sites -- Microsoft 8 included -- developed -- Troy, come up here --9 10 developed a set of -- agreed on a set of principles for trying to deal with unlawful 11 12 content on user-generated content sites. And my 13 colleague, Mr. Dow, can speak to exactly what 14 those were. MR. DOW: Sure. And for any who are 15 interested in seeing them, they're available at 16 UGCprinciples.com. 17 18 And as Preston said, it was a group of leading content providers, leading user-generated 19 20 content site operators who came together and 21 figured out a set of principles to live by to both try and promote the legitimate use and growth of 22

1 user-generated content services, while at the same 2 time trying to actually prevent piracy on those 3 sites. And it involved the use of technological 4 solutions best available and effective technology 5 to actually block infringing uploads onto those 6 sites in a way that accommodates fair use, 7 respects user privacy, and are being implemented today in ways that seem to be pro-consumer, pro-8 creator, and seem to be working very well. 9 MS. SOHN: John, if I could just address 10 that. And maybe I can ask my experts over there 11 12 to join in if they want to. I actually -- you know, I think we 13 14 really have to distinguish what's being done on the edge, all right, by YouTube. And we're fine 15 with YouTube's filtering system. Okay? But 16 that's different. All right? That's on the edge. 17 The kind of copying -- copyright 18 filtering proposals for network filtering are much 19 20 different. All right? Because they tend to 21 involve or they all involve deep packet inspection, which is like the postman opening up 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

an envelope, reading your mail, and then sending 1 it on its way. It's much more invasive; it's much 2 3 more privacy invasive. As I said before, it's not 4 network management; it's content management. 5 So, all the stuff that's going on with 6 YouTube and the, you know, uploading, the finger 7 -- you know, uploading to their reference library so they can block it. Steve, I feel like you 8 could work for me, quite honestly. Everything 9 you've said is completely reasonable. 10 All right. But it is a horse of a 11 12 different color than when you're looking at every 13 single packet because that slows down the network; there's privacy implications. It will block 14 illegal content. What Steve talked about --15 there's a human eye on that. And there's also the 16 DMCA. All right? So if YouTube takes down one of 17 18 my user-generated content videos and I think they're wrong, I have recourse. If you block my 19 20 packets automatically and there ain't no human eye 21 there, I don't have any recourse. If that content was time-sensitive, I'm screwed. So, we really, 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 really have to distinguish.

I also must put a pitch in to the user-generated content principles that my organization signed onto which were drafted by EFF. Do you have the URL, Alex? You're not doing your job.

So, I think that your principles are generally sound except fair use kind of gets the swift kick in the behind. Ours is more based on sort of -- more based on fair use as a core principle for UGC usage.

MR. GLICKMAN: I would just comment 12 13 that, you know, I understand some of the concerns and limitations that have been raised by Gigi and 14 others in this area, but what we are encouraging 15 16 you all to do is just to further develop innovation and technology in this area. Because 17 these review processes don't always have to be the 18 same. Times will change. Technology will change. 19 20 And we just hate to see you block the ability to 21 do that kind of thing.

22 MR. CARROLL: So, a couple of things. I

1 think we should recognize and applaud the evolution in the views of many of the content 2 3 holders who initially viewed a lot of what some of 4 us would view as user-generated content that's 5 fair use. That also got lumped in under the 6 piracy umbrella. 7 And now I think with, for instance, the use of watermarking filtering technology on 8 YouTube that sort of allows certain uses of the 9 10 content to go ahead, whether it's a fair use or not, it's tolerated. But the idea that the 11 12 problem is more the consumptive downloads. 13 And I would agree with Dan that, you know, the organized -- there is organized crime. 14 It's contraband. Right? They're in the game of 15 contraband, and that is a real problem that should 16 be addressed. 17 18 But now -- but I agree with Gigi that addressing it through network technologies is the 19 20 biggest concern. And I want to add to that 21 conversation that I think there's strong demand out there for wireless broadband. And those 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 technologies are in their infancy.

And another worry I want to put on the table is that any technological innovation that's based on today's network prejudices the ability to develop tomorrow's network.

6 And I think particularly about wireless 7 broadband, broadband in the train, in the back of the car. We have a problem with texting drivers, 8 but in the back of the car, if you had broadband 9 10 access and I could get access to Internet radio readily in my car, that possibility as a consumer 11 12 excites me very much. And I would want to make 13 sure that the policies about broadband deployment have that in mind. 14

MR. HORRIGAN: Let me ask -- try to 15 combine a couple of questions here that are --16 since we're starting to run short on time. This 17 18 one goes: In the MPAA's filing in the NOI for the National Broadband Proceeding, it's mentioned that 19 20 50 to 80 percent of all Internet traffic is 21 infringing, but they provided four links; three of them didn't work and one wasn't there either. The 22

1 question is where does the 50 to 80 percent figure
2 come from?

3 And related to that is the question that 4 the Star Trek movie made about \$250 million in the box office. Should it have made more than \$250 5 6 million given what we see on the poster over there? And if so --7 8 MR. WEISER: It was a really good movie. MR. HORRIGAN: So I hear. And if so, 9 how much? So what was the loss on the Star Trek 10 story and where does the 50 to 80 percent figure 11 12 come from about that share being the degree of Internet (inaudible) traffic? 13 14 MR. GLICKMAN: First of all, I'd say if that person who asked the question wants to e-mail 15 16 us directly, I'd be glad to give them a more complete response, but our data comes from folks 17 within the ISP community. It comes from 18 19 discussions with our member studios in terms of 20 their relationships with technological manufacturers and data providers, who are pretty 21 clear that that number does exceed 50 percent and 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 can be higher in many cases. But I'd be glad to 2 get more precise information both to the 3 Commission as well as to this particular reader. 4 MS. GARMEZY: Can I just add --5 MR. HUNTSBERRY: I just -- yeah, I just 6 wanted to comment on the economics of the business 7 a little bit because, I mean, when we talk about box office, we need to realize that the studio 8 only brings home about half of the box office 9 because we share that with the movie theatres. 10 So when you guote \$250 million, \$125 million is what 11 12 comes back to the studio. Now, that's still a 13 large sum; no question about it. But we have to realize also that to make the movie costs a lot of 14 money. You have a lot of special effects in the 15 film, so computer graphics do -- you know, are a 16 large portion of the budget of that film. Then 17 you have the marketing costs of the film. 18 19 We, effectively, in our business, are 20 releasing a new product, which is a new film, 21 every few weeks of the year. We have to create basically an awareness in the marketplace around 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 that franchise that didn't exist previously. So a
2 lot of marketing dollars are spent to get that
3 film opened.

4 And I think as Dan said earlier, we 5 actually -- we're not actually in profit until we 6 are in the ancillary revenue streams. So to the 7 extent that we are, again, forced to compete with free-by-theft content, right, which is really not 8 really hurting the theatrical window as much 9 10 because the theatrical window is really a social experience -- people do love going to the theatre 11 -- it is an issue when it comes to DVD sales and 12 13 also online sales downstream.

MS. GARMEZY: I just wanted to add that 14 partly all of us are victims of the sort of 15 16 celebrity-driven and box office score-driven 17 things that come out every week. In fact, box office is not where the bulk of money is made at 18 all that the industry recoups. It's actually made 19 20 from these ancillary sales. And that's what makes 21 it possible to make movies.

22 And the second thing I would say is that

ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 one can get a little lost in the blockbuster 2 discussions, but, in fact, the bulk of the movies 3 made are not blockbusters. The movies that win 4 Oscars and that you think about a lot are not all 5 blockbusters. And, in fact, those movies that are 6 made in the 50 to 70 million range or even lower, like --7 8 SPEAKER: Slum Dog. MS. GARMEZY: Well, whatever -- Little 9 Miss Sunshine -- those are the ones most 10 vulnerable to piracy. The movies most vulnerable 11 12 to piracy are the ones that cost the least to make 13 because they will lose their money much quicker. 14 So, I think sometimes our industry gets misportrayed in terms of blockbusters and the 15 wealth of the industry, but, in fact, it's a much 16 17 more complicated picture. MR. HORRIGAN: Kris, you had a question? 18 MS. MONTEITH: Yes. I think I heard a 19 20 couple of panelists mention ISPs and their responsibilities. And Charles, it may have been 21 22 you that said that ISPs should disclose their

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

network management policies. And one, I wanted to 1 see if there's agreement among the panelists on 2 3 that. Two, what specifically should they 4 disclose? And three, how does it fit in this 5 context? 6 MS. SOHN: Well, I certainly agree that 7 they should disclose their network management polices, including any prioritization or, you 8 know, any throttling they have to do during times 9 10 of congestion and that sort of thing. So, certainly, it's completely -- I completely agree 11 12 with Charles on that. MR. GLICKMAN: I mean, I don't know what 13 disclosure we're talking about and who discloses 14 what, what information, but the FCC has, 15 obviously, a regulatory interest in these issues. 16 And I presume that you will exercise your 17 18 responsibility fully in that regard. 19 MR. SLOCUM: I just want to focus on the 20 priority for us is that the consumer can take that 21 into account when choosing an ISP. I mean, there are usually several choices, but it has to be an 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

1 informed choice for it to matter.

2 MS. MONTEITH: And how do you see it 3 fitting in this context is kind of what I'm 4 getting at? What would the consumer see that 5 would help with respect to digital piracy issues? 6 MR. SLOCUM: Well, I actually gave a 7 presentation to the FCC -- actually, I was telling Susan on this -- testifying before them about this 8 very issue. It is one that there is, I think, 9 10 increasing awareness on instead of disclosure, what companies are doing in terms of network 11 12 management I think comes out of the Comcast case 13 here. 14 MS. SOHN: I mean, certainly if there

was an agreement between a content company and an 15 ISP to do some sort of network-level filtering, 16 I'd want to know that. Or even if it wasn't for a 17 18 copyright filtering purposes. Let's say if it was 19 for third-party advertising purposes, right, the 20 whole, you know, DPI and NebuAd debate that we had 21 about a year ago. I'd sure as heck want to know that as well. 22

1 MR. BRACY: I mean, the concern we're 2 seeing in the music community coming out of the 3 experience of consolidated commercial radio is 4 that there are structural barriers in the radio 5 industry that make it very, very difficult, if not 6 impossible, for independent, local artists to 7 connect to commercial airwaves. And that's been, you know, pretty well documented over the last 8 decade. So the concern that we voice is to make 9 10 sure -- and this is kind of the way we talk about Net neutrality -- is just to make sure that legal 11 12 licensed platforms for music are able to reach 13 consumers via ISPs. And certainly, there needs to be complete transparency so we know if there are 14 economic incentives for consumers to be steered 15 towards, you know, applications where there are 16 business relationships, things like that. We 17 18 think that's absolutely critical. 19 MR. HORRIGAN: Do we have more questions 20 from our questioners for our panel? 21 Well, with that I want to thank everybody for taking their time this morning to be 22

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

here. We really appreciate it. You've given the National Broadband Plan a great deal to think about as we develop a plan to make content flow --contents of all sorts flow to consumers in the right way. So, let me ask the audience to thank our panelists. (Whereupon, the PROCEEDINGS were adjourned.) * * * * *

> ANDERSON COURT REPORTING 706 Duke Street, Suite 100 Alexandria, VA 22314 Phone (703) 519-7180 Fax (703) 519-7190

2	I, Carleton J. Anderson, III do hereby
3	certify that the forgoing electronic file when
4	originally transmitted was reduced to text at my
5	direction; that said transcript is a true record
6	of the proceedings therein referenced; that I am
7	neither counsel for, related to, nor employed by
8	any of the parties to the action in which these
9	proceedings were taken; and, furthermore, that I
10	am neither a relative or employee of any attorney
11	or counsel employed by the parties hereto, nor
12	financially or otherwise interested in the outcome
13	of this action.
14	/s/Carleton J. Anderson, III
15	
16
