*Low precision; no estimate reported.

¹ Refers to lifetime use of a needle to inject a drug that was not prescribed, or that was taken only for the experience or feeling it caused.

² These drug estimates are generated from data collected on a "non-core" module of the NHSDA questionnaire. Therefore, these estimates may be somewhat inconsistent with drug estimates based on data collected from the "core" modules because NHSDA data are not edited for consistency across the "core" and "non-core" modules of the interview.
