## EXECUTIVE SUMMARY

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 02/25/2011 has revealed that there is 1 CERCLIS site within the searched area.

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 02/25/2011 has revealed that there is 1 CERC-NFRAP site within the searched area.

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/11/2011 has revealed that there are 2 RCRA-TSDF sites within the searched area.

Summary Details:

Conditions at proposal June 24, 1988): Wright-Patterson Air Force Base WPAFB) is in southwestern Ohio northeast of Dayton in Greene and Montgomery Counties. The installation is composed of two air fields, Wright Field and Patterson Field, covering 8,174 acres. The base employs approximately 33,000 people, of whom about 8,000 presently live on the base. Past Air Force activities in support of operational missions have resulted in creation of several unlined waste disposal areas throughout the base, including landfills, fire training areas, and coal storage piles. From 1941 to at least 1973, the Industrial Shops and the Research and Development Laboratories disposed of more than 791 tons of waste on the base, including solvents, contaminated thinners, degreasing sludges, tetraethyllead sludge,

and miscellaneous hazardous chemicals. In 1985, the base, with the assistance of the Ohio Environmental Protection Agency (OEPA), found 1,1,1-trichloroethane, tetrachloroethylene, trichloroethylene, 1,2-dichloroethane, and manganese in on-base wells. The Miami River Valley Aquifer System, which is the predominant water source in the Dayton and WPAFB area, provides water to three municipal well fields within 3 miles that serve more than 375,000 people. The people working and living on the base are served by 16 base wells. Local surface waters are also potentially threatened by inactive waste sites on the base. Under OEPA Consent Orders, issued on February 9, 1988 under CERCLA and the Resource Conservation and Recovery Act (RCRA), the Air Force will conduct a remedial investigation/feasibility study to determine the type and extent of contamination at the site and identify alternatives for remedial action. WPAFB is participating in the Installation Restoration Program, established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from hazardous materials. The base has completed the equivalent of a preliminary assessment and site inspection. WPAFB will recommend that all contaminated areas either be further evaluated via a remedial investigation/feasibility study, be addressed via an immediate remedial action, or be designated as requiring no further action. The landfills identified as primary sources of contamination have been proposed for immediate remedial action. Status October 4, 1989): OEPA, EPA, and the Air Force are negotiating a CERCLA Section 120 Interagency Agreement covering all activities at WPAFB.

Site Description: Wright-Patterson Air Force Base (WPAFB) is located in southwestern, Ohio, east of the city of Dayton and adjacent to the city of Fairborn. The Base is approximately 60 miles north of Cincinnati and 50 miles west of Columbus. It lies in Montgomery and Greene counties. The installation is composed of Wright and Patterson Fields, which are separated by State Route 444. Wright Field comprises Area B, approximately 2,800 acres; and Patterson Field comprises Areas A and C, approximately 5,711 acres. The Base is the Headquarters to the Air Force Material Command and home to organizations such as the Air Force Wright Aeronautical Laboratories, Air Force Institute of Technology and the Aeronautical Systems Center. The Base has a significant proportion of its acreage devoted to logistical support/warehouse land uses, research and development and uses, and administrative and classroom space. Airfield functions constitute 24 percent of all on-base land uses. The Base has more than 2,500 acres of undeveloped land, but much of that acreage is restricted from certain types of development by environmental constraints, such as flood plains, steep slopes, Indian burial mounds, and other cultural/natural features. Other constraints, such as a new national park, laser testing facilities, explosive safety zones and clear zones for runaways, also restrict development in certain areas. There are five known historic sites on the installation. Two Indian mound sites and the Huffman Prairie Flying Field, the location of early Wright brothers aircraft development, are both listed on the National Register of Historic Places. The Huffman Prairie Flying Field is a National Historic Landmark and is part of the Dayton Aviation Heritage National Historic Park. Adjacent land uses include agricultural, residential, institutional, commercial, and industrial. Commercial strip development in Fairborn and Riverside are situated across from the installation on State Route 444 and Springfield Pike and adjacent to the Page Manor residential area to the southwest. Adjacent industrial activities are situated to the northeast and northwest. Wright State University is adjacent to the south central portion of the installation. Open space remains primarily along the northern/northwestern boundary (the Huffman Reserve) and to the east. Residential development is established all along the southern/southeastern boundary and occurs sporadically along other perimeter areas. WPAFB was placed on the U.S. Environmental Protection Agency's (EPA's) National Priorities List in October 1989. Subsequently, in March 1991, WPAFB signed a Federal Facilities Agreement (FFA) with USEPA, Region V. A total of 64 Installation Restoration Program (IRP) sites have been identified. Most of these sites are grouped into 11 Operable Units (OUs) across the Base. OU1: Landfills 8 and 10 are located in the northeast corner of Area B. An unnamed tributary to Hebble Creek flows through the valley between the landfills. The area surrounding the site includes on-base military housing known as the Woodland Hills housing subdivision and off-base private homes on National and Zink Roads and Kauffman Avenue. These off-base homes are serviced by private drinking water wells. The Woodland Hills military housing units are serviced by the base water supply which draws its water from another area of base. Landfill 8 began operation about 1947 and encompasses approximately 11 acres. Landfill 10 was opened in 1965 and covers 8 acres. Following closure in the early 1970s, the landfills and surrounding area were then used for recreation until April 198. At that time, WPAFB designated the area off-limits and restricted access to both landfills and the intervening valley with a security fence in response to concerns expressed by the Ohio Environmental Protection Agency (OEPA) and the USEPA over potential exposure of local residents to hazardous waste. The total volume of waste material buried at Landfill 8 is estimated at 187,300

cubic yards. The total volume of waste material buried at Landfill 10 is estimated at 171,600 cubic yards. Response actions were taken by WPAFB in June 1989 to address the leachate seep problem closest to the Woodland Hills residential area. A passive temporary leachate collection system was then installed in March 1991 along the northern and eastern slopes of Landfill 10. Leachate for the system holding tank is periodically emptied to a tanker truck and appropriately disposed of by WPAFB personnel. Military housing units north of Landfill 8 and east of Landfill 10 that are adjacent to the landfills were vacated in 1990. Based upon the absence of significant concentrations of methane or other gases detected during indoor air monitoring, the Air Force reoccupied selected homes in 1992. Reoccupied homes were equipped with continuous methane monitors as a precaution. A Record of Decision (ROD) was approved in July 1993 for the Source Control Operable Unit (SCOU) for cleanup of the landfills themselves. A ROD was approved in June 1994 for the Off-Source Operable Unit (OSOU) for cleanup of areas outside but potentially affected by the landfills. OU2: OU2 consists of a group of eight sites located close together in the northeastern portion of Area C. These sites are Spill Sites 2, 3, and 10, the Coal and Chemical Storage Area, Temporary Coal Storage Pile (TCSP), Long Term Coal Storage Area (LTCSA), Burial Site (BS 1), and Building 89 Coal Storage Pile (B89CSP). Spill Sites 2, 3, and 10 are located in the Petroleum, Oils, and Lubricants (POL) Area. All sites in OU2 fall within a rectangular area of approximately 105 acres, although the combined area of the sites is significantly less. The TCSP covers 3.7 acres and lies at the north end of the POL Storage Area. The LTCSA, about 5.5 acres in size, is located in the northeastern portion of OU2 near the WPAFB eastern boundary and the city of Fairborn's North Well Field. The site encompasses approximately 5.5 acres. The B89CSP consists of approximately 6.2 acres located in the south end of OU2 and runs along the edge of the base just northeast of Building 89. Spill Site 2 is associated with the release of approximately 8,300 gallons of jet fuel in 1976; the spill occurred within a diked area surrounding the tank. Spill Site 3 involved the release of 1,200 to 2,500 gallons of fuel oil in 1981. The spill occurred between Tank 272 and the fueling station. The spill at Site 10 occurred in 1989 when a flange gasket ruptured on a fuel hydrant and released an estimated 150 gallons of fuel. In addition to these spills the underground piping system may have had other leaks that contributed to the contamination of the soil and groundwater in the area. Spill cleanups were conducted at the time of the spills these sites. From 1991 until 1995, several cleanup actions for Spill Sites 2, 3, and 10 took place. Two recovery systems were installed to collect any contaminants from a monitoring well in the POL Storage Area. When the second one was destroyed in a fire, it was not rebuilt. Instead, a passive recovery system was installed in a different well in the area and a bioventing system was added to demonstrate the viability of soil bioventing. Lastly, upgrades to the POL facility were made including installing fixed roofs and new valves on the tanks and installing an oil/water separator. Additional improvements were made to the facility in 1996. One of the three September 1996 RODs addressed five of the eight OU2 sites (the Coal and Chemical Storage Area, TCSP, LTCSA, BS 1, and B89CSP). A ROD was completed in September 1997 addressing subsurface soil and groundwater contamination at Spill Sites 2, 3, and 10. OU3: OU3 consists of 10 IRP sites. OU3 is located near the main runway, adjacent to the Mad River and within the Mad River floodplain. The area includes forests, open fields, and several gravel-covered sites used to conduct fire training exercises in support of flightline operations. There are no buildings within OU3, and the land use is restricted to recreational (hunting and camping) and light industrial (fire training) activities. Three jurisdictional wetlands and two areas of wetland habitat have been identified within OU3. The presence of these wetlands, along with abundant vegetation and animal life, indicates

the area supports native species commonly found in southwestern Ohio. OU3 lies in and near the clear zone of an active runway complex, and its use is limited to occasional recreation and industrial activity. Thus, OU3 is expected to remain undeveloped for an indefinite period. Three Landfills (LFs) (LFs 11, 12, 14), four Fire Training Areas (FTAs) (FTAs 2, 3, 4, and 5) and one spill site (SS 1) are located within OU3. In addition, two former Earthfill Disposal Zones (EFDZs 11 and 12) are located immediately north of OU3. The land at OU3 is nearly flat, with some elevated soil areas within FTAs 2, and 5, and at LF11 (due to consolidation/mounding of the buried waste). OU3 lies against the eastern bank of the Mad River and within the floodplain behind Huffman Dam. Most of OU3 lies within the 10-year Mad River floodplain. Surface water at OU3 either drains directly into the Mad River or into small unnamed tributaries that carry runoff from the flightline and other areas into the Mad River. Boreholes drilled at seven locations within OU3 encountered bedrock at depths ranging from 58 feet (north of LF11) to 163 feet below the ground surface (east of LF12). Groundwater was encountered at depths ranging from 4 feet (LF12) to nearly 20 feet (LF11), with an average depth of about 10 feet beneath the ground surface. One of the RODs completed in September 1996 presented the No Action remedial alternative for all the sites within OU3 except LF11 and LF12. OU4: OU4 includes Landfills 3, 4, 6, 7 (LF3, LF4, LF6, and LF7, respectively), in the southeastern section of Area C, with a portion of the sites extending into the southwestern corner of Area A. LF3 operated as a surface dump and burn operation from about 1940 to 1944 and covers 3 acres. LF4, covering 8 acres, operated from 1944 to 1949. LF4 reportedly accepted large objects such as automobile bodies, in addition to general refuse, to bring the grade of the gravel pit above the 20 to 30 feet of water reportedly in the pit. LF6, covering 7 acres, operated from 1949 to 1952 as a trench and cover operation for general refuse. LF7, covering 18 acres, operated from 1952 to 1962 as a trench and cover operation for general refuse. An area adjacent to the northwestern edge of LF7 is referred to as the drum staging area, and an area northwest of the landfill, where scattered drums were located, is referred to as the drum disposal area. Prior to its use as part of the WPAFB golf course, LF3 received a cover of about 6 to 8 inches or sandy silt and 4 to 6 inches of topsoil. In 1988, the southwestern edge of LF4 was excavated for the construction of Skeel Avenue. Wastes were removed and part of the surface was paved with asphalt; other areas are covered with densely compacted sand and gravel fill. The thickness of cover at LF4 ranges from a few inches to about three feet. In 1984, a clay and topsoil cover was placed on LF6 and LF7. Measured thickness of cover over fill and refuse is 6 inches to 2 feet thick. Drums from the Drum Disposal Area and the Drum Staging Area were recovered and disposed of in 1990. Based on the conclusions of the Remedial Investigation (RI), landfill capping as a presumptive remedy was selected and implemented at LFs 6 and 7. A cover maintenance program was developed for all sites. A ROD completed in September 1998 presented the No Action alternative for 41 sites, including LFs 3, 4, 5, 6, and 7 in OU4. OU5: OU5, located in the southwest corner of Area C, is a collection of discrete sites that have, or may have been used for handling or disposal of hazardous chemical materials in the past, and areas located adjacent to these sites. OU5 IRP sites include Landfill 5 (LF5), FTA 1, the Gravel Lake Tank Site (GLTS), and BS4. The LF5 Extension (LFE) is a large area adjacent to LF5, initially believed to be part of the LF, but not an IRP site. Within OU5 are three lakes, East Twin Lake, West Twin Lake, and Gravel Lake, and two wetlands. Other areas included in OU5 are the area south of LF5 to Hebble Creek and the area north of FTA 1 to Hebble Creek. These areas, along with the Lakes, are referred to as the south of LF5. They are located within OU5 but are not IRP sites. LF5 is a 23-acre site located north of the Twin Lakes between Riverview and Prairie Roads. General refuse from Areas A and C

was reportedly disposed of at this LF during the period of 1945 to 1991. Based on conclusions of the RI, capping as a presumptive remedy was selected and completed in 1997. In addition to the source control measures implemented for LF5, a groundwater extraction system has been installed to prevent further migration of contaminated groundwater beyond the Base boundary. A ROD completed in September 1998 presented the No Action alternative for 41 sites, including LF5 in OU5. OU6: OU6 includes Landfill 1 (LF1), Landfill 2 (LF2), and the Earth Filled Disposal Zone (EFDZ). All of these sites are located in the southwest corner of Area B within the Mad River floodplain. LF1 is a 4-acre site just northwest of the Air Force Museum. It was operated from the 1920s through 1940 for disposal of Area B refuse, surface disposal and burning. LF2 is a 15-acre site located just west of the Area B runway. It was operated from the early 1940s through 1951 as a dump for Area B refuse. Fill material was placed into gravel pits in direct contact with groundwater. LF1 and LF2 will be capped under a separate project as part of the Landfill Caps Presumptive Remedy Removal Action, as discussed in the September 1996 ROD. A ROD completed in September 1998 presented the No Action alternative for 41 sites, including LF1 and LF2 in OU6. EFDZ 1 consists of both on-base (EFDZ 1 and EFDZ 1B) and off-base (EFDZ 1C) areas separated by Harshman Road. EFDZ 1 encompasses 23 acres and lies entirely upon a portion of the Miami Valley Aquifer, a federally designated sole source aquifer. The off-base portion of EFDZ 1 (EFDZ 1C, located west of Harshman Road) is currently used as a community park maintained by the city of Riverside. This area is approximately 4 acres and consists of a playground, recreational areas, open fields, and a few asphalt covered areas used as walking paths, parking areas, and access roads. The on-base portion of EFDZ 1 is located approximately 600 yards from the U.S. Air Force Museum, and is very close to the flight line in the clear zone of an active, though seldom used runway complex. There are no buildings located at EFDZ 1, and the land is not used for commercial or residential purposes. Because of the current land use restrictions, EFDZ 1 is likely to remain undeveloped and unpopulated, except for the community and recreational activities. The September 1995 ROD proposed No Action for EFDZ. OU10: OU10 is a wedge shaped section of land, approximately 119 acres in size. It lies between Wright and Skeel Avenues in the northeastern portion of the Base and bordering the city of Fairborn. OU10 consists of a group of four IRP sites including LF13, Tank Farm 49A, Underground Storage Tank 30119, and Central Heating Plant P-3 and the associated battery burial site. Three other areas of potential contamination were also investigated under the Remedial Investigation (RI). These areas, though not IRP sites, include the Building 13 sump pit area, an area with minor soil contamination near the Base Headquarters (Building 10) flagpole, and a former dry cleaning operation in Building 89. OU10 land use is currently, and is expected to remain, light industrial/office complex, unlikely to be used for recreational or residential purposes in the future. One of the three RODs completed in September 1996 address OU10. OU12 OU12 refers to the groundwater beneath the Base and areas affected by off-site migration of contaminants. The upper and lower boundaries of OU12 are the water table surface and the top of bedrock at the base of the alluvial aquifer. The horizontal boundary is limited to the confines of the Base boundary and areas affected by off-site migration of contaminants from the Base. OU12 includes surface water and does not include unsaturated soils within current Installation Restoration Program (IRP) site boundaries. A ROD was completed for OU12 in September 1999. Wright-Patterson Air Force Base (WPAFB) is located in southwestern, Ohio, east of the city of Dayton and adjacent to the city of Fairborn. The Base is approximately 60 miles north of Cincinnati and 50 miles west of Columbus. It lies in Montgomery and Greene counties. The installation is composed of Wright and Patterson Fields, which are separated by State Route 444. Wright Field comprises Area B, approximately 2,800 acres; and

Patterson Field comprises Areas A and C, approximately 5,711 acres. The Base is the Headquarters to the Air Force Material Command and home to organizations such as the Air Force Wright Aeronautical Laboratories, Air Force Institute of Technology and the Aeronautical Systems Center. The Base has a significant proportion of its acreage devoted to logistical support/warehouse land uses, research and development and uses, and administrative and classroom space. Airfield functions constitute 24 percent of all on-base land uses. The Base has more than 2,500 acres of undeveloped land, but much of that acreage is restricted from certain types of development by environmental constraints, such as flood plains, steep slopes, Indian burial mounds, and other cultural/natural features. Other constraints, such as a new national park, laser testing facilities, explosive safety zones and clear zones for runaways, also restrict development in certain areas. There are five known historic sites on the installation. Two Indian mound sites and the Huffman Prairie Flying Field, the location of early Wright brothers aircraft development, are both listed on the National Register of Historic Places. The Huffman Prairie Flying Field is a National Historic Landmark and is part of the Dayton Aviation Heritage National Historic Park. Adjacent land uses include agricultural, residential, institutional, commercial, and industrial. Commercial strip development in Fairborn and Riverside are situated across from the installation on State Route 444 and Springfield Pike and adjacent to the Page Manor residential area to the southwest. **Hazardous Waste Summary:**

Waste code: D001  
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002  
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003  
 Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D001  
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.  
 Amount (Lbs): 12545

Waste code: D002  
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.  
 Amount (Lbs): 11192

Waste code: D003  
 Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D001  
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F003

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

The OH-CORE (Ohio - Core) database contains information commonly shared among the Ohio EPA environmental programs. The information is facility-based, general in nature, and used to support specific programmatic systems while simultaneously maintaining an inventory of common facility-related data. Specific programmatic details are maintained in programmatic databases.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

The OH-CORE (Ohio - Core) database contains information commonly shared among the Ohio EPA environmental programs. The information is facility-based, general in nature, and used to support specific programmatic systems while simultaneously maintaining an inventory of common facility-related data. Specific programmatic details are maintained in programmatic databases.

**Environmental Interest/Information System**

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

The OH-CORE (Ohio - Core) database contains information commonly shared among the Ohio EPA environmental programs. The information is facility-based, general in nature, and used to support specific programmatic systems while simultaneously maintaining an inventory of common facility-related data. Specific programmatic details are maintained in programmatic databases.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

The OH-CORE (Ohio - Core) database contains information commonly shared among the Ohio EPA environmental programs. The information is facility-based, general in nature, and used to support specific programmatic systems while simultaneously maintaining an inventory of common facility-related data. Specific programmatic details are maintained in programmatic databases.

**Environmental Interest/Information System**

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

The OH-CORE (Ohio - Core) database contains information commonly shared among the Ohio EPA environmental programs. The information is facility-based, general in nature, and used to support specific programmatic systems while simultaneously maintaining an inventory of common facility-related data. Specific programmatic details are maintained in programmatic databases.

Hazardous Waste Summary:

Waste code: D001  
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002  
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: F001  
 Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F003  
 Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

The OH-CORE (Ohio - Core) database contains information commonly shared among the Ohio EPA environmental programs. The information is facility-based, general in nature, and used to support specific programmatic systems while simultaneously maintaining an inventory of common facility-related data. Specific programmatic details are maintained in programmatic databases.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

The OH-CORE (Ohio - Core) database contains information commonly shared among the Ohio EPA environmental programs. The information is facility-based, general in nature, and used to support specific programmatic systems while simultaneously maintaining an inventory of common facility-related data. Specific programmatic details are maintained in programmatic databases.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

The OH-CORE (Ohio - Core) database contains information commonly shared among the Ohio EPA environmental programs. The information is facility-based, general in nature, and used to support specific programmatic systems while simultaneously maintaining an inventory of common facility-related data. Specific programmatic details are maintained in programmatic databases.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## FEDERAL RECORDS

### NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

### Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

### DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

## NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

## CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

## US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

The focus of the ER program is to minimize the impact on the environment from accidental releases, spills, and unauthorized discharges from any fixed or mobile sources. Incidents involving petroleum products, hazardous materials, hazardous waste, abandoned drums, or other materials which may pose as a pollution threat to the state's water, land, or air should be reported immediately. Not all incidents included in the database are actual SPILLS, they can simply be reported incidents.

## USD: Urban Setting Designation Sites

A USD may be requested for properties participating in the VAP when there is no current or future use of the ground water by local residents for drinking, showering, bathing or cooking. In these areas, an approved USD would lower the cost of cleanup and promote economic redevelopment while still protecting public health and safety. If these USDs were to be approved, the ground water cleanup or response requirements for the areas could be lessened. The Ohio EPA director may approve a USD request based on a demonstration that the USD requirements are met and an evaluation of existing and future uses of ground water in the area. The Ohio EPA director's decision on approval or denial of the request is needed before cleanup requirements for the site can be determined.

"Institutional control" is a restriction that is recorded in the same manner as a deed which limits access to or use of the property such that exposure to hazardous substances or petroleum are effectively and reliably eliminated or mitigated. ## HIST ENG CONTROLS: Operation & Maintenance Agreements Database

Volunteers that complete a voluntary action that relies on the ongoing operation and maintenance (O&M) of an engineered control to make the site protective (e.g" cap systems and ground water treatment systems) must enter into a legally binding agreement with the Ohio EPA before the director issues a covenant not to sue. This O&M Agreement must describe how the remedy is constructed and how it will be monitored, maintained and repaired. It also lays out inspection opportunities for the agency. Companies must document that they have the financial capability to operate any remedy relied on, before the agency will agree to enter into the O&M Agreement. The statute requires that the agency be notified of any change in ownership. This database is no longer updated or maintained by the state agency.

## EDR PROPRIETARY RECORDS

### Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.
