P = Pending publication in the Government Gazette

* Límites provisionales / Provisional limits (2005-2009)

**for imported products only

*** expires on 9/30/2013

NZ: Where no specific grape LMR is established in New Zealand for authorised pesticides, a default LMR of 0.1 mg/kg applies to both grapes and wine, and these are reported in the above list as "0.1 (D)"

NZ: Where pesticides are not authorised or sold in NZ a default LMR of 0.1 mg/kg also applies for both grapes and wine (e.g. imported grapes and wine), but this limit is not included in the above list

NZ: Raisins are not grown commercially in NZ . Imported raisins would comply with the NZ LMR standards if they comply with Codex LMRs or are produced from grapes complying with the listed NZ LMRs or Codex LMRs for grapes

AUS: T means temporary value

CAN: Please note that many of the pesticides in the list are not registered for use in Canada or when they are registered for use in Canada, it is not for use on grapes. As such the default MRL of 0.1 ppm would apply in the absence of a specific MRL for Canada.
