

Conservation Reserve Program

ANNUAL SUMMARY AND ENROLLMENT STATISTICS-FY 2009

This report provides statistics for land enrolled in the Conservation Reserve Program (CRP), including a summary of FY 2009 CRP related activities, FY 2009 CRP outlays by payment type, continuous CRP enrollment activity, outlay and sign-up history, CRP practice and payment provisions, and environmental benefits index (EBI) history. The enrollment tables are based on contract data developed and maintained in CRP data files by Farm Service Agency (FSA) service centers and are generally based on the physical location of the CRP contracted land. The FY 2009 ends September 30, 2009.

The report was prepared by Alex Barbarika, Natural Resources Analysis Group, Economic and Policy Analysis Staff (EPAS), Farm Service Agency (FSA), U.S. Department of Agriculture, with assistance from Skip Hyberg, Rich Iovanna, and Catherine Feather with EPAS/FSA.

CONTENTS

Appendices

- A-1 Results of the 2009 Contract Extension Offer
- A-2 2006 Re-enrollment and Extension Offer Results
- A-7 Cumulative Enrollment by Fiscal Year
- A-11 CRP Outlays by Fiscal Year
- A-28 CRP Sign-up Periods and Eligibility Criteria
- A-30 CRP Practices and Payment Provisions
- A-32 Environmental Benefits Index Components

Conservation Reserve Program

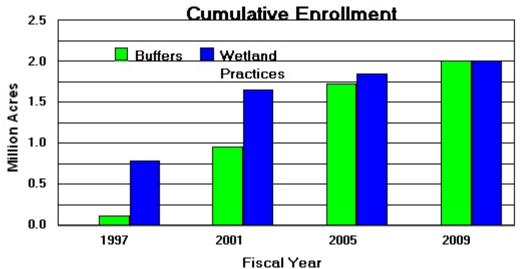

Annual Summary and Enrollment Statistics -- FY 2009

ACTIVE CONTRACTS, SEPTEMBER 30, 2009

Sign-up Type	Contracts	Farms	Acres	Annual Rental	Payments b/
				(\$Million)	(\$/Acre)
General	369,655	241,021	29,413,441	\$1,294	\$44.00
Continuous					
Non-CREP	311,656	186,037	2,957,965	\$271	\$91.49
CREP	66,193	43,715	1,160,765	\$149	\$128.78
Farmable Wetland	12,164	9,687	189,081	\$22	\$117.61
Total Continuous	390,013	226,993 a/	4,307,811	\$ 442	\$102.68
Total	759,668	424,357 a/	33,721,252	\$1 , 736	\$51.49

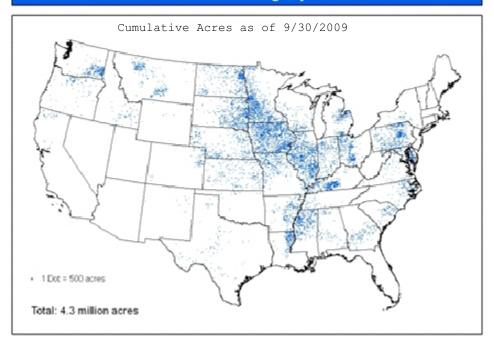

a/ Number of farms not additive across sign-up types because a farm may participate in multiple sign-up types.

Wetland and Buffers in CRP, FY 2009

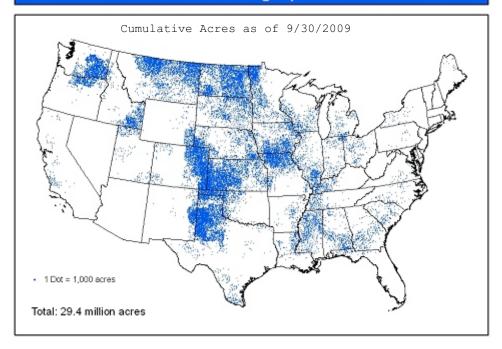

b/ Approximates payments which were paid October 2009 (FY 2010), before adjustments for haying/grazing, non-compliance, terminations, part-year contracts. Includes annual incentive and maintenance allowance, but not one-time up-front signing and practice incentive payments.

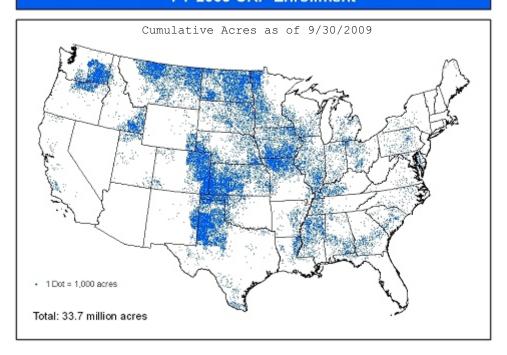

FY 2009 Continuous Signup Enrollment

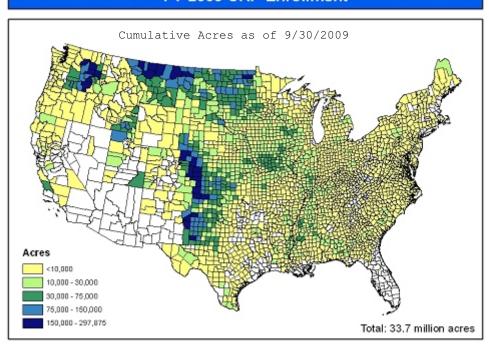

FY 2009 General Signup Enrollment

FY 2009 CRP Enrollment

FY 2009 CRP Enrollment

October, 2008

- \$1.8 billion in CRP rental payments issued for lands enrolled as of September 30, 2008.
- Total number of continuous signup contracts surpasses general signup contracts for the first time.
- Administration announces \$204 million in incentives over ten years in an initiative to enroll 1 million acres of wetland restoration practices.

January, 2009

- FSA announces CREP agreement with Hawaii. Goals are to enroll 2,000 acres of forest restoration practices and 13,000 acres of wetland restoration practices.
- USDA announces CREP agreement with Arkansas to benefit the Illinois River watershed by enrolling 15,000 acres of riparian buffers on cropland and marginal pasture.

April, 2009

• FSA announces agreement with Maryland to renew and enhance Maryland's Chesapeake Bay CREP.

May, 2009

• USDA announces opportunity for extension of up to 1.5 million acres under contracts set to expire September 30, 2009. 1.1 million acres ultimately were extended.

June 2009

 Regulations published June 29 to implement parts of the 2008 Farm Bill, including additional Farmable Wetland Program practices and costsharing for tree thinning.

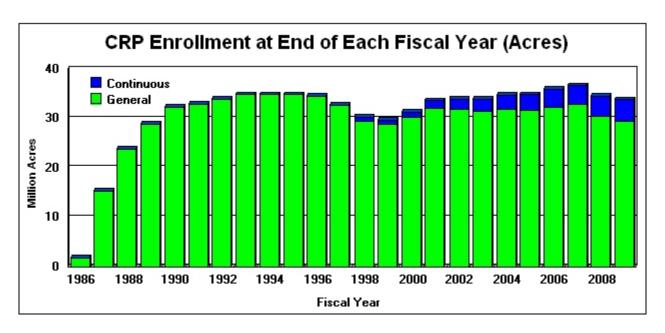

July, 2009

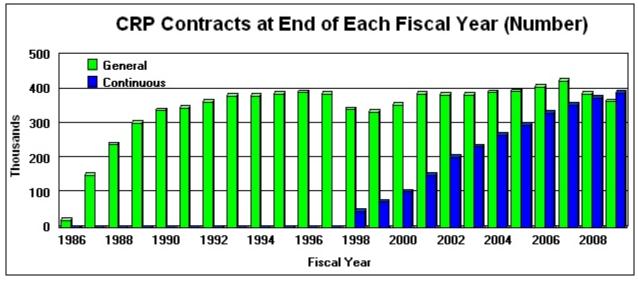

• USDA announces that enrollment of new FWP practices can begin.

Conservation Reserve Program Outlays (\$1,000) 1/

Payment	FY 2004	FY 2005	FY 2006	FY 2007	FY 2008	FY 2009
Annual Rental	\$1,598,276	\$1,630,585	\$1,666,462	\$1,727,408	\$1,785,767	\$1,720,631
Signing Incentive	\$27,996	\$25,304	\$32,577	\$18,366	\$25,164	\$25,828
Practice Incentive	\$55,368	\$49,238	\$49,573	\$39,026	\$43,246	\$45,855
Haying/Grazing Adj.	(\$10,465)	(\$11,316)	(\$8,545)	(\$9,542)	(\$12,147)	(\$12,504)
Wetland Restoration Incent.	\$1,363	\$1,289	\$1,105	\$1,030	\$932	\$517
Cost-Share	\$116,966	\$93,235	\$100,096	\$89,844	\$84,238	\$74,947
Total	\$1,789,504	\$1,788,334	\$1,841,268	\$1,866,131	\$1,927,200	\$1,855,274

^{1/} Not including technical assistance. Some outlay totals may have been updated from previous Annual Summaries.

 CRP Eligibility Must have appropriate cropping history, or be marginal pasture in or near a riparian area of be subject to an expiring CRP contract. AND □ For general signup, must be highly erodible or be located in a State or National conservation priority area. □ For continuous signup, must be suitable to serve as one of a number of conservation practices, such as a wetland restoration, filterstrip, riparian buffer, or field windbreak; or be eligible for CREP enrollment.
Cropping History Under the 2002 Farm Bill, must have been planted or considered planted to an agricultural commodity in 4 of the 6 years prior to 2002. Land coming out of CRP is considered planted (unless it is in trees), as is hay in rotation. Updated to 4 of 6 years prior to 2008 in the 2008 Farm Bill.
Annual Rental payment: □ Based on soil-specific rental rates. □ Adjusted for each particular soil's productivity. □ Reflect rental rates for comparable land in dryland crop production.
Signing Incentive payment (SIP): ☐ A one-time payment of \$100/acre when contract is approved. ☐ Applies to specified continuous signup practices (see Practice description table in the Appendix).
Practice Incentive payment (PIP): ☐ A one-time payment made when practice installation is complete. ☐ Amount equal to 40 percent of total installation cost. ☐ Applies to specified continuous signup practices (see Practice description table in the Appendix).
Haying/Grazing Adjustment: □ Reflects annual rental payment reductions (typically 25 percent) taken when participant hays or grazes CRP acreage. □ Participants allowed to hay or graze in response to emergency (drought) or when undertaking managed haying or grazing.
Cost-Share payment: Amount equal to 50 percent of practice installation costs.

CONSERVATION RESERVE PROGRAM

Under the Conservation Reserve Program (CRP), the U. S. Department of Agriculture (USDA) establishes contracts with agricultural producers to retire highly erodible and other environmentally sensitive cropland and pasture. During the 10- to 15-year CRP contract period, farmland is converted to grass, trees, wildlife cover, or other conservation uses providing environmental benefits, including surface water quality improvement, wildlife habitat creation, carbon sequestration, preservation of soil productivity, protection of groundwater quality, and reduction of offsite wind erosion damages. The program also assists farmers by providing a dependable source of income. The program was established by the Food Security Act of 1985, and was later amended by the Food, Agriculture, Conservation, and Trade Act of 1990, the Federal Agriculture Improvement and Reform Act of 1996, the Farm Security and Rural Investment Act of 2002, and the Food, Conservation, and Energy Act of 2008.

The CRP is administered by USDA's Farm Service Agency with technical assistance from USDA's Natural Resources Conservation Service and Forest Service, and from other technical service providers. Participants receive annual rental payments during the contract period and half the cost of establishing conservation covers. There are two primary ways for farmers and ranchers to participate in the CRP: general sign-up and continuous sign-up. Continuous sign-up includes the Conservation Reserve Enhancement Program (CREP) and the Farmable Wetlands Program.

CRP LEGISLATIVE AND PROGRAMMATIC HISTORY

Title XII of the <u>Food Security Act of 1985</u> established the Conservation Reserve Program (CRP) to assist owners and operators in conserving and improving soil, water, and wildlife resources on their farms and ranches by converting highly erodible and other environmentally sensitive cropland and marginal pasture to long-term resource conserving covers. In exchange for annual rental payments and cost-share assistance of up to 50 percent of cover establishment costs, agricultural landowners and operators agree to establish and maintain an approved permanent cover on enrolled acreage for 10 to 15 years. The 1985 Act directed the Department of Agriculture to enroll 40 to 45 million acres by 1990 with a primary goal of reducing soil erosion on highly erodible cropland. Secondary objectives included protecting the Nation's long-run capability to produce food and fiber, reducing sedimentation, improving water quality, fostering wildlife habitat, curbing production of surplus commodities, and providing income support for farmers. Enrollment is generally limited to 25 percent of the cropland within each county.

The <u>Food, Agriculture, Conservation, and Trade Act of 1990</u> extended CRP through 1995 and expanded types of land eligible for enrollment to include lands that could reduce on-site or off-site threats to water quality if removed from production. Following 1990 Act passage, USDA's Farm Service Agency adopted new rental payment caps based on soil-specific productivity-based rental rates, and developed an environmental benefits index (EBI) to rank offers.

The <u>Federal Agriculture Improvement and Reform Act of 1996</u> re-authorized CRP enrollment through 2002 and set a maximum enrollment of 36.4 million acres at any one time.

Following passage of the 1996 Act, FSA modified the Environmental Benefits Index (EBI) to explicitly include a wildlife benefits component, which was given equal weight with soil erosion and water quality benefits.

Also in 1996, <u>USDA initiated</u> enrollment of selected practices, such as filter strips and riparian buffers, on a continuous basis without competition. An annual incentive payment equal to 20 percent of the annual rental rate was provided for many of these practices. In 1997, FSA created the Conservation Reserve Enhancement Program (CREP), further advancing CRP's environmental targeting. CREP authorizes State-Federal conservation partnerships that address specific State and nationally significant water quality, soil erosion, and wildlife habitat concerns related to agriculture. CREP enrollment is held on a continuous basis; enrollment may include both general and continuous sign-up practices, and additional financial incentives are generally provided. An up-front signing payment and a practice incentive payment were established in 2000 to further enhance continuous enrollment, including CREP. Descriptions of practices and corresponding payment provisions are provided in the Appendix.

The <u>FY 2001 Agriculture Appropriations Act</u> established the Farmable Wetland Program (FWP), which provided for non-competitive enrollment under continuous sign-up provisions and incentives for up to 500,000 acres of small non-flood plain wetlands and adjacent uplands in 6 States (Nebraska, Iowa, Minnesota, North Dakota, South Dakota, and Montana). Enrollment was limited to 100,000 acres per State.

The <u>Farm Security and Rural Investment Act of 2002</u> extended CRP enrollment authority through 2007 and increased the enrollment cap by 2.8 million acres to 39.2 million acres. Basic cropland eligibility is re-defined to be land that has been cropped or considered cropped in at least 4 of the 6 years preceding enactment. Previously, basic cropland eligibility required cropping in at least 2 of the 5 years preceding sign-up.

In addition, the 2002 Act permitted non-emergency (managed) harvesting of forage (subject to the requirement that environmental benefits be maintained or enhanced) and required equal consideration be given for soil erosion, water quality, and wildlife. Practices eligible under marginal pasture criteria, which have no cropping history requirement, are expanded to permit appropriate vegetative covers, rather than requiring the land be planted only to trees.

Other changes included extending eligibility to field remnants made infeasible for farming where buffer practices are enrolled; cropland where enrollment would provide water conservation benefits; and land subject to expiring CRP contracts. The 2002 Act also expanded FWP from the original six States to all States and raised the enrollment cap to 1,000,000 acres, while keeping the 100,000 acre State maximum. While maximum wetland size was increased to 10 acres, only 5 acres are eligible to receive rental payments.

Re-enrollment and extension of 2007- to 2010-expiring contracts (REX). To ensure that CRP's benefits continue without interruption, FSA in 2006 offered holders of contracts set to expire between 2007 and 2010 (28 million acres) the opportunity to re-enroll or extend their contracts. FSA divided expiring contracts into five equal-size categories (quintiles) based on environmental benefits index (EBI) scores of the land under contract. FSA offered the quintile with the highest EBI scores new 10 or 15-year contracts. The 2nd highest quintile were offered 5-year contract extensions, the 3rd highest were offered 4-year extensions, and so forth. This action preserved farmers' ability to protect America's most sensitive agricultural lands. Holders of approximately 82% of expiring contract acres were approved for reenrollment or extension. Updated tables detailing REX results as of February, 2008 are provided in the Appendix.

The <u>Emergency Supplemental Appropriations Act of 2006</u> established the Emergency Forestry Conservation Reserve Program (EFCRP). Provides assistance to timberland damaged by the Gulf Coast Hurricanes of 2005 (mainly Katrina and Rita). Acreage enrolled does not count against the CRP enrollment cap.

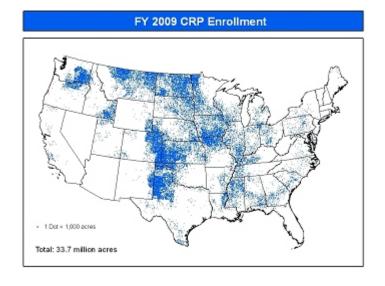

The <u>Food, Conservation</u>, and <u>Energy Act of 2008</u> extended Conservation Reserve Program (CRP) enrollment authority through September 30, 2012 and requires that enrollment be reduced to no more than 32 million acres beginning October 1, 2009. Other changes include: (1) expansion of Farmable Wetland Pilot Program eligibility criteria; (2) provision of 50-percent cost-share for tree thinning activities; (3) implementation of new payment limitation applicability and new adjusted gross income based eligibility criteria, (4) updated eligibility to require cropping history in at least 4 of 6 years during 2002 to 2007, and (5) provided additional authority to waive county cropland enrollment limit.

General Sign-up. Landowners and operators with eligible lands compete nationally for acceptance based on an environmental benefits index (EBI) during specified enrollment periods. Producers may submit offers below soil-specific maximum rental rates to increase their EBI ranking. Continuous Sign-up Non-CREP. Landowners and operators with eligible lands may enroll certain high priority conservation practices, such as filter strips and riparian buffers, at any time during the year without competition. In addition to annual soil rental payment and cost-share assistance, many practices are eligible for additional annual and one-time up-front financial incentives. Conservation Reserve Enhancement Program (CREP). Under federal-state cooperative conservation efforts, landowners and operators implement projects designed to address specific environmental objectives through targeted CRP enrollments. Sign-up is held on a continuous noncompetitive basis and additional financial incentives are generally provided. Farmable Wetland Program (FWP). Landowners and operators enroll and restore small cropped wetlands and other lands on a continuous sign-up basis. Lands are also eligible for additional annual and one-time up-front financial incentives. Includes new practices added by the 2008 Farm Bill.

Total	million metric tons	56	60	60	56	55

CRP improves water quality. Fields and buffer strips enrolled in CRP reduce nitrogen (N), phosphorus (P), and sediment losses.

- Fields enrolled in CRP have less fertilizer applied and permanent vegetative covers prevent runoff. CRP buffer strips capture N, P, and sediment, protecting adjacent waters.
- Using models developed by the Food and Agricultural Policy Research Institute (FAPRI), 612 million pounds less N, 123 million pounds less P, and 220 million tons less sediment were lost due to fields and buffers enrolled in CRP in 2009. On lands enrolled in fields, erosion was reduced in 2009 by 95 and 86 percent, respectively compared with losses that would have occurred if cropped.

- CRP buffers (grass filterstrips and riparian buffers) intercepted an estimated 348 million pounds of nitrogen and 71 million pounds of phosphorus in 2009.
- CRP grass and tree plantings reduced nitrate-N loss by 116 million pounds in 2009 (19% of total CRP N reductions). Nitrate is biologically available to algae and excess nitrate contributes to hypoxic zone formation in the Gulf of Mexico, Chesapeake Bay, and other waters.
- Wetlands restored and constructed by CRP improve water quality by converting nitrate nitrogen into benign atmospheric nitrogen through denitrification. In 2009, Iowa's 51 Conservation Reserve Enhancement Program constructed wetland projects reduced nitrate runoff by over 500,000 pounds.

CRP enhances wildlife habitat. Grass, trees, and wetlands established by CRP benefit numerous wildlife species. Several independent studies have identified benefits to bird populations including:

- Prairie Pothole Ducks Researchers from the U. S. Fish and Wildlife Service (USFWS) credited the CRP with causing a net average increase of about 2 million ducks per year (30 percent increase in duck production) between 1992 and 2004 in North Dakota, South Dakota, and Northeastern Montana.
- Ringed-Neck Pheasants Western EcoSystems Technology, Inc. found that, in prime midwest pheasant habitat, a 4 percent increase in CRP herbaceous vegetation was associated with a 22 percent increase in pheasant counts.
- Sage Grouse The Washington Department of Natural Resources found CRP enrollment was associated with halting a decline in central Washington sage grouse populations (the drop was 25 percent between 1970 -1988). The study found that another Washington region with low CRP enrollment experienced continued sage grouse population decline.
- Grassland Birds The CRP was identified as a 'Reason for Hope' for grassland birds in the "State of the Birds" report by the USFWS, which documented serious declines in grassland birds. Researchers from the USFWS, U.S. Geological Survey, and the University of Montana found that CRP had a large impact on grassland bird populations, including grasshopper sparrow and dicksissel, birds designated as species of continental importance by Partners in Flight.

CRP reduces greenhouse gases. CRP sequestered more carbon dioxide (CO₂) on private lands than any other federally administered program, 47 million metric tons (mmt), in 2009. In total, CRP resulted in the equivalent of a 55 mmt CO₂ reduction, from net CO₂ sequestration, reduced fuel use, and avoided nitrous oxide emissions from fertilizer. This represents the equivalent of the annual emissions from 10 million cars.

CRP protects and enhances soil productivity. CRP conservation covers reduce erosion and protect soil productivity. By targeting fragile cropland and placing these lands into protective conservation covers, the CRP greatly reduces sheet, rill, and wind soil erosion. In 2009, CRP reduced soil erosion by an estimated 445 million tons from 1982 levels.

FSA is using CRP enrollment data, the USDA soils and natural resource inventories, and cooperative agreements with Federal, State, and other partners to refine these performance measures and to estimate the benefits from CRP. For more information about CRP benefits, see:

http://www.fsa.usda.gov/FSA/webapp?area=home&subject=ecpa&topic=nra.

Nitrogen, Phosphorus, and Sediment Reduction Estimates

Estimates are based on the results of the modeling done in support of a 2007 study of the water and air quality impacts of the CRP using the Environmental Policy Integrated Climate (EPIC) model and the Agricultural Policy Environmental eXtender (APEX) model 1/.

CRP contract data are sorted to identify acres in grass, trees, and buffers. For whole-field (grass and tree plantings), the models are used to estimate per-acre N, P, and sediment losses from CRP fields, as compared with the losses that would occur if those fields instead cropped, i.e., "with-" vs. "without-" CRP scenarios. The impact of CRP is estimated as the difference between these two scenarios. N and P impacts of CRP buffers are estimated based on the sediment, N, and P losses from the (state) average acres buffered by a typical buffer enrollment and trapping efficiency estimates from NRCS. The total impact on sediment, N, and P is the sum of the grass, tree, and buffer impacts.

1/ Food, and Agricultural Policy Research Institute (FAPRI). <u>Estimating the Water Quality, Air Quality, and Soil Carbon Benefits of the Conservation Reserve Program</u>. FAPRI -UMC Report #01-07. University of Missouri, Columbia, MO. January 2007.

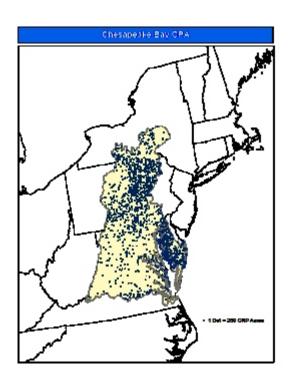

Carbon Sequestration Estimates

Estimates of total carbon sequestered are developed using CRP contract data. These data are sorted to identify CRP acres in grass, wetlands, and trees. For grasslands and wetlands, estimates of the carbon sequestered per acre are obtained from published reports, and estimates developed by the Agricultural Research Service and U.S. Geological Survey. These data are merged with CRP contract data to estimate total carbon sequestered by CRP grasslands and wetlands. Because the carbon sequestered by forestlands varies by tree species and the age of the stand, the CRP tree data are sorted by region and age. U.S. Forest Service estimates of carbon sequestered per acre by region, tree species, and age are merged with the corresponding data from CRP contract data. Total carbon sequestered is the sum of the grassland, wetland, and forestland estimates.

Chesapeake Bay Basin

FY 2009

Environmental
Benefits of the
Conservation Reserve Program

	_	2005	2006	2007	2008	2009
Land Under Contract	1,000 acres	299	314	322	316	303

In Wetlands	1,000 acres	5	5	5	5	6
Reductions (intercepted by	y buffers or not leaving	field)				
Sediment	million tons	10	11	11	12	11
Nitrogen	million lbs	24	26	27	28	27
Phosphorus	million lbs	6	7	7	7	7
Annual Accumulation						
Carbon Sequestered	million metric tons	0.5	0.5	0.5	0.5	0.5

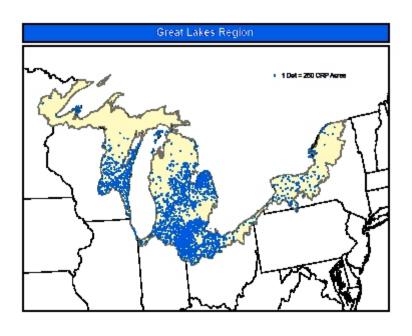

CRP fields and buffers help improve water quality in the Chesapeake Bay and it's tributaries:

- Grass filters and riparian buffers (partial field enrollments) intercept sediment, nutrients, and other contaminants before they enter water bodies. In the Chesapeake Bay basin, an estimated 8 million tons of sediment, 16 million pounds of nitrogen, and 5 million pounds of phosphorus were intercepted by CRP buffers in 2009. The remaining reduction in N, P, and sediment losses is due to whole-field CRP enrollment in the basin.
- Fields enrolled in CRP reduce the nitrogen, phosphorus, and sediment lost in runoff and percolate. On average in the U.S., enrollment reduces nitrogen loss 95 percent and phosphorus loss by 86 percent, compared with a no-CRP scenario.

Great Lakes Region

Carbon Sequestered	million metric tons	0.8	0.8	0.8	0.8	0.8

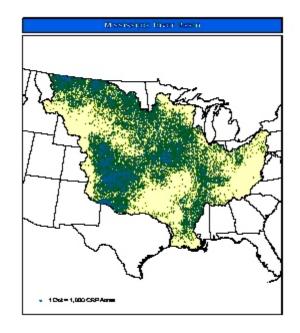

CRP fields and buffers help improve water quality in the Great Lakes and their tributaries:

- CRP buffers intercept sediment, nitrogen, and phosphorus from farmed fields. In 2009, in the Great Lakes drainage basin, CRP grass filters and riparian buffers intercepted an estimated 3 million tons of sediment, 10 million pounds of nitrogen, and 2 million pounds of phosphorus, as well as other contaminants before they entered waterways.
- Fields enrolled in CRP reduce the nitrogen, phosphorus, and sediment lost in runoff and percolate. On average in the U.S., enrollment reduces nitrogen loss by 95 percent and phosphorus loss by 86 percent, compared to losses that would have occurred if these lands were been cropped.

Carbon Sequestered	million metric tons	30	32	30	30	29

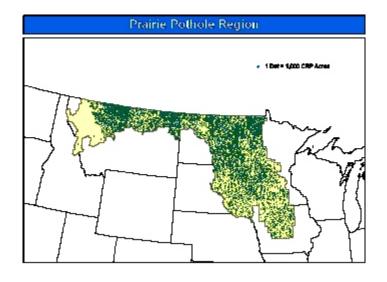

CRP fields and buffers help improve water quality in the Mississippi River and it's tributaries:

- CRP buffers intercept sediment, nitrogen, and phosphorus from farmed fields. In 2009, in the Mississippi River basin, CRP grass filters and riparian buffers intercepted an estimated 110 million tons of sediment, 261 million pounds of nitrogen, and 52 million pounds of phosphorus, as well as other contaminants before they entered waterways.
- Fields enrolled in CRP reduce the nitrogen, phosphorus, and sediment lost in runoff and percolate. On average in the U.S., enrollment reduces nitrogen loss by 95 percent and phosphorus loss by 86 percent, compared with losses that would have occurred if these lands had been cropped.
- Wetlands restored and constructed by CRP improve water quality by converting nitrate nitrogen to benign atmospheric nitrogen through denitrification. In 2009, wetlands constructed under the Iowa Conservation Reserve Enhancement Program (CREP) prevented over 500,000 pounds of nitrate from entering waterways.
- In prime midwestern ring-necked pheasant habitat, a 4 percent increase in CRP herbaceous vegetation was associated with a 22 percent increase in pheasant counts.

Prairie Pothole Region

FY 2009

Environmental Benefits of the Conservation Reserve Program

		2005	2006	2007	2008	2009
Land Under Contract	million acres	8.2	8.4	8.5	7.7	7.4
In Buffers	million acres	0.3	0.3	0.3	0.3	0.3
In Wetlands	million acres	1.6	1.6	1.7	1.6	1.6
Reductions (intercepted by	y buffers or not leaving fiel	ld)

Phosphorus	million lbs	10	11	11	11	11
Annual Accumulation						
Carbon Sequestered	million metric tons	10	10	10	9	9

- CRP buffers intercept sediment, nitrogen, and phosphorus from farmed fields. In the Prairie Pothole region in 2009, CRP grass filters and riparian buffers intercepted 19 million tons of sediment, 68 million pounds of nitrogen, and 9 million pounds of phosphorus.
- The CRP was identified as a 'Reason for Hope' for grassland birds in the U.S. Fish and Wildlife 'State of the Birds' 2009 report.
- CRP increased Prairie Pothole duck populations by an average of 2 million ducks per year between 1992 and 2004. CRP restores prairie pothole floodwater storage function USGS estimated that CRP wetland catchments could store approximately 458,000 acre-feet of water.

^{1/} Acres under contract at end of fiscal year.

^{2/} Rental payments in a fiscal year apply to acres under contract in the previous fiscal year. Includes miscellaneous adjustments and adjustments for haying/grazing usage.

^{3/} Cost-share payments are made after cover establishment work is done. For contracts beginning in a given year, payments can occur over several years.

^{4/} Signing and Practice Incentive payments for continuous sign-up enrollment.

^{5/} Technical assistance outlays are generally paid to Natural Resources Conservation Service and Forest Service in the year sign-ups are held. About 90-95 percent of outlays have gone to NRCS and about 5-10 percent to FS.

ALL P	RACTICES	33,721,252	759,668	44.4	51.49	56.92

^{1/} Contracts in effect September 30, 2009.

Note:

Cost-share data are estimates (not actuals), and represent 50% of the authorized installation costs. CP10, CP11, and CP12 are not eligible for cost-share, except under certain circumstances.

^{2/} Includes both introduced and native grasses and legumes.

^{3/} Includes both softwood and hardwood trees.

^{4/} Includes both flood-plain and non-floodplain wetlands enrolled prior to 2003.

^{1/} Includes general and continuous sign-up acreage. Contracts expire at the end of the fiscal year, September 30.

Notes: These totals include results of 2006's re-enrollment and extension offer. For example, contracts on 5.1 million acres expired September 30, 2007, but 2.6 million acres immediately began new contracts. Thus only 2.5 million acres actually left the program.

Data from Arizona, Hawaii, Nevada, and Rhode Island not reported because of confidentiality concerns. Data from these States are included in the totals.

^{1/} See attached eligibility criteria description. 2/ Re-enrollments under new contracts only.

Eligibility Criteria:

- A Land capability classes 6 8
- B Land capability classes 2 5 with predicted average annual erosion rate greater than 3T
- C Land capability classes 2 5 with predicted average annual erosion rate greater than 2T and with gully erosion
- D Land with EI > 8 and predicted average annual erosion rate greater than T
- E Land for filter strips alongside wetlands, streams, or other water bodies
- F Land for tree planting-eligible when 1/3 of field meets criteria A or Class 2-5 soil with predicted average annual erosion rate greater than 2T
- G Land having evidence of scour erosion caused by out-of-bank water flows
- H Wetland as follows:
 - cropped wetland of at least 6 acres
 - a field of which 1/3 or more is cropped wetland
 - a field of 6 to 9 acres on which wetlands are present
- I Land in designated national conservation priority areas
 - Chesapeake Bay Region
 - Great Lakes Region
 - Long Island Sound Region

Land in designated State water quality priority areas

- Public wellhead protection area established by EPA
- Hydrologic Unit Areas approved by the Secretary
- Land located in areas designated as Clean Water Act "319" priority areas
- J Lands to be established in specified eligible practices, including filter strips, riparian buffers, windbreaks, grass waterways, and salt tolerant grasses
 Wetland eligibity suspended
- K Land with an EI > 8, regardless of the predicted annual erosion rate relative to T
- L Eligible for continuous sign-up beginning with sign-up 14:
 - Land identified as suitable for field windbreaks, grass waterways, shallow water areas for wildlife, contour grass strips, shelterbelts, living snow fences, salt tolerant vegetation, filter strips, or riparian buffers
 - Marginal pasture land suitable for riparian buffers devoted to trees.
 - Land within a wellhead protection area established by EPA
- M Land classified as highly erodible land (HEL) according to conservation compliance provisions.
- N Land in designated national conservation priority areas
 - Chesapeake Bay Region
 - Great Lakes Region
 - Long Island Sound Region
 - Prairie Pothole Region

Land in designated State water, air, or wildlife quality priority areas

- O Wetlands, including associated acreage, expiring Water Bank lands, and land serving as buffers for non-cropped wetlands
- P Land suitable for cross wind trap strips
- Q Land in the Longleaf Pine national conservation priority area
- R Wetland and buffer acreage according to Farmable Wetland Program provisions
- S Restoration of flood plain wetland, including bottomland hardwood tree plantings
- T Establishment of upland bird habitat buffers
- U Restoration of non-flood plain wetland and playa lakes
- V Constructed wetlands, aquaculture ponds, and flooded prairie wetlands

CP41	Flooded Prairie Wetlands	Continuous	SRR+10%	Yes	Yes
	Wellhead protection areas	Continuous	SRR+10%	Yes	Yes

- 1/ Practices enrolled under CREP may be eligible for additional incentives.
- 2/ General sign-up practices may be enrolled under certain CREP agreements and may be eligible for additional financial incentives.
- 3/ Soil rental rates (SRR) are soil-specific maximum rental payment rates for predominant soils (up to 3) for the land offered. Beginning with general sign-up 16, producers offering land for general sign-up enrollment requesting rental payments below the maximum receive higher EBI scores. Participants in continuous sign-up receive the maximum allowable rate. Annual incentives of 20% and 10% of annual rental rate are provided as indicated. Practices enrolled under CREP may be eligible for additional incentives.
- 4/ Signing incentive payments (SIP) implemented in June 2000 are one-time up-front bonus payments of \$100 per acre.
- 5/ Practice incentive payments (PIP) implemented in June 2000 equal 40-percent of practice installation cost.
- 6/ For marginal pasture, a county-specific flat rate is used instead of the SRR.
- 7/ Incentives approved March 2008.

Conservation Reserve Program Environmental Benefits Index (EBI) Maximum Possible Points per Component

			S	ign-up
