Appendix A: SEER*DMS System Reports

This appendix includes information about the system's Standard Reports, as well as reports that are integrated as print mechanisms throughout SEER*DMS. Additional registry-specific standard reports may also be included in SEER*DMS; these are described in *SEER*DMS Technical Reference: Registry-Specific Information*. Some of the following reports are integrated into system tasks. To access these reports, follow the information provided in the Description column. The majority of system reports are listed in the Standard Reports table. (Select **View > Reports** from the red toolbar, and then click **Standard Reports** to access this list.) A unique Report ID is displayed in the upper left corner of each report. For more information about using and customizing system reports, see *Chapter 24: Creating Reports and Extracting Data*.

Report ID	Title	Description
RPT-004A	Role Users	A list of the system users assigned to a role. This report can be generated by clicking View Users while editing or reviewing a role in SEER*DMS.
RPT-004B	Role Permissions	A list of a role's permission settings. You may create this report by clicking the Report link adjacent to the role in the Role Manager (select View > Roles to access this page).
RPT-009A	Imported Records	A list of records imported into SEER*DMS during a specific time period or for a certain facility.
RPT-013A	Abstracting Assignments	The Abstract Facility Leads (AFL) in a single AFL group. This is an assignment sheet given to an abstractor. A second version of this report has been provided as an external report. If registry-specific data fields are required on the assignment sheet, modify the external version (RPT-DT071A).
RPT-015A	Record Counts by Abstractor	Initial, follow-up, and casefinding counts by abstractor.
RPT-017A	Casefinding Completeness Log by Month of Diagnosis	CTC counts by month for a two-year period. Use this report to identify under-reporting by comparing the frequencies for the current reporting year with the previous year.
RPT-018A	Casefinding Completeness Log by SEER Site Recode	CTC counts by SEER site recode for a two-year period. Use this report to identify under-reporting by comparing the frequencies for the current reporting year with the previous year.
RPT-019A	Death Certificate Only CTCs by Year of Diagnosis	Frequencies and percentages of CTCs that are DCO by year of diagnosis. The early years can be collapsed into one year range (typically thru 1972).
RPT-020A	DCO Listing By Source	A list of the death certificate records that require follow-back; follow-back letters cannot be auto-generated because of missing physician information.
RPT-020B	DCO Listing By Source: Patient Sets	A list of the death certificate only CTCs in the patient set data. These are listed by source (facility, physician, or medical examiner).
RPT-022A	Multiple Primaries	A list of patient sets with multiple CTCs, where one

Report ID	Title	Description
		of the CTCs was created within the specified time period.
RPT-024A	Active Cases	A reference sheet for abstractors showing the active cases in the database for a facility. Active is defined as alive or died within the last 4 years.
RPT-030A	Frequency of Alive SEER-Reportable Cases by Hospital	Frequency of SEER-reportable cases who are alive, by hospital. This report may be generated for all, in situ only, or childhood cases.
RPT-031A	Linked Records Selected for Quality Control	A list of randomly selected records that have gone through the workflow and are now consolidated into patient sets.
RPT-037A	Valid Follow-Up by Year of Last Contact	Cross-tab showing frequencies by year of diagnosis vs. year of last activity. Includes patients who match the Vital Status parameter and have at least one CTC matching the Reportability, Age at DX and Behavior parameters.
RPT-038A	CTCs by Facility and Year of Admission	This report shows the number of CTCs by source facility and year of admission; it compares the current reporting year to the previous year.
RPT-040A	Print Filtered Worklist	The listing generated when the worklist print button is clicked. It displays the tasks that are currently selected and includes tasks from all pages.
RPT-054A	Patients by Number of Tumors	Shows the number of patients with 1 tumor, the number of patients with 2 tumors, etc.
RPT-061A	Workflow Location of Imported Records	A table displaying the current location of records in the workflow, paged by the import data file which contained the original record.
RPT-062A	Workflow Tasks	Current workflow tasks by diagnosis year and task type.
RPT-063A	Number of Linked Records	Frequencies of linked records by year of diagnosis, record type, and facility.
RPT-064A	Frequency of Edit Errors in the Patient Set Data	Counts of edit errors in the patient set data (CTCs) for a specified year range (based on date of diagnosis).
RPT-066A	Patient to Patient Matching	The report generated by the Patient to Patient Matching system task.
RPT-067A	Casefinding Patient/CTC Autobuild	The report generated by the Build CFOs system task.
RPT-068A	Death Cert Patient/CTC Autobuild	The report generated by the Build DCOs system task.
RPT-069A	Letter Communication Report	A template used for the letters and faxes generated within SEER*DMS.
RPT-070A	Import Summary	The number of records per imported data file.
