

## **Public Notice Submission**

**Provider Name:** KLM

**Summary:** Through this filing, the KLM Telephone Company is providing a thorough demonstration of the fact that the census block groups included within its serving area are well served with broadband infrastructure. KLM demonstrates that it offers broadband service at tiers/speeds that meet and exceed the broadband definition using DSL technology at competitive rates. Furthermore, KLM demonstrates that it is able to serve 95% of the households within its serving area with broadband and that subscription approaches 30%. Finally, KLM provides specific details of its infrastructure assets with specific coordinates identifying fiber optic resources as well as the location of central office and digital loop carrier locations that contain digital subscriber line access multiplexers and transport electronics. It should be noted that a KLM affiliate is in the process of deploying fixed wireless broadband for purposes of serving the small remaining portion that does not currently support broadband services. KLM plans to have this completed in 2010 and without the aid of broadband stimulus dollars.
