

Public Notice Submission

Provider Name: Kingdom Telephone Company

Summary: Kingdom Telephone Company provides broadband internet service at speeds of up to 5 Mbps (combined download and upload speed throughout the much of its service territory. 80% of Kingdom Telephone's broadband customers are served by Kingdom Telephone's wireline xDSL broadband service. The remaining 20% are served by Kingdom Telephone's terrestrial fixed wireless network which is capable of speeds of up to 4 Mbps (3 Mbps download + 1 Mbps upload) where available. Kingdom Telephone's broadband subscription rate of 75% of households served (of customers who buy Kingdom Telephone's residential telephone service) is significantly higher than broadband subscription rates typically found in the United States. This strongly indicates that Kingdom Telephone's broadband prices are very affordable and its broadband service quality is very good. It should be noted that Kingdom Telephone's service territory covers portions of many census tracts and may not cover all of any given census tract. Thus, the best gauge of Kingdom Telephone's broadband deployment is to look at their coverage based on their local telephone exchange areas rather than census blocks.
