

The CONNECT Open Source Solution

A Gateway to the Nationwide Health Information Network

CONNECT is an open source software solution that enables health information exchange – both locally and at the national level. CONNECT employs Nationwide Health Information Network standards and services to ensure that health information exchanges are compatible with other exchanges throughout the country.

CONNECT was developed by federal agencies to support their health-related missions. It is now available as an open source solution to any organization seeking to establish health information exchanges using nationally-recognized interoperability standards.

By promoting the adoption of interoperable health IT systems, the nation can achieve the goal of providing all citizens with electronic health records. Using the Nationwide Health Information Network infrastructure, CONNECT enables health professionals to request, send and receive medical records so critical information can follow patients as they navigate through the health care system. The software places relevant patient medical data at the doctor's fingertips. It enhances security, promotes public health, and empowers patients to be more active and involved in their own care decisions.

Nationwide Collaboration in Support of Citizens

CONNECT is a Federal Health Architecture (FHA) project that began in 2007 to share health-related data among federal agencies and their partners. FHA is a coalition of federal agencies that advance health IT interoperability within federal agencies and outward with state, tribal, local and private sector organizations.

Rarely, do federal agencies come together to build a common system that everyone can utilize. However, CONNECT was built collaboratively by more than 20 federal agencies – each sharing the common goal of improving health information exchanges by making them more reliable and secure. Joint development eliminated duplicate, disjointed efforts and dramatically reduced costs for the federal government.

The CONNECT open source community is comprised of more than 2,000 organizations – including federal agencies, states, healthcare providers, insurers, and health IT vendors.

After developing CONNECT in less than a year, federal agencies released CONNECT as an open source software for use throughout the industry. Today, the CONNECT open source community is comprised of more than 2,000 organizations – including federal agencies, states, healthcare providers, insurers, health IT vendors – all working together to improve the CONNECT solution. The solution has received many awards for innovation, including the *Wall Street Journal's* Technology Innovation Award for Healthcare in September 2010.

To learn more about the CONNECT solution and community, visit http://www.connectopensource.org.

The Solution

Three primary components make up the CONNECT solution:

- The **Core Services Gateway** can locate patients at other organizations, request and receive documents associated with the patient, and record these transactions for subsequent auditing by patients and others. Other features include mechanisms for authenticating network participants, formulating and evaluating authorizations for the release of medical information, and honoring consumer preferences for sharing their information. The Nationwide Health Information Network Interface specifications are implemented within this component.
- The **Enterprise Service Components** provide default implementations of many critical enterprise components required to support electronic health information exchange, including a Master Patient Index (MPI), XDS.b Document Registry and Repository, Authorization Policy Engine, Consumer Preferences Manager, HIPAA-compliant Audit Log and others.
- The **Universal Client Framework** is a set of applications that can be adapted to quickly create an edge system, and be used as a reference system, and/or can be used as a test and demonstration system for the gateway solution. This makes it possible to innovate on top of the existing CONNECT platform.

CONNECT Milestones

 MAR The Federal Health Architecture (FHA) awards contract to begin CONNECT development JUN FHA releases CONNECT vo.5 to the Social Security Administration (SSA) to support test event FHA and Federal Partners use CONNECT to test Nationwide Health Information Network specifications along with other Nationwide Health Information Network trial grantees and awardees SEP Department of Defense (DoD), Department of Veterans Affairs (VA) and SSA participate Nationwide Health Information Network demonstration at AHIC public meeting NOV FHA and Federal Partners participate in test event to test additional Nationwide Health Information Network services DEC Centers for Disease Control and Prevention (CDC), DoD, Indian Health Service (IHS), National Cancer Institute (NCI), SSA and VA participate in demonstrations at ONC Nationwide Health Information Network Forum SSA goes into limited production on the Nationwide Health Information Network using CONNECT v1.0 exchanging data with MedVirginia APR DoD, VA, IHS, CDC, SSA, NCI and the National Disaster Medical System (NDMS) participate in HIMSS 2009 demonstrations.
