

# Glaucoma can take your sight away.

## Keep Vision in Your Future.

### Glaucoma Simulation

Glaucoma is a group of diseases that can damage the optic nerve in the eye. If left untreated, glaucoma can cause permanent vision loss or blindness. At first, there are no symptoms. Vision stays normal and there is no pain. But as the disease gets worse, side vision may begin to fail. Objects straight ahead may be clear, but objects to the side might be missed. When glaucoma is left untreated, the field of vision narrows and objects in the front can no longer be seen.
