

Table 931. Energy Consumption—End-Use Sector and Selected Source by State: 2008

[In trillions of Btu (99,382 represents 99,382,000,000,000), except as indicated. For definition of Btu, see source and text. This section. Data are preliminary. U.S. totals may not equal sum of states due to independent rounding and/or interstate flows of electricity that are not allocated to the states. For technical notes and documentation, see source <<http://www.eia.gov/state/seds/seds-technical-notes-updates.cfm>>]

State	Per capita ³		End-use sector ⁴				Source

— Represents zero. Z Less than 50 billion Btu. ¹ Includes other sources, not shown separately. ² U.S. total energy and U.S. industrial sector include 60.8 trillion Btu of net imports of coal coke that is not allocated to the states. ³ Based on estimated resident population as of July 1. ⁴ End-use sector data include electricity sales and associated electrical system energy losses. ⁵ Includes fuel ethanol blended into motor gasoline. ⁶ Includes supplemental gaseous fuels. ⁷ Conventional hydroelectric power. Does not include pumped-storage hydroelectricity.
